Electrical Engineers

Vol. 67

Subject Index Number 1964

(The Author Index Number is published separately)

SUBJECT INDEX

INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Abrasion**") which represent, in the main, general categories or concepts rather than specific names. If a heading for a particular subject does not appear, a more general heading should be consulted; for example, "Zone plates" would be listed under "**Diffraction**"; "Barkhausen discontinuities" under "**Magnetization process**". There are numerous cross-references directing attention to related headings in other parts of the index.

Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small letter (for example, see the subheadings under "**Absorption**").

ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings are arranged throughout the index in alphabetical order according to British Standard 1749:1951 (the "word by word" system, not "reading right through"). The subheadings, with a few exceptions, are themselves arranged in alphabetical order under their respective headings. The exceptions (for example, see the subheadings under "**Spectra**", "**Crystal structure, atomic**") are cases where a more logical order is preferable to a purely alphabetical one.

ARRANGEMENTS OF ENTRIES UNDER HEADINGS

Entries are arranged in two alphabetical groups as follows. First group: generalities and named substances (in words); second group: named substances (chemical formulae). If a search is being made for a particular substance, both the first and second alphabetical groups should be inspected since, for example, alumina may also be listed as Al_2O_3 .

COLLECTED LIST OF SUBJECT HEADINGS

The alphabetical arrangement of the headings is the most convenient for locating a known heading quickly, but there may be other related headings elsewhere in the index of which the reader is unaware, and which he would only come across by accident. To assist the reader to discover all the headings appropriate to his subject, a collected list of the headings is given at the end of the index, which should be consulted as a matter of routine each time a search is made. In this list, the headings are not arranged in alphabetical order, but are grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. By using this list, the reader can quickly determine which are the headings appropriate to his subject, and they are then easily found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES

Because physics is a developing subject, it is not possible to maintain the list of headings unchanged from year to year; it is subject to a continuous process of revision, with the introduction of new headings and subheadings, and the alteration and elimination of old ones. This process is a gradual one, however, and the great majority of the headings are the same as those of the previous year. To assist in maintaining the continuity of the index, all the headings in current use are printed each year, even those for which there are no abstracts to be recorded in the present volume. The latter are followed by the announcement "No entries this year"; this supplies confirmation that these headings have not been dropped from the index, and entries may reappear under them next year.

ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

The names of elements, their compounds, a few compounds of special interest (e.g. "**Water**") and a few common materials (e.g. "**Wood**", "**Paper**") are included as headings. Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named; except, however, that abstracts listed under headings referring to nuclear properties, including radio-activity, are not necessarily also listed under the substance name. The entries under these headings are themselves arranged in alphabetical order of substance or nuclide names, so that a given substance can be readily located.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "**Sodium compounds**"). Alloys are listed under the first constituent, e.g. Cu-Ni alloys under "**Copper compounds**". Organic compounds are grouped under "**Organic compounds**", "**Polymers**", "**Plastics**" and under special substance headings such as "**Paper**", "**Proteins**", etc.; all the latter are listed in the collected list of headings at the end of the index.

BEFORE USING INDEX, CONSULT LIST OF SUBJECT HEADINGS PRINTED AT THE END

Abacs

See Nomograms

Aberrations, optical

- See also Electron lenses; Ion optics; Optical instrument testing; Optics, geometrical; Particle optics
- achromatism of 2 coaxial thin lenses, new theoretical treatment 4=8373
- aplanatic points of spherical refracting surface, new theoretical treatment 4=8373
- Chebyshev polynomial description 4=29733
- coma, diffraction effects 4=27290
- concentric system of refl. surfaces, spherical aberr. 4=8394
- correction, differential balancing method 4=11329
- correction, phase absorption or double diffr. filters 4=18380
- by decentrations and tilts 4=8382
- diffraction grating, concave at grazing incidence 4=11361
- effect of aberration curve variations on optical transfer function 4=8387
- effect in diffraction by rect. aperture 4=8452
- lens, monocentric doublet, spherical 4=21280
- lenses, aspherical, astigmatic surfaces 4=5365
- lenses, photographic, meas. 4=8469
- rotationally symmetric, rel. between total illuminance and transfer function 4=2817
- Seidel, position dependence in image plane 4=8386
- Seidel theory, first order decentration aberrations 4=8383
- spherical, correction by concentric meniscus lens 4=301
- spherical, optimum balanced fifth-order 4=8381
- tolerance assignment, rel. to low contrast resolving power 4=8393
- wave and ray, exact relation 4=21278

Abrasion

See also Hardness

- friction coeff., wear and work hardening, different behaviour of hexagonal and cubic metals 4=13387
- glass, effect on specific surface area 4=28984
- metals, effect on specific surface area 4=28984
- steel, effect on specific surface area 4=28984
- Cr films, resistance meas. 4=23112
- MgF₂ films, resistance meas. 4=23112
- Nb, crystal struct. after filing 4=23194
- Ni, plastically deformed, abrasive wear 4=7438
- SiO films, resistance meas. 4=23112

Absorption

See also Alpha-rays, absorption; Beta-rays, absorption; cosmic rays, absorption; electrons, absorption; Gamma rays, absorption; Hyperons, absorption; Mesons, absorption; Neutrons and antineutrons, absorption; Protons and antiprotons, absorption; Sorption; X-ray absorption

- dielectric impurity films on metal, positive ions, electron fields emission 4=23562
- electron emission, field, gas absorption effect 4=3024
- gas, by liquid in laminar flow 4=8161
- moisture by dielect., effect on elec. props. 4=28606
- Ce vapour in Ni 4=30576
- Fe, of F, and work function reduction 4=19075
- H-Pt-Pd and D-Pt-Pd systems 4=26720
- Na vapour, measurements 4=238
- NiH, desorption enthalpy of H 4=23649

acoustic waves

- See also Noise abatement; Transmission, acoustic waves
- absorbers, wide-band, with high absorption capability 4=5348
- air, anomalous, humidity effect mechanism 4=8253
- air, var. humidity 4=14215
- antiferromagnetic uniaxial, spin wave transitions 4=6733
- apertures, circular and slit, meas. 4=14285
- architectural acoustics, average coeff., graph determ. 4=14319
- audience, 80 c/s to 10 kc/s 4=14320
- across audience seating 4=21259
- baffle, nonrigid, coupling of elements 4=29705
- benzene, solid and liquid, molecular relax. 4=16109
- chemical medium, thermodynamics 4=8339
- chlorobutyl polymer, loss, var. cross-link density 4=13396
- churches, attenuation, review 4=11317

Absorption — contd**acoustic waves — contd**

- circular and slit-shaped apertures in walls, sound insulation 4=11316
- converging wave fronts in dissipative medium 4=11307
- cyclohexane, solid and liquid, molecular relax. 4=16109
- dielectric solid, temp. gradient due to thermal phonons 4=17354
- dielectrics and metals, rel. to thermal conductivity, theory 4=9841
- dielectrics, phonon interaction theory 4=20182
- double barrier with porous elastic intermediate layer, insulation effect 4=5345
- ear-protector attenuation meas. using aural reflex 4=4976
- and electromagnetic waves, analogies 4=8319
- in foams 4=8337
- foams, open-celled, effect of light coating on impedance and absorpt. 4=2786
- gas mixtures, molecular, thermodynamic theory 4=16148
- gases, dense, depend. on density, temp. and press. 4=5175
- Helmholtz resonator, effect of shape of neck 4=24320
- imperfect gases 4=8251
- liquid mixtures, critical, corrected results 4=14162
- liquids, dense, depend. on density, temp. and press. 4=5175
- measurement, transient pulses 4=14309
- metals, by paramag. reson. transfers between Zeeman sub-levels 4=6727
- metals, theory 4=1389
- mud and sand, 4-50 kc/s meas. 4=21244
- noise abatement materials, dynamic characts. 4=28912
- ocean, attenuation over RSR paths 4=23718
- persons on unpadded chairs, meas. 4=11314
- at phase transformations of the second kind 4=14289
- plane, finite amplitude, rel. to distortion 4=5318
- quartz, temp. gradient produced calc. 4=17354
- relaxing medium, non-linearities 4=14281
- in resonator, nonlinear, undamped, design effects 4=5313
- reverberant energy, in enclosure, mean free path reciprocal 4=14321
- for reverberation chamber calibration, using Sillan SP 100 4=5338
- rocks, independence of frequency 4=9847
- room, reverberation effect on impact noise reaction 4=14315
- rooms, absorpt. coeff., review 4=16192
- semiconductor carriers effect 4=30515
- "Sillan", effect of acoustic diffusion 4=14284
- spreading loss in inhomogeneous medium 4=8346
- stratified medium, cut-off freq. 4=8320
- "sugar-cane fibreboard" absorbers, perforated 4=281
- superconductor electrons, transverse wave, components calc. 4=29827
- thermoviscous fluid, attenuation of plane, periodic, finite-amplitude waves 4=14290
- tube, with wall rather than gas losses 4=8335
- two-phase mixture, anisotropic, with cubic symm. 4=12624
- vibrating surface, influence of absorbing covering on propag. 4=5314
- viscous heat cond. medium, nonlinear interaction of sound waves 4=5319
- water vapour, 100° and 250°C 4=27220
- waterfilled tanks, absorbent linings 4=2788
- wave trapping by density grads. 4=8320
- Weinreich relation, validity when d.c. elec. and mag. fields present 4=8340
- Bi, "giant" quantum oscillations 4=9843
- Br, liq. and solid, rel. to vibr. relax. 4=14163
- CO with admixtures, thermal relaxation 4=5244
- CO₂-He mixture, rel. to vibr. relax. 4=14213
- CuSO₄, paramag. nonresonant, rel. to spin-lattice relax. 4=9840
- Fe, up to melting temp. 4=15413
- p-H₂, and mol. rot. relax. 4=29675
- H₂O, origin rel. to proposed model 4=14159
- H₂O, shallow, surface wave effects 4=14276
- K, sound wave-helicon wave interaction 4=22549
- Mo, peaks at var. temps., and dislocation relax. 4=15417
- N₂ with admixtures, thermal relaxation 4=5244
- Nb, peaks at var. temps., and dislocation relax. 4=15417

Absorption—contd.**acoustic waves—contd**

- O₂ with admixtures, thermal relaxation 4=5244
 O₂, vibr. de-excitation, effect of light impurities 4=20059
 O₂, with F₂, D₂ or E₂, mol. relax. meas. 4=12466
 O₂—CO mixtures, composition depend., relaxation 4=28285
 in O₂ and H₂O vapour mixtures 4=21185

- O₂—N₂ mixtures, composition depend., relaxation 4=28285
 Ta, peaks at var. temps., and dislocation relax. 4=15417

acoustic waves, ultrasonic

- acetic acid, aq. solns., 4-40 Mc/s meas. 4=18196
 antiferromag., and thermal cond.spin—phonon theory 4=26347
 antiferromagnetics, in mag. field 4=22490
 attenuation, studies, review 4=22483
 benzene single crystals 4=20645
 p-dichlorobenzene single crystals 4=20206
 electrolyte solns., absorpt. due to chemical relaxation 4=177
 ethyl acetate, rotational isomeric relax. 4=178
 gas, from interferometer impedances, var. reflector position 4=2728
 glass, SiO₂, GeO₂, B₂O₃ and As₂O₃, u.s. relaxation loss 4=20204
 glass balls, packed in liquid, 500 kc/s-5 Mc/s 4=29711
 imperfect gases 4=8252
 interacting reactions relaxation, rel. to viscosity 4=26732
 in liquid Na and K 4=2676
 in liquid Na and K, magnetically induced 4=14283
 liquid-vapour and liq.—liq. critical points, struct. effects 4=27140
 liquids, due to mol. relaxation, chemical equilb. 4=25745
 liquids, meas., pulse, improvement 4=2673
 magnetoacoustic transitions, 2-quantum 4=1390
 meas. method 4=4440
 measurement apparatus, pulse method, for liquids 4=29626
 measurement solids, reson. method modifications, for 20 kc/s to 600 kc/s 4=8357
 metallic nitrates, solns. 4=176
 metals, Coulomb interaction effect 4=20198
 metals, electron "liquid", transport theory 4=9889
 metals in mag. field, freqn.-depend., theory 4=12625
 metals, in mag. field gigantic oscill. 4=3985
 metals, molten and solidifying, meas. 4=174
 metals, polarization rotation in strong magnetic field 4=12629
 metals, rel. to mag. field, numerical calc. 4=9844
 methane, high-density, binary collision theory 4=2731
 naphthalene single crystals 4=20206
 plexiglass, 1.5-5 Mc/s 4=16183
 polymer solns., absorpt. coeff. rel. to structural changes 4=160
 polymer solns., conc., network diffusion model 4=11196
 polymer solns., rel. to frequency 4=5172
 polymer solns., spectra, configuration jumping effect 4=2671
 in polystyrene and Plexiglas sheets 4=2787
 porous materials, moisture effects, pulse meas. 4=5312
 quartz, below 30°K, 500-10 000 Mc/s meas. 4=17353
 quartz, fused, to 1 kMc/s and 1.4°K 4=6725
 quartz, fused, up to 1 kMc/s, rel. to temp. 4=12627
 quartz, hypersonic, "bottleneck", below 2°K 4=22485
 quartz, lattice interaction, for radiation induced defect study 4=20263
 quartz, Z-cut, 300-500 Mc/s, rel. to theory 4=6724
 ruby, low-temp. relaxation meas. at microwave freq. 4=26430
 sand, quartz, moisture effects, pulse meas. 4=5312
 by soft tissue, visualization of structure 4=4964
 solids, due to dislocation damping 4=20275
 solids, paramag., resonance, selection rules and ang. depend. 4=17357
 in solutions, nonclassical, rel. to conc. fluctuations and diffusion 4=173
 spin—phonon coupling, ferromag. transit., u.s. absorption 4=28787
 superconductors, absorpt., coeff., eqn. 4=387
 thiokols, liq., 20°-60° 4=24208
 triglycine sulphate, relax. near Curie temp. 4=6728

Absorption—contd**acoustic waves, ultrasonic—contd**

- in water containing plankton 4=4747
 water, 5.0, 11.6 and 12.9 Mc/s 4=24209
 water, u.s. cavitation, spectral indication of its origin 4=5143
 water—formic acid mixtures 4=27174
 waveguide damping in viscous fluid 4=14287
 Al, second harmonic, stress effects, due to dislocations 4=9842
 Al, superconducting, long and shear 4=16341
 Al and Al alloys, loss meas. by exponential decay, rel. to transducer thickness 4=30514
 Al₂O₃, 3000 Mc/s, low temp. 4=28363
 Al₂O₃, at microwave freq. and low temps. 4=20203
 Al₂O₃ sapphire, 2.8 Gc/s 4=12628
 Cd, freq. at which high and zero mag. field effects are equal, 3°K 4=6730
 CdS, illuminated, oscillatory currents 4=7062
 CoSO₄, conc. solns., 0.2-2.0 Mc/s 4=5173
 Cu, shear waves, resonant, by open orbit electrons 4=6731
 D₂O vapour, attenuation 4=14214
 Ga, giant quantum oscillations, effective mass determ. 4=17355
 Ge, pure and n-type 4=20201
 Ge, rel. to internal photoeffect 4=1391
 Ge, 300-500 Mc/s, rel. to theory 4=6724
 H₂, and isotopes, rotational relaxation, 77°, 90° and 293°K 4=16149
 H₂O, sonoluminescence, u.v. spectrum 4=193
 H₂O vapour, relaxation time 4=5245
 He II, liquid, calc. on four-phonon mechanism, <0.6°K 4=2908
 He II, superfluid, size depend. in 3-phonon processes 4=24480
 in Hg, at different freq. and temp., viscosity depend. 4=2675
 Mg single crystals, during yield, var. 4=3986
 MgO, at microwave freq. and low temps. 4=20203
 MnF₂, near Néel temp. 4=1388
 MnF₂, v. h. f. ultrasonic wave attenuation rel. to phonon diffusion 4=30725
 Mn-ferrite, at high mag. field 4=20202
 N₂, relaxation time 4=5245
 Na-K liquid alloys 4=27173
 NaCl, effect of crystal interstitials due to H₂O, 1.5-40°K 4=17351
 NaCl, from effect on n.m.r. 4=12623
 NaCl, in dislocation relaxation 4=28454
 Nb, normal and superconducting, atten. meas. 4=11480
 Nb, superconducting, shear, 75-225 Mc/s, and 2ε₀ 4=16355
 Nb, superconducting, transverse waves, for ql < 1 4=6729
 Nb—Zn alloys, superconducting, model 4=411
 Ni, supercond., and energy gap 4=18588
 O₂, relaxation time 4=5245
 Pb, supercond., and energy gap 4=18580
 PbTe, de Haas—van Alphen type oscs. 4=6732
 S, liquid, 45-155 Mc/s range 4=2677
 Si, pure and p-type 4=20201
 Si, 300-500 Mc/s, rel. to theory 4=6724
 SiO₂, OH-free, relaxation loss 4=17352
 SiO₂, OH ion effects, low temp. var. 4=22486
 Sn, 100-250 Mc/s, and energy gap anisotropy 4=14537
 Sn, superconducting, osc., models 4=14536
 Sn, superconducting, shear wave attenuation 4=9845
 Ta, superconducting, longitudinal, 45-340 Mc/s, and 2ε₀ 4=16355
 Ta, superconducting, transverse waves, for ql < 1 4=6729
 TiO₂, 2.8 Gc/s 4=12628
 Tl, and supercond. energy gap, ang. var. 4=27435
 U, grain size, meas. 4=29166
 V, superconducting, shear, 75-225 Mc/s, and 2ε₀ 4=16355
 V, superconducting, and 2ε₀ 4=16377
 V, superconducting, transverse waves, for ql < 1 4=6729
 YFe garnet, transverse ferroacoustic resonance 4=9846
 YGaFe garnet, transverse ferroacoustic resonance 4=9846
 Zn, superconducting, and 2ε₀ 4=16377

electromagnetic waves

SUBJECT INDEX

Absorption—contd

electromagnetic waves—contd

- air, shocked, heated, microwave attenuation 4=16173
 anisotropic medium, dispersion relations for abs.
 index 4=11795
 atmosphere, upper, and satellite drag 4=7869
 auroral ionosphere, temporal and spatial
 morphology 4=4801
 chloroform 4=3145
 cosmic radio noise, ionospheric absorpt. in auroral zone,
 and geomag. bay disturbance 4=23818
 crystal electron-phonon system, at h.f. 4=1713
 detectors, accelerating 4=16648
 by electron gas 4=9932
 Elsasser model for band absorpt., integral representa-
 tion 4=15312
 by ferrite layer backed by metal plate 4=5802
 gravitational wave radiation 4=24047
 hypochromism, Bolton-Weiss theory, extension 4=9795
 ionosphere, absorpt. index, downcoming waves 4=14911
 ionosphere, by cosmic noise method, to 5 Mc/s 4=26849
 ionosphere, and electron collision freq. meas. 4=7912
 ionosphere, and electron density profile, at eclipse 4=7903
 ionosphere, D, and equivalent electron density 4=26853
 ionosphere, D, E 4=7917
 ionosphere, nonderivative, rel. to electron density and
 collision frequ. 4=3184
 ionosphere, and nuclear explosion, high altitude
 Russian 4=13836
 ionosphere, polar cap., and sun corpusc. radiation,
 review 4=26845
 ionosphere, rel. to zenith angle 4=2264
 ionosphere, riometer obs., rel. to high-alt. nuclear
 explosion, 9 July, 1962 4=4803
 ionosphere, var., winter anomaly 4=10753
 ionospheric 4=5829
 ionospheric, rel. to high-alt. nuclear explosion 4=10760
 metal, electron-phonon in mag. field model, quantum
 calc. 4=28664
 multi-layer absorber for cm waves 4=5803
 negative in plasmas at cyclotron freq. 4=29928
 neutrinos, cross-section and possible expt. 4=6019
 Permalloy films, in l.f. field, relaxation, u.h.f. 4=1827
 Permalloy films, by spin interaction with stripe
 domains 4=28697
 plane wave attenuation in interplanar region with one face
 covered by abs. medium 4=14885
 plasma, coeff. rel. to layer props. 4=29923
 plasma, collisional dissipation at cyclotron
 harmonics 4=8718
 plasma column, and electron cyclotron harmonic
 oscs. 4=24696
 plasma, cylinder, duets surface-charge wave
 resonance 4=5624
 plasma cylinder, hot inhomogeneous 4=18872
 plasma, microwave absorption, near ion cyclotron
 reson. 4=24652
 plasma, microwave absorption, near ion cyclotron
 reson. 4=24653
 plasma, rel. to instability of one-dim. packets 4=5627
 plasma, negative, due to electron stream Coulomb
 scatt. 4=11619
 plasma, quantum derivation 4=16482
 polar gases in compressed He mixtures, microwave
 absorpt. and dispersion 4=24273
 quantum and classical plasmas 4=11621
 quasi-longitudinal approx. in generalized theory of radio
 wave absorpt. 4=11810
 scattering by complex shapes, effect of absorbers,
 theory 4=8939
 semiconductor in waveguide, microwaves 4=740
 semiconductors, degenerate, electron-phonon
 theory 4=1713
 shellacs, 3 cm and 8 mm meas. 4=26110
 shock tube gas behind discontinuity, and impurity
 ionization 4=11291
 shock waves in air, microwave attenuation 4=18333
 spherical shell 4=30055
 solids, and heat conduction m.f.p. 4=17380
 in super-high freq. pulse discharge 4=688
 v.l.f., rates, obs. rel. to theory 4=17943
 waveguide, cylindrical, progressive TM_{01} wave
 atten. 4=16655

Absorption—contd

electromagnetic waves—contd

- Al_2O_3 particles, cross-section from Mie theory,
 0.5-10 μ 4=26175
 Ge, O⁻K, by hopping, calc. 4=30690
 In, supercond. films, microwave, mag. field
 effect 4=29835
 MgO particles, cross-section from Mie theory,
 0.5-10 μ 4=26175
 NH₃ 4=3145
 NaCl, 1-3mm, temp. depend. meas. 4=10195
 Nb-Zr superconducting alloys, abs. of h. f.
 energy absorption 4=27428
 Pb, supercond. films, microwave, mag. field
 effect 4=29835
 PbS photosensitive layers, rel. to strong electric
 field 4=1736
 Si, microwave absorption, low-temp. 4=12910
 Si, O⁻K, by hopping, calc. 4=30690
 Sn, supercond. films, microwave, mag. field
 effect 4=29835
- Light**
 See also Atmospheric optics; Densitometry; Filters,
 optical; Optical constants; Optical films; Pleochroism;
 Transmission, light; Spectra
 absorpt. coeff., analytical determ. 4=14376
 acetylene, rel. to photoionization 4=8616
 air 4=15327
 alkali halide crystals, theory 4=4250
 alloys, i.r., rel. to Bloch electron theory 4=1718
 atmosphere, attenuation of middle u.v.
 radiation 4=13800
 atmospheric gases, i.r., gas conc., pressure temp. effects,
 laboratory versus open air review 4=30933
 Beer's law, application for broad spectral bandpass 4=2680
 1-butyne, rel. to photoionization 4=8616
 clouds and hazes, in visible and i.r., extinction
 coeff. 4=13793
 clouds, i.r. 4=13794
 complex mols. in soln., oscillator strengths calc. 4=2681
 crystal, rigid, dispersion due to exciton band,
 theory 4=10152
 crystals, electron transitions, far i.r. 4=1419
 crystals, ϵ , (ω , $\vec{k}$) tensor theory, review 4=10145
 crystals, exciton absorpt. region, classical
 formulae 4=7098
 crystals, exciton spectra rel. to crystal size 4=4245
 crystals, i.r., four-phonon interaction 4=1711
 crystals, interband transitions in elec. field 4=17550
 crystals, ionic, rel. to third-order potential and
 second-order dipole moment 4=1704
 crystals, ionic, shape due to localized excitons 4=7097
 crystals, lineshape, quantum lattice relax. 4=22472
 crystals, wurtzite type, excitons, anisotropy 4=4278
 diamine-quinone complexes, optical absorpt.
 edges 4=26229
 diamonds, u. v., and X-ray diffr., by platelet
 imperfections 4=28683
 2,2'-dihydroxy-1,1' naphthalidiazine (lumogen), absorpt.
 edge 4=13099
 dipole liquids, visible region 4=29632
 dye solns., fluoresc. conc., rel. to dispersion 4=2682
 E_i centre in irradiated fused silica, rel. to
 e.s.r. 4=26431
 energy ampl. at absorbing media boundary 4=8440
 exciton symposium, Colorado Springs (1962) 4=6513
 films, thin metallic, theory 4=22833
 by graphite particles, from scattering, mag.
 effects 4=30683
 near fundamental absorption edge, in crossed mag.
 and elec. fields 4=1708
 gases, vacuum u.v. cross-sections 4=11250
 high press., and electron states 4=12667
 hypochromism, solvent effects and test of theory 4=3948
 imperfect crystals, rel. to lattice vibration theory 4=12608
 impurities, symmetry group effect, lattice bands, vibronic
 transitions, selection rules calc. 4=28356
 impurity atoms in lattices with optical oscillation
 modes i.r. absorpt. 4=25838
 infra red, in atmosphere, altitude variation 4=10721
 i. r. spectral absorptance meas. 4=2837
 insulators, optical extinction by metal precipitates 4=15578
 intensity-induced abs. of laser beam 4=5181

Absorption — contd

light — contd

- interstellar, u. v., wavelength var. 4=13909
 liquid, inhomogeneous, thermal, intensity effects 4=18409
 liquids, meas. in strong absorpt. region, use of layers of uneven thickness 4=8208
 measurement of small changes by laser amplifier 4=18410
 metal films, anomalous, Tamm surface state transition mechanism 4=7094
 metal films, rel. to electrical conductivity 4=10153
 metals, thin films 4=10151
 modulation by bunching 4=16196
 molecular aggregates, classical model of electronic absorpt. 4=26165
 molecules in dil. cryst. solvents, triplets, 77°K 4=10149
 molecules, intensity and fluoresc. lifetimes 4=17271
 negative resonance absorption, with 2 types of laser emitter 4=29759
 organic crystals, with H bonds, far i.r. absorption 4=22828
 oxide films on U, immersed in refractive media, extinction coeff. rel. to wavelength 4=13060
 oxides, with exponential var., multi-phonon process 4=22835
 polarized, anisotropy, calc., aggregate of dipoles 4=322
 polymer solutions, general mechanism confirmation 4=8204
 powders, diffuse reflectance rel. to absorption coeff. 4=13005
 plane layer, transfer integral eqn. 4=14388
 plasma, of laser 4=18881
 quartz, bulk coeff. rel. to wavelength 4=15595
 propyne, rel. to photoionization 4=8616
 quantum kinetics of black absorpt. and white scatt. 4=8441
 radiation ang. distrib. in layers, integral eqns. 4=14377
 ruby, by Cr^{3+} , polarized, for each ground sub-level 4=7123
 ruby, rel. to chromium content 4=7126
 seawater, ruby laser meas. 4=5178
 semiconductors, additive, rel. to photocond. spectrum 4=26139
 semiconductors, free-carrier, mag. field depend. 4=1712
 semiconductors, by free-carriers 4=1709
 semiconductors, i. r. absorpt. coeff. 4=15531
 semiconductors, i. r., by photoinjected carriers 4=22527
 semiconductors, inter-band optical transitions 4=28396
 semiconductors, local centres, shape and temp. dependence of bands 4=1710
 semiconductors, optical extinction by metal precipitates in Ge and Si 4=15578
 semiconductors, optical transitions involving impurities 4=6776
 semiconductors, review 4=22827
 solids, pair of ions 4=15580
 solutions, var. with intensity 4=16241
 spectral band absorptance effect of low-intensity lines 4=24364
 superconductors, bulk absorption 4=24494
 thin films, absolute i. r. intensity meas. 4=7106
 titanates, with exponential var., multi-phonon process 4=22835
 total band, comparison of models for correl. 4=18399
 transparent surfaces, extinction of gas-shock luminosity 4=11295
 tryptaflavine in poly and monomethylmethacrylate, conc. var. 4=22416
 turbid media, expts. using white disks 4=321
 turbid media, scattering effects 4=14378
 turbid medium, var. with beam thickness 4=16242
 two-component system, molar extinction coeffs. determ. by graphical method 4=16114
 ultraviolet by conjugated systems, rel. to II-II* transition 4=9752
 in wurtzite and blende type structures, phonon interactions 4=25837
 Ag, films, anomalies due to granular struct. 4=1715
 Ag, films, 4000-14 000 Å 4=7093
 Ag films, polarized, plasma resonance 4=4246
 Ag films, spectrum rel. to structure 4=22891
 Ag, films, 2000-4000 Å, Walter, Rassigni relations 4=1749
 Al, extinction coeff. calc. on basis of free electron theory 4=13019
 Al, films, 4000-14 000 Å 4=7093

Absorption—contd

light—contd

- Ar arcs, opacity, 10 000° to 15 000° K 4=24622
 As₂S₃, 250-500 mμ, using polarized light 4=7109
 Au, films, anomalies due to granular struct. 4=1715
 Au sols, rel. to part. size, temp., prep. method 4=23681
 Au-Ni alloys, i. r., virtual bound state model 4=1732
 in BaTiO₃, semiconducting single crystals 4=15533
 BP, 1.6-2.9 eV, and band gap 4=22848
 Bi, oriented deposits 4=4252
 CCl₄, in strong i. r. band region 4=22397
 CH₄, 7.6 and 3.3 μ bands, correl. with CO₂ 4=27221
 CHCl₃, in strong i. r. band region 4=22397
 CO₂ cryodeposits on metal, space environment simulation 4=13015
 CO₂, 15 and 4.3 μ bands, correl. with CH₄ 4=27221
 CS₂, liquid, intensity-induced abs. of laser beam 4=5181
 C⁻, bound-free, calc. 4=30379
 Ca crystal, 0.6-5 eV meas. 4=20450
 CaF₂, i. r. 4=7122
 CaWO₄: Nd, photolytic colouring 4=22643
 Cd films, u. v., and conduction and interband transitions 4=10164
 Cd_{0.9}Hg_{0.1}Te, absorpt. coeff. rel. to wavelength 4=13026
 Cd_{0.9}Hg_{0.1}Te semiconductors for x = 1.0, 0.9, 0.8, near absorpt. edge 4=13027
 CdIn₂Te, 0.75-2.5 μ meas. 4=7121
 CdO, edge, rel. to electron concentration 4=10165
 CdS, double-photon excitation meas. 4=15584
 Co²⁺ ions in soln. 4=2684
 Cr³⁺ in ruby, polarized, for each ground sub-level 4=7123
 Cs₃Sb films, band edge structure and excitons 4=10166
 Cu covered with LiF film, extinction coeff. in far u. v., meas. 4=28677
 Cu, films, anomalies due to granular struct. 4=1715
 CuCl films, thickness var. anomaly near band 4=28681
 Cu₂O, impurity centres, rel. to photoelec. props. 4=7066
 D₂, cross-section, 580-1000 Å 4=28190
 FeAl₂O₄-MgAl₂O₄ mixed crystals 4=20514
 Ga, liq., index in visible and near i. r. 4=24213
 Ga, polycryst., coeff., 4000-8000 Å 4=26189
 Ga, for three axes, 0.4-8.0 μ meas. 4=7134
 GaAs, laser-type, determ. of coeffs. 4=13035
 GaAs, optical transitions involving impurities 4=6776
 GaAs thin films, absorpt. edge shifts 4=23579
 GaAs, var. due to optical excitation, with view to laser prod. 4=28688
 Ge 4=12895
 Ge, highly-doped, i. r. absorpt. 4=26191
 Ge, infrared modulation, by free carrier absorption 4=15589
 Ge p-n junction, edge shift by elec. field for modulation 4=26193
 Ge, up to 2.5 eV beyond first edge 4=22860
 H⁻ free-free absorpt. coeff. 4=25563
 H₂, cross-section, 580-1000 Å 4=28190
 H₂, quasi-molecular, in stellar atmospheres, absorpt. coeff. 4=23868
 H₂O, absorpt. cross-section 4=28218
 H₂S, absorpt. cross-section 4=28218
 Hg, liq., index in visible and near i. r. 4=24213
 HgTe-CdTe, meas. near fundamental edge 4=13048
 InAs, n-type, i. r., rel. to scatt. mech. 4=20461
 InAs, var. due to optical excitation, with view to laser prod. 4=28688
 InP_xAs_{1-x} 4=4017
 In₂S₃, rel. to vacancy ordering, 420° C 4=13489
 InSb, coeff., visible and near-u. v. regions 4=1734
 InSb, var. due to optical excitation, with view to laser prod. 4=28688
 K, peak, new collective electron state and coherent pairing of the second kind explanations 4=26210-11
 KBr, rel. to fast electron irradi. 4=1651
 KBr, M-band, temporary bleaching 4=20317
 KCl crystals, effect of exposure to u. v. light 4=26760
 KCl, F-centre and Tl⁺, band shape meas. 4=12809
 KCl, M-band, temporary bleaching 4=20317
 KCl, shape, due to localized excitons 4=7097
 Kr, cross-section and f value in ionization limit 4=19958
 La, superconducting, far i. r. meas., gap width 4=14522
 LaAlO₃, doped with transition element ions 4=16383

SUBJECT INDEX

Absorption—contd**light—contd**

- LiF, coloured, i.r. absorption, phonon-free transitions 4=17573
 LiF crystals, α - and X-irradiated 4=26206
 LiF, 450 m μ , rel. to γ -ray induced expansion 4=4099
 LiF, self-trapped hole, energy and width 4=17453
 Mg, extinction coeff. calc. on basis of free electron theory 4=13019
 Mg₂Ge, i.r. 4=26207
 N₂, cross-sections at 600-1000A 4=25662
 Na absorpt., 2400-1000A 4=28137
 Na-H (active) flame, self, chemiluminescence 4=23654
 Na, 2400-1000A, atomic 4=28137
 NaCl, 1-3mm, temp. depend. meas. 4=10195
 NaCl-type ionic crystals, i.r. anharmonic potential effect 4=1751
 O, 1060-580A, rel. to dissociation and ionization 4=9723
 O₂, cross-sections at 600-1000A 4=25662
 O₃, Hartley band extinction coeff., as gas and in liquid N₂, CO, Ar 4=18200
 Pb alloys, supercond., far i.r., and sharp edge gap, 4=24505
 PbI₂, extinction coeff. 4=26202
 PbS, 0.5-6.0 eV meas. 4=13042
 PbSe, 0.5-6.0 eV meas. 4=13042
 PbTe, 0.5-6.0 eV meas. 4=13042
 Se, absorption edge of hexagonal crystals 4=10190
 Si, far i.r., from transmission meas., for p-type 4=4273
 Si, radiation field interaction with lattice vibr. at critical points of Brillouin zone 4=22895
 Si, beyond band edge, review 4=28413
 Si, Zn-doped, 1-5 μ , 90° and 290°K 4=10193
 α -SiC, n-type, 80°-800°K 4=26220
 SnO₂ films, semiconducting, near i.r. 4=1755
 SnTe, 0.5-6.0 eV meas. 4=13042
 SrTiO₃, doped with transition element ions 4=26383
 Te films, in vacuo, 2-13 eV 4=1754
 Ti, coeff., in quantum-transitions range 4=15601
 Xe, cross-section and f value in ionization limit 4=19958
 Xe plasma, vac u.v., as probe method 4=14686
 Xe plasma, vac u.v., as probe 4=14687
 Zn crystals, 0.6-5 eV meas. 4=20450
 ZnIn₂S₄ single crystals 4=28713
 ZnO, and crystal struct. 4=22725

Abundance ratio

See Elements, relative abundances; Isotopes, relative abundances

Acceleration

See Dynamics; Kinematics

Acceleration measurement

- calibration, interferometric, oscillating, optimum conditions 4=2847
 piezoelectric, 1.5-150 kc/s 4=29507
 piezoelectric pickups, upper frequency limit 4=5009

Acids, inorganic

See individual compounds

Acids, organic

See Organic compounds

Acoustic analysis

- computer recognition of spoken digits 4=10946
 pitch extractor, for fundamental frequency 4=4966
 pitch of high-pass-filtered pulse trains, ear effect 4=20971
 plane-wave sources, two, directional localization of sound 4=26992
 radiation by arbitrary shell in infinite fluid 4=2778
 ray path calc., variational method 4=14279
 shock waves in liquids, e. m. produced, meas. 4=24300
 signal detect., stimulus-oriented approach 4=20972
 spectrum analysers of bank-of-filters type, response 4=5336
 spoken consonants, multidimensional analysis 4=10964
 stereophonic fields 4=5309
 stereophonic system, physical effects along symmetry axis 4=286
 vowel reduction, spectrographic study 4=4970

Acoustic generators

See also Musical instruments

- air-jet, Hartmann whistle type, optimization of dims. 4=11300
 amplifier, u.s., use of piezoelectric semi-conductors 4=22488

Acoustic generators—contd

- beam system, diapason, design calc. 4=24310
 blower, dimensional analysis 4=2801
 coherent radiation with optical-acoustic maser effect 4=8966
 cylindrical shell in a moving medium 4=8324
 electromechanical systems, segmented, of ferro-elec. tubes, theory 4=24309
 flow, feedback mechanism, edge tones, choked jets, bird calls 4=8321
 Gaussian pulses, 0.3-300 msec, apparatus 4=274
 Hartmann-type, rel. to sonic drying 4=21250
 high-intensity sources, survey of basic types 4=5301
 implosions as sources of underwater sound 4=7820
 jet, periodic structure, effect of reflector on u.s. 4=276
 laser, ruby, Q-spoiled, for liquid transients 4=16107
 magnetostrictive, high-intensity waves in gases at 23.8 kc/s 4=5306
 noise source, farfield radiation pattern 4=27273
 phonon-maser postulated in α -quartz 4=6718
 projector materials, piezoceramic, press. effect on dielec. and piezoelec. props. 4=26117
 quartz, 600-1200 Mc/s 4=21232
 ship safety signals, audibility of 4=5300
 siren with noncircular holes and noncircular nozzle, Ohm's tone definition 4=2779
 stimulator for complex waveforms 4=24313
 ultrasonic sirens, gas jet, dual chamber 4=11299
 ultrasonic waves 4=14250
 ultrasound focusing device, solid resonant 4=14288
 underwater, power output, reverberation meas. 4=2799
- Acoustic impedance**
 flexural discs in rigid plane, self- and mutual-radiation impedance 4=21233
 foams, open-celled, effect of light coating on impedance and absorpt. 4=2786
 meas. with Zwislacki acoustic bridge, reliability 4=15975
 measurement, small objects, telephone equipment 4=5337
 pistons in cylinder, mutual radiation impedance and nearfield pressure 4=8326
 pistons in rigid baffle, mutual radiation impedance 4=27256
 Pritchard's array, coupling effect 4=24317
 quartz, prestressed, compliance, audio-frequency 4=15418
 in rigid-walled cylindrical sound channel terminated with active transducers 4=21241
 silica, fused, compliance, audio-frequency 4=15418
 sound projectors in array, anomaly 4=21238
 steel, sintered stainless, characts. 4=22487
 surface wave in nonuniform plane surface 4=11274
 Al, compliance, audio-frequency 4=15418
- Acoustic radiators**
 See also Doppler effect
 arbitrary shell in infinite fluid, anal. 4=2778
 cylindrical bar, ship propeller field excited 4=27257
 cylindrical shells, theory and exper. data 4=29706
 e.m. slotted-sphere aerial in plasma 4=30063-4
 earphones, effect on auditory threshold 4=23969
 elastic cylind. shell, from system of sources 4=14272
 elastic plate, excited by marine propeller 4=29707
 ferrite, temp. depend. of props. 4=24314
 high intensity hydrodynamic 4=14273
 hydrodynamic, cavitation phenomena, 4=24312
 impedance, shape var. 4=14269
 infinite plate, point force excited, power rad. 4=27254
 Lamb and Rayleigh waves, directivity diagrams 4=8323
 loudspeaker, air-modulated, appl. to environmental testing 4=5307
 monopole, radiation impedance near reflectors 4=18354
 ocean waves, r.l.f. 4=15862
 panels, vibr.-sound coupling below int. freq. 4=27255
 pistons in rigid baffle, mutual radiation impedance 4=27256
 plane, vertical in layered medium, field calc. 4=18355
 plate, rectangular, centrally excited, two mode types, and damping 4=14270
 Pritchard's array, coupling effect 4=24317
 random sources on plane, field spatial correl. 4=24025
 slender bodies of axisymmetric vibration 4=8322
 sphere, vibr., radiation non-linear effects 4=14288
 surfaces, vibr., sound radiation 4=24311

Acoustic radiators — contd

- theory 4=14271
- ultrasonic, high-intensity, low-porosity ferrites for use in 4=5298
- ultrasonic, 1 Mc/s, for high intensity generation 4=277
- underwater transducer calibration from nearfield data 4=27258

Acoustic receivers

See also Microphones

- array bearing angle variance in random transmission medium 4=27267
- array of hydrophones, discrimination factor in noise field 4=18359
- array, reception characts. in random medium 4=21237
- arrays in noise fields, detection characts. 4=27268
- arrays, symm., shading effects 4=21239
- ferrite, temp. depend. of props. 4=24314
- hydrophone, displacement 4=23716
- hydrophone, for 1500 m immersion 4=2783
- hydrophone, solid-core probe, sensitivity 4=27270
- hydrophones, calibration, at 16 000 lb/in² reciprocity coupler method 4=29717
- hydrophones, liquid-filled, sensitivity 4=18360
- multiplier-averager, output probability distrib. for partially correlated inputs 4=5335
- projectors in array, mutual impedance anomaly 4=21238
- thermionic diode for detection of weak fields in gases 4=11313
- ultrasonic waves 4=14250
- for ultrasonic waves, in air 4=29716
- underwater array, theory and design 4=27258

Acoustic resonators

- cavities, sound-flow interaction 4=18353
- circular cylindrical cavity, excitation by circular waveguide 4=21231
- damping, effect of steady air current 4=8331
- Helmholtz, double form, press. and temp. effects 4=21255
- Helmholtz, effect of shape of neck 4=24320
- for light, modulated 4=11312
- nonlinear, undamped, effect of neck length and wall absorption 4=5313
- quartz, non-linear, and fourth order elastic consts. 4=16179
- resonant cavity, excitation by ducts of small cross-sectional dimensions 4=21230
- sectional concentrator, freqn. calc. 4=14278
- tubes, dissipation, coaxial air jet excitation 4=11305
- Pb zirconate titanate ferroelectric resonators, small-signal parameters rel. to polarization state 4=28629

Acoustic streaming

- hysteresis near suspended sphere 4=16185

Acoustic transducers

See also Acoustic generators; Acoustic receivers;

Hearing aids; Microphones; Sound reproduction

- broad band constant beam width by shaping 4=11302
- calibration from near-field data, formulae 4=5303
- composite, electromechanical coupling coeffs. 4=2781-2
- depletion layer, analysis 4=24316
- design from loss distrib. in vibr. bodies 4=27241
- dielectric capacitance, sensitivity var. 4=21234
- diffraction consts. of suitable shapes 4=8342
- digital compressed-time correlators and matched filters 4=8328

Adhesion

- energy, rel. to cohesion energy and wettability 4=16099
ice, evaporation-condensation theory, data for -3° to -20°C 4=13661
ice to ice, down to -30°C, mechanism 4=7559
isopentane, for low temp. Na to PZT u. s. transducer bond 4=27272
liquids, smallest poss. value 4=24147
metal-semiconductor contact effects, Johnson-Rahbek 4=12877
metallic films on non-metallic substrates 4=2119
metallurgy, conference 4=7690
organic liqs. to steel Berthelot tube 4=11167
polymer films to high-molecular substrates 4=7401
polymers, luminescence diffusion study 4=4455
small particles on solid bodies 4=10597
steel (100μ)-Al (7μ), Cu (50μ) foils 4=1922

Adhesion — contd

- teaching, demonstration, glass plates, correct description of principles 4=16002
thin films to oxide substrates, scratch test meas. 4=30761
water to steel Berthelot tube 4=11167
Ag in friction with Ag, Ni and Cu, effect of chemical affinity 4=10369
Al (7μ)-steel (100μ) foils 4=1922
Al, vapour-deposited, on soda lime glass 4=10596
Cu in friction with Cu, Ni and Ag, effect of chemical affinity 4=10369
Cu (50μ)-steel (100μ) foils 4=1922
Ni in friction with Ni, Cu, and Ag, effect of chemical affinity 4=10369

Adsorbed layers

- chlorophyll-a and fatty alcohols, interaction in monomolecular films 4=25792
chlorophyll monolayers, fluorescence, ang. distrib. 4=28295
monolayer, kinetic eqn. 4=7714
monolayer with lateral interaction on heterogeneous surfaces, theory 4=7718
Raman spectra, rel. to bulk spectra 4=7100
surface diffusion in electric field 4=7715
water on silica gel, proton states by nuclear-transfer and spin-relaxation study 193° to 374°K 4=7731
Ge, on W, behaviour and desorption energy 4=15820
H₂O on mica, dielectric behaviour 4=21149
NH₃, on porous Vycor glass, dielectric absorpt., 23.5 Mc/s, 4=17293
O₂, on C, interaction of O₂ with free spin centres in C, paramag. res. study 4=20822
Sr on W, migration 4=23611

Adsorption

- See also Chemical analysis, adsorption; Chromatography; Films; Heat of adsorption; Sorption
alkali films on metal surfaces, rel. to electron emission process correl. 4=27559
alkali ions desorption from metal surfaces in vacuo 4=7724
alkali metal, vapour adsorption on metal surface 4=15828
amines on Ge, effect on surface charge 4=20364
amines on Ge, rel. to effects on transistor 4=20399
anthracene, of O₂, and thermoluminescence peak 4=20497
aromatic vapours on water surface 4=29616
atmospheric anhydrous secondary particles, ads. of water vapour 4=10714
atomic processes at gas-solid interface 4=13697
atoms, partially ionized, ("adions"), on metal surface 4=15828
bau charcoal, ads. of gases, 20.4° to 80°K, 10⁻⁹ to 10⁻² mm Hg 4=7726
benzene, on graphite, specific heat calc. 4=2132
binary gas mixtures, at 4°K 4=26719
binary vapour mixtures 4=23590
butanol and hexanol from aq. soln. 4=29610
capillaries, transient flow, time lag theory 4=5140
capillary systems, irreversibility thermodynamics 4=20818
carbon black, surface energy distrib. 4=23550
carboxyl group, spectrum, on metal oxides, as ionized 4=10618
charcoal, ads. of H₂O vapour, study using sorption balance and extensometer 4=10617
charcoal, n.m.r. relaxation of adsorbed H₂O 4=29193
chrome, ads. of polystyrene, rates of adsorption and desorption for 10⁻¹ to 10⁻⁴ mg/ml conc. 4=30888
condensation nuclei activity 4=26588
condensation nuclei isomorphous, "seed" formation, influence 4=26587
and crystal face growth changes, periodic bond chain theory 4=26582
crystal growth and melting, self-adsorption processes 4=10464
description meas. 4=10620
description, metals, of gas, meas. by elastic relaxation 4=10621
desorption, rubber, of gas, diffusion mechanism 4=4676
diamond, ads. of gas, rel. to friction in high vacuum 4=23152
diamond, semicond., (100) and (111) surfaces 4=26704
dispersion energy calc. 4=13689

Adsorption—contd

- dried skim-milk powder, water adsorpt. 4=2117
 dyes in solution, effects on reflection spectrum 4=16119
 effect on GaAs laser near-field emission patterns 4=24915
 effect on photo-exoemission 4=24732
 electron diffr. exam., low energy 4=7664
 electron emission, field, Fowler-Nordheim curves 4=3023
 ether mols. on Ge, effect on recomb. centres parameters. 4=20361
 equilibrium parameters, absorbent-binary gas mixture 4=15827
 fibres, hygroscopic, of moisture and desorption, convection 4=23597
 films, metal, of H 4=2133
 films, solidified gases, of H_2 , $\sim 11^\circ K$ 4=13686
 gases, data correl., low press., supercrit. temps. 4=29192
 gases, ionically induced, in high vacuum 4=10615
 gases, lattice liquid model 4=30885
 gases on Pt, electron diffr. study 4=23602
 on glass, i. r. spectrum obs. 4=7728
 graphite, ads. of I, 100° to $800^\circ C$, 0.01-15mm Hg 4=30889
 graphite, of inert gases, dispersion energy calc. 4=13689
 graphite, physical ads. of Ar and Kr, theory and expt. 4=23592
 ice nucleability on ZnSe 4=5457
 infrared spectroscopy of adsorbed molecules 4=30884
 intermediates in electrochem. catalysis 4=7760
 internal boundaries, and solid solution decomposition component redistrib. 4=26543
 ionospheric D-region, N oxide, rel. to positively charged particle prod. 4=10714
 isotherm equation selection 4=23591
 kinetic eqn. for monolayer 4=7714
 Langmuir isotherm, and saturation coverage and equil. const. errors 4=23594
 lattice liquid model, adaptation 4=26716
 layers, n.m.r. investigation, review 4=2127
 liquid, condensation nuclei dimensions 4=27163
 liquid-gas interface, and instability 4=21083
 liquid surfaces, of ions, study using and active recoils 4=8192
 mass spectrometer flash obs., gases 4=17845
 in metal solutions, Semenchenko molecular theory 4=8184
 metal surfaces, interaction forces with inert gases 4=26717
 metals covered by metal particles, atom and ion desorption energies 4=30887
 metals films, of Kr, Xe, and surface area meas. 4=13692
 methane from H_2 , $76^\circ K$, partial press. and effective ads. press. 4=13687
 micropotentials, discreteness-of-change 4=15829
 molecules, on silica and alumina far-i. r. spectra obs. attempts 4=12421
 mononitrophenols on solid surfaces, spectral reflectance 4=25711
 nonpolar liquids on metals, surface potentials 4=29191
 oil-water interface, ads. of surface-active molecules 4=18186
 photoadsorption on semiconductors 4=20816
 physical, significant structure theory 4=23592
 polar mols. on Ge, effect on surface props. 4=20793
 polyethylene-o-phthalate, on glass powder, Al_2O_3 , var. with mol. rot. 4=10622
 polymerized methacrylic acid on glass, i. r. spectrum obs. 4=7728
 powdered substrates, surface area of preadsorbed water 4=23548
 quartz, ads. of n-heptane, Van der Waals forces present between the two mols. 4=23603
 Saran charcoal, ads. of He^+ below $5^\circ K$ 4=13690
 Saran charcoal rods, ads. of water, rel. to elec. resistance and length 4=30604
 semiconductors, effect crystal imperfections 4=20792
 semiconductors, inorganic, ads. of O_2 , rel. to eye melanin free radical kinetics 4=20975
 semiconductors, surface props., conference 4=15528
 silica-alumina catalyst, surface energy distrib. 4=23550
 site-energy distrib. of surface det. from Ar adsorpt. isotherms 4=23550

Adsorption—contd

- from solution, batch, with description, resorption, general equation 4=10616
 from solution, mechanisms 4=17846
 thermodynamics rel. to crystal structure 4=7719
 transition metal oxides on alumina, surface configuration from Al^{27} n.m.r. 4=7342
 two-dimensional condensation, supersaturation phenomena 4=7721
 two-dimensional second virial coeff. 4=29190
 at very low press. using ultra high vac. techniques, study 4=7716
 water, ads. of foreign mols. on surface, evaporation enhancement, expt. 4=8517
 water, by solids in air, and dielec. prop. changes 4=20825
 water-gelatine[silica gel], rel. to long and short n. m. relax. time 4=28263
 water in mica crystals, adsorption energy rel. to crystal props. 4=7693
 water on alumina with adsorbed transition metal oxides, proton spin-lattice relaxation time 4=7342
 water on cellulose, effect on microwave permittivity 4=1656
 water vapour and gases on Ge, kinetics 4=20362
 water vapour by porous glass, strength and length changes 4=23544
 water vapour, on cell wall, rel. to i. r. absorption meas. 4=5247
 zeolites, ads. mol. e.s.r. 4=23613
 Ag, chemisorption of S on (111), (110) and (100) faces 4=26724
 Ag films, effect of gases on elec. cond. 4=7713
 Ag, of air, H_2 , effect on work function, and dipole moment 4=11683
 Ag, H adsorption, para-ortho conversion 4=23605
 AgI, adsorption of water vapour 4=23606
 Ag-Pd, of H from soln., Ag conc. effects 4=30893
 Al, of air, H_2 , effect on work function, and dipole moment 4=11683
 Al, H adsorption, para-ortho conversion 4=23605
 Al_2O_3 , colloidal, on SiO_2 4=23684
 Ar in Vycor glass and chromia gel, thermodynamics 4=20818
 Ar, on graphite, specific heat calc. 4=2132
 Au, of air, H_2 , effect on work function, and dipole moment 4=11683
 Au, on Mo, and desorption, radiotracer meas. 4=2130
 Au, vapour deposited on glass, ads. of O_2 , surface potential meas. 4=23598
 Au, H adsorption, para-ortho conversion 4=23605
 Ba on polycryst Au, photoemission characts. 4=24731
 Ba on Rh single crystal 4=30892
 Ba on Si and Be, rel. to secondary electron emission 4=11701
 BaO desorption from W by elec. field 4=7722
 C, activated, adsorption of CO_2 4=23553
 C, activated, adsorption of ethyl chloride 4=23553
 C, activated, adsorption of N 4=23553
 C, strong ads. of O_2 , interaction with free spin centres in C, paramag. res. study 4=20822
 on C surfaces, effect on surface area meas. 4=23551
 Ca ions, on quartz, rel. to pH and concn. 4=4672
 Cd films, rel. to conductivity and surf. potl. change 4=20326
 CdS single crystals, ads. of O, surface states 4=28421
 CO and N on polycryst. W, interactions 4=23607
 CO, on Ta, dissociation, O_2 field emission patterns 4=26726-7
 Cu, of air, H_2 , effect on work function, and dipole moment 4=11683
 Cu surfaces, impurities, crystallography 4=4671
 Cu_2O , ads. of air and water, rel. to luminescence and elec. cond. 4=1770
 Cu_2O , mag. susceptibility changes during adsorpt. of O and CO 4=23596
 Fe, cast, and polymorphisin, simulation by NH_4Cl on adding $NiCl_2$ 4=23273
 Fe films, of N_2 , effect on conductivity and work function 4=7727
 Fe, molten, ads. of N_2 4=21111
 Fe powder, H^+ and OH^- aqueous ions, ads. isotherms 4=4674
 Ga, by Zn, and diffusion 4=26729
 GaSb, ads. of oxygen 4=4673

SUBJECT INDEX

Adsorption — contd

- H and D on glass, at 20° and 17°K 4=13688
 H atom on crystal surface, i.r. spectrum 4=2131
 H, on Ni, rel. to elec. and mag. props. 4=6929
 H, on Ti, effect on two-quantum annihilation 4=28433
 H₂, isotopic, at low temps., theory 4=23595
 H₂ on transition metals, rel. to hydride phases 4=10619
 HCN, DCN, spectrum, on metal oxides, as crystalline HCN 4=10618
 HCN on NaCl, CsCl, NaI films, bonding 4=29198
 He³, liquid and solid, spin-lattice relaxation time 4=14492
 He³, liquid struct. of layer 4=21384
 He³ on Pyrex, nuclear relaxation 4=7350
 He³, by zeolite, specific heat, 0.1-1.4°K and nuclear spin orientation 4=14506
 Hg, by Zn, and diffusion 4=26729
 Hg²⁰¹ on quartz, nuclear relaxation in Hg 4=6493
 H₂O, and condensation, effect of formation of liquid embryos 4=10718
 H₂O and Xe on porous glass 4=10630
 MgF₂ thin films, formation, adsorption theory 4=29122
 MnO₂, ads. of Zn ions, action of OH groups 4=7701
 MnO₂, of O₂, chemi 4=20823
 Mo, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
 Mo, adsorption-desorption of H₂ 4=23608
 Mo, chemisorption of N₂ 4=13694
 Mo, desorption of CO, O⁺ by slow electrons 4=23599
 Mo, desorption of F⁻, and work function change 4=13691
 N and CO on polycryst. W, interactions 4=23607
 N₂ from H₂, 76°K, partial press. and effective ads. press. 4=13687
 Na, liq., by El-437B alloy, effect on deform. 4=23185
 NaCl crystal growth, at crystal-solution boundary 4=20736
 NH₃, influence of solid adsorbent on inversion vibration 4=6582
 NH₃, on porous Vycor glass, orientation relax. time and pot. barriers 4=17293
 NH₃ on Vycor glass, i.r. study 4=20817
 NH₄Cl, ads. of NiCl₂, crystal habit change of NH₄Cl 4=29027
 NH₄Cl, of NiCl₂, and polymorphism, simulation of cast iron 4=23273
 Ni, ads. of CO and its interaction with O₂ 4=20820
 Ni, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
 Ni, ads. of O₂, rel. to surface interaction 4=7702
 Ni films, of CO, var. thickness, temp., from elec. cond. 4=17847
 Ni films, of H, and mag. moment 4=4365
 Ni films, of N₂, effect on conductivity and work function 4=7727
 Ni of H, var. with pressure, from mag. susceptibility 4=2128
 Ni powder, H⁺ and OH⁻ aqueous ions, ads. isotherms 4=4674
 O, by Fe, Mo, Ni and work function change 4=19076
 O₂ and water vapour on Ge and Si, effects 4=20795
 O₂ on rutile, effect on photo-cond., -volt. props. 4=22800
 Pd, of H, effect on work function, photoelectric meas. 4=8794
 Pt and C-supported Pt, ads. of H₂ and O₂ 4=26721
 Pt on alumina, gas adsorption, effect on L₃ X-ray absorpt. edge 4=7152
 Pt of chloride and phosphate anions, with desorpt., multipulse potentiodynamic meas. 4=30890-1
 Re, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
 S, of H₂O, destruction of photoelectrets 4=4219
 S surface, ion trapping, water vapour effect 4=23604
 Si crystal, etched, vapour adsorption 4=26722
 Si, ads. of O₂, e.s.r. obs. 4=26723
 Si and Ge, monolayer ads. of O, I, H, P, electron diffraction study 4=20824
 SiO₂, colloidal, on Al₂O₃ 4=23684
 ThO₂, n.m.r. study 4=26728
 TiO₂, of O₂, temp. var. 4=23612
 UO₂, sintered, as cause of resistance anomaly 4=4205
 W, ads. of Cs ion, linear var. of adsorption energy with work function 4=29196
 W, ads. of H, detection difficulty in ion microscope 4=613
 W, ads. of N₂ and CO, sticking coeff., effect of surface coverage and temp. 4=17849
 W, ads. of N₂, surface potential 4=29199

Adsorption — contd

- W, ads. of N₂, rel. to surface potential 4=11687
 W, adsorption-desorption of H₂ 4=23608
 W, chemisorption of N₂ 4=4702
 W, chemisorption of N₂, study with field emission microscope 4=13695
 W, desorption of H₂, O₂, and CO by electrons from field emitter points 4=23609
 W, desorption of K, in elec. fld, 77° to 1050°K 4=4675
 W filament, chemisorption of O₂, detector using work function prop. of W 4=10683
 W, thermal desorption of Ne, Ar, Kr, Xe 4=13693
 W, of K, and desorpt., temp., K flux var. 4=23610
 ZnO, ads. of O₂ 4=10623
 ZnO-Au, ads. of methyl free-radical, rel. to contact potential 4=6992
 ZnS-CdS:Cu, of H, and luminescence change 4=7193
 Zr, of Br⁻ and SO₄²⁻, Zr surface treatment effects 4=13696
 Zr, of phosphate ions, P³² tracer meas. 4=4677

 boundary layer flow, acoustic control 4=5225
 calculations, finite difference net methods, review 4=18225
 conducting gas flow, M² and thin-wing expansion methods 4=30041
 disk in free fall, steady and unsteady motions and wakes 4=11151
 drag in nearly-free mol. flow 4=29660
 flat plate, resist. in supersonic rarefied gas flow 4=14200
 flow in Laval nozzles, rel. to sub-supersonic transitions 4=8309
 flow of gas around blunt body, delayed vibration excitation 4=18227
 grid-produced turbulence, final-stage decay 4=5226
 group theory appl. to one-dimensional problem 4=24253
 heat exchange and gas dynamics, conference 4=8230
 hypersonic flight, wind tunnel meas., gas density distrib. meas. 4=14198
 hypersonic flow past slender cone 4=18228
 hypersonic flow round circle or sphere in mag. field 4=21642
 jet calc. 4=18230
 jet impingement on dust-covered surface 4=18124
 magnetoaerodynamic flow past thin cylinder 4=5776
 nose cone travelling in mod. rarefied atmosphere, shock layer flow 4=11288
 perturbations, time expansion, stability, approx. 4=11221
 plate motion in own plane in fluid, impulsive 4=29652
 puck, air supported, theory 4=14201
 Scout rocket, aerodynamic noise meas. 4=221
 shock reflection obs., 0.1 μsec risetime pressure gauge 4=16006
 shock wave flow round obstacles, approx. calc. 4=14197
 shock waves, two-dim. problems, finite difference system 4=14255
 simpler eqns., approximations, discrepancies 4=14199
 stagnation flow, subsonic, thin-aerofoil theory 4=215
 stellar atmospheres, compressible, waves 4=10822
 tail shock formation in supersonic flight 4=29659
 uniform flow past wedge 4=27205
 variational problems, discontinuous solutions region 4=8231
 viscosity effects on equations 4=18226
 wind tunnel, shock-tube driven, mixing chamber for combustion gases 4=21169

Aerosols

See also Foams

- acoustic wave drift towards obstacle 4=26766
 acoustic wave effects, characteristic number 4=15850
 in atmosphere, charge distrib. 4=29300
 atmospheric 4=10698
 atmospheric, CO₂ values, effect of air filtering 4=29269
 atmospheric dust, fall effect on diffusing cloud growth 4=26791
 atmospheric layers, twilight scattering 4=29268
 charge analyzer 4=23683
 coagulation chamber, acoustic air-jet generator 4=11300

Aerosols—contd

- in diffusing gas mixtures, forces on 4=2169
- diffusional phoresis 4=10658
- dioctyl phthalate, coagulation 4=4717
- light scattering and polarization by particle, rel. to atmospheric optics 4=15871
- light sensitive, in air, diffusion separation 4=4755-6
- particle motion in two-component gas under temp. and conc. gradients 4=7782
- particle-size classifier, diameters $< 50\mu$ 4=4999
- particle size distrib., calc. from spectral transparency 4=7783
- particle weight meas. by electron diffrs. 4=4718
- radioactive, atmospheric, α emitting 4=7863
- radioactive, from nuclear tests, review 4=7862
- scattering, light, astronomical appls. 4=18427
- size distribution meas., by wall diffusion decay 4=7785
- and sky brightness, calc. 4=29292
- sky radiation scatt., polarization rel. to size distrib. 4=23759
- spectroscopy, light source using modified Maekkev arc 4=8435
- Stokesian particles, motion in turbulent flow 4=2636
- thermophoresis 4=23682
- trapping of particles on stationary cylinder 4=14193
- ultrasonic ejection from fountain jet, with splash formation 4=8160
- ultrasonic formation 4=8353
- water mists, near i.r. scattering indicatrix 4=29236
- X-ray analysis, exploding wire aerosols 4=10659
- Al, coagulation in acoustic field, 300 to 3000 c/s 4=7781
- Pb iodide on supercooled fog, crystallizing action 4=13790
- Pb, melting 4=24436
- ZnO smoke, electron diffraction patterns for hard and soft electrons, recoil effect 4=7784

Ageing

Air

See also Atmosphere

- absorption, acoustic, var. humidity 4=14215
- acoustic absorption and dispersion, humidity effect 4=8253
- adsorption by Al, Ag, Cu, Au, effect on work function, and dipole moment 4=11683
- air-CO₂, binary diffusion coeffs. 4=24267
- arc channels, afterglow tails and stability 4=21491
- arc channels, high-density nsec, afterglow tails 4=11558
- arc, electric, effect as atmos., on emission 4=488
- arc, high-current, magnetic deflection 4=18773
- arc, movement in transverse mag. fld. 4=18779
- blast waves in TNT explosion, velo. 4=24308
- breakdown in crossed elec. and mag. fields, low-pressure 4=18749
- breakdown, electrical, in spark counters 4=19328
- breakdown, electric, long gaps, voltage and time lag 4=14604-5
- breakdown formative time lags in pressurized spark gap 4=18759
- breakdown, impulse, characteristics in non-uniform fields 4=21488
- breakdown in homogeneous field, transition from multi-to single-avalanche mechanism 4=21487
- breakdown, moist and dry states in wire-plane and point-plane gaps 4=18748
- breakdown, negative impulse, in large sphere-plane gaps 4=18746
- containing Hg and Xe ions, charge exchange cross-sections, meas. 4=27491
- cooling of irradiated specimens, computer programme for calc. 4=2866
- cooling of Pt filaments 4=10034
- corona discharge, negative, secondary electron emission 4=14613
- discharge, prebreakdown, atm. pressure, between point and plane 4=18695
- dispersion, optical, and max. laser bandwidth 4=27339
- effect on work function of Al, Ag, Cu, Au 4=14741
- elec. breakdown, effect of dielec. film on electrodes 4=29641
- electric discharge in, at 3.2 Mc/s, localization by quadrupole mag. field 4=24646

Air—contd

- electrical discharge, in high-speed flow 4=2959
- electric discharge, in supersonic flow 4=470
- electric discharge, standing wave 4=24605
- electron attachment, 3-body process 4=24560
- e.m. wave propag. in damp and dry air 4=3145
- electric breakdown, 20-15 000 c/s discharge 4=16452
- heat transfer, through a laminar layer, var. dissociation 4=5242
- infrared continuum, 2-8 μ , at high temp. 4=2732
- injection of He, Freon-13, thermal diffusion effects 4=5221
- ion recombination, initial 4=5566
- ionization relaxation time behind shock waves, meas. 4=448
- liquefaction, Linde process, thermodynamics 4=11434
- liquid, viscosity 4=5161
- microwave attenuation of shocked, heated air 4=16173
- moist, virtual temperature and pressure 4=7825
- Mollier diagram, transformation for enthalpy-composition diagram 4=8531
- neutron distrib., ground-air interface effect, first-last collision model 4=21861
- noise spectra in electrodeless discharge in air, irradiation influence 4=468
- plasma spectrographic analysis 4=18856
- pressure meas. at various temps., radiosonde 4=7832
- proton beam, fast, discrete energy losses 4=11517
- shock-front compressed, in tubes, light emission 4=16172
- shock waves, directed, in intense sparks 4=8660
- shock waves, e.m. wave reflection in waveguide 4=30048
- shock waves, luminosity extinction against transparent surfaces 4=11295
- shock waves, microwave attenuation 4=18333
- shock waves, weak, refl. at acoustic absorbers 4=268
- shocks, Kramer's and line radiation 4=19943
- smoke content, filter-paper method of estimation 4=7822
- spark breakdown, formation stage, point-to-plane gap 4=18756
- sparks, formative time lag meas. 4=8657
- sparks, temp. fall from 50 000° to 5000° K 4=8659
- spectral absorption coeff. at high temps. 4=15327
- spectrum, i. r. continuum, high temp. 4=27222
- thermal cond. tensors calc. for weak ionization 4=11525
- transmission, heat, near water vapour bands 4=12471
- viscosity, capillary flow viscometer for temp. depend. meas. 4=5216
- viscosity prediction using real gas state eqn. 4=24263
- viscosity, sophomore-laboratory expt. 4=21161
- CO₂ conc., volumetric det. in light and darkness 4=4755-6
- N₂ and O₂ electronic transition moments, 4000° to 9000° K 4=9700
- CO₂ free, electron diffusion cross-section, calc. 4=29873
- N₂ and O₂ binary mixture, relax. of vibr. energy behind plane shock wave 4=30438
- Pt, accommodation coeff. rel. to pressure 4=27218
- U activity, 2 π gas-flow α -counter 4=25215

Airglow

- dayglow, OI, 6300 Å, var. with height 4=13824
- different categories, rel. to planetary dayglow 4=7977
- during eclipse, solar, visual and i. r. 4=13822
- enhancement by nuclear explosions, electron heating by hydromag. waves 4=13823
- and ionospheric f_oF_2 and $h'F_2$ for zenith air glow 4=7884
- and ionosphere foF_2^o , $h'F$ 4=26825
- lunar time variations in O green line 4=7885
- Lyman α brightness, rel. to neutral H up to 10 earth radii 4=23773

Airglow—contd

- Martian, source, emission rate and apparent brightness, estimates 4=29429
 night, and twilight, spectrophotometric study, OH, Na, H lines 4=7882
 nightglow, emission during periods of polar cap absorption 4=30938
 nightglow and ionospheric sounding obs. compared, O₂ scale height 4=7926
 nightglow, dayglow, twilight-glow, review 4=13819
 nightglow, effect of solar flares on [OI] green line 4=29315
 nightglow, geocorona, Lyman α scattering 4=2228-9
 nightglow, H emission, concn. to ecliptic and radial velocities^a 4=23785
 night glow, intensity and frequency, rel. to upper atmospheric transport equations 4=10733
 nightglow, 5577A emission, height of layer by statistical triangulation 4=7883
 nightglow, Na D lines, chemiluminescent reaction 4=2227
 night glow, nocintograph, nocturnal intensity recorder 4=10744
 nightglow, O green line intensity, solar cycle variation 4=23786
 night glow photometer, calibration 4=20862
 night, "hot" Lyman- α as Galactic 4=29410
 night, O green line, var. with sunspot number 4=13827
 night, spectrum, photoelectric errors 4=29314
 obs. during eclipse (20 July 1963) 4=29312
 polar cap, effect of terrestrial ambium 4=4785
 polar cap glow 4=30938
 polar glow, $I(\lambda 5577)/I(\lambda 3914)$, effect of solar cosmic rays 4=30941
 zodiacal light, polarization obs., effect on 4=4896
 review, earth and other planets 4=13820
 spectra due to Na, K, Li 4=29313
 spectra from far-u. v. rocket spectrophotometry 4=10940
 twilight glow, OI 4=4864
 twilight, Na doublet, photometry 4=17925
 twilight, Na layer heights 4=23784
 5577 A(OI), diurnal variation 4=20861
 6300 A, twilight behaviour, Townsville, Australia, June-Oct. 1962 4=4787
 O I 6300A, luminosity profile with varying scale height 4=17924

Algebra

- Baker—Hausdorff and Magnus theorems, global validity 4=11
 Clifford 16-fold, manipulation and use 4=5748
 image algebra, rel. to crystallog. Patterson functions 4=23363
 Kemmer, connection with unitary groups 4=19384
 quantum field theory formulation 4=24960
 von Neumann, for local observables of free scalar field 4=9042
 von Neumann, generated by field operators 4=5013
 von Neumann, lattice, assoc. with free Bose field 4=3275

Alignment

- interferometer method 4=8008
 optical 4=18015-6
 optical device, electric read-out 4=18017

Alkali metals

- See also the individual metals
 airglow, atmos. spectra 4=29313
 in alcohol solns., property fluctuations, light scatt. study 4=24174
 atom reactions with excited neutral particles, mass spectrometer investig. 4=26736
 atoms, in inert-gas solids, g-factors calc. 4=9821
 atoms, resonance charge-exchange collisions 4=30394
 atoms, trapped in solid inert gases, e.s.r. meas. 4=9819
 atoms, with microsecond lifetimes, autoionizing states 4=3783
 atoms, Zeeman D-doublet pumping, collision allowance 4=6468
 boiling pts. calc. 4=365
 corresponding states behaviour 4=24460
 crystal dimensions and energy, rel. to gaseous ions 4=25801
 desorption of ions from metal surfaces in vacuo 4=7724
 discharges, high-pressure, radiation characteristics 4=18709

Alkali metals—contd

- elastic shear moduli, from binding theory 4=6681
 films, adsorbed on metal surfaces, electron emission processes, correl. 4=27559
 gaseous, elec. cond. high press. with free valence electrons, calc. 4=11644
 gases, conductivity, thermal meas. 4=5243
 halides, d.c. cond. meas., 20°-200°C instrumentation 4=28518
 halides, fused, thermodynamic props. calc. 4=29621
 halides, Hall mobility, electron, temp. var., and F centres 4=30644
 heats of mixing of binary mixtures 4=11182
 ion—atom charge exchange with earth metals, velo. var. 4=16430
 ionization rate consts. in CO flames 4=2946
 ions, backscattering from metal surfaces rel. to temp. 4=8854
 liquid, electrical resistance rel. to specific volume 4=14182
 liquid solutions in other metals, 4=8165
 magnetic suscept., electronic, nonoscillatory 4=18102
 molecules, gyromagnetic ratio 4=30422
 molten, pressures, flow rates and levels meas. 4=8147
 n.m.r., Knight shift, ion potential thermal vibr. effect 4=20607
 nitrates, heat of soln. in fused alkali nitrates 4=29622
 with organic halides, diffusion flames, chemiluminescence and radical reactions 4=22406
 oxide cathodes, pot. distrib. 4=29963
 oxides, dissociation energies 4=30483
 pressure, flow rates and levels, meas. methods 4=8892
 in quartz, as impurity imperfections, and dielectric, props., temp. var. 4=12739
 spectra, atomic, satellites due to inert gas atom oscs. 4=25494
 spectra, pressure shift of high series 4=3782
 surface ionization, heat of evap. of positive ions 4=27476
 surface ionization meas. on heated Wand Pt surfaces 4=2511
 vapour adsorption on metal surface 4=15828
 vapour atmospheres, effect on pyrometric meas. 4=5429
 vapour, detection of polarization 4=3801
 vapour, optically oriented, spin relax. 4=14223
 vapour pres. meas. at high temps. 4=2899
 vapour pressure meas., 10⁻⁵ to 10⁻² mm Hg 4=373
 vapours, critical parameters, effect of dimerization 4=21366
 vapours, magnetometers, automatic freq. control, and atomic oscillator types 4=21616
 vapours, photoionization and ion recomb., calc. 4=15297
 vapours, pure, non-equilib. ionization, in MHD generators 4=18663
 K, Rb, Cs atom reactive scattering with Br₂, I₂, ICl, IBr molec. beams 4=28288
 Li, Na, K in twilight airglow 4=23782
- Alkali metal compounds**
 See also the compounds of the individual metals

 antimonides and Bi cpds, photoelectron energy distrib. 4=3028
 chlorides, molten, viscosity 4=5159
 chlorides, 0.96-3 mm rotational spectra 4=17277
 cleavage cracks, healing 4=23116
 cyanides and halides, zone-melting apparatus 4=23324
 cyclotron resonance, Fermi-liquid effects calc. 4=17412
 fluoberyllates, vibr. i. r. absorpt. spectra, BeF₄²⁺ ion 4=10161
 fluorides, n.m.r. shifts of F 4=23067
 fluorides of Na, K, Rb, Cs, vibrational constants from i. r. spectra 4=9727
 fluorides, thermal expansion 4=3996
 fluorides, thin films, optical consts. in far u.v. 4=22820
 germanates, molten, containing oxides, viscosity 4=162

Alkali metal compounds—contd

- halide admixtures, line scattering images 4=15598
 halide crystal elastic constants, third order, ion force calc. 4=7409
 halide crystals activated by Hg-like ions, luminescence centres, polarization 4=9998
 halide crystals, growth in various gas atmospheres 4=26589
 halide crystals, optical absorption edge structure, theory 4=4250
 halide crystals, reversible plastic-flow stress changes on illumination 4=13392
 halides, α -irradiated, thermoluminescent kinetics 4=13084
 halides, binary mixtures, constitution and micro-struct. 4=23520
 halides, colour centres, F, e.s.r. study, 20-300°K 4=4080
 halides, colour centres, M, F band origin 4=22635
 halides, compressibility and volume, temp. variation 4=1401
 halides, containing U-centre, photoconductivity 4=4226
 halides, crystal growth, impurity precipitation, effect of growth atmosphere 4=7546
 halides, crystal growth, Kyropoulos method, apparatus 4=10466
 halides, crystal lattice cell cohesive energy 4=6678
 halides, crystal structure, stability, for three body interactions between ions 4=17745
 halides, crystalline solubility determ. from inter-diffusion 4=20692
 halides, crystallization, supersaturated solns., latent time 4=4525
 halides, crystals, electric field gradient due to strains, gradient-elastic tensor 4=15396
 halides, crystals, lattice distortion round impurity ions 4=26446
 halides, dislocation multiplication by h.f. vibs. 4=1482
 halides, dislocation structure and internal friction, rel. to h.f. vibrations 4=1479
 halides, doped with Ag ions, reduction of Ag ions, influence of vacancies 4=15470
 halides, elastic consts, third order, electrostatic part 4=28375
 halides, elec. conductance under pressure, Walden's rule 4=27193
 halides, elec. conductivity induced by electron bombard. 4=22759
 halides, elec. field gradient near F-centre 4=26448
 halides, e.s.r. of MnCl_2 in molten systems 4=11215
 halides, Eu^{2+} in crystals, absorpt. and fluorescence spectra 4=15611
 halides, F and M-centre prod. and destruction by X-rays 4=12807
 halides, F-centre ENDOR spectrum 4=26447
 halides, F-centres, phonon scatt. and heat cond. 4=6761
 halides, fluorescence of O_2^- 4=17605
 halides, γ -irrad. hardening 4=15699
 halides, growth of high-purity crystals 4=13529
 halides, hard and neutron irrad., effect on mechanical props. 4=10352
 halides, impurity ions, lattice distortion theory 4=4040
 halides, internal friction and Young's modulus, rel. to plastic deformation 4=1923
 halides, ionic crystals, colour centres, props 4=28496
 halides, irradiation stability, rel. to divalent impurities 4=6895
 halides, light scattering, rel. to temp. 200°-1000°K 4=28712
 halides, liquid, hard sphere dia., from thermal expt., surface tension, compress. 4=18173
 halides, luminescence, on impacting SiC or metal 4=1765
 halides, optical lattice absorption and reflection 4=22842
 halides, phonon and zero-phonon optical absorpt. lines 4=22843
 halides, plastic deform., charge flow analysis 4=22755
 halides, polymorphism, Born model, necessity for separate repulsive parameters 4=4519
 halides, positron annihil., spectra analysis 4=15465
 halides, positron annihil., three-quantum, meas. 4=20259
 halides, Sm^{2+} activated, spectra at 4.2°K 4=22887
 halides, specific heat, Debye temp., from X-ray reflection intensity, temp. var. 4=4249

Alkali metal compounds—contd

- halides, specific heats, 0.5° to 1.5°K 4=9857
 halides, spectra, far u.v., and struct. changes on melting 4=16292
 halides, spectra, u.v., and crystal excitons 4=13020
 halides, spectrum, u.v., discontinuity on melting 4=5452
 halides, strength electric, review 4=1647
 halides, thermal expansion at low temp., expt. 4=17369
 halides, thermoluminescence and thermally stimulated conductivity, model 4=10210
 halides, thermoluminescence effect of Tl, glow curves and emitted spectra 4=10209
 halides, vacancy production by Varley mechanism, efficiency, theory 4=9947
 halides, zero-phonon transitions of colour centres 4=6886
 hexafluorophosphates, dynamic structure, n.m.r. study 4=2067
 hydrides, positron annihilation 4=28436
 hydrides, U-centre absorpt. rel. to fundamental absorpt. bands 4=17551
 hydroxide solutions, proton n.m.r. shifts of H_3O^+ and OH^- 4=5212
 liquid, surface tension, appl. of Lennard-Jones-Devonshire theory 4=143
 nitrates, liquid, + ion diffusion and mobility 4=27166
 oxides, dissociation energies, meas. 4=28267
 oxides, molten, structure from density meas., 1050° to 1500°C 4=24163
 thionates tetra, spectra, absorpt., i.r., and SO_2 vibr. 4=1716
 Br^{81} in alkali bromides, chemical shift and spin-lattice relaxation times 4=13339
 Cl^{35} in alkali chlorides, chemical shift and spin-lattice relaxation times 4=13339
 F-centres, e.s.r. 4=1529
 I^{127} in alkali iodides, chemical shift and spin-lattice relaxation times 4=13339
 LiCl-NaCl-KCl , surface ionization, mass spectrometer successive detection of + and -ions 4=27490
 O_2^- ion, hindered rotation, phonon-induced tunnelling 4=9822

Alkaline earth metals

See also the individual metals

- atoms, dipole polarizabilities, from osc. strengths 4=12360
 ion-atom charge exchange with, alkali metals, velo. var. 4=16430
 liquid solutions in other metals, binding energy pair model. 4=8165
 spectrochemical analysis, plasma jet source 4=10672

Alkaline earth compounds

Alloys

See also Crystal structure, atomic, alloys; Solid solutions; Steel; and under compounds of the individual elements. Alloys such as Au-Cu, Au-Cu, Au-Cu-Zn are indexed under compounds of the first-named element, i.e. Gold compounds in these examples

ageing, "denuded zone" formation, 2 theories, electron probe test 4=30755

ageing, X-ray scattering by intermediate layer between matrix and Hinde-Preston zones 4=20775

Al₂Ni-type alloys, decomposition, initial stages, rel. to coercive force 4=17751

Alnico, crystal structure and mag. props., connection 4=1850

Alnico-Cu (0-9 at. %), mag. coercivity, crystal struct. 4=17645

Alnico 5, phase transform., α - γ 4=23251

Alnico, mag. props. var. Fe 4=26692

Alnico, structure, max. Al phase identification 4=26692

Alnico-type alloys, decomposition, initial stages, rel. to coercive force 4=17751

Alnico-type, structural studies, replicating technique 4=13631

antiferromagnetic, ordering and magnetization processes 4=29000

antiphase domains, observation 4=7472

ANKO-4 alloy, crystal structure at 750-900°C 4=17806

Armco Fe, mosaic block size from X-ray diffraction line width 4=4648

binary, diffusion, intrinsic coeffs. 4=9980

binary, elastic constants, ordering depend. 4=13361

binary, mutual exclusion of intermetallic phases 4=13465

binary, non-ordering, elec. resistivity 4=1556

binary, ordered, elastic vibrations, freq. spectrum 4=17340

binary, self-diffusion activation energies 4=22605

brass, β , martensitic phase, crystal structure 4=10526

brass, in Cu rods, mutual diffusion, effect of press., rel. to diffusion-induced porosity 4=15486

brass, diffusion, β layer growth vs. α couples 4=6868

brass, fatigue under alternating torsion 4=1939

brass grains, bombard. target, ion and electron emission 4=8826

brass target, bombard. by brass and quartz grains, ion and electron emission 4=8826

α -brass, n enhanced diffusion, flux independ. 4=28479

α -brass, transformations, undeformed specimens 4=26571

β -brass, order-disorder, diffusion coeff. 4=17422

α -brass, wear, frictional, and crystal plane orientation 4=13393

chemical analysis, by neutron activation, intermetallic compounds 4=10680

Coelinvar, Curie temp., press. depend., up to 20 kb 4=17652

conductivity, elec., Matthiessen's rule, impurity incoherent electron-phonon scatt., no effects 4=28525

Constantin, cond., elec., 10-380°K, wires 4=12849

for creep and fatigue props at high temp. 4=26474

crystal growth, mag. and high m. p. 4=7537

crystal imperfections, stacking, in- and extrinsic distinction by electron microscope 4=6861

crystal lattice vibr. spectrum and X-ray diffr., temp. var. 4=6699

crystal struct., effect of heat treatment below recrystallization temp. 4=20630

crystallization in binary eutectic systems 4=30862

dilute, magnetism, review 4=20513

disordered, residual elec. resist., quantum theory 4=4109

disordered systems, energy spectra, fundamental theorems 4=28391

ductility and strength, current and future research, Russian assessment 4=13373

duralumin, ultimate tensile strength, temp. depend., effect of plastic deform. 4=28936

elastic consts., effect of heat treatment below recrystallization temp. 4=20630

electric cond., effect of short-range spin correl 4=1554

electronic structure theory 4=22538

El-437B, effect of liq. Na adsorpt. on deform. 4=23185

Elinvar, Curie temp., press. depend., up to 20 kb 4=17652

f. c. c., A-B and A₂-B types, antiphases theory 4=10414

film preparation by sputtering 4=20798

films, prep., comp. and optical props. 4=23569

Alloys—contd

elec. resistivity, local order rel. to interference effects 4=25998

electron microscope obs., at 10°V 4=29158

emissivity, high temp. measurement 4=14444

equilibrium order parameters, quantum and class. theory 4=10413

eutectics, lamellar, freezing and entropy prod., theory 4=5449

eutectic, microscopy of decoated interfaces 4=8504

Evanohm, cond., elec., 10-380°K, wires 4=12849

ferromag.-non-mag., miscibility gaps and Curie point, calc. 4=13466

ferromagnetic, crystal orientation, by etch and powder figures 4=7526

ferromagnetic, dilute, electron impurity scattering 4=4108

ferromagnetic, elec. resistivity, theory 4=26001

ferromagnetic, f. c. c., ordering theory 4=15634

ferromagnetic, Fe₃Al-type, ordering 4=17759

ferromagnetic, h. c. p. lattice, ordering and magnetization 4=22965

ferromagnetic, neutron effects, Italian I. E. N. G. F. work 4=22953

ferromagnetic, ordering and magnetization processes 4=29000

freezing, stability of planar interface 4=11404

γ -brasses, phase transformations at 250°C, 500°-650°C, and 700°C 4=10420

i. r. absorption, rel. to Bloch electron theory 4=1718

Inconel, oxidized, heated to 1000°C, spectral emittance 4=14443

intergranular segregation 4=4636

intermetallic cpds, crystal structure, single-map technique 4=23377

internal friction, theory and effects, book 4=7372

Ising model, statistical theory, Gaussian average method 4=1966

Ising model, two-dim., Kramers-Wannier duality as Poisson's summation formula 4=18079

Ising model with weak interplane interact., thermodynamics 4=12637

Ising spins, random, cluster expansion theory 4=20511

Karma, cond., elec., 10-380°K, wires 4=12849

Laves phases, thermochemistry 4=10418

liquid, infiltration of Fe 4=8144

magnetic states, localized, rel. to s-d exchange 4=9877

manganin, cond., elec., 10-380°K, wires 4=12849

metallic, dilute and conc., conference 4=10407

metastable, preparation by vacuum evaporation 4=10422

mixing, e. m., by passing current in e. m. field 4=23996

neutron diffr. exam., mag. spin arrangement, review 4=17615

neutron scattering, lattice distortion effects 4=2064

Nichrome thin films, electrical props. rel. to crystal structure 4=10030

Nimonic 80A, relaxation creep 4=23190

noble metal dental, X-ray spectrometric analysis 4=15856

noble metal-magnetic impurity alloys, resistivity anomalies 4=28523

order-disorder, vacancy conc. and diffusion 4=17422

ordered, diffusion of interstitial atoms 4=1509

ordered, elec. cond., theory, review 4=1555

ordered, interdiffusion, theory 4=1510

ordered, X-ray and neutron scatt., theory, review 4=2062

ordering, in β -brass type lattice, quasichemical model 4=1880

ordering, dislocation structure 4=22583

ordering in f. c. c. alloys, statist. theory 4=13467

ordering, strengthening mechanisms, dislocation movement 4=22582

ordering, X-ray investig., review 4=1979

oxidation at low press., gravimetric determ. apparatus 4=13711

paramagnetic, resistance in mag. fld. rel. to magnetic resistance 4=12846

Permalloy, ferromag. films, comments 4=23564

Permalloy film, longitudinal Kerr effect 4=4265

Permalloy films, domains, reversed, nucleation and growth study using partial switching 4=23003

Permalloy films, ferromag. reson. at 36 kMc/s 4=7307

Alloys—contd

- Permalloy films, ferromagnetic relaxation, u.h.f. absorpt. in l.f. field 4=1827
- Permalloy films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
- permalloy, films, mag. anisotropy dispersion 4=26326
- Permalloy films, mag. annealing 4=20549
- Permalloy films, mag. domain structure, dense-banded 4=7281
- Permalloy films, mag. ripple calc. 4=23000
- Permalloy films, magnetization reversal process 4=23002
- Permalloy films, meas. of anisotropy dispersion 4=1817
- Permalloy films, on Ni mag. props. 4=7283
- Permalloy films with rot. initial susceptibility, mag. props. 4=23006
- permalloy, films, vacuum-deposited in mag. field, mag. anisotropy, field orientation depend. 4=26325
- Permalloy, mag. initial susceptibility and elec. cond., stress and heat treatment effects 4=7282
- Permalloy, magnetic films, aging and stabilization 4=13212
- Permalloy magnetic film flux reversal at low temps. 4=13218
- Permalloy magnetic films, hysteresis, anisotropy, n, He^3 effects 4=13216
- Permalloy magnetic films, stress effects 4=13211
- Permalloy, magnetization, 4. 2-100°K, and spin wave theory 4=13210
- Permalloy, magnetostriction, var. with plastic deformation 4=1837
- Permalloy (95% Ni), mag. stripe domain obs. 4=23005
- Permalloy, switching, effect of pulsed mag. fields rise time 4=23004
- Permalloy—Mo magnetic film props. 4=13213
- Permalloy—Mo, 79-5, hysteresis squareness increase on electron irradi. 4=13217
- Permalloy—Mo, 79-4, hysteresis squareness, and crystal struct. 4=13215
- Permalloy—Mo, 81. 3-6, hysteresis, square loop 4=13214
- permanent magnets 4=15642
- precipitation kinetics 4=23246
- resistance min., electron scatt. calc. by localized mag. moments 4=28524
- resistivity, electrical, rel. to periodic inhomogeneities and long-range order 4=22665
- rolling texture, depend. on stacking fault energy 4=10565
- semiconducting, three component, as solid solutions of two two-component compounds 4=1586
- Sendust, sheet processing and mag. props. 4=13222
- 79NM alloy, permeability, max., differential, rel. to a.c. amplitude 4=17644
- 75 NMA, films, magnetization reversal 4=26328
- specific heat meas., low temp., use of electronic computers 4=8538
- specific heat, very dilute, resistance minimum phenomena 4=15425
- spinodal, mag. ageing 4=7244
- strength, rel. to dislocations 4=4436
- stress-strain relations, on structural hardening, theory 4=17714
- structure, intermetallic phases 4=10417
- structure, sub, dilute, cellular—striation relationship 4=4634
- substructure and concentration nonuniformity 4=20780
- superconducting, crit. field limit estimate 4=2918
- superconducting, electrodynamics, lower critical field and nonlinear effects 4=27417
- superconducting, explanations, review 4=18564
- superconducting, ferromagnetism 4=20530
- superconducting, resist. anomaly near crit. point 4=11464
- superconducting, transition temp., concn. depend. 4=5498
- superconducting transition temps., empirical prediction 4=11470
- surface phenomena, binary alloys 4=13670
- surface phenomena, conference 4=7690
- thermal expansion, rel. to substit. point defects 4=28374
- transition metal, supercond., H_{c2} temp. var. 4=18617
- transition metal, supercond. transition temps., specific heats 4=18616
- transition metal, superconducting, cold-rolled, high-field critical currents, giant anisotropy 4=16338
- transition metal, superconducting, critical fields rel. to low and high current densities 4=16337

Alloys—contd

- transition metals, crystal electron struct. and supercond., review 4=20229
- transition metals, 3d, f.c.c., low-temp. specific heat 4=12639
- Udimet 700 Ni base alloy, solute distrib. near grain boundaries 4=13464
- vacancy defects, anomalously high concentrations, evidence 4=1461
- vacancy precipitation, rel. to annealing, irradi., quenching, review 4=12733
- Vicalloy II, magnetization anisotropy in strips and small coercivity 4=23010
- volume-surface property relations 4=13668
- whiskers, binary, tensile strength and deform. 4=13378
- X-ray diffr., temp. var., lattice vibr. effects, calc. 4=6699
- X-ray diffraction examination, review 4=13623
- Zircaloy-2, α - β transformation 4=7520
- Zircaloy-2, diffusion of H, thermal, theory 4=6882
- Zircaloy-2, heat treatment effects at high temps. 4=26534
- Zircaloy-2, reduction of corrosion and hydrogen embrittlement 4=10994
- Al alloys, strengths determ. from applied stress, theory and expt. 4=13380
- Al bronzes, binary and ternary, kinetics of $\beta \rightarrow (\alpha + \gamma_2)$ transformation 4=4500
- Be bronze, abnormal stress relaxation 4=7413
- Cu, cond., thermal, lattice, low temp., Pippard's theory 4=17362
- Cu, containing Pb, interface energy 4=20693
- CuZn -type short-range ordering, long-range effects 4=10411
- Fe, Al-type, ordering, rel. to internal friction 4=1948
- InSb, cross-substitutional 4=12902
- Mn steel, low C content, dissolution and formation of Nb carbide, kinetics 4=7506
- Mo-permalloys K formation and mag. and elec. props. 4=26316
- Sn, supercond., a.c. mag. transition hysteresis 4=18611
- Alpha-particles and helium nuclei**
See also Alpha-rays
- α , binding energy calc. with vel.-depend. pot. 4=25214
- binding energy, velocity dependent N—N potential 4=3497
- clustering, at nuclear surface 4=983
- double electron capture in He 4=24571
- $e + He^3 \rightarrow d + p + e'$, coincidence, calc. 4=27827
- excited state, from $He^3 + d(6-10 \text{ MeV})$, p spectra 4=15112
- existence in heavy nuclei, theory 4=6178
- four body problem at low energies 4=27914
- nuclear scatt. and polarization, model 4=22084
- from proton bombardment of light nuclei 4=9509
- as resonance in t-p elastic scatt. 4=9317
- structure, from stripping reactions 4=9565
- He^3 , by $He^3(d, t)$, half life meas. 4=9320
- He^3 Coulomb energy calc., from mixed symmetry with H^3 4=16979
- He^3 , elastic scatt. by V, Ni, Cu, Rh, Sn^{118} , Sm, Yb and Pb at 20 MeV 4=22183
- He^3 , e. m. structure, using S and D states function 4=27911
- He^3 form factor sharp fall off and n capture by d 4=21965
- He^3 form factor, in terms of component nucleons 4=6143
- He^3 , from $D(d, n)He^3$, use in time-of-flight meas. 4=16980
- He^3 nucleus, radius and Coulomb energy, 4=30280
- He^3 , photodisintegration 4=25213
- He^3 , singly ionized, table of energy rel. to mag. field strength and orbital radius 4=25212
- $He^3 + d(6-10 \text{ MeV})$, p spectrum, and He^4 excited state 4=15112
- He^3 - α scattering, elastic, 1-50 MeV, optical potential 4=21966
- He^3 - He^4 , elastic, scatt., 2.5 to 5.7 MeV 4=12082
- He^3 -p elastic scatt., 4.5 to 11.5 MeV 4=12004
- $He^3(\gamma, p)d$, 10-30 MeV, peaks 4=15113
- $He^3(\gamma, p)D^2$, $He^3(\gamma, n)2p$, γ energy var. 4=27915
- $He^3(\nu, p)D$, 35 MeV 4=6147
- He^4 excitation, by p at 55 MeV 4=16981
- He^4 levels 4=19611
- He^4 -p elastic scatt., 2-11 MeV 4=12001

 crystallographic texture variations through rolled Al sheet 4=13638
 crystals, growth, recrystallization-polygonization competition 4=23327
 crystals, single large, lineage struct. 4=23521
 crystals, single, recrystallization study 4=23325
 crystals, substructure, effect on neutron induced defects 4=9941
 cyclotron resonance, limiting point, rel. to current sheets 4=9934
 decanting of Fe-doped crystals 4=29040
 defect structures and H distrib., autoradiography 4=2106
 deformation resist., effect of strain rate and temp. 4=28931
 deformation texture and recrystallization kinetics, new study method 4=13641
 deuteron range meas., 5–27 keV 4=1540
 diffusion of Cr, 250–605°C 4=22610
 diffusion of Fe, Ni, Co, dislocation short-circuiting models 4=1506
 dislocation debris when fatigued at 78°K 4=12751
 dislocation loops, formation of 4=4048
 dislocation loops, new type, when quenched 4=6840
 dislocation relax., 10–50 Mc/s meas. analysis 4=12754
 dislocations, interaction between imperfect loops and moving dislocations 4=12757
 divacancy binding and migr. energies 4=15468
 effect on tensile props. of α -U, —183° to 350°C 4=28987
 elastic constants, adiabatic, at 300°, 77° and 4°K 4=23117
 elastic constants, 4.2–300°K 4=13390
 elastic const. recovery after plastic deform., dislocation effects 4=20651
 electrical conductivity, effect of surface enriched with Cr, Ti or Si 4=28535
 elec. resistance in magnetic fields up to 27 kOe, 4.2° and 20.4°K 4=28528
 electrical resistivity of dislocations, expt. determ. 4=6848
 electrical resistivity meas. of dislocations 4=6842
 electrical resistivity, recovery, 60° to 200°K, rel. to cold-working in liq. H₂ 4=12850
 electron backscatt. coeff., 8–22 MeV 4=22122
 electron beams, energy dissipation, fair agreement for medium penetration 4=6817
 electron concn., free 4=9891
 electron diffraction intensities and structure amplitudes rel., and its appl. in structure analysis 4=10521
 electron energy-loss line shape 4=28437
 electron energy loss, 20–60 MeV 4=28438
 electron energy losses due to surface plasma oscill. 4=9937
 electron group, basic, effective masses anisotropy meas. 4=4007
 electron scatt., unsymm. ang. distrib. for charact. surface losses 4=28429
 electrophoretic deposition and fusion to substrate 4=7789
 epitaxial growth on NaCl cleaved in vac. 4=29070
 exo-emission from abraded etched surface 4=19077
 exploding wire, hollow, X-ray emissions meas. 4=16177
 Fermi surface 4=12697
 Fermi surface investig. by high-freq. surf. resistance quantum oscils. 4=12698
 Fermi surface magnetoacoustic studies 4=30547
 Fermi surface shape from de Haas — van Alphen data 4=6792
 film and block, scatt. region misalignment comparison 4=20802
 film, X-ray refl., rel. to substrate 4=26708
 films, elastic deform., electron diffr. exam. 4=1928
 films, light, absorption, refractive index, 4000–14 000 Å 4=7093
 films, melting point, rel. to thickness 4=8499
 films, optical consts. at less than crit. wavelength 4=22844
 films, oxidation thickness change rel. to transmission and resistance 4=20801
 films, supercond. pulse-destroyed 4=1412
 films, transmitted electron energy spectrum 4=9935
 films, ZnS and cryolite coated, spectral refl. curves 4=24377

Aluminium—contd

filter, optical, films, for 600-1250 Å 4=21290
 foil, cavitation by u.s. waves 4=11311
 foils, cylindrical, collapsing, z-pinch production 4=18351
 foils, electron-bombarded, plasma radiation detection 4=17407
 foils, secondary electron emission, beam monitors 4=8827
 fracture, ductile 4=23123
 fracture tearing of sheets, and crack toughness 4=20642
 γ -ray absorption efficiency, effect of multiple scatt. 4=9157
 in glasses, structure 4=10627
 grain refinement by transition metal additives 4=23241
 halides, thermal expansion at low temps., expt. 4=17369
 heat of solution in Sn at 75°C, and theories 4=24175
 impurity distribution, nonuniform, in cross-section of single crystals 4=9949
 inert gas ionization at 2000°K, seeding effect 4=27472
 interdiffusion with Zr 4=28478
 ions, Al³⁺, formation in electron interaction with AlCl₃ 4=18674
 ions, Al³⁺, lowest config., Hartree-Fock calc. 4=12377
 irradiation hardening due to electrons 4=28929
 latent hardening and secondary slip 4=30766
 lattice parameter, effect of small amounts of Au 4=29091
 lattice vibr. and Debye temps. calc. 4=6706
 layers, optical consts., 0.4-2 μ region, rel. to quantum absorption 4=20447
 liquid flow, activation energy jumps and cluster formation 4=5137
 liquid, surface tension, effect of 0.12 Na 4=14152
 Lorenz number at low temp. 4=6919
 luminescence spectrum, u.v., on K⁺, H ion bombardment 4=22913
 magneto-optical polarized light reflection rotation 4=28667
 magnetoresistance, 4° to 30°K 4=12851
 magnetoresistance, Kohler's law, deviations 4=4115
 mechanical props., effect of electron irradi. 4=15701
 mechanical strength calc. from shock wave attenuation and thickness of surface scale produced 4=4456
 mechanically unstable solid, expt. data 4=1926
 melt-grown, single crystals, influence of mosaic structure on creep 4=7405
 microhardness rel. to applied load 4=17743
 molecule, Al₃, rotational analysis of band spectrum 4=9699
 molten, viscous flow, activation energy increase 4=155
 monocrystalline, channelling of heavy Na²⁴, Kr⁸⁵, Rb⁸⁶, Xe¹³³ ions 4=22642
 n.m.r., effect of Zn, Ge impurities 4=4424
 n.m.r., elec. cond., normal and supercond. 4=20608
 necking and fracture 4=4457
 neutron backscattering from reflectors, Monte Carlo calc. 4=21860
 neutron irradiation damage, effect of impurities, vacancies, dislocations 4=28503
 neutron irradiation at 4.5°K, effect of initial defect conc. on annealing 4=12829
 neutron spectrum, spherical and slab cases, 3 and 15 MeV 4=30233
 nuclear transitions, meas. from γ -ray spectrum after Al + n 4=12133
 optical absorptance and emittance, rel. to ion bombardment 4=20472
 optical constants, low temp. meas. 4=17544
 optical consts. rel. to inter- and intraband transitions 4=7108
 optical constants, X-ray range 4=20439
 optical refl., phase shift dispersion meas. 4=28709
 photo-exoemission, effect of temp. 4=24732
 plasma oscill., volume and surface, excitation by electron beam 4=28426
 plastic flow, surface removal effects 4=7430
 plastic microstrain curves, moments 4=26431
 plastically deformed, activation energy and activated vol., effect of surface condition 4=30763
 plastically deformed at low temp., crystal lattice distortions, kinetics of relief 4=6847
 plasticity at high temp. 4=28921
 point defect study, expansion meas. and X-ray diff. techniques 4=30551
 polycrystalline, residual press. effects 4=23120

Aluminium—contd

positron annihil. quanta, ang. distrib. meas. 4=12718
 powder, adsorption isotherms of H⁺ and OH⁻ aqueous ions 4=4674
 powder, annealed, X-ray line broadening, rel. to variance 4=23382
 proton prod. by H ion impact 4=28270
 pure, resistivity restoration by neutron irradiation at 77°K 4=26002
 purity determination, residual resistivity method 4=12852
 quenched from liq. state, defects 4=9942
 quenched, void and dislocation loop form. 4=22559
 range of Na²⁴ nuclear recoils in, from Al²⁷(n, α)Na²⁴ 4=6355
 recovery after cold-working at 78°K 4=4037
 recovery of creep-resistant substructures 4=23122
 recovery after neutron irradiation at 78°K 4=4091
 recovery, stage I, of neutron irradiation, rel. to quenched-in vacancies 4=4097
 recrystallization of ground powder, X-ray meas. 4=10575
 recrystallization inhibition by polygonized structure prod. 4=23326
 recrystallization nuclei formation process 4=13474
 refl. coeff., rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
 refractive index meas. from 300 Å to critical wavelength, extinction coeff. calc. 4=13019
 S.A.P., activation energy and volume 4=20643
 self-diffusion, determ. by electrotransport meas. 4=28486
 self-diffusion, electrolytic 4=17439
 shock waves, "elastic" high amplitude, meas. 4=2515
 single crystals, obtained by deformation and annealing, substructure 4=26590
 sintered products, mechanical props., no grain size effect 4=30767
 6061-T6, uniaxially strained, unloading behaviour 4=23119
 size effects in single crystal deform., tested in compression 4=30762
 slipband transitions, surface, in plastic deform. 4=7386
 solidification, use of u.s. vibration 4=23328
 solubility of Fe, zone refined Al, var. with temp. gradient 4=13457
 spectral line intensities, oscillation, in toroidal discharge with mag. field 4=14651
 spectrum, Al III calc. osc. strengths and spectrometer calibration 4=5381
 spectrum, plasma, Al III broadening and shift 4=18846
 sputtering, by Hg, 500-3000 eV, energy distrib. of Al⁺ and impurity K⁺ 4=21583
 sputtering products, neutral and charged, energy distrib. 4=6904
 stress/strain discontinuities at 1.3°K, more at higher rates 4=20640
 stress/strain discontinuities rel. to grain size and surf. conditions 4=23118
 stress-strain relation, dynamic, up to 22kb 4=15700
 substructure formation, during high temp. and high strain rate deformation 4=26492
 superconducting, absorption, u.s., long. and shear 4=16341
 superconducting films, energy gap, mag. field depend., tunnelling meas. 4=21414
 superconducting films, energy gap, tunnelling meas. 4=16347
 superconducting film transition temp., stress var. 4=14517
 superconducting films, energy gap temp. depend., tunnelling meas. 4=21413
 superconducting, nuclear spin relax., size effect 4=8565
 superconducting, surface impedance 4=24511
 superconductivity crit. temp. decrease by Cr, Mn, Fe impurities 4=18566
 surface discharges effect of various substances on breakdown voltage 4=2962
 surface tension orifice discharge meas. 4=24149
 target, bombard. by brass and quartz grains, ion and electron emission 4=8826
 tensile strength, yield pt., extrusion by high-pressure liquid 4=28930
 thermal expansion coeff. and lattice parameters rel. to temp. 4=20220
 thermal expansion, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219

Aluminium—contd

- thermal expansion and melting anomalies of small crystals 4=9861
 thermal expansion, room-temp., X-ray diffractometer determ. 4=3997
 thin film, abnormal optical absorpt. 4=22866
 thin film, optical props. in far u.v., from electron energy losses 4=22821
 thin film, scatt. factor meas. 4=22837
 thin unbacked film, transmittance in far u.v. 4=22882
 time-to-fracture, constant and cyclic stresses 4=23124
 u.s. loss meas. by exponential decay, rel. to transducer thickness 4=30514
 u.v. radiation, on H impact 4=20487
 ultrasonic attenuation, mag. field depend. 4°K 4=12633
 ultrasonic waves in second harmonic amplitude 4=279
 volume changes induced by fission 4=4094
 work function, effect of adsorption of H, air, and dipole moment 4=11683
 work function, effect of air and H₂ 4=14741
 work function variations when heated in air 4=14740
 work hardening mechanisms, dislocations 4=7408
 work hardening, orientation dependence 4=26494
 X-ray reflect., and crit. angle and absorpt. 4=28675
 X-ray spectrum, K β band, secondary excitation 4=13016
 X-ray tube, membrane target, spectral distrib. 4=24774
 X-ray yield (K), 1.5-44 A, by 1.5 MeV protons 4=17593
 yield points at high temp. 4=23121
 zone-refined, impurity distributions 4=4540
 Al III in plasma, spectral line width and location 4=18845
 Al III Stark broadening in fully ionized plasma 4=18853
 Al—Al₂O₃—Al thin film cathodes, cold emission 4=11690
 Al²⁺ + H, charge exchange cross-section, matrix calc. 4=29871
 Al²⁷ n.m.r. in V—Al alloys 4=26455
 Al³⁺ ions, Hartree—Fock eqns. 4=6466
 K α and K β lines, satellites, systematics 4=13018
 K β emission lines, analysis, in solid and liq. Al 4=13017
 K-shell X-rays due to 60-500 keV protons 4=13046

Aluminium compounds

- Alcoa 2011, work hardening 4=20644
 alloys, u.s. loss meas. by exponential decay, rel. to transducer thickness 4=30514
 α -alumina, heat capacity 4=2879
 α -Al₂O₃, Mn⁴⁺ e.s.r., sharp line fluorescence and thermoluminescence 4=26236
 α -Al₂O₃, Mn²⁺, Fe³⁺ e.s.r. appd elec. fld effect 4=26406
 alumina, n.m.r. of Al²⁷ rel. to conc. of adsorbed oxides of Cr, Ni and Co 4=7342
 chromia-alumina powders, reflection spectra 4=7124
 corundum, crystal growth rate in hydrothermal conditions 4=30819
 corundum, crystal growth from soln. in PbF₂ 4=4541
 corundum crystals, whiskers, prep. and props. 4=30823
 corundum, crystallization from gas phase 4=30818
 corundum, growth under hydrothermal conditions 4=26591
 corundum, i.r. lattice vibr. spectra analysis 4=4256
 corundum, quadrupole interactions of V and Mu 4=3959
 corundum, Mn-doped, phys. props. rel. to growth conditions 4=10462
 corundum, R lines of V²⁺ and Mn⁴⁺, splitting in elec. fields 4=9820
 corundum, radiation induced cavitation and exfoliation 4=10008
 corundum, Ti³⁺ e.s.r. and spin-lattice relax. 4=26436
 corundum, Ti³⁺ spin-lattice relaxation 4=1890
 corundum, transmission and reflecting power in far u.v. 4=7126
 corundum whiskers, real structure meas. 4=26646
 cryolite, molten, elec. cond. 4=29643
 DTD 5070A alloy, creep curves, data 4=30752
 duralumin, deformation ageing, temp. depend. 4=1915
 duralumin, sputtering, by Hg, 500-3000 eV, energy distrib. of Al⁺ and impurity K⁺ 4=21583
 garnets, crystal lattice, energy calc., var. structures 4=3955
 montmorillonite gel, refractive index var. in different directions 4=15853
 mordenites, synthetic, sorption, intracrystalline 4=26725

Aluminium compounds—contd

- oxide films, anodic, in diethylphthalate, galvanoluminescent cathodic flash 4=20478
 ruby, absorpt. spectrum, energy levels and line splittings calc. 4=1747
 ruby, absorption, light, polarized, by Cr³⁺, for each ground sub-level 4=7123
 ruby, absorption R lines 4=20468
 ruby, absorption spectra 4=15596
 ruby, absorption spectrum, theory 4=22885
 ruby, absorption, U and Y bands, analysis 4=20467
 ruby, B₁ and B₂ absorption lines, mag. and elec. field effects 4=28703
 ruby, B and R absorption lines, Zeeman effect 4=4271
 ruby, cathodoluminescence 4=28735
 ruby, colour changes on laser irradiat. 4=22628
 ruby, Cr-activ, luminescence, Cr interact. effects 4=1767
 ruby, Cr conc., spectrophotometric determ. 4=15857
 ruby, Cr conc. and texture inhomogeneity 4=23534
 ruby, Cr e.s.r., line shapes, statistical theory 4=26388
 ruby, Cr³⁺ doped, γ ray effects on spectrum, luminescence, lasing action 4=17607
 ruby, Cr³⁺ e.s.r. line splitting by external elec. field 4=26387
 ruby, crystal electron dipole transitions, from i.r. spectrum 4=15457
 ruby, crystal spin-lattice interaction, from e.s.r., stress effects 4=23055
 ruby crystals, dislocations 4=20283
 ruby, electric dipolar transitions 4=22828
 ruby, electric shift of Cr³⁺ e.s.r. 4=26384
 ruby, e.m. mixing and harmonics due to non-linear susceptibilities, line shapes 4=8999
 ruby, e.s.r. spectrum, population inversion and microwave-stimulated emission 4=27705
 ruby, far-i.r. absorption spectrum, liquid He temperatures 4=4270
 ruby, fluorescence rel. to incident light direction 4=1778
 ruby, flux-grown, laser action 4=11837
 ruby, γ -irradiated, colour centres 4=28497
 ruby, green band, fine structure meas. by magnetic resonance 4=26218
 ruby, green band, theory 4=26168
 ruby, hemihedral field effect in spectrum 4=26219
 ruby, i.r. spectrum, 300-3000 cm⁻¹ 4=1746
 ruby, laser action, mode excitation and divergence rel. to optical inhomogeneities 4=11835
 ruby, laser, coherence and time scanning 4=3221
 ruby laser crystal dislocation struct. 4=22589
 ruby, laser emission, line splitting by mag. field 4=16711
 ruby laser, emission from moving rod 4=14951
 ruby laser, emission spectra, time-resolved, high-resolution 4=19314
 ruby laser, increased microwave inversion with 0.05% Cr 4=14950
 ruby laser, large-amplitude solns. of rate eqns. 4=24926
 ruby laser, optimum reflectivity, determ. 4=27709
 ruby laser quasi c.w. and Cl switching 4=21274
 ruby laser, quasi-fundamental mode oscillation 4=14952
 ruby, laser, as Raman spectral source 4=14372
 ruby, laser, relaxation oscillations 4=8997
 ruby laser, saturation and regeneration effects 4=21687
 ruby laser, transverse mode study 4=27707
 ruby, lasers, oscillation loss estimation 4=5873
 ruby, lattice sum evaluations of spectral parameters 4=26306
 ruby, low-temp. relaxation meas. at microwave freq. 4=26430
 ruby, luminescence (resonance) radiation, diffusion 4=26247
 ruby, paramagnetic reson. harmonic generation, 4.5 $\rightarrow$ 9 kMc/s 4=1872
 ruby, photoconductivity, rel. to sapphire 4=10132
 ruby, pink, single-crystal elec. cond. 4=22703
 ruby, pulsed laser, sequence of isolated pulses 4=24927
 ruby, R₁ linewidth determ. using pulsed laser 4=10188
 ruby, refractive index change rel. to optical pumping 4=10189
 ruby rod, pumping energy distrib. 4=28705
 ruby rod, side-pumped, absorbed power distrib. 4=28704
 ruby, spin-lattice relax. of Cr³⁺, calc. 4=10320

Aluminium compounds—contd

- ruby, spin—lattice relax., concn. and temp. depend. 4=13313
 ruby, susceptibility anisotropy at He temps. 4=26264
 ruby, transmission and reflecting power in far u.v. 4=7126
 ruby, u.v. absorption spectra 4=20466
 ruby with 0.5% Cr₂O₃, biquadratic exchange energy 4=12570
 ruby, Zeeman effect, pulsed, time var., spin relax. 4=22886
 sapphire, clear, single-crystal, elec. cond. 4=22703
 sapphire crystals, dislocations 4=20283
 sapphire, heat pulse propag., low temps., and phonon traject. 4=25867
 sapphire, photoconductivity meas. 4=10132
 sapphire, spectrum, γ -ray effects 4=17607
 sintered aluminium product, mechanical props., no grain size effect 4=30767
 solutions, ion coordination numbers, from O¹⁷ n.m.r. 4=207
 topaz, cleavages, etching 4=23315
 tourmaline, pyroelec. electron diffr. exam. 4=22461
 valency, from X-ray emission K α spectrum 4=20062
 vibrations, frequ. of normal modes, meas. analysis 4=20192
 2024 alloy, plastic instability rel. to low-temp. machine stiffness effect 4=30765
 Al acetylacetonate, e. s. r. of Cr³⁺ 4=13338
 Al 2024, optical absorptance and emittance, rel. to ion bombardment 4=20472
 Al alloy, fatigue, effect of atmospheric humidity 4=23125
 Al alloy, impact high temp. behaviour 4=20665
 Al alloy 35, work hardening, by monotonic and cyclic loading 4=7402
 Al alloy, plastic deformation, effect on yield condition 4=26490
 Al alloy, plastic deformation, threshold meas. 4=15691
 Al alloy, X-ray line profiles, effect of stress 4=23143
 Al alloys, anodic oxide films, microanalysis 4=7711
 Al alloys, DTD683/3 and 2024-T4, fatigue behaviour, unusual, effects of cycling rate 4=26493
 Al alloys with Mn or Fe, low-temp. magnetoresist. 4=20333
 Al alloys, dilute binary, irradi., n, 78°K, recovery, from cond. elec. 4=1560
 Al alloys, effect of strain rate and temp. 4=28931
 Al alloys, elastic modulus, electrocapillary effect 4=4438
 Al-base alloys, solute Knight shifts 4=17692
 Al nitrate hydrolysed solns., X-ray scattering, small-angle 4=21098
 Al-1 $\frac{1}{4}$ % Mn alloy, grain size rel. to intergranular cavitation 4=30866
 Al oxide anodic films, i.r. absorpt. study 4=23566
 Al oxide films, discontinuous, growth kinetics 4=29041
 Al oxide surface, exo-electron glow curves 4=3017
 Al phosphate glass, thermoluminescent use in dosimeters 4=5892
 Al-3d transition element b.c.c. binary and ternary alloys, specific heat, low temp. meas. 4=30518
 Al—transition metals, valence electron concn. and mag. props. 4=4008
 Al-20% Ag[4% Cu] with or without trace elements, precip., plastic deform., and ageing 4=23250
 Al-Ag alloy, age-hardened, plastic flow 4=10370
 Al-Ag alloy, Guinier-Preston zones, metastable precipitates 4=26691
 Al-Ag alloy, hardness, critical shear stress var. 4=30768
 Al-Ag and Al-Cu alloy, thin foils parallel arrangement 4=1490
 Al-Ag alloy, X-ray diffr. intensity distrib. near reciprocal lattice site 4=10508
 Al-Ag crystal lattice vibr., var. with Ag conc. of inter-atomic force 4=6707
 Al-Ag crystal lattice vibr., var. with Ag conc. and temp., X-ray diffr. obs. 4=6708
 Al-Ag, dilute, equil. vacancy conc. meas. 4=15469
 Al-Ag, fracture process, age hardened 4=28932
 Al-Ag, microstructure Guinier-Preston zone exam. 4=13639-40
 Al-Ag, phase transform., metastable miscibility gap obs. by cond., elec. 4=7474

Aluminium compounds—contd

- Al-Ag(8%) solid soln., crystal structure disintegration under heat treatment 4=7678
 Al-(0.11 at.%)Ag solid solution, internal elec. field gradient 4=22459
 Al-Al₂O₃ alloys, deform. induced substruct. 4=29163
 Al-Al₂O₃, dislocation blocking by alumina particles 4=22584
 Al-Al₂O₃-Au-Ba, electron emission, var. with Au, Ba thickness 4=8799
 Al-Al₂O₃-Se-Au sandwich cells, negative resistance 4=28583
 Al-Au system, dilute, lattice parameter 4=29091
 AlB₁₀, crystal structure, atomic 4=2069
 Al-B, Al-B-C systems, phases, crystal struct., atomic 4=26640
 Al-Be boride, crystallization 4=26592
 Al-Bi-Pb liq. system, thermodynamic props. 4=21122
 Al₂Ca₃(SiO₄)₃, neutron diffr. structure 4=29092
 Al-Cd-Sn alloys, solid Sn rich, structure 4=13471
 AlCl₃, aq. soln., proton relax., rel. to concentration 4=27199
 AlCl₃, electron interaction, Al⁺ formation 4=18674
 AlCl₃, nuclear quadrupole coupling const. of Al²⁷, and elec. field gradient parameter 4=12569
 AlCl₃, mean ampl. of vibr. 4=15358
 Al-Cr alloys, thermal expansion coeff. and lattice parameters rel. to temp. 4=20220
 Al-Cu alloy, age-hardened, plastic flow 4=10370
 Al-4% Cu alloy, ageing reactions, kinetics, effect of creep deformation 4=23249
 Al-4% Cu alloy, creep deformation 4=28934
 Al-Cu alloy, Guinier-Preston zones, metastable precipitates 4=26691
 Al-Cu alloy, strength, rel. to structure 4=17721
 Al-Cu alloys, conc. microheterogeneity in grains, various cooling rates 4=26690
 Al-Cu (4%), quench aging, electric current effects 4=7407
 Al-Cu, Al-Mg, Al-Si alloys, hardening, strainage 4=17722
 Al-Cu alloys, solidification, use of u.s. vibration 4=23328
 Al-Cu[Mg] alloys, strength, time-dependence, 100°-350°C 4=23126
 Al-Cu alloys, substructure and concentration non-uniformity 4=20780
 Al-Cu, alloys, time-to-rupture tests 4=28933
 Al-Cu foils, aged, fracture mechanism 4=7404
 Al-4% Cu foils, deformation and fracture 4=4458
 Al-Cu, fracture process, age hardened 4=28932
 Al-Cu, mech. strength, due to short-range order calc. 4=13379
 AlF₃, Mn-activated, correlation of luminescence with e.s.r. 4=26411
 Al-Fe alloys, Al determ. by X-ray fluorescence 4=10676
 Al-Fe, superconducting props., small amounts of Fe 4=8566
 AlH, electronic-band spectra, by exploding wire method 4=25635
 Al-Li (2.8, 1.5 wt. %) phase transformation on aging, neutron effects 4=13472
 Al-Mg alloy, statically or dynamically deformed, UTS and ductility 4=15721
 Al-Mg alloys, decomposition kinetics during zone formation, effect of vacancies 4=15729
 Al-Mg alloys, quench-aged, precipitation and dislocation nucleation 4=17750
 Al-Mg(5%), age hardening enhancement by Ag 4=20696
 Al-Mg(4.5%), brittleness, in Hg 4=17723
 Al-Mg, fatigued crystals, dislocation arrangement 4=12759
 Al-Mg, melting, relation bet. holding time and limiting value of reduced press. 4=5447
 Al-Mg oxides, electron emission, secondary, var. current 4=19094
 Al-Mg target, bombard. by brass and quartz grains, ion and electron emission 4=8826
 Al-Mg, work hardening mechanisms, dislocations 4=7408
 Al-Mn alloys, thermal expansion coeff. and lattice parameters rel. to temp. 4=20220
 Al-Mn, precipitation and recrystallization 4=7473
 Al-Mo, crystal structure 4=23417
 Al-Mo, phase diag., changes at Al-rich end 4=13470
 Al-Mo solid solns., lattice parameters, hardness, decomposition temp., mag. suscept. thermo-e.m.f. 4=15722

Aluminium compounds—contd

- AlN, crystal electron forbidden zone width 4=25896
 AlNH₄, alum. e.s.r. of Fe³⁺ 4=13321
 Al N whiskers, axial dislocation effect on growth 4=23354
 AlNbO₄, lattice constants and 42 X-ray powder lines 4=13580
 Al—Ni alloys, time-to-rupture tests 4=28933
 Al O, A²Σ—X²Σ system, intensity meas. 4=17278
 AlO (A²Σ⁺—X²Σ⁺) system, spectra, electronic transition moment var. 4=12442
 AlO, electronic-band spectra, by exploding wire method 4=25635
 AlO, spectrum, B²π—A²Σ band 4=22346
 AlO spectrum, shock excited, B²π—A²Σ band 4=22346
 AlO₂, α, fast-neutron-irrad., dielectric props. at room temp. 4=28620
 Al₂O₃, adsorption of polyethylene-o-phthalate, var. with mol. rot. 4=10622
 Al₂O₃, in Al—Al₂O₃—Al films, electron tunnelling theory 4=17526
 Al₂O₃, Al—Al₂O₃—Al tunnel cathodes, hot electron transport 4=22762
 Al O₃, on Al, tunneling current 4=15566
 Al₂O₃, amorphous, Na²⁴, Ar⁴¹, Kr⁸⁵, Xe¹²⁵ range meas., comp. to theory 4=27580
 Al₂O₃, anodic layers grown on (100) face, structure 4=23565
 Al₂O₃, α, colloid double layer zero point of charge pH 4=13750
 Al₂O₃, colloidal, adsorpt. on SiO₂ 4=23684
 α-Al₂O₃ corundum films on Al surfaces, morphology 4=4667
 Al₂O₃ (corundum), Kβ₁ emission line, complex nature 4=4251
 Al₂O₃, corundum, V-doped, magnetic susceptibility 4=1801
 Al₂O₃, Cr³⁺ e.s.r. absorpt. line depend. on Cr conc. 4=26385
 Al₂O₃, Cu³⁺ e.s.r. 4=26393
 Al₂O₃, density increase on sintering by adding MgO 4=20788
 Al₂O₃, derived from Al hydroxides, crystal struct. 4=30844
 Al₂O₃, effect on Bi₂O₃ polymorphism 4=23253
 Al₂O₃, electric stresses, safe, for 5000 hrs. at 800°–1140°C 4=28611
 Al₂O₃, electroluminescence 4=1764
 Al₂O₃, electron microscope exam. specimen preparation 4=23522
 Al₂O₃, evaporation, melting point discontinuity 4=18497
 Al₂O₃ films optical props., 0.2–1.6 μ rel. to appl. 4=22893
 η-Al₂O₃ with Fe⁵⁷ at surface, Mössbauer effect 4=25816
 Al₂O₃, α-phase, e.s.r. meas. of Cr⁴⁺ 4=7322
 Al₂O₃, e.s.r. of Ni³⁺, Pt³⁺, Jahn—Teller splitting 4=28879
 Al₂O₃, films on Al, elec. and electrolumesc. props., effect of water vapour 4=20427
 Al₂O₃, films, on Al, interfacial topography 4=15815
 Al₂O₃ films on Al, stress—strain relns. 4=23128
 Al₂O₃ films, impurity cond. and negative resist. 4=22760
 Al₂O₃ films, tunnel currents for various contacts 4=22761
 Al₂O₃, gaseous environment effect on fracture strength 4=28935
 Al₂O₃, γ-irrad., e.s.r. meas. 4=17676
 Al₂O₃, heated to 1000°C, spectral emittance 4=14443
 Al₂O₃, i.r. spectrum and structure 4=25666
 Al₂O₃, molecular vibr., mean ampl. 4=25665
 Al₂O₃, molten, viscosity up to 2200°C 4=16096
 Al₂O₃, Mössbauer effect hyperfine struct. of Fe⁵⁷ 4=30501
 Al₂O₃ μ-size spheres, Mie scatt., 0.5–10.0 μ 4=22845
 Al₂O₃, n.q.r. of Al²⁷, linear elec. shifts meas. 4=28907
 Al₂O₃ particles, Mie scatt. and absorpt. cross-sections for e.m. waves 4=26175
 Al₂O₃, phonon generation, coherent, via transducer of insulating CdS films 4=28353
 Al₂O₃, photoelectric emission, delayed, film thickness var. 4=24733
 Al₂O₃, sapphire, absorption, acoustic 2.8 Gc/s 4=12628
 Al₂O₃ sapphire crystal dislocation hexagonal arrays 4=12764
 Al₂O₃, sapphire, luminescence and absorption spectrum, with flash light excitation 4=30696
 Al₂O₃, solubility and crystal growth in molten PbF₂ 4=29614

Aluminium compounds—contd

- Al₂O₃, trigonal, energy levels calc. of Fe³⁺ 4=1356
 Al₂O₃, u.s. absorption at low temps. 4=20203
 Al₂O₃, u. s. attenuation, 3000 Mc/s, low temp. 4=28363
 Al₂O₃ whisker growth, by vapour deposition 4=7567
 α-Al₂O₃ whiskers, transport and deposition 4=7566
 Al₂O₃—Al alloys, mechanical tensile strength, improvement by blending 4=17724
 Al₂O₃. 3CaO. 6H₂O, H atom position by n.m.r. 4=29093
 Al₂O₃. 3CaO. 6H₂O, position of H atoms 4=4594
 Al₂O₃—GeO₂, phases, new, 900°–1350°C 4=13475
 AlPO₄, cell constants, space group and atomic coordinates 4=10523
 AlPO₄, optical second harmonic generation, by laser beams 4=28666
 AlSb, n-type, i. r. Faraday effect meas. 4=10162
 AlSb, thermal expansion, 20°–340° K 4=1404
 AlSb, uniformity, qualitative control 4=1587
 Al—3% Si alloy, anomalous lattice spacings, rel. to Si crystallites 4=4593
 Al—Si alloy, modification study on solidification 4=23329
 Al—Si eutectic, modification due to 1A elements 4=13476
 Al—Si eutectic, surface tension, orifice discharge meas. 4=24149
 Al—Si, liquid, surface tension, effect of 0.12 Na 4=14152
 Al₂SiO₅ system at high temp. and press. 4=29002
 Al—Sn, thermodynamic props., electrode potl. study 4=29801
 AlTO₃ (T = Y, Eu, Gd, Tb, Dy, Ho, Er), hexagonal structure 4=2068
 α-Al—U(Pu), solubility limits 4=13460
 α-Al—U or Pu, α-Al solubility limits 4=13460
 Al—V solid solns., lattice parameters, hardness, decomposition temp., mag. suscept. thermo-e.m.f. 4=15722
 AlVO₄ glass, structure, from spectra, i. r. 4=10626
 Al—W solid solns., lattice parameters, hardness, decomposition temp., mag. suscept. thermo-e.m.f. 4=15722
 Al—Zn alloy, age-hardened, plastic flow 4=10370
 Al—Zn alloy, ageing, natural, effect of a third component 4=17752
 Al—Zn alloy, hardness, critical shear stress var. 4=30768
 Al—Zn alloys, diffusion processes in, effect of Mg atoms 4=28477
 Al—Zn alloys, Guinier—Preston zones, effect of d-irradiation 4=23248
 Al—Zn alloys, heat-treated, internal friction 4=17725
 Al—Zn alloys, precipitation, rel. to dislocation loops, cold working effects 4=13473
 Al—Zn (10 wt. %), clustering, little effect of Cu, Ag 4=17753
 Al—Zn, crystal vacancies, interaction with Mg impurity atoms 4=12725
 Al—Zn, eutectic alloy, interlamellar spacing meas. 4=4650
 Al—Zn, fracture process, age hardened 4=28932
 Al—Zn, hardening, precipitate and dispersion 4=23948
 Al—Zn (10–98 wt. %), heat cycling, effect on internal friction and elongation 4=13389
 Al—10 wt % Zn—0.10 wt % vacancies, interaction with Si, Ge, Sn atoms, rel. to clustering, calc. 4=28994
 Al—Zn—Mg alloy D. T. D. 683 of high fatigue characts., notched and unnotched 4=7406
 Al—Zn—Mg alloy, microstructural damage produced by glide 4=23127
 Al—Zn—Mg, clustering, effect of Mg 4=17754
 Al—Zn—Mg, clustering, elec. resistivity meas. 4=28995
 Al—Zn, phase transform., cooling depression of boundary 4=26544

Americium

- Am IV in LaCl₃, energy levels, assignment of 10 lowest 4=20177
 Am³⁺, electronic energy levels, theory and expt. 4=22310
 Am³⁺ spectrum, missing band 17500 cm⁻¹ 4=30377

Americium compounds

- AmO₂, X-ray M absorpt. spectrum 4=7146

Ammonia

See Nitrogen compounds

Amorphous state

- See also Vitreous state
 atomic distribution curves, termination effects 4=23614

Amorphous state—contd

- diatomic solid, electron energy states 4=17387
 graphite powders 4=10624
 Mössbauer effect of Fe⁵⁷ 4=15405
 photo-excitation and carrier-trapping meas. 4=22804
 structure, lattice-like and liquid features 4=2134
 Al₂O₃, films, on Al, interfacial topography 4=15815

Amplifiers

- beam—plasma, for mm waves 4=16509
 cathode follower, hybrid, for vibration pickups 4=8591
 circuit adjustment, parametric amplifiers 4=18643
 current, use of secondary electron multiplication 4=16533
 d.c., for 10⁻⁸ to 10⁻⁶ A range 4=420
 d.c., high gain, Zener stabilized starved pentode 4=18642
 dielectric parametric, microwave 4=24828
 electromagnetic waves, crossed-field double-beam drift-space, dispersion relations 4=11789
 electrometer amplifier for partial pressure gauge 4=18292
 electron beam—plasma, in waveguide and axial mag. field 4=30044
 EMR model 33, noise reduction 4=14545
 with frequency and bandwidth variation 4=14549
 galvanometer conversion to direct coupled amplifier 4=29848
 galvanometer, photocell twin 4=24525
 galvanometer, photocell twin, improved 4=24526
 gamma amplifier—discriminator 4=14977
 hybrid electrometer preamplifier 4=21437
 integrating, for magnetic meas., theory and application 4=8597
 integrating, with photocells, applic. to permanent magnet meas. 4=21438
 laser and maser, review 4=24878
 laser, use in e.m. signal detection 4=11793
 laser, noise reduction 4=14927
 linear amplification, quantum statistics 4=27275
 logarithmic amplifier—detector, alignment 4=11496
 low-frequency narrow band with 5 × 10⁶ gain 4=16403
 low noise detector amplifiers using optimum filtering, for nuclear spectrometry 4=9018
 maser amplif. noise 4=19263
 maser, pulse propag. 4=24885
 meter amplifier for liquid conductivity meas. 4=18633
 microwave, by electron beam—plasma interact., theory 4=685
 miniature broadband electrometric, for space research 4=27442
 mm. wave by resonance saturation of HCN 4=19196
 nonoverloading linear, with improved risetime 4=14552
 non overloading, with 2 × 10⁴ gain 4=16404
 nucleonic preamplifier, low-noise 4=776
 parametric, for radioastronomy, development, problems of use 4=4927
 parametric, gain pumping conditions with nonlinear immittance element 4=24517
 parametric, 108 Gc/s, 1 mW, doubler 4=14882
 parametric, with lossy modes, quantum noise 4=8603
 parametric, supercond. film 4=21648
 photoelectric optical amplifier, use for voltage measurement 4=16387
 preamplifier for semicond. counters 4=27723
 preamplifier for scintillation counters 4=16737
 preamplifier, wide band 4=16863
 pulse amplifiers, fast-rise transistor type 4=8594
 pulse, fast transistorized 4=14548
 quantum, transmission-type, for use with laser beams 4=8975
 for radiation detectors 4=21351
 transistor amplifier with 2 μsec rise-time 4=27450
 travelling wave 4=8350
 u.s., use of piezoelectric semiconductors 4=22488
 ultrasonic, travelling-wave, theory confirmed 4=6735
 23 kMc/sec, microwave beam—plasma amplifier 4=16510
 CdS u.s., free carrier trapping effect 4=21236
 He—Ne, maser, gain saturation, 3.39 μ 4=19293

Analogue computers

See Calculating apparatus, analogue apparatus

Anelasticity

See Internal friction

Anemometers

- continuously computing standard deviations of wind velocity components 4=17880
 corona, optimum parameters 4=18223
 hot wire, const. resistance, for fluct. meas. 4=16133
 standard cup contact 4=30926

Angle measurement

- See also Alignment
 amplitude modulated reticle, error response 4=16214
 by diffraction grating pair Moiré fringes, displacement, review 4=18013
 interferometer, to 30° 4=27332
 unit, solid 4=21002

Angular velocity measurement

- See also Stroboscopes
 by laser, ring cavity 4=21007

Antiferromagnetic resonance

- dielectrics, uniaxial, relaxation processes, theory 4=13304
 helical structure, relaxation processes, theory 4=7295
 linewidths due to paramag. impurities with different g-value 4=1850
 orthoferrite structures theory 4=13260
 relaxation, review 4=8091
 reviews 4=23036
 spectrometer, mm-wave, with broad-band components 4=3189
 spin waves, freq. spectrum and damping const., quantum statistics 4=20562
 width, Suhi—Nakamura, mag. field quenching 4=13300
 CoCO₃, 4.2° to 1.5°K 4=13305
 CoF₂ calc., mag. field splitting 4=13301
 CoF₂, var. field, temp., stress, far i. r., interferometric obs. 4=13302
 CoO, modes and freqs. calc. 4=20577
 Mn in MnCO₃, double, nuclear 4=13347
 MnCO₃, far i. r., interferometric obs. 4=13302
 MnCO₃, 4.5–15 kMc/s 4=4397
 MnCO₃, saturation due to spin wave parametric excitation 4=20578
 MnF₂ linewidth calc. 4=15668
 MnF₂, linewidth near Néel temp. 4=13303
 NiF₂, var. field, temp., far i. r., interferometric obs. 4=13302

Antiferromagnetism

See also Magnetic properties, antiferromagnetic.

- anisotropy, theory review 4=22970
 biquadratic superexchange theory 4=23025
 crystal electron band theory, spin waves 4=13131
 crystal field effects and cooperative state, theory 4=1796
 cubic lattices, simplified molec. field theory 4=23024
 crystal phonon diffusion and u.s. absorpt., thermal cond. 4=26347
 diagonalization of free spin-waves Hamiltonian for arbitrary mag. structure 4=20523
 domains and domain walls, review 4=13138
 domain-wall motion, quantum theory 4=15635
 for electromagnetic mm wave appls. 4=19187
 e. s. r. linewidth formula, uniaxial anisotropy 4=13307
 f.c.c. crystals, theory 4=26403
 f. c. c., with Ising interactions, low-temp. props. 4=13259
 and ferroelectricity, simultaneously 4=13258
 and ferromagnetism, coexistence in subst., magnetization processes, theory 4=7242-3
 generalized molecular field theory 4=20561
 Green function method 4=17664
 Green's function method for S ≥ 1/2 4=28850
 Heisenberg, layer structures, Curie temps. 4=10254
 Heisenberg linear chain, mag. curve at zero temp. 4=10296
 Heisenberg model, linear, partition function 4=26280

Antiferromagnetism — contd

- Heisenberg, variational treatment, phase boundary 4=13256
 helical structures, relaxation processes, theory 4=7295
 helicoidal structures in nonmetals, theory 4=20564
 impurities, localized magnetic states, interact. 4=12740
 Ising model, two-dim., Kramers-Wannier duality as Poisson's summation formula 4=18079
 isotropic, with arbitrary spin, thermodynamic Green's functions 4=1849
 linear chain with spin $\frac{1}{2}$, Heisenberg model 4=4388
 linear chains with anisotropic coupling 4=26279
 low temp. free energy, Heisenberg antiferromag., propagator calc. 4=13257
 magnetic current relaxation, with "easy plane" anisotropy 4=17665
 magnetic ions in insulators, book 4=20521
 magnetic structure, from mag. and nuclear elastic scattering neutron spectra 4=13578
 magnetization reversal for weak ferromagnetism 4=13147
 magnetoelastic waves 4=22490
 magnetostriction, cubic, field strength and orientation, var. 4=28851
 magnetostriction, theory review 4=22970
 metals, helicoidal mag. structure, theory 4=26346
 metals, transition, theory, s-d exchange model 4=12668
 nonlinear and "latent" effects, analysis 4=20563
 nuclear mag. resonance, acoustic, theory 4=4422
 nuclear magnetic resonance effects 4=13331
 optical and i.r. props., review 4=22815
 orthoferrite structures theory 4=13260
 Overhauser effect in magnet, theory 4=17691
 phonon critical magnetic diffusion 4=30725
 simple cubic lattice, BPW method 4=20524
 sound absorption, threshold, by spin wave transitions 4=6733
 space symmetry of dipole structures 4=20746
 spherical Ising model and associated lattice gas 4=4387
 spin-phonon coupling, theory 4=28787
 spin ordering below 1°K 4=20560
 spin-wave scatt. of phonons, relax. time calc. 4=28852
 spin-wave spectra, Heitler-London approach, cluster expansion 4=17629
 spin wave spectrum and damping consts. 4=15668
 spin-wave spectrum, effect of dipolar fields 4=1850
 spin wave theory in collective electron model 4=17663
 spin waves, freq. spectrum and damping const., quantum statistics 4=20562
 spin waves, theory 4=7296
 spin waves, coherent amplification 4=4338
 spin waves, review 4=7226
 statistical mechanics, phase transitions, interreln. of theories 4=8098
 statistics, Green functions appl. 4=28853
 theory for spin $S = \frac{1}{2}$ system in external field, Néel temp. calc. 4=15657
 transition to ferromagnetic layer, spin configuration calc. 4=13125
 transition metals and alloys, electronic structure, exchange integral, sign 4=13224
 two sub-lattices of spin- $\frac{1}{2}$ particles, coupled by exchange interactions 4=10294
 uniaxial antiferromagnet, magnetization, temp. depend. 4=1848
 uniaxial antiferromagnets, magnetoelastic props., thermomag. theory 4=26348

Antimony

- concentration in Ge in equil. with Bi-Sb alloy vapour 4=1513
 crystal growth from vapour phase 4=2022
 crystallographic angles 4=23457
 crystals, single, etching by H, rel. to microstruct. 4=26693
 de Haas-van Alphen effect, liquid He temp., calc. 4=28758
 de Haas-Shubnikov effect and ellipsoidal carriers 4=6945
 diffusion in Cu, $560^\circ\text{--}896^\circ\text{C}$ 4=22609
 diffusion in Ge, rel. to local electric fields, $750^\circ\text{--}900^\circ\text{C}$ 4=6871
 donor, in Si single crystals, stacking faults 4=28574
 electrical properties, temp. depend. 4=1588
 electrodiffusion in Sn, d.c.-induced, analysis 4=12785
 Fermi surface, by Shubnikov-de Haas effect 4=9904

Antimony—contd

- films, conductivity, elec., time var. 4=26003
 grain boundaries, low-angle, annealing displacement orientation, preferred, effect of Sn additions 4=17783
 lattice vibrations, longitudinal and transverse 4=9826
 magnetoacoustic geometric resonances meas. 4=25846
 magnetoresistance, $100\text{--}300^\circ\text{K}$, up to 320kOe 4=26004
 magnetoresistance oscs., 1.2°K , and Fermi surface 4=4138
 multipole spectrum 4=19949
 optical props., i.r., low temp. 4=28672
 optical props., $0.5\text{--}25\text{ eV}$ meas. 4=13042
 optical refl., phase shift dispersion meas. 4=28709
 phase transformations, 90 k bars 4=4501
 phase transitions at high pressures 4=29003
 poly- and mono-crystalline vac. deposited films, structure 4=10609
 thermal properties, temp. depend. 4=1588
 twins, wedge-shaped, props. of boundaries 4=10454
 X-ray continuous spectrum, Ohlin structure meas. 4=4242
 from InSb, on heating 4=1969

Antimony compounds

- with rare-earth metals, crystal structure 4=15791
 semiconducting, LiSb, NaSb, Na₃Sb 4=1589
 SbBr₃ (Menshutkin) complexes, nuc. quadrupole resonance rel. to structure 4=26456
 Sb¹²¹Cl₃ crystal compounds, n.q.r., temp. var. 4=4433
 SbCl₃, negative ion formation, by electron bombard. 4=453
 SbCl₃, SbBr₃ complexes with benzene and derivs., and naphthalene, n.q.r. 4=23081
 SbF₅, mol. potential consts., calc. 4=9724
 SbI₃, conductivities, elec. and thermal, thermoelectricity, microhardness 4=1624
 SbI₃, optical props. meas. 4=1720
 Sb₂O₃-As₂O₃ mixtures, vaporization 4=27383
 Sb₂S₃, band structure, group theory calc. 4=1434
 Sb₂S₃, crystal growth and elec. cond., rel. to S vap. pressure 4=2023
 Sb₂S₃, elec. props. rel. to stoichiometry 4=1590
 Sb₂S₃ films, h.v. photo-e.m.f., $90^\circ\text{--}350^\circ\text{K}$ 4=26141
 Sb₂S₃ layers, photoconductivity 4=4227
 Sb₂S₃, molten, thermodynamic and electrical investigations 4=8197
 Sb₂S₃, refl. spectrum, u.v. 4=7109
 Sb-Se, condensation mechanism, structure and props. 4=23239
 SbSI, crystal struct., atomic, change on transition from non-polar to ferroelec. 4=20757
 SbSI, piezoelectric constants, in ferroelec. range 4=12973
 SbSI, substituted, wholly or partly, Sb by Bi or As, S by Se or O and I by Br or Cd, ferroelectric 4=26114
 Sb₂Te₃, thermodynamic props. rel. to stability 4=27396
 SbTeI, conductivities, elec. and thermal, thermoelectricity microhardness 4=1624

 - reflex discharge, long-wavelength instab. 4=24709
 - spark recovery in gaps, gas flow effect 4=11545
 - spark-triggered electrode shock-hazard removal 4=29895
 - spectral lines, self-inverted, use for concentration determ. of charged to neutral particles 4=24667
 - spectroscopic, light source, modified Maekkev, for solutions, aerosols 4=8435
 - stability of vacuum arc for metal cathodes 4=2965-6
 - stationary d. c. arcs of known duration, apparatus 4=29896
 - steel, arcbreak, dropless 4=11560
 - temperature measurement, spectral, by Fe lines 4=485
 - theory, convection 4=21492
 - Toronto Hg, easily fabricated 4=24623
 - vacuum, high speed plasma beams 4=29935
 - vortex stabilization mechanism 4=18772
 - vortex-stabilized, transient discharges 4=18805
 - wall stabilized column, with strong axial gas flow 4=24625
 - welding systems, mass transport 4=10998
- Ar, between W electrodes, temp. distrib., spectroscopic meas. 4=18778**
- Ar, electrical, thermal, optical props, viscosity, 10 000° to 15 000° K 4=24622**
- Ar, for plasma obs., 50-60 A, 11000-12000°K 4=24666**
- Ar, forward and retrograde motion in mag. fields 4=18775**
- Ar, ionized hollow cathode and anode, visible and i. r. meas. 4=18781**
- Ar torch, r. f., spectroscopic and microwave meas. 4=18788**
- Ba, vaporization, var. with sample composition 4=484**
- C, rel. to constituent BaO vibr. temp. 4=22347**
- C, spectrophotometric radiation standard 4=21303**
- Cd, vaporization, var. with sample composition 4=484**
- Cr lines in seeded Cu arc, integral radiation 4=16457**
- Cs 4=8670**
- Cs vapour, bar voltage, props 4=29900**
- Cs vapour, low voltage, props. 4=29900**
- Cu₂I transition probs. meas. 4=25498**
- D₂, ionized hollow cathode and anode, visible and i. r. meas. 4=18781**
- Fe, Cr ratio in gas cloud, and electrode composition 4=21490**
- Fe d. c. arc electrode vapour jet vels., by spectroscopy 4=29894**
- FeO emission spectrum source, low-press. 4=9741**
- H and He column with superposed mag. fld., pressure variation and heat conductivity calc. 4=18777**
- H, high-pressure, temperature determ., interferometric 4=18705**
- H, low-voltage, dissociation, rel. to energy loss 4=18784**
- H, whirl stabilized, plasma generation 4=19060**
- H₂, ionized hollow cathode and anode, visible and i. r. meas. 4=18781**
- He, introduction of Li and Sr, var. with pressure, < 8.5 atm 4=8663**
- He, ionized hollow cathode and anode, visible and i. r. meas. 4=18781**
- He I spectrum profiles 4=19947**
- He, stationary, d. c., transport coeffs. rel. to mag. field 4=18783**
- Hg, as telemetry light source, modulated at 10 to 120 kc/s 4=8666**
- Hg cathode spot, basic theory 4=11557**
- Hg, in mag. field, natural oscill. and electron temp. 4=14619**
- Hg, self-emission spectrum, far i. r., as source 4=14620**
- Hg vapour-metallic iodide, as lamps 4=14351**

Arcs, electric—contd

- Li, vaporization, var. with sample composition 4=484
- N, high density, arc, mag. probe meas. 4=5606
- N₂, plasma, spectral continuum meas. 4=14652
- N₂⁺, oscillator strength meas. 4=20054
- Na lines in seeded Cu arc, integral radiation 4=16457
- Na and Li atomic forbidden lines in d. c. arc flame 4=29899
- O, N—O, and 6 O I multiplet transition meas. 4=28134
- Rb, vaporization, var. with sample composition 4=484
- Xe arc, u. v. spectral distrib. and aging characts. with filters 4=27306
- Xe, dynamic props. rel. to physical data 4=8665
- Xe flashtubes, shock waves and deterioration 4=8662
- Xe, temp. meas., by spectral line self reversal 4=18786-7

Area measurement

- leaves, photoelec. planimeter, large-stage 4=8006
- powders, automatic device using Ar adsorption 4=7697
- surface examination technique using friction meas. 4=4657

Area measurement, porous substances

See Surface measurement

Argon

- acoustic wave propag., by localized r.f. breakdown 4=19019
- adsorbed on graphite, specific heat calc. 4=2132
- adsorption, physical, on graphite, theory and expt. 4=23592
- afterglow, collision with gases, electronic spectra of excited gases 4=18725
- afterglow due to excitation in electron avalanches 4=24614
- afterglow plasma, dielec. const., meas. and theory 4=11641
- arc discharge, visible and i. r. meas. 4=18781
- arc, electric, effect as atmos., on emission 4=488
- arc, forward and retrograde motion in mag. fields 4=18775
- arc, between W electrodes, temp. distrib., spectroscopic meas. 4=18778
- arcs, electrical, thermal, optical, props, viscosity, 10 000° to 15 000° K 4=24622
- atmospheric distribution up to 430 km 4=26807
- atom, autoionized energy levels, meas. and theory 4=6474
- atom, elastic electron scatt., semiempirical calc. 4=9671
- atom, K-absorption edge, counter response meas. 4=9636
- atom, ³P, metastable, polarizability tensor of mag. substrates 4=19948
- atom, radial electron density plots 4=22280
- atom, recombination rate constants, three-body 4=17852
- atomic beam scattering from epitaxially grown gold films 4=22323
- atomic collisions, characteristic energy losses 4=12399
- atomic scatt. factor, X-ray, rel. to theory 4=3797
- atoms, electron differential elastic scattering, 75 to 500 eV 4=25569
- atoms, electron scatt., low-energy, cross-sect. abs. meas. 4=25568
- atoms, excited, competitive quenching by O₂, N₂, H₂, CO₂, CH₄ 4=30486
- atoms, 600-170 Å absorption cross-sections 4=15272
- breakdown, laser induced, at high pressures 4=8654
- breakdown, moist and dry states in wire-plane and point-plane gaps 4=18748
- charge exchange, two-electron, with protons 4=464
- charge transfer with N₂, at thermal energies, meas. 4=24555
- collisional detachment cross-sect. of O⁺ and O₂⁺ 4=27492
- conductivity, thermal, calc., in presence of ionization 4=18241
- cooling of Pt filaments 4=10034
- critical opalescence, X-ray meas. 4=2890
- critical pressure determ., theory 4=18501
- cryotrapping effect on H₂, 4.2°K 4=2737
- crystal excitons, appl. of Wannier model 4=9919
- current-voltage characteristics, high temp. and pressure 4=18685
- desorption rates and heats of desorption from silica gel and sand 4=7729
- dielectric constants, audio frequency meas. 4=27227
- diffusion, in binary mixtures with He and H₂, pressure effect 4=27215
- diffusion in CaF₂, as model for fission gas transport in UO₂ 4=25466
- diffusion in CCl₄ 4=18189
- diffusion of Zn, temp. var., spectral absorpt. meas. 4=18244

Argon—contd

- discharge, electric, h. f., torch, electrode erosion, lack of for Al 4=8667
- electric breakdown static, role of metastable atoms 4=16453
- electric discharge, 10-100 kc/s, in 1000-3000 Oe 4=24609
- electric discharge, sustained, in shock-ionized gas 4=8640
- electron avalanches, mean energy and drift velocities 4=11546
- electron drift velocities meas. 4=24561
- electron elastic scattering factors, nonrelativistic theory 4=15298
- electron energy distrib., effect of CO₂ and H₂ impurities 4=11256
- electron impact spectra 4=6520
- electron scatt., elastic and inelastic, from electron transport 4=11509
- electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
- electron transport coeffs. and cross-sections calc. 4=11257
- electrons, low-energy, drift velocity 4=27479
- excitation in positive column at medium pressures 4=5570
- excitation temp. meas. in plasma jet using transition probabilities of lines 4=12382
- excitation of upper levels, in d. c. discharge, quenching collision broadening 4=14598
- films, spectra, absorpt., and Xe impurity states 10°K 4=1721
- fluid, radial distrib. function calc. 4=14101
- gas, Joule-Thompson zero press. coeff., exptl. and theoret. 4=27208
- gas, lifetime curves of positrons, fine structure 4=15047
- gas, transport props. and interaction of atoms 4=18240
- glow, localized density meas. by X-ray fluorescence 4=18724
- heat accommodation with W surface 4=29674
- interatomic, Morse potential force consts. from viscosity 4=9787
- interdiffusivity with metal vapours at high temp. 4=24266
- ion beam collisions with gas atoms, diff. scatt. cross-sect. and charge state distrib. 4=25593
- ion mobilities from electron density meas. 4=2948
- ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
- ionization by electron impact, with fast crossed-beam 4=24589
- ionization by fast He atoms and He⁺ ions 4=24566
- ionization and formation of long-lived excited ions 4=25492
- ionization, He atoms and ions, 15-180 keV 4=2944
- ionization, multiple, by Auger effect, meas. 4=11520
- ionization, photo, from M₁ to L edges 4=14575
- ionization potential meas. by mass spectrometry, influence of mag. field 4=21458
- ionization rates in shock-heated gas 4=11522
- ionization, single and double, by electron impact 4=11523
- ionization, total, by 8-100 keV heavy ions 4=21459
- ionized partially, shock heated, electronic cond. in mag. field 4=27225
- ionized, slightly, cyclotron reson., collision frequ. det. 4=461
- ions in Ar gas, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
- ions, Ar⁺, emulsion sensitivity, up to 25 keV 4=9037
- ions, Ar⁺, 15 keV bombard. of Cu, secondary atom emission 4=17457
- ions, Ar⁺, 20 keV sputtering of Cu 4=17459
- ions, Ar⁺, scatt. from metals, 40-80 keV 4=14766
- ions, Ar⁺ and Ar²⁺, ionization cross-sections, for electrons 4=16433
- ions, Ar IX, X, XI, XII, spectra, grazing incidence meas. 4=25490
- ions, bombard. metals, secondary electron emission 4=8822
- ions bombarding W, ionic entrapment and thermal desorption 4=13693
- ions, charge exchange with molecules, meas. 4=14574
- ions, electron capture and loss, 250-1400 keV 4=16431
- ions, reflection from Cu single crystal, anisotropy 4=29992
- ions, scatt. by Cu, graphite, max. 4=19118

Argon—contd

- ions, sputtering of Cu, atom, energy distrib. 4=24754
- ions, sputtering in Cu, temp. var. 4=10018
- ions in upper atm., form. and disappearance study 4=26838
- isotopic thermal-diffusion factor, 127° to 653°K 4=5239
- laser action, high-gain 4=19286
- laser, ionised 4=27684
- lattice dynamics, effect of vacancy 4=28347
- liquefied, positive ion mobility meas. 4=27194
- liquid, breakdown, electric, mechanism, impurity effects 4=5200
- liquid diffusion, self, transport theories criticism 4=18187
- liquid, electron drift velocity, mol. impurities effect 4=16122
- liquid, elec. strength 4=16121
- liquid, mean square force, isotope separation factor 4=21090
- liquid, metal powder production by spark erosion 4=30999
- liquid, thermal cond., expt. and theory 4=169
- liquid, transport processes, config. relax. model 4=8163
- liquid, viscosity 4=5161
- liquid, viscosity meas. 4=21108
- liquid, viscosity and surface tension, simultaneous micro-balance method 4=24188
- in MHD generators, ionization, non equil., seeded with Cs 4=18663
- molecular beam production from Ar—H₂ gaseous mixture 4=15389
- optical emission from α -particle excited Ar, and quenching 4=28117
- pair coupling, Ar I, 5g level 4=28116
- plasma, axisymmetric, interferometric analysis 4=16467
- plasma, containing W Langmuir probe, work functions lowering 4=14685
- plasma, with Cs, elec. cond. and heating field 4=27545
- plasma diagnostics, microwave reflection method 4=18901
- plasma, effect of 1 or 2% Fe on temp. 4=11633
- plasma, 5.4 kJ linear Z-pinch, collapse stage meas. 4=8737
- plasma flows, high speed, microwave diagnostics 4=18903
- plasma gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
- plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
- plasma, hydromagnetic waves, fast, expt. 4=14714
- plasma, K seeded, elec. cond. at atmospheric press. 4=24638
- plasma for m.h.d. generator 4=11501
- plasma, magnetoacoustic resonance 4=19022
- plasma, partially ionized, anomalous microwave radiation at cyclotron resonance 4=5613
- plasma pinch, shock waves 4=11649
- plasma produced by shock waves, mag. driven, spectra 4=24648
- plasma, seeded, electrode phenomena, tensor cond., electrode heating 4=18925
- plasma, shock-heated, elec. cond. between electrodes 4=11586
- plasma, shock heated, Hall e.m.f. meas. 4=18897
- plasma, shock ionized, electron conc. and temp. meas. 4=18896
- plasma, spectral line self-absorpt. meas. technique 4=24665
- plasma, supersonic streams, seeded with electronegative gases, props. 4=16468
- plasma, thermal transport, shock tube studies 4=16466
- plasma, z-pinch effect at high gas densities 4=14693
- positive ion production, by energetic He⁺ impact 4=24569
- propylene—argon system, liq.—vapour equil. 4=11410
- radiation cooling after shock heating 4=18482
- scattering by Ni, polycrystalline 4=19996
- shock excited, in granular pressings, temp., calc. 4=2774
- shock fronts structure, optical refl. meas. 4=5282
- shock wave structure, Navier—Stokes calc. 4=5283
- shock wave temp. calc. 4=18327
- shock waves, cylindrical propagation 4=14264
- shock waves, luminosity extinction against transparent surfaces 4=11295

Argon—contd

- shock waves, precursors ahead 4=18340
- shock waves, temperatures, photomultiplier meas. 4=18326
- solid Ar: H, 1s-2p, 1s-2s excitation calc. 4=30548
- solid, crystal structure 4=29094
- solid, energy bands, augmented plane-wave calc. 4=12691
- solid, H, D impurity 1s-2p transitions obs. 4=30503
- solid, H₂ and CH₄ impurities, irradi., energy migration and isotopic effects, e.s.r. meas. 4=25928
- solid and liquid, neutron scatt. meas. 4=27171
- solid, metastable hexagonal phase 4=23247
- solid, rotation and ortho—para conversion of water molecules 4=1275
- solubility in distilled water 4=11184
- solubility in H₂O, heat and entropies 4=159
- sorption, on chabazite 4=15830
- sorption in porous glass, condensation ht. and pore shape 4=20819
- sorption in Vycor glass and chromia gell, thermodynamics 4=20818
- spark gaps, high current, cooling 4=27503
- spark, long, at high press., stabilized by rotating gas 4=14612
- sparks, temp. fall from 50 000° to 5000°K 4=8659
- specific heat, solid, three parameter interatomic potential calc. 4=17360
- spectrum, continuous, visible, shock excited 4=29678
- spectrum, discharge, electric, r.f., similarity to Geisler tubes at high powers 4=5612
- spectrum, reson. lines 1048A, 1967A, oscill. strength, meas. 4=30378
- spectrum, i.r., interferometric meas. 4=6467
- spectrum, neutral, var. with type of elec. discharge 4=18782
- sputtering of Au, meas. of yield by replication 4=27582
- thermal transpiration at high temps. and 3×10^{-3} —2.5 mm Hg press. 4=5224
- thermodynamic state in shock tube, spectral meas. 4=27527
- torch, r.f., spectroscopic and microwave meas. 4=18788
- triply-ionized 4=11511
- viscosity, calc., Enskog's dense gas theory and Kirkwood's radial distrib. function 4=14208
- viscosity meas., effect of press. up to 820 atm 4=27214
- viscosity, Prandtl number, calc., in presence of ionization 4=18241
- work function, photoelectric, of Mo, Ni 4=568
- X-ray absorption coefficients, 2 to 8A, meas. 4=3784
- X-ray emission spectrum, K β , fluoresc. meas. 4=7147-8
- Ar⁺ and Ar²⁺, ionization by electron impact 4=5560
- Ar⁺ beam, 30-170 keV, sputtering of Cu and Ag 4=22644
- Ar⁴¹ ion range in amorphous Al₂O₃, WO₃, meas., comp. to theory 4=27580
- Ar⁺ ions, atomic scattering from metal surfaces, 40 to 80 keV 4=19121
- Ar⁺ ions on metal surfaces, rel. to secondary electron emission 4=11700
- Ar⁺ ions, incident on Cu and Al momentum accommodation above sputtering threshold 4=19123
- Ar I, line broadening in plasma jet 4=9635
- Ar⁺, 1-10 keV, sputtering yields of single crystals 4=4103
- Ar⁺ positive ion stripping and neutralization, 100-450 keV, 4=24568
- Ar—proton elastic scattering at 9.8 MeV 4=30396
- Ar⁺⁺ single-charge-transfer reactions, cross-sections. 4=8627
- Ar⁺, 10 laser wavelengths, 4500 A to 5300 A 4=19285
- Ar II Stark broadening in fully ionized plasma 4=18853
- Ar—Ar, potentials from neutral beam elastic scatt. 4=25777
- Ar⁺—Ar, resonant electron capture 4=24588
- Ar—BaO suspension, Ar elec. cond. enhancement, appl. to m. h. d. power generation 4=27224
- Ar—CO₂, binary diffusion coeffs. 4=24267
- Ar—Cs plasmas, energy density rel. to temp. 4=11653
- Ar—He mixtures, viscosity at 20° and 30°C, from 1—50 atm, expt. 4=8242
- Ar—He supersonic jet recovery factor > either pure gas 4=27206
- Ar—Hg discharges, striation, moving, dispersion rel. 4=16449

SUBJECT INDEX

Argon—contd

- Ar—Li scattering, Liennard—Jones potential:
determ. 4=20131
Ar—NH₃ mixtures, viscosity 4=18242
Ar—N₂, Ar—CO₂ mixtures, low-energy electron drift
velocity 4=27479
Ar—N₂—O₂ discharges, forbidden auroral radia-
tion 4=18708
Ar—O₂ mixtures, vib. relax., acoustic resonator
meas. 4=11244
Ar²⁺ + H₂ charge exchange cross-section, matrix
calc. 4=29871

Argon compounds

- Ar—H₂ solid solutions, lattice vibrations 4=3855
ArHg, molecular states, potential energy curves 4=1266
ArHg, vibrational levels, eigenfunctions 4=1267

Arsenic

- crystallographic angles 4=23457
multipole spectrum 4=19949
optical props., 0.5–25 eV meas. 4=13042
As⁷⁵ nuc. quadrupole res. in orpiment 4=23079
As⁷⁵, strength fn., neutron scatt., resonance parameters,
spin var., calc. 4=28036
in Se as trace element, neutron activation chem.
anal. 4=23692

Arsenic compounds

- claudeite, As₂O₃, prod. by forced condensation 4=2024
halides, mol. vibr. calc., XY₃, pyramidal 4=9734
orpiment, rel. to As⁷⁵ nuc. quadrupole res. 4=23079
As chalcogenides, vitreous and crystalline,
structure 4=2135
AsCl₄, mean ampl. of vibr. 4=15358
AsD₃, relax. rel. to vibr. —rot. energy transfer 4=17289
AsH₃, relax. rel. to vibr. —rot. energy transfer 4=17289
AsO, emission spectrum, by heavy current dis-
charge 4=30423
As₂O₃, condensation behaviour from -196° to
100°C 4=370
(As₂O₃)₂, condensation, activated, on incandescent gauze,
dissociation 4=8521
10 As₂O₅, 90 M₂O₅ (M = Nb, Ta), tetragonal phase 4=26666
As₂S₃, absorption coeffs. and refl. spectrum 4=7109
As₂S₃, long-wavelength edge absorption 4=17553
As₂S₃, sols, stability, var. with particle size, colori-
metric study 4=10665
As₂S₃ wedge, transmittance effects, 2–15 μ 4=20443
As₂Se₃ films, photoconductivity storage 4=28638
As₂Se₃, photoconductivity, rel. to Cu and Ag
impurity 4=1677
As—Te—I and As—Te—Br semiconducting glasses, Hall
effect 4=26029

Association

- acetamide—nitrophenol complexes in benzene, from i.r.
spectrum 4=20077
dimethyl ether + SO₂, HCl or fluoroform, from dielectric
const. and density, press. var. 4=11258
polyatomic molecules, bimolec. pre-association 4=9798
C, molecular ions, in spark source, mass spectra 4=9782

gases

- alkali metal vapours, effect on crit. consts. 4=21366
collision processes, statistical mechanics 4=6662
ionic salt molecules, dimensional theory 4=25747
HCl mixed with Ar and Xe, complex formation, spectral
data 4=3858
He₂⁺ formation from He⁺, reaction rates meas. 4=11532
Ne₂⁺ formation from Ne⁺, reaction rates meas. 4=11532

liquids

- See also Colloids
n-decyl alcohol in nonpolar solvents 4=5210
ideal solutions 4=29613
metallic nitrates, solution 4=176
n. m. r. relaxation 4=27202
CuCl—LiCl fused system, complex ions 4=183
CuCl₂ fused mixtures with LiCl and KCl 4=183
KNO₃—AgNO₃ fused system, complex ions 4=183
LiClO₃—H₂O fused system, complex ions 4=183
LiNO₃ fused mixtures with NaNO₃, LiOH and H₂O, complex
ions 4=183
LiOH—NaOH fused system, complex ions 4=183
ZnCl₂ fused mixtures with LiCl and KCl 4=183

Astatine

- atomic absorpt. spectrum, 2244. 01 and
2162. 25A 4=28118

Astatine compounds

- As₂O₃, growth from vapour, crystal faces
theory 4=10468

Asteroids

- See Planets; Solar system

Astronomical instruments

- See also Radioastronomy; Telescopes, astronomical
coronagraph, effect of boundary diffraction wave 4=29461
coronagraph, externally occulted, scatt light 4=23926
coronagraph, reflecting, feasibility 4=2445
interference filters for very faint emission
objects 4=23837
interferometer, for astronomical near i.r.
spectrometry 4=29362
interferometer, eyepiece for binary star obs. 4=23836
interferometer Michelson, for i.r. spectrometry 4=29361
interferometer spectrometer, noise analysis 4=27312
Michelson interferometer for Fourier

- "forcing function", total, N. hemisphere 4=7829
- friction and diabatic processes 4=30929
- i. r. absorption, gas conc., pressure temp. effects, laboratory versus openair review 4=30933
- i. r. spectral radiance, meas. by inflight satellite 4=13795
- i. r. spectral radiance variation 4=13797
- magnetoacoustic energy propag. 4=13832
- meas. 4=17910
- pressure, meas. by ionization gauge 4=30927
- radiation, i. r., over Arctic Ocean 4=7844
- radiation, scattered, in presence of O₃ absorpt., effect of ground reflection 4=23753
- satellite and space probe meas., review, (1963) 4=10932

Atmosphere—contd

- smoke, filter-paper method of estimation 4=7822
 - stratosphere and troposphere, i. r. thermal radiation field 4=26795
 - thermal radiative transfer, effect on acoustic propag. 4=7867
 - tropopause height osc., due to vert. temp. var., non-adiabatic, theory 4=15865
 - troposphere, radio scatter, air-mass effects 4=20851
- composition**
- absorption of solar i. r. radiation 4=2196
 - aerosols, effect on contrast of objects on earth's surface seen from above atm. 4=17892
 - air chemistry, book 4=10698
 - diurnal variation, 190 km, from solar extreme u. v. absorption meas. 4=13815
 - electron density, models for height distrib. 4=2260
 - exosphere, H concn., diurnal variation, effects 4=7874
 - ionosphere, ionic reactions, general analysis 4=13846
 - methane, abundance 4=17878
 - ozone, biannual variation over tropics 4=4758
 - ozone content, meas. by improved spectro-photometer 4=13781
 - ozone content in mesosphere, rel. to radiative equilb. 4=23775
 - ozone content rel. to stratospheric wind oscillations 4=23730
 - ozone distrib., continuum behaviour 4=2186
 - ozone meas. by u. v. absorpt. 4=2187
 - ozone vertical distrib. meas. by satellite 4=13780
 - ozone upper atmos. temp. and electron precip. 4=29306
 - ozone, vertical distrib., by twilight balloon photometry 4=2185
 - tritium, produced by thermonuclear explosions, moratorium distrib. 4=2213
 - upper atmosphere, review 4=13819
 - upper, atom, ion, molecule, electron density theoretical calc. 4=7868
 - upper, chemical processes, review 4=26808
 - upper, He 4=7869
 - upper, ion exchange processes, meas. 4=26809
 - upper, ions, altitude distrib., O—He transition, satellite obs. 4=2288
 - upper, from light scattering by particles 4=17921
 - upper, Na abundance, day and twilight meas. 4=26806
 - upper, review 4=30936
 - water vapour distrib. 4=2188
 - 100-500 km, diurnal variation, satellite meas. 4=13817
 - CO₂, effect of light and temp. on volume content 4=4755-6
 - CO₂, giving errors in spectral absorpt. meas. 4=17895
 - CO₂ values, effect of air filtering 4=29269
 - H, He, vert. distrib. calc., during quiet sun 4=7872
 - H₂O, giving errors in spectral absorpt. meas. 4=17895
 - He escape rate, effect of geomag. changes 4=2221
 - He, thermal diffusion effects 4=26805
 - He, upper, from twilight glow, and fast photo-electrons 4=13826
 - He', H', and total ion density, 940 km, direct meas. 4=7873
 - N₂ and γ -ray absorpt., H Lyman 4=26787
 - O₂ distribution, 62 to 175 km 4=10734
 - O₃, and earth, mag. field vars. 4=7823
 - O₃ and geomagnetic disturbance, relation 4=4757
 - O₃, meas., spectroscopic 4=10735
 - O₃ representative vertical distrib., for transmission studies 4=23729
 - O₃, and sun, flares, lack of connection 4=7823
 - SO₂ recorder 4=30928
 - Xe, origin and earth's origin and early development 4=20844

humidity

- See also Humidity
- and absorption, acoustic 4=14215
- dew-point determ. by α -source and ionization chamber 4=7824
- and e. m. wave refractive index calc. 4=26804
- effect on convection movement 4=4760
- effect on optical props. 4=2198
- horizontal transport of moisture, micro-meteorological 4=4753
- recorded by airborne apparatus 4=13779

Atmosphere—contd**humidity—contd**

- stratosphere, water vapour content 4=13782
- vertical distrib. of water vapour, spectral obs. 4=2188
- water droplets 0.2–3 mm diameter, size and conc. meas. by drop-size sensor 4=10700

ionization

- surface, window radiation chart for calc. 4=23733
- upper atmosphere, review 4=13819
- upper, mag. storm effects, satellite obs. 4=20860
- upper, mag. storm heating, latitude var. 4=20856
- upper, ozone temp. and electron precip. 4=29306
- upper, review 4=30936
- upper, var. rel. to solar activity 4=29310
- variation with height, 100-200 km, K resonance radiation 4=2216
- variations, local, spatial correl. calc. 4=26788
- vertical gradient changes, and tropopause height, theory 4=15865

thermodynamics

- adiabatic processes 4=30929

book 4=10695

- mesospheric circulation, thermally driven, simple models 4=29272
- thermal equilibrium, with convective adjustment 4=29271
- radiation balance, day time vertical profile 4=7841
- radiation balance, surface-atmosphere meas. 4=4763
- radiation balance, Tiros II data treatment 4=7842
- 10.7 cm solar flux as index of extreme u.v., inexactness 4=17914

upper

- acoustic wave ray paths to above 300 km 4=7875
- air density, 500-1500 km, rel. to sunlight pressure, involving cylindrical satellites 4=4782
- atom, ion, molecule, electron density theoretical calc. 4=7868
- auroral zone electron precipitation events, balloon obs. 4=10747
- chemical processes, review 4=26808
- chemical reactions involving H, OH, HO₂, H₂, NO₂, O₃, review 4=13718
- chemical reactions, N, O, bimolecular, rates 4=13719
- chemiluminescence of trimethyl aluminium vapour in 4=7876
- circulation and O dissoci. rel. to comp. 4=23803
- clouds, noctilucent, obs. over Canada, June to July 1963, data 4=4784
- clouds, noctilucent, particle sampling 4=4783
- collision processes, charge transfer and ion-atom interchange, review 4=15306
- collision processes, charge transfer and ion-molecule, low energy, review 4=12539

SUBJECT INDEX

Atmosphere — contd

upper — contd

- composition, mass spectrometer for obs. 4=16558
- Cosmos 3 and 5 satellites, upper-atm. study 4=26819-20
- cyclotron radiation, from bunched electrons 4=17919
- density, by drag on falling sphere, 95-135 km 4=2217
- density, decrease from 1958 to 1962, 150-750 km 4=4781
- density decrease, 1957-63 4=2218
- density, diurnal variation at 205 km 4=7871
- density from grenade glow cloud diffusion, 120-180 km 4=23772
- density, from satellite orbital data 4=2219
- density and temp. var. rel. to solar activity 4=29310
- density meas., from satellite heating 4=7870
- density, pressure and temp. meas., 260-900 km 4=20859
- density, 200-230 km, by Cosmos 3 and 5 satellites 4=26822
- density variations above 200 km, meas. 4=26810
- diffusion, with vapour from sounding rocket 4=4779
- diurnal variation, 190 km, from solar extreme u.v. absorption meas. 4=13815
- e. m. field fluctuations, 3.0 to 0.02 c/s 4=7941
- electrical state, review 4=23790
- electrojet, current strength, rel. to F-layer drift 4=2238
- electrojet enhancement during polar magnetic substorms 4=2236
- electrojet, equatorial, daily strength variation 4=2237
- electrojet, equatorial current, lunar tidal variations 4=2239
- electrojet, equatorial, rel. to plane-wave electron-density irregularities 4=2240
- electron density meas. in magnetosphere by whistlers 4=29309
- electron density, models for height distrib. 4=2260
- electron and protons, fast, and N day glow and red aurora prod. 4=17922
- electrostatic field strength near space vehicle surface 4=26815-17
- exosphere, diffuse whistlers, rocket meas. at night 4=17918
- exosphere, H concn., diurnal variation, effects 4=7874
- exosphere, h. f. radio propag. by field-aligned ionoz. 4=7894
- exosphere, outer, v.l.f. emissions, rel. to Cherenkov effect and anomalous Doppler effect 4=2222
- exosphere, shock wave propagation, hydromagnetic, and geomag. var. due to nuclear explosions 4=23776
- up to 430 km, He, N and Ar distrib. 4=26807
- glow clouds from grenades, diffusion coeff. determ. 4=10737
- gravity waves, viscous damping and thermal conduction effects 4=7826
- heating, atmospheric response, dynamic model calc. 4=20863
- heating in mag. storms, latitude var. 4=20856
- hypersonic atmospheric penetration causing optical spectra 4=13974
- i.r. radiation from earth, satellite meas. 4=17920
- infrasonic pressure waves, auroral zone, rel. to ionospheric and geomagnetic disturbances 4=13839
- ion composition, meas. instrument 4=26814
- ion density, 200-2000 km, rocket obs., heavy-light transition 4=2262
- ion-electron, —ion recombination, review 4=15884
- ion exchange processes, meas. 4=26809
- ionization and recomb. coeffs., variations 4=7896
- ionization due to fission product β -particles, at 100 km 4=4780
- ionized irregularities, movement 4=15883
- ions, altitude distrib., O-He transition, satellite obs. 4=2288
- ions, negative, processes 4=17915
- joule heating by equatorial electrojet, theory 4=7897
- light scattering by particles 4=17921
- luminous cloud triangulation, photographic instrumentation 4=17917
- m.h.d. convection theory and mag. storms and aurorae 4=26873
- m. h. d. weak shock wave propag. and mag. storms 4=7944-6
- magnetopause, review 4=4958
- magnetosphere, anomalies and disturbances 4=26865

Atmosphere — contd

upper — contd

- magnetosphere electron density distribution, from whistler data 4=10748
 - magnetosphere, solar plasma injection 4=20857
 - magnetosphere, solar wind hydromagnetic coupling 4=20858
 - magnetosphere structure, rel. to geomag. pulsations 4=15898
 - magnetosphere, viscous interaction with solar wind 4=15897
 - mesosphere, radiative equilibrium 4=23775
 - movements, and energy sources 4=13813
 - neutron and proton dosages from solar flare radiation 4=26813
 - ozone temp. and electron precip. 4=29306
 - pressure and density and scale heights, satellite obs. 4=26812
 - radiance, middle u.v. 4=13816
 - radiation meas. up to 130 km, not rel. to sun 4=13825
 - radio emissions, v. l. f., props. 4=7895
 - review, density, temp., composition 4=30936
 - rotational speed, from changes in satellite orbits 4=29308
 - satellite and space probe meas., review, (1963) 4=10932
 - solar radio flux and thermopause temperature 4=10736
 - spectrum, 1μ to 3 mm, review 4=29311
 - structure, and satellite drag and e.m. absorpt. relation, He amount 4=7869
 - temperature, satellite meas. 4=26824
 - temperature, var. with height, 100-200 km, K resonance radiation 4=2216
 - three-body reactions 4=23783
 - transport equations in ionized gas mixture 4=10733
 - temperature, mag. storm effects, satellite obs. 4=20860
 - various particles, density and temp. distrib. 4=10738
 - variations, by satellite drag 4=13818
 - wind meas., Na, Li clouds, review 4=17916
 - wind meas. at 100-200 km, using Na vapour trail data 4=7877-9
 - wind and temperature structure 4=26811
 - winds, twilight 4=13833
 - 130-140 km, temp. distrib. 4=26807
 - X-ray and u.v. radiation, satellite meas. 4=15879
 - Ar ions, form and disappearance study 4=26838
 - H near earth, origin of H_e emission 4=17995
 - H, neutral, current knowledge 4=23773
 - H, He, vert. distrib. calc., during quiet sun 4=7872
 - He composition, thermal diffusion effects 4=26805
 - He⁺, N⁺, O⁺, NO⁺, O₂⁺ distrib., 130-430 km 4=26839
 - N₂, formation of Lyman-Birge-Hopfield bands 4=10739
 - Na abundance, day light rel. to twilight 4=26806
 - Na, atomic, abundance, by solar Fraunhofer telluric absorption 4=2226
 - O₂ distribution, 62 to 175 km 4=10734
 - O₃, meas., spectroscopic 4=10735
- Atmospheric acoustics**
- amplitude fluctuations of sound in turbulence 4=7866
 - focussing, Saturn rocket firings appl. 4=10731
 - infrasonic pressure waves, from pulsating aurora 4=17928
 - propagation, effect of radiative transfer 4=7867
 - propagation in medium with spheroidal inhomogeneities 4=18356
 - scattering, expt. 4=14292
 - ship safety signals, propagation of their sound 4=5300
 - sonic-boom ground-pressure signatures 4=4778
 - sound wave trapping by density grads. 4=8320
 - subpolar acoust. structure, in Autumn 4=15878
 - upper atmosph., ray paths to above 300 km 4=7875
- Atmospheric disturbances**
- See Atmosphere, movements; Thunderstorms
- Atmospheric electricity**
- See also Atmosphere, radioactivity; Atmospherics; Aurora; Electromagnetic wave propagation, atmosphere; Ionization, atmosphere; Ionosphere; Lightning; Thunderstorms

 - aerosol layer charging mechanism, primary 4=7846
 - air conductivity in thunderstorms 4=2207
 - book 4=10695
 - charge generation, book 4=10695

Atmospheric electricity—contd

- electrification of freezing water droplets and colliding ice particles 4=2202
- electrification on melting of ice and snow 4=2203
- electrojet, effect on sporadic-E seasonal variations 4=4813
- electrojet, equatorial, radiowave backscatt. 4=4792
- equatorial electrojet, ionization irregularities, field-aligned 4=17934
- field strength near surface of space vehicle in ionosphere 4=26815-17
- ground fair-weather space-charge meas., apparatus 4=17898
- horizontal components near ground 4=2200
- ionospheric currents, aurora and bays 4=17929
- joule heating of electrons and ions at mag. equator 4=7897
- measurement at top and foot of 25 m mast 4=7847
- measuring apparatus for field, current and conductivities 4=13801
- potential gradient, var. with height, Antarctic 4=2201
- potential meas. with passive aerials 4=2129
- probe, rocket-borne, for meas. of elec. field in auroral displays 4=10942
- radioactive collector 4=17899
- snowstorms and sandstorms, due to temp. gradient. 4=10726
- space charge of lower layers 4=29302
- upper atmosphere, review 4=23790
- variation, daily, annual, freq. effects 4=29301

Atmospheric optics

- See also Airglow; Sky brightness; Sunlight; Twilight; Visibility
- absorption cross-section rel. to ionization coefft. 4=7896
- aerosols, size distrib. rel. to polarization, calc. 4=23759
- attenuation of middle u.v. by ozone and earth's albedo 4=13800
- Chapman function simplification 4=23760
- cirrus i.r. reflection meas. 4=10713
- contrast of objects on earth's surface seen from above atm. 4=17892
- diffusion model for radiation transport from point source 4=23751
- dispersion, rel. to astronomical objective grating use 4=23832
- effect of water vapour 4=2198
- emission in water-vapour lines, calc. from radiation lines 4=29289
- Faraday rotation calc. 4=17897
- fog formation, scatt. and polariz. effects 4=7838
- i.r. absorption spectrum 4=29297
- i.r. radiation scattered from clouds 4=13794
- i.r. spectral radiance, meas. by inflight satellite 4=13795
- i.r. spectral radiance variation near limb of earth 4=13797
- i.r. transmission along slant path 4=4770-1
- i.r. transmittance of CO₂ 4=11247
- i.r. transmittance of H₂O vapour 4=11248
- i.r. and visual radiation meas. from Tiros III 4=13796
- image transmission through turbulent media, optical transfer function 4=10723
- intensity and polarization of light scattered from earth and atmosphere 4=17893
- Ionosphere, depth, large solar zenith distances calc. 4=29322
- light reflection, diffuse, and transmission, in nonuniform atmosphere bounded by reflecting surface 4=16243
- light scattering by particles in upper atmosphere 4=17921
- light scattering, theory 4=2398
- long-wave radiation from clear skies 4=2187
- lower atmosphere, review 4=13799
- Rayleigh scattering and polarization 4=15872
- refractive index, spatial distrib. up to 3 km 4=26798
- refractivity meas. in lower troposphere 4=4759
- scattering 4=13798
- scattering, high order, in mol. atm. 4=17894
- scattering indicatrix in visual and u.v. spectral region 4=26793
- scattering of light in spherical atm. 4=26796
- scattering and polarization props. of clouds and hazes in visible and i.r. 4=13793

Atmospheric optics—contd

- scattering props. of an air volume, rel. to aerosol scatt. and polarizing props. 4=15871
- solar i.r. spectrum, altitude variation 4=10721
- in stars, photometry, colour, extinction 4=26905
- stratospheric slant paths, CO₂ and H₂O transmittances 4=23777
- sun, eclipse, fleeting shadows obs., 15 Feb. 1961 4=29299
- sun, eclipse, shadow bands, 15 Feb. 1961 4=29298
- Sun radiation u.v. limit, daily var. 4=26794
- transparency, vertical, statistical characts. 4=26797
- turbidity parameters 4=29296
- upper atmosphere, review 4=13819
- upper atmosphere, solar irradi. scattering 4=13816
- water mists, near i.r. scattering indicatrix 4=29236
- West Ford dipole belt, optical studies 4=7992-3
- window at 10 μ , rel. to stellar photometry 4=23860
- window radiation chart for radiating surface temp. meas. 4=23733
- "windows", 0.4-4.0 μ , model for attenuation 4=23762
- visibility, review 4=23756
- visibility, review of early work 4=23757
- visibility, two-cavity range meter 4=23727
- X-ray and u.v. radiation intensity, 60-96 km meas. 4=7880-1
- X-ray and u.v. radiation, satellite meas. 4=15879

Atmospheric pressure and density

- density, diurnal variation at 205 km 4=7871
- density in E region, comparison of estimates 4=2289
- density from grenade glow cloud diffusion, 120-180 km 4=23772
- density variations above 200 km, meas. 4=26810
- dispersion of initial disturbance, two model atmospheres 4=2189
- and earth surface tilts, specific case 4=13788
- meas. by satellite drag expts. 4=23773
- moist air, virtual pressure 4=7825
- pressure meas. at various temps., radiosonde 4=7832
- satellite meas. 4=26823
- scale heights estim. from satellite orbit contraction 4=2220
- stratospheric mass variations, 80°W 4=13812
- troposphere, solar-activity effect on pressure 4=2192
- upper, decrease from 1958 to 1962, 150-750 km 4=4781
- upper, density, from satellite orbital data 4=2219
- upper, He thermal diffusion effects 4=26805
- upper, review 4=30936
- upper scale heights, satellite obs. 4=26812
- variations in pressure during lightning 4=7850
- 100-500 km, diurnal variation, satellite meas. 4=13817

Atmospheric spectra

- See also Atmospheric optics
- airglow green line, Rayleigh's data re-exam. 4=17923
- airglow, Na, K, Li abundances 4=29313
- airglow, O 5577A line, lunar time variation 4=7885
- airglow, [OI] 6300 A, terrestrial ambium effect 4=4785
- airglow, 6300 A [OI] emission, luminosity profile, theory 4=4786
- aurora, association with radio data 4=17931
- aurora, daytime, O lines, green and red 4=7889
- aurora, Doppler profile of H α , variations 4=7891
- auroral absorpt., height distrib. 4=26830
- auroral doublet, NI, 5200 A, wavelength meas., at Byrd Station, Antarctica 4=7892
- auroral H β line profiles 4=7890
- continuous night-time glows in artificial clouds 4=2225
- dayglow, atomic O, 6300 A, ground-level photog. obs. 4=10740
- near earth's limb, i.r. spectra 4=13797
- emission over Arctic Ocean 4=7844
- hypersonic atmospheric penetration causing optical spectra 4=13974
- i.r. absorption, band models appl. 4=25602
- i.r. emission flux var. with time and elevation 4=29291
- i.r., extreme, H₂O absorpt. line 4=17896
- i.r. spectra, meas. by inflight satellite 4=13795
- meteor shock front interaction with atmosphere, gas dynamics 4=13926
- nightglow, H emission, conc. to ecliptic and radial velocities 4=23785
- nightglow, H α emission, ecliptic concentration and radial velocity 4=4788

Atmospheric spectra—contd

- nightglow, O green line intensity, solar cycle variation 4=23786
- nightglow, OH and O₂ bands, near i.r. 4=23779
- nightglow, O I 6300Å emission, obs. with pressure scanning Fabry-Perot interferometer 4=26823
- night sky, continuous spectrum, variable radiation component 4=23755
- ozone, u.v. absorpt. 4=2187
- 6.3 μ water vapour band, balloon-borne radiometer for night emission meas. 4=29290
- solar Fraunhofer absorption, rel. to atomic Na abundance 4=2226
- stratosphere, solar i.r. radiation absorpt. 4=2196
- from three-body reactions 4=23783
- transition probabilities, review 4=23778
- water vapour, transmission spectrum, 2.7 μ region 4=3881
- X-ray, auroral, periodic variations 4=2233
- X-ray and u.v. radiation intensity, 60-96 km meas. 4=7880
- AlO bands in sunlit artificial clouds at 130 km 4=2224
- AlO bands in sunlit atmosphere, excitation, and temp. determ. from vibr. level distrib. 4=26827
- Ba, Al and K atomic lines at 100 km, artificial 4=2223
- CO₂ emission at 15 μ, multiple beam interferometric satellite apparatus 4=27310
- CO₂ emission at 15 μ, stratospheric temp. meas. 4=29270
- CO₂, giving errors in spectral absorpt. meas. 4=17895
- H₂O, giving errors in spectral absorpt. meas. 4=17895
- H₂O¹⁸ and H₂O¹⁶ lines in solar spectrum 4=2188
- N₂, Lyman-Birge-Hopfield bands in upper atmosphere 4=10739
- O₂ absorption in mm range, calc. rel. to height 4=7886
- O I 6300Å, luminosity profile with varying scale height 4=17924

Atmospherics

- activity on 27 kc/s, diurnal variation, stepped structure at sunrise 4=17902
- amplitude-probability distribution 4=26799
- attenuation characteristics meas. 4=13804
- Cherenkov radiation in exosphere by sun's corpuscular radiation 4=4791
- directional aerial reception, high frequency 4=29303
- diurnal variation afternoon hump, 27 kc/s 4=2209
- e.l.f. waveforms obs. 4=4774
- effects of nuclear explosions, high altitude, 5-219 Mc/s 4=17912
- enhancement due to nuclear explosions 4=2283
- and explosions, nuclear, high altitude, v.l.f. 4=15899
- high-altitude nuclear explosion effects 4=10760
- integrated field intensity and attenuation coeff. at 27 kc/sec calc. 4=17901
- ionosphere propagation, reflecting height, source distance 4=7904
- noise, atmospheric, mag. tape recording and reproducing 4=17906
- noise due to high altitude nuclear explosion, 30 Mc/s 4=7854
- noise, rel. to cyclonic conditions and frontal polar, various sources 4=23766
- from radiation belt, artificial electron, by nuclear explosion, decay 4=4802
- radio emission from clouds, unassociated with lightning 4=2208
- and thunderstorm cell number meas., from 3 Mc/s lightning radiation 4=23746
- v.l.f., "distorted", magnetic anomaly formation mechanism 4=13803
- v.l.f. emissions, production mechanisms 4=10728
- v.l.f. noise bands var. with latitude, satellite obs. 4=13835
- v.l.f. noise above ionosphere, rocket obs 4=29307
- v.l.f. periodic emissions, whistler-triggered 4=7855
- v.l.f. pulses, from small high-altitude nuclear explosions 4=13802
- v.l.f., triggered, mechanism 4=7853
- whistler and chorus activity at sunrise 4=2287
- whistler data, rel. to magnetospheric electron density distrib. 4=10748
- whistler medium, geomag. trapping theory 4=5758
- whistler-mode, man-made, one-hop, 18.6 kc/s, phase path variations 4=13809

Atmospherics—contd

- whistler mode propag., rel. to h.f. northscatter 4=7857
- whistler obs., rel. to nuclear explosions 4=7856
- whistlers, convergence coeff. 4=17905
- whistlers, diffuse, rocket meas. in exosphere at night 4=17918
- whistlers, dispersion 4=17904
- whistlers, exceptionally small dispersion, Kyoto obs., Jan. 1963 4=13805
- whistlers, and magnetosphere electron density meas. 4=29309
- whistlers, method of analysis 4=30935
- whistlers, observations at widely-spaced stations 4=17903
- whistlers and thunderstorms 4=7851
- whistlers, causing Van Allen electron loss 4=2244
- whistlers, correl. with ionosphere spread F at mag. conjugate points 4=15891
- whistlers, emergence from ionosphere 4=7852
- whistlers, excited by nuclear explosions 4=2211
- whistlers, high-latitude field line 4=2210
- whistlers, multiple, in mag. storm recovery, and ionosphere ionization increase 4=13837
- whistlers in plasma with nonisotropic relativistic component 4=10911
- whistlers, polarization rel. to their direction of arrival 4=4773
- 27 kc/s noise level rel. to 225 Mc/s solar fluctuations, on aerial temperatures 4=2460
- 58-62 Gc/s, attenuation and emission in earth's atmosphere 4=13810

Atomic beams

- See also Velocity analysis, particles
- alkali metals, reaction with halogen molecules, crossed 4=28288
- bombarding target, power calorimetry 4=8853
- inert gases, reflection and electron ejection from Mo, comparison with ions and Na⁺, K⁺ 4=5719
- magnetic resonance, rel. to radioactive nuclei spin and moment meas. 4=30297
- neutral beam detection 4=6667
- for plasma gun plasmoid meas., fast beam 4=27534
- scattering, definition of resolution 4=12410
- scattering, elastic, in thermal energy range 4=25579
- transitions, two frequency, in combined static and rot. mag. field 4=30371
- Ar, scattering by Ni, polycrystalline 4=19996
- Cs, reaction with Br, molecules, crossed 4=28286
- Cu, 1-10 keV, slowing down in crystals, theory 4=6891
- D, 20 MeV, electron detachment from, in gases 4=18676
- Ga, 0.07-1.0 MeV, range meas. in Cu and Zn 4=28505
- H, energetic, cascade processes on passing through plasma 4=12409
- H, enhancement of excited-state population 4=6494
- H, formation on charge exchange by H₂⁺ and H₃⁺ 4=11526
- H, injection and accumulation in mag. mirror system 4=541
- H, neutral, 20 keV, bunching 4=30399
- H, for plasma gun plasmoid meas., fast beam 4=27534
- H, quantum levels > 7, by energy transfer of 750 keV H₂⁺ 4=11515
- H, in 2S state, by charge-exchange by proton beam 4=11521
- H, 10 MeV, excitation and Lorentz ionization 4=25527
- H and He, atomic and ionic partial stopping powers in gaseous H₂ 4=25779
- He, effective charge through Cd metal and gas 4=1231
- He metastable atoms, scattering in He and Ne 4=25588
- He, metastable low-energy electron scatt., recoil technique 4=25567
- He, scattering by Ni, polycrystalline 4=19996
- Hg¹⁹⁸, 2537Å absorpt. line and Zeeman filter, wavelength comparison 4=6478
- Hg²⁰¹, relaxation on quartz walls 4=6493
- K, scattering, by Ne, Ar, Xe at different temperatures 4=25597
- Kr, scattering by Ni, polycrystalline 4=19996
- Ne, scattering by Ni, polycrystalline 4=19996
- Tm¹⁶⁹, mag. reson., Zeeman effect h.f.s. and nuclear mag. moment 4=12378

Atomic mass

- See also Isotopes; Mass spectra
- A=6-100, stable and radioactive isotopes 4=3532

Atomic mass — contd

- Ba¹³¹—Cs¹³¹ difference, theory and meas. 4=6287
 Rn²²⁰ (Thoron), by mass spectrometer, double focussing 4=9648
 Ru—Xe, stable and radioactive isotopes 4=3533
 Sr⁸⁷/Sr⁸⁶ ratio, mass spectrometer meas. 4=17265

Atomic weight

 Schrödinger eqn. for 2-electron atoms, mathematical generalizations 4=25486
 several quanta reson. 4=28098
 short-range forces 4=6512
 single collisions, characteristic energy losses 4=12399
 slow collisions, production of molecular ions 4=30397
 split excited state, modulated light scatt., freq. conversion 4=21267
 transitions, two frequency, in combined static and rot. mag. field 4=30371
 two-atom system, non-adiabatic transitions, probabilities 4=17264
 two-electron, and ion interaction, δ -function model 4=17263
 two-electron quantum theory, 1925-1930, review 4=12336
 universal potential, theory 4=19923
 Van der Waals forces between an atom and solid surface 4=12411
 X-ray and electron diffr., effects of electron correlation 4=30390
 Ag, electron affinity, surface ionization meas. 4=18678
 Ar beam scattering from Au films, epitaxially grown 4=22323
 Ar, collisions, characteristic energy losses 4=12399
 Ar—Li scattering, Lennard—Jones potential determ. 4=20131
 Ar, ³P₂ metastable, polarizability tensor of mag. substrates 4=19948
 Ar—proton elastic scattering at 9.8 MeV 4=30396
 Au, electron affinity, surface ionization meas. 4=18678
 Au, photoelectron ang. distrib. from L subshells 4=30389
 C, photoionization cross-sections, calculation 4=25543
 C to U, Ag K α and Co K α X-ray scattering dispersion corrections 4=3813
 C⁺, photodetachment cross-section up to 3eV 4=12387
 C I, photoionization cross-section 4=18677
 Cr³⁺ in ruby, absorption, light, polarized, for each ground sub-level 4=7123
 Cs¹³³, spin-exchange collisions, e.s.r. meas. 4=25591
 Cu, electron affinity, surface ionization meas. 4=18678
 Cu, secondary emission from Cu targets, under 15 keV Ar⁺ bombard. 4=17457
 Cu, sputtered from Cu by Ar⁺ 4=14769
 Cu, sputtered by 80-1200 eV ions, energy distrib. 4=24754
 Eu, K α X-rays from radioactive sources 4=9665
 F⁺, polarizability and London force consts. 4=3790
 Gd, K α X-rays from radioactive sources 4=9665
 H, charge transfer in H—H' low energy collisions 4=15303
 H, collisions, spin-exchange, models 4=25586
 H, in crystals, potential distrib., thermal motion effects 4=30830
 H, electron capture cross-section, impulse approx. 4=9678
 H, electron loss and capture, in NO and CO 4=463
 H, excited, electron impact ionization calc. 4=12392
 H, excited, ionization by strong elec. fields, meas. 4=11550
 H, excited states, proton inelastic cross-sections 4=3814
 H, metastable 2s state, quenching by laser beam 4=9655
 H, n^l state, electron impact ionization calc. 4=12388
 H, optical polarizability calc. 4=3776

Atoms — contd

- H, polarizability, meas. in Ar—H₂ shock tube 4=9628
- H, two, asympt. exchange coupling 4=19990
- H—H collisions, exchange, density matrix 4=6507
- H⁺—H collisions, electron capture theory 4=12405
- H⁺—H(1s) collisions, resonant charge transfer, continuum distorted wave approx. 4=22324
- H⁺ bound—free absorption coeff. 4=25482
- He— α collisions, two-electron exchange 4=9633
- He-beam scattering from Au films, epitaxially grown 4=22323
- He, electron capture by He⁺ ions 4=19995
- H, hot, reactions with propane, butane, butene -1, kinetic theory analysis 4=30395
- He—He interaction energy calc. at short range 4=19993
- He—He repulsive energy calc. 4=19992
- He—He scatt., nonadiabatic effects at high energies 4=1228
- He, ionization of He, Ar, H₂ and N₂, 15-180 keV 4=2944
- He-like, 2³S₁ state, mag. suscept. calc. 4=28113
- He scattered on He, scattering cross-sections, calc. 4=12402
- He, 2³S₁ state, mag. suscept. calc. 4=28113
- He, 20 keV bombard. of W, surface damage 4=15511
- He³, singly ionized, table of energy rel. to mag. field strength and orbital radius 4=25212
- Hf, K α X-rays from radioactive sources 4=9665
- Hg, collisions with N₂, rel. to Hg reson. fluoresc. quenching 4=22304
- Hg²⁰¹, quadrupole relaxation on quartz walls 4=6493
- I⁺—Hg collision, near-resonance charge transfer process 4=22325
- Kr—Li scattering, Lennard—Jones potential determ. 4=20131
- Li—H gas mixtures, at high temps. 4=3860
- Lu, K α X-rays from radioactive sources 4=9665
- Mn, X-ray scattering factor 4=4587
- N in crystals, zero-field splitting 4=25828
- N⁺—N collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
- Na, absorption, 2400-1000Å 4=28137
- Na, e.s.r., optically polarized, spin relaxation 4=6486
- Na⁺, polarizability and London force consts. 4=3790
- Nd, laser line relax. time meas. 4=24923
- Ne, photoionization cross-section, 80-600Å meas. 4=12390
- Ne, polarizability and London force consts. 4=3790
- O—H gas mixtures, at high temps. 4=3860
- O, X-ray scattering factor 4=4587
- O⁺—O collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
- O⁵⁺, electron impact and photoionization calc. 4=6482
- Rb, electronic polarization relax., longit., effect of Rb—Cs exchange collisions 4=22321
- Rb, magnetic relaxation on paraffin covered walls 4=6492
- Rb^{85,87}, spin-exchange collisions, e.s.r. meas. 4=25591
- Sm, K α X-rays from radioactive sources 4=9665
- Th, oscillator strengths 4=30384
- Tm, K α X-rays from radioactive sources 4=9665
- Xe, interaction force 4=21175
- Yb, K α X-rays from radioactive sources 4=9665

electron scattering

- bremsstrahlung—elastic cross-rel. 4=15299
- classical theory, further development 4=25575
- conference, London (1963) 4=25545
- by Coulomb potential, scattering angle, reflection and penetration 4=12407
- diffraction, one-electron and two-electron operators 4=30390
- elastic, exchange polarization approx. 4=25564
- elastic, semiempirical calc. for neutral atoms 4=9671
- exchange scattering, Born—Oppenheimer theory 4=3817
- excitation calc. 4=6489
- excitation, effective cross-section, model 4=9657
- free-e.s.r. freq. shifts by collision with polarized atoms 4=19982
- Green's function method theory 4=19969
- Hartree—Fock potential, analytical expressions 4=17256
- inelastic, classical impulse approx. 4=12398
- inelastic, near-resonance, transitions with strong coupling 4=9666
- inelastic, velocity distribution 4=1226

Atoms — contd

electron scattering—contd

- inert gases, anomalous transmission at sub-excitation energies 4=25551
- inert gases, disagreement with Lenz theory 4=30393
- inert gases, inelastic, continuum oscillator strength determ. 4=25516
- inert gases, inelastic, structure beyond ionization limit 4=12393
- inert gases, losses, and forbidden transitions in continuum 4=15279
- inert gases, at 25 keV, elastic, and optical transitions 4=6505
- ionization, threshold law 4=17260
- iteration-variation method, applic. to coupled equations 4=25561
- low-energy expansion for long-range quad. potentials 4=19981
- low-energy, in Thomas—Fermi theory 4=6501
- many-electron atoms, elastic, exchange and correl. potentials 4=25550
- methane—O₂ ionized mixture, neutral atoms, meas. 4=17261
- Mott polarization calc., Thomas—Fermi and Hartree atoms 4=9668
- optimal basis and expansion functions 4=3811
- perturbation calc. with modified Schrödinger eqn. 4=25471
- polarization and ang. distrib. of electrons 4=25547
- resonance charge exchange, cross-section for slow collisions 4=16428
- slow, collision theory 4=25546
- Thomas—Fermi atom, low energy scatt. cross-section 4=25549
- Thomas—Fermi—Dirac atoms, neutral, scatt. factors 4=3768
- Thomas—Fermi theory, low energy, elastic 4=28145
- Al, 20 keV electron, plural scattering 4=13627
- Al, diffusion m.f.p. calc. for fast electrons 4=25552
- Al, large-angle inelastic, 500 keV meas. 4=3809
- Ar, differential elastic, 75 to 500 eV 4=25569
- Ar, elastic and inelastic, from electron transport 4=11500
- Ar, elastic scattering factors calc., nonrelativistic theory 4=15298
- Ar, elastic semiempirical calc. 4=9671
- Ar, low-energy, total cross-sect. abs. meas., 1-25 eV 4=25568
- Au, L-Auger, fluoresc. and Coster—Kronig yields 4=1227
- Au, large-angle inelastic, 500 keV meas. 4=3809
- Au, Mott formula, numerical soln., 0.2-290 keV 4=25572
- Au, screened with three-terms exponential potential 4=9600
- Au, 20 keV electron, plural scattering 4=13627
- C, elastic, slow, static central field exchange approx. 4=25571
- Cd, diffusion m.f.p. calc. for fast electrons 4=25552
- Cs, cross-sect. meas. by cyclotron resonance 4=25570
- Cs, elastic and inelastic, from electron transport 4=11500
- Cs, spin exchange optical pumping study 4=30391
- Cs, 6s—6p transition 4=9669
- Cu, screened with two-terms exponential potential 4=9669
- Cu, 20 keV electron plural scattering 4=13627
- H, close-coupling approx. cross-sections 4=25558
- H—e⁻, resonances and Regge poles 4=25555
- H—e⁻ resonances, structure just below inelastic threshold 4=25557
- H, elastic, effect of virtual excit. of 2s and 2p states 4=6503
- E, elastic, 1eV, meas. by elec. cond. method 4=12391
- H, elastic, polarized orbital method 4=28149
- H, elastic, radial wave functions 4=19983
- H, elastic, variational method 4=25554
- H, exchange treatment 4=25553
- H, excitation, accuracy of classical calcs. 4=28141
- H, excitation of 2p state near threshold 4=25524
- H, first-order exchange approximation 4=6504
- H, Fredholm determinant application 4=25562
- H, inelastic, nonadiabatic 4=25559
- H, inelastic, S-wave, nonadiabatic theory 4=17257
- H, ionization, exact classical calc. 4=28146

Atoms — contd

electron scattering — contd

- H, ionization from any level, general formula 4=12392
 H, long-range interaction resonance, posn. and width calc. 4=28148
 H, narrow resonances, theory 4=25556
 H, $n \rightarrow n+1$ transitions, cross-sections 4=19974
 H, $n\ell$ state, electron impact ionization calc. 4=12388
 H, positrons, s-wave phase shift 4=25560
 H, 2nd Born and close coupling approx. 4=25525
 H, slow electron exchange scattering 4=22319
 H, slow positron elastic scattering 4=17258
 H, 2s and 2p excitation, cross-section matrix 4=9659
 H⁺, detachment by e⁺ impact, cross-sections 4=15302
 H⁺, free-free absorption coeff. 4=25563
 H⁺, free-free transitions, in exchange approx. 4=28147
 He, elastic, 0-50 eV calc., polarization effect 4=28150
 He, elastic, rearrangement collisions 4=25565
 He, elastic, sharp resonance 4=25566
 He, excitation, absolute cross-sections 4=17253
 He excitation, double, calc. 4=30388
 He, excitation radiation, polarization cause 4=9660
 He, collision cross-sections in ionized continuum 4=12397
 He, inelastic collision cross-sections rel. to scattering angle 4=12396
 He, inelastic scattering of 390 V electrons 4=12394
 He ions, elastic, polarized orbital method 4=28149
 He metastable, low-energy electron scattering 4=25567
 He, $1S^1 \rightarrow 2P^1$ transition, electron collision cross-sections, calc. 4=12395
 He, rel. to excitation 4=25529
 He, slow, elastic, calc. 4=17259
 He, slow electrons, simplified exchange operator 4=19980
 He, S-electrons, slow, elastic 4=9670
 He, 2nd S electron collision cross-sect., Maier-Leibnitz expt. repeat 4=19984
 He $\Pi \rightarrow 4\sigma 86$ A line, excitation meas. 4=1225
 He⁺, excitation to 2S, 2P states 4=25532
 He⁺, in 1s, 2s, 2p states, cross-sections 4=15301
 Hg, diffusion m.f.p. calc. for fast electrons 4=25552
 Hg, ³F₄ level amp. and depolarization calc. 4=28143
 Hg, Mott formula, numerical soln., 0.2-290 keV 4=25572
 Hg, screened with Hartree potential 4=9667
 Hg, 200 to 4000 eV, cross-sections 4=30392
 K, elastic, slow rel. to polarization potential calc. 4=25573
 Li isoelectronic series reson. transition excitation, calc. 4=6489
 Li, (1s2s2p)⁴P_{5/2} state obs. 4=25538
 N, bremsstrahlung—elastic cross. rel. 4=15299
 N, low-energy, total cross-sect. abs. meas., 1-25 eV 4=25568
 Na, elastic, slow, rel. to polarization potential, calc. 4=25573
 Na isoelectronic series reson. transition excitation, calc. 4=6489
 Na, slow, calc. 4=22320
 Ne, elastic, sharp resonance 4=25566
 Ne and He cross-sections, classification of resonances 4=3810
 Ne, elastic, semiempirical calc. 4=9671
 O, bremsstrahlung—elastic cross. rel. 4=15299
 O, low-energy, total cross-sect. abs. meas., 1-25 eV 4=25568
 O₂, excited, ionization meas. 4=11537
 U, elastic scattering factors calc., nonrelativistic theory 4=15298

excitation

- afterglow processes 4=25577
 alkali metal vapour, optically oriented, spin relax. 4=14223
 alkali metals, Zeeman D-doublet pumping, collision allowance 4=6468
 collisional transfer in reson. process 4=19991
 in collisions related to meteor radiation 4=25590
 dielectric suscept. of atomic vapour, 3 × 3 tensor 4=8255
 dipole transition probabs., optimum wave functions 4=19971
 double-resonance phenomena, extension to gas laser 4=27683
 e.m. radiation by electrons during β -decay 4=6271
 e.s.r., Franck-Hertz method appl. 4=1220
 electron-excitation cross-sect. calc. for gaseous nebulae forbidden lines 4=25518

Atoms — contd

excitation — contd

- electron field pair prod., recoil distrib., atomic binding effect 4=27834
 by electron impact cross-section calc. model 4=25521
 by electron impact, review and bibliographies 4=25515
 by electron impact, semiclassical treatment 4=25517
 electron spin coherent precession, on pulsed electron excitation 4=12381
 by electrons, calc. 4=6489
 by electrons, effective cross-section, model 4=9657
 equilibrium population in gas layer in thermal equilb. 4=19972
 excited states, second order orthogonality problem 4=22278
 fluorescence, resonance, due to pulsed or modulated light, theory 4=9661
 fluorescence yields, L_{γ} and L_{α} , meas. method 4=9652
 forbidden spectral lines, transition probabilities, calc. 4=15268
 gases selectively excited in He afterglow meas. 4=12385
 heavy atoms, collective states, quantum field calc. 4=19924
 highly ionized atoms, transition probab. calc. 4=6482
 impact parameter treatment 4=24547
 induced emission wave-function calc. 4=3204
 inelastic electron scatt., classical impulse approx. 4=12398
 inert gases, by electrons, inelastic, structure beyond ionization limit 4=12393
 inert gases, optical transitions, by 25 keV electrons 4=6505
 inert gases, stimulated emission of new i.r. transitions 4=16696
 interaction energy, atom—excited atom, first-order dispersion forces 4=12401
 internal conversion of elec. multipole, K-shell, Born approx. 4=6500
 ionization by collision between two atoms, theory 4=1229
 ionization, impact cross-section, classical calc. 4=2940
 ionized, multiply, spectrum as nova 4=15922
 K-shell energy shifts in perturbation theory, calc. by natural orbital expansion 4=15264
 K-shell ionization probability during nuclear reaction 4=3548
 L-shell, fluorescent yields meas. for 7 substs. 4=3774
 laser beam interact., very intense, perturb. theory 4=22315
 lifetimes, interaction effects 4=30387
 light elements, radiative recombination coeffs., into low-lying excited states 4=19942
 metals in flames and in organic cpd. vapours, anomalous excitation 4=9658
 optical functions, retarded optical potential method 4=3803
 oscillator strengths, meas., review 4=25475
 oscillator strengths of transitions 4=12341
 photoeffect, K-shell, polarization correl., 200 keV-2 MeV 4=17255
 photoelectric cross-sections, K-shell, 200 keV-2 MeV 4=17254
 photon absorption or in mag. field, by Green's function method 4=19969
 photon scatt. and detachment, final-state effects 4=22317
 for plasma device injection, calc. corr. 4=24716
 plasma, resonance lines, Doppler broadened, radiative transfer 4=21504
 in plasma, shift and broadening of energy levels 4=1199
 positive ions, 60-500 keV, rel. to resulting spectral lines 4=25520
 potential change under optical transition 4=3802
 radiation interact., semiclass., variation-perturb. theory 4=1172
 response function for time-depend. Hartree scheme 4=6496
 scattering, elastic rel. to inelastic cross-sections 4=15305
 scattering of modulated light, coherence of states 4=3806
 slow collisions, of heavy atoms, excitation mechanism 4=3816
 in strong radiation field 4=16425
 transition probabs. in inhomog. elec. fields with any ang. depend. 4=19970
 two-electron atoms, perturbation study 4=22283
 wave-functions and term energies, parameter tables 4=6459
 X-ray fluorescence radiation transfer calc. 4=9649

SUBJECT INDEX

Atoms—contd

excitation—contd

- Ar, competitive quenching by O_2 , N_2 , H_2 , CO_2 , CH_4 4=30486
 Ar, electron impact spectra 4=6520
 Ar, excitation temp. meas. using transition probabilities of lines 4=12382
 Ar ions, excited, long-lived 4=25492
 Ar, in positive column, medium pressures 4=5570
 Ar, upper levels, in d.c. discharge, quenching collision broadening 4=14598
 Au, 50-400 keV, Coulomb scatt. without excitation 4=6502
 Au¹⁰⁰, ang. distrib. of K photoelectrons 4=30315
 Be, $^1S-^1P$, correlations, random-phase approx. 4=9624
 Br⁷⁹, Auger effect, KLL, KLM, using thin Kr⁷⁹ source 4=12363
 C⁻, photodetachment cross-section up to 3eV 4=12387
 Ca, double resonance due to modulated light, meas. 4=9662
 Ca, first $^1P_1$ state lifetime meas. 4=19968
 Ca, 5^3P_1 level, optical r.f. double resonance at nutational freqn. 4=9663
 Ca, ionization, single and double, by electron impact, power law 4=8617
 Ca, $^1S-^1P$, correlations, random-phase approx. 4=9624
 Cd, $(5s5p)^1P_1$ state, lifetime meas. 4=17244
 Cd, $(5s5p)^3P_1$ state, lifetime meas. 4=17345
 Cd, Landé g-factors and lifetimes, by mag. reson. 4=3787
 Cd vapour, coherent excitation by electron impact 4=25536
 Ce³⁺ in silicate glass, optical, and transfer to Nd³⁺ 4=28721
 Cl³⁷, Auger K group intensities, from Ar³⁷ decay 4=12366
 Cr, $L_{II,III}$ energy levels, chemical binding effect 4=1427
 Cr³⁺, states calc., SCF 4=30380
 Cs, optically pumped, relaxation in buffer gases 4=28142
 Cs, optically pumped, spin relax. 4=25537
 Cu, 50-400 keV, Coulomb scatt. without excitation 4=6502
 Cu, K α radiation under electron impact, meas. 4=9664
 D, to ^2P state, with Lyman-alpha lamps 4=13724
 Er, excit. during electron-capture decay 4=3614
 Fe¹³, $3p_{1/2} \rightarrow 3p_{3/2}$, in solar corona, by protons, calc. 4=15944
 Ge I, electronic g factors and empirical intermediate coupling transformation 4=22303
 H, Balmer lines, by passage of H^+ , H_2^+ , H_3^+ through He and Ne 4=9656
 H, beam, energetic, cascade processes on passing through plasma 4=12409
 H beam, enhancement of excited-state population 4=6494
 H, by beta rays, fast 4=22374
 H, by Cs beam charge exchange 4=19975
 H, collisional transfer in reson. process 4=19991
 H, by electron capture 4=25528
 H, by electrons, calc. near (2s, 2p) threshold 4=6495
 H, electron impact, accuracy of classical calcs. 4=28141
 H, excited by impact, Lyman- α radiation polarization 4=12350
 H, excited, ionization by strong elec. fields, meas. 4=11530
 H, by fast H ions 4=19994
 H, free-free transitions, radial wave functions 4=19983
 H, highly-excited, formation by charge exchange 4=28155
 H, inelastic electron scatt., nonadiabatic theory 4=17257
 H lines, oscillator strengths, transition probabilities, and lifetimes in elec. field 4=25480
 H, M shell by electrons near threshold 4=25522
 H, $n \rightarrow n+1$ transitions by electron impact 4=19974
 H, $1s-2p$ and $1s-2s$ transitions, by electrons, theory 4=9657
 H, optical quenching of metastable state 4=1223
 H, by p, charge exchange, high, reson. 4=19976
 H, in planetary nebulae, high state population calc. 4=12353
 H, to ^2P state, with Lyman-alpha lamps 4=13724
 H, quantum levels > 7 , by energy transfer of 750 keV H_2^+ 4=11515
 H, 10 MeV beam collisions 4=25527
 H, in 2S state, by charge-exchange by proton beam 4=11528

Atoms—contd

excitation—contd

- H, 2p, by electrons near threshold 4=25524
 H, 2s and 2p by electron impact 4=25523
 H, two-photon ionization, e.g. metastable 25 state 4=223
 H, 2s and 2p, by electron impact, theory 4=9659
 H, 2s-3s, by electron impact 4=25526
 H⁻, free-free transitions, in exchange approx. 4=28147
 $H^+ + H(1s) \rightarrow (n^2m) + H^+$, calc., no need for p-p interaction 4=27475
 He, autoionization meas. near 200 Å 4=12355
 He, collisional de-excit. rate meas. 4=5565
 He, double, by electron impact, calc. 4=30388
 He, by electron impact 4=25529
 He, by electron impact, rel. to polarized radiation 4=255
 He, electron impact spectra 4=6520
 He, electron-induced radiation, polarization cause 4=966
 He, by electron scattering, continuum oscillator strength determ. 4=25516
 He, by electrons, abs. excit. functions rel. to pressure 4=25330
 He, by electrons, absolute cross-sections 4=17253
 He by electrons, rel. to polarized radiation 4=25484
 He, by electrons, supplementary lines by adding H, Kr, Hg 4=22294
 He, excited state lifetime meas. apparatus 4=25534
 He, excited states, single-configuration calcs. 4=25483
 He, by He ions, radiation polarization 4=19944
 He induced by p and H colls, 4-35 keV 4=25533
 He, ion-atom collisions, resonance at 28eV 4=19945
 He, by p and H, resulting radiation polarization 4=22318
 He, proton impact, spectra meas. 4=25485
 He and 2-electron systems, work since 1957, review 4=9630
 He, 2^3S and 2^1S by electron collision in Maier-Leibnitz expt. repeat 4=19984
 He⁺ by electrons, cross-sections 4=15300
 He⁺, ground to 2S, 2P states by electron scatt. 4=25532
 He⁺ ions, excited, produced by single-electron impact 4=25535
 He⁺, long-lived highly excited states 4=25514
 He II λ 4686 Å line, by electron impact 3=1225
 He³, by electrons, and ^1D levels h. f. s., mag. reson. obs. 4=28111
 He³ metastability exchange cross-section, temp. dependence 4=25589
 He⁴, by electron beam, mag. depolarization of emitted light, and level lifetimes 4=1221
 Hg ions, excited, long-lived 4=25492
 Hg, metastable atoms produced by charge exchange 4=25596
 Hg, by pulsed electrons, $^3F_4$ level amp. and depolarization calc. 4=28143
 Hg, 2537 Å resonance radiation, quenching, cross-section meas. 4=25539
 Hg vapour, optical, producing fluorescence 4=9651
 Hg-N transfer of energy from Hg 7^3S_1 level 4=12386
 Ho³⁺, in CaMoO₄, energy transfer from Er³⁺ 4=7180
 K, energy transfer in collisions 4=15289
 Kr ions, excited, long-lived 4=25492
 Kr, metastable atoms in pulsed discharge, decay 4=6490
 Li, isoelectronic series reson. transitions by electrons, calc. 4=6489
 Li-like, excited states, theory 4=1208
 Li, $(1s2s2p)^4P_{3/2}$ state obs. 4=25538
 Mg, $^1S-^1P$, correlations, random-phase approx. 4=9624
 Mn, relative f-values 4=12369
 N, metastable sextet, estimated energy 4=3795
 N, metastable sextet, lifetime 4=3796
 N, transition probabilities, from Hartree-Fock-Slater wave-functions 4=12370
 Na, calc. near threshold, in N, Ar, from luminescence extinction 4=12384
 Na isoelectronic series reson. transitions, by electrons, calc. 4=6489
 Na, optically oriented, spin relax. on diffusion 4=22314
 Na vapour, optically oriented, spin relax 4=1230
 Ne, direct and stepwise, effective cross-sections 4=1990
 Ne, by electron scattering, continuum oscillator strength determ. 4=25516
 Ne, induced by H⁺ and He⁺ impact, 5-35 keV 4=25540
 Ne ions, excited, long-lived 4=25492

Barium compounds

- bafertisite $\text{BaFe}_2\text{TiO}[\text{Si}_2\text{O}_7](\text{OH})_2$ crystal structure,
 atomic 4=7607
 Edingtonite, n.m.r., D in water of crystallization,
 double quanta 4=1903
 polarization processes 4=28623
 Ba borates, atomic crystal structures 4=15787
 Ba crown glass, UO_2^{2+} radiationless resonance energy
 transfer to Nd^{3+} 4=22914
 Ba ferrite, Bloch wall dynamics 4=30706
 Ba ferrite, different dynamic magnetization
 mechanisms 4=28832
 Ba ferrite, domain structure, effect of mag. field 4=26333
 Ba ferrite, elec. cond., anisotropy and mech. 4=6953
 Ba ferrite, elec. cond. anisotropy, 20° to 180°C 4=10041
 Ba ferrite, ferromag. domain pattern on cryst. faces 4=4375
 Ba ferrite, mag. domain structure and form of Bloch
 walls 4=10288
 Ba ferrite powders, sat. magnetization rel. to grinding
 and annealing 4=26334
 Ba sulphate, surface energy of 100 faces, calc. 4=20178
 $\text{Ba}(\text{B}'_{0.33}\text{Nb}_{0.67})\text{O}_3$, B' any divalent metal, crystal
 structure 4=4619
 $(\text{Ba}_{1-x}\text{R}_{2x/3})\text{Nb}_2\text{O}_6$, where R is Y, Sm, or La 4=20417
 $\text{Ba}_2\text{Bi}_4\text{Ti}_6\text{O}_{18}$ and substituted cpds, ferroelec. phase
 transitions 4=23255
 BaBr_2 , crystal structure by X-ray diffraction 4=7608
 $\text{Ba}(\text{Ca}_{0.33}\text{Ta}_{0.67})\text{O}_3$, crystal structure 4=4597
 BaCl_2 , crystal structure by X-ray diffraction 4=7608
 BaCl_2 , dielectric const., density var., 9200 Mc/s 4=22758
 BaCl_2 , phase transformations, heat of fusion 4=8501
 $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}$, neutron diff. crystal structure meas. 4=29147
 $\text{Ba}(\text{ClO}_3)_2 \cdot \text{H}_2\text{O}$, H_2O molecular motion, rel. to
 n.m.r. 4=6692

Barium compounds — contd

- $\text{Ba}(\text{ClO}_3)_2 \cdot \text{H}_2\text{O}$, n.m.r. line splitting, effect of H_2O mol.
 vibration, theory and expt. 4=23059
 $\text{Ba}(\text{ClO}_3)_2 \cdot \text{H}_2\text{O}$, proton spin-lattice relax. rel. to orienta-
 tion and temp. 4=23071
 $\text{BaCqFe}_{18-x}\text{O}_{27}$ ($0 < x < 1.5$) single crystals, magnetocrystalline
 anisotropy 4=26336
 BaF_2 , capture levels and recomb. nature of
 thermoluminesc. 4=28728
 BaF_2 , crystal internal charge compensation by interstitial
 F^- , e.s.r. obs. 4=22460
 BaF_2 doped with Sm^{2+} ions, fluorescence and absorption
 spectra 4=17582
 BaF_2 , elastic consts., 4.2–300°K 4=28937
 BaF_2 : Er, i.r. quantum counter action 4=22872
 BaF_2 , e.s.r. of Gd^{3+} , effects of heat treatment,
 hydrolysis 4=1877
 BaF_2 , e.s.r. of Gd^{3+} , meas. analysis 4=4407
 BaF_2 , Eu^{2+} e.s.r. 4=1874
 BaF_2 : Ho, Er, absorption and emission spectra of Ho^{2+} and
 Er^{2+} 4=13038
 BaF_2 , i.r. spectral transmittance between 27° and
 1000° C 4=10178
 BaF_2 , refractive index meas., temp. depend. 4=7092
 BaF_2 , refractive props., 0.2652–10.346 μ , 25°C 4=17554
 BaF_2 , spin-lattice relax. of Er^{3+} 1.6°–25°K 4=30732
 BaF_2 : Sm^{2+} , vibronic spectra model 4=13085
 BaF_2 thin film, far u.v. reflection, rel. to thickness 4=13004
 $\text{Ba}(\text{Fe}_x\text{Nb}_{1-x})\text{O}_6$, crystal structure 4=10549
 BaI_2 , crystal structure by X-ray diffraction 4=7608
 Ba-K Fe garnet, magnetic exchange anisotropy 4=13230
 $\text{Ba}(\text{NO}_3)_2$, NO_2^- vibrations rel. to overtone and combination
 bands 4=10163
 BaNO_2 , mag. structure, neutron diffn. analysis 4=29102
 BaO , $\text{A}^1\Sigma-\text{X}^1\Sigma$ system, in C arc, vibr. temp. 4=22347
 BaO , $\text{A}^1\Sigma-\text{X}^1\Sigma$ system, intensity distrib. 4=15328
 $\text{BaO}-\text{Ar}$ suspension, Ar elec. cond. enhancement, appl.
 to m. h. d. power generation 4=27224
 BaO cathodes, work function patches 4=24728
 BaO , crystal cubic field splitting of Eu^{2+} 4=20152
 BaO , desorption from W by elec. field 4=7722
 BaO , dissociation energy, meas. 4=28267
 BaO films, on W, secondary electron
 emission 4=582
 $\text{BaO} \cdot 6\text{Fe}_2\text{O}_3$, Mössbauer effect 4=12591
 BaO , Franck-Condon factors of band system 4=25660
 BaO , luminescence, activated by Bi, Eu, Sm, Pr,
 Ce 4=22515
 BaO -metal systems, work funcn. depend. on surface
 coverage 4=29961
 BaO , photoelec. emission expts. 4=29964
 BaO solid + H_2O vapour reaction, mass-spectrometric
 study 4=23647
 $\text{BaO}-\text{MgO}-\text{P}_2\text{O}_5$, phase equilibria and fluorescence 4=10421
 $\text{BaO} \cdot 6\text{Fe}_2\text{O}_3$, ferrimagnetism, Mössbauer study 4=26335
 $\text{BaO}-\text{WO}_3$ system, crystal structure and melting
 point 4=2070
 $\text{BaO}-\text{ZnO}-\text{P}_2\text{O}_5$, phase equilibria and fluorescence 4=10421
 $\text{Ba}(\text{OH})_2 \cdot 8\text{H}_2\text{O}$, crystal structure, atomic, and Ba
 ion coordination 4=2071
 BaPb , crystal structure 4=26641
 BaPb_3 , crystal structure 4=26641
 Ba_2Pb_3 , crystal structure 4=26641
 $\text{Ba}[\text{Pt}(\text{CN})_4] \cdot 4\text{H}_2\text{O}$, luminescence 4=14371

 exchange model for reson. prod. 4=24998
 excited, spin and parity determ., Adair's analysis extension 4=21765
 excited states, reciprocal bootstrap model 4=16812
 excited states, SU₃ octet model, dynamical approach 4=3298
 "fourth" baryon Sakata model, modified B-L symmetry 4=21761-2
 45-fold ³/₂⁺ multiplet 4=27782
 gas, in centre of celestial body of infinite density 4=4840
 high resonances, prediction from SU₃ symm. and Regge trajectories 4=3310
 interactions, two-baryon, and unitary symmetry 4=30172
 isobar classification, by five SU₃ Regge trajectory families 4=9094
 isobars, empirical classification incl. hyperons 4=954
 j = ³/₂ 4=24996
 J^π = ³/₂⁺ isobars, decay, sum rule, 4=30274
 macroscopic props. of baryon gas 4=29557
 magnetic moments, anomalous, Vigier's rotator model 4=808
 mass degeneracy broken by Yang-Mills gauge field 4=27762
 mass relations, rel. to mesons 4=11951

Baryons—contd

- mass rules applied to baryon resonances 4=11904
- mass spectrum 4=3297
- masses, rel. to mesons 4=3302-3
- meson-baryon collisions, vector-meson prod. 4=27784
- meson-baryon interaction and octet model generalisation 4=5930
- meson-baryon scatt., asymptotic relations, T invariance importance 4=16830
- meson-baryon scatt., rel. to fermion trajectories interreln. 4=21808
- meson-baryon systems and resonances, quantum number 4=21945
- model of mesons and baryons based on SU_3 symm. 4=11905
- nonuplet theory, 1350 MeV prediction 4=16811
- octet and decuplet, reciprocal bootstrap reln. 4=27779
- octet model, meson-baryon resonances 4=15002
- octet model, violated, boson-baryon scatt. 4=11893
- Ω^- , possibility of observation 4=25192
- prod. in pairs by $p-\bar{p}$, inconsistent with octet unitary symmetry model 4=19516
- production, $\nu + n \rightarrow$ lepton + baryon, weak-interact. theory 4=5955
- R-invariance in $SU(3)$ octet model, rel. to magnetic moments 4=21763
- reciprocal bootstrapping, and mag. moments, D to F ratio 4=27783
- resonance decay widths in unitary symmetry model 4=25189
- resonance systems, with π , higher, prediction 4=19574
- resonances, unitary symmetry model 4=30171
- resonances, first, in violated unitary symmetry 4=9075
- resonances, with mesons, attractive force for baryon number 1/3 hypoth. 4=24993
- resonances with mesons, $j = 3/2^+$ in terms of W_3 symmetry 4=24994
- resonances in octet model 4=30164
- resonances, with π, K , selection rule 4=3468
- resonances, summary, rel. to 8-fold way and Regge trajectories 4=21910
- scatt., by mesons, asymptotes in unitary symmetry models 4=21793
- scatt. on mesons and unitary symmetry with T_3^3 breaking test 4=21749
- scattering, resonances, higher theoret. prediction 4=3310
- spins and parities, determ., Adair's analysis 4=11952
- strange resonances, spin-parity determ., new test 4=27778
- strangeness -3, production in $\bar{p}-d$ and K^-p , theory 4=9286
- $SU(3)$ symmetry breaking in $3/2^+$ meson-baryon decuplet 4=27780
- SU_3 spinor integral charge Z, rep. new triplet 4=27757
- symmetry princ., baryon-lepton 4=19422
- trio invariance symmetry principle 4=21751
- $Z^-(\Omega^-)$ prod. 4=6137

- electric conductivity, effect of 93 kbar pressure 4=10022
- electron beams, energy dissipation, fair agreement for medium penetration 4=6817
- Fermi surface calc. from first Brillouin zone 4=20246
- film production for electron microscope exam. 4=13642
- films, crystal orientation and fibre struct., var. substrates 4=23570
- hambergite, Be₂BO₃·OH, structure and birefringence 4=4598
- hardness 4=4599
- interaction with MoSi₂ 4=10638
- internal friction, liq. N₂ temp. to 735°K 4=7411
- ion, Be II, oscillator strengths calc. 4=6476
- Knight-shift, discrepancy between calc. and expt. 4=10343
- lattice vibr. spectrum by root sampling method 4=20194
- magnetic breakdown, from galvanomag. data 4=20325
- magnetoelectric properties, in pulsed mag. field 4=2928
- magnetoresistance, 4.2°K and Fermi surface 4=6920
- magnetothermal oscillations, 0.9°K in fields up to 20 kOe 4=28759
- mechanical ductility, improvement, above 300°C, and crack growth 4=10371
- mechanical properties, and effect of heat treatment on impurities, 600°C 4=7667
- metal, resistivity, rel. to temperature 4=1561
- microhardness anisotropy 4=20646
- microstrain characteristics, transition rel. to dislocation structure 4=17726
- mirrors in streak cameras 4=21325
- Mössbauer effect by Fe⁵⁷ impurity, meas. 4=12579
- neutron effects at high temps., mechanical prop. changes, He gas bubble effects 4=4092
- neutron flux in Be, asymptotic thermal spectrum 4=12019
- neutron polarization during transmission 4=6058
- neutron slowing down spectrum calc. 4=21876
- proton-bombarded, H diffusion and agglomeration 4=15484
- refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
- rolled, plastic deform. and fracture, 20°-800°C 4=26498
- slip, prismatic, critical shear stress meas. 4=20647
- solutions ion coordination numbers, from O¹⁷ n.m.r. 4=207
- spectrum, Be II calc. osc. strengths and spectrometer calibration 4=5381
- sputtering by inert gas ions 4=19124
- superconducting films, critical field, var. with temp., anomaly 4=5514
- variation-perturbation calc. for ground state energy 4=28119
- wire, const. of ultra lightweight phonograph stylus 4=4994
- X-ray spectrum absorpt., around K edge, with BeO 4=26176
- X-ray K-absorption fine structure theory 4=1723

SUBJECT INDEX

Beryllium—contd

Be⁷ radioactive isotope, extraction from cyclotron targets 4=10652

Beryllium compounds

- beryllides, "pest" degradation 4=29169
 Be alloys, microstructure, heat treatment effects 4=7667
 Be boride, B-rich, crystallization 4=26592
 Be bronze, ultimate tensile strength, temp. depend., effect of plastic deform. 4=28936
 Be hydroxide, allotropic transformations of different crystalline forms 4=7475
 Be hydroxide, entropy, exptl. determ. 4=2146
 Be oxide, grain size rel. to fracture stress and residual strain 4=10364
 BeC₂, mean ampl. of vibr. and thermodyn. props. 4=15348
 BeF₄²⁻ ion, spectra, vibr. i. r. absorpt., in alkali fluoberyllates 4=10161
 Be-Fe, microstructure, heat treatment effects 4=7667
 BeH₂, mean ampl. of vibr., calc. 4=17291
 Be-Ni (8 at. %), phase transform., diffusionless 4=23254
 BeO, annealed after irradiation, structure defects 4=12722
 BeO, conductivity thermal, temp. var. reduction 4=6762
 BeO, cracking due to neutron damage, effect of microstructure 4=6896
 BeO, crystal struct., atomic, and neutron diffusion, temp. var., review 4=19533
 BeO, crystal structure and polarity 4=10525
 BeO, diffusion of a self, 1500-2000°K 4=12784
 BeO, energy struct. by ultra-soft X-ray spectroscopy 4=30544
 BeO films, tunnel current, var. with voltage 4=7017
 BeO, ground state, potential curve and spectroscopic consts. in MO approx. 4=20037
 BeO, He aggregation due to neutron irradiation 4=4093
 BeO, internal elec. field analysis 4=12568
 BeO, mechanical fracture stress/lattice strain relation, radiation effects 4=13394
 BeO, neutron irradiation, defect loops 4=22640
 BeO, neutron irradiation, Wigner energy determ. by calorimetric method 4=18473
 BeO, neutron slowing down spectrum calc. 4=21876
 BeO, neutron-irradiation, X-ray double Bragg scattering 4=29097
 BeO powder, X-irradiation, e.s.r. of fluorine centre 4=26396
 BeO single crystals containing B, e.s.r. 4=26378
 BeO, single crystals, microhardness 4=1931
 BeO, sintered, microstructure, electron micr. meas. 4=13643
 BeO, sintered, neutron diffusion meas. 4=21866
 BeO, sintered, reflection coeffs, diffuse and specular 4=28671
 BeO, thermal conductivity, 1000°-2000° C 4=9866
 BeO, thermodynamic Wigner energy meas. 4=15439
 BeO tunnel diode, tunnel current at different temps. 4=7018
 BeS, B²Σ⁺-X²Σ⁺, rotational analysis 4=6558
 Be₁₂Ti-Be₁₂Ti₂, several phases, crystal structure 4=23422

Beta-decay theory

 Cd^{115m}, longitudinal polarization 4=6284
 Co⁵⁸, matrix elements 4=19719
 Cs¹³⁴, matrix elements 4=1046
 Eu¹⁵², five β - γ circular polariz. correls. 4=25354
 Eu¹⁵⁴, circular polariz. of γ -ray, meas. 4=19732
 Eu^{152,154}, first-forbidden decay, nuclear matrix elements 4=15192
 F¹⁸ source production, carrier-free 4=6266
 F²⁰, anisotropy, in n. m. r. technique 4=3541
 Fe⁵⁹, correl. with polarized γ 4=27991
 Gd, e^+e^- coincidences after thermal neutron capture 4=6362
 Ge⁶⁹ decay 4=9403
 H⁴, long-lived, unsuccessful search 4=9443
 H³, search in Li⁷-p processes 4=9444
 Hg²⁰³, K-conversion electrons, polarization 4=1053
 I¹²², positrons, coinc. with γ -rays 4=6285
 I¹³¹, matrix elements 4=19719
 In¹¹⁰, 66 min, positron branching 4=25350
 In^{118,120,122} 4=22071
 K⁴⁰, to Ar⁴⁰, precise meas. of γ -rays 4=17049
 K⁴², $2^- \rightarrow 2^+$, β - γ (circularly polarized) correl. 4=15186
 La¹⁴², 92.5 min. 4=17097
 Li⁸ 4=1040
 Li⁹ 4=1039
 Mg²⁴, meson exchange effect meas. 4=17090
 Mn⁵⁶, γ -ray spectra of Fe⁵⁶ 4=25346
 N¹⁷, to bound states of O¹⁷ 4=15184
 Na²⁴, $\Delta T = \pm 1$, β - γ circular polariz. 4=12178
 Nb⁹⁵ 4=1044
 Ni⁶⁰, lifetime of first excited state 4=3602
 P³² bremsstrahlung rel. to Coulomb field 4=25344
 Pt¹⁸⁹ $\rightarrow$ Ir¹⁸⁹, Os¹⁸⁹ 4=17104
 Re^{186,188}, first-forbidden decay, nuclear matrix elements 4=15192
 S³⁵, e. m. radiation by atomic electrons, theory and expt. 4=6271
 Sb¹¹⁵, positrons, probability ratio to electron capture 4=9451
 Sb¹¹⁸ 4=22071
 Sb¹²², log ft value 4=6285
 Sb¹²⁴, first-forbidden decay, nuclear matrix elements 4=15192
 Sc⁴⁷, γ -rays meas. 4=12181
 Sm¹⁵³ $\rightarrow$ Eu¹⁵³, γ -ray transitions meas. 4=17100
 Sn⁹⁹ bremsstrahlung rel. to Coulomb field 4=25344
 Sr⁹⁴ 4=17092
 Tb¹⁶⁰ decay 4=6293
 Tb¹⁶⁰, K-forbidden, meas. 4=25355
 Tc¹⁰³⁻⁵ 4=3606
 Te¹²¹ isomers 4=12184
 Ti⁴⁶, lifetime of first excited state 4=3602
 Tm¹⁶⁹, 8.4 keV level, coincidences and lifetime 4=3581
 Tm¹⁷⁰, first-forbidden decay, nuclear matrix elements 4=15192
 Y⁹⁰ bremsstrahlung rel. to Coulomb field 4=25344
 Y⁹⁰, internal bremsstrahlung meas. 4=6282
 Y⁹¹ bremsstrahlung rel. to Coulomb field 4=25344
 Zn¹⁷¹, 4-hr, gamma-spectrum meas. 4=19721

- resistance, elec., 4-lead meas. system 4=30612
- self-diffusion in Bi_2O_3 , effect of phase transformation 4=6867
- self-magnetoresistance and pinch effect 4=4140
- self-magnetoresistance calc. 4=20353
- semiconductivity, films, large temp. var. with Pb, Sn added 4=12883
- specific heat, low-temp., calc. 4=1395
- spectra in $BiCl_3$, and solute equilibrium 4=5185

Bismuth—contd

- superconducting double layer, with Pb, diffusion and contact effect 4=24513
- thermal expansion, $4^\circ K$ to room temp. 4=15434
- thermomagnetic figure of merit 4=4141
- twins, wedge-shaped, props. of boundaries 4=10454
- two-band model, matrix elements and select. rules 4=30546
- viscosity, temp. var., m. p. to $1000^\circ C$ 4=5160
- weak field region, 77° - $273^\circ K$ 4=4139
- Bismuth compounds**
- with rare-earth metals, crystal structure 4=15791
- Bi arsenate phosphors activated with rare-earth ions 4=20479
- Bi-BiBr₃ molten solns., mag susceptibilities 4=24239
- Bi-Cd, hardness, effect of composition near eutectic 4=7414
- BiCl₃, critical temp. and coexistence curve 4=29812
- BiCl₃, molten, Bi spectra and solute species equilibrium 4=5185
- BiF, spectra, A-X system 4=28182
- BiFeO₃, ferroelec., mag. props., crystal struct., temp. var., Neel point 4=22774
- BiFeO₃-LaFeO₃, dielectric transformations, simultaneous with mag. change 4=4214
- BiFeO₃-Sr(Sn_{1/3}Mu_{2/3})O₃, Mossbauer change on anti-ferromag. phase transform. 4=15658
- BiFeO₃-SrSnO₃, 4 solutions, ferroelectric Curie temp., from Mössbauer effect, temp. var. 4=4212
- Bi oxide-Mg fluoride anti-refl. coating deposition 4=23567
- { Bi_{1-2x}Ca_{2x} } [Fe_{2-x}(Fe_{3-x}V_x)O₁₂], single-crystal growth 4=29043
- BiOCl, crystal structure atomic, by electron diffr. 4=4600
- Bi₂O₃, Bi self-diffusion, effect of phase transformation 4=6867
- Bi₂O₃, electrical conductivity and thermoelectric power, up to $1000^\circ C$ 4=10043
- Bi₂O₃, oxide addition effect on polymorphism 4=23253
- Bi₂O₃, pure, polymorphism stability relations 4=23252
- Bi₂O₃, rel. to double layer antirefl. coatings 4=21307
- BiPb alloy film 4=14530
- Bi-S solns., densities, meas. 4=24185
- Bi₂S₃, prep. and elec. props 4=10140
- Bi-Sb alloys, Hall coeff. and magnetoresistance tensors, 77° to $300^\circ K$ 4=10042
- Bi-Sb alloy, interband transitions and band structure 4=22539
- Bi-Sb alloys, single-crystal growth 4=23334
- Bi-Sb alloys, weak magnetic field region 77° - $273^\circ K$ 4=4139
- Bi-Sb, elec. props., 75- $500^\circ K$ 4=26034
- Bi-Sb laser, 100 radiations, p-n junctions 4=27697
- Bi-Sb, Nernst-Ettingshausen figure of merit meas. 4=22704
- Bi-Sb system, liquid, struct. from viscosity, elec. cond. 4=21110
- Bi₈₅Sb₁₅ semicond. magneto-, thermoelec., Te doping effects 4=30618
- Bi₈₉Sb₁₂ + 0.5% Pb, thermal cond. and thermoelec. power meas. 4=14424
- Bi_{0.92}Sb_{0.08} temp. effect on transport props. 4=26033
- Bi-Sc alloys, crystal structure 4=2072
- Bi-Se, crystal structure, atomic, of solid solns., C33 tetradymite 4=10527
- Bi₂Se₃, crystal structure and elec. props. 4=7609
- Bi₂Se₃, galvanomagnetic effects at $42^\circ K$, erratum 4=15534
- Bi₂Se₃, magnetoelectric effects, $4.2^\circ K$, six-valley model 4=6946
- Bi₂₄Se₆Sb_(60+x)Te_(150-x) crystal growth, thermoelectric props. 4=29042
- Bi-Sn, elec. props., 75- $500^\circ K$ 4=26034
- Bi-Sn(50/50), phase transform., melting pt. obs. 4=20687
- Bi-Sn-Te (Sn + Te ≤ 0.3 at. %), semicond. props., 77° - $450^\circ K$ 4=12884
- Bi-Te, elec. props., 75- $500^\circ K$ 4=26034
- Bi-Te solid solutions, electrical props., 77° - $300^\circ K$ 4=10045
- Bi₂Te₃ alloys, thermoelectric properties, 100° to $300^\circ K$ 4=10141
- Bi₂Te₃, Cd diffusion and solubility 4=1507
- Bi₂Te₃, Ge doped, elec. and therm. cond. 4=28380
- Bi₂Te₃, Laue patterns rel. to Brillouin zone structure 4=6797
- Bi₂Te₃, magnetoelectric anisotropy, low temp., suitable cryostat 4=16310

Bismuth compounds — contd

- Bi₂Te₃, magnetoresistance, oscillatory, 77°, 4.2°, 2.08°K 4=6947
 Bi₂Te₃, resistivity rel. to pressure 4=10044
 Bi₂Te₃, semiconductivity, Hall effect, thermoelec., var. with Ge, Pb doping, 100-400°K 4=15535
 Bi₂Te₃ single crystal, physical props., review 4=13530
 Bi₂Te₃, structural changes, rel. to grinding 4=7668
 Bi₂Te_{3-x}Se_x, thermoelectricity, temp. var., and conductivity 4=1697
 Bi₂Te₃, thermodynamic props. rel. to stability 4=27396
 Bi₂Te₃, unit cell angle, rel. to transport props. 4=30846
 Bi₄Ti₃O₁₂ single crystals, production and ferroelec. props. 4=23335

Bitumen

See Materials

Blood

- haemoglobin disoxygenation, spectrophotometric meas. 4=7800
 haemoglobin, Mössbauer effect 4=6669
 plasma, laser beam irradiation effects 4=20966

Boiling

See also Distillation

- alcohol, from Hg surface 4=24447
 binary liquid mixtures, vapour bubble growth rate calc. 4=27382
 binary mixtures, vapour nuclei phase formation 4=5460
 bubble, heat exchange, rel. to thermodynamic similarity 4=8509
 bubble size distribution, appl. to BW reactors 4=11419
 demonstration specimens 4=11421
 density change under pulsed heating 4=5459
 diethyl ether, heat transfer in nucleate boiling 4=27170
 effect of acceleration on boiling crisis, liquids at saturation temp. 4=14457
 film boiling, natural convection, laminar two-phase boundary layer 4=8515
 gas evolv., effect of vibr. on rate 4=24444
 heat transfer at the coexistence of nucleate and film regions 4=27379
 heat transfer, film, radiation effect 4=11418
 heat transfer, from horizontal surface, nucleate boiling, eqn. 4=11416
 heat transfer, from horizontal surface, in transition boiling domain 4=29784
 heat transfer from horizontal surface in transition zone, mechanism 4=24443
 heterogeneous boiling, criteria for investigation 4=29804
 incipient subcooled-boiling with forced convection, conditions 4=27378
 laser induced, bubble prod. at inhomogeneities 4=2895
 liquid oxygen, bulk density meas. 4=11432
 nucleate-boiling heat-transfer, for liq. H₂, at zero and standard gravity 4=11452
 nucleate boiling, of liquefied gases, peak heat flux and temp. diff. 4=11420
 nucleate, heat transfer, theory 4=5464
 nucleate, heat transfer, theory 4=21332
 nucleate, use of bubble growth theory 4=8513
 nucleation and heat transfer on Ni chemical effects 4=11422
 overheating, near stability boundary of liquid 4=21105
 singularity in thermodynamic potential 4=8514
 water, forced circulation, press. drop prediction 4=24449
 water, from Hg surface 4=24447
 water heat transfer, burnout in heated round tubes, world data 4=29789
 water, heat transfer from Ni wire in subcooled and boiling water 4=11417
 water, heat transfer from Pt and Ni wires, depend. on wire surface 4=2894
 water, nucleate boiling on Cu, effect of surface config. 4=2862
 water, on Ni wires, surface oxidation temp. effects 4=11423
 water, thermal exchange mechanisms, strioscopic visualization 4=8512
 Ba, density, calc. discrepancy 4=18183
 Ca, density, calc. discrepancy 4=18183

Boiling — contd

- H₂O, saturated and subcooled, heat transfer at the coexistence of nucleate and film regions 4=27379
 H₂O, subcooled, surface boiling under free convection, heat transfer 4=27380
 Na, mechanism, for surface heating and natural convection 4=29809
 Na oleate, heat transfer at the coexistence of nucleate and film regions 4=27379

Boiling point

- calculation, b.p. rel. to characteristic temp., principal quantum no. 4=365
 inert-gas crystals, calc. 4=5473
 molecular crystals, calc. 4=5473
 CaCl₂ 4=5461
 H₂ 4=5478
 20 liquids, rel. to intermolec. free-length temp. coeff. 4=27381

Bolometers

- cryogenic, detectivity formula 4=8495
 designs for energy loss determ. from plasma 4=18496-7
 ferroelectric, for astronomical applications 4=27369
 use in horizon sensor for space vehicle 4=10938
 millimetre wave, sub. 4=19205
 for power meas. mm bands 4=18483
 pyrhelimeter as standardization instrument for absolute meas. of solar radiation 4=24428
 stars, radiation meas., corrections 4=10833
 in sub mm region, comparison 4=14445
 superconducting, review 4=8577
 Bi, large temp. coeff. with Pb, Sn added 4=12883
 Ge, load curve empirical approx., liquid He temp. 4=5439
 Ge, for mm band thermal energy 4=18485

Bonds

See also Molecules

- actinide group complexes and electron struct. 4=22370
 alcohols, secondary, solid, H bonding, dielectric effects of flaws 4=25803
 aliphatic alcohols in polar solvents, hydrogen bonding, electrostatic model 4=30449
 alkali halides, lattice cell cohesive energy 4=6678
 alkyl hydroperoxides, O—O bond dissociation energies 4=13704
 alkylammonium salts, hydrogen bonding 4=22386
 anilines, o-substit., NH...X H-bonds 4=15362
 aromatic, hybridization and proton splitting consts. 4=17322
 aromatic molecules, resonance energies, Pauling bond orders 4=6544
 bent, electrons in specific mols., theory and expt. 4=3847
 benzene crystals at -209°C, hydrogen, by Raman spectra 4=30691
 benzene derivs., i. r. absorption and H-bonding 4=30454
 calc., linear combination of atomic associations (LCAA) method, 3 atoms 4=6539
 calc., polyatomic mols., in terms of diatomic and non-atomic components 4=6550
 ε-caprolactam, from irradiation single crystal e.s.r. 4=23044
 chemical bonds in valence semiconductors 4=4126
 chemical props. relation, Mössbauer effect meas., survey 4=28159
 chloroacetylene, lengths, by isotopic substitution 4=9735
 2-chloropropane, distances and angles 4=12499
 conference on quantum mechanics, Sanibel Island (1963) 4=6449
 correlation linear, between orders and stretching force consts. 4=9696
 covalent, forces between atoms in terms of classical electrostatics 4=17276
 crystal, ionic, covalent, metallic, mol. systematization 4=12553
 crystals, A^{III}-B^V, mixed covalent-ionic, e. s. r. study 4=3956
 cyclopropyl chloride, distances and angles 4=12500
 diatomic mols., homopolar binding 4=3846
 diatomic molecules and crystals, 33, calc. 4=30418
 diazocarbonyl cpds 4=1291
 dibenzene chromium mol., rel. to symmetry assessments 4=22389
 dicyandiamide, solid, H-bonding system 4=23504
 dimethylsulphoxide, (CD₃)₂SO, distances, angles, from rot. spectrum 4=22404

Bonds—contd

- electron-pair bond, time-dependent Hartree-Fock theory 4=20026
 electronic structure, lengths, angles, from spectrum, microwave, review 4=3827
 ethylene, electron-pair bond, time-dependent Hartree-Fock theory 4=20026
 ethylene, π electron states, calc., analogue 4=9757
 ferrocene and related cpds, covalent, Mössbauer study 4=12585
 fluoroacetylene, lengths, by isotopic substitution 4=9735
 graphite, rel. to Fe^{57} Mössbauer effect 4=12586
 group III transition-metal monoxides, bonding correl. 4=12528
 H bonding of hydroxide ion 4=29131
 halogen cyanides, lengths, by isotopic substitution 4=9735
 n-heptane, adsorption on quartz, Van der Waals forces present between the two mols. 4=23603
 hydrides, neutral and charged, ordering of bond strengths 4=3845
 ice, H-bonds, theory 4=25804
 ice, O atom separation elongation on isotopic exchange, rel. to temp. 4=10536
 ionic crystals, theoret. binding energy between ions 4=28442
 ions in octahedral fields, mag. moments 4=1355
 lanthanide complexes, weak covalent bonding 4=1276
 lanthanides (III) in ThO_2 , oxide ligands, nephelauxetic effect 4=20462
 lengths-force consts. correl. 4=25625
 liquids, effect of hydrogen bond on specific heat 4=21121
 liquids and solids, energy rel. to surface tension 4=10595
 metal-glass surface regions 4=10594
 metallic, review 4=6681
 metals, forces with potential energy part due to cond. electrons 4=23085
 molecular solids cohesive energy, electronic correl. dispersion contrib. 4=28300
 monohydrides, series of, binding type, discontinuous change 4=17281
 use of Mössbauer isomer shifts as index to chemical bonding 4=9816
 nitriles, π -electron calc. by self consistent charges 4=25712
 nitromethane, N—O, C—N and C—H, dipole moments 4=3897
 nitroso-methane and dimers 4=15373
 O—D...O, in crystals, n.m.r. study 4=28894
 organic saturated hydrocarbons, energy calc. from σ -electron charges 4=15324
 phenol and substituted phenols in polar solvents, hydrogen bond, electrostatic model 4=30449
 polyethylene, cohesion, autogenous, under high press. 4=26526
 polymer chain, real, polarizabilities, principal 4=20680
 polymerization with alkali metals, metal-carbon 4=25796
 polymers, inorganic $[\text{AB}]_n$, alternation calc. 4=9801
 polymers, π electron states, calc., analogue 4=9757
 polyphenyls, bond orders, mobile, calc. using SCF-LCAO-MO theory 4=22413
 pyrazine, from interaction coeffs. 4=22411
 silica, hydroxyl bonds rel. to F^1 centres 4=22951
 in solids, book 4=22446
 strengths, from overlap charge potential energy 4=25626
 s-tetrazine, from interaction coeffs. 4=22411
 transition metal oxides and carbides, metal-metal, screening effects 4=22450
 s-triazine, from interaction coeffs. 4=22411
 two-electron chemical bond 4=15335
 Van der Waals forces between atom and solid surface 4=12411
 A^{III}B^V semiconductors, nature 4=28302
 Al-transition metal, spd-hybrid localized, degree of polarization 4=6679
 AlH_3 and AlD_3 trimethylamine and tetrahydrofuran complexes, coordination bonds, rel. to i. r. spectra 4=3869
 As_4O_6 , ionic nature of As—O bond 4=10468
 B, to radicals NHR and NH_2 , magneto-optic meas. 4=15343
 B—S, from magneto-optical effects 4=15344
 Br_2 , benzene, charge transfer lack, p.q.r. investigation 4=25802
 CBr_4 , p-xylene, charge transfer lack, p.q.r. investigation 4=25802

Bonds—contd

- C—C in aliphatic hydrocarbons, mag. shielding const 3=1253
 C—C, C=C, C $\equiv$ C, optical anisotropies 4=22343
 C—C in NH_4 oxamate and Li oxalate, electron density 4=4595
 C=C and C=N, diamag. anisotropy effects in n.m.r. 4=6648
 C $\equiv$ C, C=O spectral bands in phenylpropionic acid and derivs. 4=25714
 C—Cl, in 6-chloro-2-nitrotoluene 4=17704
 CCl_4 , p-xylene, charge transfer lack, p.q.r. investigation 4=25802
 C—H, in alkanes, effect in reactions with tritium recoil atoms 4=7776
 C—H, and methyl group, magnetic screening constants 4=3849
 C—H, optical anisotropies 4=22343
 CaF_2 , from deflection in inhomogeneous elec. field 4=22378
 CF_3 reactions, bond and activation energies, correl. 4=30895
 CH, anisotropic proton hyperfine interaction 4=30424
 CH, props. rel. to proton hyperfine splitting 4=6647
 α C—H in trialkylboranes, rel. to B^{11} quadrupole resonance 4=6645
 C^{13} —H coupling constants 4=3844
 C=O stretching vibr. in copolymers and hydrogenated monomers 4=12550
 CS_2 , in upper state 4=20065
 CaF_2 , from deflection in inhomogeneous elec. field 4=22378
 CdSb, electron deficient, MO LCAO calc. 4=6559
 CO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
 $\text{CoCl}_2 \cdot 2\text{H}_2\text{O}$, from crystal structure, atomic 4=7612
 CoF_2 , from deflection in inhomogeneous elec. field 4=22378
 Cr oxychlorides, fluorides, sulphates, from e.s.r. 4=20098
 Cr, rel. to $\text{L}_{II,III}$ energy levels 4=1427
 Cu chelates, N bonded, e. s. r. study 4=30471
 CuF_2 , from deflection in inhomogeneous elec. field 4=22378
 Fe complex cpds, covalency, rel. to Mössbauer effect 4=9742
 Fe complex compounds, by Mössbauer effect 4=28328
 Ge, bending under stress 4=28305
 H, in acetylene cpds. 4=29648
 H, acid-base, effect on dipole moments of complexes 4=25623
 H-bond formation study, by i. r. spectra, in CDCl_3 in non-polar-proton-acceptor solvents 4=28208
 H-bond, in KH_2PO_4 -type ferroelectrics, collective motion 4=7043
 H bond, review 4=22344
 H-bonds in solutions of polar mixtures in nonpolar solvents 4=5207
 H, hydrogenous liqs., proton motion, neutron scatt. meas. 4=27165
 H, and molecular shape change 4=28179
 H, from n.m.r., t-butanol organic solutions, p shift 4=1251
 H in water from i. r. absorpt., 27°-209°C 4=21137
 H_4^+ , electron pairing 4=30444
 H_3^+ molecule-ion 4=12482
 $(\text{HF})_2$, H-bond, electrostatic contrib., multicentre integrals 4=3875
 H—H distances in CH_2Cl_2 , SiH_2F_2 and CH_3CXO (X = H, F, Cl, Br) 4=22338
 H_2O , calc. 4=6550
 H_2O , chem. binding, electronic structure effect, calc. energy 4=30446
 H_2O , H-bond energy rel. to valence vibration freq. 4=22384
 He_2^{2+} , natural orbital expansion coeffs. 4=25648
 HgCl_2 , from deflection in inhomogeneous elec. field 4=22378
 $\text{HgSO}_4 \cdot \text{H}_2\text{O}$, crystal struct., rel. to H bonding 4=26658
 In_2H_3 , gaseous 4=25707
 KD_2PO_4 , D intrabond motion rel. to ferroelec. 4=10112
 $\text{Li}(\text{N}_2\text{H}_5)\text{SO}_4$, H—H and N—H distances, 4=1902
 Li_3Sb , ionic character, from semiconducting properties 4=1589
 MgF_2 , films on support, existence of chemical bonds 4=29122

Bonds—contd

- MgO periclase in brick, impurities effect 4=30869
 Mg₂Sn, rel. to 23.8 MeV Mössbauer absorption line 4=12592
 Mn cpds., from e.s.r. h.f.s. 4=20095
 MnCl₂ and MnF₂, from deflection in inhomogeneous elec. field 4=22378
 N—O distance, in Ce₂Mg₃(NO₃)₁₂·24H₂O 4=7611
 N₂O₄, calc. 4=15373
 NaHF₂ and NaDF₂, H-bond with F atoms 4=4623
 NaHF₂, NaDF₂, H-bonds, neutron diffn. meas. 4=28308
 Na₂H₂P₄O₁₂, rel. to 2D disorder struct. 4=30855
 Na₂S₂O₄·2H₂O, H-bonds, p. m. r. meas. 4=7643
 NaSb, ionic character, from semiconducting properties 4=1589
 Na₃Sb ionic character, from semiconducting properties 4=1589
 Ne solid, cohesive energy calc. 4=28301
 NiF₂, from deflection in inhomogeneous elec. field 4=22378
 Ni—H chemisorption, ionicity 4=22949
 NO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
 O₂⁺ ion clusters, bonding 4=17319
 O—Cl, O—P, O—Si, correlation between stretching freqs., force consts. and lengths 4=9697
 OH, changing props. in O-hydride series 4=9731
 O—H—O bond, neutron diffn. length, symmetry meas. 4=28175
 O—N or O—P nature rel. to diamag. susceptibility 4=30460
 P³¹—H¹ coupling in organo-phosphorus cpds 4=3915
 Rh—F, in RhF₃, interbond distance 4=17292
 Ru—F, in RuF₆, interbond distance 4=17292
 S molecules, d orbit construction unnecc. 4=25682
 S—O in SO₃²⁻, stretching frequency 4=28231
 S—O in SO₄²⁻ ion, rel. to i. r. absorption bands in Cu[Na]SO₄·5H₂O 4=4255
 SCN, S—C, C—N angle/length rels. 4=20084
 S₂F₂, bond angles and distances 4=3879
 Si, review 4=28413
 Si—transition metal, spd-hybrid localized, degree of polarization 4=6679
 SiR₃H₃X₃, where R is alkyl and X halogen, and mag. props. 4=30467
 Sn organic cpds., Sn—Sn and Sn—C bonds, Mössbauer effect 4=25717
 Sn, rel. to splitting and shifts of Mössbauer lines 4=28323
 TiN, metallic, and chemical reactions 4=22451-2
 TiO₂, chemical, rel. to Hall effect anisotropy 4=10072
 V³⁺ salts, hydrated, mol. orbital theory of ligand field 4=20520
 Xe fluorides, rel. to chemical shifts 4=20074
 ZnCl₂ and ZnF₂, from deflection in inhomogeneous elec. field 4=22378
 ZnO crystal, polar props. perpendicular to c-axis 4=6680
 Zr—O crystal, cohesive energy, Ligand field treatment 4=9807

 units, dimensionless numbers and scales, dictionary 4=5004
 units, national and international, dictionary 4=18011
 vacuum and electronics, applied physics 4=8581
 Br and isotopic hydrogen mol. reaction, rates and kinetic isotope effects 4=29208

Boron

- activation energies in monocrystalline β-rhombohedral B 4=25897
 atom, 1s²2s2p² configs., analytic self-consist. field functions 4=15273
 atom, unrestricted Fock calcs. 4=1207
 bonds with NHR and NH₂, magneto-optic meas. 4=15343
 crystal lattice dimensions, new polymorph 4=4601
 diffusion in Si, conc.-depend., calc. 4=9993
 diffused in Si, redistribution due to oxidation calc. 4=25967
 diffusion in rutile 4=1505
 diffusion in Si, 1100° to 1300°C 4=20303
 diffusion into Si, surface conc. 4=4077
 diffusion through SiO₂ to Si, segregation coeff., p-n jn. method, two-boundary method 4=30578
 films, self-supporting, preparation 4=7706
 films on Si substrate, preparation 4=15818
 ion, B⁻, electron affinity and stability calc. 4=9643
 isotope separation 4=10633
 layers, electron bombardment deposition and vacuum weighing 4=10611
 molten, density and surface tension 4=132
 solution, effect on neutron source absorption 4=19519
 spectrum, in Si, compensated, i. r., vibr. absorpt. 4=4274
 sublimation, pressure meas., Langmuir, 1781-2152°K 4=5468
 vacuum evaporation, electron bombardment apparatus 4=14224
 in BeO single crystals, e.s.r. 4=26378
 in Si, i. r. absorpt. impurity lines, width and temp. depend. 4=28673
 in Si, rel. to localized vibr. 4=17346

Boron compounds

- borates and boric acid, in nuclear reactors, boiling, distrib. 4=15253
 borates, fused, viscosity and free vol. 4=2663
 borazates, dielec. props., ferroelec. 4=22773
 boric acid glass, aromatic-doped, X-irrad., e.s.r. 4=13742
 boric anhydride, Raman spectra, rel. to B coordination transitions, rel. to Na₂O content 4=20449
 boro-organic cpds., use as nuclear reactor poisons 4=22267

Boron compounds — contd

- diborane ($B^{11} \rightarrow B^{10}$), vibrational freq. shifts, isotope effects 4=28213
 diboranes, B^{11} labelled, i.r. spectra 4=1272
 hydrides, fragmentation by electron impact 4=21460
 tourmaline, electron polarization effect meas. 4=17821
 vitreous borates, structure, similarity to high temp. crystals of same composition 4=2136
 B alloys, neutron effects, and crystal structure 4=10007
 B trihalides, Coriolis coupling coeffs. calc. 4=3839
 B trihalides, force consts. 4=28207
 $BAsO_4$, $AlAsO_4$ glass, structure, from spectra, i. r. 4=10626
 B—C and B—C—Si systems, mass spectra 4=17318
 B_4C , high-temp. vaporization 4=24455-6
 B_4C —SiC system, phase equilibria 4=20698
 BCl_3 , $^1\pi$ - $^1\Sigma^+$ bands 4=12443
 BCl_3 — $HBCl_2$ — $DBCl_3$, vibrational analysis 4=22372
 BF, electronic structure 4=22363
 BF, spectrum, electronic 4=6557
 $BF_3 \cdot 2H_2O$, crystal structure 4=23423
 BF_3 — B_2O_3 , i.r. absorption spectrum 4=22847
 BF_3 discharge, 5450 Å emission, identification as BO_2 bands 4=22371
 BF_3 , n.m.r. of F^{19} , interpretation 4=9768
 BF_3 , n.m.r. of H and F^{19} 4=3916
 B_2F_4 , solid and gaseous, i.r. spectrum 4=21187
 BH, BD energy states and transitions, l-coupling of excited states 4=25636
 BH_4^- , mol. polarizability, orbital calc. 4=3870
 B_2H_6 calc., two-centre approx. 4=20063
 B_2H_6 , i. r. spectrum, Coriolis perturbations 4=28212
 i- $B_{10}H_{22}$, molecular, crystal and valence structures 4=4602
 $B_{20}H_{16}$, molecular and crystal structure 4=13583
 $B_{20}H_{16}$, prepn., props., and molec. structure 4=7748
 BN heated to 1000°C, spectral emittance 4=14443
 BN, planar, overlap functions 4=15451
 BO_2 bands in 5450 Å emission from discharges through BF_3 vapour 4=22371
 BO_2 , molecular vibr. and rot., calc. 4=28233
 BO_2 , vibrational spectra 4=1282
 B_2O_3 glass, densification, heat treatment 4=13409
 B_2O_3 glass, densification in rigid state up to 80 kbar 4=13408
 B_2O_3 glass, Young's modulus rel. to refr. index, ht. effect 4=22864
 B_2O_3 , molecule, thermodynamic functions 4=6584
 B_2O_3 , vitreous, i. r. spectra, interpretation 4=7112
 B_2O_3 , vitreous, layer struct. 4=20826
 $BOCl$, ht. of form. and entropy, rel. to vapour-phase equilib. 4=15837
 BP, optical absorpt., electroluminescence and band gap 4=22848
 BP, prep., optical props. and band struct. 4=26178
 BPO_4 , $AlPO_4$ glass, structure, from spectra, i. r. 4=10626
 B—S compounds, magneto-optical effects, and bond 4=15344
 B_2S_3 , molecule, thermodynamic functions 4=6584
 BVO_4 glass, structure, from spectra, i. r. 4=10626
 HBO_2 , three cryst. forms, ht. of soln., transition and form. meas. 4=14452
 H_2BO_3 , solutions, neutron spectra, thermal 4=911
 M^{2+} borates, atomic crystal structure 4=15787

Bosons

See Fundamental particles; Quantum theory, many-particle systems

Breakdown, electric

See also Discharges, electric; Electric strength

- air, in high-speed flow 4=2959
 between two insulators, glass, covered with photographic emulsion 4=5581
 of field gaps, non-uniform, effect of the electrode surface conditions 4=5576
 high vacuum 4=14602
 insulating gaseous systems, at press. between atmospheric and high vac. 4=20957
 magnetic fields effect, small, point gaps, pulse 4=478
 r.f. emission, near ionizing particle track 4=681
 vacuum 4=18754
 vacuum, electron beam or clump mechanism 4=5580
 vacuum, electron beam to clump mechanism transition 4=476
 vacuum gaps, discharge delay time 4=18755

Breakdown, electric —contd

- vacuum, initiated by macroparticles 4=8651
 vacuum, preceding local anode heating 4=2961
 vacuum, small gap mechanism 4=29888
 vacuum gap, h. v. insulation with dielec. coated electrodes 4=24536
 in vacuum, role of field emission from vacuum-deposited metallic film 4=27561
 Al surface, effect of various substances 4=2962
 Ge, uncompensated n-type, critical field anisotropy 4=10055
 between Ni surfaces in vacuum 4=24724
 Si diodes, edge effects 4=26082
 Si, p-n junc., lowered by stress 4=22742
gases
 air at atm. press. in small gaps, statistical theory 4=29889
 air, effect of dielec. layer on electrode 4=29641
 air, impulse breakdown characteristics in non-uniform fields 4=21488
 air, in crossed elec. and mag. fields, low-pressure 4=18749
 air, in homogeneous field, transition from multi-to single-avalanche mechanism 4=21487
 air, influence of O_2 and H_2O vapour on the propagation of streamers 4=5577
 air, long gaps, voltage and time lag 4=14604-5
 air, moist and dry, in wire-plane and point-plane gaps 4=18748
 air, negative impulse, in large sphere-plane gaps 4=18746
 air, O_2 , N_2 , pressurized spark gap, formative time lags 4=18759
 air, shock excited, Paschen curves 4=2960
 air, spark counter breakdown 4=19328
 air, spark, formation stage, point-to-plane gap 4=18756
 air, 20-15000 c/s discharge 4=16452
 avalanche series, carrier number distrib. function 4=18742
 electrode processes in high-current in vacuum 4=21479
 electron avalanche current with diffusion 4=24618
 electron avalanche in uniform elec. field gas, amplification and transit time 4=29885
 final stage, rel. to anode vaporization 4=18771
 Geiger-counter pulses in air 4=3237
 high-temperature 4=27501
 high-voltage and high-pressure discharges, review 4=18750
 ionization space-time growth in distorted fields 4=29886
 by laser beams, theory 4=24619
 leader, partially ionized, formation, theory 4=18745
 localized, rel. to acoustic wave propagation 4=19019
 at optical frequencies 4=18747
 plasma theta-pinch 4=18957
 plasma, toroidal pinch, with reversed field 4=21523
 propane-air flame, sparking potential 4=16454
 rel. to impulse corona 4=18770
 shock heated, complete current-voltage characteristics 4=14222
 spark gap, small, nanosec. delay times 4=14603
 spark gaps, undervolted, triggering by microsec. fast electron pulse 4=18762
 spark gaps, uniform field, Ra irr., static voltage, rel. to materials, 1 to 3 cm gap 4=18760
 sparkover voltage, effect of discharge products 4=5585
 sphere-plane, in vacuum 4=18752
 streamers, negative, in spark breakdown, nature 4=5584
 suppression by pulsed corona 4=27502
 in thermionic diodes, below ionization potential 4=11715
 theta-pinch apparatus, breakdown 4=18954
 Townsend, rel. to streamer, calc. 4=18744
 trigatron, leader mechanism 4=18761
 vacuum, initiatory electron emission meas. 4=8652
 vacuum, rel. to cathode electron emission 4=18753
 vacuum, 10^{-6} to 10^{-3} torr, rel. to electrode material and distance apart 4=18751
 Ar, laser induced, at high pressures 4=8654
 Ar, moist and dry, in wire-plane and point-plane gaps 4=18748
 Ar, static, role of metastable atoms 4=16453
 Cs vapour, discharge voltage 4=8653
 D, electron ionization frequency 4=18675
 H discharge tube, as fast pulsed current and light source 4=18652
 H_2 , sparking potentials of metal cathodes, rel. to material and surface nature 4=21554

SUBJECT INDEX

Breakdown, electric—contd

gases—contd

- He, laser induced, at high pressures 4=8654
 N_2 and N_2-O_2 mixtures, in wire-plane and point-plane gaps 4=18748
 N_2 , coaxial electrodes, in columns, low press. 4=11555
 N_2 , electron avalanche development 4=21467
 N_2 , Paschen curve, comparison with other gases 4=5579
 O_2 , uniform field potentials meas. 4=8622
 SF_6 -air mixtures, time lag meas., digital 4=16455

liquids

- direct-stress investigations 4=2926
 ethyl glycol, pulsed strength 4=27188
 glycerine, pulsed strength 4=27188
 hydrocarbon oil and liquefied gases, theory 4=5204
 insulating liquids, mechanism 4=8218
 insulating liquids, pre-breakdown current pulses 4=16120
 oil, transformer, quenching effect of oxygen 4=2705
 transformer oil, electrode coating effects 4=21146
 transformer oil, rel. to organic additives 4=5208
 water, tap and distilled, pulsed strength 4=27188
 Ar, mechanism, impurity effects 4=5200
 CCl_4 , effect of dielec. layer on electrode 4=29641
 He, mechanisms, impurity effects 4=5200
 N_2 , mechanism, impurity effects 4=5200
 NaCl solns. 4=21155
 O_2 , mechanism, impurity effects 4=5200

solids

- alkali halides, review 4=1647
 cavity in dielectric, discharge number rate, layer effects 4=24616
 ceramic surface, glazed, in vac. 4=15557
 corona discharges in dielectrics 4=14614
 dielectric films, thickness depend., avalanche theory 4=12959
 dielectrics, thermal, var. of temp. distrib. with time in a.c. field 4=8602
 dielectrics in vacuum, pulsed breakdown 4=30643
 insulating materials, exposed to internal corona 4=26095
 protrusion pre-breakdown emission, projection tube use 4=29887
 semiconductors, phonon-defect interaction mechanism 4=4288
 space research, flash, spark-over 4=17511
 $BaTiO_3$, breakdown field, rel. to temp. 4=10111
 $BaTiO_3$, d.c., temp. var., time lag distrib., dielectric constant, meas. 4=28627
 GaAs lasers, hysteresis 4=20380
 Ge, avalanche, relative electron loss to optical and acoustic modes 4=28560
 Ge and Si, secondary multiplication coefficient 4=7004
 Ge, var. compression stress, 5.2°K 4=20365
 Si diodes, high noise temp. data 4=22747
 Si p-n barrier layers, avalanches, irrad. release 4=12932
 Si, p-n junctions, avalanche 4=7002
 Si p-n junctions, avalanche, mech. damage effect 4=22744
 Si p-n junctions, microplasma interactions 4=22738
 Si p-n junctions, "steep," impact ioniz. and field emission 4=1632
 Si p-n transistors, mesoplasma breakdown 4=1828
 SiO films, voltage 4=1655
 $SrTiO_3$, -195° to 100°C 4=20422

Breaking strength

See Mechanical strength

Bremsstrahlung

- See also Electrons, radiation; Gamma-ray spectra;
 Gamma-rays; X-ray spectra, emission; X-rays
 atoms, and electron scatt. elastic cross-section 4=15299
 circular polarization, from β -rays in magnetized iron target 4=15040
 double, calc. for almost collinear momenta 4=17479
 e-e scatt., rel. to nonlocal electron structure 4=3380
 in electron-electron scattering, high energy 4=3386
 electrons, ang. momentum, i.r. divergence, rel. to electron structure 4=16873
 electrons, h.f. limit of spectrum, rel. to αZ 4=16872
 electrons, polarized, in Coulomb field, exact calc. 4=21837
 electrons and positrons, h.f. region calc. 4=11965
 electron, ultrarelativistic, coherence effects 4=19486
 energy determ. in different countries, agreement 4=6013

Bremsstrahlung — contd

- energy meas. in the interval $E_{\gamma\max} = 15-18$ MeV, by 3 methods 4=16864
 formation, effective depth 4=3077
 heavy nuclei scattering, rel. to giant resonance 4=22104
 measurement, ionization chamber, reference 4=11966
 μ decay, inner, meas. 4=27871
 μ -meson-proton scattering at high momentum 4=25126
 for μ prod., very high energy beams 4=16924
 ρ -meson decay, inner bremsstrahlung 4=6124
 in nucleon scattering, calc. 4=9483
 and pair production, for ultrarelativistic electrons 4=16870
 p-e scattering, at high momentum transfers 4=9172
 periodic medium, for particle detection 4=5883
 plasma, dense, from electron in Coulomb field 4=512
 plasma, emission and absorption, general theory 4=24649
 plasma, relativistic, var. with temp. 4=5615
 in plates at high energies 4=5997
 positron depolarization 4=19492
 p-p, at 160 MeV, calc. 4=6043
 production in BeV range, nuclear size effect 4=877
 in propane, 600 MeV, e^+ , e^- 4=30212
 from radiation belts, as source of X-rays? 4=23791
 radiation units and critical energies for various substances 4=6012
 scattering, by Al^{27} , 2.21 MeV level, resonant, ang. distrib., and spin and parity 4=6224
 shielding using plexiglass and lead 4=3586
 sources for 0-18 keV, tritium absorbed in Ti or Zr 4=6014
 theory, fast charged particle scattered in medium 4=19478
 from ultrarelativistic electrons in crystals 4=1445
 of ultrarelativistic electrons, quantum absorption effects 4=16871
 Cl^{36} , internal bremsstrahlung accompanying electron-capture decay 4=1042
 N, and electron scatt. elastic cross-section 4=15299
 O, and electron scatt. elastic cross-section 4=15299
 Y^{90} , beta-rays, internal bremsst. meas. 4=6282

Brightness

See also Illumination

- laser angular, improvement, through diffr. coupling 4=30085
 sun, corona, distrib. for 20th July 1963 eclipse 4=29460
 true indicatrix recovery, 2D problem 4=27282
 tungsten ribbon, distribution profile 4=11324
 vision, discrimination, body position effects 4=2494
 vision perception, scatter mechanism 4=10988

Brittleness

See also Breaking strength

- brittle solids, fracture stress rel. to grain size and residual strain, theory 4=10364
 cemented bodies, brittle fracture 4=26486
 crack vel. oscs. in wedging 4=13384
 crystal drilling without fracture or cleavage 4=4993
 fracture, brittle, structural aspects 4=26485
 fracture in crystals, review 4=4454
 fracture theory 4=23108
 mechanical strength, tensile, meas. by two pulse fracture 4=20684
 metals and alloys, internal friction data 4=7372
 notches, theory 4=20634
 polystyrene, high press. var. 4=23198
 steels, internal strains, distrib. in grains and grain boundaries 4=26529
 Zircaloy-2, reduction of heat treatment 4=10994
 AgCl, ductile-brittle transition 4=23204
 Al-Mg(4.5%), in Hg, strain ageing as for precipitation hardening 4=17723
 Be, above 500°C, deformation 4=1930
 Cd, rel. to surface-active Ga coating 4=10353
 Cr alloys, carbide strengthened, ductile-brittle transition temp. 4=30771
 Cr, brittle-ductile transition, effect of N concentration 4=23134
 Cr, ductile-brittle fracture, effects of C, N, O and S 4=30770
 Cr, effect of hydrostatic press., up to 10° atm 4=23133
 Cu, caused by introduction of H_2 4=13430
 Fe-Al-Mo-Si alloy 4=13383
 Fe-Si(3%), on plastic deformation, and crack nucleation 4=13412

Brittleness—contd

- KCl-KBr, temp. effects 4=4484
 Mo, ductile-to-brittle transition temp., rel. to stress rate type 4=13427
 Nb in H₂ atmosphere, rel. to O₂ in solid solution 4=1958
 Ni, caused by introduction of H₂ 4=13430
 Ti containing H, ductile-to-brittle transition temp. 4=10403
 U—Mo alloys 4=20686
 α -U, effect of Fe and Al on ductile/brittle transform; —183° to 350°C 4=28987
 UC 4=13611
 W alloys, ductile-to-brittle transition temp. 4=23220
 W rods, notch-impact behaviour, ductile-brittle transitions 4=30789
 Zn—(0 to 0.5%)Cd, fracture rel. to surface phenomena, —200°C to +200°C 4=10363

Bromine

- adsorption on Zr of Br⁻, Zr surface treatment effects 4=13696
 atom, recombination rate constants, three-body 4=17852
 ions, Br⁻, quadrupole antishielding factor calc. 4=3791
 laser action in atoms from mol. dissoc. 4=11828
 liq. and solid, vibr. relax. 4=14163
 molecular crystals, far i.r. spectrum meas. 4=20445
 spectrum analysis, atomic 4=9637
 spectrum, transient absorption, analysis 4=1259
 surface reaction on Ni, press. and temp. var. 4=10636
 Br⁻ ion, radial wave-functions, determ. 4=3785
 Br₂, spectrum, continuous 4=30426
 Br⁷⁹, Auger effect, KLL, KLM, using thin Kr⁷⁹ source 4=12363
 Br^{79,81} nuc. quadrupole resonance in Menshutkin [SbBr₃] complexes, rel. to structure 4=26456
 Br⁸¹ in polycrystalline cpds., nuclear quadrupole interactions, elec. induced perturbations, expt., phenomenological and microscopic theory 4=28909-10
 Br₂, dissociation, theory and expt. 4=25744
 Br₂ molec. beam, reaction with Cs, crossed 4=28286
 Br₂, thermodynamic and partition functions 4=28177
 Br₂, vac. u. v. resonance spectrum 4=28183
 Br—Ar mixtures, glow discharges, Faraday dark space, luminous layers 4=11551
 Br₂—H₂ reaction rate in nonsteady state, 1000°-1600° K 4=7744

Bromine compounds

- BrCl, spectrum, continuous 4=30426

Brownian movement

- charged particle in elec. field, transport eqn. 4=21061
 fluctuation phenomena 4=8078
 galvanometer, optical lever for obs. 4=5369
 ions, electrolytic, trapped, association in poly-electrolytes 4=17864
 Langevin eqn., modified, validity conditions 4=2575
 many-particle systems, forced interdiffusion of two species 4=29539
 molecules turning motion in liquids 4=29608
 paraffin molecules dissolved in CCl₄, rotation 4=11160
 plasma, diffusion in mag. field theory 4=502
 plasma, "resonance diffusion" in mag. field 4=11596
 rate consts. for collisions 4=73
 rotational, for arbitrarily shaped particles 4=5073
 sample planar path, calc. 4=27085
 theory, particle in crystal 4=29538
 trapped trajectories in attractive field of infinite line charge 4=27084
 unrestrained systems 4=2576
 rel. to weighing accuracy 4=2505

Bubble chambers

- bright field photography, H-chamber 4=5913
 CERN 2m hydrogen chamber, illumination 4=5909
 finite dimensions, for nuclear process investig. 4=782
 freon, bubble density rise along fast particle tracks, relativistic 4=3261
 illumination, bright-field 4=5914
 illumination of BNL 80 in. chamber 4=5907
 illumination system 4=16767
 light source trigger circuit, BNL 80 in. chamber 4=5905
 liquid-H, pressure and level indicator, electronic 4=16769
 liquid-H, temperature regulator 4=16770
 liquid, heavy, internal H targets 4=30133
 measurement of photographs with punched card output 4=9039

Bubble chambers—contd

- for neutron detection and analysis, scintillation type 4=12023
 nucleation process, estimation by kinetic theory 4=5912
 nucleation processes theory, analogous to cavitation 4=21080
 optics and optical systems, developments 4=5904
 photograph scanning and meas. projector 4=27302
 photographs, flying-spot measuring machine 4=5910
 photographs, microscopes for meas., construction 4=14989
 picture reading flying spot digitizer, circuit 4=14990
 propane, absorption of slowed-down π^- , data analysis 4=19568
 propane, bubble growth and ascent rate 4=16771
 propane, use for particle mass determ. 4=16772
 recent experiments at C.E.R.N. 4=16841
 review 4=24935
 track momentum and direction uncertainties, scatt. and meas. errors 4=9027
 track photography, pattern formation 4=14988
 tracks, photography 4=16768
 windows, optical and mechanical props. 4=5906
 windows, specification and testing 4=5911
 H, ionization meas. methods 4=21715
 H₂—D₂ chamber, eight litre 4=11863
 use of Xe-Freon and Xe-propane mixtures 4=16773
 Xe energy meas. of photons, 20-1000 MeV 4=19464

Bubbles

See also Foams

- binary liquid mixtures, boiling, growth rate calc. 4=27382
 boiling, laser induced, light scatt. 4=2895
 in boiling liquid, size distribution 4=11419
 cavitation nuclei, size and growth 4=2647
 dynamics of vapour bubbles in binary liquids 4=18170
 emission in leak detection, determ. of leak size 4=10991
 growth in temp. fields, nucleate boiling 4=8513
 growth, rel. to density decrease after ht. pulse in boiling liq. 4=5459
 in insulating liquids, stability in elec. field 4=24151
 stability, mechanical, thermodynamic 4=24150
 steam in water, upward trajectories, condensation effects 4=24152
 structures 4=23231
 surface tension meas. by max. press., non-wetting systems 4=11168
 in viscous liquids, formation parameters correlation 4=14131
 volume calc. formula, nozzles at right angles to column 4=14132
 wake, rising 4=16085
 in water, collapse and rebound, cavitation 4=8149

Cadmium

- atom, (5s5p)¹P₁ state, lifetime and h. f. s. meas. 4=17244
 atom, (5s5p)³P₁ level, g_r meas. 4=19954
 atom, optical double reson. lines, self-broadening 4=17345
 atoms, electron scatt., diffusion m. f. p. calc. for fast electrons 4=25552
 atoms, excited levels, Landé g-factors and lifetimes, by mag. reson. 4=3787
 atoms, interatomic potential energy functions, from viscosity 4=25592
 atoms, spectral line collision broadening 4=25511
 condensation, on Si 4=29810
 cover in n scatt. water content gauge for optimization 4=29243
 crystal equilibrium form, from interatomic forces 4=7532
 crystals, transport phenomena 4=6793
 de Haas—van Alphen effect, at high mag. fields 4=22945
 diffusion in Bi₂Te₃ 4=1507
 diffusion in CdS, mechanism 4=15485
 diffusion in GaAs, rel. to dislocations 4=9986
 diffusion in GaAs, with In, interstitial—vacancy mechanism 4=12792
 diffusion in MgCd₃, effect of ordering 4=25965
 diffusion in Mg₃Cd, temp. var., ordering effects 4=4076
 diffusion in NaCl, meas. from colloidal coloration 4=28491
 dislocation structure and multiplication 4=9970
 dislocations and impurity distribution 4=6837
 effect on elec. props. of photographic grains 4=18437

SUBJECT INDEX

Cadmium—contd

- effective charge of He beam traversing metal and gas 4=1231
 elec.resistivity increase during elongation at 78°K, effect of impurities 4=17470
 electron backscatt. coeff., 8-22 MeV 4=22122
 Fermi surface, pressure depend. 4=4023
 films, absorption and reflection, u.v. 4=10164
 films, conductivity and surface potential change rel. to adsorption 4=20326
 5^3P_1 level, Landé g-factor meas. 4=17246
 growth and etch spirals on single crystals 4=29044
 Hall effect, two vector component meas 4=28538
 hardness, micro, effects of electrons, alphas, with and without Sn 4=23229
 Knight shift in single crystal, temp. depend. in 4.2°K to 300°K range 4=28893
 liquid, diffusion of U 4=5167
 magnetoacoustic effect, parallel field, liquid He temps. 4=15422
 magnetoacoustic effect, perpendicular field, u.s., 1.3°K 4=15421
 magnetoacoustic effect, theory, parallel field 4=12636
 magnetoacoustic effect, 3°K, and m. f. p. max. 4=6730
 magnetoelectric oscills., Hall effect and magnetoresistance, low temp. 4=6923
 magnetoresistance, pressure depend., Fermi surface 4=4023
 molecular beam condensation temp. effects 4=14458
 photoelectric emission, vacuum u.v., crystals and films 4=7119
 plastic deform. at 78°K, recovery, defect behaviour 4=13401
 polycrystalline, flow under simple shear 4=23130
 reflectivity, vacuum u.v., crystals and films 4=7119
 resonance, double, 5^3p_1 level, light modulation at r.f. 4=9639
 single crystals, shaping and polishing 4=30812
 skin effect, static, 4.2° to 78°K 4=10023
 specific heat, 0.1°-4.2°K analysis 4=15426
 spectra, Cd I, II, in submerged spark, press. effect of foreign Zn 4=25497
 spectrum arc and vaporization, var. with sample composition, using radioactive Cd^{115} 4=484
 stress effects, cyclic, ductility, and dislocation 4=10372
 structural and mech. props. rel. to liq. Ga coating 4=10353
 in sulphide minerals, spectrochemical analysis 4=30913
 superconductivity, pressure depend., up to 27 000 atm 4=401
 thermal expansion at low temp., expt. 4=17369
 thermal expansion, 1.5° to 12°K 4=9864
 thermal expansion, 1.5-12°K, electronic and lattice contribs., and Grüneisen parameters 4=17370
 thermal expansion, 10-300°K, negative below 20°K 4=12655
 thin films and crystals, optical and photoelec. props. 4=22849
 vaporization in arc, electric, var. with sample composition 4=484
 vapour, coherent excitation by electron impact 4=25536
 vapour, in flames and inorganic cpd. vapours, anomalous excitation 4=9658
 vapour, resonance light scatt., modulation 4=6499
 X-ray continuous spectrum, Ohlin structure meas. 4=4242
 Cd 5^3P_1 , resonance, r.f. field at twice Larmor freq. parallel to static 4=15276
 Cd I, $\lambda 3261$, absolute oscillator strength 4=22302
 Cd ^{113} in metallic Cd, n.m.r. line shift, 77°-615°K 4=23066
 Cd, 10-300°K, negative below 20°K 4=12655

Cadmium compounds

- film formation by co-evaporation method 4=29183
 Cd, dihalides, linear symmetrical amplitudes of vibr. and Bastiansen-Morino shrinkage effect 4=30441
 Cd halides, Cd visible spectrum, rel. to complex formation 4=22375
 Cd hydroxide, void prodn. by vacancy aggregation 4=12830
 Cd pyroniobate, temp. depend. of elastic and piezoelectric props. 4=4459
 Cd sulpho-selenide solid solns., imperfections, photo-electronic props. 4=12987
 Cd $_3\text{As}_2$, vaporization, nonstoichiometric, mass spectrometric study 4=24457
 Cd-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 CdBr $_2$ films, crystallization, X-ray study 4=2065

Cadmium compounds—contd

- CdCl $_2$, in CdS films, effect on elec. cond. of films 4=22708
 CdCl $_2$ films, crystallization, X-ray study 4=2065
 CdCl $_2$, vapour press., entropy, mol. bending freq. 4=16144
 CdF $_2$, NaF freezing pt. depression 4=5454
 CdF $_2$, spin-lattice relax. of Er $^{3+}$, 1.6°-25°K 4=30732
 CdF $_2$, Yb $^{3+}$ e.s.r. and spin-lattice relax. 4=26442
 CdGa $_2\text{S}_4$, luminescence rel. to chem. structure 4=7178
 CdGeAs $_2$, preparation and properties 4=1593
 Cd $_{0.1}\text{Hg}_{0.9}\text{Te}$, prep., doping and elec. props. 4=28554
 Cd $_x\text{Hg}_{1-x}\text{Te}$ semiconductors for x = 1.0, 0.9, 0.8, optical props. 4=13027
 Cd $_{0.6}\text{Hg}_{0.4}\text{Te}$ thin layers, optical props. 4=13026
 CdI $_2$, crystal structure meas. by neutron diffn., anomalies 4=29098
 CdI $_2$ films, crystalline, absorption spectra 4=2065
 CdI $_2$:Pb, luminescent centres, average size, determ. by appl. of Perrin's law 4=17594
 CdI $_2$, polytype 28H $_c$, atomic structure, growth and screw dislocation theory 4=13584
 CdI $_2$, polytypism, and crystal growth conditions 4=26593
 CdIn $_2\text{S}_4$, luminescence rel. to chem. structure 4=7178
 CdIn $_2\text{S}_4$ -CdTm $_2\text{S}_4$ electroluminescence due to rare earths 4=13069
 CdIn $_2\text{Te}_4$, n-type, elec. props., temp. depend. 4=6949
 CdIn Te, transmission, 0.75-2.5 μ meas. 4=7121
 Cd-Mg alloys, phase transformations, and composition 4=20699
 Cd-Mg-In alloys, phase transformations and composition 4=20699
 Cd $_{0.8}\text{Mn}_{0.2}\text{O}_4$, antiferromag., < 200°K 4=26345
 Cd $_x\text{Mn}_{3-x}\text{O}_4$, ferrimag., 0 $\leq$ x $\leq$ 0.6, low temps. 4=26345
 Cd $_2\text{Nb}_2\text{O}_7$, conduction props. 4=26120
 CdO, effect on Bi $_2\text{O}_3$ polymorphism 4=23253
 CdO, optical consts., 0.3 to 0.8 μ 4=10165
 CdO-P $_2\text{O}_5$, phase equilibrium and Mn activated luminescence 4=30796
 Cd $_3\text{P}_2$, prep. and semiconducting props. 4=26036
 Cd $_4(\text{P,As})_2(\text{Cl,Br,I})_3$, five ternary semiconductors 4=1594
 5CdO.2P $_2\text{O}_5$:Mn, luminescence, Cl, Fe effects 4=1762
 CdS, absorption edge shift, field-induced 4=13024
 CdS, absorption, 1-24 μ , meas. and theory 4=13025
 CdS, acoustic amplification, u.s., and phonon Cherenkov rad. 4=15410
 CdS, acoustic waves coupled to drifting carriers 4=20207
 CdS, anomalous sound propagation 4=3987
 CdS, cathodoluminescence, field enhancement 4=4294
 CdS, chemisorption of O, elec. cond., contact potential obs. 4=29194
 CdS, conduction, elec., oscs. 4=26041
 CdS, conductivity, effect on current saturation 4=30620
 CdS crystal counter, efficiency 4=24944
 CdS, crystal dislocation Burgess vector, X-ray diffr. obs. 4=22595
 CdS crystal growth, large 4=7549
 CdS, crystal growth and structure 4=29047
 CdS, crystal lattice spectrum, specific heat, calc. 4=3975
 CdS crystal polarons and cyclotron resonance 4=20258
 CdS crystals with hollow centres, growth 4=29046
 CdS, crystals hollow, grown by sublimation at high pressures and temps. 4=7548
 CdS crystals, u.v. reflection spectrum 4=26180
 CdS, cyclotron reson., < 4.2°K 4=28431
 CdS, cyclotron reson. 4=20257
 CdS, cyclotron resonance 4=1446
 CdS, decomposition products diffused along dislocation lines, rel. to irradiation 4=9985
 CdS, diffusion of Cd, mechanism 4=15485
 CdS, dislocation images, senses of Burgers vectors, by X-ray microscopy 4=30560
 CdS, dislocation structure and growth mechanism 4=25938
 CdS, dislocations after vapour-phase growth 4=20281
 CdS, e.s.r. of Co $^{2+}$ 4=10317
 CdS, e.s.r. of Cr 4=26389
 CdS, e.s.r. of Nd $^{3+}$ at 1.4°K 4=7333
 CdS, edge fluoresc. and Zeeman effects 4=4293
 CdS, elec. field effects on e.s.r. of rare-earth ions 4=26369

Cadmium compounds—contd

- CdS, electroluminescence 4=26234
 CdS, electron trapping parameters from conductivity glow curves 4=22532
 CdS, energy terms linear in wave vector, optical effects 4=26181
 CdS, evap. films, crystal structure 4=20803
 CdS, evaporation of single cryst., mechanism 4=27388-9
 CdS, exciton annihil. radiation, polarization meas. 4=28723
 CdS, exciton emission meas., rel. to energy transport 4=13068
 CdS, exciton spectrum, and doping effects 4=28426
 CdS film growth on rocksalt, electron diffraction exam. 4=4670
 CdS, films, cathode conductivity 4=22709
 CdS, films, with CdCl₂ impurity, elec. cond., effect of moisture 4=22708
 CdS, films, cold electron emission 4=21556
 CdS, films, current pulse generator 4=26148
 CdS films, electrical conductivity, field effect 4=10046
 CdS films, Hall effect studies 4=26040
 CdS, films, photocond., preparation 4=26147
 CdS films, recrystallization and structure 4=20804
 CdS films, sputtered, resistivity, photoconductivity, transmittance, rel. to temp. 4=20810
 CdS films, vacuum-deposited, structure and resistivity 4=20805
 CdS films, vapour-deposited, hexagonal, cubic phase prod. 4=29099
 CdS films, X-ray diffraction obs., effect of substrate temp. 4=7710
 CdS, γ -irradiation, defect production meas. 4=20480
 CdS, Hall mobility of photoelectrons 4=17528
 CdS having metallic contacts, elec. props. 4=12853
 CdS, high-gain photoconductor, trapping 4=4223
 CdS, high pressure phase, crystal structure 4=10433
 CdS hollow crystals, growth 4=10470
 CdS, illuminated, oscillatory currents under ultrasonic flux 4=7062
 CdS, impurity scatt. of electrons 4=1598
 CdS, induced i.r. impurity photoconductivity, rel. to local-level parameters 4=1678
 CdS, large crystal growth, sublimation method 4=10469
 CdS laser excitation by fast electrons 4=21684
 CdS, layer-like field inhomogeneities, artificial 4=12888
 CdS, light centres, review paper 4=1526
 CdS, linear electro-optic effect 4=13023
 CdS, luminescence, electric field effects on quenching and enhancement 4=15617
 CdS, luminescence, mechanism 4=4292
 CdS, luminescence temp. var. 4=22916
 CdS, mag. suscept. of Ni²⁺, analysis 4=17616
 CdS, magnetoresistance, negative, var. with Cl doping 4=12886
 CdS, multiphonon i.r. absorption 4=7116
 CdS, nature of photo-current 4=26146
 CdS, negative resist. and double-carrier injection 4=12887
 CdS, new etchants to detect dislocations 4=1496
 CdS, new rectifier effect 4=30657
 CdS, optical double-photon absorpt. 4=15584
 CdS, optical harmonic generation, by laser, from second order polarization tensor 4=2809
 CdS, optical second harmonic generation, by laser beams 4=28666
 CdS, optical study of defect struct. 4=30559
 CdS, optically active phonon processes 4=17560
 CdS, phase transformations, 18 to 35 k bars 4=4502
 CdS, phonon interactions 4=25837
 CdS, phonon scatt. from thermal cond. meas. 4=15411
 CdS, photo induced chemisorption calc., photoconductive gain, response time, meas. 4=30900
 CdS, photochemistry, from luminescence rise and fall curves 4=7771
 CdS, in photocond. cell, image sharpness recognition 4=15573
 CdS, photocond. evaporated films, props. 4=15567
 CdS, photocond., quantum yield 4=1681
 CdS photoconductive cells, preparation effects, review 4=7064
 CdS, photoconductivity, cells, slit γ excitation, in gas discharge 4=4228
 CdS, photoconductivity excitation spectra 4=10122

Cadmium compounds—contd

- CdS, photoconductivity, exciton structure obs. 4=7063
 CdS, photoconductivity meas. with contact-free microwave method 4=30661
 CdS, photoconductivity, mechanism 4=4292
 CdS, photocurrent pulse generation 4=10123
 CdS, photocurrent saturation meas. 4=10120
 CdS photoelec. carriers, schubwegs 4=22795
 CdS, photodielectric effect, 50 c/s-300 kc/s 4=26145
 CdS, photoelectret state in single crystal 4=12971
 CdS, photoelectricity, hole contribution 4=22796
 CdS photo resistors 4=17536
 CdS, photoresistors, capacitance, equiv. cct 4=7081
 CdS photoresistors, Ohmic contacts problem 4=12984
 CdS, photoresistors, preparation and characteristics 4=26156
 CdS, photovoltaic effect, at Au or Al contacts 4=15568
 CdS, photovoltaic effects, rel. to wavelength and optical excitation 4=1680
 CdS, polycrystalline layers, photosensitivity activation temp. depend. 4=7061
 CdS, powder, $\beta \rightarrow \alpha$ phase transition temperature 4=7477
 CdS, in pulsed mag. fields, current-voltage saturation 4=12885
 CdS, reflecting power and photoelectric emission 4=1724
 CdS, reflection peaks near exciton line 4=1705
 CdS, self-activated semiconductivity, meas. 4=1597
 CdS single crystal, current oscillations induced by light irradiation, local 4=28640
 CdS single crystals, e.s.r. of Cr²⁺ 4=15669
 CdS single crystals, elec. pot. and movement of minority carriers 4=26037
 CdS single crystals, electroluminescence 4=28722
 CdS single crystals, fast recomb. at surface 4=26144
 CdS single crystals, photoelectric polarization and photomagnetoelectric effects 4=26038
 CdS single crystals, precipitation of impurities 4=13479
 CdS single crystals, surface states, photoconductivity investigation 4=28421
 CdS, sintered, in photocells and resistors, reversible changes 4=30658
 CdS, spectra, Raman and i.r. absorpt. 4=17559
 CdS, spectrum, reson near absorpt. edge, temp. var., analogue of Mossbauer effect 4=17558
 CdS, structure changes 4=13508
 CdS, thermally stimulated conductivity, rel. to trapping levels 4=1595
 CdS, thermally-stimulated elec. cond. rel. to prelim. illumination 4=1596
 CdS, thin-film diodes, space-charge-limited and Schottky-emission currents 4=28595
 CdS-type semiconds., elec. cond. contact-less study 4=26039
 CdS, u.s. attenuation at room temp. 4=20199
 CdS, u.s., free carrier trapping effect 4=21236
 CdS, u.v. refl. spectrum, polarization effects 4=4279
 CdS, use in u.s. amplifier 4=22488
 CdS, X-ray continuous spectrum, Ohlin structure meas. 4=4242
 CdS, X-ray diffraction patterns at ultra-high press. 4=15779
 CdS, X-ray photoconductivity, spectral distrib. 4=12986
 CdS, zincblende-type, absorpt. band edge, thermal depend. 4=17557
 CdS, Ag impurity incorporation 4=6821
 CdS, CdS: Cu, photoconductivity, improvement on growing in Ar 4=1679
 CdS—Cu, red electroluminescence 4=7190
 CdS: Cu, Cl, photoconductivity, i.r., optical activation 4=28639
 CdS, GaCl₃ impurity clustering, X-ray obs. 4=15473
 CdS with GaCl₃ impurity, stacking faults in crystals 4=25949
 CdS:I:Cu crystals, photoconductivity gain rel. to photon energy 4=12985
 CdS:Se, photoconductivity, exciton structure obs. 4=7063
 CdS_xSe_{1-x} films, photovoltaic effect, (x from 0 to 1) 4=12982
 CdS_xSe_{1-x} photovoltaic effect, spectral distrib., (x from 0 to 1) 4=12983
 CdS, Te-doped, electroluminescence 4=28724
 CdSb, bonds, electron deficient, MO LCAO calc. 4=6559
 CdSb, doping, using Cd-rich Cd—Sb alloy 4=29045

SUBJECT INDEX

Cadmium compounds—contd

- CdSb, electron oscillations and scatt., interminimum transitions 4=25887
 CdSb, hole mobility anisotropy from elec. props. 4=6948
 CdSb, magnetoresistance, temp. and field depend. 4=26035
 CdSb, phase separation, by centrifuging melt 4=4543
 CdSb, piezoelec., anisotropic, cond., Hall effect, temp. var. 4=17524
 CdSb, refractive index near absorption edge, anisotropy 4=26179
 CdSb, semiconducting, Hall anisotropy, 77-340°K, and mobilities 4=4143
 CdSb, semiconducting props., Au doping effects, temp. var. 4=28555
 CdSb, thermal cond. anisotropy, 100°-420°K 4=30530
 CdSb, Ag-doped, elec. props. meas. 4=20356
 CdSb—ZnSb, elec. and thermal props., 90-400°K 4=1592
 Cd_{1-x}Sb_x, Sb₂O₃ (O' + F₂), X-ray study 4=4603
 Cd—Se, condensation mechanism, structure and props. 4=23239
 CdSe, crystal growth and photoelec. props. 4=22797
 CdSe, e. s. r. of Eu²⁺, rel. to covalent bonding 4=10321
 CdSe, electrical properties 4=4144
 CdSe exciton bands, complex structure 4=9912
 CdSe, exciton structure 4=20248
 CdSe films, photoconduction response and dark-sensitivity 4=4229
 CdSe, high pressure phase, crystal structure 4=10433
 CdSe, optical study of defect struct. 4=30559
 CdSe, in photocond. cell, image sharpness recognition 4=15573
 CdSe photocond. detector, microwave signal-to-noise ratio 4=30660
 CdSe, photocond., gas discharge effect 4=30659
 CdSe, photoconductivity excitation spectra 4=10122
 CdSe, photoconductivity, exciton structure obs. 4=7063
 CdSe, photoconductivity meas. with contact-free microwave method 4=30661
 CdSe, photoelectric saturation and osc. effects for local illum. 4=10124
 CdSe, photoionization in fundamental absorpt. region 4=26143
 CdSe, precipitation of Cu, Ag, Au, Ni impurities 4=29004
 CdSe, semicond., photo induced oscills. for localized illum. 4=10125
 CdSe single crystals, current oscillations, undamped, light beam present, expt. 4=28641
 CdSe single crystals, photoconductive mixing 4=4230
 CdSe solid, films, structure 4=15819
 CdSe thin-film triodes, field excitation of electrons from shallow traps 4=26087
 CdSe, u. v. refl. spectrum, polarization effects 4=4279
 CdSe, use in u. s. amplifier 4=22488
 Cd₂SiO₄, phase transform., high press 4=30797
 CdTe, acceptor states, shallow and deep 4=4145
 CdTe, cond. band. min. 4=17400
 CdTe crystal growth by sublimation 4=7547
 CdTe, crystal growth from vapour, differences between opposite faces 4=4542
 CdTe, crystal structure and semiconducting props. 4=1622
 CdTe, cyclotron resonance in n-type 4=28432
 CdTe, diffusion, intercrystalline, 350-580°C 4=1508
 CdTe, double acceptor centre, props. 4=17420
 CdTe, e. s. r. of Eu²⁺, rel. to covalent bonding 4=10321
 CdTe, etched, surface layers, elec. props. 4=12889
 CdTe, films, high-voltage photovoltaic effects 4=1682
 CdTe films, prep., optical and photoelec. props. 4=22857
 CdTe, films, vacuum-deposited, structure 4=26709
 CdTe, growth by static sublimation under pressure 4=157585
 CdTe, heat cond., phonon scatt. by mag. impurities 4=9871
 CdTe, high pressure phase, crystal structure 4=10433
 CdTe layers sublimated onto alkali halide crystals, structure 4=10531
 CdTe, mag. susceptibility; room temp. to 800°K 4=1800
 CdTe monocrystalline films, photo-e. m. f. rel. to phase composition 4=10126
 CdTe, phonon scatt. from thermal cond. meas. 4=15411
 CdTe, refractive index 4=13061
 CdTe, structure changes 4=13508
 CdTe—CdSe alloys, elec. and thermal props. 4=22706
 CdTe—CdSe system, cubic and hexag. structures 4=23424

Cadmium compounds—contd

- CdTe—HgSe, photoconductive and photomagnetic effects 4=4225
 CdTe—HgTe, optical and photoelec. props., 0.6-2 μ 4=15593
 CdTe—HgTe system, mag. suscept. meas. 4=13108
 CdTe—In₂Te₃ peritectic compounds, semiconducting props. 4=6950
 CdTe—In₂Te₃ pseudo-binary system, phase diagram 4=7478
 CdTe in PbTe and SnTe, solid solubilities, phase diagrams, and lattice parameters 4=23262
 Cd—Zn, lamellar spacing rel. to freezing velocity 4=8503
 Cd_{1-x}Zn_xAs₂, semicond. props. rel. to x 4=26042
- Caesium**
 arc, vapour, low voltage, props. 4=29900
 atom, h α level, ion recomb. calc. 4=15297
 atom, Cs I λ 8521 perturbation by Xe satellite collision bands 4=28120
 atom charge transfer to Rb^{85,87} ions 4=24563
 atom—electron collisions, spin exchange optical pumping study 4=30391
 atom, oscillator strength of Cs I line 4=28125
 atom, oscillator strengths calc. 4=25501
 atom, radial wave functions for 26 orbitals 4=28121
 atomic beam, reaction with Br₂ mols, crossed 4=28286
 atomic heat, electronic and thermal contribs., 0.35-2°K meas. 4=25852
 atoms, Cs¹³³, spin exchange collisions, e. s. r. meas. 4=25591
 atoms, electron scatt. cross-sect. meas. by cyclotron resonance 4=25570
 atoms, electron scatt., 6s—6p transition 4=9669
 atoms, optically pumped, relaxation in buffer gases 4=28142
 atoms, optically pumped, spin relaxation, rel. to N₂ pressure 4=6498
 corresponding states behaviour 4=24460
 de Haas—van Alphen effect, in steady mag. fields 4=26263
 diode, radial potential and electron density 4=21575
 discharge, elec., cond., field, var. with current 4=21497
 discharge, ion wave resonance and plasma instability 4=11671
 electrical conductivity, rel. to pressure 4=12854
 electron scatt., elastic and inelastic, from electron transport 4=11509
 gas, partly ionized, viscosity 4=24562
 ion adsorption energy, linear var. with Mo, W, Ni and Re work functions 4=29196
 ion beams, imaging methods 4=27583
 ion mobilities, pulsed-discharge meas. 4=5562
 ionization, in Ar, behind shock wave, relax. 4=21228
 ionization, mobility, scatt., in weak plasma 4=21497
 ions, bombard. metals, secondary electron emission 4=8822
 ions, cathode sputtering ratio for Ni, Ti, Nb, Pt, C, Mo, Re, W, Ta and Fe 4=24753
 ions, Cs⁺, resonance charge exchange, 900-2400 eV 4=18692
 ions, Cs⁺ collisionless plasma stream in transverse mag. field 4=24708
 ions, secondary emission, by Cs⁺ bombardment of Mo 4=5717
 optically pumped, spin relax. rel. to buffer gas pressure 4=25537
 photoelectric emission, work function, pure Cs in u. h. v. 4=11697
 plasma, appls. and props. 4=8670
 plasma, cylindrical, in mag. field, instability, harmonics detection 4=14722
 plasma diode for direct conversion of elec. operational results 4=29864
 plasma diodes, fission energy heated 4=27464
 plasma, high-freq. resonance probe meas. 4=18932
 plasma, ion acoustic waves, Landau damping meas. 4=8752
 plasma, ion acoustic waves, Landau—viscous damping transition 4=19024
 plasma, probe characteristics meas. by 1-, 2-, 3-, and 4-electrode probes 4=14688
 plasma, 10¹⁰-10¹¹ cm⁻³, low-freq. wave excitation in curved mag. fld. 4=11660
 plasma thermionic converters 4=27461
 plasma, use in expts., survey 4=18790
 satellite bands in gaseous mixture spectra 4=25594

Caesium—contd

- spectra of gaseous mixtures, satellite bands 4=25781
 spectrum, $P_{1/2}$ doublet quenching in gas mixtures 4=9674
 thermodynamic props., liquid and vapour, up to 1500°K
 and 22 bars, calc. 4=8246
 vapour atmosphere, effect on pyrometric meas. 4=5429
 vapour devices, use of AgCl seals 4=27236
 vapour, discharge voltage 4=8653
 vapour dispenser 4=21544
 vapour, ionization, absolute cross-section 4=14573
 vapour, low voltage arc, props. 4=29900
 vapour in thermionic converter, low-freq. oscillations,
 expt. 4=11504
 vaporization, high temps., coprecipitated with
 $K_4Ni_4[Fe(CN)_6]_3$, inhibiting agents 4=5470
 weakly ionized, Onsager phenomenological coeffs.,
 calc. 4=5593
 Cs-filled thermionic convertor, current-voltage
 characteristics, rel. to current oscillations 4=14564
 Cs⁺ bombard. Mo and Ni targets, ang. distrib. of scattered
 secondary ions 4=8856
 Cs¹³³, e. s. r., vapour, optically aligned, fine
 structure 4=6471
 Cs¹³⁷ in oceans, vertical distrib. 4=2183
 Cs⁺, backscattering from W, Ta, Mo, Ti and Ni targets
 rel. to temp. 4=8854
 Cs—Hg diode, Hg addition effect 4=29976

Caesium compounds

- di-caesium uranyl nitrate, fluorescence spectrum at
 77°K 4=17595
 Cs halides, cond. band structure 4=6787
 Cs perrhenate in CsNO₃, heats of soln. and dil., interaction
 parameters of liq.—liq. mixtures 4=10631
 CsBr, colour, centre F, mag. dichroism 4=25971
 CsBr, containing colour centres, photoconduct. 4=4231
 CsBr, elastic const., room temp. to 4.2°K 4=15702
 CsBr, elastic constants, temp. depend. 4=1932
 CsBr, F-centre optical props., mag. field
 effects 4=28499
 CsBr, thermoluminescence, X-ray, u. v.
 excited 4=30697
 CsBr₃ samples, preparation technique 4=23993
 Cs₂CdCl₄, crystal struct., atomic 4=23425
 CsCl, colour centre, F, mag. dichroism 4=25971
 CsCl crystal lattice spectrum, effect on specific heat,
 acoustic velo. 4=3974
 CsCl, F-band shape under 6200 atm 4=20313
 CsCl, h. p. polymorphs, lattice energies and
 parameters 4=15786
 CsCl, phase transition at 469°C, X-ray
 investigation 4=23257
 CsCl, polycryst. rods, thermal expansion up to
 600°C 4=12654
 CsCl, single crystals, elec. cond. 4=30603
 CsCl type crystals, independent slip systems 4=1934
 CsCl-type crystals, third-order elastic constants 4=1933
 CsCl-type lattices, phonon spectra, thermodynam.
 props. 4=1382
 CsCl—RbCl, CsCl—NaCl systems, solid solubility, from
 Debye—Scherrer photograms 4=28996
 Cs₂CoCl₆, crystal structure, least-squares refine-
 ment 4=23426
 Cs₂Co(SO₄)₂·6H₂O, crystal struct., atomic 4=23435
 CsF atmosphere in thermionic convertor, rel. to W electron
 emission 4=18662
 CsF, enthalpy of soln. in water 4=29623
 CsF, F colour band peak energy calc. 4=30586
 CsF, i. r. lattice refl. spectrum analysis 4=1737
 CsI, adsorpt. of HCN, bonding 4=29198
 CsI crystals, Raman spectrum 4=22883
 CsI, elastic const., room temp. to 4.2°K 4=15702
 CsI, elastic constants, temp. depend. 4=1932
 CsI, F and M centres, absorption spectra rel. to
 pressure 4=15502
 CsI, thermoluminescence, trapping levels are due to
 host 4=22917
 CsI and CsI:Ti, luminescence decay time meas. 4=7177
 CsI: Ti phosphors, emission and absorpt. spectra, rel. to
 press. 4=28699
 CsMnF₃, antiferromag. props. meas. 4=1851

Caesium compounds—contd

- CsMnF₃, mag. structure, neutron diffn. meas. 4=28859
 CsNO₃, phase transformation with absence of ferro-
 electricity, mechanism 4=4202
 Cs₂O-type composite photocathodes, thermionic sensitivity
 reduction 4=29962
 Cs—Rb—Sb photocathode 4=27564
 Cs—Sb, composition depend. of photoelec. characts. 4=26142
 Cs₃Sb cathode, photoelectric emission, var. with
 colour 4=8807
 Cs₃Sb films, absorpt. band edge structure and
 excitons 4=10166
 Cs₃Sb layers, photo-e. m. f. effect 4=30656
 Cs₃Sb, photoelectric emission, anomaly 4=572
 Cs₂(UO₂)OCl_x, crystal structure 4=7610
 CsUO₂(NO₃)₂, neutron irradi., fluorescence spectrum of
 uranyl ion 4=15612

Calcium

- atom, double resonance due to modulated light,
 meas. 4=9662
 atom, first excited state, oscill. strength from
 lifetime 4=6469
 atom, first ¹P₁ state lifetime meas. 4=19968
 atom, 5³P₁ level, optical r. f. double resonance at
 nutational freqn. 4=9663
 atom, ³S—¹P excitation, correlation effects calc. 4=9624
 atomic spectrum, transition probabs, of 19 lines 4=12365
 atoms mesic, Ca^{40,44}, μ X-rays, isotope effect on
 energy 4=3823
 Fermi surface meas. by de Haas—van Alphen
 effect 4=15455
 film growth rel. to optical props. 4=28674
 films, optical properties 4=26182
 ion adsorption on quartz, rel. to pH and concn. 4=4672
 ionization, single and double, by electron impact, power
 law validity 4=8617
 ions, bombard. metals, secondary electron emission 4=8822
 liquid, density, boiling, crit., temp. var., calc.
 discrepancy 4=18183
 optical consts. of single crystal, 0.6-5 eV meas. 4=20450
 phase diagram, molten—b. c. c.—f. c. c. 4=4505
 vapour, in flames and inorganic cpd. vapours, anomalous
 excitation 4=9658
 vapour, multiple ionization, by Auger effect,
 meas. 4=11520
 Ca^{40,44} μ mesic atoms, X-ray K α isotope
 shift 4=25600
 Ca⁴¹, possible use in radioactive dating 4=12180
⁴⁶Ca(Hg) + ⁴⁰Ca²⁺ (solution) = ⁴⁰Ca(Hg) + ⁴⁶Ca²⁺ (solution)
 reaction, isotope separation 4=28157
 CaI transitions in anomalous emission reversals of solar
 and stellar H- and K-lines of CaII 29389

Calcium compounds

- apatite, Mn²⁺ e. s. r. 4=10326
 calcite, birefringence 4=17549
 calcite, Cherenkov radiation, prod. by 663 MeV
 protons 4=16866
 calcite, crystal cleavage planes 4=23314
 calcite, dielec. const. and anisotropy
 meas. 4=1646
 calcite, force consts. 4=28354
 calcite, phosphorescence, long duration 4=17598
 calcite, thermoluminescent, trapping centres
 meas. 4=28725
 calcite twinning, dislocation interactions 4=9955
 calcite, twinning, rel. to hardness 4=10373
 calcite, X-ray crystal analysis 4=23427-8
 danburite, n. q. r. of Bi¹¹, coupling and atomic
 struct. 4=20678
 fluorite, light scattering in synthetic crystals 4=22881
 fluorite, phosphorescence, long duration 4=17598
 gypsum, with "cast surface", microstructure 4=7670
 gypsum, n. m. r. narrowing by rot. r. f. field 4=4420
 gypsum, Raman spectra, H-bands, rel. to temp. 4=10176
 limespar, birefringence, revised data 4=26215
 Ca acetate, aq. soln., dissociation, u. s. study 4=26739
 Ca acetate, aq. soln., dissociation, u. s. study 4=26740
 Ca aluminoborate glasses, O diffusion, elec.
 cond. 4=28610
 Ca aluminosilicate glasses, O diffusion, elec.
 cond. 4=28610
 Ca differite, Y₂O₃-doped, electrical resistivity 4=6951

SUBJECT INDEX

Calcium compounds—contd

- Ca ferrite containing Gd^{3+} , ferromagnetic resonance and crystal structure 4=26359
 Ca fluoride, Mn-activated, correlation of luminescence with e.s.r. 4=26411
 Ca phosphate, octa and hydroxyapatite, crystal struct. atomic, and growth 4=17807
 Ca selenate hydrate, lattice structure 4=13585
 Ca sulphate, surface energy of 100 faces, calc. 4=20178
 Ca tungstate thin films, prep. and examination 4=23573
 $Ca_{1+x}Y_{1-x}Sb_2O_6(Ox + Fy)$, X-ray study 4=4603
 $CaAl_2Si_2O_{12} \cdot 6H_2O$, Ca^{2+} and Si^{2+} differential exchange, self-diffusion coeffs., calc. 4=30572
 $Ca_3Al_2(SiO_4)_3$, crystal lattice, energy calc., var. structures 4=3955
 $Ca[B(OH)_4]_2 \cdot 2H_2O$ crystal structure 4=30848
 $CaB_2Si_2O_8$, B^{11} n.m.r. spectrum 4=20609
 Ca—Bi—Ti phosphates luminesc. 4=26238
 $CaBr_2$, spectra, u.v., impurities, crystals, frozen solns., solns. 4=1733
 $CaCO_3$ (calcite), e.s.r. of trivalent Fe 4=1878
 $CaCO_3$, crystal growth, u.s. effects 4=7545
 $CaCO_3$, crystal structure, effect of neutron irradiation 4=26564
 $CaCO_3$, e.s.r. of Fe^{3+} , isotopic shift in h.f.s. 4=13322
 $CaCO_3$, e.s.r. of Mn^{2+} , pressure depend. to 7000 atm. 4=1880
 $CaCO_3$, high-pressure, phases, X-ray diffraction study 4=30799
 $CaCO_3$, Raman spectrum, laser stimulated, 2 Stokes and 4 anti-Stokes orders 4=20451
 $CaCO_3$, Raman spectrum, Stokes and anti-Stokes lines, laser stimulated 4=7105
 $CaCl_2$ aq. soln., proton relax., rel. to concentration 4=27199
 $CaCl_2$, heat of sublimation 4=5475
 $CaCl_2$, vapour pressure and thermodynamics of vaporization, 1110° to 1281°K 4=5461
 CaF_2 , additive colour centres 4=4081
 CaF_2 , capture levels and recomb. nature of thermoluminesc. 4=28728
 CaF_2 , crystal internal charge compensation by interstitial F^- , e.s.r. obs. 4=22460
 CaF_2 , diffusion by O_2 , meas. 4=12786
 CaF_2 doped with 1% Dy^{3+} , fluorescence excitation by two-photon absorpt. 4=17599
 CaF_2 doped with Sm^{2+} ions, fluorescence and absorption spectra 4=17582
 CaF_2 , e.s.r. of Dy^{3+} , separation of Γ_8 — Γ_7 levels 4=20590
 CaF_2 , e.s.r. of Er^{3+} , five spectra 4=4403
 CaF_2 , e.s.r. of Gd^{3+} , meas. analysis 4=4407
 CaF_2 , e.s.r. of Sm^{3+} , tetragonal, g factors 4=20590
 CaF_2 , e.s.r. of Tm^{2+} , Ho^{2+} 4=26435
 CaF_2 , e.s.r. of trivalent rare-earth ions, crystal-field splittings 4=20585
 CaF_2 , e.s.r. of Y, after 2 MeV β irradiation 4=10167
 CaF_2 , Faraday rotation by Er^{3+} , Er^{3+} , Gd^{3+} and Nd^{3+} 4=7103
 CaF_2 , films, growth, surface mobility and gas occlusion from optical props. 4=2120
 CaF_2 (fluorite), crushed, coarse powder specimens, texture 4=10573
 CaF_2 , geometry and bonding, from deflection in elec. field 4=22378
 CaF_2 , light scattering coeff. of Kubelka—Munk theory 4=17556
 CaF_2 , longitudinal spin—spin relax. of F 4=13335
 CaF_2 , n.m.r. narrowing by rot. r.f. field 4=4420
 CaF_2 , optical absorption, refractive index, i.r. 4=7122
 CaF_2 , paramag. relax. of Gd^{3+} , meas. 4=7328
 CaF_2 , pure, annealed in O_2 and air, optical absorption 4=12787
 CaF_2 , rare-earth divalent impurity ion spectra 4=20465
 CaF_2 , rare earth ion, e.s.r., rel. to irradiation and heat treatment 4=26425
 CaF_2 , refractive index meas., temp. depend. 4=7092
 CaF_2 , refractive index, 0.23–9.7 μ 4=4253
 CaF_2 , spin—lattice relax. of Er^{3+} 1.6°–25°K 4=30732
 CaF_2 , spin—lattice relax. of trivalent rare-earth ions 4=20586
 CaF_2 , thermal expansion at low temps., expt. 4=17369
 CaF_2 , X-ray line broadening 4=23523
 CaF_2 , Y and CaF_2 , thermoluminescence theory, radiative recomb. from electron—hole pairs 4=17600

Calcium compounds—contd

- CaF_2 , Ar—diffusion as model for fission gas transport in UO_2 4=25466
 CaF_2 : Dy^{2+} , laser, Zeeman tuning and internal modulation 4=19301
 CaF_2 : Dy^{2+} paramagnetic resonance spectra, study at liq. He temp. 4=28871
 CaF_2 , Dy^{3+} doped, $Dy^{3+} \rightarrow Dy^{2+}$ photo-reduction by γ -rays and thermal reoxidation 4=23679
 CaF_2 , Dy^{3+} e.s.r. in cubic and axial fields 4=1873
 CaF_2 :Er, i.r. quantum counter action 4=22872
 CaF_2 : Er^{3+} , stimulated emission 4=17555
 CaF_2 : Eu^{2+} electron—nuclear double resonance 4=26449
 CaF_2 : Eu^{2+} , ENDOR meas. on F nucleus 4=4425
 CaF_2 : Gd^{3+} , e.s.r. 4=1876
 CaF_2 : Gd^{3+} e.s.r. 4=7327
 CaF_2 :H, e.s.r. 4=13319
 CaF_2 :H interstitial atoms, e.s.r. 4=26402
 CaF_2 :Ho, Zeeman effect in strong fields 4=7101
 CaF_2 :Ho, Er, absorption and emission spectra of Ho^{2+} and Er^{2+} 4=13038
 CaF_2 : Sm^{2+} laser, second-order nonradiative processes 4=8985
 CaF_2 : Sm^{2+} and Tm^{2+} impurity ion valence control, electrolytic meth. 4=23667
 CaF_2 : Sm^{3+} (Y^{3+}), u.v. coloration 4=22627
 CaF_2 :Tm, luminescence, on irradiation, mechanism 4=22918
 CaF_2 : Tm^{2+} crystal, 1.116 μ line Zeeman effect 4=26183
 CaF_2 : Tm^{2+} , fluorescence, Zeeman effect 4=28726
 CaF_2 : U^{3+} , absorption and emission spectra, 2.1 to 2.5 microns 4=7113
 CaF_2 : U^{3+} , 4 to 3-level optical quantum generator 4=3230
 CaF_2 : U^{3+} , luminescence, 2.5 and 2.6 μ 4=28727
 CaF_2 : U^{3+} , spontaneous fluoresc. excit. 4=4295
 CaF_2 : U^{3+} , e.s.r. 4=26438
 CaF_2 : U^{4+} e.s.r. and charge compensation 4=26439
 CaF_2 — YF_3 crystalline solns., interstitials and structure 4=6831
 $Ca_3F(PO_4)_3$, F n.m.r. line, structure 4=28895
 $Ca_3Fe_2(Fe_{1.5}V_{1.5})O_{12}$, ferrimagnetism, temp. var., lattice const. 4=4376
 CaI_2 films, structure and absorpt. spectra 4=2065
 CaI_2 , spectra, u.v., impurities, crystals, frozen solns., solns. 4=1733
 CaI_2 , spectrum 4=25637
 CaI_2 , tetrahydrated, aq. soln., u.s. velocity 4=24207
 $CaMg[B_3O_6(OH)_2]_2 \cdot 3H_2O$, crystal structure 4=23429
 $CaMoO_4$, i.r. reflection, lattice vibr. 4=25841
 $CaMoO_4$, rare earth niobate system, lattice parameters and fluorescence rel. to composition 4=26644
 $CaMoO_4$: Tm^{3+} and Ho^{3+} , energy transfer from Er^{3+} 4=7180
 $Ca(NO_3)_2$ aqueous solns., complex formation, spectrophotometric obs. 4=8213
 $Ca(NO_3)_2$, soln. in water, thermodynamic props. 4=21126
 $Ca(NO_3)_2$, as laser host crystal 4=3215
 CaO cathodes, photoluminescence 4=17601
 CaO , with divalent Fe impurity, e.s.r. 4=17678
 CaO , e.s.r. of Eu^{2+} , exchange interactions 4=13315
 CaO , e.s.r. of iron group and rare earth impurities 4=26402
 CaO , 14.5 μ –200 μ absorption meas. 4=7120
 CaO , Franck—Condon factors of band system 4=25660
 CaO , mixtures with ZrO_2 and MgO , phase change temps. 4=23296
 CaO , paramagnetic, defect centres due to X or Hg irradiation 4=7320
 CaO , thermoelec. power and elec. cond. 4=22705
 CaO , X-ray characteristic temp. and thermal expansion 4=28372
 CaO , Ni^{2+} and Cu^{2+} e.s.r., Jahn—Teller effect 4=13327
 CaO :Sm, luminesc., impurity effects 4=28729
 CaO — Al_2O_3 — Fe_2O_3 , phase structures 4=26643
 CaO . B_2O_3 . PbO , luminescence, u.v. and visible 4=17596
 CaO . xB_2O_3 . PbO , Mn^{2+} luminescence, var. composition 4=17597
 CaO . $6Fe_2O_3$. La_2O_3 , ferrimagnetism 4=10289
 CaO — HfO_2 , elec. conductivity from 800° to 2000°C 4=10093
 CaO — Y_2O_3 — ZrO_2 , solid solution ionic conductivity 4=20405
 CaO — ZrO_2 , elec. conductivity from 800° to 2000°C 4=10093
 $3CaO$, MgO , $2SiO_2$ — MgO . Al_2O_3 — $2CaO$. Al_2O_3 . SiO_2 , in phase equilibrium in CaO — SiO_2 — Al_2O_3 — MgO 4=29005

Calcium compounds—contd

- Ca(OH)₂, lattice vibs. 4=3973
 Ca₅(PO₄)₃Cl, colour centres, optical meas. 4=22626
 Ca₅(PO₄)₃F, colour centres, optical meas. 4=22626
 CaPd(CN)₄·5H₂O 4=29101
 CaPd₂O₇, crystal struct., poss. space groups 4=26645
 CaPt(CN)₄·5H₂O, crystal structure 4=29101
 CaPt[P, Ni](CN)₄·5H₂O diamagnetic anisotropy 4=26265
 CaS, thermodynamic props. rel. to vaporization 4=16301
 CaS, X-ray characteristic temp. and thermal expansion 4=28372
 Ca₂Sb₂O₆F, and with Nb, Ta subs. for Sb, luminescence 4=26237
 CaSO₄· $\frac{1}{2}$ H₂O, crystal growth during hydration 4=20727
 CaSO₄· $\frac{1}{2}$ H₂O, γ irradi., e.s.r. of atomic H 4=26401
 CaSO₄·2H₂O, dielectric anisotropy, 3cm 4=1649
 CaSO₄·2H₂O, nucleation, effect of var. subst. 4=20730
 CaSO₄·2H₂O, vibr. spectrum, resonance splitting 4=3983
 CaSO₄, Sm, thermoluminescence 4=28730
 Ca₂SiO₄, β -phase, crystal structure 4=23431
 Ca₂SiO₅, phase structure, room temp. to 1100°C 4=29100
 CaSnO₃, γ -reson. absorption, lattice structure, 78-1020°K 4=1350
 Ca₃Ta₂O₁₁, crystal structure atomic, preparation 4=2074
 CaTiO₃, crystal structure, effect of neutron irradi. 4=26564
 CaTiO₃, i.r. reflection and transmission spectra 4=26184
 CaTiO₃, paraelectric, microwave dielec. const. 4=26121
 CaWO₄, crystal growth defects 4=30817
 CaWO₄, crystal structure 4=10532
 CaWO₄, crystal structure 4=10533
 CaWO₄, etch-pit obs. of dislocations 4=6838
 CaWO₄, i.r. reflection, lattice vibr. 4=25841
 CaWO₄, refractive index meas., temp. depend. 4=7092
 CaWO₄, structure, neutron diffn. analysis 4=29102
 CaWO₄, synthesis, flux effects with KCl or LiSO₄ 4=10211
 CaWO₄, trivalent rare earth substitution and coupled substitution theory 4=15474-5
 CaWO₄, Ir and Rh scattering centres 4=9950
 CaWO₄ with Mn²⁺, Fe³⁺, Nd³⁺, paramag. resonance determ. of ion sites 4=4409
 CaWO₄, Na-compensated, laser threshold rel. to Nd conc. 4=10168
 CaWO₄:Nd, crystal growth, rel. to laser threshold 4=19308
 CaWO₄:Nd lasers, relax. osc. calc. 4=3229
 CaWO₄:Nd, photolytic and reduction colouring 4=22643
 CaWO₄:Nd, Pr doped, colouring, vacuum reduction or photolytic prod. 4=12814
 CaWO₄, Nd³⁺, e.s.r. and spin-lattice relaxation 4=1884
 CaWO₄, Nd³⁺ n.m.r., Na compensated or uncompensated 4=13348
 CaWO₄:Nd³⁺, p.m.r., model for W site substitution 4=20620
 CaWO₄, Yb³⁺ and Ce³⁺ e.p.r. 4=23058
 CaWO₄—PbWO₄:Sm, luminescence 4=22919
 CaZn₂, heat of vaporization 4=366
 CaZn₂, vapour pressure 4=366
 Ca₁₀Zr₁₀O₃₆, isothermal grain growth 4=13644
 CaZr(PO₄)₂, crystal structure, atomic 4=2073

Calculating apparatus

- See also Fourier analysis; X-ray crystallography, calculation apparatus.
 amplitude analyser for impulse function spectra calc. 4=18023
 analyser for frequency-amplitude characteristics of arbitrary functions 4=16009
 automation of expt. laboratory 4=24013
 computers, applications in meteorology 4=17876
 correlation spectral analyser for recording processes 4=2521
 data processing system for automatic transform. of plasma radiation intensities into radial distrib. 4=11608
 diffractometers, analogue and digital single-crystal 4=30837
 eulogismographic nonlinear optical image processing for pattern recognition 4=27346
 exhibits in 1964 at Physical Society 4=21011
 machine 104, crystal analysis programme 4=23371
 modulator, exponential, for simple computer 4=16007
 Papa No. 3 machine for pattern recognition 4=8016
 tape store, low cost for γ -activity in upper

Calculating apparatus — contd**analogue apparatus**

- See also Nomograms; Sliderules.
 analogue computer, use in side-on arc spectroscopy 4=11338
 analogue to digital conversion 4=11014
 application, molecular π electron states calc., ethylene, polymers 4=9757
 charged particle trajectory calc. and plotting 4=610
 for chromaticity evaluation, from spectral data 4=29727
 conducting paper analogue for two-dimensional elasticity 4=117
 cross-spectrum analyser, low-freq. 4=8
 cube-root coordinate colour-difference computer 4=27286
 and ferrimagnetic reson. unstable spin waves calc. 4=13291
 heat cond. boundary conditions, electrical analogue 4=27351
 for histogram, joint-interval 4=29506
 IBM 7090, use for γ -spectra anal. 4=16854
 magnetic field with axial and plane symm., resist. network 4=642
 magnetic field, helically invariant, simulation 4=643
 nuclear reactor core, iterative model 4=25458
 optical analogue for Laue diagrams 4=13562
 optical simulator for soln. of convolution integral equation 4=24011
 plastic mechanical properties 4=17706
 for resolving power increase, with pulse response inverse operator 4=14010
 tropospheric duct propagation 4=15873

digital computers

- computer—cyclotron multi-conductor cable 4=11730
 cryotron, parallel film 4=16380
 ferrites, square-loop, appls., review 4=1840
 and ferrites, transient spin-wave buildup calc. 4=13292
 geomagnetic body, mag. anomaly, total intensity, calc. 4=15900
 Grey reading of binary coded disks 4=11015
 memories, mag. film, future developments 4=11750
 memory, film, uniaxial pair with biaxial props. 4=11756
 memory, mag. and dielectric layers, optical readout 4=11757
 memory, mag. film, creep and boundary displacement switching 4=11752
 memory, mag. film, evaporated wiring 4=11751
 memory, mag. film, interaction between elements 4=11753
 memory, mag. film, optimum mag. parameters 4=11754
 multiplication and division using Si diodes 4=11016
 multiplication and log. conversion by operational amplifier-transistor circuits 4=8592
 neutron time-shared time-of-flight analysis 4=27870
 nuclear electronics, internat. symposium, Paris (1963) 4=11843
 nuclear physics applications, "on-line" operation 4=19321
 ordinary numbers generation using counters 4=16008
 recognition of spoken digits 4=10946
 scanning and meas. projector system use 4=27302

adiabatic differential, for study of stored energy in neutron irradiated Fe $4=4098$
adiabatic dynamic calorimeter $4=16284$
adiabatic, heating rate $4=2879$
aneroid, with replaceable reaction cells $4=8493$
Calvet microcalorimeter used in quantitative differential analysis, calibration $4=14434$
Calvet, for specific heat meas. $4=27366$
combustion, semi-micro static aneroid $4=8494$
differential, high temperature $4=18472$
differential resistance bridge, high temp. $4=21349$
differential scanning, direct transition energy meas. $4=26773$
dosimeter, point, appl. to 10, 20 MeV e's $4=5898$
for enthalpy analysis, 0–300°C $4=8492$
for gas specific heat meas., high press. $4=16283$
heat of formation meas., 20^o–80°C, graphite $4=355$
for heats of adsorption measurements $4=11399$
isothermal, low temp., construction and calibration $4=21350$
isothermal, with sample temp. control $4=14436$
for laser energy meas., Calvet $4=24892$
for liquid crystals $4=18475$
for meas. heats of soln. and reaction in molten salts up to 400°C $4=16282$
micro, metal-block, for combustion heat meas. $4=2880$
microcalorimeter, adiabatic, for radioactivity meas. $4=6260$
microcalorimeter, calibration using Peltier effect $4=27367$
microcalorimeter for radiation dose meas., portable $4=22053$
for power meas., mm bands $4=18483$
for radiation meas., bursts $4=14449$
thin heater, for sp-heats $4=18474$

 apparatus for analysis in variable conditions 4=14435
 boil-off calorimetry, theory, vapour heating
 correction 4=21348
 of combustion, meas. of elec. ignition energy 4=29797
 differential thermal, use for stored energy release
 meas. 4=4068
 electroluminescence power absorpt. meas. 4=4289
 energy dose absorbed in reactor irradiation,
 meas. 4=6087
 fast-particle beams striking target, power
 calorimetry 4=8853
 for flux-density distrib. in focal vol. of arc image
 furnace 4=8491
 heater lead thermal cond. problem 4=24425

Calorimetry—contd

- isothermal, with automatically controlled Peltier cooling and continuous compensation power integration 4=2881
- laser beam energy meas. 4=14954
- low temperature, use of punched tape recorder 4=11430
- radiometric, review 4=30115
- scanning, proportional temp. control advantages 4=24424
- temperature pulsation method 4=29793
- wire resistance coeffs., 10–380°K 4=12849
- BeO, neutron irradi., Wigner energy determ. by calorimetric method 4=18473
- Cu, irradiated, specific heat determ. methods 4=354
- H₂O, heat of ionization 4=8199
- H₂O at 25°C, heat of ionization 4=8198

Cameras

- electron diffraction, for photo electric films 4=15785
- electronic photographic recorder 4=337
- electronic, planetary and stellar photograph, role of distortion 4=23839
- flat-field, new family 4=5407
- for high temperature microscopic observation of creep 4=11377
- moon camera of Markowitz, use in determ. moon's position 4=8012
- for plasma in directed motion 4=27537
- resolution, probability distrib. 4=8466
- rotating-mirror, control and trigger system 4=334
- rotating-mirrors, vibration amplitude meas. 4=21326
- streak, with Be rotating mirrors, time resolution 4=21325
- streak, for laser emission studies 4=2859
- streak, modified, shock speed meas. 4=24303
- television, use in spark chamber data-handling 4=14992
- Weissenberg, split cassette attachment, for X-ray crystal structure obs. 4=26636
- X-ray, Debye–Scherrer, with focusing for linewidth meas. 4=10520
- X-ray, Debye–Scherrer 19cm camera for working between 400°K and 106°K 4=27345
- X-ray diffraction, for liquid metals 4=14135
- X-ray diffraction, using polaroid film 4=24775
- X-ray, high resolution small angle 4=30011
- X-ray micro diffraction camera, cylindrical 4=24776

Capillarity

- See also Bubbles; Contact angle; Drops; Films, liquid; Foams; Surface tension.
- condensation in wedge-shape pores 4=27386
- dispersed systems, $r \sim 10^{-7}$ cm, theory of type II effects 4=5148
- flow, viscoelastic, instability onset, dimensionless parameters 4=14113
- liquid waves, seawater, damping by insoluble organic monolayers 4=5145
- ripples, vel. and amplitude meas., instrumentation 4=27149
- spherical fluid layer, surface waves 4=14123
- transient flow with adsorption, time lag calc. 4=5140
- viscoelastic films, capillary ripples, dispersion theory 4=5144
- wave velo. and attenuation, water and monolayers 4=8154
- waves on viscoelastic films, velocity dispersion and amplitude attenuation, gravity effect 4=24146
- AgBr, use in thin sheet prep. 4=15763
- AgCl, use in thin sheet prep. 4=15763
- C surface area meas., effect of capillary condensation 4=23552
- HeII, capillary heat flow, turbulence and crit. velocity 4=8549
- HeII flow types 4=21377
- HeII, viscosity 4=21376

Carbon

- See also Diamonds; Graphite.
- absorption, light, C⁻, bound-free, calc. 4=30379
- activation process, adsorption of N, CO₂ and ethyl chloride 4=23553
- adsorption of O₂, interaction of O₂ with free spin centres in C, paramag. res. study 4=20822
- amorphous, molecular C ions formed in spark source, mass spectrographic study 4=9782
- arc, rel. to constituent BaO vibr. temp. 4=22347
- atom, absorption oscill. strengths, 1100–1800Å 4=6472

Carbon—contd

- atom, electron scatt., static central field exchange approx. 4=25571
- atom, radiative recombination coeffs., into low-lying excited states 4=19942
- atoms, mesic, K series meas. 4=22329
- atoms, 1s²2s2p^k configs., analytic self-consist. field functions 4=15273
- atoms, photoionization cross-sections, calc. 4=25543
- band structure, relativistic corrections 4=9899
- bauxite charcoal, gas adsorption, 20.4° to 80°K, 10⁻⁹ to 10⁻² mm Hg 4=7726
- brushes of elec. motors, friction, current effects 4=7415
- char compaction at carbonization temp. 4=30769
- charcoal, activated, use in leak detector 4=16161
- charcoal, adsorption of H₂O vapour, study using sorption balance and extensometer 4=10617
- charcoal, Saran, adsorption of He⁴ below 5°K 4=13690
- crystal structure, atomic, turbostratic C, interlayer spacing and crystal sizes 4=10528
- determination in low-alloy steels using VC1 vacuum quantometer 4=7795
- diamagnetism, temp. var., review 4=10240
- diffusion in Fe–C, Ni–C, and Co–C solid solns., rel. to temp. 4=20295
- diffusion in α -Fe, temp. var. 4=28488
- diffusion, in Ti, 1223–1923°K 4=1519
- diffusion of Th, activation energy, pyrolytic C 4=6869
- in discharge, electric, h.f., C_n⁺ and C_n⁻ distrib., periodicities with var. n 4=16447
- effect on fatigue and creep in Fe and Fe alloys 4=28957
- elastic constants, polycrystalline samples, small-strain model 4=23132
- for electron microscope exam., support film and replica preparation 4=23514
- e.s.r., homogeneity, using spectrometer, modulated, field, up to 1 Mc/s 4=748
- Faulquemont crystal, T₁ paramag. relax., rel. to temp., at 34.6 kMc/s 4=13314
- films, graphitization and deformation 4=15731
- films, graphitization meas. rel. to mech. props. 4=23263
- fluctuations, electrical 4=438
- graphitization, diagmag. suscept. obs. 4=26546
- graphitization of polymer carbons 4=23264
- graphitization, X-ray obs. 4=26547
- in ice freezing, C particle nucleation activity 4=27374
- internal friction, elasticity, glassy and baked C 4=10380
- ion source 4=19113
- ion, C⁻, electron affinity and stability calc. 4=9643
- ions, C⁻, photodetachment cross-section up to 3eV 4=12387
- laser action in atoms from mol. dissociation 4=11828
- layers, lustrous, structure and texture 4=4666
- magnetic anisotropy, theory, pyrocarbons 4=10241
- magnetoelectric effects, conductivity, hard, glassy C 4=10024
- magnetoresistance, negative, pyrolytic C 4=20327
- mechanical damping, 300°–20°K 4=28956
- molecular ions, formed in spark source, mass spectrographic study 4=9782
- molecule, electronic-band spectra, by exploding wire method 4=25635
- molecule, Swan and Fox–Herzberg bands, transition probability 4=22348
- non-graphitized powder, Hall effect, 80° to 400°K 4=12855
- paramagnetic relaxation, spin–lattice, different carbonization temps. 4=1869
- phase transformations, high temp., graphitization of pyrolytic C 4=7476
- pore structure and surface area, high temp. polymer types 4=23543
- precipitation in α -Fe, rel. to kinetics in alloys 4=23246
- pyrocarbon, diamagnetic susceptibility anisotropy, 2500° to 2900° C 4=4324
- pyrolytic, hardness meas. 4=13400
- refl. coeff., rel. to refr. index and absorpt. coeff., 23.6–113 Å 4=22846
- refractive index at 4910 Å, error 4=22850
- resistance thermometer, >1°K 4=18503
- resistor, characts. at He temp., depend. on meas. current 4=26005

Carbon—contd

- Saran charcoal rods, elec. resistance and length rel. to adsorbed water 4=30604
 solubility in Co-Ni alloys at 1000° C rel. to electronic structure 4=7470
 solubility in steel, cold-rolled transformer 4=26541
 spectrum, C1, in 3420-9659 Å region 4=12364
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 stainless, proton prod. by H₂⁺ ion impact 4=28270
 surface area meas., effect of activated diffusion 4=23551
 surface area meas., effect of capillary condensation 4=23552
 surface energy distrib. of C black 4=23550
 thermal expansion, -196° to 2000° C, polycrystalline specimen 4=22505
 thin films, electron microscopy image contrasts 4=23574
 in V targets, deuteron interactions 4=22167
 vapour molecules condensed in Ne, Ar, Xe matrices at 4°K and 20°K, u.v. and i.r. spectra 4=12472-3
 Young's modulus, at high temperatures 4=23131
 X-ray yield (K), 1.5-44 Å, by 1.5 MeV protons 4=17593
 C-replica method for Si-surface examination 4=26706
 C I atom, photoionization cross-section 4=18677
 C_s, potential const., vibrational, abnormality 4=25608
 C₃ radical, spectrum 4=6613
 C^{12,13} ions charge states 4=24564
 C¹³ levels, use for obtaining two-body interaction parameters 4=17000
 C¹⁴ increase due to nuclear tests, May 1962, 9-78° N 4=20855
 C⁻, bound states rel. to phase shifts 4=19989
 in Cr, effect on ductile-brittle fracture temp. 4=30770

Carbon compounds

- See also Organic compounds.
 adsorption of gases, data correl., low press., supercrit. temps. 4=29192
 carbonate systems, glass formation 4=23615
 charcoal, adsorpt. H₂O, n.m.r. relaxation 4=29193
 graphite interlamellar cpds with Br, ICl and FeCl₃, crystal dislocations 4=22588
 graphite-Br residue cpds., pyrolytic, thermal expansion under different applied loads 4=20221
 metal carbides, surface energy, calc., NaCl type 4=13669
 strained, elementary atomic layer diameter, 1000°-2000° C 4=29103
 C alloys with transition metals, antiferromag. props., plasticity 4=23028
 C bisulphate, thermal expansion, by X-ray method 4=22506
 C nitrates, thermal expansion, by X-ray method 4=22506
 C perchlorate, thermal expansion by X-ray method 4=22506
 C steel, stress meas. by X-ray method 4=23097
 CBr₄, mean square vibr. amplitudes, rotational distortion consts., and shrinkage consts. 4=22395
 C-Cl complex, e.p.r. study 4=20097
 CCl₄, absorpt. and dispersion, i.r. 4=22397
 CCl₄, condensation coefficient calc. 4=21359
 CCl₄, diffusion of H₂, D₂, N₂, Ar, CH₄, CF₄ 4=18189
 CCl₄, diffusion of n-alkanes, hydrodyn. interaction 4=166
 CCl₄, liq., i. r. absorpt. spectrum, 740-810cm⁻¹ 4=30455
 CCl₄, liq., rotational correl. time for quadrupole relax. 4=210
 CCl₄, mean square vibr. amplitudes, rotational distortion consts., and shrinkage consts. 4=22395
 CCl₄, MO LCAO calc., symmetry 4=1247
 CCl₄, Raman light intensities, ang. distrib. 4=16118
 CCl₄, Raman spectrum, using ruby laser, light source 4=14372
 CClF₃, injection into air, thermal diffusion effects 4=5221
 CCl₂F₂, positron annihilation, collision complex formation 4=6029
 C₂, CN free radical temps., in O₂-C₂H₂, O₂-C₂N₂ detonation in shock tube 4=7757
 CF₃ reactions, bond and activation energies, correl. 4=30895
 CF₄, dielec. const., 800 Mc/s, 295° to 630° K 4=14220
 CF₄, diffusion of methane, meas. 4=11238
 CF₄ diffusion in CCl₄ 4=18189

Carbon compounds—contd

- CF₄, mean square vibr. amplitudes, rotational distortion consts., and shrinkage consts. 4=22395
 CF₄, transport props. meas., rotational relax. 4=5241
 C₃F₈, gas, ioniz. and attachment coeffs. calc. 4=5557
 C₇F₁₄, ioniz. and attachment cross-sections meas. 4=16436
 C₈F₁₂, crystal struct., atomic 4=29151
 CF₂BrCFBrCl, n. m. r., time-weighted averaged approx. 4=5214
 CF₄-SF₆ mixtures, viscosity and diffusion coeffs. 4=2725
 CHCl₃, liq., i. r. absorpt., spectrum, 740-810cm⁻¹ 4=30455
 Cl₂, thermodynamic props., gas, 100-1000° K, calc. 4=8247
 Cl-C complex, e.s.r. study of electronic struct. 4=25725
 C₆K, heat of formation, rel. to graphite polymorphism 4=30534
 CN, dipole moment for violet band electronic transition 4=22349
 CN, excited π lifetime, direct meas. 4=28185
 CN, Franck-Condon factors to high vibr. quantum numbers 4=15329
 CN, molecular dipole moment of electronic transition of violet band, matrix calc. 4=30429
 CN mol., rot. temp. from solar lines 4=26951
 CN, in solar atm., violet spectral system 4=23921
 CN spectral "tail" bands in active nitrogen flames 4=30430
 CN, violet band electronic transition, matrix element for dipole moment 4=15330
 C₂N₂¹⁵, gaseous and polycrystalline, i. r. spectra, and intermolecular coupling in crystal 4=28211
 C₂N₂ halides, vibr. amplitudes and thermodynamic functions 4=1274
 CO, a³Π level, excited by iodine lamp, photochem. 4=13738
 CO, absorpt. band, test of theoretical model approx. 4=9743
 CO, absorption coeffs., 1006-600 Å 4=20038
 CO, absorption spectra, 1850 to 4000 Å 4=11249
 CO, adsorption on Ta, dissociation, O₂ field emission patterns 4=26726-7
 CO with admixtures, thermal relaxation 4=5244
 CO, adsorbed with N on polycryst. W, interactions 4=23607
 CO, adsorption on Cu₂O, mag. susceptibility changes 4=23596
 CO adsorption on Ni and its interaction with O₂ 4=20820
 CO, adsorption on Ni films, var. thickness, temp., from elec. cond. 4=17847
 CO, adsorption on W, sticking coeff., effect of surface coverage and temp. 4=17849
 CO in Ar matrix, i. r. spectra 4=20039
 CO, collision cross-sections and vibrational relaxation 4=9794
 CO, diffusion of methane, meas. 4=11238
 CO, diffusion in Mo, W, Nb, above 1000° C, degassing 4=22620
 CO, diffusion in Ni, 970-1320° C 4=22622
 CO, electron attachment and ionization meas. 4=5556
 CO, electron inelastic collision cross-sections for three transitions 4=12445
 CO, electron photoemission, retarding potential meas. 4=16435
 CO, electron scatt., elastic and inelast., from electron transport 4=11509
 CO, electronic structure 4=22363
 CO, equation of state, theory confirmation 4=11229
 CO excited by active N, use of vibrational energy for optical maser 4=27685
 CO, field desorption from W 4=7725
 CO flame bands 4=6560
 CO, 4.7μ band, band model appl. 4=25602
 CO, 4.7μ band total absorptance 4=28184
 CO, Franck-Condon factors 4=27480
 CO, γ-radiolysis with inert gases, meas. 4=13741
 CO, H passage through, electron loss and capture 4=463
 CO-hydrocarbon mixtures, virial coeffs. meas. 4=24261
 C¹²O¹⁸, J = 5 → 6 rotational line meas. 4=24858
 CO, i. r. fluorescence, by radiation chopping techniques 4=15331
 CO isobaric mols., separation by thermal diffusion 4=20841
 CO, Joshi effect, surface origin 4=467

Carbon compounds—contd

- CO, laser, discharge, electric, pulsed, $B'\Sigma - A'\pi$ band transitions 4=8976
- CO, liquid, self diffusion, 69-78°K 4=21118
- CO, in liq. O_2 , and liq. and solid N_2 and Ar, $O-2$ transition 4=25638
- CO, luminescence, excited by active N 4=9701
- CO, molecule, elec. polarizability tensor calc. 4=1256
- CO, oxidation on NiO catalyst, mechanism 4=17862
- CO oxidation, ZnO photosensitized, kinetics, activation energy 4=17869
- CO positive ion production, by energetic He⁺ impact 4=24569
- CO, pure and mixtures, solid, liq. and gaseous, i. r. spectra, molec. motion and moment analysis 4=28162
- CO, Rydberg excited levels of $^1\Sigma^+$, $^3\Sigma^+$, $^1\Pi$, $^3\Pi$ symmetry, calc. 4=30425
- CO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
- CO, in soln., i. r. absorption and rotation 4=5190
- CO, spectra excitation by reaction with active He 4=11533
- CO, spectrum, vibr. - rot. φ branch displacement in solns. 4=25634
- CO, total band absorbance, 4-7 μ 4=22350
- CO, 2-0 band, broadening by N_2 and H_2 4=12444
- CO, vibr. excitation by electron impact, meas. 4=28198
- CO, vibrational relaxation times 4=28181
- CO, vibration-rotation spontaneous emission probability 4=20070
- CO, viscosity, -50° to 150°C, below 200 atm. 4=24264
- CO, CO_2 , CH_4 gas mixture, i. r. absorption monitoring, using multi-image light pipe system 4=27296
- CO^{++} dissociation, double mass spectrometer obs. 4=22429
- CO_2 , Ar diluted, transmission meas., 1500°-3500°K, 4.25 μ 4=22373
- CO_2 , absorpt. band, test of theoretical model approx. 4=9743
- CO_2 , absorption spectra, 1850 to 4000 Å 4=11249
- CO_2 , adsorption on activated C 4=23553
- CO_2 bands, total emissivity at 1000°-4000°K 4=12476
- CO_2 , cooling of irradiated specimens, computer programme for calc. 4=2866
- CO_2 , critical isotherm calc., opalescence 4=8527
- CO_2 , cryodeposits on metal, optical absorption 4=13015
- CO_2 , desorption rates and heats of desorption from silica gel and sand 4=7729
- CO_2 , dielectric constants, audio frequency meas. 4=27227
- CO_2 , diffusion, in binary mixtures with N_2 , CO, Ar, SF_6 , 290-470°K 4=27216
- CO_2 , diffusion, thermal, with Ar, Kr, Xe 4=29673
- CO_2 , dispersion, acoustic, light diffr. meas., and vibr. relax., press. temp. var. 4=18249
- CO_2 , dissociation at 3500°-6000°K 4=28268
- CO_2 , effect on H_2O Raman spectrum 4=14169
- CO_2 , electron attachment and ionization meas. 4=5556
- CO_2 , electron scatt., elastic and inelast., from electron transport 4=11509
- CO_2 electrons, low-energy, drift velocity 4=27479
- CO_2 , emissivity, 4.3 μ , 1500-3000°K 4=14217
- CO_2 , enriched with 10 at % O^{18} , i. r. spectrum 4=12477
- CO_2 , equations of state, 0°-1000°C, up to 100 bar pressure 4=5231
- CO_2 , equation of state, theory confirmation 4=11229
- CO_2 , 15 and 4.3 μ band absorpt., correl. with CO_2 4=27221
- CO_2 -foreign gas mixtures, dielectric loss 4=27226
- CO_2 , 4.3 μ band emission at 1200°K 4=6585
- CO_2 , 4.3 μ band, lineshape in wing beyond band head 4=25669
- CO_2 gas, electron drift velocities in inert gas- CO_2 mixtures 4=24274
- CO_2 gas, viscosity near critical point 4=8243
- CO_2 glow discharge, positive ion 4=18726
- CO_2 , intermolecular, Morse potential force consts. from viscosity 4=9787
- CO_2 , ionization cross-section and electron attachment 4=24565
- CO_2 , ionization potential meas. by mass spectrometry, influence of mag. field 4=21458

Carbon compounds—contd

- CO_2 , ionized, slightly, cyclotron reson., collision frequ. det. 4=461
- CO_2 , i. r. spectral emissivity, 2.7 μ band 4=20064
- CO_2 , i. r. transmittance 4=11247
- CO_2 , jet, supersonic, as ion beam charge transfer target 4=14768
- CO_2 , laser, rot., vibr. - rot. transitions 4=24896
- CO_2 molec. crystals, far i. r. spectra 4=20446
- CO_2 , mol. vibr. excitation by fast beta rays 4=22374
- CO_2 , 1.9 μ bands, integrated intensity meas. in range 1400°-2500°K 4=12475
- CO_2 , with N_2 , solid-vapour equilib. system 4=11425
- $C^{12}O_2$, rotational perturbations 4=9736
- CO_2 , second virial coefficient 4=24262
- CO_2 , shock waves, Mach 2.5-5.5, vibr. relaxation freqs. 4=5291
- CO_2 , sorption rate on chabazite 4=15830
- CO_2 , sparks, temp. fall from 50 000° to 5000°K 4=8659
- CO_2 , spectral emissivities and integrated intensities, 2.7 μ , 1200°-1800°K 4=17290
- CO_2 , spectral intensities rel. to planetary bands 4=25640
- CO_2 , thermal conductivity, theory and expt. 4=21182
- CO_2 , transmittance over stratospheric slant paths 4=23777
- CO_2 , transport props. 4=29670
- CO_2 , transport props. meas., rotational relax. 4=5241
- CO_2 , 2.7 μ band, 1200°-3000°K intensity meas. 4=3871
- CO_2 , u. v. absorption, shock-wave heated, to 6300°K 4=5249
- CO_2 , values in atm., effect of air filtering 4=29269
- CO_2 , vibrations and dissociation caused by shock waves at 2000° to 4000°K 4=12529
- CO_2 vibrations in shock waves, modes var. with Mach number 4=18339
- CO_2^+ electronic spectrum, weaker bands explanation by antisymmetric stretching frequencies 4=30442
- CO_2^+ , emission spectrum meas. 4=12474
- CO_2^{2+} , metastable state, dissociation 4=12526
- C_3O_2 , i. r. absorption, $\Sigma_u - \Sigma_g$ and $\pi_g - \pi_u$ 4=12478
- C_3O_2 , mol. vibr. and thermodyn. props., review 4=25668
- C_3O_2 , potential const., vibrational, abnormality 4=25608
- $CO^{18}O^{18}$, dipole moment 4=25624
- $CO(CN)_2$, microwave mol. study 4=22394
- CO- CO_2 atmospheres, use in prep. and free energy determ. of transition metal oxides 4=15840
- CO-He, vibrational relaxation of CO 4=20040
- CO-Kr, vibrational relaxation of CO 4=20040
- CO- N_2 , spectra, simultaneous transition band, liquid, solid, gaseous 4=22351
- CO-Ne, vibrational relaxation of CO 4=20040
- CO- O_2 photolysis in solutions, 77°K 4=13734
- CO- $O(^1D)$ photolysis, 77°K 4=13735
- CO_2 - H_2O , two phase region, up to 3500 bar 4=8508
- CO_2 -He mixture, absorpt. of sound rel. to vibr. relax. 4=14213
- COS combustion, spectroscopy in vac. u. v. 4=17861
- COS gas, electric dipolar transitions, two freq. 4=28210
- COS, microwave absorpt. in compressed He mixtures 4=24273
- COS molec. crystals, far i. r. spectra 4=20446
- COS, quadrupole moment from microwave spectrum 4=25678
- COS^+ , emission spectrum meas. 4=12474
- CS_2 combustion, spectroscopy in vac. u. v. 4=17861
- CS_2 , decomp. kinetics, shock-tube study 4=22428
- CS_2 , equation of state, second virial coeffs., 22-150°C 4=29666
- CS_2 , i. r. spectra, X-ray diffraction and structure 4=10202
- CS_2 , light scatt. rel. to depolarization ratio 4=24394
- CS_2 , mag. rotation spectrum, origin of doublets 4=6587
- CS_2 -methyl iodide, SF_6 "indicator-cpds", ionization by electron bombardment 4=29868
- CS_2 , near u. v. absorpt. spectrum 4=6586
- CS_2 , Raman light intensities, ang. distrib. 4=16118
- CS_2 , Raman spectra at 28°C and -80°C 4=5182
- CS_2 , rotational analyses and neav u. v. bands 4=25670-1
- CS_2 , 2100 Å band and bonds 4=20065
- CS_2 vapour, absolute Raman intensities and depolarization ratio 4=12502
- CS_2 vapour, luminescence mechanism 4=5250

Carbon compounds — contd

- CS₂³⁴, (60 to 300) × 10³ Mc/s spectra 4=6561
CS(NH₂)₂, specific heat, anomalous, and ferroelectric transform. 4=1399

Catalysis

See also Reaction kinetics.

- acetaldehyde and propionaldehyde vapours, decomposition by I₂ 4=10642
acetylene, polymerization and hydrogenation, by ion exchange resins 4=7759
chromia-alumina catalysts, optical meas. of specific chromia area 4=29174
complex chain diagnosis with HCl catalysis 4=2157
conductivity, electrical, surface, from dielectric dispersion 4=2155
dimethyl ether, pyrolysis, by HCl gas 4=2157
electrochemical, adsorption of intermediates 4=7760
ethyl alcohol, by LiF, catalyst dislocation density rel. to reaction const. 4=6841
ethyl bromide, from ethylene + HBr, by Co⁸⁰ 4=10650
glass crystal growth, 600-1000°C, by TiO₂ 4=13534
graphite-diamond transformation, by metals 4=1991
methanol, oxidation using photosensitized ZnO 4=23652
n.m.r. investigation 4=2127
neopentane pyrolysis, catalytic transfer by HCl 4=23633
semiconductors, effect crystal imperfections 4=20792
on semiconductors, O₂ chemisorption 4=20832
CO oxidation on NiO catalyst, mechanism 4=17862
H, ortho to para conversion 4=23644
H oxidation by Ni-on-CrO₃, simultaneous isotopic exchange between H₂ and steam 4=7758
H₂, dissociation, thermal, on Mo or W catalyst 4=20117
LiAlH₄, active centres, investigation by e.s.r., n.m.r. 4=2156
MgO, of H₂ + D₂ = 2HD u. v. irradi. induced V₁ centres, e. s. r. study 4=30901
N₂ dissociation in microwave discharge 4=11553
Ni, adsorption of H, var. with pressure, from mag. susceptibility 4=2128
Pt-C system, activity for H-D isotopic exchange 4=30902
S-vaporization by Al₂O₃ 4=8516

Cataphoresis

See Electrophoresis.

Cathode-ray tubes

See Electron tubes

Cathode rays

See Electron beams.

Cathodes

See also Electron emission; Thermionic emission.

- field emission flicker noise, point cathode 4=3020
field emission microscope, semiconductor cathode prep. 4=23519
gas discharge tubes, electron emission under accelerating field 4=475
material effect on elec. strength of liq. methane 4=21144
metal covered with emissive materials, secondary emission mechanisms 4=19091
metal, in H₂, work function and sparking potential, rel. to material and surface nature 4=21554
multialkali metals, sensitivity enhancement by mirrors 4=8815
photocathodes, dynamic fatigue investig. 4=8816
pulsed diodes, cathode vapours in glow discharge 4=5569
semiconductor, pulse current, cond. mechanism 4=28545
spark conditioning, 10⁻⁶ to 10⁻⁸ mm Hg 4=18767
transition-metal carbides, proposed 4=14743
tunnel cathodes, structural effects 4=11692
Ag-O-Cs, photo, sensitivity, reflectivity, transmittance 4=3029
Ag-O-Cs photocathodes, threshold spectral sensitivity region rel. to layer structure 4=11694
Cs-Rb-Sb, photo. 4=27564
Cs₃Sb cathode, photoelectric emission, var. with colour 4=8807
Mo, Ni, fall in Ar, Ne 4=568
Mo, vapour-deposited, thermionic emission 4=16520
Ni, breakdown between surfaces in vacuum 4=24724
W, improved life in mag. fields for a.c. heating by adding 3% Re 4=19083
W, laser-heated, thermionic emission 4=16521

Cathodes — contd**oxide**

- alkaline earth, activation rel. to Ba and Mg getters 4=21561
alkaline earth, emission rel. to crystal structure 4=10524
alkaline-earth, pot. distrib. 4=29963
emission, rel. to methane pressure changes 4=21576
evaporation rate in stationary low-pressure Hg discharges 4=8802
flicker noise, from ionized donor movement 4=24727
multialkali metal, emission characteristics 4=8813
porous emitters, Richardson plots 4=5693
BaO coated, effect on anode work function 4=14745
BaO, work function patches 4=24728
(Ba,Sr)O particle heating by electrons, conditions 4=11717
CaO, photoluminescence 4=17601
Cs₂O-type composite photocathodes, thermionic sensitivity reduction 4=29962
GaAs coated with Ag-O-Cs layer, emission efficiency 4=8805
MgO polycrystalline layers, cold, review 4=16518
MgO, residual gas analysis 4=21562
ThO₂ coated filament emitters, poisoning and activ. 4=21560
W, carburized thoriated, high current, for electron linear accelerator 4=3067

Cavitation

See also Vortices.

- acoustic hydrodynamic radiator 4=24312
chemical effects, connection with sonoluminescence 4=26966
effect on metal surfaces 4=26705
gas and liquid phases, by u.s. waves, mechanisms 4=11311
impellers of mixed flow pumps 4=21081
liquid metals, at solidification, u. s. irradi. 4=27372
and luminescence of bubbles, onset 4=14118
and luminescence, u.s. effects 4=14117
measurement 4=29604
near non-uniformly rotating spindle 4=18157
noise spectra 4=291
polymer solns., rel. to u.s. degradation 4=21104
relaxation times for gas and vapour cavitation by ultrasound, formulae 4=8148
secondary centre of destruction, pulsed stresses 4=14116
solid surface in contact with liq., cavitation destruction mechanism 4=7467
super-cavitation profile, in presence of free surface 4=11153
temperature jump, double 4=14118
thin films of viscous liquids, photographic obs. 4=8150
ultrasonic 4=8353
ultrasonic, meas. by chemical reactions 4=8351
ultrasonic, nucleation by fast neutrons 4=5142
ultrasonic nucleation process 4=5912
ultrasonic, statistical approach 4=2642
vapour-air bubbles, spherical, collapse 4=11165
water, light emission 4=11166
in water, theory of flow near collapsing bubble 4=8149
water, u. s. cavitation, spectral indication of its origin 4=5143
water, u.s., by cosmic-ray neutrons, model 4=21080
Al foil, by u.s. waves 4=11311
H₂O, and luminescence, u.s. effects 4=14117
He, liquid, u.s., 1.2°-2.3°K meas. 4=18520
Hg, causing sonoluminescence 4=5192
KI solutions, and luminescence, u.s. effects 4=14117

Cavity resonators

See Electromagnetic oscillations; Resonators, acoustic.

Celestial mechanics

- binary stars with variable mass, with additional small non-Newtonian force 4=13873
class of force functions generalizing functions of radial forces 4=29572
cluster of stars, moments of veloc. distrib. 4=15923
Darwin ellipsoid pair stability 4=29359
disk of stars, gravitational stability 4=23879
flight analysis in field of one attracting centre 4=15911
flight between two points in central field 4=15965
forward-rotatory motion in central Newton field 4=15910
gaseous masses, oscillations, radial and nonradial, general variational principle 4=10781

Celestial mechanics—contd

- gaseous masses radial and nonradial oscill., variational princ. 4=17971
 general relativistic polytropic fluid spheres 4=29365
 gravitational collapse, instabilities and Maclaurin spheroids 4=23841
 gravitational collapse theory 4=29356
 gravitational spheres of planets, Sun and Moon 4=10876
 instability of equipartition state in fluid sphere 4=29358
 instability of infinite rotating layer in mag. field in non-conducting medium 4=23844
 irreversibility in small stellar dynamical systems 4=29401
 isochronous derivs. matrix 4=15912
 Jean's gravitational instability 4=10785-6
 Jeans gravitational instability 4=29355
 Jeans' gravitational instability, spherically symm. 4=4832
 Jean's incompressible spheroid oscillations 4=26891
 Jeans medium gravitational instability 4=26889
 Keplerian motion energetic identities 4=10798
 meteorite, twin, large, orbital perturb. 4=2406
 motion in central field with slight transversal thrusts 4=15964
 motion of two bodies with corpuscular radiation 4=10796
 optimum trajectories with repeated impulses 4=15966
 orbit, circular, distant, long-period motion of the plane 4=26977
 orbital collision probabilities using statistical mechanics 4=4845
 n particle problem 4=2472
 periodic orbits, families, uniformity props. 4=4842
 perturbation theory used in von Zeipel's method 4=4843
 planetary orbits in general relativity 4=4844
 plasma, cylind., gravitational stability for uniform rotation 4=4831
 plasma gravitational stability, viscous, heat cond., rot. 4=26890
 problems, rel. to astrodynamics 4=26888
 relativistic, satellite orbits around rotating sphere in linear Minkowski theory 4=24053
 resonance osc. for elliptic orbit round mass centre 4=20888
 Roche ellipsoids, equilibrium and stability 4=10782
 Roche ellipsoids, rel. to stabilities exchange princ. 4=10783
 rotating polytropes 4=29366
 satellite motion about centre of mass, under gravitational moments 4=10937
 satellite orbit, secular and crit. effects 4=13977
 satellite orbits, for communication 4=20962-3
 satellites of planets, eccentricities, secular changes 4=2473
 Saturn's rings, stability 4=13920
 Schwarzschild limit gas sphere instabilities 4=29357
 self-gravitating disk of matter, structure and stability 4=10787
 solar system, loss of long-period comets 4=20910
 stability of triangular Lagrangian points in three-body problem 4=23829
 star in galaxy, third integral 4=17972
 stars, escape during two-galaxy collision 4=23881
 third integral of motion, resonance cases and smaller divisors 4=13872
 three bodies, elliptic restricted problem, triangular points 4=14092
 three-body problem, elliptic restricted, eqns. 4=17974
 three-body problem, Meffroy's special case 4=21063
 three-body problem, restricted, 800 orbits calc. 4=18122
 three-body problem, restricted, elliptical, Lagrange triangle solns., stability 4=24115
 three-body problem, stellar encounters in galactic field 4=13874
 two bodies of decreasing mass, var. of eccentricity and true anomaly for $-m/m^3 = \text{const.}$ 4=10797
 two-body problem, variable G or mass, effects 4=17973
 O and B stars, kinetics and galactic force 4=20904

Centrifuges

Lamm equation exact soln. 4=23685

Ceramics

- ceramic-metal surfaces, bonds, rel. to elec. props. 4=10594
 elastic modulus meas. at high temps. 4=23088

Ceramics—contd

- electric breakdown in vac. at glazed surface 4=15557
 ferroelectric, blast pressure gauge elements 4=21009
 ferroelectric disks, poled, Poisson's ratio meas. method 4=7364
 ferroelectric, permittivity under d.c. bias fields 4=26112
 ferroelectric, polarization-reversal processes, statistical investig. 4=10105
 glass, review 4=26731
 heat transfer behaviour at high rates 4=30779
 heat treatment, and microstruct. bi-phase equilibrium rate, diffusion 4=23524
 high strength, prodn. and developments 4=29201
 high-strength, use in vibration transducers 4=21235
 lapping device, precision, for diffusion coeff. meas. 4=17437
 lining plates, flaw detection in, acoustic method 4=16000
 magnetic, microstructure, and hysteresis 4=26293
 mechanical props. and microstructure, review 4=23084
 mechanical strength, dislocation theory 4=1921
 metal-ceramic seals, high vacuum elec. lead-ins 4=18300
 molten, sapphire dissolution, kinetics 4=18188
 neutron irradiation, damage, point defect formation 4=22640
 piezoelectric acoustic transducers, effect of high coupling in equiv. network 4=16180
 plates, irradiation, Young's modulus change, meas. method 4=20631
 porcelain, thermal diffusion of Fe_2O_3 on surface 4=30577
 radon leakage from, as potential health danger 4=6298
 sintering, rel. to plastic deformation 4=7380
 strength, transverse, meas. method at high temps. 4=23089
 structure and mechanical props., review 4=23084
 structure, micro, geometry 4=23510
 tensile strength, diametral-compression test 4=26500
 two-phase systems, residual stresses 4=23099
 volume and mechanical strength, rel. to irradiation and annealing 4=10374
 X-ray diffraction examination, review 4=13623
 Al_2SiO_5 system at high temp. and press. 4=29002
 BaTiO_3 , fracture, electrostrictively generated and moderated 4=28938
 Pb zirconate titanate ferroelectric resonators, small-signal parameters rel. to polarization state 4=28629
 Pb-Ba and Pb-Sr zirconate-titanate, piezoelectric finite strain response 4=7054
 PbZrO_3 , modified with Ti^{4+} and Sn^{4+} , ferro- and antiferroelectric phases, stability, var. with press., elec. field, temp., composition 4=26123
 $\text{Pb}(\text{Zr}_{0.85}\text{Ti}_{0.05})\text{O}_3$, primary pyroelec. effect 4=22785
 Ta_2O_5 , dielec. const. and dissipation factor 4=12964
 $\text{Zr}_{0.84}\text{Ca}_{0.16}\text{O}_{1.84}$, grain boundary conductivity 4=7077

Cerium

- allotropy at high press. 4=26560
 electronic structure by positron annihilation 4=17413
 ions, Ce^{3+} , paramag. relax. in $\text{CeCl}_3 \cdot 7\text{H}_2\text{O}$ 4=26379
 ions, Ce^{3+} , spin-lattice and cross-relax. in $\text{CeCl}_3 \cdot 7\text{H}_2\text{O}$ 4=26380
 ions in water, vol. mag. susceptibility meas. 4=8888
 I and II, crit. end point evidence 4=17757
 phase transformation, $\alpha - \alpha'$, diffusion on increasing temp. and press. 4=4503
 plasma, in Q machine, ion loss effect on diffusion 4=14733
 rolling texture and stacking-fault energy 4=13656
 specific heat meas., $0.4^\circ - 4^\circ \text{K}$, in phase mixture 4=12642
 thermal expansion low temp. anomalies and f electron states 4=15433
 vapour diffusing through Ni, surface ionization 4=30576
 $\text{Ce}^{141,144}$, fallout, stratospheric, bomb-produced 4=2214
 Ce^{3+} , elec. quadrupole interact., rel. to anti-shielding 4=1215
 Ce^{3+} e.s.r. in SrTiO_3 4=26417
 Ce^{3+} in CaWO_4 , e.p.r. 4=23058

Cerium compounds

- ceric sulphate in H_2SO_4 , response to 14 MeV neutrons 4=25118
 Ce ethylsulphate, specific heat, rel. to spin-lattice coupling 4=6739
 Ce hydride, elec. conductivity rel. to composition 4=20328
 Ce magnesium nitrate, energy diff. between 1st excited and ground states 4=12641

SUBJECT INDEX

Cerium compounds — contd

- Ce mag. nitrate, use in low temp. susceptibility thermometer 4=24465
 Ce magnesium nitrate, use in temp. meas. 4=14430
 Ce sulphate solns., dosimetry of electron beams and X-rays 4=9017
 Ce—Ag, magnetic susceptibility, 90°–50°K 4=10244
 Ce—Al, prep., structure, mag. props., –200° to +200°C 4=13116
 Ce—Au, magnetic susceptibility, 90°–50°K 4=10244
 Ce—Cd, prep., structure, mag. props., –200° to +200°C 4=13115
 CeCl₃, anhydrous, mag. suscept. meas. 4=7217
 CeCl₃·7H₂O, e.s.r. susceptibility meas., 2 Kramers doublets 4=20587
 CeCl₃·7H₂O, paramag. relax., dispersion-absorption meas. 4=26379
 CeCl₃·7H₂O, spin—lattice and cross-relax. of Ce³⁺ 4=26380
 Ce—Cu, magnetic susceptibility, 90°–50°K 4=10244
 Ce—Cu phase diagram, by differential thermal analysis and metallography 4=30800
 CeF₃, solid, F¹⁹ n.m.r. absorpt. line, mag. shielding transition 4=23068
 CeF₃:Nd³⁺, lattice energy transfer and stimulated emission 4=30093
 CeF₃—ZnS evap. films, refractive indices 4=7114
 Ce—Ga, prep., structure, mag. props., –200° to +200°C 4=13116
 Ce—Hg, prep., structure, mag. props., –200° to +200°C 4=13115
 Ce—In, prep., structure, mag. props., –200° to +200°C 4=13116
 CeMg₉ (approx.), crystal struct., atomic, unusual 4=23430
 Ce—Mg double nitrate crystals, proton polarization 4=13340
 Ce Mg nitrate, crystalline field splittings 4=26381
 CeMg nitrate, far i.r. spectrum meas. 4=4254
 Ce Mg nitrate, ordered spin T → O°K, int. mag. field calc. 4=28317
 Ce₂Mg₃(NO₃)₁₂·24H₂O, crystal structure 4=7611
 CeO₂, mixture with ZrO₂, phase change temps. 4=23296
 Ce₂O₃·2.67P₂O₅, optical rot.—mag. susceptibility comparison 4=22851
 CeRu₂—GdRu₂ (7.3%), ferromagnetism and incipient supercond., 1.3–20°K 4=13172
 CeS, Ce₂S₃, thermal exp., 20–1020°C, Debye temp. 4=22508
 CeS, elec. and mag. props. and thermal expansion 4=6952
 CeS, thermal expansion, X-ray determ. 4=30523
 Ce₂S₃, conductivity, electrical, 20–1000°C 4=4161
 Ce₂S₃, elec. and mag. props. and thermal expansion 4=6952
 Ce₂S₃, γ-phase, optical parameters analysis 4=13028
 Ce₂S₃, thermoelectricity, 20–1000°C 4=4161
 Ce₂S₄, elec. and mag. props. and thermal expansion 4=6952
 Ce_{2-x}S₃, x > 0.3, electron transport rel. to temp. 4=10048
 Ce_{2-x}S₄, x = 0–0.3, semimetallic props. analysis 4=10047
 Ce—Ti, prep., structure, mag. props., –200° to +200°C 4=13116
 CeZn nitrate, far i.r. spectrum meas. 4=4254
 Ce—Zn, prep., structure, mag. props., –200° to +200°C 4=13115

Change of state

See Phase transformations.

Charge

See Electric charge.

Chemical analysis

See also Spectrochemical analysis.

- alkali metals, by photometry, flame, enhancement 4=2173
 aqueous salt solns., microdetermination 4=4721
 benzoic acid solns., monomer-dimer equilib., u.s. obs. 4=25745
 beta-ray backscattering, sensitivity improvement using a pulse height analyser 4=10668
 differential thermal analysis appar. 4=13760
 differential thermal, scanning calorimeter 4=26773
 gas content in gas mixture at several atmospheres 4=26769
 gases, 5–10 mm Hg, using thermal conductivity 4=17875
 gauge optimization H₂O content by n scatt., for soils and concretes, 4=29243
 isotopes, by β-ray interaction 4=25063
 by neutrons, H₂O in soil, calibration curve and configuration 4=7807

Chemical analysis — contd

- oxide monocrystals, stoichiometric deviations, determ. 4=29244
 photometry, flame, absorptive 4=2172
 trace components exam. by i.r., effect of water 4=8438
 volumetric det. of CO₂ in air, results in light and darkness 4=4755-6
 H₂O—D₂O, by gas resistance 4=24450
 O₂ detector, by chemisorption 4=10683
 O₂ gas, by thermal cond. var. in mag. field 4=29245
 Pt—C system conc., e. p. r., catalyst in H—D isotopic exchange reaction 4=30902
 U, in fuel elements, by γ-ray absorption 4=6442
adsorption

 activation analysis, self-shielding for finite cylinders 4=7805
 activation analysis, use of delayed neutrons 4=7801
 β-emitting isotopes, thick samples, specific activity determ. and identification 4=13755
 influence of glass surface effects under α-irradiation 4=12831
 neutron flux perturbation in activation analysis 4=7803
 in presence of active matrix, γ spectra, optimum irradi. and meas. conditions 4=4730
 review 4=7804
 thermal neutron activation, corrections for position of foil 4=4727
 tracer methodology conference 4=7779
 Be, by γ, n, use of β-source bremsstrahlung 4=26772
 Cd¹¹⁶, and spectrum, arc and vaporization, var. with sample composition 4=484
 C¹³ and C¹⁴O₂ separation and analysis 4=30914
 D, by γ, n, use of β-source bremsstrahlung 4=26772
 Se, neutron activation anal. for trace Cu, Zn, As and Fe 4=23692
 T, gas counting, non-scintillation methods, review 4=10682
 T, by ionization chamber 4=15176
X-ray
 See also X-ray examination.
 absorpt. edge, 0.53–2.2 Å 4=10674
 alloys, noble metal dental, spectrometrically 4=15856
 characteristic K-emission, production efficiency 4=11738
 electron probe, light elements 4=23689
 electron probe microanalysis, conference 4=10678
 electron probe microanalysis, conference 4=10679
 electron-probe microanalysis, of low atomic number elements 4=13754
 electron probe microanalysis, probe technique 4=7711

Chemical analysis — contd

X-ray — contd

- filters, applications in spectrography 4=10675
 light elements, using H^3/Zr as exciting source 4=23688
 micro and electron microscope combined, two gun 4=27574
 micro furnace for high temp. observations 4=18471
 microanalysis, conference, Stanford (1962) 4=24773
 microscopy, four methods, review 4=29155
 photoelectron spectra 4=23686
 Physical Society exhibition review 4=23981
 radiation transfer, calc., effect of matrix 4=4285
 rare earths in Y-Fe garnet powders 4=10677
 solutions, atomic numbers > 25 4=26771
 sources of X-ray and bremsstrahlung from tritium absorbed in Ti or Zr 4=6014
 spectrometer, single-crystal multichannel scanning 4=4726
 spectrometer, windowless X-ray tube, for light elements 4=17874
 Al in Fe-Al alloys, fluorescence method 4=10676
 Fe films 4=2122
 FeSn₂, determ., at Sn-Fe interface during flash-melting 4=23690
 FeSn₂, at Sn-Fe interface during flash-melting, diffraction determ. 4=23690
 Ni films 4=2122

Chemical effects of radiations

See also Nuclear reactions, chemical effects; Photo-Chemistry.

- aromatic anion lifetimes in aliphatic alcohols 4=30908
 cyclohexane-benzene binary mixtures, hydrogen yield rel. to composition 4=23677
 explosives, π irradi., "spherical hot spots" 4=17871
 ice, electron and atomic H formation, rel. to γ -irrad, 77°K 4=4715
 polymers, branching 4=16095
 toluene- α , α , α -d₃, radiolysis, thermal-spike model 4=26762
 AgBr, u.v. irradiated, e.s.r. detection of colloidal particles 4=26408
 NH₃, proton irradi. rel. to conc. and decomp. 4=15848
 Pb hydroxide, decomposition in electron microscope 4=4698

acoustic waves

- cytosine, formation of fluorescent product 4=7772
 photographic film, exposed and unexposed, under u.s. 4=14412
 polyisobutylene in soln., degradation, mol. wt. distrib. 4=7773
 H₂O decomposition, no change in H isotope ratio 4=13745
 K₂SO₄, n irradi. 4=4089
 (NH₄)₂SO₄, n irradi., N₂H₄ prod., by u.s. 4=4089
 Na formate, decomposition, no change in H isotope ratio 4=13745

ionizing radiations

- alkyl radicals, transient formation in liq. hydrocarbons 4=3925
 amino acids, radical prod. by t β -rays, e.s.r. obs. dicarboxylic 4=29234
 ammonium dihydrogen phosphate, neutron irradiated, annealing by compression 4=6893
 aromatics in boric acid glass, free radicals, e.s.r. 4=13742
 cyclohexane-benzene soln., benzene consumption on irradi. 4=13743
 ethyl bromide, catalysis from ethylene + HB, by Co⁶⁰ 4=10650
 halogen ion, dl, formation, in glasses, by X-rays 4=4707
 hydrocarbons, γ -irradiated "free ion" yield 4=2167
 macromolecules, dissociation into large and small radicals 4=20838
 methane radiolysis, effect of additives 4=7774
 methane, radiolysis, effect of pressure 4=17870
 methyl orange, use in dosimetry 4=5894
 molecular aggregates, exciton impurity level calc. 4=28423
 and molecular dissociations, crystal exciton theory 4=9918
 organic sulphur compounds, meas. of appearance pot. prod. by electron impact 4=8623
 propane, γ -radiolysis, effect of elec. fields 4=29233

Chemical effects of radiations — contd

ionizing radiations — contd

- radiolysis, pulse apparatus for reaction kinetics obs. 4=26763
 solvated electron in aliphatic alcohols, pulse radiolysis 4=29232
 thermal neutron capture, influence of crystal defects 4=6892
 CO, γ -radiolysis with inert gases, meas. 4=13741
 Dy³⁺ in CaF₂, Dy³⁺ → Dy²⁺ photo-reduction by γ -rays 4=23679
 HCl and HBr, liquid phase, evidence of H atoms 4=23680
 H₂O, by γ , H₂⁺, H₃O⁺ struct. and stability 4=10651
 H₂O synthesis, radiation induced, energy transfer from CO₂ 4=23678
 L-cystine dihydrochloride, irradiated, e.s.r. meas. 4=13310
 N₂-O₂ mixtures, by α -rays, oxygen 5577A line production 4=15287
 NaNO₂ solns. containing mercuric salts 4=2164
 [Ni(NH₃)₄]²⁺, [Ni(NH₃)₆]²⁺, formation and stability in water, polarographic obs. 4=4713
 NiSO₄, irradi. by Au¹⁹⁸, catalytic H-current by radiolysis 4=7775
 Pb(NO₃)₂, γ damage, annealing, effect of crystal imperfections 4=4714
 PbNO₃, NO₂ and NO₃ formation, e.s.r. 4=17682

Chemical reactions

- See also Exchanges, chemical; Heat of formation; Heat of reaction; Oxidation; Photochemistry; Polymerization; Reaction kinetics
 acetylene, ion-molecule 4=12523
 acetylene in O, flames 4=23655
 acetylene-O₂, delayed appearance of OH 4=20830
 alkali metals with organic halides, diffusion flames, radical reactions 4=22406
 alkanes with tritium recoil atoms, rel. to C-H bond type 4=7776
 application of optical pumping 4=17853
 atmosphere, upper, review 4=26808
 atmospheric 4=10698
 atom recombination rate constants, three-body 4=17852
 boro-organic cpds., pyrolytic stability 4=22267
 coal, carbonization, rel. to spin-lattice relax., 300°-600°C 4=1870
 complex chain diagnosis with HCl catalysis 4=2157
 cyclopropane, unimolecular, statistical complex ion calc. 4=13707
 diatomic molecule AB with atom C, isotope effects, classical model 4=12538
 dimethyl ether, pyrolysis, HCl catalysis 4=2157
 electrolytic S₂O₈²⁻ with I⁻, specific cationic effects 4=13730
 electron donors and acceptors, 1:1 interactions in soln., theory review 4=23653
 electron transitions, in H + H, type reactions 4=17856
 equilibrium, complete set of independent reaction calc. 4=23624
 ethane, ethyl, decomposition 4=26752
 ethyl-d, radicals, decomposition 4=10639
 and flow, gases, shock waves 4=16138
 gas Mach stems 4=24306
 gases, d.c. electric discharge effects 4=18758
 gas-phase, coherent light generation 4=19282
 gas-phase, nonequilibrium effects, composition depend. 4=23632
 halogen molec. beams with alkali metal atoms 4=28288
 n-hexane and air in flames, activation energy calc. 4=29221
 high temp. in furnace crucible, improving gas-melt contact 4=23660
 hot-atoms, kinetics, average collisional energy loss evaluation 4=26735
 ignition, transition to explosion, vessel size 4=26754
 inert gases, recombination rate constants, three-body 4=17852
 interacting reactions relaxation by ultrasonic absorption in fluids 4=26732
 ion-molecule, in methane and ethane 4=11538
 ion-molecule reactions, ionic k.e. distrib. 4=27473
 liquids, u.s. absorpt. obs. of equilib. 4=25745
 in molecular beam scattering, review 4=25786
 neopentane pyrolysis, catalytic transfer by HCl 4=23633
 neopentyl chloride, pyrolysis mechanism 4=2148

SUBJECT INDEX

Chemical reactions—contd

- nitrates, ionic, in aq. solns., Raman spectral study 4=2687
 one-electron transfer reactions, proton magnetic resonance line widths 4=4690
 organic acid—base in aprotic solvent 4=29209
 p-nitrophenol with triethylamine, in aprotic solvents, three types of complex form. 4=29209
 phthalimide in alkaline solns., from spectrum, u.v. 4=9759
 polar soln. mixtures, from dielectric const. and refractive index 4=10637
 potential-energy surfaces, local approx. by surfaces permitting separation of variables 4=28158
 rapid, modification of continuous flow apparatus for meas. 4=26737
 rare earth tri to divalent ion conversion in alkaline earth fluorides 4=29213
 sec-propyl ions, hydride and proton transfer 4=13712
 sonochemical, for ultrasonic cavitation meas. 4=8351
 at surfaces between dissimilar solid materials, rel. to bonds 4=10594
 thalidomide in alkaline solns., from spectrum, u.v. 4=9759
 unimolecular, oscillator models 4=26733
 unimolecular, statistical complexation calc., anharmonicity effects 4=13707
 $\text{BF}_3(\text{g}) + \text{B}_2\text{O}_3(\text{l}) = (\text{BOF})_3(\text{g})$ 4=2149
 $\text{B}_{20}\text{H}_{16}$ preparation 4=7748
 $(\text{BOF})_3(\text{g}) = 3\text{BOF}(\text{g})$ 4=2149
 BaO solid + H_2O vapour, mass-spectrometric study 4=23647
 Br, recombination rate constants, three-body 4=17852
 $\text{Br}_2 + \text{Cs}$ crossed beams, CsBr ang. distrib. 4=28286
 CD_4 , unimolecular, statistical complexation calc. 4=13707
 C_3H_3^+ ion formation 4=13714
 $\text{CO}-\text{O}_2$ photolysis in solutions, 77°K 4=13734
 CdS , chemisorption of O, elec. cond., contact potential obs. 4=29194
 $\text{CrO}_3 + \text{Cr}_2\text{O}_3$ in solia state, study by i.r. spectroscopy 4=10169
 D atoms in H_2 , CH_4 , and C_2H_6 , and moderation probabilities 4=23673
 D atoms in ^2P state, with N_2 , meas. 4=13724
 $\text{D} + \text{Cl}_2 \rightarrow \text{DCl} + \text{Cl}$, rel. to i.r. chemiluminescence 4=7747
 Fe_3O_4 formation, thermodynamic prop. changes 4=26742
 in GeTe vaporization, partial pressures, entropy changes 4=20828
 H atom recombination on Al surfaces 4=13721
 H atoms in D_2 , CD_4 and C_2D_6 , and moderation probabilities 4=23673
 H atoms in ^2P state, with N_2 , meas. 4=13724
 H_2 , hot atom, with propane, butane, butene-1, kinetic theory analysis 4=30395
 H with isobutane, displacement steric effect 4=26753
 H_2 in upper atmosphere, and OH, HO_2 , H_2 , NO_2 , O_3 , review 4=13718
 $\text{HD}^+ - \text{He}$, $\text{HD}^+ - \text{Ne}$, $\text{Ar}^+ - \text{HD}$, and $\text{Kr}^+ - \text{HD}$ reactions, isotope effects, intramolecular 4=29205
 H_2 , D + P (white vapour) + O (traces), HPO, DPO spectra 4=15346
 $2\text{HI} = \text{H}_2 + \text{I}_2$, thermal conductivity 4=24270
 H_2O synthesis, radiation induced, energy transfer from CO_2 4=23678
 $\text{H}_2\text{O}_2 - \text{NaOCl}$ solns., luminescence, and excited O_2 4=24223
 H_2O_2 formation, by free-radical reaction on cold surfaces 4=10640
 $\text{H}_2 + \text{X} = \text{H} + \text{HX}$ and $\text{X}_2 + \text{H} = \text{X} + \text{HX}$, (X = H, F, Cl, Br and I) 4=26738
 He, recombination rate constants, three-body 4=17852
 I_2 , recombination rate constants, three-body 4=17852
 K-Li- NO_3 melts, Cd—chlorocomplex formation 4=2143
 MgO , sorption of O_2 on n, γ irradi., e.s.r. obs. 4=23600
 Mo , reactive diffusion in $\text{BCl}_3 + \text{SiCl}_4 + \text{H}_2$ atmos. 4=28489
 MoSi_2 reduction by Be powder at 900°–1100° C 4=10638
 $\text{MoSi}_2 + \text{Be} \rightarrow \text{MoBe}_{12}$, MoBe_{22} and $\text{Mo}(\text{Si}_{0.9}\text{Be}_{0.1})_2$ 4=10638
 N , recombination rate constants, three-body 4=17852
 N , in upper atmosphere, bimolecular, rates 4=13719
 $\text{N} + \text{O} \rightarrow \text{NO}^+ + \text{e}$ 4=30397
 NH_3 gas, ion-molecule reactions 4=2141
 $\text{N}-\text{O}$ afterglow, ionization 4=23648
 $\text{NO} + \text{N} \rightarrow \text{N}_2 + \text{O}$ in glow discharge 4=14595
 $\text{NO} + \text{O}$, quantum yield, chemiluminescent standard 4=13720

Chemical reactions—contd

- $\text{N}_2\text{O} + \text{O}^-$, mass spectrometer obs. 4=29218
 $\text{NO} + \text{O} \rightarrow \text{NO}_2$ in glow discharge 4=14595
 $\text{NO} + \text{O} \rightarrow \text{NO}_2 + h\nu$ at low press. 4=26744
 $\text{Na}-\text{H}$ (active) flame, chemiluminescence, self absorption 4=23654
 $\text{Ne}-\text{H}_2$, ion—mol., under electron bombard. 4=4694
 $\text{Ni} + \text{Cl}_2$, high temp. 4=13723
 NiH desorption enthalpy of H 4=23649
 O , recombination rate constants, three-body 4=17852
 O_3 and ozonide production and stabilization in H_2O 4=23646
 O , in upper atmosphere, bimolecular, rates 4=13719
 O_2 luminescence in $\text{NaOCl} + \text{H}_2\text{O}_2$ solns. 4=5195
 O_3 production from O_2 -filled ozonizer, surface effects 4=17860
 $\text{O} + \text{N}$ atomic mixtures, chemiluminescence 4=29217
 $\text{O} + 2\text{O} \rightarrow \text{O}_3 + \text{O}$, rate const. 4=15836
 $\text{O}(\text{D})^2$ with CO, photolysis, 77°K 4=13735
 $\text{P}_4 + \text{O}$, spectrum, PO radical 4=23638
 $\text{ROH} + \text{OH}^- \rightarrow \text{RO}^- + \text{H}_2\text{O}$ in alcohols 4=13725
 SO_2 in Ar, shock excited, thermal radiation 4=26747
 TiN , and struct. 4=22451-2
 $\text{Xe}-\text{F}$, i.r. spectral study of mixture 4=2836
 $\text{ZnO} + \text{Fe}_2\text{O}_3$, explosive compression, Zn ferrite prod. 4=4701
 $\text{X}^* + \text{Y} \rightarrow \text{XY}^+ + \text{e}$ for inert gas atoms, lifetimes 4=13717
- Chemical structure**
 See also Bonds
 Fe , ions, trivalent, in molten silicates + Fe_2O_3 , coordination 4=2654
- Chemical technology**
 boiler water vapour emulsion density meas. by Re^{186} 4=188
 radioactive tracer 4=26768
 rapid reaction meas., continuous flow apparatus modification 4=26737
 rare earth tri to divalent ion conversion in alkaline earth fluorides 4=29213
- Cherenkov radiation**
 See also Counters, Cherenkov, Electrons, radiation.
 for astronomical obs., γ -ray, from air showers, review 4=10795
 calcite, prod. by 863 MeV protons 4=16866
 charged particles in circular motion in waveguide 4=16865
 from charges moving in dielectric layer 4=19189
 from cosmic-ray air showers 4=30287
 cosmic ray showers, expt. and theoretical study 4=30288
 cosmic ray showers, extensive air, and primary spectrum, m.f.p. 4=21971
 crystal phonons, forced, and phonon increase 4=15410
 crystal, transparent uniaxial, magnetic and electric moment produced 4=10160
 e.m. radiation absorption 4=6015
 elastic conducting medium in mag. field by mechanical impulse 4=16168
 elastic conducting solid—liquid contact in mag. field 4=24288-9
 elastic conductor in mag. field next to vacuum 4=14244-5
 elastic dielectric in mag. field by mech. impulse 4=16167
 elastic liquid in a mag. field with a moving mechanical impulse 4=5271
 exosphere, by sun's corpuscular radiation 4=4791
 ferrite, anisotropic, from Doppler effect 4=11805
 ferrites, anisotropic, radiation resistance 4=19188
 ferrite, magnetized, Vavilov—Cherenkov effect 4=30718
 induced, in resonance induced photon scatt. 4=11959
 intensity, calc. with allowance for dispersion 4=3381
 in metallic strata embedded in lattices 4=19185
 due to moving mechanical impulse in dielectric liquid in mag. field 4=5270
 negative absorption in electron stream, rel. to plasma wave longitudinal amplification 4=559
 nuclear reactor, fission, start up 4=1162
 oriented spin effects 4=19480
 in plasma in field, for particle motion parallel to field 4=5616
 plasmoid, energy loss, non-linear theory 4=29922
 recording, rel. to Sb—Cs photocathode polarization selectivity 4=581
 stars, magneto-acoustic, on motion in ionized gas 4=13894

Chlorine

- adsorption and desorpt. of anion on Pt, multipulse potentiodynamic meas. 4=30890-1
atoms, aspherical scatt. factors in sp^3 , sp^2 and sp valence state 4=26626
diffusion in $AgCl$, temp. var. 4=9996
dissociation by neutron bombardment 4=3918
e.s.r. of Cl_2^- in irradi. NH_4OHCl 4=28869
ions, Cl^- , lowest config., Hartree-Fock calc. 4=12377
ions, Cl^{35} , in various cpds., n.q.r., 4.2-300°K 4=26458
laser line classification review 4=19287
molecular crystals, far i.r. spectrum meas. 4=20445
molecular structure, by electron diffraction 4=6562
nuclear quadrupole resonance, temp. depend. 4=1313
spectrum, continuous, Cl , 4=30426
spectrum, transient absorption, analysis 4=1259
thermal dissoc., shock tube study 4=4691
X-ray spectrum, absorpt., in $KClO_3$, $KClO_4$, X-ray effects 4=13029
 $Cl + HCl$ and $Cl + DCl$ exchange rates, D-isotope effect, and tunnel effect models 4=29206
 Cl^{37} , Auger K group intensities, from Ar^{37} decay 4=12366
 Cl_2 , solid, orthorhombic space group, obs., and prediction from intermolecular forces 4=23432
 Cl^{35} in polycrystalline cpds., nuclear quadrupole interactions, elec. induced perturbations 4=28909-10
 Cl^{35} in $NaClO_3$, n.m.r. 4=7344
in ZnS , as impurity, and crystal imperfections 4=6821

Chlorine compounds

- n.q.r. Zeeman effect, Cl^{35} 4=25739
Würster's blue perchlorate, proton mag. reson. 4=28906
 ClF , n. m. r. gas-liquid shift 4=30476
 ClF_3 , F^{19} n. m. r. in gas phase, and gas-liquid shift 4=30476
 ClF , mol. structure and props. 4=9737
 $Cl^M(M = Pd, Pt, Se, Sb, Pb, Sn, Ti)$, mol. vibr. calc., from Raman spectra 4=9738
 ClO_2 , absorpt. bands in vac. u. v. 4=6589
 ClO_2 in excited state, double-minimum potential, evidence 4=6588
 ClO_3F , n.m.r. of F^{19} , interpretation 4=9768
 $HClO_4$, anhydrous, heat capacities and thermodynamic functions 4=9859

Chromatography

- See also Adsorption; Chemical analysis, adsorption.
chromatogram, β -activity, liquid scintillation counting 4=25334
conference on applied spectroscopy 4=5378
gas, electron drift-velocity detector for impurity determ. 4=29246
gas, programmed preparative scale chromatograph 4=23693
 β -radiochromatogram reading instrument 4=23691
radiogaschromatograph, for C^{14} and T-labelled organic molecules 4=22063
use for Sr^{90} determ. in milk and rainwater 4=25347

Chromium

- antiferromagnetic anisotropy 4=15659
antiferromagnetic props., correl. with plasticity 4=23028
antiferromag. spin density wave models 4=23026
antiferromagnetic transition temp., effect of pressure 4=26349
atom, Cr^{53} , h. f. s. meas., mag. -dipole interaction 4=6470
atom, and excited states, self-consistent field calc. 4=9641
atoms, electron density, by X-ray scatt. 4=13588
atoms, $L_{II,III}$ energy levels, rel. to chemical binding 4=1427
brittle-ductile transition, effect of N concentration 4=23134
brittleness, effect of hydrostatic press., up to 10^4 atm 4=23133
conductivity, elec., solid and liquid 4=11212
cracks, at twin-grain boundary intersections 4=23136
crystal growth, whiskers 4=10483
crystal structure, 113°-373°K 4=29104
de Haas-van Alphen effect and antiferromagnetic structure 4=23027
determination, in ruby, spectrophotometric determ. 4=15857
diffusion in Al, 250-605°K 4=22610
diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194

Chromium—contd

- diffusion, in Ni, 600-900°K 4=15492
diffusion in Ni-Cr alloys rel. to Cr content 4=20302
ductile-brittle fracture temp., effect of added C, N, O and S 4=30770
ductile transition temp., impurity effects 4=7424
e.s.r. in CdS 4=26389
elastic constants and damping, ~40°K, effect of thermal and mech. history 4=26501
electric and mag. props., rel. to temp. and ext. mag. field 4=6924
film, O_2 chemisorpt. effect on work function 4=23657
films, abrasion resist. meas. 4=23112
films, absolute phase change on reflection 4=27323
films, optical consts., evaporation effects, prior obs. 4=26185
films, optical properties, rel. to evaporation conditions 4=7115
films, residual resistivity, rel. to imperfections 4=20329
films, separated isotopes, by vacuum evaporation 4=10606
films, ZnS and cryolite coated, spectral refl. curves 4=24377
fracture study, from ductile-brittle transition 4=23135
ion, Cr^{3+} , self-consistent field calc. 4=9641
ions, Cr^{3+} , e. s. r. in cubic $SrTiO_3$, temp. and press. depend. 4=10325
ions, Cr^{3+} , e.s.r. in rutile 4=23057
ions, Cr^{3+} , spin-lattice relax. in ruby, calc. 4=10320
ions, $Cr V$, $(3d)^2$ config., multiplet, effect of electron correl. 4=15274
ions, e.s.r. in ruby, lineshapes, statistical theory 4=26388
ions in ruby, antiferromag. exchange coupling, <0.3°K 4=17666
lines in seeded Cu arc, integral radiation 4=16457
liquid, pure, solubility of H_2 4=5157
magnetic props. when cooled in mag. field 4=17646
microscopy, electrolytic deposits 4=10579
mirror, optical props. in visible spectrum rel. to prep. 4=22853
phase transform., high temp. search 4=23261
phase transform., 200°K, no anomalous thermal exp., X-ray obs. 4=20700
polymorphism search in Cr-Ni, Cr-Fe at high temps., X-ray diffr. obs. 4=7479
refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
targets for nuclear bombardment, preparation 4=16716
vapour, interdiffusivity with Ar at high temp. 4=24266
Young's modulus data, rel. to temp. 4=30788
X-ray emission and absorpt. spectrum interpretation 4=22852
X-ray K absorption spectra of cubic and hexagonal Cr 4=7118
X-ray lines, K, from flash tube, meas. 4=20453
X-ray reflection intensity decrease from powder, prob. due to oxidation 4=20751
 Cr^{53} , n. m. r. in $CrCl_3$, var. with temp., mag. field, and antiferromag. 4=13341
CrI and II oscillator strengths, by shock tube spectrosc. 4=18335
 $Cr(III)$, spin Hamiltonian in $Co(NH_3)_6I_2$ cubic field 4=20588
 Cr^{3+} , e. s. r. of $3d^5$ config. in $ZnSe$ and $ZnTe$ 4=13312
 Cr^{2+} in CdS single crystals, e.s.r. 4=15669
 Cr^{3+} in TiO_2 , external stress effects on e.s.r. 4=26435
 Cr^{3+} in Al_2O_3 , e.s.r. absorpt. line depend on Cr conc. 4=26385
 Cr^{3+} in Al_2SiO_5 (kyanite), paramagnetic resonance 4=13309
 Cr^{3+} e.s.r. in ruby, line splitting by external elec. field 4=26387
 Cr^{3+} e.s.r. in $LaAlO_3$, 4°-700°K 4=26386
 Cr^{3+} e.s.r. in MgO , lattice imperfection effects 4=26440
 Cr^{3+} ions in aqueous solutions, proton and deuteron relax. times 4=21160
 Cr^{3+} in ruby, electric shift of e.s.r. lines 4=26384
 Cr^{4+} , e. s. r. in $\alpha-Al_2O_3$, meas. 4=7322
 Cr^{3+} , analytical self-consistent-field functions 4=28122

Chromium compounds

- alloys, containing Y, cubic monocarbides, Mn and Re strength 4=30771
chrome ferrotype plates, adsorption and desorption rates of polystyrene, for 10^{-1} to 10^{-4} mg/ml conc. 4=30888

SUBJECT INDEX

Chromium compounds—contd

- chromia-alumina catalysts, optical meas. of specific chromia area 4=29174
 chromia gel, ht. of Ar sorption 4=20818
 chromite spinels, Jahn-Teller and spin-orbit effects 4=15407
 Cr alloys, mag. props., rigid band model 4=17624
 Cr III complexes in aq. soln., e.s.r. study 4=201
 Cr(III) complexes in rigid glass, luminescence meas. 4=22920
 Cr dihalides, mean amplitudes of vibr. and shrinkage effect, 1000°K, 1250°K and 1500°K 4=30441
 Cr ferrite, Grtneisen's const., X-ray meas. 4=1407
 Cr oxychlorides, fluorides, sulphates, e.s.r., and mol. struct., bonding 4=20098
 Cr silicides, conductivity, elec., solid and liquid, var. conc. 4=11212
 Cr spinellides, thermal conductivity, rel. to temp. 4=9868
 Cr trisethylxanthate, mol. electronic struct., ligand field theory 4=22412
 Cr-Al liquid alloys, viscosity and elec. resistivity 4=8181
 CrBO₃, with calcite structure, X-ray evidence 4=29105
 CrBr, mag. antiferromag. at low fields, transition to ferromag. at high fields, angle effects 4=10297
 CrBr₃, dislocation multiribbons and stacking faults 4=22585
 CrBr₃, n.m.r. of Br^{79,81} in ferromag. state 4=28891
 CrBr₃, use of spin-wave renormalization 4=15645
 [Cr(C¹³N)₆NO]³⁺, e.s.r., two h.f. splitting const. 4=12512
 CrCl₂, CrCl₃, spectra 4=28205
 CrCl₃, dislocation multiribbons and stacking faults 4=22585
 CrCl₃, crystal structures of the 2 phases from X-ray diffraction and Cl³⁵ n.q.r. 4=17808
 CrCl₃, e.s.r. 4=10315
 CrCl₃ in LiCl-KCl, e.s.r. 4=10315
 CrCl₃, n.m.r. of Cr⁵³, var. with temp., mag. field, and antiferromag. 4=13341
 CrCl₃ in ZnCl₂, e.s.r. 4=10315
 Cr, F₂, crystal structure 4=23433
 Cr-Fe, Hall effect meas. at room and liq. N₂ temp. 4=22668
 Cr-Fe liquid alloys, viscosity and elec. resistivity 4=8181
 Cr-Fe-C liquid alloys, viscosity and elec. resistivity 4=8181
 (CrFe)₂O₃, mixed crystals, Néel temp. 4=1871
 CrH, "hexagonal Cr", crystal structure, atomic 4=2076
 CrI₂, phase transform., high temp. search 4=23261
 Cr-Ir alloys, superconductivity, and ferromag. 4=16342
 CrK alum, P₂²-T curve and colour transitions 4=28761
 Cr K sulphate alum, phase transition, 192.5°K 4=29006
 Cr(SO₄)₂·12H₂O, double refraction, magnetic, X band 4=13022
 CrN, current carrier activation energy meas. 4=12906
 Cr-Ni films, vacuum deposited on glass, thickness and composition 4=20809
 Cr-Ni, structure at high temp. up to 1260°C 4=26538
 CrO, spectrum, A⁵Π→X⁵Π band r-centroids, F-C factors 4=30427
 CrO₂, anisotropy energy, erratum 4=15397
 CrO₂, modified, in Te-CrO₂, ferromagnetic 4=13174
 CrO₂, vibrational spectrum 4=10169
 CrO₃ + Cr₂O₃ reaction, study by i.r. spectroscopy 4=10169
 CrO₃, vibrational spectrum 4=10169
 Cr₂O₃, antiferromagnetic, low-temp. residual paramagnetism 4=26270
 Cr₂O₃, corundum mag. lattice, spin configuration 4=30701
 Cr₂O₃, elec. conductivity of single crystal 4=26099
 Cr₂O₃, impurities of equal or lower valency, kinetics of inclusion, and effect on elec. props. 4=28612
 Cr₂O₃, kinetics of Nb₂O₅, V₂O₅ donor addition 4=30535
 Cr₂O₃, mag. structure, neutron diffn. meas. 4=28822
 Cr₂O₃, cotransfer with Al₂O₃, under hydrothermal cond. 4=26591
 Cr₂O₃, effect at low O₂ pressure on Fe₂O₃ melting relations 4=14453
 Cr₂O₃, neutron irradiation effect on elec. conductivity 4=10049
 Cr₂O₃, vibrational spectrum 4=10169

Chromium compounds—contd

- Cr₂O₃-Al₂O₃ mixtures, antiferromagnetism, e.s.r. study 4=26350
 Cr-Re, specific heat, antiferromag. and supercond. 4=25853
 Cr-Rh alloys, superconductivity, and ferromag. 4=16342
 CrS, mag. structure, neutron diffn. meas. 4=28762
 Cr₃S₄, mag. configuration calc., comp. with neutron diffn. meas. 4=28800
 Cr₃S₆, Cr₂S₃, ferrimag., origin, quenching, pressure squeezing effect, X-ray diffn. meas. 4=28834
 Cr-Sc, ordered vacancies and elec. cond. 4=1549
 Cr₃Se₄, mag. configuration calc., comp. with neutron diffn. meas. 4=28800
 CrSe_x, 1.00 ≤ x ≤ 1.33, elec. conductivity rel. to temp. 4=22763
 Cr-Si films for strain gauges 4=26502
 Cr-Si, thermal and magnetic props. 4=1802
 Cr-Si-O system, phase transformations at low O pressures 4=24434
 CrSi₂, n and p-type semicond. props. 4=20357
 CrTe, magnetoresistance, temp. var. 4=22982
 Cr₃Te₄, mag. configuration calc., comp. with neutron diffn. meas. 4=28800
 Cr_{1-x}Te, magnetic moment decrease with 0.1 ≤ x ≤ 0.33 4=4323
 Cr-V, Hall effect meas. at room and liq. N₂ temp. 4=22668
 Cr₃X₄ (X = S, Se, Te), antiferromagnetism, and atomic struct. 4=13267
 HCrO₄, DCrO₄, crystal structure 4=7613
- Cinematography**
 See also Cameras.
 electron micrographs, vacuum recording 4=17828
 transparent drops, moving, motion picture method 4=8468
- Circuits**
 See also Counting circuits.
 for airborne apparatus for meas. of meteorological and dynamic props. of atmosphere 4=13779
 amplifier-detector, logarithmic, alignment 4=11496
 amplifier for liquid conductivity meas. 4=18633
 amplifier, low noise solid-state for semiconductor detectors 4=16748
 amplifier for radiometric applications 4=21351
 amplifier, selective, with var. freq. and bandwidth 4=14549
 amplifier-transistor circuits for multiplication and log. conversion 4=8592
 amplitude limiter 4=16408
 automatic frequency control, klystrons and microwave spectrometers 4=18644
 book, rectification, amplification and oscillations 4=8581
 bridge, a.c., noiseproof 4=16389
 bridge networks, linearization of output 4=21435
 bubble chamber liquid-H level and pressure indicator 4=16769
 bubble chamber, picture reading flying spot digitizer, circuit 4=14990
 calculating, analogue, for resolving power increase 4=14010
 for capacitance meas., for small and rapidly varying values 4=16386
 capacitor and switch, low inductance 4=21446
 cascade generator, symmetrical 4=16575
 cathode follower amplitude control 4=18645
 chronograph, millisecond Vernier 4=16411
 chronograph, transistorized counter, for μsec time meas. 4=6
 coaxial connector, fast distortionless risetime, design and construction 4=29847
 compensators for current regulation 4=29859
 condenser discharge analogue for exploding wire 4=11556
 connector, solderless, for electronic breadboards 4=18637
 constant phase shift by first and third harmonic energising 4=24531
 for control of c.r.t. with mechanical scanning 4=14554
 control system of nuc. resonance mag. field 4=757
 coupled, with non-linear Duffing reson. on one 4=18639
 cross-spectrum analyser, low-freq. 4=8
 crystal growth temperature control 4=4534
 current divider, for null d.c. measurements 4=14542
 current emitted by ionization gauge, regulation 4=2739
 current-pulse generator, 250 kA, 0.3 μsec 4=14558

Circuits — contd

current regulator, $\pm 0.1\%$, for u.v. source 4=14350
 current regulator for 10 000 A magnet power supply 4=11618
 current source, const., continuously adjustable, current stabilizer and field sweep for electromagnet 4=18646
 Dauphinee-Mooser, zero-point detector 4=8593
 detector, phase sensitive, for long integration time 4=14550
 detector, reactor fuel rod burn-out 4=25467
 e.m. wave attenuation meas. in super-high freq. pulse discharge 4=688
 electrical analogue for ht. cond. boundary conditions 4=27351
 electrical models, boundary conditions, multiterminal network theory 4=18638
 electromagnet current stabilizer 4=425
 electron microscopy, Zener diode voltage reference sources 4=3048
 electronic-optical transducer, multistage, image control 4=431
 electronic photographic recorder 4=337
 electronic sequence control for programming events 4=14547
 equivalent circuit of coupled vibrating system 4=259
 feedback control system with two nonlinearities 4=24529
 flash photolysis lamp, h.v. 4=24357
 for flash tube triggering 4=29749
 frequency convertor, 50-300 cycle 4=14557
 frequency marker, 50 kc/s-10 Mc/s every 10 kc/s 4=27448
 frequency response, a.c. circuits with negative L, C or R 4=18640
 frequency transformation, using photomultipliers 4=16531
 functional converter, for random voltage production 4=16405
 gamma-ray spectrometer gain stabiliser, transistorized 4=25057
 Gauss impulse generator 4=5535
 for Geiger counter characteristic meas. 4=16722
 generator of nanosecond steep-front pulses 4=18650
 high voltage precision regulator, transistorized 4=29849
 high-voltage supply, portable 4=16574
 InSb Hall element thermal time const. meas 4=6978
 ignitron, stabilized switching 4=14546
 klystron, millimetre wave, synchronization with quartz oscillator 4=11790
 LGZ-10 oscillator, extension of r.f. heating range 4=14556
 lag line and lag generator, 1-100 msec delays 4=14555
 Liebman mesh, resistance between adjacent points 4=24528
 light source trigger, for bubble chamber 4=5905
 lock in, semicond. diode 4=27447
 low-voltage transistorized stabilised supply 4=16397
 magnetic resonance recorder recentering 4=8965
 maser rel. to classical oscillator 4=19250
 mass spectrometer digitizer, holding circuit 4=24761
 Moiré fringe interpolator 4=8443
 n.m.r., frequency-swept absorption circuit 4=21664
 n.m.r. magnet, stabilized power supply 4=8962
 n.m.r. oscillator, frequency without amplitude modulated 4=5836
 negative trigger generator 4=21436
 neutron spectrometer, time-of-flight, slow-fast coincidence system 4=6080
 nuclear system noise analysis, conference 4=19855
 omegatron mass spectrometer 4=21592
 oscillator, autodyne, tunnel diode, for e.s.r. detect. at low temps. 4=8957
 oscillator, for cavity resonator h.f. system for proton accelerator 4=3076
 oscillator, grid-current regenerative, for e.p.r. obs. 4=16673
 oscillator, grounded grid, 100 Mc/s, used with r.f. ion source of particle accelerator 4=29852
 oscillator, simultaneous self-maintenance of two frequencies 4=8590
 oscillators, phase locking phenomena 4=27445
 oscilloscope sweep delay digital read-out 4=27449
 oscilloscope time-base 4=16409
 oscilloscope waveform recorder 4=21441

Circuits — contd

particle accelerator, Van de Graaff, source leak control, transistorized 4=3065
 phase detector with phase modulation 4=16391
 phase discriminator, gas-discharge 4=16390
 phase meter, direct reading 4=16392
 phase meter, with frequency multiplication 4=16393
 for photo diode VI characteristic 4=17502
 phase sensitive detector to 100 Mc/s 4=29851
 photoconduction, spectra and kinetics, investig. apparatus 4=424
 photomultiplier circuit for precision spectrophotometry 4=11497
 photomultiplier dynode voltage regulator, transistorized 4=8818
 phototubes, pulse operation 4=576
 polyphase systems invariant under transformation to symmetric components 4=27446
 positive ion source, triggered, low-voltage 4=19112
 potential divider, decade 4=18647
 power leveller, microwave, for K band, milliwatt range 4=8928
 power stabilization, improved, in varying resistances 4=8589
 power supplies, stabilized, positive feedback 4=16398
 preamplifier, hybrid electrometer 4=21437
 programmer for furnace temp. control 4=24422
 projection lamps, high-wattage, Si controlled rectifier 4=27307
 proton relax. in liquids, meas. 4=760
 pulse amplifier, nsec risetime 4=14548
 pulse-generation, random time with Poissonian distrib. 4=18651
 pulse generator, 15 kV, of millimicrosec duration 4=429
 pulse generator, 45 A, with Si-controlled rectifiers 4=433
 pulse generator, nsec, using avalanche transistors 4=16413
 pulse generator, h.t., for Kerr cell shutter 4=21444
 pulse generator, high current low impedance 4=8595
 pulse generator, for magnetrons 4=428
 pulse generator, $0.01-0.5 \mu\text{sec} \times 2 \text{ kV}$ 4=16414
 pulse generator, 10 MW at 2 Mc/s 4=8596
 pulse generator, 2-channel 4=432
 pulse generator for time of flight mass spectrometer 4=17855
 pulse generator, 200 V, 5 millimicrosec 4=430
 pulse generator, 2000 A, 50 nsec, for injection laser 4=19300
 pulse generator, with var. delay time 4=16415
 pulse, high power, "crowbar" triggering 4=18648
 pulse receiver system, stagger-tuned, rel. to relaxation time meas. 4=27443
 pulse transformers, wide band, low impedance 4=2930
 pulse trigger, fast, transistorized, simple 4=434
 read-out for optical alignment device 4=18017
 for registering sinusoidal voltage amplitude minima 4=14553
 for resistance meas., pulse method for up to $10^{10} \Omega$ 4=16395
 sampling oscilloscope use with random signals 4=21442
 scalar, mechanical binary 4=27009
 scale-section converter analysis 4=8582
 semiconducting diode minority carrier lifetime meas. 4=1626
 servo with backlash in output coupling 4=24530
 for shock tube, precursor 4=27251
 Si voltage stabilizer, under power balance condition 4=426
 spark gap trigger, zero energy, up to 250kA 4=14611
 spark-triggered arc electrode shock hazard removal 4=29895
 speech circuits with long delay, echo elimination 4=4969
 speech, pitch extractor for fundamental frequency 4=4966
 stabilizer, current, using mag. field 4=16402
 stabilizer, γ -ray spectrometer 4=11968
 stabilizing, for magnetic lens current 4=11709
 stabilizer, current, 0.1-11 mA 4=16401
 stabilizer, MV-pulses of accelerator pulse transformers 4=16576
 for step-voltage production 4=14551

SUBJECT INDEX

Circuits — contd

- sweep generator, triangular waveform 4=21440
- switching functions for synthesis of 3 level circuits 4=27444
- switches, superconducting, review 4=8577
- synchronous excitation of suspended systems for elec. and mag. meas. 4=2925
- television receiver scanning, aperture influence compensation 4=11495
- temperature stabilizer for ion-source diffusion-chamber 4=617
- thermistor bridge, for $\approx 10^{-3}$ degree changes 4=18464
- thermistors in l.f. circuits 4=18641
- thermocouples, time constant detm. method 4=350
- time to amplitude converter 4=3258
- time-relay, multiposition automatic 4=16410
- transducer, capacitive, non-linear twin-T network 4=16407
- transformer for use in magnetic film logic 4=24793
- triggering circuits for spark chamber 4=9028
- tunnel diode discrimination, d.c., hysteresis 4=21439
- for ultrasonic interferometers, choice and tuning 4=290
- ultrasound velocity change measurement 4=8356
- vacuum gauge, semiconductor 4=11266
- voltage converter, transistorized 4=16400
- voltage multiplication device 4=16406
- for voltage stabilization, cyclotron reflecting system 4=14787
- voltage stabilizer for electrostatic generator 4=16577
- voltage stabilizer for transistor power supplies 4=16399
- voltage step generator 3=18649
- wattmeter for phosphor power absorption meas. 4=17592
- Wheatstone bridge, sensitivity 4=21434

Clay

- adsorpt. of Al_2O_3 , electron micrograph 4=23684
- magnetic moments, small, permanent, meas. method 4=8889
- plasticity, hysteresis effects, model 4=23137
- rheological const. and flow schemes 4=15854
- X-ray diffraction meas., adsorption cell 4=2058

Climatology

See Meteorology; Weather.

Cloud chambers

- convection, with cellular bottom 4=784
- coupled to β -spectrometer 4=16878
- diffusion, with constant supersaturation 4=16764
- diffusion, methyl alcohol in H_2 , density distrib. 4=783
- expansion valve, differential pneumatic type 4=14987
- He, at low press., operation 4=19338
- illumination of large chamber by electronic flash tubes 4=5908
- illumination of multiple type 4=21714
- illumination system 4=16767
- large, photography, rel. to simultaneous pulse and ionization meas. 4=781
- measurement of photographs with punched card output 4=9039
- review 4=24935
- stereophotographic frames, numbering 4=16766
- track photographs, photometric meas. of ionization 4=16765
- track simulator, three dimensional 4=30132
- tracks, ionization measurements 4=14986
- Wilson, demonstration using point corona 4=27728

Clouds

- accuracy of data derivation, requirements in satellites 4=26785
- cirrus i. r. reflection meas. 4=10713
- convection, generated by moist air mass, calc. 4=7828
- convective, life cycle, role of condensed water 4=29281
- crystallization, propagation theory 4=2193
- crystallization of supercooled clouds caused by Pb iodide aerosols 4=13790
- cumulus, growth 4=7840
- cumulus theory 4=30930
- drop collision, coalescence, disruption 4=30910
- drop condensation, latent heat effects 4=26792
- droplet collision efficiency in electric fields 4=4767
- droplet growth, large, cumulus clouds 4=2194
- droplets, coagulating, kinetic eqn., allowing for condensation 4=15869

Clouds — contd

- droplets in rising air current, coagulation eqn., soln. 4=4766
- electric field effects on precipitation processes, review 4=10720
- electrification of melting ice and snow 4=2203
- electrification of water droplets and ice particles 4=2202
- e.m. wave obs., 30, 50 Mc/s 4=17889
- gas cloud, expansion in presence of ambient gas 4=14202
- gravity settling of cloud drops, effect on water content 4=15868
- grenade glow, diffusion rel. to atm. density, 120-180 km 4=23772
- height meas., photoelec. scanning system 4=29279
- heights and night-time cloud cover from Tiros radiation data 4=23747
- ice crystals formation and props. 4=7559
- layer, formation and development 4=30932
- luminous, in upper atmos., fotogr. instrumentation for triangulation 4=17917
- microstructure, study with continuous photoelectric device 4=7839
- movements, and diffusion, surface source at free convection in boundary layer with variable exchange 4=5238
- noctiluent, low-lying, artificial origin 4=10717
- noctiluent, particle sampling 4=4783
- noctiluent particles, composition anal. 4=29285
- noctiluent particles, electron microscope samples 4=29284
- noctiluent particles, moisture, Ca film indicator 4=29286
- noctiluent particles, ring pattern simulation 4=29287
- noctiluent particles, sampling 4=29282
- noctiluent particles, sampling, rocket techniques 4=29283
- noctiluent, rel. to meteor vapour condensation products 4=10714
- noctiluent, widespread, over Canada, June to July 1963 4=4784
- nucleation on insoluble particles for low supersat. ratio 4=17885
- particle collisions, effect on precipitation of inertial, hydrodynamic and electric forces 4=17886
- planetary atmospheres, formation, criterion 4=17991
- polydispersed, two-dimensional diffusion 4=23748
- properties and behaviour, book 4=10695
- radioactive aerosols removal rate 4=15877
- radioactive, effect on ground level atmospheric electricity 4=10729
- radioactive, high altitude, cosmic ray count obs. 4=7865
- radio emission, unassociated with lightning 4=2208
- recent research, Russia, survey 4=10711
- scattering of i.r. radiation 4=13794
- scattering and polarization props. 4=15867
- scattering and polarization props. in visible and i. r. 4=13793
- seeding with AgI, mechanism 4=23606
- stratocumulus, subinversion, elec. field meas. 4=7846
- and sun light, short wave, sea surface, empirical reln. 4=10723
- supercooling of water drops, effect of elec. field 4=368
- thermodynamics, book 4=13789

Coal

- anthracite, specific electrical resistivity 4=1558
- as paramagnetic surface, use for benzene relaxation and polarization 4=27198
- spin-lattice relaxation, rel. to carbonization, 300°-600°C 4=1870
- structure research using i. r. spectra of chars 4=4722

Cobalt

- atom, crossing two levels with same M value 4=22301
- crystal coord. in KCl, NaBr, NaCl from spectrum 4=26186
- crystal, single, domain struct. in mag. field 4=22979
- crystals from $CoBr_2$, reduction, ext. symmetry and twinning 4=26594
- crystals, hexagonal, stacking faults 4=12770
- deformed, annealing meas., Frenkel pairs recomb. 4=15471
- density, liquid and solid 4=18184
- diffusion in Ag, poss. surface effects 4=12800-1
- diffusion in Al dislocation short-circuiting models
- diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194

Cobalt — contd

- diffusion in MgO, grain boundary, 1350°C 4=20299
 domain nucleation at inclusions 4=17633
 domain structure, thickness depend. meas. 4=7253
 elastic anisotropy, stress effects 4=7425
 electric conductivity, spin-wave scatt. processes 4=1553
 elec. resistance at low temp., effect of domain structure 4=28529
 electric resist., temp. depend. 1.3°-4.2°K meas. 4=6925
 electrodeposited films, effect of soln. pH and applied mag. field 4=23664
 electrodeposited, growth habits 4=23346
 ferromagnetic domains and crystal dislocations 4=22980
 ferromagnetic n.m.r. in stacking faults and twins 4=1860
 film, refl. spots and streaks from electron diffr. 4=23434
 films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
 films, magnetoelastic energy 4=22971
 films, 10-100 A, magnetization, longitudinal and transverse 4=13175
 hydrogen over-potential in KCl solution 4=29228
 interdiffusion with Ni and Cu, meas. analysis 4=12789
 liquid, pure, solubility of H₂ 4=5157
 mag. annealing effect 4=4352
 magnetic coercivity rel. to temp., saturation remanence, in Co-Cu alloy 4=13173
 magnetic domains, temp. var., electron microscope obs. 4=13168
 magnetic film hysteresis, rot., and torque 4=13169
 magnetic form factor, hexagonal Co 4=30712
 magnetic form factor meas., by neutron diffr., spin density temp. var. explanation 4=4353
 mag. order, high temp., thermal neutron scatt. 4=28794
 magnetic saturation, high pulsed fields 4=19154
 magnetic sp. ht., effect of elastic modulus relaxation 4=25856
 magnetization, a.c. and d.c., and under torsion 4=17647
 magnetization, exchange parameters, 4.2-70°K 4=20545
 magnetization, press. var. 4=13170
 magnetostriction meas. rel. to magnetization up to 17000 Oe 4=10268
 mirrors, for neutron polarization 4=16903
 neutron reflection, total, by mag. Co 4=6066
 nuclear Zeeman effect of Au¹⁹⁷ rel. to mag. field 4=9811
 n.m. relax. rate theory and internal mag. field 4=23062
 phase transform., Co V, order-disorder, near 550°C 4=23259
 specific heat meas., 50° to 1400°C 4=28369
 spin rotation and polydomain structure 4=4354
 spin rotation, poly-domain structure, neutron diffr. study 4=28802
 spin wave spectrum, acoustic and optical branches 4=28801
 stacking fault probabilities, effect of cold-working and annealing 4=22602
 stress-strain relations, shear 4=7426
 surface tension, effect of Ti and TiC 4=8190
 thin film, abnormal optical absorpt. 4=22866
 vapour, interdiffusivity with Ar at high temp. 4=24266
 whiskers, growth and transformation characteristics 4=23258
 α -Co, crystal structure and orientation, deposited in presence of I ions 4=29106
 Co³⁺ e.s.r. in TiO₂ 4=26382
 Co²⁺ ions in methanol, proton relaxation and methanol exchange rate of solvation sphere 4=18219
 Co²⁺ in KCl crystals, optical absorpt. spectrum, crystalline field theory 4=7128
 Co²⁺ in MgF₂ and ZnF₂, spontaneous and stimulated emission 4=30089
 Co³⁺ n.m.r. in methanol and methanol-water mixtures, rel. to solvation 4=14189

Cobalt compounds

- complex hydrolyzed salts, mag. props. 4=20512
 dihalides, linear symmetrical, amplitudes of vibr. and Bastiansen-Morino shrinkage effect 4=30441
 trans-dichlorotetrammine Co III, spectrum, tetragonal splittings 4=22399
 X-ray spectra, K _{α} band and initial absorpt., correlations 4=7127
 Co(III) acetylacetonate, e.s.r. of Cr⁵³ 4=13338

Cobalt compounds — contd

- Co-base alloys, stacking faults in cold working 4=15479
 Co-base alloys, stacking faults and segregation 4=25950
 Co complex oxides, X-ray K absorption, rel. to valence states 4=6691
 Co halides in organic solvents, absorption spectra 4=29634
 Co spinel, Curie-Weiss consts. from molecular field treatment 4=13231
 Co⁵⁹ nuclear resonance chem. shift in complexes 4=6646
 Co III complexes, rot. dispersion, circular dichroism 4=22398
 CoAl₂O₄, ferrimag. prop., neutron diffr. and susceptibility meas. 4=28836
 Co₃Al₂O₄, magnetic moments of Co²⁺ 4=13231
 Co-Au solid solutions 4=7468
 Co₂Bi₂, mag. domain structure, temp. depend. 4=10267
 CoBr₂·6H₂O, antiferromagnetic space group, from p.m.r. 4=13262
 Co-C, C diffusion rel. to temp. 4=20295
 [Co(C₂H₅)₂]⁺, field gradient at Co site 4=6627
 [Co(C₂H₅)₂]⁺, field gradient at Co, Sternheimer correction 4=25708
 [Co(C₂H₅)₂]⁺, r⁻³ mean value for 3d and 4p electrons 4=6626
 CoCO₃, antiferromagnetic resonance 4.2° to 1.5°K 4=13305
 CoCO₃, magnetic moments in strong magnetic fields 4=7298
 Co₂(CO)₈, crystal structure 4=23436
 Co-Cl complex formation in methanol, n.m.r., optical spectra, and kinetics of methanol exchange of solvation shell, -80° to +80°C 4=27201
 CoCl₂, crystal structure, atomic, refinement, bond lengths 4=7612
 CoCl₂, soln. in water, thermodynamic props. 4=21126
 CoCl₂ solutions, u. s. velocity, temp., conc. var. 4=27172
 CoCl₂·2H₂O, ferromagnetic linear chain, metamagnetic behaviour 4=28803
 CoCl₂·6H₂O, antiferromagnetic space group, from p.m.r. 4=13262
 CoCl₂·6H₂O heat capacity near Néel point 4=30519
 CoCl₂·6H₂O, proton resonance obs. of para- to antiferromagnetic transition 4=20610
 Co²⁺[Co³⁺]₄O₄, spinel, superexchange 4=13274
 CoCr₂O₄, neutron diffr. study, spiral config. 4=28835
 CoCs₂Cl₂, Zeeman effect, and two crystalline phases at low temps. 4=15585
 Co-Cu solid solutions 4=7468
 CoD, band spectrum 4=25639
 CoF₂, antiferromag. reson. calc., mag. field splitting 4=13301
 CoF₂, antiferromagnetic reson., far i.r., var. field, temp., stress 4=13302
 CoF₃, geometry and bonding, from deflection in elec. field 4=22378
 CoF₃, magnetic moments in strong magnetic fields 4=7298
 CoF₂, piezomagnetism 4=30726
 CoF₂, spin-wave scatt. of phonons, analysis 4=28852
 CoF₂, thermal expansion, from crystal structure, atomic, temp. var. 4=9863
 Co-Fe alloy films, dislocation struct. 4=30562
 Co-Fe alloys, n.m. r. of Co and H_{eff} distrib. 4=30742
 CoFe garnet, mag. anisotropy 4=1842
 CoFe garnet, magnetostrictive displacement of O ions 4=13246
 CoFe₂ films, optical Faraday effect 4=22879
 CoFe₂O₄ ferrite films, structure 4=23586
 CoFe₂O₄ films, optical Faraday effect 4=22879
 CoFe₂O₄, Fe⁵⁷ 14.4 keV γ line, Zeeman splitting, study by Mössbauer effect 4=15402
 Co_{0.9}Fe_{2.1}O₄, mag. anisotropy, mag. annealing effect, meas. 4=28837
 Co_{1+2x}Fe_{2-2x}O₄, mag. anisotropy composition var. and electron diffusion 4=23017
 Co_{1-x}Fe_xSi, semimetal props. meas. 4=17486
 Co₂GeO₄, magnetic moments of Co²⁺ 4=13231
 Co, 6H₂O²⁺ trigonally distorted complex, mol. orbital theory 4=28307
 Co(IO₃)₂·2H₂O, susceptibility meas. and mag. props. 4=28823
 Co_{1-x}Li_xV₂O₆, semiconductivity, temp. var. 4=12891
 CoM₂(SO₄)₂·6H₂O, M = K, Rb, NH₄, or Cs, crystal struct., atomic 4=23435

SUBJECT INDEX

Cobalt compounds—contd

- [Co(MeOH)₅Cl]⁺ in methanol, n.m.r. and optical spectroscopy and kinetics of methanol exchange of solvation shell, -60° to -80°C 4=27200
- Co_mMg_{2-m}TiO₄, cation distrib. parameter, determ. from mag. moment meas. 4=13231
- Co-Mn alloys, paramag. susceptibility, 100-1100°K, composition depend. 4=26269
- Co(NC₅H₅)₂Cl₂, ferromagnetic linear chain, metamagnetic behaviour 4=28803
- Co(NH₃)₆I₃, Cr III spin Hamiltonian 4=20588
- Co(NH₄)₂(SO₄)₂·6H₂O, paramag. relax. low temp. var. 4=17677
- Co(NO₃)₂·6H₂O, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
- Co-Ni alloys, solubility of C at 1000°C rel. to electronic structure 4=7470
- Co-Ni, dilute, n.m.r. of Ni⁶¹ meas. 4=20621
- Co-Ni-P, magnetic films, reversal mechanism 4=13171
- CoO antiferromag. domain struct. electron mic. obs. 4=17667
- CoO, growth of single cryst. by Verneuil method 4=29048
- CoO, Mössbauer effect, Fe⁵⁷ h.f.s., Fe²⁺,³⁺ isomer shifts 4=12583
- CoO, paramag., n.m.r. of O¹⁷ meas. 4=13349
- CoO, structure and temperature factors 4=10534
- CoO, susceptibility and antiferromag. reson. 4=20577
- CoO, visible radiation emitted by electron bombard., spectral distrib., intensity distrib., polarization 4=13080
- Co₃O₄, ferrimag. prop. meas. 4=28836
- Co₃O₄, mag. structure, antiferromag. ordering 4=13263
- Co₃O₄—Mn₂O₄ system, activity—composition curves, free energy of mixing and of formation of CoMn₂O₄ 4=22517
- Co-Pd alloys, Co⁵⁹ n.m.r., dilute ferromag., giant moment, meas. and calc. 4=28892
- Co-Pt alloys, magnetic and elec. props. rel. to prelim. plastic deformation 4=22981
- CoPt, mag. structure, neutron diffn. study comp. with X-ray diffn. 4=28804
- Co-Pt, phase transforms., ordering, lattice distortion, X-ray exam 4=23260
- Co²⁺Rh₂O₄, spinel, superexchange 4=13274
- Co-Se system, thermodynamics 4=7480
- Co₂SiO₄, antiferromagnetism 4=28854
- Co-Sn phases, mag. props. temp. var. 4=4327
- CoSO₄, anhydrous, antiferromag. structure 4=7297
- CoSO₄, β, crystal, magnetic structures, 4.2°K 4=1852
- CoSO₄, solns., conc., absorption, u. s., 0.2–2.0 Mc/s 4=5173
- CoSO₄·7H₂O, i.r. absorption spectra, 350–4000 cm⁻¹ 4=22880
- CoTiO₃, antiferromagnetism 4=13586
- CoTiO₃, crystal structure, atomic 4=13586
- Co₂TiO₄, magnetic moments of Co²⁺ 4=13231
- Co-Tutton salts, at 0.07°K, magnetic cooling by anisotropic hyperfine structure coupling 4=16306
- Co-W, elastic modulus and damping decrement, during phase transform. 4=17727
- Co_mZn_{2-m}TiO₄, cation distrib. parameter, determ. from mag. moment meas. 4=13231

Cold working

- See also Plastic deformation; Slip; Work-hardening.
- alloys, rolling texture rel. to stacking fault energy 4=10565
- crystal twinning, mechanical, book 4=7528
- elastic modulus defect, double kink formation, low temp. 4=23087
- elastic recovery, lubrication improvement 4=26483
- metals, f. c. c., low-temp. recovery stages 4=7428
- recovery, b. c. c. metals, effect of interstitials 4=10362
- silicon iron, effect on coercive force 4=22993
- steel, ageing effects 4=29009
- steel, high-carbon, fine structure meas. 4=15806
- steel, mild, explosively loaded, Bauschinger effect 4=23215
- steel, Cr-Ni, effect on thermal expansion, density 4=1951
- strip rolling, elastic behaviour at onset of plasticity 4=7377
- vacancy prod. in pure metals 4=30593
- Ag, effect on γ-ray ang. correl. of In¹¹¹ impurities 4=22463
- AgI, strain investigation by X-ray diffn. 4=30784
- ε Ag-Sn alloys, lattice deformation and recovery 4=23206

Cold working—contd

- AgCl 4=23204
- Al, formation of substructure 4=1967
- Al, in liq. H₂, rel. to elec. resistance recovery 4=12850
- Al, polygonized struct. prod. and recrystallization inhibition 4=23326
- Al, recovery after compression at 78°K 4=4037
- Al wires, and recrystallization, from tensile testing 4=1925
- Al-Zn alloys, and precipitation and grain boundary reactions 4=13473
- Au, internal friction and dynamic moduli 4=1941
- Au, low-temp. recovery stages 4=7428
- Au-Pd, structure short range order persistence 4=13645
- CaF₂, annealed, effect on X-ray lines 4=23523
- Ce, rolling texture rel. to stacking-fault energy 4=13656
- Co, h.c.p., effect on stacking fault probabilities 4=22602
- Co-base alloys, stacking faults behaviour 4=15479
- Cu, internal friction and dynamic moduli 4=1941
- Cu strips, recrystallization, effect of P 4=10576
- Cu₃Au, heat treatment, ordering and strength changes 4=7485
- Cu-Si-Mn, effect on X-ray diffraction pattern 4=10577
- Fe, polycrystalline, rel. to coercive force recovery 4=13152
- Fe, recovery meas. 20°–450°C and defect nature 4=6900
- Fe alloys, precipitation and deform. damping peak 4=28962
- Fe-Si(3%), crystal texture similarity to Fe 4=7673
- Mg and crystal lattice strain 4=25951
- MnAlGe, effect of milling on mag. props. 4=7218
- Mo, and annealing, density changes 4=23177
- Mo, cold-rolled and recryst. textures 4=2110
- Mo, recovery, stored energy meas. 4=15506
- Nd in Mg, supersat. solid soln., causing lattice distortions 4=10435
- Ni, and annealing, rel. to elastic limit, hardness, and elec. resistivity 4=13431
- Ni, stage III recovery, internal friction peaks 4=26523
- Ni-Fe alloy, effect on mag. anisotropy, meas. 4=10282
- Pt, stage III recovery, internal friction peaks 4=26523
- Pt wire, elec. resist., annealing recovery 4=15524
- Rh wire, effect on elec. resist. 4=15523
- Si-Fe crystals, rolled and annealed, microstructure study by electron transmission microscopy 4=23171
- Th-Ce alloys, rolling texture rel. to stacking-fault energy 4=13656
- Th, rolling texture rel. to stacking-fault energy 4=13656
- Ti, internal friction recovery on annealing 4=7461
- U, rel. to recrystallization 4=2116
- W, elec. resistivity recovery 4=17480

Collections of physical data

- Only comprehensive works of reference are listed here.
- asymmetric top molecules, table of reduced energies 4=3835
- atom and ion wave-functions and term energies parameter tables 4=6459
- atomic weights, C¹² = 12 scale 4=12408
- elementary particles and resonant states (Nov. 1963) 4=9149
- elementary particles, and resonant states, Nov. 1963 4=15032
- gamma ray spectra 4=9374
- metal oxide melting points 4=2886
- molecular rotational spectra, analysis tables 4=3834
- nuclear binding energies, C¹² = 12 scale 4=12408
- Nuclear Data Library, Aldermaston 4=6342
- reactor fuels and coolants, molten, physical props. 4=6443
- solar system, centre of gravity, position and velo., (1961–9) 4=13913
- sunlight at Uccle (1957) 4=17891
- He³, singly ionized, energy rel. to mag. field strength and orbital radius 4=25212
- Ir-Rh alloys versus Ir thermocouples, reference tables 4=16278

Collision processes

- See also Atoms, electron scattering; Field theory, quantum, interactions; Fundamental particles; and under the individual particles; Ionization; Nuclear forces; Nuclear reactions; Scattering, particles
- acetylene—slow positive ions, charge exchange 4=12523
- alkali atoms, and Zeeman D doublet pumping 4=6468
- alkali and earth metals ion-atom charge exchange, velo. var. 4=16430
- alkali metal atoms with excited neutral particles, mass spectrometer investig. 4=26736

Collision processes—contd

- approximation method, based on R-matrix theory 4=21783
- atom—atom, reson. excitation transfer 4=19991
- atom—atom scatt., velocity dependence, rel. to inter-
action potentials 4=25595
- atom—atom, velocity dependence, rel. to interaction
potentials 4=25595
- atom—ion, 60–500 keV, rel. to resulting spectral
lines 4=25520
- atom—mol., rel. to Hg reson. fluoresc. quenching 4=22304
- atom—molecular, non-adiabatic vibr. relax., weak spin—
orbital coupling 4=12404
- atom recombination by 3-body colls. 4=25581
- atomic, classical theory, further development 4=25575
- atomic collisions, characteristic energy losses 4=12399
- atomic, conference, London (1963) 4=25545
- atomic, Coulomb, review 4=17262
- atomic and molec. beams, elastic scattering in thermal
energy range 4=25579
- atomic and molec. beams, elastic, in thermal energy
range 4=25579
- atomic, from muonium and positronium
physics 4=25129
- atomic, review 4=25574
- atomic scatt. cross-sect., and long-range interatomic
potential 4=25580
- atomic scattering, high-energy, non-adiabatic
effects 4=25587
- atoms in afterglow 4=25577
- atoms, average energy 4=28151
- atoms charge exchange with small energy transfer 4=24554
- atoms, charge transfer collision involving accidental
resonance 4=24553
- atoms charge transfer model in near adiabatic
collisions 4=24552
- atoms, cross-sections for electron detachment 4=12400
- atoms—electrons, slow, theory 4=25546
- atoms, energetic, energy degradation, and hot atom
reactions 4=25583
- atoms, excitation, ionization, and charge transfer, impact
parameter treatment 4=24547
- atoms, inelastic, 1st Born approx. calc. method 4=19988
- atoms, ions, molecules, scatt. processes and rel. meta-
stable levels, indep. part. model 4=24544
- atoms and negative ions, interaction 4=25582
- atoms and positive ions, many-channel quantum defect
theory 4=25576
- atoms, potential energy meas., from scatt. var. with velo.
at low velos. 4=6531
- atoms, slow heavy, excitation mechanism 4=3816
- atoms, spin exchange, polarization phenomena 4=6506
- atoms, transitions and recombination spectra calc.,
planetary nebulae 4=12352
- atoms, two, ionization, statistical theory 4=1229
- atoms, unlike, Morse potential force const. combination
rules 4=9787
- between electrons and atoms, optimal basis and expansion
functions 4=3811
- between particles of comparable size, charge and
field effects 4=17886
- charge exchange, high-energy, orthogonality 4=24551
- charge transfer, asymmetric, impact parameter
calc. 4=21457
- charge transfer and ion—atom interchange, > few eV, ion
beam study, reviews 4=15306
- charge transfer and ion—molecule, low energy,
review 4=12539
- charge transfer reaction cross-sects. meas. at thermal
energies 4=24555
- charged—neutral particle colls., Boltzmann eqn.
calc. 4=11235
- chemical, activated complex 4=29207
- dE/dR meas. in gases with low energy heavy
particles 4=27578
- dispersion force calc. by time dependent Hartree
method 4=9791
- elastic, rel. to stopping of plane source particles 4=22637
- elastic scatter of rotating molys. by atoms 4A-25761-2 in
weak mag. field 4=25761
- electron—molecule inelastic, review 4=25760
- electronic and atomic in gases, leading to laser
action 4=24895

Collision processes—contd

- elementary particles, cross-sections, review 4=3361
- elementary particles, understanding, review 4=3360
- ethyl-d₃ radicals, excited vibr., deactivation by D₂,
He 4=22441
- exchange approx., first order 4=6504
- exchange effects inclusion in collision theory 4=3625
- excited molecule deactivation by H₂ collisions 4=25770
- gases, collision freq., meas. by microwaves 4=24545
- heavy particle, inelastic 4=25578
- heavy particles, nonadiabatic transitions 4=16842
- high energy, fireball model 4=17108
- "hot" atoms, energy loss in reactive mixtures 4=26734
- independent variable number for n neutral scalar
bosons 4=15021
- inelastic, in case of several intersection points,
probability 4=19986
- inert gas atoms, unlike, interaction energies 4=9672
- inert gas ions, doubly-charged, single electron
capture 4=24597
- inert gas—p |d_j, Lyman α emission cross-sects. 4=25519
- inert gas—proton, 100–450 keV 4=16426-7
- interatomic potential, long-range, and scattering cross-
section 4=25580
- ion—atom interchange processes, Birmingham,
review 4=24556
- ionization of atoms by electrons 4=22327
- ion—mol., charge exchange reaction 4=1222
- ion—molecule, excitation and charge exchange, in adiabatic
region 4=25776
- ion—molecule at low vel. 4=6652
- ion—molecule, mass spectrometer current data con-
version 4=25775
- ion—molecule rearrangement collisions at high impact
energies, classical theory 4=9793
- J.W.K.B. phase shift and classical angle of deflection,
calc. 4=14022
- metals, plastic bodies, compressibility rel. to impact
parameters 4=5120
- metastable atoms, in gases inelastic, rel. to dissociative
ionization 4=24548
- methane—O₂, ionized mixture, electron—neutral atoms,
meas. 4=17261
- molec. charge transfer cross-sect. meas., ion beam
excitation effects 4=24590
- with molecular beams, review 4=25786
- molecular beam scatt., phase shifts calc. from differential
cross-sections 4=3934
- molecular collisions, energy exchange, vibr., in quantum
and classical mechanics, review 4=20132
- molecular gases, scattering 4=25764
- molecular interactions in beams from exhaust
nozzles 4=12540
- molecular scatt., sensitivity to potential, quantum
calc. 4=11237
- molecules, scattering, Lennard—Jones potential
determ. 4=20151
- molecules, use of nuclear theory methods 4=3926
- molecules, vibrational energy transfer, effects of
anharmonicity 4=9788
- molecular vibrational level inverted population quenching
by collisional excitation transfer 4=27682
- molecules, vibrational—vibrational energy
transfer 4=9759
- multiparticle, angular correlations 4=9100
- multiple particle production, Fermi statistical
model 4=3305
- neutral atoms—molecules, potential curves,
shape 4=25594
- neutral beam scatt. rel. to intermolec. potentials 4=25777
- peripheral and central, in high-energy interactions,
separation 4=3306
- plasma relaxation, unified theory 4=27507
- positive ion production by He⁺—atom (molec.)
colls. 4=24569
- quantum corrections to transport cross-sections 4=28283
- relaxation by spin exchange 4=22322
- spin-exchange atomic collision, density matrices
theory 4=9654
- and tryptaflavin luminescence quenching by rhodamin-6G
in methanol by intermol. energy transfer 4=28287
- two electron exchange between colliding nuclei,
T-matrix theory 4=9633

Collision processes — contd

- Ag, atoms rel. to spectral line broadening 4=25511
 Ar⁺—Ar, resonant electron capture 4=24588
 Ar beam scatt. on Ar and Kr gas atoms 4=25593
 Ar ion beam with gas atoms, diff. scatt. cross-sect. and charge state distrib. 4=25593
 Ar, Morse potential force consts. from viscosity 4=9787
 Cd, atoms rel. to spectral line broadening 4=25511
 Cd, interatomic potential energy functions from viscosity 4=25592
 CHF₃, collision diameters in foreign gas absorpt. broadening 4=25785
 CH₃SI, collision diameters in foreign gas absorpt. broadening 4=25785
 CO⁺⁺ with Ne, air, double mass spectrometer obs. 4=22429
 Cs atom charge transfer to Rb^{85,87} ions, 4=24563
 Cs, spectrum, P_{1/2}, doublet quenching in gas mixtures 4=9674
 H, atom—atom, double inelastic collisions 4=25585
 H atom scattering by D₂ 4=25780
 H atoms, exchange, density matrix 4=6507
 H₂ gas, partial atomic and ionic stopping powers for He and H₂ beams 4=25778
 H and He beams, atomic and ionic partial stopping powers in gaseous H₂ 4=25779
 H, hot atom reactions, with propane, butane, butene -1, kinetic theory analysis 4=30395
 H, interaction with He, methane and H₂ 4=25583
 H, non-additivity of atomic interaction energies 4=25584
 H—H atoms, spin—change cross-sect. up to 1000°K 4=9677
 H⁺—H atom, electron capture theory 4=12405
 H⁺—H, electron capture wave calc. 4=22326
 H—p, charge exchange and high reson. excitation 4=19976
 H + H, spin change calc., temp. var. 4=6511
 H + H₂, collinear collisions, exchange, classical mechanical calc. 4=6660
 H₂⁺⁺ + H₂ → H₃⁺ + H, cross-sect. rel. to vibration of H₂⁺ ion 4=24574
 H⁺ + H(1s) → H(1s) + H⁺ 4=24575
 H⁺ + H(1s) → H(n^l m) + H⁺, calc., no need for p—p interaction 4=27475
 H⁺ + He(1s²) → H(1s) + He⁺ 4=27474
 H₂O with H₂O or O₂, line width calc. 4=22439
 He⁺—He, charge transfer, differential and total cross-sects 4=24573
 He—He scatt., nonadiabatic effects at high energies 4=1228
 He interatomic potentials, comparison 4=12406
 He ion—atom, resonance excitation at 28eV 4=19945
 He ionization cross-sects, on He, Ne, N₂ 4=24572
 He³ metastability exchange cross-section, temp. dependence 4=25589
 He, Morse potential force consts. from viscosity 4=9787
 He on Ni, W, and Pt, thermal accommodation coeffs., theory and expt. 4=15814
 He plasma, afterglow, electron—atom momentum transfer, 10⁻³ eV, 4.2°K 4=14638
 He scattered on He, scattering cross-sections, calc. 4=12402
 Hg atoms, excited, 6³P₁, and rare gases, N₂, O₂, H₂ double reson. meas. 4=15304
 Hg, interatomic potential energy functions, from viscosity 4=25592
 I¹²⁷⁺ ions on Au, Ni, Al, C, stopping cross-sections 4=3815
 I₂ in pyridine, and spectrum 4=28193
 K atomic beam scatt. by Ne, Ar, Xe at different temperatures 4=25597
 N₂—e⁻ elastic scattering, resonances 4=25566
 N⁺—H₂ (n=0-3), charge exchange meas. 4=8628
 N₂ metastable molecule collisions in weak discharge afterglows 4=24613
 N⁺—N collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
 Na vapour, optically oriented, spin exchange 4=1230
 Ne excitation induced by H⁺ and He⁺ impact, 5-35 keV 4=25540
 Ne on Fe and W, thermal accommodation coeffs., theory and expt. 4=15814
 Ne⁻—Ne, resonant electron capture 4=24588
 O atom charge transfer with O⁺, H⁺ 4=24593
 O*, collisional deactivation 4=10634
 O⁺—O collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438

Collision processes — contd

- Rb atoms, optically pumped, spin relaxation in buffer gases 4=15308
 Rb—Cs atoms, exchange, effect on Rb longitudinal electronic polarization relax. 4=22321
 Rb⁸⁵—Rb⁸⁷, atomic spin-exchange cross-section meas. 4=9676
 Rb vapour, excitation transfer, from hyperfine relaxation 4=6510
 T atoms, moderation, relative efficiency of D₂ or CH₄ 4=7778
 TIF—atom, rotational transition (2, 0) → (3, 0) excitation 4=25769
 TIF, scatt. by rare gases in definite quantum state 4=6664
 Tl—Hg, optical meas. 4=28156
 Zn, interatomic potential energy functions, from viscosity 4=25592

Colloids

- See also Electrophoresis; Emulsions; Gels; Sols; Thixotropy.
 acoustic wave effects, characteristic number 4=15850
 electron diffraction, mechanical fluctuations 4=5702
 electrophoretic mobility, effect of r. f. fields 4=7788
 films, monomolecular, method for compression at oil—water interface 4=7717
 floc formation in colloidal suspension 4=2170
 light scatt., charged colloidal particles in electrolyte solns. 4=4144
 light scattering by colloidal spheres, size distrib. curves 4=10663
 light scattering by spherical particles 4=14398
 lyophobic sols., coagulation by electrolyte mixtures, theory 4=10660
 micelles, statistical mechanics 4=7790
 order-disorder transitions in biocolloids 4=15851
 particle size meas. by light scatt. at two freqs. 4=13749
 stability, by cluster theory of fluids 4=2161
 stress analysis, rheogoniometer 4=114
 in synthetic crystals, light scattering 4=22884
 turbulence coagulation 4=26767
 ultrasonic charging in non-conducting liquids, triboelectric 4=7786
 X-ray scatt. exam. of polymer swelling 4=17746
 Ag in AgCl crystals, photoelectric investigation 4=1688
 Ag in u.v. irradiated AgBr 4=26408
 Al₂O₃, adsorpt. on SiO₂ 4=23684
 Al₂O₃, α, double layer zero point of charge pH 4=13750
 Au, coagulation kinetics 4=7787
 K in KN₃, e.s.r. 4=26422
 Li in LiF due to n-irradiation 4=6901
 Ni and NiO, particle size determ. 4=4651
 SiO₂, adsorpt. on Al₂O₃ 4=23684

Colorimetry

- See also Spectrochemical analysis; Spectrophotometry
 Adams chromatic value coordinate table calc. 4=5362
 β-carotene photocond. cell, colour response 4=28653
 chromaticity, evaluation from spectral data, by a. c. analogue computer 4=29727
 color correction, in halftone color print, single gray mask 4=14332
 colour metric coeffs., analytical approximations 4=27285
 and colour vision 4=2498
 difference analogue computer, cube-root coordinate 4=27286
 difference formula, new 4=5363
 Donaldson colorimeter, calibration 4=16202
 filters for thermoelectric colorimeter 4=8371
 galaxies, UVV photometry of spirals and ellipticals 4=26920-1
 indicators, screened, colour changes evaluated 4=18377
 phase contrast imaging, colour calc., polychromatic illum. 4=2822
 stars, conversion of 3 colour obs. to U, B, V system 4=26906
 whiteness formula, rel. to cements 4=27284

Colour

 densitometry, for temp. meas. 4=8481
 MacAdam (u.v.) diagram, colour difference solid metric coeffs., analysis, Friele approx. 4=11325

Colour—contd

stars, by astronomical photometry 4=30968

T tan stars 4=23864

Colour centres

alkali halide crystals activated by lig-like ions,
luminescence centres, polarization 4=9998alkali halide crystals, F-centres, optical transitions on
illumination causing flow stress changes 4=13392alkali halide ionic crystals, F, F¹, H, M, N, R, U centres
and α , β , V, Z bands, by irradi., props 4=28496alkali halides, F-centres, by γ -irrad., hardening 4=15699

alkali halides, F-centres, phonon scatt. 4=6761

alkali halides, F-centres, zero-phonon transitions 4=6886

alkali halides, F, e.s.r. study, 20–300°K 4=4080

alkali halides, F₂-centres, e.s.r. 4=1529

alkali halides, F, and electron Hall mobility 4=30644

alkali halides, F and M-centre prod. and destruction by
X-rays 4=12807

alkali halides, M, F band origin 4=22635

alkali halides, R₂ and N bands, phonon and zero-phonon
lines 4=22843

alkali halides, U-centre, rel. to photocond. 4=4226

alkali hydrides, U-centre, absorpt. rel. to fundamental
absorpt. 4=17551

alkaline-earth halides 4=28494

amethyst, production 4=25975

calcite, thermoluminescent, trapping centres
meas. 4=28725E₁ centre in irradiated fused silica, e.s.r. rel. to
optical absorption 4=26431F-band in ionic crystals, adiabatic theory, higher approx.,
calcs. 4=20310

F-centre electron, phonon scatt. calc. 4=25969

F-centre, excited, relaxation, semicontinuum
model 4=28498F-centre, excited, Schottky ionization and
tunnelling 4=12808

F-centre, Raman effect theory 4=15500

F-centres, energy levels of trapped electrons, calc. 4=1423

F-centres, e.s.r., g-shifts due to nuc. hyperfine
interact. 4=20312F-centres, first-excited state, lifetime, Pekar—Perlin
calc. 4=4084

F-centres, quantum state theory 4=30582

F¹ in ionic crystals, disintegration and formation 4=20311

F, in K halides, electrical effects 4=20314

F and M, e.n.d.o.r. study 4=1528

F, Pekar's quantum theory review 4=22630

M-centres, polarization and reorientation 4=12812

paramagnetic, symmetry and microwave spectra 4=4398

quartz, due to powdering, e.s.r. meas. 4=6883

quartz, smoky, on X irradi., origin 4=4100

quartz, spin-lattice interaction expts. 4=20598

ruby, changes on laser irradi. 4=22628

ruby, γ -irradiated 4=28497

silicate glass, thermal stability 4=20308

U-band theory 4=4085

AgBr, F-centres, continuum model 4=9999

Al₂O₃, sapphire, light vs γ -irradiation, decay
process 4=30696BaTiO₃, F¹, e.p.r., 78°K, O non-stoichiometric 4=4404CaF₂, additive 4=4081CaF₂: Sm³⁺(Y³⁺), u.v. irradi. production 4=22627Ca₅(PO₄)₃Cl, X-irrad., optical props. meas. 4=22626Ca₅(PO₄)₃F, X-irrad., optical props. meas. 4=22626CaWO₄:Nd, Pr doped, vacuum reduction or photolytic
prod. 4=12814

Cs halides, F-band fine structure theory 4=6787

CsBr, rel. to photoconductivity 4=4231

CsBr, F-centres optical props., mag. field
effects 4=28499

CsBr, F, mag. dichroism 4=25971

CsCl, F, mag. dichroism 4=25971

CsF, F peak energy calc. 4=30586

CsI, F and M centres, absorpt. spectra rel. to
pressure 4=15502Cu—Ag—Au alloys, reflection spectra rel. to plastic
deformation 4=1719K halides, F and M-centre processes, photo-
chemical 4=10003

K halides, nitrogen centres, e.s.r. meas. 4=26418

Colour centres—contd

KBr, F-centre absorpt. and emission, temp.
depend. 4=25970KBr, F-centre prod. efficiencies at liq. He
temp. 4=12810

KBr, F-centres, optical pumping 4=10000

KBr, F- and V₂-centres rel. to fast-electron
irrad. 4=1651

KBr, H centre recomb. with electron 4=28733

KBr, KCl, F_A, excited, lifetime 4=25974

KBr, M-band, temporary bleaching 4=20317

KBr, U-centres, i.r. absorption meas. 4=1531

KBr, Z₂ centres, absorption peaks rel. to Ca, Sr, Ba
doping 4=28501KBr:KH, U₁-centres, absorption, effect of inter-
stitials 4=7149KBr:Na, A-centres, bleaching and dichroic props. of
A, and A₂ bands 4=6884KCl containing Ca²⁺ and Sr²⁺, Z-centre energy
levels 4=28500KCl crystals, F¹ centres luminescence in i.r. 4=22921KCl crystals, F-centre to M-centre photochemical conversion

KCl, H centre recomb. with electron 4=28733

KCl, Harshaw, gamma-ray effect vars. in different
samples 4=1525

KCl, K-centres, Na impurity effect 4=30585

KCl, M band, temporary bleaching 4=20317

KCl, M-centres, metastable triplet state e.s.r. 4=4408

KCl, M-centres, temporary bleaching effect 4=1530

KCl, new absorptions 4=25973

KCl, pure Harshaw, F- and V₂-centres, by γ -irrad. 4=10005

KCl, R centre, by X-irrad., e.s.r. 4=17452

KCl, Sr²⁺ doped, F- and V₂-centres, by γ -irrad., formation
rel. to Sr²⁺ conc. 4=10005

KCl, U-centres, i.r. absorption meas. 4=1531

KCl, V₂-band, effects of plastic and elastic
deform. 4=20318KCl, V₂ centres, u.v. light bleaching meas. 4=22636

KCl, Z centres 4=15503

KCl, Z₂ centres, absorption peaks rel. to Ca, Sr, Ba
doping 4=28501KCl-KF mixed crystal, FCl⁻ hole centre meas. 4=6887KCl:Li, Na, F_A radiative lifetime, temp. var. 4=12811

KCl-RbCl mixed crystals, F-centres, e.p.r. 4=20315

KI coloured with I₂, ionic conductivity 4=28618KI, F-band growth due to X-rays, temp.
depend. 4=17423

KI, F-centre absorpt. and emission, temp. depend. 4=25970

Li colloidal specks in LiF, due to n-irradiation 4=6901

LiCl, F-centres, excited states, calc. 4=6885

LiCl, M-centres, electronic structure calc. 4=12813

LiF, coloration layer after deuterium irradi. 4=4082

LiF containing Mg, optical absorption 4=15501

LiF, F band, isotope effects meas. 4=22633

SUBJECT INDEX

Colour centres—contd

- LiF, F-centre absorption rel. to γ -ray-induced expansion 4=4099
 LiF, F-centre formation by neutron irradi. 4=9946
 LiF, F-centre prod. efficiencies at liq. He temps 4=12810
 LiF, fluorescence and F-band excit. 4=4302
 LiF, M-centres, electronic structure calc. 4=12813
 LiF, review 4=1458
 LiF, V_k centre, energy and wave functions 4=17453
 LiF, X-irrad., absorpt. spectrum at 20°K 4=28695
 LiF, X-irrad. effects, low-temp. annealing 4=15505
 LiF, X-irrad., i. r. absorption, phonon-free transitions 4=17573
 Na cyanamide, by electron or u.v. irradi. 4=17448
 NaBr, F, struct. magneto, optical study at 1.86°K 4=17449
 NaCl containing Ca^{2+} and Sr^{2+} , Z-centre energy levels 4=28500
 NaCl crystals, elec. field effect on photostimulated exoelectron emission 4=24721
 NaCl, F-band, after X-ray irradi. 4=15510
 NaCl, F-centre absorpt. and emission, temp. depend. 4=25970
 NaCl, F-centre prod. efficiencies at liq. He temp. 4=12810
 NaCl, F-centres, by X-ray irradi. 4=12768
 NaCl, F, struct. magneto-optical study at 1.86°K 4=17449
 NaCl, by γ -radiation, Zeeman effect search 4=30583
 NaCl, H centre recomb. with electron 4=28733
 NaCl, nitrogen centres, e.s.r. meas. 4=26416
 NaCl, X-ray irradi., coloration 4=17464
 NaCl, Z_2 centres, absorption peaks rel. to Ca, Sr, Ba doping 4=28501
 NaCl : Ag and : Ag, Ca; F-, Ag colloid- and B-bands 4=22629
 NaCl— $CdCl_2$, F-centres, by X-ray irradi., formation rel. to impurity content 4=10001
 NaCl— $MnCl_2$, F-centres, by X-ray irradi., formation rel. to impurity content 4=10001
 NaCl— $PbCl_2$, F-centres, by X-ray irradi., formation rel. to impurity content 4=10001
 $NaClO_3$, X irradi. 4=4083
 NaF, X-ray irradi., temp. effects 4=28495
 NaN_3 , F-centres, formation and bleaching 4=20316
 NH_4Cl , electron-deficiency centres, e. s. r. meas. 4=10006
 RbBr, coloured with Na, colloidal absorpt. bands 4=17580
 RbBr, F and M centres, absorpt. spectra rel. to pressure 4=15502
 RbCl, coloured with Na, colloidal absorpt. bands 4=17580
 RbCl, F-band shape under 6200 atm 4=20313
 RbCl, F-centre absorpt. and emission, temp. depend. 4=25970
 RbCl, F and K bands, optical absorption 4=22634
 RbCl, F and M centres, absorpt. spectra rel. to pressure 4=15502
 Si, A-centres, annealing behaviour 4=15509
 Si, E-centre, e.p.r. and ENDOR meas. 4=20309
 SiO_2 , doped, by X-ray irradi., optical and thermal bleaching 4=15499
 SiO_2 , silica, with < 1% Al, rel. to heat treatment 4=4306
 TiO_2 (rutile), e.s.r. obs. 4=28887
 ZnS A-centre, e.p.r., g-factor anisotropy at 77°K 4=26443
 ZnS, A centres, e. s. r., g-shift calc. 4=10333
 ZnS:In crystals, yellow and green emissions under u.v. excitation 4=7189

Colour vision

- additivity failure in parafoveal fields 4=20991
 chromatic adaption, nonlinear response of receptor 4=10982
 chromatic mech. interactions from increment thresholds 4=26997
 colour contrast, induced opponent responses theory 4=26998
 colour-matching functions, parafoveal fields 4=20990
 and colour rendering 4=2496
 coloured stimuli, sinusoidally alternating, phase shift 4=10984
 decay effects 4=23979
 extra-foveal colour metrics, chromatic and photometric additivity 4=4990
 foveal sensitivity for protanope 4=20992
 hue discrimination, effect of surround and stimulus luminance 4=20986

Colour vision — contd

- Land two-colour projections 4=15995
 large-field matching, 1959 C.I.E. supplementary standard observer 4=20987
 large-field matching, reanalysis of N.R.C. 1958-9 field trials 4=20988
 mesopic spectral sensitivity, effect of field size and position 4=20985
 N. P. L. investigation, addendum on additivity 4=4989
 paired comparisons of colour diffs. 4=2497
 perceived colour relations, multidimensional ratio scaling analysis 4=13997
 photo-labile pigments, Rushton's work 4=13995-6
 ratio comparisons of colour differences 4=10983
 red-green sensitivity, normal, meas. 4=26996
 sensitivity, function of wavelength, 410-500 m μ 4=20989
 summation index, further use 4=10985
 at threshold, interrelations between mechanisms, study 4=4988

Columbium

See Niobium.

Combustion

See also Explosions; Flames; Heat of combustion; Reaction kinetics.

- acetylene in O, reactions 4=23655
 acetylene-oxygen flames, rate 4=2153
 acoustic instability, gases from burning solid 4=14428
 ammonium perchlorate-copper chromite-carbon pellets, deflagration waves at surface, initiation 4=23656
 calorimetry, meas. of elec. ignition energy 4=29797
 coal pyrolysis 4=4722
 fuel, liq., rate rel. to initial drop size, technique 4=13726
 ionization meas., by diode 4=4700
 measurement, micro calorimeter, metal-block 4=2880
 methane-air and methane-O $_2$ with K addition, elec. cond. of products 4=18250
 mixing chamber for gases for shock tube driving wind tunnel 4=21169
 partial modelling 4=8480
 propane-air flame, sparking potential 4=16454
 propellant grain surface, kinematics 4=29792
 propellants for rockets, solid, burning rate meas. 4=27359
 seeded air combustion products, elec. conductivity 4=11251
 COS, spectroscopy in vac. u. v. 4=17861
 CS $_2$, spectroscopy in vac. u. v. 4=17861
 H $_2$ S, spectroscopy in vac. u. v. 4=17861

Comets

- atmosphere, interaction with solar corpuscular stream 4=10885
 atmospheres, ionization and excit. mechanisms 4=20911
 brightness, and sun flares, types II, IV 4=29431
 cumulative effects, solar wind and magnetized plasma, interaction 4=29430
 formation from nebula, role of crystal growth theory 4=4881
 Ikeya (1963a), spectrum 4=17994
 ionization of molecules, factors 4=4889
 Jacobini-Zinner, 1933-49 obs. 4=2403
 light scattering by cometary particles, solar continuum 4=15933
 long-period, loss from solar system 4=20910
 lost, seven, orbit and return ephemerides calc. 4=13924
 Mrkos 1957d, mag. field in tail 4=4890
 nature and origin, nuclei surrounded by mag. plasma 4=13923
 tails, causes, rel. to interplanetary magnetic fields 4=4891
 and textite origin 4=29260

Compasses

No entries this year

Compressibility

- See also High-pressure phenomena and effects.
 alkali halides, 0-500°K 4=1401
 β -brass, temp. depend. of c_{11} , calc. 4=28947
 char, at carbonization temp. 4=30769
 crystals, effect of point defects 4=9939
 graphite, pyrolytic 4=13411
 ionic crystals, theory 4=22448
 measurement by shock waves 4=7388

Compressibility — contd

- metals, plastic bodies, impact parameters of collisions 4=5120
- near critical point, influence in gravitational effect on meas. of C_v 4=14468
- paper, pore surface 4=10591
- rare-earth elements, meas. 4=17767
- rubber, natural, at pressures below 500 kg/cm² 4=23201
- solid elements, periodicity 4=26467
- solids, theory, using Mie-Grüneisen eqn. of state 4=1401
- Ag, 0-900°K 4=1401
- Al, quantum defect model, exchange correl. 4=28966
- CsF, calc. from lattice refl. spectrum 4=1737
- Dy, 4.0×10^{-14} cm²/dyne change at 1 atm Néel point 4=30607
- F₂, liq., coeff. calc. using significant structure theory 4=8166
- H₂ solid, isothermal 4=22491
- He⁴, γ phase, meas. 4=21386
- InSb, I and II forms 4=29114
- InTe, I and II forms 4=29114
- KF, calc. from lattice refl. spectrum 4=1737
- LiBr, calc. from lattice refl. spectrum 4=1737
- LiCl, calc. from lattice refl. spectrum 4=1737
- Mg, quantum defect model, exchange correl. 4=28966
- Mg, volume and lattice param., up to 300 kbar 4=29120
- N, from X-ray scatt. near critical opalescence 4=29676
- NH₄Cl, ordering effect 4=28303
- Pb, 0-600°K 4=1401
- RbF, calc. from lattice refl. spectrum 4=1737
- Si, quantum defect model, exchange correl. 4=28966
- Sn(β) 4=29114
- Zn, quantum defect model, exchange correl. 4=28966

gases

- kinetic theory rarefied gas, inverse power law (> 2) inter-molecular force 4=227
- measurement, $\sim -140^\circ$ C, Burnett method accuracy 4=11233
- mixture, Amagat's law validity, at low press. 4=29650
- CO—hydrocarbon mixtures, meas. 4=24261
- He—N, 0 to -140° C, meas. Burnett method accuracy 4=11233

liquids

- alkali halides, and hard sphere dia. 4=18173
- alkali salts, temp. var. 4=14145
- binary systems with eutectic state diagram 4=11178
- calc. from rigid sphere eqn. of state 4=18192
- cyclohexane binary mixtures, rel. to soln. mol. theory 4=18191
- Dow Corning 200 fluid, from sound vel. meas. 4=2674
- electrolytes, in aqueous soln. 4=2678
- intermolecular potential dependence 4=21106

- vapour—liq. equil., van der Waals theory, crit. region 4=8506
- water droplets, charge accumulation 4=5539
- water, growth of droplets and condensation coeffs. 4=5467

SUBJECT INDEX

Condensation—contd

- water vapour, by nucleation in nozzles 4=14462
- Ag, on NaCl, in air and vacuo 4=13547
- Ar capillary, heat and pore shape 4=20819
- Ar, critical opalescence, X-ray meas. 4=2890
- (As₂O₃)₂, activated, on incandescent gauze, dissociation 4=8521
- As₂O₃, at -196° to 100°C, As₂O₆ formation 4=370
- Cd, molecular beam, temp. effects 4=14458
- Cd—Se, mechanism, composition depend. 4=23239
- Cd, on Si 4=29810
- H₂ and N₂ on cooled surfaces, rel. to vacuum production 4=8259
- H₂O, effect of adsorption on formation of liquid embryos 4=10718
- H₂O, T tracer meas. 4=21360
- H₂O vapour, to ice or water 4=10476
- H₂O vapour, on shock-tube walls 4=18496
- Sb—Se, mechanism, composition depend. 4=23239
- Zn—Se, mechanism, composition depend. 4=23239

Conduction, electrical

- See also Conductivity, electrical; Contact resistance; Current, electrical; Photoconductivity; Resistance, electrical; Semiconductors; Skin effect; Superconductivity.
- acetone, fluctuations, freq. var. 4=21151
- alloys, dilute magnetic, resist. minimum, scatt. calc. 4=28524
- alloys, disordered, residual resist., quantum theory 4=4109
- alloys, effect of short-range mag. spin correl. 4=1554
- carrier scattering on impurities 4=6775
- composite medium of cylinders, calc. 4=16416
- conductance—concentration calibration, use of precision burette 4=13731
- crystal random impurities effects, diagram perturb. method 4=20230
- crystals, anisotropy of resistivity, meas. using four-point method 4=25987
- crystals, electron mobility, weak and strong scatt. 4=1422
- crystal electron motion in elec. and mag. fields 4=12670
- crystals, frequ.-depend., in d. c. mag. field, Green's function method 4=6909
- dielectrics, neutron and γ -ray induced 4=17513
- electrolytes, conductivity, relaxation effect 4=21500
- electrolytic, equation inapplicability in acidic solns. 4=23661
- electrolytic solns. under pressure, Walden's rule 4=27193
- electron distrib. function, max. anisotropy approx. 4=8114
- electron gas, h. f., correl. corrections 4=5599
- electron gas, hot, tensor, dissipative part 4=27511
- electron gas, in uniform mag. field, tensor 4=17405
- electron-phonon system, in strong mag. field, theory 4=6908
- exchange interaction bet. mag. ions and cond. electron 4=22522
- ferrites, l.f. dispersion model 4=28608
- ferromagnetic metals, spin-wave scatt. of electrons 4=1553
- films, metal and dielec., mechanisms review 4=22661
- films, metallic, at h. f. and He temps. 4=13680
- fluid, symmetrical currents transverse to mag. fld. 4=11766
- frequency dependent, small polarons 4=6907
- gas, electron diffusion, spatial energy distrib. 4=5252
- gas, neutral, run-away electrons, theory and expt. 4=18251
- inert gases, electron mobility theory 4=14221
- interference between streaming and collision in transport equations 4=18655
- ionized gas, particle orbit theory 4=24549
- ionized gas stream in mag. field, induced current meas. 4=29869
- ionosphere, anisotropy 4=26841
- liquids, insulating, irradiated, conductivity variation 4=11211
- matter under high pressure, solid and liq. 4=10019
- medium containing cylindrical inclusions, d. c. conductivity, calc. 4=15513
- metal—dielec.—metal sandwiches, theory 4=15565
- metals, crystals, recoil, meas. method 4=1552
- metals, ferromag., s-d or s-f exchange model 4=12843

Conduction, electrical—contd

- metals, ferromag. umklapp electron—magnon processes 4=22666
- metals, field peaks in mag. field, rel. to electron drift 4=6916
- metals, irradiated, effect of displacement cascades 4=12845
- metals, Lorenz parameter, anomalous, at He temps. 4=17471
- metals, with intersecting bands, nonthreshold internal photoeffect 4=6915
- metals, zeroth-order tensor, by resolvent method 4=6914
- monopolar nonequil., kinetics in space charge region 4=12838
- noble metal—magnetic impurity alloys, resistivity anomalies 4=28523
- nonlinearity meas. method 4=24522
- organic charge-transfer complexes, resistivity rel. to press. 4=22730
- organic insulators, neutron and γ -ray induced 4=17513
- plasma, dense, quantum effects 4=8715
- plasma, from electron temp., anomaly 4=11589
- plasma, low-pressure, resist. gradients, instabilities 4=24707
- plasma, theory, by operational methods 4=16463
- plasmas, conductivity, relaxation effect 4=21500
- plasmas, unified theory calc. 4=498
- polycrystalline mixture, effective tensor 4=22659
- polycrystalline mixtures, stochastic processes 4=28992
- polyphenols, carrier mobility models 4=1430
- quantum theory of conductivity 4=12836
- resistance minimum impurity-free conductors 4=4106
- semiconducting polymers derived from nitriles, resistivity 4=20228
- semiconductors, basic concepts 4=15527
- semiconductors, current—polarization interact. 4=1572
- semiconductors, degenerate, h. f., due to electron—phonon (optical) interact. 4=10038
- semiconductors, general theory, introductory lectures 4=30615
- semiconductors, impurity hopping, a. c., approx. at low temps. 4=10037
- semiconductors, impurity, hopping analysis 4=12870
- semiconductors, meas. of minority carrier diffusion length 4=22700
- semiconductors, non-degenerate, surface rel. to reduced potential 4=10039
- semiconductors, s.w.r. method 4=15531
- semimetals, in crossed elec. and mag. fields, I—V characteristics 4=28522
- silicone varnish films, equilibrium approach 4=20413
- solid, second-order, tensor, quantum theory 4=17543
- solid, specific negative resist., instability theory 4=6906
- solids, Boltzman transport eqn., relaxation-time approx. 4=6768
- solids, hot-electron negative resist. effect 4=6905
- solids, nonlinear constitutive reln. at optical freqn. 4=15512
- solids, space-charge-limited currents, two-charge 4=1644
- space-charge-lim. currents, rel. to saturated photocurrents 4=28637
- space-charge limited currents, with field-dependent mobility, impedance 4=12671
- in strong mag. field, transport theory 4=6908
- switch on processes in a cylindrical conductor, field changes 4=11499
- transition metal compounds, and band struct. 4=15517
- transition metal oxides and carbides, carrier mobility, metal—metal bond screening effects 4=22450
- transition metal oxides and carbides, metal—metal bond screening effects 4=22450
- tunnelling current, oscillatory, through insul. film 4=7025
- tunnelling, metal—insulator, effect of traps 4=6910
- two-carrier injection currents in insulators, theory 4=12956
- viscous fluid, anisotropy, effect on magnetohydrodynamic flow in initial section of plane channel 4=16640
- Al₂O₃ films, impurity 4=22760
- CdS, oscs. 4=26041

Conduction, heat

See Heat conduction.

Conductivity, electrical

See also Resistance, electrical; Semiconducting materials; Semiconductors; Skin effect; Superconductivity.

alkali halides, induced by electron bombard. 4=22759

alkali halides, thermally stimulated, simple model 4=10210

alkali vapours, high press. with free valence electrons, calc. 4=11644

alkanes, liq., γ -irrad., rel. to field strength 4=5205

alloy, binary non-ordering 4=1556

alloys, Matthiesen's rule impurity incoherent electron-phonon scatt., no effect 4=28525

alloys, resistivity, rel. to periodic inhomogeneities and long-range order 4=22665

alumina, ruby and sapphire single-crystal 4=22703

aluminosilicate glasses, effect of silica replacement by Al_2O_3 4=1645

anthracene, anisotropy 4=28579

anthracene, carrier mobility models 4=1430

anthracene thin layers, adsorbed I_2 , air and water vapour effect 4=30630

anthracite 4=1558

p-azoxyanisole, elec. field alignment 4=196

benzidine-iodine crystal complex, dark 4=26063

borosilicate glass, volume cond. 4=1648

calcium aluminoborate glasses, O ionic conduction 4=28610

calcium aluminosilicate glasses, O ionic conduction 4=28610

catalysts, surface, from dielectric dispersion 4=2155

cellulose acetate, alkali-chloride doped, ionic model 4=7735

cellulose acetate, induced by γ -rays and neutrons, time var. 4=20402

chlora nil-n-phenylenediamine crystal complex, dark 4=26063

Constantin, 10-380°K, wires 4=12849

due to crystal imperfect free electron scatt. 4=25988

1,6-diaminopyrene solid complexes 4=13062

diamonds, semicond., decrease on irrad. by n, e 4=4146

dielectric liquids, irradiation effects 4=27191

diphenyl-dipicrylhydrazyl (DPPH) in benzene soln. 4=27196

earth, from magnetic storm data 4=30920

earth, from magnetotelluric meas. 4=30921

Evanohm, 10-380°K, wires 4=12849

ferrocene, Ohms-law breakdown 4=17532

ferromagnetic metals, surface impedance 4=28521

films, rel. to cond. electron scatt. and mean free path 4=22521

fuels, aviation, meas. instrument, portable 4=18215

gases, elastic and inelastic cross-sections eval. 4=11509

gases, high temp., review 4=236

gases, ionized, slightly, calc., different collision frequencies 4=462

gases, ratio of drift speed to diffusion coefft. 4=11254

gersdorffite, NiAsS, rel. to mag. susceptibility 4=7220

glass, containing Li, K, Na ions, rel. to temp., up to 430°C 4=10095-6

glass-like materials, ionic and electronic conductivity 4=7027

glow discharge, a.c. impedance 4=2956

graphite, for determ. of atomic displacement from lattice under e^- -bombardment, 15°K 4=22647

graphite, n irrad. and annealed 4=30605

graphite, irrad. at high temp. 4=20323

graphite, pyrolytic, rel. to neutron-irrad. 4=10028

graphite, resist. depend. on mag. field 4=26007

n-hexane, pulse 4=8221

high press., and electron states 4=12667

highly conductive organic solids, new class 4=6912

hydrocarbons, liquid 4=11213

hydrocarbons, liquid, d.c., hopping model 4=16123

hydrocarbons, liquid, γ -induced 4=14181

hydrocarbons, saturated and unsaturated liquids 4=11214

ice, Arctic sea, rel. to dielectric constant 4=26100

ice, doped with HF and NH_3 4=4203

ice doped with hydracids, rel. to conc. 4=26107

ice, mobility of H_3O^+ , rel. to energy bands 4=12699

ice, proton and deuteron, kinetic meas. 4=15844

Inconel 702, high temperature 4=8473

induction method meas. 4=422

inert gas shock waves, alkali smoke seed effects 4=29679

Conductivity, electrical — contd

inert gases, theory 4=22754

Invar-type alloys meas., dispersion-hardened 4=13419

insulating liquids, fields up to 10 kV cm^{-1} 4=29644

ionic crystals, var. with temp. 4=28442

ionized gas, slightly, rel. to collision frequ. 4=461

ionized gas, weak, a. c., calc. 4=14570

ionosphere, sudden local changes 4=23798

irreversible processes, quantum theory, variation principle 4=2581

Karma, 10-380°K, wires 4=12849

liquids, pure polar 4=24229

manganin, piezoresistivity 4=20334

Manganin, 10-380°K, wires 4=12849

meas., bridge, 5 c/s-500 kc/s, for quartz, high temp. 4=2927

measurement, Si slices, 4 probe 4=10064

metal-glass surface region, temp. depend. 4=10594

metal oxides, effect of O vacancies, model 4=12860

metallic layers, time and elec. field effects, low temp. 4=12844

metallic oxides, reduced 4=22702

metals, electronic, calc. 4=28526

metals, h.f. conductivity, in quantized mag. field, quantum oscill. 4=20254

metals, pure, resistivity, effect of single vacancies 4=30593

metals, radiation cascades summation effect 4=25999

metals, rel. to vacancies 4=1551

methane-air and methane- O_2 with K addition, combustion cond. of products 4=18250

methane, electron drift velocity, avalanche meas. 4=11253

methyl-substituted benzenes 4=11213

mica, induced by γ -rays and neutrons, time var. 4=20402

mica, thin layers as capacitor, surface cond. 4=22787

naphthalene, carrier mobility models 4=1430

Nichrome thin films, rel. to crystal structure 4=10030

nitrates, fused, d. c. meas. 4=24231

org. complexes, single crystal and compressed micro-cryst. molecular comparison meas. 4=22728

organic insulating liquids under elec. stress, pulses 4=16120

organic semiconductors, narrow-band, calc. 4=12920

p-nitrophenol, surface anisotropy meas. 4=17465

pentolite and composition B, detonation zone 4=14267

Permalloy, stress and heat treatment effects 4=7282

rel. to phonon drag, Green's function method 4=12677

phthalocyanine, at high freq. and press. 4=26067

phthalocyanine, metal-free 4=12923

plasma, a. c., theory 4=29906

plasma, collisional, slipping 4=14637

plasma in high current toroidal discharge 4=29955

plasma, h.f., non-uniformity error 4=21499

plasma, h.f. rel. to oscill. 4=18971

plasma, Lorentz gas 4=21498

plasma, meas. method 4=24641-2

plasma, osc., and MHD generator 4=11602

polar liquids, rel. to field 4=14184

polyacrylonitrile, pyrolyzed 4=22733

polyamides, d. c. cond., temp., H_2O content and voltage depend. 4=7038

polyethylene, irradiated 4=1657

polymer thin films, 50-150 A, 77°-300°K 4=22769

polymers, induced by γ -rays and neutrons, time var. 4=20402

polymers, meas. for freq. 10^{-2} c/s-300 Mc/s 4=18630

polytetrafluoroethylene, anomalous and steady state 4=10103

polyvinylene foil 4=12995

α -quartz, Ag ion migration 4=25966

quartz, ion-exchange electrolysis meas. 4=20408

radiation effects, theory 4=4087

radiation-induced in insulators, diffusion controlled carrier recombination 4=12957

rain, and precipitation rate 4=4768

rare earth cpds. and alloys, selected, rel. to temp. and comp. 4=28566

rare earth dipositive-tripositive alloy monoselenides, composition, temp. var. 4=30614

rare-earth metals, 11, effects of press. and temp. 4=10035

rare earth monoselenides, temp. var. 4=30614

SUBJECT INDEX

Conductivity, electrical—contd

- rare-earth monochalcogenides (Ce subgroup)
300°-1300°K 4=30613
- rare earth monotellurides, temp. var. 4=30614
- rare-earth sesquisulphides, electron and phonon contrib.
4=30527
- resistivity changes in neutron and deuteron irradiated
metals 4=30587
- rocks, to 40000 kg/cm² and 400° temp. 4=22663
- rutile, increase in cond. due to electrolysis 4=6983
- seawater, CO₂ effect 4=26782
- seeded air combustion products 4=11251
- semiconductors and semimetals, current instability,
theory 4=10036
- semiconductors, meas. instrument 4=12879
- semiconductors, meas., microwave, analysis, slab in
waveguides 4=12880
- semiconductors, space-charge induced increment 4=20347
- semiconductors, temp. var., and ratio of carrier masses for
given doping 4=4128
- semiconductors, III-V, microwave oscillations 4=4132
- semiconductors, two-band resistivity tensor
components 4=20341
- semi-metals, in strong elec. fields 4=1571
- sintering, and diffusion activation energy meas. 4=13665
- silicone oils, X-ray induced conduction 4=29640
- silicone polymer thin films, 500-2500 Å, negative 4=22768
- solids, mobility rel. to Debye dielec. loss 4=1643
- solids, pressure effects, review 4=22658
- steel, Cr-Ni austenitic, effect of cold deformation and
ageing 4=12663
- steel, surface enriched with Al, Si, Cr, Mo, W or
Ti 4=28535
- in strong mag. field, transport theory 4=6908
- tetracyanoquinodimethan radical ion, high, 4=25995
- tetracyanoquinodimethan salts, highly conductive
solids 4=6912
- transformer oil, rel. to organic additives 4=5208
- transition metal cpds. 4=1550
- transition metal cpds with NiAs structure, elec.
cond. 4=26043
- transition metal cpds. of pyrite struct., and struct.
details 4=20336
- transition metals and alloys, band structure
effect 4=30543
- transition metals, high temp. var. 4=22688
- trees, living, rel. to point discharge 4=10725
- ullmannite, NiSbS, rel. to mag. susceptibility 4=7220
- waxes, var. with temp., voltage, near melting 4=1658
- Ag antimony telluride 4=22722
- Ag azide 4=17493
- Ag binary terminal solid solns., resistivity 4=22685
- Ag crystal whiskers, low temp. min. 4=17478
- Ag, electron scatt. by vacancies, pseudopotential
method 4=6771
- Ag films, effect of gas adsorption meas. 4=7713
- Ag, films, thickness var. and electron in f.p. 4=22683
- Ag, Lorenz number at low temps. 4=6919
- Ag, plastic deformation effect, 77-293°K 4=22682
- AgBr crystals, u.s. field effect 4=22767
- Ag₂Se, beta ray effects, 2 MeV 4=10070
- AgCl-Ag₂S molten mixtures 4=24236
- Ag₂HgI₄, press. depend. 4=26105
- AgIn₃Te₅ 4=26060
- Al, after cold working, -190° to 340°C 4=4037
- Al, after neutron irradiat. at 78°K 4=4091
- Al alloys, dilute, binary, recovery, on irradiat. n,
78°K 4=1560
- Al, due to crystal stacking faults, temp. var. 4=12772
- Al film, normal and supercond. 4=20608
- Al, Lorenz number at low temps. 4=6919
- Al, residual resistivity, purity determination 4=12852
- Al, resistivity of dislocations, expt. determ. 4=6848
- Al, resistivity rel. to electrolytic self-diffusion 4=17439
- Al, resistivity restoration by neutron irradiat. at
77°K 4=26002
- Al, stress effects on residual, low temp. 4=22667
- Al, surface enriched with Cr, Ti or Si 4=28535
- Al-10 wt% Zn-0.10wt% Si, Ge, Sn, meas., clustering,
4=28994
- Al₂O₃ films, tunnel currents for various contacts 4=22761

Conductivity, electrical—contd

- Al-Ag, and phase transform., metastable miscibility
gap 4=7474
- Al-Zn, changes on annealing, and Mg impurity/
vacancy interaction 4=12725
- Al-Zn and phase transform., cooling depression of
boundary 4=26544
- Al-Zn-Mg alloys, meas., rel. to clustering 4=28995
- Ar arcs, 10000° to 15000° K 4=24622
- Ar, electron energy distrib., effect of CO₂ and H₂
impurities 4=11256
- Ar, ionized partially, shock heated, electronic cond.
in mag. field 4=27225
- Ar, liquid, electron drift velocity, mol. impurities
effect 4=16122
- Ar plasma, shock-heated, between electrodes
meas. 4=11586
- Ar, transport coeffs. and cross-sections calc. 4=11257
- Ar-BaO suspension, enhancement of Ar cond. by suspen-
sion, appl. to m. h. d. power generation 4=27224
- Ar-Cs plasma 4=27545
- Ar K seeded plasma at atmospheric press. 4=24638
- As-Te-I and As-Te-Br semiconducting
glasses 4=26029
- Au, cold-worked, resistivity rel. to annealing effect 4=7428
- Au, and crystal vacancy clusters, on n irradiat. or quenching,
annealing effects 4=4038
- Au, electron irradiat. recovery, temp. var. 4=30600
- Au, electron scatt. by vacancies, pseudopotential
method 4=6771
- Au films, decrease on adding surface layers 4=12856
- Au, films, non-ohmic tunnelling effects 4=6927
- Au films, saturation effect at high fields 4=26009
- Au films, surface, on supercond. Sn 4=22672
- Au films, thickness and temp. var. electron
kinetics 4=22670
- Au, films, thickness var. and electron in f.p. 4=22683
- Au, Lorenz number at low temps. 4=6919
- Au, 2°-9°K 4=1688
- Au thin films, rel. to structure changes 4=23578
- Au, variations due to vacancies 4=10142
- AuSb₂, 2.5°-300°K meas. 4=15520
- AuSn 4=7619
- B, β -rhombohedral 4=25897
- Ba, and melting, phase transform., high press.,
temp. 4=16293
- Ba ferrite, anisotropy and mechanism 4=6953
- Ba ferrite, anisotropy, 20° to 180°C 4=10041
- (Ba, Sr)TiO₃, with La, Ce and Bi impurities, positive
temp. coeff. of resist. 4=26030
- BaTiO₃, ionic and electronic 4=26118
- BaTiO₃ powder, rel. to Känzig exhaustion layer 4=12970
- BaTiO₃, O deficient, positive temp. var. anomaly near Curie
point 4=7047
- BaTiO₃, resistivity anomaly 4=15558
- BaZrO₃ containing La 4=20419
- Be, effect of pressure up to 93 kbar 4=10022
- Bi 4=12882
- Bi doped with Te or Sn 4=30619
- Bi films, anomaly explanation 4=7709
- Bi films, Hall effect, var. with thickness and residual
O₂ 4=6921
- Bi, magnetoelectric and Hall effects, pressure var.,
4.2°K 4=6922
- Bi, oriented deposits 4=4252
- Bi, oscillations, quantum, in mag. field 4=26031
- Bi, resistivity change in press. induced
polymorphs 4=30795
- Bi₂O₃, solid and liquid phases, up to 1000°C 4=10043
- Bi-Sb liquid system 4=21110
- Bi-Sb, 75-500°K 4=26034
- Bi₂Se₃ and Bi₂Se₅, temp. depend. 4=7609
- Bi-Sn, 75-500°K 4=26034
- Bi₂Te₃ alloys, 100°-300°K 4=10141
- Bi₂Te₃, Ge doped, meas. 4=28380
- Bi₂Te_{3-x}Se_x from thermoelectricity 4=1697
- Bi-Te, 75-500°K 4=26034
- C, hard, glassy 4=10024
- CaO-HfO₂, 800°-2000°C 4=10093
- CaO-Y₂O₃-ZrO₂ solid soln., ionic conductivity 4=20405
- CaO-ZrO₂, 800°-2000°C 4=10093
- Cd, elongated at 78°K, effect of impurities 4=17470

Conductivity, electrical—contd

- Cd, min. at 3°K, magnetoacoustic obs. 4=6730
 CdGeAs₂ 4=1593
 Cd_{0.9}Hg_{0.1}Te, rel. to doping 4=28554
 CdIn₂Te₄, n-type, temp. depend. 4=6949
 CdNb₂O₇ 4=26120
 CdS, and chemisorption of O 4=29194
 CdS, effect on current saturation 4=30620
 CdS films, cathode conductivity 4=22709
 CdS films, rel. to external electric field 4=10046
 CdS, films, with CdCl₂ impurity, effect of moisture 4=22708
 CdS, self-activated semiconductivity, meas. 4=1597
 CdS single crystals, surface contact 4=22707
 CdS, thermally-stimulated, rel. to prelim. illumination 4=1596
 CdS-type semiconds., contact-less study 4=26039
 CdSb 4=4143
 CdSb, Ag-doped, meas. 4=20356
 CdSb, temp. depend. and anisotropy meas. 4=6948
 CdSb, temp. var. 4=17524
 CdSb—ZnSb, 90–400°K 4=1592
 CdSe single crystals 4=22797
 CdTe, surface layers due to etching 4=12889
 CdTe—CdSe alloys, rel. to composition 4=22706
 Ce, and phase transformation meas. 4=4503
 Ce hydride, rel. to composition 4=20328
 CeS, meas. rel. to temp. 4=6952
 Ce₂S₃, meas. rel. to temp. 4=6952
 Ce₂S₃, 20–1000°C 4=4161
 Ce₃S₄, meas. rel. to temp. 4=6952
 Ce_{3-x}S₄, x = 0–0.3, semimetallic, meas. rel. to theory 4=10047
 Ce_{3-x}S₄, x > 0.3, analysis rel. to temp. 4=10048
 Co, spin-wave scatt. at low temps., meas. 4=1553
 Co, temp. depend. 1.3°–4.2°K, singularity 4=6925
 Co_{1-x}Fe_xSi, semimetal props. meas. 4=17486
 Cr, rel. to temp. and ext. mag. field, 150–310°K 4=6924
 Cr silicides, solid and liquid, var. conc. 4=11212
 Cr, solid and liquid 4=11212
 Cr—Al liquid alloys, rel. to Cr conc. and temp. 4=8181
 Cr—Fe liquid alloys, rel. to Cr conc. and temp. 4=8181
 Cr—Fe—F liquid alloys, rel. to Cr conc. and temp. 4=8181
 Cr₂O₃, kinetics of Nb₂O₅, V₂O₅ donor addition 4=30535
 Cr₂O₃, rel. to neutron irradi. 4=10049
 Cr₂O₃, single crystal 4=26099
 Cr—Se system, rel. to structure 4=1549
 CrSe_x, 1.00 ≤ x ≤ 1.33, rel. to temp. 4=22763
 CrSi₂, rel. to semicond. props. 4=20357
 Cs, rel. to pressure 4=12854
 Cu alloys, low temp., temp. var. and thermal, Pippard's theory 4=17362
 Cu crystal whiskers, low temp. min. 4=17478
 Cu, electron scatt. by vacancies, pseudo potential method 4=6771
 Cu films, surface, on supercond. Sn 4=22672
 Cu, isochronally annealed, cooling rate, hydrogen—vacancy interaction effect 4=30606
 Cu, Lorenz parameter, anomalous, at He temps. 4=17471
 Cu, low temp. min., effect of Sn, Fe impurities 4=20330
 Cu phthalocyanine, rel. to carrier mobilities 4=6994
 α-Cu phthalocyanine, surface cond. meas. 4=28422
 Cu, plastically deformed, relaxation behaviour 4=10025
 Cu, surface enriched with Cr, Ti, Si, B or Ni 4=28535
 Cu—Al (14.3 at %), temp. var., and deformation 4=7487
 Cu—Au alloys, disordered, residual, quantum theory 4=4109
 Cu₃Au, shock wave effect on resistivity 4=26508
 Cu₃Mn_{3-x}O₈, rel. to composition and temp. 4=15555
 Cu—Ni alloys, disordered, residual, quantum theory 4=4109
 Cu—Ni and n prod. vacancy de-segregation on heat treatment 4=22645
 Cu₂O, rel. to adsorption of air and water 4=1770
 Cu₂Sb, 2.5°–300°K meas. 4=15520
 Cu—Ti alloy 4=1558
 DNA, theoret. estimate 4=28520
 Dy in molten Dy trichloride, irregularity 4=8220
 DyCl₃—DyCl₂ 4=8220
 Er in molten Er trichloride, irregularity 4=8220
 Fe, anisotropic resistivity, effect of hydrostatic high press. 4=22675

Conductivity, electrical—contd

- Fe-base alloys, rel. to Ni and Co content 4=17736
 Fe films, effect of adsorption of N₂ 4=7727
 Fe, high purity, rel. to temp., 300–1300°K 4=30611
 Fe, neutron irradi. 4=28509
 Fe, spin-wave scatt. at low temps., meas. 4=1553
 Fe strips meas., 0–30 Mc/s 4=7236
 Fe wire bipolar negative resistance element, expt. demonstration with 20 s. w. g. soft Fe wire 4=30610
 Fe—C, annealed after irradi., elec. resistivity meas. 4=15735
 Fe—Co—V alloys, annealing and ordering 4=1992
 Fe—Co—V, effect of heat treatment 4=22676
 Fe—Ge alloys, heat treatment and temp. depend. 4=26010
 Fe—Ge alloys, β-phase 4=29118
 Fe_xMn_{3-x}O₄, rel. to temp., anomaly at Curie pt. 4=17491
 Fe—Mo alloys, rel. to temp. 4=17421
 Fe—Ni alloys, rel. to Hall const. 4=26011
 Fe—Ni, Ni conc. depend. 4=13184
 Fe—Ni (50–50), and order-disorder transform by n irradi. 4=7496
 Fe—Ni—Mn, α-phase, temp. depend. 4=23168
 Fe—Ni—Mn—Ti, α-phase, temp. depend. 4=23168
 Fe—Ni—Mo alloys, rel. to Mo content 4=17737
 Fe—Ni—Ti, α-phase, temp. depend. 4=23168
 FeO_{1-x}, at high temps. 4=25989
 Fe₂O₃, α-phase, effect of impurities 4=1599
 Fe₂O₃, α-phase, pure, carrier processes 4=1600
 α-Fe₂O₃ single crystals, natural and synthetic 4=28615
 Fe—Si, Si conc. depend. 4=13184
 FeTiO₃, (ilmenite), single crystals 4=26122
 Fe—V alloys, room and liq. N. temp. 4=1564
 Ga, and Debye temp. anisotropy 4=20217
 Ga, ideal resistivity, rel. to temp., and departures from Matthiessen's rule 4=17475
 Ga liq., rel. to pseudopot. theory 4=21152
 Ga, liquid, electron mean free path, by positron annihil. 4=199
 Ga, low temps., impurity effects 4=17474
 GaAs, n and p-type, surface meas. 4=12893
 GaAs thin films, Ohm's law temp. validity determ. 4=30621
 Ga(As_{1-x}P_x), n-type, pressure effect up to 15 000 atm. 4=17487
 Gd, 1.5–20.3°K 4=17473
 Gd, 4°–375°K meas., rel. to mag. transitions 4=10027
 Gd, 4.2°–380°K meas. 4=4358
 Gd hydride, rel. to composition 4=20328
 Gd in molten Gd trichloride, irregularity 4=8220
 Gd, spin-wave scatt. at low temps., meas. 4=1553
 Gd—Dy alloys, and magnetic spiral struct. between Curie and Neel points 4=13110
 Ge 4=12895
 Ge, changes under tension and illumination 4=4150
 Ge, epitaxial films, p-type 4=4152
 Ge films, acceptor conc. reduction by cleanliness improvement 4=6965
 Ge films, effect of neutron irradi. 4=15538
 Ge films, rel. to substrate temp. during deposition, thickness and temp. 4=20806
 Ge, hot, carrier injection, high field mobility 4=4158
 Ge, n irradi., 14 MeV, n type, and crystal imperfection distrib. 4=6822
 Ge, n-type, hot electron effects, 9.392 Gc/s 4=22712
 Ge, neutron irradi., rel. to carrier conc. 4=12898
 Ge, on fast neutron bombard. 4=10012
 Ge oxide films, resistivity 4=28613
 Ge, polarization conductivity at 1.2°–4.2°K in p-type 4=1607
 Ge, surface, clean and oxidized, meas. 4=6969
 Ge, warm and hot electrons, anisotropy angle 4=10068
 Ge, Au-doped, surface cond., rel. to fracture, liq. N₂ temp. 4=10052
 Ge, Zn-doped, 5°–250°K 4=6957
 H, solid, under high pressure 4=10019
 H₂, electron drift velocities from mol. excitation 4=11252
 H₂, ratio of drift speed to diffusion coefft. 4=11254
 H₂—Ar, transport coeffts. and cross-sections calc. 4=11257
 H₂O, pure 4=24238
 HCl, aq. soln., activation energy rel. to pressure 4=2706
 He, cylindrical shock wave, current density meas. 4=18828
 He, electron drift velocity meas. at high E/P 4=11550

SUBJECT INDEX

Conductivity, electrical—contd

- He plasma, calc. 4=531
 HgS, α -phase, effect of impurities 4=7073
 HgTe, doped and undoped, 77°-400°K 4=10063
 Hg Te—Cd Te solid solutions, rel. to vacancy study 4=28998
 Ho in molten Ho trichloride, irregularity 4=8220
 I_2 , transient space-charge-limited currents along various crystallographic directions 4=25883
 In, liquid, electron mean free path, by positron annihil. 4=199
 InAs—CdTe alloys, n-type, up to 400°C 4=22717
 InAs—In₂Se₃ system 4=1611
 In₂Bi, molten, 100° to 350°C 4=8167
 In₂S₃, meas. 4=20374
 InSb, after n, γ irradi. at 78°K, recovery on heating 4=6976
 InSb, 80°-500°K, in n- and p-type 4=26048
 InSb films, rel. to annealing 4=20808
 InSb, high-field 4=4160
 InSb, metallic form 4=29114
 InSb, n-type, negative resist., rel. to impurity impact ionization 4=10058
 InSb, n-type, optical mode and ionized impurity scatt. 4=1700
 InSb, at 77° and 20°K in high elec. fields 4=30538
 InSb, surface conductance meas. for p-type crystal in heptane and heptane—ethanol mixtures 4=28564
 InSb, surface conductance, photocontrolled 4=20371
 In₃Te₅, increase associated with phase transition at 463°C 4=29011
 K films, on KCl, annealing effect 4=4122
 K halides, effect of F centres 4=20314
 K, press. effect 4=20332
 K, pressure depend. over 500 kbar 4=1559
 K, rel. to wavelength, in terms of band transitions 4=12666
 K vapour plasma, fully-ionized, meas. 4=11587
 KBr, rel. to Pb impurity content 4=6895
 KCl, aq. soln., activation energy rel. to pressure 4=2706
 KCl, Sr doped, temp. var., and association 4=20407
 KCl, Sr-doped, X-irrad. 4=25991
 KCl—LiCl fused salt mixtures, conductivity, d. c. meas. 4=24232
 KI coloured with I_2 , ionic conductivity 4=28618
 KOH, aq. soln., activation energy rel. to pressure 4=2706
 La in molten La tribromide, increase with metal conc. 4=8220
 LaCoO₃, anomalous var. with temp. 4=28616
 La₂S₃, 20-1000°C 4=4161
 Li, press. effect 4=20332
 Li, pressure depend. over 500 kbar 4=1559
 LiF, ionic conductivity in grain boundaries 4=26101
 LiF, Mn-doped, mechanism meas. by e. s. r. 4=30646
 LiNO₃—NaNO₃—KNO₃ fused eutectic d. c. meas. 4=24233
 Mg alloys, dilute, Matthiessen rule deviations, rel. to phonon spectrum 4=28531
 Mg₂Si, resistivity of cubic and hexagonal phases 4=30804
 Mg₃Cd, ordering kinetics 4=1995
 Mg—Gd alloys, dilute, meas. down to 1°K 4=10029
 MgMn₂O₄, cation migration process meas. 4=26052
 Mg_xMn_{3-x}O₄, rel. to composition and temp. 4=15555
 Mg—Nd alloys, dilute, meas. down to 1°K 4=10029
 MgO, rel. to γ -irrad. 4=28617
 Mn ferrite, near Curie pt., anomaly 4=17492
 Mn ferrites, Verwey hopping mechanism 4=12905
 Mn—Cr, meas. 4=29146
 Mn_{2-x}Cr_xSb, changes rel. to mag. transitions 4=1617
 Mn—Cu alloys, effect of short-range spin correl. 4=1554
 Mn_xFe_{3-x}O₄, low temps 4=1548
 β -MnO₂, pyrolytic 4=26102
 Mo, 4.2°-300°K 4=22677
 Mo—Nb alloy, effect of 1% Fe, meas. 4=28530
 Mo—Nb—Fe(1%) 4=12859
 Mo—Re alloy, effects of 1% Fe, meas. 4=28530
 Mo—Re—Fe(1%) 4=12859
 MoSe₂—WSe₂ polycryst. system, resistivity 4=22720
 MoTe₂—WTe₂ polycryst. system, resistivity 4=22720
 N and Ar plasmas, specific radiation calc. and meas. 4=29934
 N₂, electron drift velocity, avalanche meas. 4=11253
 N₂, momentum transfer and inelastic collision cross-sections, electron transport coeffs. 4=27228

Conductivity, electrical—contd

- N₂, ratio of drift speed to diffusion coeff. 4=11254
 NH₄Cl, solid, pure and doped, rel. to other NH₄ salts 4=30603
 Na, due to twinning in (111) plane, theory 4=22686
 Na, liquid, electron mean free path, by positron annihil. 4=199
 Na, press. effect 4=20332
 Na, pressure depend. over 500 kbar 4=1559
 Na, surface, in mag. field, and cyclotron reson. with helicon waves 4=22554
 Na—DNA, highly polymerized, pressed pellets 4=12840
 NaBrO₃, temp. var., and positive ion vacancies 4=7034
 NaCl crystals, doped with divalent cations, ionic cond. 4=17467
 NaCl, effect of air and water vapour 4=1653
 NaNO₃, single crystal, γ -irrad. effect 4=22777
 NaNO₃, temp. var. 4=4204
 Na₂O—K₂O—GeO₂ glasses, rel. to comp. 4=10094
 Nb, and supercond. upper crit. field 4=18590
 Nb—base binary alloys, rel. to conc. and temp. 4=17813
 Nb, 0°-1000°K 4=25869
 Nb—N crystals, with 0.9-1.3 at. % N 4=10032
 Nb₃Sn, temp. var. anomalies 4=30624
 Nd in molten Nd tribromide 4=8220
 NdBr₃—NdBr₂ 4=8220
 NdCl₃—SrCl₂, electron exchange between adjacent oxidation states 4=8220
 NdI₃—SrI₂, electron exchange between adjacent oxidation states 4=8220
 NH₄ClO₄, temp. and ambient atmosphere effects 4=4200
 NH₄H₂PO₄, rel. to temp. 4=28609
 Ni, changes in mag. field, rel. to domain structure 4=26317
 Ni, effect of cold working and annealing 4=13431
 Ni ferrite, effect of Mn content, meas. 4=6982
 Ni films, Curie temp. from ferromag. anomaly 4=26320
 Ni, 4°-300°K, rel. to cathodically appl. H 4=6929
 Ni, neutron effects, and phase transform. 4=23282
 Ni, spin-wave scatt. at low temps., meas. 4=1553
 Ni—B system, 300-550°C, and struct. 4=15742
 Ni—Cr alloy, short-range ordering, room temp. -600°C 4=1998
 Ni—Cr (21.4 wt%), neutron effect, and K phase form. 4=23282
 Ni_{0.2}Cu_{0.8}Fe_{1.9}Mn_{0.2}O₄, d. c. resistivity 4=26055
 Ni_{0.75}Fe_{0.25}Fe³⁺O₄, 170-273°K 4=26338
 NiH, 78-273°K 4=17466
 Ni—Mo alloys, variation during tempering, K-state function obs. 4=23283
 NiO powder, pure and Cr³⁺ doped, freq. depend. 4=30625
 Np, temp. var. down to liquid He temps., spin-disorder effects 4=6918
 Pb, and supercond. crit. fields var. 4=18579
 Pb ferrite, anisotropy and mechanism 4=6953
 Pb silicate glasses, radiation effects 4=17515
 Pb_{1-x}Nb_xO_{6.5} 4=26120
 PbS, ion beam effects 4=4162
 PbS layers, mono- and polycryst. 4=26051
 PbTe, electron mobility at liq. He temp., theory 4=4041
 PbTe, n-type, resistivity, 20°-550°K 4=22813
 PbTe—SnTe system alloys 4=23275
 Pd—U, comp. effect on resist. to 15.5 at.% U 4=29014
 Pr in molten Pr tribromide 4=8220
 Pt wire, recovery after cold working 4=15524
 Pu, self-irradiation effects 4=22680
 Pu, temp. var. down to liquid He temps. 4=6918
 Pu α , low temp. var. anisotropy 4=20335
 Pu, α , low temps., high press. 4=15522
 α -Pu, with and without Pu²³⁸, self-irrad. effects 4=22651
 Pu, β , 5-425°K 4=6930
 PuC, resistivity from 4.2°-1200°K 4=28416
 Pu—O compounds 4=29016
 Pu, Pu—Al, decrease due to self-irradiation 4=1537
 Rb, pressure depend. over 500 kbar 4=1559
 Rh wire, change after cold working 4=15523
 Rh—Fe alloy, anomalous increase, 1°-50°K 4=15525
 Ru, down to 2°K 4=12863
 S, effect of short high-pressure pulses 4=2515
 S, rhombic, β ray induced, temp. var. 4=7036
 S, rhombic, high-voltage polarization, current flow meas. 4=10098

Conductivity, electrical—contd

- Sb films, time var. 4=26003
 Sb, temp. depend. 4=1588
 Sb_2S_3 , molten 4=8197
 Sb_2S_3 , rel. to S vapour partial pressure 4=2023
 Sb_2S_3 , rel. to stoichiometry and bonding 4=1590
 Sc, temp. depend. 4=26013
 Se, amorphous, poly- and monocrystalline 4=26057
 Se, Cl doped, reduction by Th, Na, K, As 4=4165
 Se, electric field effect, 77°-293°K 4=6985
 Se, space-charge limited currents 4=1619
 Se—Te, liquid, temp. var., and chain struct. 4=24234
 Si, effect of Ni interstitials, meas. 4=28453
 Si, epitaxial films, meas. by i.r. reflectivity technique 4=28570
 Si films, epitaxial, meas. methods 4=6989
 Si films, meas. using three-point probe 4=28569
 Si, heavily doped, temp. depend. 4=4171
 Si, p-type, impurity cond. at microwave freq. 4=4172
 Si, p-type, resistivity minimum for oxidation conversion to n-type 4=12911
 Si, p-type, space-charge-lim. hole injection and trap effects 4=6988
 Si real surface, field effect and relaxations, 190°-620°K 4=10066
 Si, rel. to Hg, W, Mo, Pt impurities 4=10067
 Si, small slices, resistivity meas., appl. of Siemen's method 4=28568
 Si surface, rel. to temp. 4=12913
 Si, temp. depend. when Ni-doped 4=4173
 Si, thermal instability analysis 4=12909
 Si, warm and hot electrons, anisotropy angle 4=10068
 SiO films 4=22766
 SiO films, with Ag and Au, rel. to optical reflectivity 4=22888
 SiO_2 , fused, solid and liquid, 1000-2480°C 4=12962
 Sn, anisotropy due to Brillouin zones 4=26015
 Sn, 4.2-293°K 4=17583
 Sn, liquid, electron mean free path, by positron annihil. 4=199
 Sn, 0-505°K deviation from Matthiessen's rule 4=1566
 α -Sn, press. depend., theory 4=6790
 Sn, surface impedance at 3 Mc/s in mag. field 4=6916
 SnO_2 , 100-900°C, Sb doped 4=6990
 SrTiO_3 , 4.2°-300°K meas. 4=15559
 Ta carbide, rel. to C content 4=13448
 Ta, 0°-1000°C 4=25869
 Ta_2O_5 , induced by γ -rays and neutrons, time var. 4=20402
 Te films, in modulating elec. field 4=28575
 Te, molten, temp. depend., free-electron model 4=2707
 Th, temp. var. down to liquid He temps. 4=6918
 ThC, resistivity from 4.2°-1200°K 4=28416
 Ti alloys, temp. depend. 4=28537
 Ti—Al alloys, 20-1200°C 4=28536
 TiO_2 , partly-reduced, 78°-700°K 4=10072
 TiO_2 , reduced, evidence for interstitial Ti 4=9948
 TiO_2 , (rutile), changes during ageing 4=6984
 U, and U—Mo alloys in γ -phase 4=28388
 U carbides 4=13611
 U, n effects, low temps., two-spike mechanism 4=6932
 U, temp. var. down to liquid He temps. 4=6918
 UC, cast, effect of neutron irradi. 4=22664
 UC, resistivity from 4.2°-1200°K 4=28416
 UC, sintering, and diffusion activation energy meas. 4=13665
 UC, temp. depend. meas. 4=23225
 U—O system from U_3O_8 to UO_2 , temp. var. 4=6991
 UO_2 , sintered, resistance anomaly 4=4205
 UO_2 , 90-800°K 4=15546
 UO_3 , 80-900°C 4=25992
 U_3O_8 , α -phase, rel. to temp. and O_2 pressure 4=1625
 U_3O_8 , 80-900°C 4=25992
 US, 4.2-360°K 4=12842
 V_2O_3 — V_2O_5 system 4=12841
 W, cold-worked, resistivity recovery 4=17480
 W, resist. ratio, residual, diameter and current depend. 4=20337
 W, zone-melted, resist. ratios 1.4°-27°K 4=20338
 Xe, ionized by m.h.d. shock tube, 5800, 8000°K 4=14581
 Yb, 1.5-20.3°K 4=17473
 Zn, high-purity meas. analysis 4=12865

Conductivity, electrical—contd

- Zn, recovery processes after neutron irradi. 4=4102
 $\text{Zn}_x\text{Cd}_{1-x}\text{Sb}$ 4=12918
 Zn—Mn (0.4 at. %), low temp., spin ordering effects 4=17623
 $\text{Zn}_x\text{Mn}_{3-x}\text{O}_4$, rel. to composition and temp. 4=15555
 $\text{Zn}_{1-x}\text{Mn}_x\text{O}_4$, rel. to composition and temp. 4=15555
 ZnS , under 60 keV electrons 4=13091
 ZnSb—CdSb films, var. with conc., temp. 4=12917
 ZnTe in Zn vapour, high-temp. cond. 4=17496
 ZnTe—CdTe, liquid, and phase diagram, dissociation 4=11185
 Zr, crystal zone purified 4=17790
 ZrC, and phase transform., ~2200°C, fruitless search 4=17774
 $\text{Zr}_{0.84}\text{Ca}_{0.16}\text{O}_{1.84}$ ceramics, grain boundary action 4=7037
 ZrO_2 —CaO and phase transform., order—disorder 4=17778
 ZrO_2 — La_2O_3 system, var. temp., freq., composition 4=25990

electrolytic

- See also Chemical analysis, electrochemical; Ion velocity, electrolytic.
 alkali halides, Walden's rule, modification under pressure 4=27193
 benzene, conditions for obeying Ohm's law 4=27192
 demonstration, large scale 4=29222
 electrolytes, in aqueous solns., u. s. vel. 4=2678
 H-bonding solutes in aq. soln. 4=29612
 Kohlrausch's law, deduction from jump-model of electrolytic cond. 4=7765
 measurement 4=24237
 measurement, oscillometric, for chemical analysis 4=13757
 salt solns., press., temp. var. 4=16124
 solutions, cluster expansion for Kubo-type expression 4=14185
 solutions, ionic, cluster theory of conductance 4=14186
 Na_3AlF_6 — Al_2O_3 —NaCl melts 4=29643
 Na_2CO_3 in H_2O 4=24237
 Na-NH_3 solns., conc., liquid metal model 4=14183
 NaOH in H_2O 4=24237

measurement

- alkali halides, d. c., 20°-200°C instrumentation 4=26518
 analogue, elec. of multiresistivity systems 4=24527
 anthracene thin layers, in vacuum, impurities effect 4=30630
 gases, electron drift velocities from mol. excitation 4=11252
 liquids, meter amplifier 4=18633
 metals, by magnetic suspension balance 4=2929
 metals, > 1000°C 4=342
 organic semicond., elec. cond. cell for cond.: temp. meas. 4=28577
 oxides, binary, ion and electron, electrochemical method 4=4704
 Q-meter resistivity meas., thickness corrections 4=18632
 semiconducting materials, four-point probe for resistivity 4=26025
 semiconducting materials, resistivity meter, non-contact 4=22701
 semiconductor post, microwave interaction method 4=22696
 semiconductor sheet resist. nonuniformities, four-point probe 4=22697
 semiconductor surface cond., cleavage method 4=4167
 semiconductors, conductivity anisotropy, effect of specimen side-arms 4=28551
 semiconductors, four-probe, geom. factor calc. 4=1584
 semiconductors, four-probe method, corrections 4=4137
 semiconductors of high purity 4=10069
 semiconductors, loss, by coaxial cell 4=6934
 semiconductors, meas. in microwave field 4=1580
 semiconductors, review 4=26024
 of wakes of projectiles and other media 4=8588
 Wheatstone bridge, sensitivity 4=21434
 Al, resistivity of dislocations 4=6842
 Cu phthalocyanine, surface cond. meas. 4=10137
 Si, diffused layers by four-point probe 4=28448
 Si films, epitaxial 4=6989

Conductivity, thermal

- See also Heat conduction
 nuclear track emulsions at low temp. 4=16786

SUBJECT INDEX

Conductivity, thermal — contd
gases

- acetylene, rel. to viscosity, rotational relax. meas. 4=5241
 air, through a laminar layer, var. dissociation 4=5242
 air, weakly ionized, tensors calc. 4=11525
 alkali metals, meas. 4=5243
 binary monatomic mixture 4=16140
 diluted dissociating gas mixtures 4=8250
 ethane, rel. to viscosity, rotational relax. meas. 4=5241
 ethylene, rel. to viscosity, rotational relax. meas. 4=5241
 high temp., review 4=236
 inert gases, multicomponent mixtures 4=11243
 inert, in terms of Morse potential 4=8241
 kinetic theory predictions, class demonstration 4=5229
 meas., var. pressure, conduction-convection change-over 4=346
 methane, in terms of Morse potential 4=8241
 methane, rel. to viscosity, rotational relax. meas. 4=5241
 mixture, binary, var. temp., composition 4=11242
 mixtures, monatomic rel. to viscosity 4=16141
 obstacle array, effect of using cell model 4=2727
 plasma 4=18807
 plasma, Grad approx. appl. 4=5598
 polyatomic, nonpolar, rel. to viscosity 4=5240
 shock tube study 4=18327
 steam, rel. to temp. and density 4=8248
 translational component, gas mixtures 4=345
 twentyfive, temp. var. 4=18245
 use in chemical analysis 4=17875
 Ar, arcs, 10 000° to 15 000° K 4=24622
 Ar, calc., in presence of ionization 4=18241
 CF₄, rel. to viscosity, rotational relax. meas. 4=5241
 CO₂ 4=29670
 CO₂, rel. to viscosity, rotational relax. meas. 4=5241
 CO₂, theory and expt. 4=21182
 D₂O, 100°-500°C 4=235
 H and He⁺ in discharge in mag. field, reaction ht cond. 4=29882
 H₂, ionized, in external mag. field, tensors calc. 4=458
 H₂, ionized, in mag. field, collisional effects in tensors 4=459
 H₂, theory and expt. 4=21182
 H and He arc column with superposed mag. fld., calc. 4=18777
 2HI = H₂ + I₂ 4=24270
 H₂O, D₂O, and H₂O-D₂O mixture 4=14209
 He^{3,4}, 0.4-3°K 4=16145
 K vapour plasma, fully-ionized, meas. 4=11587
 Li-Li gas mixtures, at high temps. 4=3860
 Li-O gas mixtures, at high temps. 4=3860
 N₂, effect of mag. field 4=14211
 N₂, rel. to viscosity, rotational relax. meas. 4=5241
 N₂, in terms of Morse potential 4=8241
 N₂, theory and expt. 4=21182
 Ne, 25°, 50° and 75° C, up to 2600 atn 4=21183
 O-H gas mixtures, at high temps. 4=3860
 O₂, rel. to viscosity, rotational relax. meas. 4=5241
 O₂, theory and expt. 4=21182
 O₂, var. in mag. field, appl. to gas anal. 4=29245
 SF₆, rel. to viscosity, rotational relax. meas. 4=5241

liquids

- binary mixtures, dimensionless presentation 4=8202
 dependence on press. and vol. 4=18193
 increase by electric field, dielectrics 4=5170
 methane, meas. and Rice-Allnatt theory 4=169
 43 aliphatic liquids, meas. by unsteady state method, -100°-200°C 4=24204
 Ar, configuration relax. model 4=8163
 Ar, meas. and Rice-Allnatt theory 4=169
 D, ortho and para 4=171
 Ge 4=13532
 HeII capillary flow, and second sound absorpt. 4=18521

Conductivity, thermal — contd
gases — contd

- He II, effect of small amounts of He³ on pulse propag., meas. 4=14487
 He II, for large temp. diff. 4=21375
 He⁴, with β phase 4=18526
 H₂O, convective, from horizontal rotating cylinder, var. Reynolds and Prandtl numbers 4=5420
 H₂O, up to crit. point 4=18194
 Kr, meas. and Rice-Allnatt theory 4=169
 Li, molten, 320°-830°C, expt. 4=16106
 Xe, meas. and Rice-Allnatt theory 4=169
- solids**
- alkali halides, effect of ion tunnelling processes 4=9822
 alkali halides, F-centres, phonon scatt. 4=6761
 antiferromag., and u.s. absorpt., spin-phonon theory 4=26347
 co-axial cylinders, inner cylinder arbitrary temp. accommodation effect 4=21336
 crystal imperfection meas. 4=1450
 crystal, isotopically disordered, rel. to lattice 4=30528
 crystal lattice imperfections, screw dislocations, temp. var. 4=4002
 dielectrics, amorphous, below 1°K 4=6758
 dielectrics, diffusivity minimum for unity density 4=22511
 dielectrics, at low temp. 4=17381
 dielectrics and metals, rel. to acoustic wave absorption 4=9841
 digital computer determ. 4=22513
 ferroelectrics, at low temp. 4=17381
 graphite, below λ -pt. of He, meas. and cal. 4=30531
 graphite, irradi. effect 4=20226
 graphite, irradi. at high temp. 4=20323
 graphite, irradiated in nuclear reactor, decreasing damage with increasing annealing freq. 4=9615
 graphite, meas. instruments, neutron effects, var. with irradi. and meas. temp. 4=6764
 graphite, neutron-irradi. effects 4=30599
 graphite, 90°-350°K, rel. to defect structure 4=1415
 graphite, polycrystalline, irradiated, rel. to crystallite size 4=1412
 Inconel 702, high temperature 4=8473
 infrared optical materials, forty-eight 4=2811
 insulators, 80° to 500°K, calc. 4=30533
 mixed boundary conditions 4=27352
 molecular crystals 4=28379
 organic semiconductors, narrow-band, calc. 4=12920
 polytetrafluoro-ethylene, 80° to 500°K, calc. 4=30533
 quartz, pulse propag., low temps., and phonon traject. 4=25867
 rare earth cpds. and alloys, selected, rel. to temp. and comp. 4=28566
 rare earth ethyl sulphates, anomalous, and phonon spectrum 4=6714
 rare-earth sesquisulphides, electron and phonon contrib. 4=30527
 refractories, ZrC, TiC, Ta, measurement 4=6754
 semiconducting polymers derived from nitriles, thermal conductivity 4=20228
 silica heat shields for nose cones 4=15437
 steel, Cr-Ni austenitic, effect of cold deformation and ageing 4=12663
 steel, stainless, low temp., electron and phonon 4=22515
 supercond., lattice, reduction by crystal point defects 4=18556
 Ag, Lorenz number at low temps. 4=6919
 AgIn₃Te₅ 4=26060
 AgSbTe₂ 4=25868
 Ag₂Se, beta ray effects, 2 MeV 4=10070
 Al, Lorenz number at low temps. 4=6919
 AlO₂ (sapphire), pulse propag., low temps., and phonon traject. 4=25867
 Au, below 1°K 4=6757
 Au, Lorenz number at low temps. 4=6919
 Au, 2°-17°K 4=1898
 AuSn 4=7619
 BeO, temp. var. reduction by n irradi. 4=6762
 BeO, 1000°-2000°C 4=9866
 Bi 4=12882
 Bi₂Te₃ 4=13530
 Bi₂Te₃ alloys, 100°-300°K 4=10141
 Bi₂Te₃, Ge doped, meas. 4=28380

Conductivity, thermal—contd
solids—contd

CdS, lattice, phonon scatt. analysis 4=15411
 CdSb, anisotropy, 100°-420°K 4=30530
 CdSb—ZnSb, 90-400°K 4=1592
 CdTe—CdSe alloys, rel. to composition 4=22706
 CdTe, lattice, phonon scatt. analysis 4=15411
 CdTe, rel. to phonon scatt. by mag. impurities 4=9871
 Cr spinellides, rel. to temp. 4=9868
 Cu alloys, lattice, low temp., and elec., temp. var., Pippards's theory 4=17362
 Cu, below 1°K 4=6757
 Cu, below 1°K, rel. to impurities 4=9874
 Cu crystal lattice imperfections, screw dislocations, temp. var. 4=4002
 Cu, determination by Angström's method, effects of modification 4=22512
 Cu, Lorenz parameter, anomalous, at He temps. 4=17471
 Cu, point defects annealed, effects of 4=1455
 Cu wire, 0.1 cm dia., 16 cm long, Angströms method adaptation 4=30526
 Cu—Pb—Cu sandwiches, 1.3° to 4.0°K 4=9873
 Dy, polycryst., 5°-305°K, rel. to mag. transitions 4=9872
 Fe, below 1°K 4=6757
 FeAl₂O₄—MgAl₂O₄ mixed crystals 4=20514
 GaAs, effect of 2 MeV electron irradiation, and annealing 4=28381
 GaAs, intrinsic and heavily doped, 300°-900°K 4=1414
 GaAs, lattice, phonon scatt. analysis 4=15411
 GaSb, lattice, phonon scatt. analysis 4=15411
 GaSb—InSb alloys, rel. to that of InSb 4=28383
 Gd, 5-310°K, Lorenz function, and ferro—paramagnetic transition 4=12661
 Ge 4=13532
 Ge crystal lattice imperfections, screw dislocations, temp. var. 4=4002
 Ge, fast neutrons effects 4=4003
 Ge, on fast neutron bombard. 4=10012
 Ge, lattice thermal cond., analysis 4=6756
 Ge, rel. to deformation 4=1410
 Ge, thermal shock behaviour rel. to conductivity 4=6763
 H₂O, D₂O, liquid N and H temps. 4=12660
 He³, He⁴ 4=18525
 He⁴ 4=21387
 Hg, pure, near T_c, normal and superconducting 4=6765
 In 4=22514
 In film, supercond., mag. field effect 4=18608
 In—sapphire boundaries, thermal resist., for supercond. and normal In 4=28385
 In, size effects, and electron m.f.p., supercond. and normal 4=21415
 InAs, intrinsic and heavily doped, 300°-900°K 4=1414
 InAs—CdTe alloys, n-type, up to 400°K 4=22717
 InAs—CdTe system, meas. 4=6759
 InAs—In₂Se₃ system 4=1611
 InAs—ZnGeAs₂ system, meas. 4=6759
 InAs—ZnTe system, meas. 4=6759
 In—Bi superconductors, mixed, var. mag. field 4=18572
 InP, intrinsic and heavily doped, 300°-900°K 4=1414
 InP, undoped, rel. to optical mode scatt. 4=12662
 InSb, effect of 2 MeV electron irradiation, and annealing 4=28382
 InSb—In₂Te₃ alloys, 80° to 500°K 4=9870
 InSb, lattice, phonon scatt. analysis 4=15411
 KBr, doped, application of Debye model 4=6760
 KBr, rel. to deformation 4=1410
 KCl, rel. to deformation 4=1410
 KCl, with KNO₃, temp. var., phonon—defect reson. interaction 4=17382
 KI, rel. to deformation 4=1410
 LaCoO₃, meas., heat transfer processes 4=30532
 LiF, rel. to deformation 4=1410
 NaCl, effect of crystal interstitials due to H₂O, 1.5-40°K 4=17351
 NaCl, plastically deformed 4=1411
 NaCl, rel. to deformation 4=1410
 Nb, 0°-1000°K 4=25869
 NdCoO₃, meas., heat transfer processes 4=30532
 Nb₂Sn, supercond., temp. var. 4=21423
 Ni—Cr—Fe alloys, 20-900°K, Lorentz number calc. 4=15424
 Ni—Zr(2, 0.2 at.%), 1.6-12°K, normal and superconducting 4=4006

Conductivity, thermal—contd
solids—contd

Pb film, supercond., mag. field effect 4=18608
 Pb, pure, near T_c normal and superconducting 4=6765
 PbTe, rel. to deformation 4=1410
 PbTe—SnTe system alloys 4=23275
 Pt, suitability as standard 4=11385
 Ru, down to 2°K 4=12863
 Sb, temp. depend. 4=1588
 SbI₃ 4=1624
 SbTeI 4=1624
 Se, crystalline and amorphous, 85° to 450°K 4=28386
 Si, effect of neutron irradiation, 80°-300°K 4=4004
 Si, effects of Sn impurities, theory 4=9829
 Si, fast neutrons effects 4=4003
 Si, lattice thermal cond., analysis 4=6756
 Si, neutron-irradiation damage, rel. to recovery and annealing 4=4005
 Si, 3°K to melting point, meas. and theory 4=17383
 SiO₂, rel. to defect sites 4=28387
 Sn film into liq. He 4=24470
 Sn film, supercond., mag. field effect 4=18608
 Ta, 0°-1000°K 4=25869
 Ta—Nb mixed single crystals, normal and superconducting, rel. to composition 4=15438
 Te, rel. to deformation 4=1410
 TeI 4=1624
 Ti, below 1°K 4=6757
 TiC, 200°-2000°K 4=20227
 TiN, 200°-2000°K 4=20227
 U, and U—Mo alloys in γ -phase, 4°-40°K 4=28388
 UC and UC₂, rel. to temp. 4=13611
 UO₂, changes at high-temp., theory 4=12664
 UO₂, effect of neutron irradiation. 4=22653
 UO₂, low temp., n irradiation, spin—phonon effects 4=17386
 Zn blende-type lattice, rel. to degree of ionicity 4=9869
 ZnSO₄·7H₂O, containing Fe²⁺, and phonon diffusion 4=1383
 ZrC, 200°-2000°K 4=20227

measurement

adiabatic meas. using Peltier coeff., corrections 4=30529
 Angström's method, adaptation 4=30526
 fluid, from temp. var. of immersed heated wire compared with standard fluid 4=5418
 gases, from press. change on surrounding with isothermal wall 4=16142
 gases and vapours, over wide temp. and pressure ranges 4=18448
 gases, var. pressure, conduction—convection change-over 4=346
 graphites, polycrystalline, thermal diffusivity meas., 40°-1200°K 4=28384
 high press. and temp. 4=26568
 high temps., unmatched-guard method 3=341
 Hg contacts 4=18455
 liquids, over wide temp. and pressure ranges 4=18448
 metals, cylinder method 4=344
 metals, high temp., by electron bombard. 4=27353
 metals, > 1000°K 4=342
 non-stationary heated-wire method 4=5419
 by periodic heating, with compensation for a periodic temp. rise 4=5414
 poor conductors, transient line-source method 4=29786
 powders, in vacuum, 120°-350°K 4=2865
 refractories, thermal diffusivity, 1300°-1650°K 4=6754
 solids, absolute method, 25° to 320°K 4=14424
 solids, calc. of real and effective values 4=8472
 solids, determination by Angström's method, effects of modification 4=22512
 solids, liq. He to room temps., appar. 4=9872
 variable-state methods, for solids, appl. to building materials 4=14425
 Au—Fe alloy thermocouples, use at low temp. 4=8537

Conferences

astronautical sciences 4=10931
 astronomical spectra, i.r., Twelfth International Astrophysics Colloquium, Liege, 1963 4=26878
 atomic collision cascades symposium 4=30597
 atomic collision processes, London (July 1963) 4=25545
 atomic and molec. quantum mechanics, Sanibel Island (1963) 4=6449
 Brandeis summer institute 1962 lectures 4=9040

SUBJECT INDEX

Conferences—contd

- carbides in nuclear energy, Harwell 1963 4=19906
 complex nuclei reactions, Asilomar (April 1963) 4=22192
 cosmic rays, solar particles and space research,
 Varenna (1961) 4=20883
 cryogenic engineering, Univ. of California (1962) 4=8533
 crystal point imperfections in non-metallic
 solids 4=20264
 crystallography and crystal perfection,
 Madras (1963) 4=20744
 dielectrics in space, Pittsburgh (1963) 4=15963
 EAES, reactor fuel cycles 4=19901
 e.m. wave scattering, Potsdam, NY (1962) 4=14392
 electricity direct conversion, Pacific (1962) 4=14563
 electromagnetic and time measurements 4=29509
 electron microscopy, Cambridge, July 1963 4=2098
 electron microscopy, collection of articles 4=29156
 electron probe microanalysis 4=10678
 electron probe microanalysis 4=10679
 electron tubes residual gases, Milan (1963) 4=11718
 electron tubes and semiconductor devices, Pilani,
 India, Dec. 1962, review 4=603
 excitons, Radiation Research Soc., Colorado
 Springs (1962) 4=6513
 fast neutron physics, Houston (Feb. 1963) 4=22142
 films, thin solid, optics, Marseille (1963) 4=20438
 geophysical prospecting, industrial and exploratory 4=10686
 glass, optical, physical structure and props. 4=10625
 glass, viscoelastic props., Sheffield (1963) 4=4678
 gravitation theory, series of articles 4=8028
 gravitational theories, Varenna (1961) 4=24026
 He, liquid, Varenna (1961) 4=18507
 heat exchange and gas dynamics 4=8230
 high-energy physics, Tihany (Sept. 1962) 4=21689
 high mag. fields, prod. and applications, Oxford,
 July 1963 4=647
 high-pressure physics and chemistry, collected
 papers 4=27002
 high temps., meas., London (May 1964) 4=27360
 ice crystals, Berkeley California (1963) 4=7559
 interstellar matter in galaxies, Princeton (1961) 4=7959
 ionization phenomena in gases, Paris (1963) 4=11506
 ionization phenomena in gases, Paris (1963) 4=11507
 ionization phenomena in gases, Paris (1963) 4=18670
 ionization phenomena in gases, Paris (1963) 4=18671
 liquid metals, Stoke Poges (1963) 4=149
 liquid state, Kiev (1963) 4=21087
 liquid state, London (1963) 4=5150
 liquid state, London, (1963) 4=16088
 low-temperature physics, London (1962) 4=11428
 magnetism and magnetic materials, Atlantic city
 (1962) 4=13104
 magnetohydrodynamics, engineering aspects, Berkeley
 (1963) 4=14871
 many-body problem, Hoboken (1957) 4=27090
 mechanics of anisotropic and inhomogeneous materials,
 Manchester, April 1964 4=23082
 metallurgy, surface phenomena 4=7690
 metals, mechanical props. rel. to structure, Teddington
 (Jan. 1963) 4=26460
 millimetre and submillimetre waves, Orlando
 (1963) 4=8922
 Mössbauer effect, Dubna (1962) 4=15398
 Mössbauer effect, Ithaca, NY (1963) 4=15399
 Mössbauer effect, second international 4=9809
 multiparameter analysers use in nuclear physics,
 Grossinger (1962) 4=11842
 nonlinear magnetism, Washington (1963) 4=14846
 novae and supernovae, Haute Provence (Sept. 1963) 4=29394
 nuclear electronics, internat. symposium,
 Paris (1963) 4=11843
 nuclear interactions, Herceg-Novi (1962) 4=27930
 nuclear physics, Orsay (1963) 4=11841
 nuclear radiation effects, Toronto (1963) 4=16713
 nuclear system noise analysis, Gainesville (Nov.
 1963) 4=19855
 neutron physics, Soviet progress 4=9002
 nuclear physics, Manchester (1963) 4=5882
 nuclear spectroscopy, Varenna (1960) 4=25244
 optical masers, Brooklyn (1963) 4=14923
 optics, six review articles 4=14374-5
 organic semiconductors, Chicago (April 1961) 4=22727

Conferences—contd

- paramagnetic resonance, Jerusalem (July 1962) 4=23040
 particle accelerators, Boston, 1963 4=24763
 plasma and controlled nuclear fusion, Salzburg (1961) 4=5588
 plasma phenomena and meas., San Diego (1963) 4=14624
 plasma physics (Culham Lab., 1963) 4=5589

Constants

- astronomical 4=23822
 atomic physics, theoretical connection 4=11009
 Avogadro's number 4=27595
 elementary particles, mass multiplicity 4=25051
 fine structure, from muonium and positronium
 data 4=25129
 gravitation, Dirac hypothesis, expt. data 4=18038
 gravity, meas., interferometric, free fall lengths 4=13762
 h/e, from h.f. limit of continuous X-ray
 spectrum 4=16605
 new set of values by NAS-NRC 4=11007
 solar system 4=13912
 tables, in dictionary of units 4=5004
 and time scales, macro and micro, self-interaction
 appl. 4=2525

Contact angle

See Capillarity; Surface tension; Wetting.

Contact potential

- difference meas., ionization method 4=27452
 metal-insulator-metal, barrier shape meas. 4=26136
 metals, rel. to capacitance and current 4=12853
 photovoltaic effect 4=30655
 AgS films, photovoltaic effect 4=28650
 CdS, and chemisorption of O 4=29194
 Cu and Ni surfaces treated with electrolyte
 solutions 4=26008
 Ge, rel. to O₂ and water vapour effect 4=20795
 N₂, on W crystal faces 4=29199
 Si, rel. to O₂ and water vapour effect 4=20795
 W-Nb potential difference 4=6931
 ZnO-Au interface, rel. to methyl free radical
 adsorption 4=6992

Contact resistance

- graphite, high press. and current effects 4=20331
 probe, automated, films and press. var. meas. 4=8587
 Al-Al₂O₃-Se-Au sandwich cells, negative resis-
 tance 4=28583

Contact resistance — contd

C, electric-motor brushes, effect of current 4=7415

Convection

in adsorption and desorption of moisture by hygroscopic fibres 4=23597

air, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866

arcs, elec., theory 4=21492

atmosphere, upper, m.h.d., and aurora and mag. storms 4=26873

atmospheric, effect of humidity 4=4760

atmospheric, generated by moist air mass, calc. 4=7828

atmospheric, in unstable stagnant mass 4=30930

between parallel plates, 2-dimens. problem 4=29791

boundary layer, heated, vertical, approx. soln. 4=5422

CO₂, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866

convection—condensation enhancement of vaporization of solids 4=24452

cooling transients, natural convection 4=18459

cylinder, electrically heated, transfer to fluid 4=24403

effects in sapphire dissolution in ceramic systems 4=18188

electric field effects in fluids 4=16271

electrically conducting fluid, mag. field effect 4=21639

electrically conducting fluid, from vertical plate, mag. field present 4=27358

electrophoresis, continuous-flow, kinematic stabilization, effects 4=29224

electrostrictive forces, effect of 4=347

fluid, cond., unsteady, past plate 4=21640

fluid sphere interior, heterogeneous, compressible 4=30974

gas—liquid, theory 4=24409

He, and radiation cooling of irradiated specimens, computer programme for calc. 4=2866

heat transfer by, up to near-critical conditions 4=5413

heat transfer from, ice hailstones, turbulence effects 4=10716

heat transfer from thermistors, natural and forced convection together 4=27355

influence of roughness, artificial, two-dimensional 4=21333

laminar forced, heat transfer in non-circular duct 4=27357

in liquid films, flowing across wall, stability 4=2640

liquid flow in pipes, rel. to surface roughness 4=11159

liquid mixture instability, vertical layer under gravity 4=11155

natural convection film boiling, laminar two-phase boundary layer 4=8515

planet and moon interiors 4=30974

plasma, inhomog., instab. in gravity field 4=8764

plasma, weakly ionized, in nonuniform external mag. field. theory 4=11581

with rotation or mag. field 4=11391

stars, atmosphere, mixing depth 4=2416

steady-state equations 4=14427

steam—water, theory and expt. 4=24409

teaching demonstration, free fall, correct description of principles 4=16002

thermal, in fluids, rigid boundary problem 4=21338

thermal, two-dim. element, shape-preserving, numerical calc. 4=16272

thermistors in liquids, Prandtl number effect 4=27356

thermolecular flow, rel. to microbalance experiments 4=2506

turbulent, heat eddy diffusivity near wall 4=16273

turbulent, in stars, spectrum 4=11392

two-layer thermoconvective problem 4=2868

unsteady, free, from vertical flat plate 4=5421

in water, from horizontal rotating cylinder, var. Reynolds and Prandtl numbers 4=5420

with He injection, thermodynamic coupling bet. heat and mass transfer 4=340

Conversion electrons

See Beta-ray spectra, conversion electrons; Gamma-rays, internal conversion.

Cooling

See also Joule—Thomson effect; Low temperature production; Supercooling.

in air, of irradiated specimens, computer programme for calc. 4=2866

in CO₂, of irradiated specimens, computer programme for calc. 4=2866**Cooling — contd**

gas, by radiation after shock heating 4=18482

in He, of irradiated specimens, computer programme for calc. 4=2866

helium, cool-down conditions, in contact with various materials 4=11436

hydrogen, cool-down conditions, in contact with various materials 4=11436

nitrogen, cool-down conditions, in contact with various materials 4=11436

nuclear reactors, fission, natural liquid circulation, non-stat. regimes 4=25456

oxygen, cool-down conditions, in contact with various materials 4=11436

slow, from 300° to 20°K, method 4=356

GaAs diodes, photon emission, refrigeration 4=10082

Copper

acoustic dissipation coeff., increase by grinding of metal 4=6723

adhesion, 50μ foil, to steel (100μ) 4=1922

atom, electron Coulomb scatt. without excit., 50-400 keV 4=6502

atom, excited states, spin-orbit coupling 4=15270

atomic electron affinity, surface ionization meas. 4=18678

atoms, 1-10 keV, slowing down in crystals, theory 4=6891

atoms, sputtered, energy distrib. 4=24754

atoms, 20 keV electron plural scattering 4=13627

bending fatigue life, cross-slip effects 4=7421

cold-drawn, room-temp. creep, under torsion and tension 4=28945

collision effects of Cu atom in lattice, machine calc. 4=28506

cond., elec., crystal whiskers, low temp. min. 4=17478

conductivity, elec., low temp. min., effect of Sn, Fe impurities 4=20330

conductivity thermal, below 1°K 4=6757

conductivity, thermal, crystal lattice imperfections, temp. var. 4=4002

contact to CdS single crystals, electrical props. 4=12853

creep and damping capacity, influence of deformation at low temps. 4=23147

critical point Grüneisen eqn. in pressure, density, int. energy 4=25849

crystal dislocation relaxation peaks after deformation at 4.2°K 4=7429

crystal electron band struct. calc. 4=17401

crystal electron band struct., from photoelectric emission 4=20242

crystal growth 4=7537

crystal growth, with low dislocation density 4=23337

crystal imperfections, interstitials, and irradiation, annealing 4=15472

crystal imperfections on n irr., electron mic. contrast effects 4=17425

crystal interstitials in films, ion beam prod. at low energies 4=6833

crystal stacking faults, effect of diffusion annealing in H 4=20284

crystal texture transform. var. with rolling temp. 4=7481

crystal twinning, possible pole rather than dislocation model 4=7529-30

crystal whisker growth 4=13553

crystal whisker growth, platelet modification 4=17793

crystallographic texture variations through rolled Cu sheet 4=13638

crystals, cathodic sputtering, anisotropy 4=12823

crystals, cutting by immiscible acid method 4=29072

crystals, preferential atomic ejection directions, bombarded by Ar⁺ ions, 40 keV 4=4095

crystals prep. with few dislocations, no substructure 4=4544

crystals, single high purity, growth 4=29049

cyclotron resonance, electron masses meas. 4=9933

d-band density of states 4=12692

Debye—Waller factor interpretation 4=3982

defect self-healing at high temp., mechanism and kinetics 4=12744

deformation, in tension, energy absorption, dislocation annihilation and blocking 4=26506

deformation, three stages, unloading effects meas. 4=20651

dendrites, twins pseudopentagonal 4=23306

deuteron range meas., 5-27 keV 4=1540

Copper—contd

- diffusion of Ag, in elec. fields 4=20307
- diffusion of He-filled bubbles, rate of migration 4=30573
- diffusion of Pd, meas. and analysis 4=6870
- diffusion of Sb¹²⁴, 560°-896°C 4=22609
- diffusion and solubility in Ge, Si and GaAs 4=12791
- diffusion, thermal, of substitutional impurities 4=17440
- diffusion, zone-refining of tracers 4=23336
- dislocation distrib. after deform. at 4.2°K, meas. 4=9971
- dislocation, electron-irradiation, thermal depinning theory 4=28455
- dislocation loops formed on deformation 4=28469
- dislocation loops after neutron irradiation, annealing 4=4053
- dislocation sub-structure, rel. to grain size and strain rate 4=20282
- dislocations, rel. to α and β -irrad. 4=22586
- dislocations, X-ray investigation 4=22596
- elastic const. recovery after plastic deform., dislocation effects 4=20651
- elastic and shear moduli 4=17707
- elastic Young's modulus, beta ray effects, low temps. 4=10376
- electric cond. for vacancy scatt., pseudopotential method 4=6771
- electrical conductivity, effect of surface enriched with Cr, Ti, Si, B or Ni 4=28535
- electrodeposits, partial (110) pole figures rel. to thickness 4=7669
- electrolytic deposition onto rare earths, small area 4=23665
- electrolytic films, structure 4=30879
- electron backscatt. coeff., 8-22 MeV 4=22122
- electron beams, energy dissipation, fair agreement for medium penetration 4=6817
- electron emission coeff. anisotropy, Ar-ion induced 4=3035
- electron emission, secondary, on ion bomb., ang. var. 4=21565
- electron emission, secondary, var. Ar⁺ ion beam angles 4=14754
- electron irradiation, 1.25-3.25 MeV, stage I recovery spectrum 4=10010
- epitaxial growth on NaCl cleaved in vac. 4=29070
- explosive loaded wave profiles, mech. props. meas. 4=28939
- explosively deformed, substruct. 4=29164
- equation of state, metal 4=25848
- etched, thermally, in vac., surface topography 4=17780
- exploding wires, composition of aerosols, X-ray anal. 4=10659
- faceting of surfaces at 1000°C 4=10459
- fatigue in crystals, effect of strain amplitude 4=23140
- fatigue under alternating torsion 4=1939
- fatigued, persistence of voids after annealing 4=15705
- Fermi surface and electron distrib. nearly-free electron approx. 4=9903
- Fermi surface necks, by de Haas-van Alphen effect 4=17622
- film, O₂ chemisorpt. effect on work function 4=23657
- films, absorption, light, anomalies due to granular struct 4=1715
- films, ageing 4=10608
- films, electron deceleration and inelastic scattering 4=8835
- films, evaporated, bridging phenomenon 4=20743
- films evap. onto Cu, dislocation structure 4=25942
- films on Ni, electron microscopy 4=2108
- films, partially oxidized, mag. susceptibility at 25°C, erratum 4=17625
- films, recrystallization time, tensile strength, thickness var. 4=23571
- films, reflectivity, 2-10.5 eV, ~1100 Å thick 4=28676
- films, sticking coeff., optical transmission, and oxidation 4=20801
- films, tensile strength, rel. to thickness 4=7416
- films, very thin, absorpt. 0.2-0.7 μ 4=22867
- fluctuations, electrical, due to finite thermal capacity 4=438
- foil crystals, plastic deformation 4=1936-7
- foil from rolled material, tensile behaviour, 2-53 μ thick 4=15704

Copper—contd

- foil, speed of evap. in vacuum furnace 4=5472
- foils, cylindrical, collapsing, z-pinch production 4=18351
- foils, isotopic, for nuclear targets 4=24933
- friction coeff. meas. rel. to speed 4=7400
- in friction with Cu, Ni and Ag, effect of chemical affinity on adhesion 4=10369
- grain boundaries, movement, by strong elec. currents 4=25954
- grain boundary relaxation, study by internal friction and elastic aftereffect 4=23141
- Grüneisen constant 4=4000
- Grüneisen parameter, temp. depend., calc. 4=12657
- halides, thermal expansion at low temps., expt. 4=17369
- hardening by fast neutrons 4=30760
- heat transfer to water by nucleate boiling, effect of surface config. 4=2862
- ion scatt., Ar, max. 4=19118
- indentation hardness, effect of loading duration 4=26518
- interdiffusion with Ni and Co, meas. analysis 4=12789
- internal friction, dislocation-point defect interaction model 4=20653
- internal friction and dynamic moduli after cold working 4=1941
- internal friction, interstitial conditioned 4=1938
- internal friction peaks at low temps. 4=1935
- ion damage, below 30°K, in electron microscope 4=6897
- ion penetration along lattice open channels, at 50 keV 4=4086
- ions, Cu²⁺, e. s. r. in K₂Cu(SO₄)₂, temp. depend. 4=13328
- ions, Cu⁶³⁺, in various cpds., n.q.r., 4.2-300°K 4=26458
- irradiated, specific heat detem. methods 4=354
- isochronal studies, rel. to annealing in H₂ atmosphere 4=30606
- K α radiation under electron impact, meas. 4=9664
- K-shell X-rays due to 60-500 keV protons 4=13046
- La_{1,2}, β emission spectra, in metal, Cu₂O and CuO 4=28680
- latent hardening of cross-slip system 4=26503
- lattice dynamics, anisotropic dispersive continuum model 4=1368
- lattice dynamics, force consts. and phonon dispersion, model 4=12604
- liquid, diffusion of Si, Ti, Cr, Fe, Co and Ni rel. to rate of soln., expt. 4=8194
- liquid, pure, solubility of H₂ 4=5157
- Lorenz parameter, anomalous, at He temps. 4=17471
- luminescence, resonance, ion beam prod. ang. var., mechanism 4=13071
- magnetic impurities, exchange mechanism 4=6835
- magnetoresistance and Fermi surface neck diameters 4=10033
- magnetoresistance for mag. field meas. up to 34 kG 4=2478
- mechanical internal energy increase under stress 4=23144
- mechanical props., effect of H₂ 4=13430
- mechanical relax. rel. to work hardening curve 4=4460
- mechanical strength, fatigue, effect of grain size 4=28940
- microhardness rel. to applied load 4=17743
- microstrain yield stress, rel. to n-irrad. 4=28942
- microstructure, Cu reduced from scale, oxidation and reduction kinetics 4=23526
- monocrystalline substrate on mica, rel. to Ag and Ni film struct. 4=23589
- Mössbauer effect by Fe⁵⁷ impurity, meas. 4=12579
- Mössbauer effect of Fe⁵⁷, interpretation of magnetism 4=25817
- Mössbauer effect of Fe⁵⁷, 20° to 850°C 4=12584
- μ -meson scatt., 1.7 GeV/c meas. 4=28050
- n.m.r. Cu^{63,65}, ultrasonic excitation, attenuation due to nuclear spin level transitions 4=17694
- n.m.r. in sheets, anisotropy, meas. and theory 4=7345
- neutron irradiation at 4.5°K, effect of initial defect conc. on annealing 4=12829
- neutron irradiation, prismatic dislocs. and volume change on annealing 4=17460
- neutron-irradiated, defects rel. to yield strength 4=20650
- neutron scatt., small-angle, by vacancy clusters 4=10009
- 99.99% pure, elastic modulus, electrocapillary effect 4=4438
- nuclear cooling by demagnetization of cerium magnesium nitrate 4=5484

Copper — contd

nuclear transitions, meas. from γ -ray spectrum after
 Cu + n interaction 4=12133
 nucleus, screened, electron scatt. calc. 4=9667
 optical absorptance and emittance, rel. to ion
 bombardment 4=20472
 optical constants, meas. in far u. v. for Cu layer with LiF
 film 4=28677
 optical props., dielectric const., and band struct.,
 review 4=13047
 optical properties in vacuum, and surface
 contamination 4=20452
 optical refl., phase shift dispersion meas. 4=28709
 oxidation, high temperature 4=23639
 oxidation and reduction, using gas reactor for trans-
 mission electron microscopy 4=29220
 oxidation, whisker growth of CuO is of no
 importance 4=29212
 plastic deformation, large-angle grain boundaries
 formation 4=10378
 plastic deformation, temp., strain rate var. 4=23145
 plastic flow, initiation 4=10375
 plastic deformation, subgrain formation 4=30867
 plastic microstrain curves, moments 4=26491
 plastic range in neutron irradi. single
 crystals 4=30772-3
 plastic yield, single crystals, radius effect,
 50-150 μ 4=20652
 plastically deformed at low temp., crystal lattice
 distortions, kinetics of relief 4=6847
 plastically deformed, relax. behaviour, elec. cond.
 data 4=10025
 plastically deformed single crystals, activation energy
 and activated vol., effect of surface
 condition 4=30763
 point defects, quenching and annealing effects 4=1455
 polishing machine, acid, for dislocation free
 surface 4=4992
 polycrystalline specimens, diffuse and double Bragg
 reflection 4=15804
 polycrystals, Cottrell-Stokes flow stress law
 validity 4=23203
 positron flux from Cu⁶⁴, spectral distrib. 4=28435
 precipitation in Ge, var. crystal dislocation density,
 450-570°C 4=13480
 proton irradi., 10 MeV, stage III recovery 4=10011
 proton prod. by H₂⁺ ion impact 4=28270
 range of 0.07-1.0 MeV Ga atoms 4=28505
 recrystallization after cold rolling, effect of P 4=10576
 recrystallization of ground powder, X-ray meas. 4=10575
 reflection of Ar ions, anisotropy 4=29993
 removal from GaAs, 600-1000°C 4=15536
 resistance thermometer for field use 4=21342
 rods, brass-cored, mutual diffusion, effect of press., rel. to
 diffusion-induced porosity 4=15486
 secondary atom emission, under 15 keV Ar⁺
 bombard. 4=17457
 secondary electron emission and ionic reflection on ion
 bombardment 4=27565
 secondary electron emission rel. to photoelectric
 emission 4=8808
 single crystal, sputtering ratio and ion-electron emission
 coeff. anisotropy 4=25983
 single crystals, deform. twin form. 4=29032
 sintering gravity effects on radial shrinking 4=7689
 slip bands, formation in fatigue tests 4=28941
 slip, fatigue induced, electron microscope exam. 4=23139
 slip lines, temp. depend., neutron irradi. effect 4=10395
 slip process in fatigue 4=26504
 slip, thermal activation after neutron irradi. 4=10377
 solid solubility of Ho 4=13459
 solubility in GaAs, and elec. activity, 600-1000°C 4=15536
 specific heat, 0.1°-4.2°K analysis 4=15426
 spectrum, CuI, 3d⁹ 4s4p h. f. s. and electron struct. 4=25509
 spectrum, CuII, h. f. s. and shifts, for two isotopes 4=9640
 sputtering, average energy rel. to focusing energy 4=19125
 sputtering, by Ar⁺ ions, 30-170 keV 4=22644
 sputtering by Ar⁺ and Ne⁺, temp. var. 4=10018
 sputtering, by Ar⁺, neutral particle emission 4=14769
 sputtering by ion bombardment, 40° to 900°K target
 temp. 4=20320
 sputtering, temperature dependence 4=10017

Copper — contd

sputtering, by 20 keV, Ne⁺, Ar⁺ and Kr⁺, ang.
 depend. 4=17459
 sputtering, by Xe⁺ ions, 25 to 60 keV 4=20321
 sputtering yields for 1-10 keV Ar⁺ ions 4=4103
 strain distrib. in neck of tensile specimen, expt.
 analysis 4=23142
 strain hardening, in polycrystalline specimens 4=13397
 strength, neutron irradi. effect in single crystals 4=17728
 strength of neutron-irradiated crystals, effect of
 prestressing 4=13398
 stress, long-range back, nature 4=26505
 stress prod. precipitation and dissolution 4=26549
 stress/strain relns., high press., effect of pores 4=23146
 substructure of annealed specimens, temp. var. 4=23525
 substructure formation, during high temp. high strain rate
 deformation 4=26492
 surface diffusion on Cu 4=15487
 surface diffusion of Ge 4=22611
 surface free energy, anisotropy, effect of metallic
 impurities and temp. 4=17373
 surface self diffusion, environment effects 4=28487
 surface stresses in sheets, X-ray refl. obs. 4=26499
 surface structure after ion bombardment 4=13671
 surface tension, temp. var., 1100°-1500°C 4=8187
 surfaces, contact potential, treated with electrolyte
 solutions 4=26008
 surfaces, impurity adsorption, crystallography 4=4671
 tensile strength, ultimate, rel. to high temp. and
 pressure 4=7418
 tensile strength, yield pt., extrusion by high-pressure
 liquid 4=28930
 thermal boundary resist. with He³ and He⁴ below
 1°K 4=27404
 thermal cond. by adaptation of Angström's method,
 0.1 cm dia. 16 cm long wire 4=30526
 thermal cond., below 1°K, rel. to impurities 4=9874
 thermal conductivity determ. by Angström's method,
 effects of modification 4=22512
 thermal expansion, lattice const. changes, from Bradburn-
 Fürth eqn. of state 4=20219
 thermal expansion, low temp., meas. 4=20218
 thermal expansion at low temps., meas. using elec.
 capacitance technique 4=25862
 thermal Gruneisen relation form, high temps., from
 X-ray diffr. 4=10529
 thin film, abnormal optical absorpt. 4=22866
 threshold energy to displace atom from lattice and
 subthreshold displacement 4=12827
 time-to-fracture, constant and cyclic stresses 4=23124
 torsional-strain-cycling fatigue 4=1940
 trace element in Se, neutron activation chem.
 anal. 4=23692
 u.v. radiation, on H impact 4=20487
 unidirectional and reverse straining, recovery 4=28944
 vacancies, migration energy and activ. volume,
 model 4=12730
 vacancies, and vacancy aggregates, annealing in quenched
 specimens 4=12734
 vacancy migration and binding energy 4=9944
 vapour pressure, 1367 to 1523°K, calc. 4=27384
 volume changes induced by fission 4=4094
 whiskers, resistance, rel. to temp. 4=4116
 whiskers, spiral and straight types, growth 4=13550
 work function, effect of adsorption of H, air, and dipole
 moment 4=11683
 work function, effect of air and H₂ 4=14741
 work function of single-crystal faces, temp. depend. 4=8795
 work hardening meas. by torsion 4=28943
 X-ray K-absorption spectrum meas. 4=17562
 X-ray line profiles, effect of stress 4=23143
 X-ray prod., charact. L_{III} shell, due to 100-500 keV
 protons 4=15586
 X-ray scatt. factor in perfect crystal 4=29107
 X-ray spectra, K α centroid wavelengths 4=15771
 X-ray spectrum, absorpt., L_{II,III} fine structure 4=13031
 X-ray spectrum, K absorpt. edge fine struct., from
 p-quasistationary states 4=13032
 X-ray spectrum, K α emission from inclined
 target 4=17561
 X-ray spectrum, M_{II,III} absorpt., valence, quasistationary
 states 4=13030
 X-ray tube, membrane target, spectral distrib. 4=24774

Copper—contd

- X-ray yield (L), 1.5–44 Å, by 1.5 MeV protons 4=17593
- yield stress, hardness, plasticity, rel. to grain size, block
dims., microstresses 4=23138
- Young's modulus, decrease after deformation and
recovery 4=15703
- Cu, lattice const. distrib. curve and lattice
orientations 4=17798
- Cu and Pb films superimposed, superconductivity 4=16348
- Cu²⁺ in Cu₂S, CuS, CuCl, CuBr and CuI, X-ray L_{II}- and
L_{III}- absorpt. spectra 4=28679
- Cu²⁺ in pure metal, cuprous and cupric oxides, X-ray L_{II}-
and L_{III} absorpt. spectra 4=28678
- Cu⁺ ion, radial charge density, on statistical and
Hartree-Fock theories 4=22279
- Cu²⁺ e.s.r. in CaO, Jahn-Teller effect 4=13327
- Cu²⁺, in Cu(NH₄)₂Cl₂·2H₂O, e.s.r. 4=20589
- Cu²⁺ spectra, distortion in tetrahedral crystal
field 4=12571
- Cu²⁺ in Zn₂P₂O₇, e.s.r. spectrum, phase transition
study 4=26572
- Cu³⁺ e.s.r. in Al₂O₃ 4=26333

Copper compounds

- azurite, mag. susceptibility meas. down to 1.4°K 4=17668
- brass, cumulative fatigue damage under limited
stress 4=28946
- α-brass, grain size rel. to intergranular
cavitation 4=30866
- brass, mechanical strength, effect of external stresses
during annealing 4=20649
- α-brass, wear, frictional, and crystal plane orienta-
tion 4=13393
- β-brass, elastic const., temp. depend. calc. 4=28947
- bronze, thermal expansion meas. 4=17367
- complex hydrolyzed salts, mag. props. 4=20512
- cupric ammonium Tutton salt, spin absorption 4=10242
- cupric potassium Tutton salt, spin absorption 4=10242
- cuprite, photoconductivity rel. to wavelength and surface
conditions 4=7065
- Cupron wire, magnetization curves, 4.2° to
57.5°K 4=15643
- dihalides, linear symmetrical, mean amplitudes of vibr.,
and Bastiansen-Morino shrinkage effect of T = 1000°
1250°K and 1500°K 4=30441
- halides, h.p. microscopy rel. to phase props. 4=15743
- jachimovite, CuH₂(UO₂·SiO₂)₂·5H₂O, crystal structure,
atomic 4=7614
- manganin, piezoresistivity 4=20334
- nuclear magnetic relaxation, 0.5° to 1.25°K 4=13342
- organic complexes, spin-lattice relaxation, temp.
var. 4=12613
- scale, microstructure 4=23526
- trichloroacetate monohydrate, e.s.r. line-
width 4=26391
- Tutton's salts, water of cryst., proton-proton vector
orientations 4=10450
- Cu-Al, explosively deformed, substruct. 4=29164
- Cu-alloy composites, W-fibre-reinforced, effects of
alloying on room temp. tensile props. 4=30777
- Cu alloy, internally oxidized, yielding and work-
hardening 4=26509-10
- Cu alloys, cond., thermal, lattice, low temp., Pippard's
theory 4=17362
- Cu alloys containing Pb, interface energy 4=20693
- Cu alloys, precipitation, discontinuous and
continuous 4=20701
- Cu alloys stacking fault fringe phenomena 4=4067
- Cu alloys, yield point, appl. of Petch formula 4=7420
- Cu-base alloys, internally oxidized, structure 4=7616
- Cu-base alloys, solute Knight shifts 4=17692
- Cu-base binary solid solns., Hall effect, effect on
scattering 4=17472
- Cu-base solid solutions, solute atoms in Suzuki
atmospheres 4=23233
- Cu chelates, N bonded, e.s.r. study 4=30471
- Cu-ferromagnet, low temp. specific heat 4=13126
- Cu(II) monoethylenediamine chloride, e.s.r. 4=7323
- Cu oxides, thin film prep. and structure 4=23572
- Cu phthalocyanine, elec. props. and charge carriers 4=6994
- Cu phthalocyanine, photoconductivity meas. 4=10137
- α-Cu phthalocyanine, field effects and surface
photovoltage 4=28422
- Cu-rare earth alloys, crystal structure 4=10559

Copper compounds — contd

- Cu salt-quinoline complexes, i.r. absorption 4=22414
- Cu-Ag alloy, elastic const., effect of Pb addition 4=28964
- Cu-Ag alloy, phase diagram asymmetry at 800°K 4=4504
- Cu-4% Ag alloy, Hg-embrittled, fracture path,
effect of precip. 4=30774
- Cu-4% Ag alloy, Hg-induced crack formation and
propag. 4=30775
- Cu-Ag(1.8–5.1%), ageing, effect of Sb, Be additions 4=13484
- Cu-Ag-Au alloys, reflection spectra, rel. to plastic
deformation 4=1719
- Cu-(Ag, Au), stacking-fault probabilities 4=4064
- Cu-Ag, surface free energy, anisotropy, effect of
metallic impurities and temp. 4=17373
- Cu-Al(6%), cross slip in easy glide under tension 4=7423
- Cu-Al alloy, deformation twinning, study by electron
microscopy 4=26579
- Cu-Al alloy, internal energy changes resulting from
deformation and recovery 4=13402
- Cu-Al alloy, neutron-irradiated, defects rel. to yield
strength 4=20650
- Cu-Al alloy, ordering, effect of quenching temp. 4=1984
- Cu-Al alloy, ordering kinetics, incompleting
long-range order 4=1986
- Cu-Al alloy, ordering, vacancy formation 4=1987
- Cu-Al alloys, internal friction rel. to temp. 4=13399
- Cu-Al alloys, ordering, effect of P additions 4=1985
- Cu-Al alloys, time-to-rupture tests 4=28933
- Cu-Al containing a little Mn, paramagnetism of Mn 4=7219
- Cu-Al(14.3 at.%), crystal dislocations, quenched, by
electron microscopy 4=1487
- Cu-Al, crystal imperfections, stacking, electron
microscope obs. 4=6861
- Cu-Al, hardening, precipitate and dispersion 4=28948
- Cu-Al, low-temp. μ-phase (near Cu₃Al), structure 4=7617
- Cu-Al, new phase α₁, below β = α + γ, eutectoid 4=4506
- Cu-Al(14.3 at.%), plastic deform. from density, hardness,
cond. elec., temp. var. 4=7487
- Cu-Al, short-range order 4=1988
- Cu-Al, short-range order, temp. depend. 4=15723
- Cu-16 at.% Al, short range structure 4=23437
- α Cu-Al single crystals, strength, neutron irradi-
effect 4=17728
- Cu-Al solid solns., ordering kinetics, theory 4=7484
- Cu-Al solid soln., short-range order, kinetics of
variation 4=17747
- Cu-Al, sp. ht., effect of heating rate and neutron
irrad. 4=6741
- CuAl₂-Al, eutectic alloy, interlamellar spacing
meas. 4=4650
- Cu-Al-Ni, martensitic transition, lattice reorienta-
tion 4=13483
- Cu(78)-Al(14)-Ni(8), martensitic transform. with
increased strain under stress 4=20702
- Cu-Au, disordered, residual elec. resist., quantum
theory 4=4109
- CuAu, internal friction, order-disorder
transformation 4=26511
- Cu-Au single crystals, stress-corrosion
cracking 4=28949
- Cu-Au, slip, shear, differences between ordered and dis-
ordered alloys 4=7417
- Cu₃Au alloy, order-disorder transformation, kinetics, two
ordering processes 4=7489
- Cu₃Au, cold working and annealing, ordering and strength
changes 4=7485
- Cu₃Au crystals, strained, frictional stress on
dislocations 4=26507
- Cu₃Au, dislocation configurations and work
hardening 4=17729
- Cu₃Au, f.c.c., ordered, strain hardening 4=17730
- Cu₃Au, features of recrystallization 4=1978
- Cu₃Au, Hall effect, plastic deformation increase 4=22669
- Cu₃Au, internal friction, order-disorder
transformation 4=26511
- Cu₃Au, local ordering at low temps. 4=26548
- Cu₃Au, ordering rate, effect of quenched-in
vacancies 4=15732
- Cu₃Au, shock wave effect on props. 4=26508
- CuAu type alloys, interdiffusion, theory 4=1510
- Cu₃Au, ordering, nucleus formation and growth 4=7488
- Cu₃Au, ordering, type II antiphase boundaries 4=7490

Copper compounds—contd

- Cu₃Au type superlattice alloys, ordering and domain hardening 4=7483
- Cu₃Au, work hardening rel. to plastic deformation and dislocations 4=4448
- Cu—Be, ageing, structural changes 4=7482
- Cu—Be alloy, β phase transformations 4=7486
- Cu(97.5%)—Be, hardening rate, stress effects 4=23148
- Cu—Be, in phase transition, elastic oscill. damping 4=13403
- Cu—Be, secondary electron yield under $H_{1,2,3}^0$ 4=8828
- CuBr, edge luminescence, excitation curves, 77°K 4=1768
- CuBr, spectrum, new band system 3700–4000 Å 4=30428
- CuBr₂, antiferromagnetic props. 4=20565
- Cu(CN)₄²⁻ ion, electronic structure and absorption spectrum 4=1273
- CuCl crystal, fluorescence and photoconductivity rel. to exciton 4=26240
- CuCl, edge luminescence, excitation curves, 77°K 4=1768
- CuCl films, absorption, light, thickness var. anomaly wear band 4=28681
- CuCl, thermoelec. power, with CdCl₂, doping 4=7085
- CuCl, use for optical modulation 4=10171
- CuCl—LiCl fused systems, complex ions 4=183
- CuCl₂, antiferromagnetic props. 4=20565
- CuCl₂ fused mixtures with LiCl and KCl, complex ions 4=183
- CuCl₂·2H₂O, elec. field gradients and g factors 4=3958
- CuCl₄²⁻, electronic absorption spectrum and structure 4=28682
- Cu₂Cl₄(CH₃CN)₂, crystal structure 4=13615
- Cu₃Cl₆(CH₃CN)₂, crystal structure 4=13615
- Cu₂Cl₄(C₂H₅OH)₂, crystal structure 4=13615
- Cu—3.1 wt% Co alloy, precip., electron microscope study 4=30776
- Cu—Co, Cu—Ag, metastable alloys, preparation by vacuum evaporation 4=10422
- Cu—Co dilute alloys, mag. props., very low temp. 4=20540
- Cu—2%Co, grain boundary relaxation, study by internal friction and elastic aftereffect 4=23141
- Cu—Co, hardening, precipitate and dispersion 4=28948
- Cu—Co solid solutions 4=7468
- Cu²⁺Co₂O₄, spinel, superexchange 4=13274
- Cu—Cr alloys, mechanical strength, increase by vacuum condensation 4=23149
- CuCs₂(SO₄)₂·6H₂O, e. s. r., low temp. var. 4=23045
- Cu—CuO contacts, I—V and photovoltaic characteristics 4=7010
- CuF₂, geometry and bonding, from deflection in elec. field 4=22378
- Cu—Fe (<0.02 at. %), conductivity, elec., low temp. min., effect of Sn impurity 4=20330
- Cu—Fe, magnetoresistivity, He temp. 4=10026
- Cu—Fe system, sintered, interphase energies 4=20789
- Cu—Fe whiskers, tensile strength 4=7419
- CuFeS₄, spin waves, dispersion relation 4=13261
- Cu₅FeS₄, structures of two polymorphic forms 4=23438
- Cu—Ga, sp. ht., effect of heating rate and neutron irradiation 4=6741
- Cu—Ge alloy, growth, tensile deformation modes and yield phenomena 4=7422
- α Cu—Ge alloys, stacking and twinning faults 4=28473
- Cu—Ge containing a little Mn, paramagnetism of Mn 4=7219
- Cu—Ge, crystal imperfections, stacking, electron microscope obs. 4=6861
- Cu—Ge single crystals, dislocation damping 4=23150
- Cu—Ge supersaturated soln., Cu segregation along As-grown dislocn. 4=29007
- CuGe₂P₃, solubility of Ge, X-ray, thermal obs. 4=4496
- CuI, edge luminescence, excitation curves, 77°K 4=1768
- CuI, exciton lines, crystallite size effects 4=26187
- CuI, exciton spectra, rel. to crystal size 4=4245
- CuI films on polycarbonate, 1/f noise 4=26050
- CuI, spectrum, transition props., arc meas. 4=25498
- Cu—In, age hardening 4=4461
- Cu—In, in phase transition, elastic oscill. damping 4=13403
- CuInTe₂, thermoelectric peaks 4=26160
- CuK₂Cl₄·2H₂O, low temp. e. s. r. line structures 4=26390
- CuK₂Cl₄·2H₂O, mag. and sp. ht. meas. between 0.04 and 1.5°K 4=17648
- CuK₂Cl₄·2H₂O, simple Heisenberg ferromagnetism, expt. 4=7252

Copper compounds—contd

- CuK₂(SO₄)₂·6H₂O 4=19247
- CuK₂(SO₄)₂·6H₂O, e. s. r., low temp. var. 4=23045
- Cu₃La_{0.2}Er_{0.2} and Cu₃La_{0.4}Er_{0.4}, magnetic cooling by adiabatic demagnetization 4=16305
- Cu—(I and 0.13 at. %) Mn alloys, anomalous specific heat, down to <0.1°K 4=17361
- Cu—Mn alloys, paramag. susceptibility, 100–1100°K, composition depend. 4=26289
- Cu—Mn alloys, thermal expansion at low temp., expt 4=17369
- Cu—Mn, anelastic piezoresistance, stress-induced ordering 4=12847
- Cu—Mn, magnetoresistivity, He temp. 4=10026
- Cu—Mn, specific heat and mag. props. at low temps. 4=7299
- Cu—Mn, vapour pressure study 4=2898
- Cu₂MnAl—Cu₃Al mag. Hensler alloys, precipitation and superparamag. 4=20541
- Cu₂MnAl, magnetic moment distrib. 4=15644
- CuMn₃O₈, elec. cond., tetragonal distortion, prep. 4=15555
- Cu(NH₃)₄SO₄·H₂O, exchange-coupled linear chains 4=26351
- Cu(NH₃)₄SO₄·H₂O, exchange interactions 4=10245
- Cu(NH₃)₂(SO₄)₂·6H₂O, e. s. r., low temp. var. 4=23045
- Cu(NH₃)₂Cl₄·2H₂O, crystal structure meas. by e. s. r. 4=10319
- Cu(NH₃)₂Cl₄·2H₂O, e. s. r. of Cu²⁺ 4=20589
- Cu(NH₃)₂Cl₄·2H₂O, mag. and sp. ht. meas. between 0.04 and 1.5°K 4=17648
- Cu(NH₃)₄Cl₄·2H₂O, simple Heisenberg ferromagnetism, expt. 4=7252
- Cu—Ni alloys, liquid, infiltration of TiC 4=8145
- Cu—Ni alloys, magnetoresistance, temp. var. 4=22982
- Cu—Ni alloys, n. m. r. 4=7346
- Cu—Ni alloys, stacking fault probabilities 4=4066
- Cu—Ni alloys, surface tension of 1550°C 4=8185
- Cu—Ni, disordered, residual elec. resist., quantum theory 4=4109
- Cu—Ni Hq. system, ht. of mixing at 1200°C 4=24176
- Cu—Ni, n. prod. vacancy de-segregation on heat treatment 4=22645
- Cu—Ni, powder to alloy homogenization 4=26550
- Cu—Ni, X-ray K-absorption spectrum meas. 4=17562
- Cu—Ni(6–10 wt. %)—Al(1.5 wt. %), Ni₃Al phase separation, at 880°C 4=26551
- Cu—Ni—Fe alloys, spontaneous remanent mag. 4=28805
- Cu—Ni—Al alloy, martensite transformation 4=17755
- Cu(NO₃)₂, anhydrous, organic solns., e. s. r. 4=11216
- Cu(NO₃)₂·2.5H₂O, mag. suscept. at low temps. 4=4393
- Cu(NO₃)₂ vapour mols., configuration and dimensions, electron diffr. obs. 4=6590
- CuO, dissociation energy, meas. 4=28267
- CuO_{0.87} paramagnetism 4=4329
- CuO—CoO system, semiconductivity, thermoelec. 4=12890
- CuO—Cu₂O, CuO—CuS, CuO—CuBr systems, solid solubility, from Debye-Scherrer photograms 4=28996
- CuO·Fe₂O₃, magnetic props., temp. var. 4=28838
- Cu₂O, absorption at 30–250 μ , 4 and 300°K 4=7125
- Cu₂O, Ag-doped, yellow and green exciton series 4=22855
- Cu₂O, Debye—Waller factor, characteristic temp., Cu at. scatt. factor 4=10530
- Cu₂O, crystal dislocations, etching obs. 4=22598
- Cu₂O, crystal growth, by oxidation 4=13531
- Cu₂O, defects effect on exciton spectrum 4=1440
- Cu₂O, electroluminescence, mechanism and kinetics 4=13070
- Cu₂O, exciton absorption spectrum, neutron and γ -irrad. effects 4=1727
- Cu₂O, exciton yellow line, Zeeman effect 4=22854
- Cu₂O, i. r. electroluminescence, with and without Al electrodes 4=1769
- Cu₂O, i. r. luminescence, –150° to +100° C 4=1728
- Cu₂O, i. r. spectra, transmission and refl. 4=1726
- Cu₂O, impurity absorption and photocond. 4=7066
- Cu₂O, luminescence, elec. cond. and luminescent fld., rel. to adsorption 4=1770
- Cu₂O, luminescence excitation in impurity absorpt. region, mechanism 4=10212
- Cu₂O, mag. susceptibility changes during adsorpt. of O and CO 4=23596
- Cu₂O nucleation on Cu under O ion bombardment 4=26613
- Cu₂O point contact diodes, field effect 4=7009
- Cu₂O rectifier, γ -ray irradiation effects 4=4184
- Cu₂O, thermal etching, in vacuo, 800°–1000° C 4=1494

SUBJECT INDEX

Copper compounds—contd

- $\text{Cu}_3\text{PO}_4(\text{OH})_3$, cornetite, crystal structure, Monte Carlo calc. 4=30847
 Cu—Pb—Cu sandwiches, thermal cond., 1.3°—4.0°K 4=9873
 Cu—Pd alloys, n.m.r. of Cu 4=7347
 Cu—Pd, slip, shear, differences between ordered and disordered alloys 4=7417
 Cu₃Pd, features of recrystallization 4=1978
 Cu₃Pd, internal friction, order-disorder transformation 4=26511
 Cu—Pd solid solns., near Cu₃Pd, crystal structure 4=29108
 CuPt type alloys, diffusion, theory 4=1509
 CuPt₃, internal friction, order-disorder transformation 4=26511
 Cu—Re alloy, elec. resist. at low temp. 4=22681
 Cu²⁺Rh₂O₄, spinel, superexchange 4=13274
 CuS films, sputtered, resistivity, photoconductivity, transmittance, rel. to temp. 4=20810
 Cu—S, scale formation, reaction diffusion mechanism 4=23640
 CuS, spectrum, bands in visible region 4=28186
 Cu₂S, tetragonal, atomic crystal structure 4=15788
 CuSO₄, crystallization, effect of u.s. 4=15759
 CuSO₄, mag. structure, neutron diffn. analysis 4=29102
 CuSO₄ rate as combination of matter and heat transport 4=26584
 CuSO₄ solns., viscosity, conc. var. 4=27162
 CuSO₄, sound absorption, nonresonant paramagnetic, rel. to spin—lattice relax. 4=9840
 CuSO₄·5H₂O, Faraday effect, anomalous in e.s.r. absorpt. region 4=28870
 CuSO₄·5H₂O, Faraday effect, microwave 4=26173
 CuSO₄·5H₂O, i.r. absorption bands due to SO₄ 4=4255
 CuSO₄·5H₂O, ionic susceptibilities, principal, meas. method 4=26268
 CuSO₄·5H₂O magneto-optical Faraday effect near e.s.r. 4=30679
 CuSO₄·5H₂O, mag. susceptibilities and reson., 0.3—4.2°K 4=22948
 Cu₂Sb, elec. resist., thermoelec. power and Hall coeff. 4=15520
 Cu₂Sb₂S₁₃ (tetrahedrite), crystal structure 4=10513
 Cu—Si alloy, thermal etching 4=26583
 Cu—Si—Mn, effect of cold working on X-ray diffraction 4=10577
 Cu—Si—Mn, stacking faults, formation under tensile deformation 4=12774
 Cu—12 vol % SiO₂ alloy, rate of worsening of SiO₂ particles, electron-micrographic study 4=30868
 Cu—Si—Zn, crystal struct., atomic, α -phase, const. Zn 4=20758
 Cu—Sn alloy, elastic consts., effect of Pb addition 4=28964
 Cu—Sn alloys, internal friction rel. to temp. 4=13399
 Cu—Sn, β'' — β reverse martensite transition 4=7491
 Cu—Zn alloys, α -solid soln. range, void formation 4=29170
 Cu—Zn, β' phase, optical data, plasma—interband coupling 4=15587
 Cu—Sb, elastic parameters rel. to composition 4=23158
 Cu—Te films, structure 4=30880
 Cu—Zn, γ -phase, 4=13481
 Cu—Sn, γ -phase, natural ageing and structure 4=23256
 Cu—Sn liq. system, ht. of mixing at 1127°C 4=24176
 Cu—Sn, thermal diffusion in mixed phases 4=9984
 Cu₃VS₄, sulvanite, Madelung's coeff. 4=22449
 Cu₂XY₃ (X = Ge or Sn; Y = S, Se or Te), ordering and superstructure 4=2066
 Cu—Zn alloy, elastic consts., effect of Pb addition 4=28964
 Cu—Zn alloy, internal energy changes resulting from deformation and recovery 4=13402
 Cu—Zn alloys, internal friction rel. to temp. 4=13399
 Cu—Zn alloys, lattice parameter and X-ray diffn. pattern changes due to transformation 4=17756
 γ -Cu—Zn alloys, specific heat below 4.2°K 4=3992
 Cu—Zn, anelastic piezoresistance, stress-induced ordering 4=12847
 Cu—Zn, bending fatigue life, cross-slip effects 4=7421
 Cu—Zn, magnetic susceptibility rel. to hydrostatic pressure 4=7288
 Cu—Zn, magnetoresistivity, He temp. 4=10026
 β -CuZn, ordering, effect of long-range interactions 4=13482
 α -Cu—Zn, ordering energy, thermal meas. 4=10423

Copper compounds—contd

- Cu—(Zn, Cd) alloys, stacking-fault probabilities 4=4063
 γ -Cu—Zn, specific heat below 4.2°K 4=3992

- Cassiopeia A, Cygnus A, positions 4=2463
 Cassiopeia A at 52 Mc/s, scintillation variations depend. on scintillation rate 4=17941
 Cassiopeia, OH, H absorpt., turbulence, two clouds 4=23949
 continuous sky emission meas. at 327 c/s 4=10910
 from cosmic-ray electron synchrotron radiation 4=26886
 cosmological expansion test from quasi-stellar source rad. 4=17967
 and cosmology, meas. 4=13940
 and cosmology, review 4=29469
 Crab nebula, fine structure detection, 38 Mc/s 4=30984
 Crab nebula, mag. field development, analysis 4=4868
 Crab nebula, polarization, 9.6cm 4=2467
 Crab nebula, radio obs. during lunar occultation 4=30985
 Cygnus Y 4=20951
 discrete sources, dm, flux density meas. 4=15960
 discrete sources, 240 and 412 Mc/s, obs. 4=23944
 eight sources, linear polarization, distrib. meas. 4=15961
 extended source survey, north of $\delta = -05^\circ$, 178 Mc/s 4=10925
 extended sources, catalogue of 21 4=20945
 extra-galactic sources radio luminosity function 4=29488
 extragalactic, extended source model 4=10929
 extragalactic nebulae, spectrum and source size 4=10927
 extragalactic sources, luminosity function, theory 4=7957
 flare star V371 Orionis 4=4956
 galactic 408 Mc/s emission, linearly polarized component 4=29484
 Galactic neutral H clouds within halo?, 21 cm obs. 4=13968
 galactic noise, satellite versus ground meas., ionospheric absorption effect 4=30987
 Galactic pole, neutral H detection from 21 cm obs. 4=2394
 galactic radiation at 4.7 Mc/s 4=10918
 galactic radio emission, general, spectrum 4=26887
 Galactic radiosources, possible class 4=29486
 galactic spur 4=29485
 galaxies, energy source from colliding stars 4=23948
 galaxies identified with radio-sources 4=26974
 galaxies, intense, light var., 3C48, 3C196, 3C273 4=15925

Cosmic radiations, radiofrequency—contd

- galaxies, intense, 3C48 type, optical identification 4=15926
- galaxies, and magnetic fields 4=30992
- galaxies, H emission 4=30990-1
- galaxies, survey, 750 to 1400 Mc/s 4=23947
- Galaxy, background polarization at 610 Mc/s 4=13967
- Galaxy, spectrum, rel. to electron density and mag. field 4=10924
- Galaxy, spiral structure, 21 cm obs. 4=29483
- gas clouds at intermediate latitudes 4=10921
- intergalactic H, attempted obs. at 21 cm 4=7991
- interstellar cloud models, uniform and non-uniform models 4=29481
- interstellar gas, distrib. and motion, 21 cm data 4=10922
- interstellar gas, 21 cm profile, H density eval. 4=20947
- interstellar lines, 21 cm, radial velocity correl. with optical data 4=10861
- interstellar OH, 1612, 1720 Mc/s 4=30986
- in ionosphere, resulting electric and magnetic fields 4=10759
- ionospheric absorption 4=2272
- ionospheric 18 Mc/s enhancement, following "Starfish" test 4=4800
- Jovian outbursts, occultation theory 4=4941
- Jupiter, sporadic disc radiation from amplified whistlers 4=10911
- Jupiter, 178 Mc/s 4=7988
- Jupiter, 1400 Mc/s 4=4940
- linear polarization at 3.15-11.5 cm of discrete sources 4=10926
- linear polarization of microwave radiation from radiosources 4=26971
- M31 and surround, maps at 600, 1415 Mc/s 4=23952
- M82 galaxy, absorpt. 4=23951
- Magellanic Clouds, H-line survey, low resolution, obs. and interpretation of results 4=10919-20
- magneto-optical effects in extra galactic sources 4=20953
- map of Cygnus X region 4=15958
- nebulae, M31, map, 1400 Mc/s 4=2464
- nebulae, planetary, for mass meas. 4=13966
- neutrino emission by sources, detection rel. to intermediate bosons 4=26962
- noise absorpt. by ionosphere meas. to 5 Mc/s 4=26849
- noise absorption, auroral-type, twilight effects 4=2284
- noise, short-duration, absorption in nearly conjugate regions, high mag. latitude 4=15889
- oscillation model for 3C273 4=23953
- planets, thermal, polarization calc. 4=23936
- polarization at 5 cm for 7 sources 4=29487
- polarization, small sources, 18 cm 4=20952
- polarization, 10.6cm, 19 sources 4=2468
- polarization, 75 cm 4=10923
- quasi-stellar, and collapse of stars or accreted matter 4=20900
- quasi-stellar radiosources 3C 48 and 3C 273 4=26975
- quasi-stellar sources, γ -ray shower search 4=21969
- quasi-stellar sources, plasma Debye e.s. free energy model 4=20954
- radio galaxies, data analysis and generation processes 4=10928
- radio star envelopes, mass and dimensions 4=13969
- radio star scintillation, near auroral zone 4=15948
- radio star scintillation, rel. to ionospheric diffraction 4=13840
- radio star scintillations rel. to auroral mag. activity 4=4952-3
- radio stars, angular size 4=2465
- redshifts of quasi-stellar radio sources 3C47 and 3C147 4=17987
- rich clusters of galaxies as radiosources 4=29489
- scintillation, and ionosphere spread-F echoes 4=4817
- sources, catalogue -20° to -60°, 75 cm, 21 cm, 11 cm 4=30989
- source counts, Sciama's model, new evidence for extra-galactic nature 4=10930
- sources, fan-beam obs., 21cm 4=30988
- source identifications by lunar occultation 4=26973
- source with marked spectral curvature 4=2466
- sources, brightness, power law sign change, and absorption 4=13970
- sources, galaxies, superstars, protostars, review 4=15962
- sources, intensity, time variations 4=26963
- sources of low flux density, 1400 and 612 Mc/s 4=15959

Cosmic radiations, radiofrequency—contd

- sources, position and diameters from lunar occultation 4=26972
 - sources, small and distant 4=13904
 - sources, unusual, and cosmic ray origin 4=17960
 - star scintillations, rel. to ionospheric spread-F echoes 4=10762
 - star, UV Ceti, bursts, combined optical and radio obs. 4=26969
 - strong sources, rel. to massive star collapse 4=10811
 - Sun, corona, occultation of Crab nebula, 18 cm 4=23950
 - supernova remnant IC 443, 8000 Mc/s 4=4954
 - Tau A, 1.2 cm 4=13959
 - Taurus A, second source, width, 8.5mm 4=13957
 - 13 new shell sources, identification 4=4955
 - 3C273, 21cm absorption 4=4957
 - three component source with well aligned field 4=23954
 - 21 cm line profiles, catalogue 4=29482
 - 21cm, survey using multi-channel receiver 4=4934
 - Zeeman splitting, rel. to galactic magnetic field meas. 4=7990
 - H, 21 cm, Zeeman splitting rel. to Galaxy mag. field 4=7954-5
 - H, intensity distrib. and radial velocity, 21 cm survey 4=20948
 - H, neutral, in solar neighbourhood 4=29480
 - OH absorpt. 4=20949-50
 - OH absorpt. towards Sagittarius A 4=23946
- Cosmic rays**
- acceleration by magnetic pumping, Alfvén's theory 4=26941
 - acceleration by radiation 4=4879
 - auroral-zone noise absorption rel. to 18 Mc/s attenuation, Arctic propagation path 4=26831
 - cutoffs, rel. to symmetry of mag. field 4=6152
 - distinction from "cosmic static", and astrophysical relevant studies 4=26885
 - distribution of arrival times, meas. 4=19613
 - geophysical and astrophysical aspects, book 4=26884
 - high-energy particles, scintillator interactions meas. 4=967
 - measurement, meteorological corrs., averaging intervals 4=25226
 - neutrinos, data from intensity meas. deep underground 4=6164
 - neutrinos, prod. of upward μ flux in atmosph. 4=3519
 - optics, Störmers problem, modification of adelpic integral method 4=26833
 - particle motion in geomag. field, first integral 4=5753
 - solar radiation, soft, enhancement of high energy (> 35 keV) radiation meas. by Sputnik III 4=29443
 - solar, rigidity spectra 4=25228
 - spectrum of 12-450 BeV nuclear active component 4=30285
 - stars observed at ground level over 2 months 4=6163
 - streaming due to interplanetary mag. field irregrs. and daily var. 4=29353
 - from sun, review 4=26935
- absorption**
- decaying fragment atmospheric coeffs. 4=27926
 - deep underground, rel. to neutrino data 4=6164
 - heavy nuclei fragmentation in light elements 4=3512
 - intensity meas. at 800-8400 m.w.e. underground 4=21974
 - μ , in brass, decay asymm., polarization data 4=3504
 - μ -mesons, earth penetration, angular and energy distrib. 4=25241
 - μ , stopped in C, decay energy spectrum, time depend. 4=3511
 - μ , ultrarelativistic, range-energy reln. calc. 4=25127
- apparatus**
- See also Particle detectors.
 - blob length method for heavy primaries det. 4=30284
 - Cherenkov detector, large 4=862
 - Cherenkov detector for $Z \geq 6$ nuclei intensity 4=25220
 - e.m. cascades, energy meas. method, limitations 4=25225
 - flux obs., emulsion plate scanning efficiency 4=15116
 - γ -ray device in Antares rocket 4=25219
 - Geiger counter for primaries inside and outside radiation belts 4=25220
 - hodoscope (pulse), for μ^+ decay study 4=963
 - probe for interplanetary plasma 4=20865
 - scintillation counter, large area 4=16986

SUBJECT INDEX

Cosmic rays — contd**apparatus — contd**

- scintillation counters, use for uninterrupted meas. 4=25223
- scintillator, liquid, anticoincidence guard for neutrino meas. 4=16736
- scintillator range spectrum calc. 4=25224
- solar neutrino flux detection possibilities 4=21968
- solid-state detectors as high-energy spectro-meters 4=25222
- spark chamber and magnet system, for tracks at balloon height 4=25221
- technique for simultaneous meas. at different altitudes 4=3500
- telescope for combined meas. of intensity 4=6151

composition

- calc. for cosmic rays of galactic and metagalactic origin 4=27917
- decaying fragment atmospheric coeffs. 4=27926
- decaying fragment spectra 4=27927
- from interacting particle momentum spectra, above 1.8 GeV/c 4=968
- high-energy nuclear interactions with liquid scintillator 4=30286
- integral spectrum of ionization pulses 4=19627
- magnetic monopoles, ferromag. trapped, search for 4=964
- nuclear-active particle spectrum, 3260m above sea level 4=969
- primary, ultrahigh-energy, generation theory 4=6159
- solar cosmic rays 4=25228
- π flux, high-energy, height depend. calc. 4=9327
- He, in solar primaries 4=15938

alpha-particles

No entries this year

deuterons

No entries this year

electrons

- air shower cores, structure meas. 4=19617
- atmosphere, upper, fast, and N day glow and red aurora prod. 4=17922
- distribution study, Cosmos 3 and 5 satellites 4=26820
- e.m. cascades, energy meas. method, limitations 4=25225
- e.m. cascades, fluctuation problem 4=6162
- e.m. showers, buildup and energy dissipation, meas. 4=25236
- electron-photon showers in Pb, Monte-Carlo calc. 4=6161
- electron-positron ratio in primary radn. 4=12087
- extensive air showers, longitud. distrib. meas. 4=19622
- galactic, energy spectrum 4=974
- origin 4=26963
- Pb cascade curves for primary energies $3 \times 10^8 - 10^{14}$ eV 4=19616
- primary, radio astronomy obs. of synchrotron radiation 4=26886
- primary relativistic, Galactic origin 4=4877
- secondary component and general galactic radio emission spectrum 4=26887
- secondary electron component 4=26887
- showers, in Pb absorbers, direct meas. 4=3508
- variations due to mag. field of earth and origin 4=6168
- in "young" atmospheric showers, nuclear-active particles, total energy 4=12090

mesons

- amplitude latitude depend. and diurnal phase var. 4=3514
- anisotropy 4=21970
- intensity, rel. to geomag. character C, and E-region nocturnal ionization 4=7922
- K/ π ratio, from μ polarization meas. 4=19629
- μ , charge ratio, above 5 GeV, zenith angles $>77.5^\circ$ 4=970
- μ^+ , decay study, pulse hodoscope 4=963
- μ , earth penetration, angular and energy distrib. 4=25241
- μ , electron pair prod. at 32.6 GeV, underground 4=19493
- μ , energy depend. of positive excess, 5-200 GeV 4=3505
- μ , energy spectrum at sea level, 200-7500 GeV 4=21975
- μ , in extensive air showers, total number fluctuation 4=19621
- μ , fast, prod. of neutrons in Pb, meas. 4=9337
- μ , 40 GeV, charge ratio $+\pi^0$ to $-\pi^0$, at sea level 4=9330
- μ , polarization from decay asymm. in bass 4=3504
- μ polarization 4=27929
- μ produced bursts, and μ prod. mechanism 4=6172

Cosmic rays — contd**mesons — contd**

- μ , range spectrum at sea-level, empirical formula 4=6167
- μ -rich air showers, arrival direction 4=9332
- μ , scattering in Pb 200-1500 MeV/c 4=30344
- μ , sea-level flux, from burst-size spectra 4=16989
- μ , spectrum, sea level, and primary spectrum 4=6156
- μ spectrum, sea level, from primary spectrum 4=25218
- μ , stopped in C, decay energy spectrum, time depend. 4=3511
- μ , ultrarelativistic, range-energy reln. calc. 4=25127
- μ , underground, e. m. interactions 0.2-100 GeV 4=25125
- μ , upward flux prod. by neutrinos in atmos. 4=3519
- μ^+ , 0.3 and 1.45 BeV, polarization meas. 4=9331
- π^0 decay, energy spectrum at 3200m 4=19628
- π , energy spectrum near sea level, 0.7-150 GeV 4=19625
- π , in extensive air showers, multiplicity 4=12089
- π flux, high-energy, height depend. calc. 4=9327
- π , high-energy, prod. in atmosphere 4=6174
- π , prod. in steady-state theory 4=4839
- π , production during propagation through the atmosphere 4=25243

neutrons

- albedo, theory of geomag. trapped protons, review 4=7902
- atmospheric fast flux, up to 27.4 km 4=3518
- daily variation, IGY records 4=973
- interactions, 3×10^{11} to 6×10^{12} eV, 6-12 km 4=12092
- leakage flux from earth's atmosphere 4=6173
- measurement, multiplicity effects, var. with incident energy 4=16988
- monitor pressure coefficient, correl. with solar cycle 4=9335
- moon, albedo on surface 4=10879
- scintillation counter, 1-10 MeV, with background discrimination 4=9226
- and sun flare (Sept. 1963) 4=23929

photons

- absorption, in intergalactic space 4=4880
- detection device in Antares rocket 4=25219
- e.m. cascades, energy meas. method, limitations 4=25225
- e.m. showers, buildup and energy dissipation, meas. 4=25236
- electron-photon showers in Pb, Monte-Carlo calc. 4=6161
- energy spectrum from decay of π^0 at 3200m 4=19628
- extensive air showers, γ -quanta formation, 10^{14} - 10^{15} eV, in upper third of atmosphere 4=12089
- in extensive air showers, spectrum and total number 4=19619
- galactic origin, γ -rays and magnetic bremsstrahlung X-rays 4=3503
- γ -ray background at ground and aircraft altitudes, meas. 4=20853
- γ -ray shower search from quasi-stellar sources 4=21969
- γ -ray spectra meas. at 5200 m, rel. to nuclear events 4=25231
- γ spectrum, from primary spectrum 4=25218
- high-energy, from intergalactic space, theory 4=2384
- metagalactic origin, γ -rays and magnetic bremsstrahlung X-rays 4=3503
- Pb cascade curves for primary energies $3 \times 10^8 - 10^{14}$ eV 4=19616
- shower producing 4=25235
- 10^{14} eV, intensities compared with cosmic electrons synchrotron X-emission 4=10794
- in "young" atmospheric showers, nuclear-active particles, total energy 4=12090

protons

- antiproton upper limit in 1000 GeV primaries 4=21972
- atmosphere, upper, fast, and red aurora prod. 4=17922
- cut off for 1.5 MeV extraterrestrials 4=25240
- interactions, 3×10^{11} to 6×10^{12} eV, 6-12 km 4=12092
- momentum spectrum near sea level, 0.6-150 GeV/c 4=19625
- neutron prod. in Pb at 0.2-200 GeV, meas. 4=9336
- primary flux meas. at 57 and 77 MeV 4=12088
- primary flux meas. with nuc. emulsions 4=3506
- solar, geophysical effects, review 4=29442
- solar, propag. in interstellar mag. field 4=26938
- solar, spectra and diffusion model 4=3515
- spectrum, sea level, and primary spectrum 4=6156
- from sun, spectrum, 0.5-6 MeV, rocket obs. 4=6154

Cosmic rays — contd
effects and interactions

- See also Nuclear reactions, cosmic rays.
- Cherenkov radiation from air showers 4=30287
in galaxy and metagalaxy, γ - and X-ray
production 4=20885
- Galaxy, prod. of γ -rays >0.2 MeV 4=2383
in graphite, photon spectrum 4=27928
heavy nuclei in emulsion, high energy, slow and fast
particle emission 4=23005
heavy nuclei fragmentation in light elements 4=3512
heavy primary central collisions 4=27925
integral spectrum of ionization pulses 4=19627
meteorites, iron, eight, exposure ages 4=23899
meteorites, stone, prod. of He^3 and Ne^{21} from Mg, Si,
S, Fe 4=15934
in mica, tektite and olivine, interactions, obs.
conditions 4=30137
momentum spectra, above 1.8 GeV/c 4=968
nucleons and muons, rel. to effect on correl. count under
thick absorber 4=25242
nucleons, 3×10 to 6×10^{12} eV, 6-12 km 4=12092
polar ionosphere, low-energy solar cosmic rays 4=4807
radio nuclide production in meteorites and earth
surface 4=15216
solar particle stream, interaction with h.f. radio waves,
rel. to detection 4=10892
strange particle prod. 4=956
and strong interaction theory 4=16818
and sun, flares, increase mechanism 4=3517
"young" atmospheric showers, nuclear-active
particles 4=12090
 $\sim 3 \times 10^{11}$ eV 4=27835
 μ , electron pair prod. at 32.6 GeV, underground 4=19493
 μ , underground, e. m. interactions 0.2-100 GeV 4=25125
 π , high-energy, prod. in atmosphere 4=6174
N-N, 30-10⁶ GeV, particle prod. review 4=16882
 Na^{24} prod. from Ar spallation, in atmosphere 4=20852
Pb, neutron prod. by fast μ , meas. 4=9337
Pb, neutron prod. by 0.2-200 GeV protons 4=9336

origin

- acceleration by varying mag. fields in space 4=15909
conference, Varenna (1961) 4=20883
electrons 4=26963
electrons, from variations due to mag. field of earth 4=6168
exploding stars 4=20884
extensive air showers, due to Dirac monopoles 4=10793
extragalactic phenomenon 4=23827
galactic 4=25227
galactic, modulation models for He and H 4=9329
intensity increase, momentary, solar origin 4=6155
light nuclei, spallation production, energy depend. 4=6157
in metagalactic space and in the galaxy 4=2331
 μ -rich air showers, arrival direction 4=9332
primary rays and relativistic electrons, in Galaxy 4=4877
primary, ultrahigh-energy, energy and composition,
theory 4=6159
radiation acceleration in supernova 4=13871
radio quasi-stellar source, γ -ray showers search 4=21969
and radio sources, unusual 4=17960
in radio stars, very massive 4=13969
storage, and acceleration 4=15906
in sun and solar system, acceleration mechanisms and
Alfvén's magnetic pumping theory 4=26940
supernova 4=29352
supernovae, emission model, energy spectrum 4=10838
supernovae, rel. to galactic halo origin 4=15906

primary

- atmosphere, upper, fast, e, p , and N day glow and red
aurora prod. 4=17922
anisotropy of air showers, evidence 4=25238
anisotropy in μ 's 4=21970
antimatter search 4=6158
antiproton upper limit at 1000 GeV 4=21972
composition 4=16985
composition and spectrum, review 4=9326
conference, Varenna (1961) 4=20883
and earth isotope composition, obs. of history,
review 4=25230
electron-positron ratio 4=12087
electrons, radio astronomy obs. of synchrotron
radiation 4=26886

Cosmic rays — contd
primary — contd

- energy spectrum, behaviour at large energies 4=3502
energy spectrum and composition at ultrahigh energies,
calc. 4=6159
energy spectrum for galactic and meta-galactic
origin 4=27917
energy spectrum, long term changes, effect in sec.
components 4=9328
energy spectrum, 10^{10} - 10^{15} eV, and μ , p sea level spec-
trum 4=6156
energy spectrum, $Z \geq 6$ rays, in 2.5-16.0 GV
interval 4=29354
Fermi acceleration, adiabatic theory review 4=665
H and He nuclei during solar quiet time 4=9329
hard component, directional distrib. meas. 4=16990
heavy nuclei, modulation process 4=25237
very heavy nuclei spectrum, and passage through
interstellar matter 4=15908
heavy nuclei, 200-300 km, short var. and solar
activity 4=6153
heavy, $Z > 10$, for year 1957 4=12086
high-energy particles, scintillator interactions
meas. 4=967
identification by blob length meas. 4=30284
intensities in different types of galaxies 4=15907
intensity increase, momentary, solar origin 4=6155
light nuclei, production, energy depend. data 4=6157
magnetic monopoles, ferromag. trapped, search for 4=964
and meteorite obs. of history, review 4=25230
momentary increase meas., solar origin 4=15117
motion in geomag. field 4=25239
nuclear reactions due to $> 8 \times 10^4$ eV, meas. at
5200 m 4=25231
nuclei of $Z > 2$, modulation by interstellar matter 4=23828
origin in Galactic explosion 4=4877
 p , from sun, spectrum, 0.5-6 MeV, rocket obs. 4=6154
proton flux meas. with nuc. emulsions 4=3506
proton flux meas. at 57 and 77 MeV 4=12088
review 4=25229
solar, He abundance 4=15938
solar, spectra and diffusion model 4=3515
in space, effects, dosimetry 4=20958
space vehicle obs., distrib. over earth 4=7900
spectrum 4=3501
spectrum derivation from sea-level spectrum 4=19614
spectrum, m.f.p., Cherenkov meas. on extensive air
showers 4=21971
spectrum, and shower max. height and μ , γ spectra 4=25218
from sun, and atmosphere radiation belt electron
component 4=26834
from sun, and daily var. calc., coordinate
transform. 4=19623
three components, review 4=16985
ultrahigh energy, interaction with neutrinos in
universe 4=20886
variation rel. to interplanetary magnetic field
investigation 4=25220
variations in rigidity spectrum, and geomag. distur-
bances 4=6169
X-rays, Galactic, evidence 4=12085
 10^{20} eV, evidence 4=25232
 $\sim 10^{60}$ - 10^{80} eV postulate, cosmological
theory 4=13870

showers and bursts

- air showers, electronic structure of cores 4=19617
air shower intensity, r. m. s. amplitude of daily var.,
math. method 4=30289
air showers, "young", electron-photon component 4=19618
angular distribution rel. to fire ball motion 4=15119
angular momentum characterizing "proto-
fireball" 4=25233
anisotropy of air showers, evidence 4=25238
burst-size spectrum, high-energy μ sea-level
flux 4=16989
Cherenkov radiation from air showers 4=30287
Cherenkov radiation, expt. and theoretical
study 4=30288
due to decaying fragments 4=27927
e. m. cascades, fluctuation problem 4=6162
e. m. or nuclear cascades, rel. to sequent correls. in
stochastic processes 4=24078

Cosmic ray—contd

showers and bursts—contd

- e.m. showers, buildup and energy dissipation, meas. 4=25236
- electron-photon showers, number of particles, fluctuations 4=3510
- electron-photon showers in Pb, Monte-Carlo calc. 4=6161
- electron showers in Pb, direct meas. 4=3508
- extensive air showers, core structure obs. 4=27920
- extensive air showers, density spectrum of charged particles 4=27921
- extensive air showers, due to Dirac monopoles 4=10793
- extensive air showers, double core event 4=966
- extensive air showers, meson cascade development 4=15118
- extensive air showers, γ -quanta formation, 10^{14} - 10^{15} eV in upper third of atmosphere 4=12089
- extensive air showers, γ -rays, high-energy, from intergalactic space 4=2384
- extensive air showers, investigation 4=25234
- extensive air showers, longitud. electron distrib. 4=19622
- extensive air showers, μ -meson component, total number fluctuation 4=19621
- extensive air showers, muon and nucleon correl. counts under thick absorber 4=25242
- extensive air showers, nuclear-active particles, energy spectrum 4=3509
- extensive air showers, nuclear-active particles, lateral distrib., theory 4=9334
- extensive air showers, nuclear active particles, total number 4=19620
- extensive air, particle numbers spectrum and barometric coeff. 4=6160
- extensive air showers, production height distrib. 4=3507
- extensive air showers, x-ray component, spectrum and total number 4=19619
- extensive air, spectrum, m.f.p., Cherenkov meas. 4=21971
- extensive atmospheric showers, vertical, height var. 4=9333
- gamma produced 4=25235
- from gamma-rays from quasi-stellar sources, search 4=21969
- high-energy collisions, secondary shower particles, momentum spectrum 4=19459
- high energy, three component, review 4=16985
- high energy jets and fire ball model 4=27918
- jets, asymmetric, statistical model 4=19615
- jets, four momentum transfer, Monte-Carlo calc. 4=21815
- jets, secondary particles, P_t distrib. 4=21973
- jets, shower particles, azimuthal ang. distrib. 4=965
- jets, ultrahigh energy collisions, theory review 4=9121
- maxima height, from primary spectrum 4=25218
- due to μ , and μ prod. mechanism 4=6172
- μ -rich air showers, arrival direction 4=9332
- N-N, $\sim 10^{18}$ eV, effective target-mass distrib. 4=11984
- Pb cascade curves for primary energies 3×10^8 - 10^{14} eV 4=19616
- in photographic emulsions, azimuthal distrib. 4=3520
- recording, photographic, increasing sensitivity 4=16987
- spark counter detector, air-oxygen 4=14959
- storms, magnitude, rel. to latitude dependence 4=21976
- time directional aspect of storm in Dec. 1957 4=27919
- "young" atmospheric showers, nuclear-active particles, total energy 4=12090
- 1956-60, Yakutsk 4=27924
- July 1961, Yakutsk 4=27922

variations

- anomalous, July 1961, Yakutsk 4=27922
- anomalous, Dec. 1957, rel. to sun activity 4=27923
- anisotropy of air showers, evidence 4=25238
- current theories 4=10738
- cut off for 1.5 MeV extraterrestrial p's 4=25240
- daily apparent sidereal variation underground at Hobart, 1958 4=3513
- daily, energy spectrum analysis 4=19626
- daily, hard component 4=30290
- daily, and streaming due to interplanetary mag. field irregs. 4=29353
- diurnal, rel. to solar wind vel. 4=13930
- diurnal, and solar activity, mag. storms 4=6171

Cosmic rays—contd

variations—contd

- and earth mag. field, cut off rigidity calc. 4=12091
- extensive atmospheric showers, vertical, height var. 4=9333
- geomagnetic effects on electron intensity 4=6168
- hard component, directional distrib. meas. 4=16990
- high altitude, due to radioactive clouds 4=7865
- IGY, comment 4=971
- and interplanetary mag. field, from solar flare event time distrib. 4=17996
- jets, shower particles, azimuthal ang. distrib. 4=965
- latitude survey by Explorer 7 Oct. 1959 to Feb. 1961 4=972
- mesons, latitude and diurnal phase depend. 4=3514
- meteorological, geomag. and more distant influences, review 4=6165
- neutron monitor pressure coeff., correl. with solar cycle 4=9335
- π flux, high-energy, height depend. calc. 4=9327
- primary heavy nuclei, 200-300 km, short, and solar activity 4=6153
- primary μ anisotropy 4=21970
- in primary rigidity spectrum, and geomag. disturbances 4=6169
- storms, magnitude, rel. to latitude dependence 4=21976
- solar, low-rigidity, anomalous entry into geomag. field 4=3516
- and sun activity, early obs. 4=15120
- due to sun anisotropy, daily, calc., coordinate transform. 4=19623
- and sun, flares, particular associated type 4=15946
- time, degree of disturbance, proposed J index 4=6170
- 27-day, and solar and geomag. activity 4=30291
- U.S.S.R. studies at Yakutsk for 3 years 4=6166
- X-rays, increase above 30 km in S. American anomaly, due to radiation belts? 4=23791
- 1956-60, Yakutsk 4=27924

- neutron detector, pulse transformer design 4=9228
- nuclear electronics, internat. symposium, Paris (1963) 4=11843
- nuclear emulsion automatic examination, with television raster 4=790
- p-i-n junction detector, RC network pulse shaping 4=27720
- pre-amplifier, low-noise charge-sensitive, for semiconductor detector 4=3251
- preamplifier for scintillation counter 4=16737
- preamplifier for semiconductor 4=27723
- programme for 2-dim. pulse-height analyser 4=30125
- pulse amplifier, gain 1580, risetime 3 nsec 4=8594
- pulse amplitude analyser, transistorized one-channel 4=21706
- pulse amplitude discriminator, low level 4=3259
- pulse analyser for scintillation counter calibration 4=5902
- pulse discriminator restorer, threshold pot. maintenance at high rates 4=778
- pulse-height analyzer, adaptation circuit for neurophysiological obs. 4=23956
- pulse-height analyser, eight-dimensional 4=21708
- pulse height analyzer, mV threshold triggers 4=16760
- pulse height analyzer, 100 channel 4=16758
- pulse-height analyser, with output on punched cards 4=30126
- pulse-height analyser, with photog. recording of c.r.o. screen 4=30122
- pulse height analyser using tunnel diodes 4=16759
- pulse-height analyser, two-parameter multi-channel 4=21707
- pulse-height analysis, analogue-to-digital converters 4=21711
- pulse height discriminator, redundant 4=14982
- pulse height spectra, resolution distortion correction 4=21839
- pulse-height spectroscopy, high-resoln. 4=14981
- pulses, high speed decade 4=27724
- pulse multiplier, Hall-effect based, for charged particle analysis 4=777
- pulse pile-up rejector using tunnel diodes 4=14979

Counting circuits--contd

- pulse voltage dividing, applied to fission fragment mass distrib. 4=14980
- recording device, multiparametric 4=19324
- relay unit MST-2 for radiation detector, transistorized 4=5903
- scalar, decade 4=16756
- scalar, decade, transistorized 4=16755
- scaler, decade, transistorized 10 Mc/s 4=14978
- scalar, decimal, transistorized 4=9019
- scaler, multiple input, with central core memory 4=27725
- scaling, 0.15 and 1 μ sec resolution 4=16754
- spark chamber, two-electrode, large gap, triggering circuit 4=788
- systems with variable dead time, losses 4=27726
- time to amplitude converter 4=3258
- time-to-amplitude converter, transistorized 4=30121, 30124
- time-to-amplitude converter, with simult. random coincidence subtraction 4=30129
- time analyser, nanosecond, solid-state 4=30118
- time-to-height conversion system, 10 psec-200 μ sec 4=5899
- time-to-pulse height converter 4=21710
- time-to-pulse-height converter, $\sim 10^{-12}$ sec resolution 4=9020
- time analyser, matrical, with capacitive memory distributors 4=780
- time analyser, 256-channel, with memory unit for neutron spectrometer 4=779
- time-analyzer, 1024 channel, for neutron meas. 4=16911
- timing slow pulses for fast coincidence meas. 4=3255
- timing system, 100 Mc/s, digital 4=30116
- transistor amplifier with 2 nsec risetime 4=27450
- transistorized instrumentation system, modular 4=3257
- 2-pulse amplitude simultaneous recording, for even fission fragments 4=1118

Cracks

- acceleration, initial, max. in brittle material, calc. 4=13381
- alkali halides, cleavage, healing 4=23116
- cemented bodies 4=26486
- edge cracks propag., cyclic stress required, in eight materials 4=30759
- elastic dislocation cut, stress potential functions 4=2618-9
- elastic medium, integral representation 4=11028
- elastic wave diffraction 4=18317
- elastic waves prod. 4=14251
- equilibrium, stress distrib. at edge 4=26488
- glass and ceramics, under pulsed arc discharge 4=30779
- formation, microcracks, vacancy aggregate growth and fusion mechanism 4=4450
- glass, and mechanical strength, etching effect 4=13407
- glass, size, effect on strength, calc. 4=28952
- growth, early, field emission microscope obs. 4=7393
- hard substances, development, variational principle 4=23109
- hydrodynamic formulation, development of cracks under pressure, theory 4=23110
- in ice plates, formed by thermal shock 4=1947
- initiation meas., acoustic, record pickup 4=15697
- metal tubes, eddy-current testing method, non-ferromagnetic specimens 4=26487
- metals, f.c.c., microcracks 4=23160
- metals, f.c.c., propagation 4=4452
- metals, fatigue crack propagation modes and physical features 4=13382
- metals, fatigue growth, forking and division 4=7392
- metals, pure, under high-stress fatigue 4=7394
- plastic relaxation, dislocation model 4=20634
- polymethylmethacrylate, surface, thermal healing 4=7446
- polymethylmethacrylate, theory 4=13439
- propagation, double-cantilever cleavage mode 4=13386
- propagation, effect of gaseous environment 4=4451
- propagation of elliptical Griffith cracks for plane stress 4=30757
- propagation, plastic instability theory 4=28927
- propagation speed and dynamic stresses 4=26483
- Rebinder effect, liquids in fine cracks, effect on mech. props. 4=23111
- silicide layers on Mo, influence of stresses 4=7704
- steel, movement, effects of fracture temp. and heat treatment 4=10385

Cracks—contd

- steels, intergranular propagation 4-26529
 velocity, max., and surface energy, specific 4-4453
 velocity oscs., brittle wedging 4-13384
 Al alloy, formation, effect of atmospheric humidity 4-23125
 Al, fatigue growth, reduction by metal fragments 4-7403
 Al sheets, toughness, and tearing 4-20642
 Al₂O₃, films, on Al 4-15815
 Al-Zn-Mg, torsion fatigue prod. 4-23127
 BeO, cracking due to neutron damage, effect of microstructure 4-6896
 Bi single crystals, kinetics of growth 4-20648
 Cr, at twin-grain boundary intersections 4-23136
 Cu-4% Ag alloy, Hg-induced crack formation and propag. 4-30775
 Cu, intergranular cracks caused by introduction of H₂ at high press. 4-13430
 Cu-Au single crystals, stress-corrosion cracking 4-28949
 Cu, Cu-Zn, fatigue, cross-slip effects on propagation 4-7421
 Fe, Armco and pure, microcracks 4-23160
 Fe, deformed at -196°C, microcrack formation 4-20719
 Fe-3% Si, cleavage cracks, anisotropic growth 4-10384
 Fe-Si (3%), micro, propagn., temp. and strain effects 4-28961
 Fe-Si (3%), on plastic deformation, nucleation, and brittleness 4-13412
 LiF, compressed, anisotropic microcrack growth 4-10390
 LiF, growth, rel. to triboluminescence 4-26243
 Mg and Mg alloys, fatigued in push/pull 4-1954
 MgO bicrystals, deformed under 3-point bending, crack nucleation 4-10391
 MgO, bicrystals, formation by blocked glide band 4-13423
 MgO, cleavage cracks propagation 4-4556
 Mg-Zr (0.5 wt.%), grain boundaries, in traces of moisture, in reactors 4-20667
 Mn⁵⁶, two stage facility design 4-30322
 Mo single crystals, causing fracture 4-13428
 Mo, at twin-grain boundary intersections 4-23136
 NaCl crystals, caused by impact treatment 4-30787
 Ni, intergranular cracks caused by introduction of H₂ at high press. 4-13430
 TiC-WC-Co alloys, rel. to ultimate tensile strength 4-26532
 U, on annealing following irradiation 4-12835
 U-Mo alloys, during tensile tests 4-20686
 UO₂, effect of neutron irradiat. 4-22653
 W, at twin-grain boundary intersections 4-23136
 WC-Co alloys, rel. to ultimate tensile strength 4-26532
 Zn, due to locally applied drop of Hg or Ga development 4-7465
 Zn, effect of Hg on initiation process 4-13451
 Zn, fatigued by direct stress 4-7466

 Al, polycrystalline, effect of stress and recovery 4-13391
 Al single crystals, influence of mosaic structure 4-7405
 Al, and stress relax. and internal friction, activation energies 4-28922
 Al, and time to rupture under load, high temps. 4-7439
 Al-4% Cu alloy, effect on ageing reactions, kinetics 4-23249
 Al-4% Cu alloy, metallography of deformation 4-28934
 Au, polycryst., high-temp. 4-28953
 Cu, cold-drawn, room-temp, under torsion and tension 4-28945
 Cu, influence of deformation at low temps. 4-23147
 Cu, mechanism, rel. to mechanical relax. 4-4460
 EI-4378 alloy, adsorbed liq. Na effect 4-23185
 Fe, diffusion creep rate, at sub-melting temp. 4-23164
 Fe, high temp. 4-26514
 α -Fe, incubation creep effect 4-1946
 α -Fe, at low temp. 4-17731
 Fe, and time to rupture under load, high temps. 4-7439
 Fe-N alloys, creep resistance, enhancement by Mn addition 4-28957
 KCl crystals near m.p. under small loads 4-1961
 Mg-Cd, system, order-disorder transform effects 4-26519
 MgO, electric field increase 4-7433
 Mg-Zr alloy, creep strength rel. to heat treatment 4-28965
 Mg-Zr alloy, at 400°-450°C in CO₂ 4-30782
 Mg-Zr homogenized alloy, Zr hydride precipitation 4-30872
 Mn-Mg alloy, compressive creep deformation, effect of grain size 4-30781
 NaCl crystals near m.p. under small loads 4-1961
 NaCl, 500°-750°C, temp. and stress depend. 4-4488
 Nb, at low temps. 4-28972
 Ni, effect of prior strain and polygonization 4-7441
 Ni, and time to rupture under load, high temps. 4-7439
 Ni, 700°C, effect of previous deformation at 4.2° and 300°K 4-13429
 Ni, temp. and stress effects on deformation components 4-23182
 Ni, Ni-Au and Ni-Ag, comparison at 500° and 600°C 4-23184
 Ni-Fe magnetic films, domain wall, temp. var. 4-13201
 P, white, rel. to pressure 4-15712
 U, activation energy temp. var. 4-23224

SUBJECT INDEX

Creep—contd

- U carbides 4=13611
- UC, compressive, meas. 4=23225
- Zn, additional strain due to temp. variation 4=10405
- Zn, heat cycling effects 4=13452
- Zr, meas. under 4-26 kg/cm² at high temps. 4=13455

Critical constants, thermal

- acetic acid—water—butane, 3 coexisting phases 4=24442
- alkali metal vapours, effect of dimerization 4=21366
- binary mixtures, gas—liquid, crit. temp. 4=369
- binary systems, fluctuations and opalescence, theory 4=8525
- critical isothermal degree 4=27390
- critical mixtures of polar liquids, dielec. props. 4=29639
- density, according to single phase region data 4=21365
- liquids, and zero-point volumes 4=27377
- monatomic elements, critical press. determ., theory 4=18501
- partition function correction 4=5479
- simple fluids, critical region rel. to correl. functions 4=24441
- theory, gases, progressive condensation 4=14460
- three-component solns., diffusion 4=29618
- vapour—liq. equil., van der Waals theory, crit. region 4=8506
- water, heavy and ordinary, determ. from exper. data 4=29813
- Ar, critical opalescence, X-ray meas. 4=2890
- Ar, critical press. determ., theory 4=18501
- BiCl₃, critical temp. 4=29812
- C, gravitational effects in meas. near critical point 4=14468
- CO₂, isotherm calc., opalescence 4=8527
- CO₂—H₂O, curve, up to 3500 bar 4=8508
- Cu, eqn. of state near crit. point 4=25849
- F₂, liq., calc. using significant structure theory 4=8166
- H₂, triple pt. 4=5478
- He⁴, solid, triple-point temps. 4=21386
- Ne—nD₂ liquid mixtures, excess free energy at triple point 4=2668
- O₂, C, near critical point 4=5480
- Xe, critical press. determ., theory 4=18501

Cryoscopy

See Freezing; Low temperature production; Low temperature technique.

Cryostats

- for adsorption measurements 4=11399
- conductor elec., optimum conditions, general heat exchange 4=16309
- for e. s. r., n. m. r., He³ 4=24860
- electrical conductors, optimum design for perfect thermal exchange 4=11439
- for electron beam studies, 6°–77°K 4=27400
- for electron irradi. of metals and semiconductors, 4.2°K 4=11440
- 14°–300°K, adaptable for high pressure expts. 4=11397
- for heat conduction meas. under mechanical loads 4=8487
- liq. gases, automatic refilling device 4=375
- liquid level detector 4=376
- liquid nitrogen temp. for isothermal annealing of metals after heavy-particle bombard. 4=8488
- for magnetoelectric anisotropy study, Bi₂Te₃ 4=16310
- matrix-isolation spectroscopy, miniature cryostat 4=5490
- for nuclear orientation expts., He³ 4=11442
- for nuclear quadrupole reson. meas. 4=14919
- review, below 1°K 4=11429
- for susceptibility meas. of paramag. salts 4=10249
- for X-ray examination of materials 4=15780
- for X-ray investigations, liq. N₂ to room temp. 4=353
- He-bath, vapour pressure stabilization device 4=8541
- He-3, for radioactive Np and Pu 4=21421
- 60° to 20°C, for small samples 4=24466
- 20°–870°K, for localized ht. control 4=24419
- 15°K to room temp., simple 4=18504
- 196° to –100°C semi-automatic 4=27398
- 0.02°K and below 4=8534

Crystal chemistry

- geometrical bases 4=7524
- germanates and silicates, relationships 4=4509
- graphite, dimensional changes, rel. to Br absorption 4=30808
- semiconducting compounds, general valence rule 4=7601
- BaTiO₃ with Co added 4=30807

Crystal chemistry — contd

- Hg(II) complexes 4=30861
- KTiNbO₆ 4=23466
- KTi₃NbO₆ 4=23466

Crystal counters

See Counters, crystal.

Crystal imperfections

See also Colour centres.

- alkali halides, divalent imperfections, rel. to irradiation stability 4=6895
- alkali halides, impurity ions, lattice distortion theory 4=4040
- alkali halides, ionic, colour centres by irradi., props. 4=28496
- alloys, f. c. c., stacking, in- and extrinsic distinction by electron microscope 4=6861
- alloys, intergranular segregation 4=4636
- alloys, stacking fault energy, depend. of rolling texture 4=10565
- anthracene containing anthraquinone, anthrone or naphthalene impurities, photocarrier trapping 4=15448
- apatite crystals, rel. to Mn²⁺ e. s. r. extra lines 4=10326
- aromatic hydrocarbons, polycyclic, elec. cond., impurity effect 4=26064
- bicrystal, tilt wall formation, simple model 4=4526
- ceramics, neutron irradi., defect loops 4=22640
- cleavages, in topaz, etching 4=23315
- conductivity elec., due to free electron scatt. 4=25988
- conductivity, thermal, meas. 4=1450
- corundum, quadrupole interactions of V and Mu 4=3959
- covalent, radiation effects, and paramag. res. 4=28507
- crostedite, stacking, and X-ray diffr. streaking 4=20289
- defects, electron microscope technique and application 4=29157
- defects from coalescence of twin layers in polysynthetic twin 4=25930
- deformations < ~ 0.1" arc, obs. by double spectrometer device 4=22572
- diamonds, doped synthetic, X-ray spikes, anomalous, along <111> 4=6819
- diamond, impurities and X-ray diffr. spikes, topography 4=4646
- diamond, in recomb. radiation meas. analysis 4=13072
- diamonds, on irradiation, n, e, γ, from spectrum, optical 4=1729
- diamonds, and X-ray diffr. and u.v., absorpt. by platelets 4=28683
- diffraction of X-rays and electrons, wave-optical theory 4=23362
- disorder problems, semiclassical approx. 4=23381
- effect on dielectric const. 4=26092
- effects on growth, review 4=7541
- elastic inclusions, diffraction contrast theory 4=4643
- elastic relaxation, dislocation—point defect interact. process 4=1913
- electron irradi. induced, apparatus for low temp. obs. 4=8542
- electronic structure in valence crystals 4=9886
- electronic—vibr. transitions study 4=22473
- faults produced during growth, origin 4=9938
- ferromagnetic dilute alloys, electron impurity scattering 4=4108
- ferromagnetic solids, point defects studied using directional order 4=1456
- ferromagnetics, point, rad. prod., mag. obs. 4=25920
- grain boundaries, Cu, movement, by strong elec. currents 4=25954
- graphite, Au "decoration" for electron microscopy 4=12760
- graphite, defect structure rel. to thermal cond. 4=1415
- graphite, fast-neutron effect 4=30599
- graphite, impurity nucleation of rad. damage 4=28450
- graphite, polycrystalline, irradiation defects, rel. to thermal conductivity 4=1412
- graphite, rel. to irradiation energy release 4=12832
- graphite, structural defects, obs. by electron microscopy 4=12743
- growth, X-ray exam. 4=13521
- haematite, defects causing anisotropy 4=10276
- ice, D-defects, energy of formation 4=4043
- ice, double faults, energy of formation 4=25804
- ice, impurity distrib. rel. to crystal growth 4=25929

Crystal imperfections—contd

- due to impurities, and solubility, phase equilibrium theory 4=6820
- impurities, carrier scattering 4=6775
- impurities, conc. in surface layers of ionic crystal 4=26449
- impurities, effect on excitation migration in linear chain of molecules 4=25909
- impurities, energy band minima, subsidiary 4=15449
- impurities in insulators, optical spectra, dynamic perturb. effects 4=26348
- impurities, ionized, electron scatt., Born approx. 4=12874
- impurities, multiplet transitions, vibr. structure 4=17546
- impurities, polyatomic, resonance phonon scatt., theory 4=9833
- impurities, singlet spectra, vibration structure theory 4=13006
- impurities, symmetry group effect, lattice bands, vibronic transitions, selection rules calc. 4=28356
- impurity in anharmonic crystal, localized mode 4=17342
- impurity atom, shell and nucleus transition interacts. with vibrs. 4=28345
- impurity atoms, oscillations, Mössbauer effect and i.r. absorpt. 4=25838
- impurity centres, phototransition, effect of lattice anharmonicity 4=28452
- impurity distrib. meas. of diffused layers in Si 4=28448
- impurity effect on neutron scattering 4=22474
- impurities in growing semiconductors, mechanism 4=30816
- impurity, magnetic neutron scattering, theory 4=25927
- impurity spectra, narrow "no-phonon" lines, theory 4=10150
- inclusions, circular, interaction with edge dislocation 4=25934
- inerts gases, CH₄ and CD₄ impurities, vibration—rotation spectra, 5° to 40°K 4=6628
- interaction of dislocation loops and point defects 4=25919
- interaction thermodynamics of impurities, review 4=28440
- intermetallic compounds, review 4=9804
- ionic crystal, lattice distortion around impurity 4=1468
- ionic crystals, energy levels of trapped electrons, calc. 4=1423
- ionic crystals, glide band formation and broadening 4=4446
- ionic crystals, impurity centres, luminescence line shape, width and shift 4=7172
- isotopic impurities, time-dependent lattice behaviour 4=1378
- isotopically disordered crystal, lattice thermal cond. 4=30528
- Italian contributions, recent 4=20146
- kink pairs, nucleation, activation energy rel. to stress, lattice constants and Peierls' hill 4=30751
- lattice distortions in plastically deformed metals, kinetics of relief 4=6847
- lattice, Sn films, electron microscope obs. 4=4045
- rel. to lattice vibration theory 4=12608
- and luminescence 4=17588
- metals and alloys, internal friction data 4=7372
- metals and alloys, rel. to surface props. 4=13668
- metals, b. c. c. stacking fault growth rate 4=6856
- metals, charged impurities, interaction energies 4=6825
- metals, doped, fissile and non-fissile additions, impurity study 4=30587
- metals during quenching, formation of oriented voids 4=20291
- metals, f. c. c., stacking-fault energies calc. 4=9978
- metals, field ion microscopy 4=1449
- metals, impurities, localized magnetic states, interact. 4=12740
- metals, irradiated, displacement cascades, effect on resist. 4=12845
- metals, irradiation damage and recovery 4=1533
- metals, lattice defects produced by fast electrons 4=1474
- metals, neutron effects calc., dislocation spikes and vacancy clusters, and mech. props. 4=13358
- metals, neutron-irradiat. at 4.5°K, annealing analysis 4=12821
- metals, non-cubic, anisotropic paramag., rel. to nuc. relax. 4=10340
- metals, point defects 4=1452

Crystal imperfections—contd

- metals, point defects, cond. electron scatt., pseudopotential method 4=6771
- metals, point defects from cold-working 4=1453
- metals, rel. to electron energy changes 4=12689
- metals, very pure, effect of method of preparation 4=20147
- metallic welding, slip plane action rel. to bond formation 4=23245
- microdeformation meas. by Fourier anal. of X-ray diffr. lines 4=15801
- mobility activation meas. by linear heating, extension to higher order processes 4=9940
- molecular crystals, exciton impurity level 4=28423
- molecules on substituted sites, arrangement probabilities 4=20174
- mosaic and perfect crystals, X-ray reflection intensities 4=23380
- movement, rate const. low temp. var. 4=20262
- naphthalenes, D-substituted, rel. to Rashba effect 4=1714
- noble-metal alloys, stacking-fault probabilities 4=4064
- noncubic centres in cubic crystals, rel. to piezo-spectroscopic props. 4=28441
- organic, and luminescence, exciton 4=10228
- organic semiconductors, impurity effects, theory 4=26066
- p-n junction, impurity conc. rel. to field 4=28547
- paired, in O₂ symmetry lattices, rel. to mech. relax. 4=30748
- paramagnetic impurity or ion-pairs, energy states 4=13306
- paramagnetism, parasitic, line defects 4=13111
- permalloy, stacking faults 4=25952
- perturbed ionic, one-dimensional, multiple excitation defect representation 4=25893-4
- from photoconductivity in mag. field 4=17415
- point, and plastic deform., ionic crystals 4=28916
- point, boundary, ferromag. spin wave scatt. 4=1813
- point defect annealing kinetics, diffusion eqn. 4=6826
- point defect obs. by X-ray diffraction 4=22593
- point defects, and associated mechanical and dielectric relaxation 4=6827
- point defects and diffusion mechanisms 4=1504
- point defects, and dislocations, elastic interactions 4=25918
- point defects and excitons 4=1441
- point defects, contributions to statistical mechanics, formation and appl. to ionic crystals 4=17418-49
- point defects, elastic props., Clausius—Mesotti formula 4=17705
- point defects, correl. and scatt. of lattice vibr. 4=9829
- point defects determ. in non-stoichiometric cpds. 4=1454
- point defects, effect on lattice vibrations 4=28341
- point defects, effects on ferromag. spin waves 4=4336
- point defects, electron motion, functional anal. 4=1421
- point defects in ionic crystals, var. with temp. 4=28442
- point defects in ionic luminescent crystals 4=1526
- point defects, neutron scatt. cross-section calc., atomic relaxn. correction 4=30552
- point defects, production theoretical and expt., review 4=30550
- point defects in pure metals, vol. and lattice parameter changes 4=30551
- point defects in two and three-dim. lattices, vibrations 4=1371
- point defects, interacting, thermal equil. kinetics 4=12723
- point defects, lattice dynamics, review 4=22470
- point defects, random walk on cubic lattice, distrib. function for number of distinct sites visited 4=20265
- point defects, prod. of thermal resistance 4=1413
- point defects, rel. to compressibility and thermal expansion 4=9939
- point defects, rel. to vibration distortion 4=1359
- point defects, study by X-ray scatt. 4=1459
- point, in non-metallic solids, conference review 4=20264
- point, review 4=17417
- polar crystals, impurities, theory of levels 4=4041
- production, cascade theory, equiv. collision distrib. 4=4035
- pure twist boundary model, moiré pattern demonstration 4=1502
- quartz, alkali impurity, and dielectric props., temp. var. 4=12739
- quartz, artificial, twinning, rel. to Li, Na, Ge, Al impurities 4=30810

SUBJECT INDEX

Crystal imperfections—contd

- quartz, e.s.r., low temp. var. 4=20597
 quartz polished surfaces, defect structures 4=17837
 quartz, radiation induced, obs. by u.s. and lattice wave interaction 4=20263
 radiation defects, review 4=30589
 radiation effects, conference, Varenna (1960) 4=25976
 rare earth ion, at garnet lattice 24c site, mag. props., theory 4=28763
 review lecture 4=28439
 Rochelle salt, X-irrad. 4=2018
 ruby laser, emission pattern formed by diffraction 4=24931
 rutile, point defects type, rel. to internal friction 4=23219
 semiconducting materials, radiation-induced defects 4=10040
 semiconductors, impurities, behaviour, conc. and props. 4=28548
 semiconductors, ionized impurities, electron cascade capture 4=12674
 semiconductors, local symm. of electron centres 4=12742
 semiconductors, radiation-induced defects 4=1535
 semiconductors, rel. to adsorption and chem. reactions 4=20792
 semiconductors, surface local electron centres, optical spin-lattice relax. for var. defect reson. freq. 4=17341
 stacking faults, Co-base alloys, and segregation 4=25950
 stacking faults, Co⁵⁹ ferromag. nuclear reson. 4=1860
 stacking faults, electron microscopy 4=1501
 stacking faults, f. c. c. metals, meas. by X-ray line shifts 4=4578
 stacking faults, in pure f. c. c. metals, energy calc. 4=12769
 steel and Cu alloys, stacking fault fringe phenomena 4=4067
 steel, stainless, stacking, electron microscope obs. 4=6861
 stored energy release, differential thermal calorimetry 4=4068
 structural defects, origin, ionization mechanism 4=1471
 substitutional point defects, effect on thermal expansion 4=28374
 and supercond. lattice thermal cond. reduction, point defects 4=18556
 superconducting films, critical field var. 4=29838
 surface defects, rel. to work function meas. 4=19074
 thermal spikes, effect of focused collision sequences 4=6894
 transition metal oxides and carbides, O sub-lattice, metal-metal bond screening effects 4=22450
 transition metals, solute atom moments, rel. to supercond. 4=399
 two-dimensional, in plastically deformed crystals 4=22594
 vacancies and holes, multi diffusion in growing oxide films 4=7028-9
 X-ray diffr. exam., grains, comparison of var. methods 4=12721
 X-ray diffrn. topography, "limited projection" method 4=7658
 X-ray line breadth analysis, h. c. p., growth and deformation 4=10568
 X-ray study, dynamic effects, oscillating film method 4=1451
 X-ray wavefield partial reflection and superposition 4=23378
 Ag layers on monocryst. Cu layers, dislocation struct. 4=23589
 Ag, on quenching after heating in air 4=6823
 Ag, stacking fault energy calc. 4=22603
 Ag halide grains, X-ray diffr. exam., comparison of var. methods 4=12721
 AgBr, incorporation of Ni²⁺, e.s.r. data 4=4412
 AgCl, Cu⁺ doped, trapping of photoproduced holes 4=25888
 Ag-Sn alloys, cold worked, lattice deformation and recovery 4=23206
 Ag-(Zn, Cd) alloys, stacking-fault probabilities 4=4063
 Al, defect structures, autoradiography 4=2106
 Al, impurity distrib., nonuniform in cross-section of single crystals 4=9949
 Al, migrating interstitials at quenched-in vacancies rel. to neutron-irrad. 4=4097
 Al, mosaic, X-ray effects 4=12775
 Al, neutron induced, effect of substructure 4=9941

Crystal imperfections—contd

- Al quenched from liq. state, perfect and imperfect loops and dark spots 4=9942
 Al, stacking faults, electron scatt., cond. temp. var. 4=12772
 Al, stacking; in loops 4=6858
 Al, zone-refined, impurity distributions 4=4540
 Al and Cu, volume changes induced by fission 4=4094
 Al-3% Si alloy, anomalous lattice spacings, rel. to Si crystallites 4=4593
 Ar, H₂ and CH₄ impurities, irradiation, energy migration and isotopic effects, e. s. r. meas. 4=25928
 As₂Se₃, Cu and Ag impurities, rel. to photoconductivity 4=1677
 Au, effect on thermoelec. power 4=20435
 Au, effect on thermoelectric power 4=7086
 Au, electron irradiation, recovery, temp. var., elec. cond. study 4=30600
 Au foils, stacking fault disappearance on O⁻ ion bombard. 4=20285
 Au, point defect study by electron irradiation 4=25922
 Au, stacking-fault energy 4=12769
 Au, stacking fault energy calc. 4=22603
 Au stacking-fault tetrahedra, irradiation-induced annealing 4=4065
 Au, stacking fault tetrahedra, nucleation and growth 4=17435
 Au, stacking tetrahedra, removal by ledge propagation 4=15480
 Au, thermal defect existence 4=30554
 Au, vacancy-rich zones surrounded by low-interstitial areas, rel. to neutron irradiation 4=4097
 Au-Cu-Zn, stacking effect in Martensitic transformation 4=29008
 B and Li in Si, localized vibr. 4=17346
 BaTiO₃, effect of added Co 4=30807
 Be, rolled, impurity effect on plastic deform. and fracture, 20°-800°C 4=26498
 BeO, annealed after irradiation, point defects 4=12722
 BeO, He aggregation due to neutron irradiation 4=4093
 Bi₂Te₃, structural changes, rel. to grinding 4=7668
 CaF₂, Eu²⁺-F interact., ENDOR meas. 4=4425
 CaO, paramagnetic, due to X or Hg irradiation 4=7320
 CaWO₄, and growth 4=30817
 CaWO₄, Ir and Rh scattering centres 4=9950
 CaWO₄, Nd conc. rel. to laser threshold 4=10168
 CaWO₄, trivalent rare earth substitution and coupled substitution theory 4=15474-5
 Cd hydroxide, void prodn. by vacancy aggregation 4=12830
 Cd sulpho-selenide solid solns., photoelectronic props. 4=12987
 CdS, Ag impurity incorporation 4=6821
 CdS, Ga Cl₃ impurity clustering, X-ray obs. 4=15473
 CdS, optical study of defect struct. 4=30559
 CdS, point defects and excitons 4=1441
 CdS, point defect prod. by γ -irrad. 4=20480
 CdS with GaCl₃ impurity, stacking faults 4=25949
 CdSe, optical study of defect struct. 4=30559
 CdTe, double acceptor centre, props. 4=17420
 CdTe, mag. impurities, phonon scatt., in heat
 Ce, stacking-fault energy rel. to rolling texture 4=13656
 Co-base alloys, stacking faults in cold working 4=15479
 Co, h.c.p., stacking fault probabilities, effect of cold-working and annealing 4=22602
 Co, stacking faults, n.m.r. observations 4=12770
 Co-Pt, lattice, on ordering, X-ray exam. 4=23260
 Cr films, rel. to residual resistivity 4=20329
 CrBr₃, stacking fault energies 4=22585
 CrCl₃, stacking fault energies 4=22585
 Cr₂O₃, impurities of equal or lower valency, kinetics of inclusion, and effect on elec. props. 4=28612
 CsCl type, independent slip systems 4=1934
 Cu-base solid solutions, solute atoms in Suzuki atmospheres 4=23233
 Cu, dislocation loops after neutron irradiation, annealing 4=4053
 Cu foil, dislocations during plastic deform. 4=1936
 Cu, impurities, rel. to thermal cond., below 1°K 4=9874
 Cu, interstitial reorientation in internal friction 4=1938
 Cu, magnetic impurity exchange mechanism 4=6835
 Cu, point defects quenched and annealed 4=1455

Crystal imperfections—contd

- Cu, stacking faults, change in numbers at texture transform. 4=7481
 Cu, stacking faults, effect of diffusion annealing in H 4=20284
 Cu and Cu—Al, neutron-irradiated, rel. to yield strength 4=20650
 Cu—Al, Cu—Ge, stacking, electron microscope obs. 4=6861
 Cu—Ni alloys, stacking fault probabilities 4=4066
 Cu—Si—Mn, stacking faults, formation under tensile deformation 4=12774
 Cu—(Zn, Cd) alloys, stacking-fault probabilities 4=4063
 Cu₂O, point defects from neutron irradi. 4=1440
 Fe, due to cold working or neutron irradi. 4=6900
 Fe, neutron irradi. of pure and doped samples 4=1832
 Fe oxide films on Fe single crystals, stacking faults 4=26711
 α -Fe, radiation damage, dynamics analysis 4=6890
 Fe single crystal plates, mosaic structure in early stages of tensile deformation 4=7432
 Fe, zone-melted, stacking faults in thin foils 4=9974
 Fe—Al alloys, lattice, temp., composition var. 4=23529
 Fe—Al, iron-rich, dip system 4=6854
 Fe—C—N, segregation at grain boundaries and dislocations 4=1503
 Fe₃C in steel, increase on deformation 4=4057
 Fe—Ni, neutron irradi., annealing of defects 4=1457
 GaAs, defects introduction and removal, by thermal treatment, effect of Cu 4=15467
 GaAs, dislocations, rel. to Cd diffusion 4=9986
 GaAs on Ge substrates, stacking faults, grains and twin planes rel. to Ge surface 4=29066
 GaAs vapour-deposited films, stacking faults 4=13681
 GaP, luminescence, decay time fine structure rel. to lattice defects 4=4300
 Gd, Lu³⁺ impurities, γ — γ correl., rel. to cond. electron polarization 4=4009
 Ge crystallized from Ge—In—Sb liq. alloy, impurity content 4=12737
 Ge, defects formed by neutron bombard. causing hole-scattering 4=12899
 Ge, defects, prod. by 28 MeV electrons 4=1539
 Ge, defects produced by γ -rays 4=1538
 Ge, deformation, rel. to combined resonance 4=1605
 Ge, doping and radiation damage centres, by ion bombard. 4=28558
 Ge films, in growth, etching is not necessary for low values 4=17844
 Ge, Group V impurities, ground-state splittings, optical meas. 4=28337
 Ge, impurities 4=12895
 Ge, impurities, interaction with dislocations 4=12738
 Ge, impurities, rel. to anomalous X-ray trans-
 Ge, impurity doping in vapour growth 4=1470
 Ge, impurity doping in vapour growth 4=7555
 Ge, impurity segregation coefficients, rel. to growth 4=7556
 Ge layers, epitaxial 4=30566
 Ge, n irradi., 14 MeV, n type, distrib. 4=6822
 Ge, neutron-irradi., obs. by chemical etch 4=4060
 Ge, oxygen-defect complexes, i. r. absorption study 4=6830
 Ge, p-type, impurities, rel. to thermal expansion, 77° to 340°K 4=9862
 Ge, plastically deformed, minority carrier trapping centres 4=12673
 Ge, point defects, methods of prod., mobility 4=30553
 Ge, produced by fast neutron bombard. 4=10012
 Ge, radiation-induced defects 4=10040
 Ge, Zn doped, impurity centre optical transitions, liquid He temps. 4=15569
 Ge—Cu solid solution, distortions due to precipitation 4=2084
 Ge—Ni solid solution, distortions due to precipitation 4=2084
 Ge—Si alloy films, vapour growth on Ge 4=7554
 Hg, slip plane and direction of slip 4=6855
 InSb, n-type, impurity mol. wavefunctions in high mag. field 4=9902
 InSb—Te, inclusion of Te on crystallization from liquid with periodic temp. change 4=23342
 Ir, stacking-fault density meas. 4=9978
 KBr, radiation-defect formation and annealing 4=1651

Crystal imperfections—contd

- KCl and KBr, impurity vibrations, rel. to i. r. absorption line intensity 4=10183
 KCl containing impurities, defect. microscopic investigation by evaporation method 4=28451
 KCl, irradiation defects, rel. to thermal expansion 4=6752
 KCl with Na, F-and K-colour centres var. 4=30585
 KCl tubular whiskers, rel. to fracture stress 4=28976
 KCl, Ca-doped, impurities, rel. to dipole aggregation 4=1652
 KCl, with KNO₃, phonon—defect reson. interaction, and thermal cond. temp. var. 4=17382
 KCl, Pb impurity entry during growth, rel. to vibration 4=30821
 K₂NiF₄, stacking faults, antiferromag. neutron diffr. exam., calc. 4=13275
 K₂SO₄, impurities, distrib. during crystallization 4=29062
 Kr, H₂ and CH₄ impurities, irradi., energy migration and isotopic effects, e. s. r. meas. 4=25928
 LiF, ionic conductivity in grain boundaries 4=26101
 LiF, neutron irradi. at low temps. 4=1541
 LiF, neutron radiation damage 4=28512
 LiF, point and surface defects, Lang method study 4=1460
 LiF, point defects and relation with physical props. 4=1458
 LiF, point defects giving dielec. props., recovery 4=1650
 LiF, structure changes due to bombardment with alumina particles, annealing study 4=4044
 Mg(Al, Fe)₂O₄, effect on ferromag. reson. 4=30728
 Mg, cold worked, due to lattice strain 4=25951
 MgO, impurity precipitates, incoherent, obs. 4=9951
 MgO, impurity precipitates on {100} surfaces 4=22569
 MgO, mobile sources, rel. to tensile strength 4=13425
 MgO, neutron irradi., defect clusters and macroscopic growth 4=12833
 MgO, of various origins, X-ray and electron micr. study 4=10583
 Mn silicide 4=17416
 NaCl containing impurities, defect. microscopic investigation by evaporation method 4=28451
 NaCl, dissolution spiral structures, etch study 4=2019
 NaCl, from n.q.r. of rare Na, Cl nuclei at non-cubic sites 4=20606
 NaCl, low-angle boundary displacement in annealing 4=15481
 NaCl, precipitated impurities, study by light scattering 4=6834
 NaCl, Ca impurity—cation vacancy pairs, interaction with dislocations 4=22571
 NaCl—CdCl₂, impurity distrib., rel. to colour centre formation 4=10001
 NaCl—MnCl₂, impurity distrib., rel. to colour centre formation 4=10001
 NaCl—PbCl₂, impurity distrib., rel. to colour centre formation 4=10001
 Nb₃Sn, neutron-induced, effect on supercond. 4=18597
 Nd in Mg, supersat. solid soln., lattice distortions caused by cold working 4=10435
 Ni layers on monocryst. Cu layers, dislocation struct. 4=23583
 Ni, on neutron irradi., 28°K magnetic drag bands 4=13196
 Ni—Co, stacking, electron microscope obs. 4=6861
 Ni—Mo alloys, effect on K-state formation 4=23283
 Pb, stacking fault energy, cross-slip and subgrain obs. 4=9975
 Pb(NO₃)₂, effect on chemical γ damage annealing 4=4714
 Pd, stacking-fault density meas. 4=9978
 Pd, stacking-fault energy 4=12769
 Pt, effect on thermoelec. power 4=20435
 Pt, stacking-fault density meas. 4=9978
 Pt, stacking-fault energy 4=12769
 Pu, due to self irradiation, saturation 4=12834
 Pu, Pu—Al, lattice defects from self-irradi. 4=1537
 Rh, stacking-fault density meas. 4=9978
 Rh, stacking-fault energy 4=12769
 Sb, low-angle boundary displacement in annealing 4=15481
 Si, defects, additional levels, rel. to photoconductivity meas. 4=1687
 Si, doped with Sb and P, stacking faults 4=28574
 Si, doping and radiation damage centres, by ion bombard. 4=28558

SUBJECT INDEX

Crystal imperfections—contd

- Si, E-centre, e. p. r. and ENDOR meas. 4=20309
 Si, energy levels after proton irradi. 4=15458
 Si epitaxial layers, stacking-fault density, effect of growth rate 4=12771
 Si, epitaxial, stacking, obs. by interference contrast microscopy 4=20287
 Si films, in growth, etching is not necessary for low values 4=17844
 Si films, stacking fault nucleation 4=20288
 Si, He detection by vacuum cleavage 4=22570
 Si, impurities 4=12895
 Si, impurities, interaction with dislocations 4=12738
 Si, impurities, rel. to electrical and photo-conductivity 4=10067
 Si lattice, absorpt. spectra of impurities 4=1469
 Si, local centres with deep levels 4=10135
 Si, neutron irradi. 4=1627
 Si, proton irradi. 4=1544
 Si, proton irradi., point defects, formation and diffusion 4=9995
 Si, radiation-induced defects 4=10040
 Si, radiative electron capture by Ga and In impurity atoms 4=4169
 Si single crystal, P-doped, new type 4=6818
 Si, single crystal wafers, meas. by X-ray diffr. 4=15478
 Si single crystals, O-doped, precipitation 4=23287
 Si solar cells, effect of impurities on radiation damage 4=28649
 Si solar cells, electron microscope obs. 4=7006
 Si solar cells, X-ray obs. 4=7005
 Si, spin-1 centres after neutron irradi. 4=1543
 Si, stacking faults, extrinsic and intrinsic, epitaxial (110) 4=1500
 Si, stacking faults, X-ray topographic obs. 4=12773
 Si, substitutional impurities, effect on X-ray diffraction 4=2091
 Si, X-ray study, oscillating film method 4=1451
 SiC, β , impurity distrib. and crystal growth form 4=13546
 SiC, rel. to growth 4=23472
 Si-Fe, and magnetization process, high field 4=22992
 SiO₂, defect sites, appl. to thermal conduction 4=28387
 Sn, effect of impurities on orientation of dendrites 4=20740
 Sn, hard, superconducting, defects rel. to upper critical mag. fld 4=11486
 Sn-Cd, Al impurity rel. to lattice parameters 4=10556
 SnS₂, stacking faults geometry 4=9977
 SrCl₂·6H₂O, Mn²⁺ impurities 4=1467
 Th, stacking-fault energy 4=12769
 Th, stacking-fault energy rel. to rolling texture 4=13656
 Th-Ce alloys, stacking-fault energy rel. to rolling texture 4=13656
 Ti, 4 at. % additions of Al, Mo, Cr, Re, Pd, Ta, La rel. to resistivity 4=22687
 Ti-Mn alloys, slip planes, twinning, and stacking faults 4=4490
 TiO₂ films, stacking faults and dislocations 4=6862
 U, containing Kr gas bubbles 4=2115
 U, point defects and fission spikes from weak irradi. 4=1534
 U-Mo alloys, γ -grain boundaries 4=4652
 UO₂, stacking faults 4=25953
 W, after He atom bombard., at 20 keV 4=15511
 W, grain boundary through central (011) plane 4=9979
 W, impurity density and excess charge, rel. to work function 4=21555
 WC, dislocation and other defect increase, rel. to high press. and temp. 4=22592
 Yb, stacking-fault energy 4=12769
 Zn, Cd impurities rel. to brittle fracture, -200°C to +200°C, 4=10363
 Zn, effect on thermal evaporation 4=29179
 Zn, impurity diffusion, screened interaction model 4=9997
 Zn, impurity substructure 4=2095
 Zn, recovery processes after neutron irradi. 4=4102
 ZnO, photosensitive Ni impurity, e. s. r. 4=13323
 ZnO, Cu²⁺ substit. impurity, wave functions 4=4042
 ZnS, A-centres, thermally activ. motion, e. s. r. meas. 4=28446

Crystal imperfections—contd

- ZnS, Cl impurity incorporation 4=6821
 ZnS, Fe²⁺ and Cr³⁺ impurities, charge transfer 4=1357
 ZnS, Mn²⁺, exchange-coupled in cation sites, spectral study 4=7162
 Zn(NH₄)₂(SO₄)₂·6H₂O, impurities, distrib. during crystallization 4=29062
 ZnS, photosensitive Fe, Ni and V, e. s. r. 4=13323
 ZnS, rel. to birefringence bands, uniform 4=15602
 ZnS, stacking faults 4=20290
- dislocations**
 alkali halides, dislocation multiplication by h.f. vibs. 4=1482
 alkali halides, dislocation structure, rel. to h.f. vibrations 4=1479
 alkali halides, rel. to light scattering 4=28712
 Akulov's statistical theory, discussion 4=28460
 alloys, paired, and short range order detection 4=4499
 anthracene whiskers, during growth 4=7568
 b. c. c. lattice, partial dislocations on {110} planes 4=9954
 b. c. c. metals, screws, cross-over splitting 4=9959
 behaviour under internal stresses from spinodal decomp. 4=7395
 bent, weakly, Peierls model and string eqn. 4=22577
 calcite, in moving twin region, rel. to hardness 4=10373
 calcite twinning, interactions 4=9955
 camera for diffrn. radiography 4=1491
 charged, in elec. effects of plastic deform. 4=22754
 core, thermal disorder, effect on damping 4=20274
 corundum whiskers, real, by electron micr. 4=26646
 creep rate over Peierls barrier, model 4=17718
 cubic [111], energy and stress field 4=28464
 defect self-healing at high temp., mechanism and kinetics 4=12744
 deformed ionic crystals, electron product function 4=4047
 in dendrites, origin 4=28458-9
 diamond, and origin of trigons 4=12752
 diffusion, pipe, model 4=22579
 dislocation-tangle formation 4=12755
 displacement due to stress, calc., b. c. c. crystals 4=17430
 distributions, periodic 4=25931
 double kinks, elastic modulus defect, low temp. 4=23087
 edge dislocations, Morse and Lennard-Jones inverse power potentials 4=1480
 edge, elastic field, rel. to vibr. behaviour 4=9958
 edge, interaction with circular inclusion 4=25934
 effect on n. m. r. signal of cubic crystals 4=4418
 effect on X-ray and neutron scattering 4=4591
 rel. to elastic wave decay 4=23092
 elastically isotropic half-space, displacement functions 4=22575
 electronic energy states of edge dislocations 4=12753
 elliptical glide zone, number and distrib. 4=4049
 energy, circular loops in anisotropic hexagonal plates 4=12746
 f. c. c. metals, prismatic loops 4=4048
 f. c. c. structures, dissociation of dislocations 4=6836
 ferromagnetics, domain stress changes, rel. to n. m. r. 4=10338
 ferromagnets, effect on domains, magnetization 4=13145
 field theory, geometrical basis 4=4046
 formation during crystal growth, theory 4=30815
 garnet ferrites, by hydrothermal etch method 4=2017
 geometrical kinks, contribution to nonelastic strain 4=28463
 glide motion, u. s. stress/strain wave 2nd harmonic generation 4=28915
 glide of segments, thermally-activ., thermodynamics 4=23104
 glycine sulphate, X-ray topography 4=25943
 grain boundaries, energy calc., elec. props. 4=30570
 grain boundary grooving in liq. presence 4=15483
 graphite, Au "decoration" for electron microscopy 4=12760
 in graphite interlamellar cpds with Br, ICl and FeCl₃ 4=22588
 in growth, screw, and lattice vibr., thermal 4=7544
 helical dislocations, growth 4=12756
 ice, prism planes, etch pits 4=20720

Crystal imperfections—contd
dislocations—contd

- interaction with point defects 4=25918
- interactions, elastic and elec., rel. to mech. props. 4=22581
- interstitial impurity atoms segregated round dislocations, temp. and comp. depend. 4=17427
- kink motion, u.s. attenuation and velocity change 4=20275
- lattice, screw, and cond., thermal, temp. var. 4=4002
- line silhouettes in X-ray transmission diagrams 4=6850
- local vibrations of one-dimensional model 4=25935
- loop interaction with free surface 4=25933
- loop interactions with point defects 4=25919
- loops, continuously distrib. moving, elastic field 4=30561
- loops, electron microscope study, simplified technique 4=12758
- metal foils, electron micr. images, surface stress relax. effect 4=9964
- metal work hardening, electron mic. obs. 4=26481
- metals and alloys, loops and helical disloc., review 4=12733
- metals and alloys, rel. to deformation theory 4=4436
- metals, attractive dislocation junctions 4=28466
- metals, behaviour under reversed stressing 4=13382
- metals, deformed, var. on annealing, equ. 3=12747
- metals, dislocation distrib. and hardening mechanism 4=28465
- metals, electrical resistivity data 4=6843
- metals, formation by plastic deform., rel. to vacancy density 4=25924
- metals, mobility meas. by dynamic torsion 4=30569
- metals, movement, effect on plastic props. origin, nature survey 4=28917
- mica foils, electron microscope obs., reflections 4=10585
- mobility, in Frenkel-Kontorova model 4=15476
- motion, statistical theory 4=22576
- moving dislocations, theory, kinetic eqns, soln. 4=9956
- moving, dynamical theory 4=20273
- multipoles, rel. to strain-hardening 4=25936
- multi-wall, of intercryst. boundaries, theory 4=22578
- nomenclature, double tetrahedron, for interaction analysis, Cph structures 4=9961
- obs. by surface methods and decoration techniques 4=28468
- observation, review 4=1475
- ordering alloys, defect structure 4=22583
- ordering alloys, strengthening mechanisms 4=22582
- Peierl's mechanism for kinetics of dislocation motion, vel. rel. to activation energy for kink pairs formation 4=30751
- perovskites, complex, small distortions, X-ray study 4=9963
- pinned, freeing at yield, calc., without neglecting line tension 4=7382
- pinned line, thermal breakaway theory 4=12748
- pinning by impurities, thermal activation, and internal friction amplitude effects 4=26464
- and plastic flow yielding, discontinuous 4=26471
- plasticity, Riemannian geometry calc. 4=26468
- polyethylene crystals, arrays 4=17434
- prod. of precise translation motion for obs. by Lang method 4=1488
- rock salt, defect self-healing at high temp., mechanism and kinetics 4=12744
- rocksalt, light and electron microscope examination 4=6851
- ruby laser crystal 4=22589
- ruby, revealed by etching and chemical polishing 4=20283
- rutile, interactions with point defects, in creep 4=13442
- screw, in cubic crystal, elastic energy calc. 4=20276
- screw, in cylind. specimens, stress fields and energies 4=6844
- screw, in piezoelectric crystal, elec. potential and charges 4=6845
- screw, intersecting, type of jogs 4=4050
- screw, partial, bounding stacking fault, X-ray diffr. 4=25941
- screw, stability, effect of var. ratio and dia. 4=28456
- screw, surrounded by piezoelectric potential fields 4=28634

Crystal imperfections—contd
dislocations—contd

- screw type, splitting, b. c. c. metals 4=25932
- semiconductor heterojunctions, abrupt, inter-facial 4=12925
- semiconductors, intrinsic, screw, elec. field and charge distrib. 4=6846
- sharp notches, plastic yielding 4=20634
- solid solns., rel. to plastic deformation and work hardening 4=4448
- solid solutions, stacking-fault energy and dislocation arrangement, rel. to short-range order 4=6857
- stacking faults, electron interference fringes, branching, rel. to absorption 4=9976
- steel, effect on fatigue limit 4=10382
- steel, 3% Si, before and after recrystallization 4=2114
- stress dependence of dislocation velocity 4=28457
- stress field, planar, in anisotropic plate, theory 4=6839
- stress fields, local stabilization of superconductivity 4=5593
- superconductors, type II, and mag. hysteresis 4=18583
- surface effects on nucleation 4=26484
- thermal activation over Peierls barrier 4=25937
- tri-hydrogen lithium selenite single crystals, ferroelectric 4=12750
- and twinning intersections mechanisms 4=20277
- twinning model 4=7529-30
- twins, dislocation theory, rel. to Lifshits macroscopic theory 4=1472
- unpinning, thermally activated, entropy factors 4=28461
- velocity, stress dependence, rel. to work hardening 4=22580
- velocity, var. with stress 4=12745
- wall, compound tilt, elastic props. 4=20633
- X-ray diffraction topography for bulk imperfections 4=7659
- X-ray diffr. microscope technique, modified 4=30568
- X-ray diffr., variance of line profile, calc. 4=7590
- X-ray refl., Bragg, Fourier series model 4=9965
- X-ray scattering by crystals containing randomly distributed dislocation loops, theory 4=10507
- X-ray scattering, on screw and edge dislocations 4=13564
- Ag, rel. to work hardening 4=30766
- Ag, in slip deform. 4=26527
- Ag, relaxation peaks after deformation at 4.2°K 4=7429
- AgCl, lattice distortion, rel. to u. v. irradi., 25°C 4=9953
- AgCl, plastically bent, distrib. 4=22601
- Al, and absorption, u.s., second harmonic, stress effects 4=9842
- Al, and impurities, distrib., growth and heat treatment effect 4=20278
- Al, and u. s. second harmonic prod., kink model 4=28362
- Al, cellular grown crystals, Fe distrib. and sub-structure 4=29090
- Al, debris formation when fatigued at 78°K 4=12751
- Al, effect on neutron irradi. damage 4=28503
- Al, elec. resistivity meas. of dislocations 4=6842
- Al, interaction between imperfect loops and moving dislocations 4=12757
- Al loops, conversion of Frank sessile to prismatic, by shear stress 4=4052
- Al, new type dislocation loops when quenched 4=6840
- Al, on deformation and annealing 4=20280
- Al, prismatic loops 4=4048
- Al, production and electrical resistivity meas. 4=6848
- Al, quenched, loop form. 4=22559
- Al, rel. to work hardening 4=30766
- Al, relax., 10-50 Mc/s meas. analysis 4=12754
- Al single crystals 4=15701
- Al-Ag and Al-Cu alloy, thin foils parallel arrangement 4=1490
- Al-Al₂O₃ alloys, rel. to deform. induced substruct. 4=29163
- Al-Al₂O₃, dislocation blocking by alumina particles 4=22584
- Al-4% Cu alloy, formed during creep 4=28934
- Al-4% Cu foils, movement during deformation 4=4458
- Al-Mg alloy precipitates, dislocation loops 4=17750
- Al-Mg, fatigued, electron microscope study 4=12759
- Al-N, effect on growth of whiskers 4=23354

Crystal imperfections—contd

dislocations—contd

- Al₂O₃ sapphire, hexagonal arrays, electron mic. exam. 4=12764
- Al—Zn alloys, loops, and precipitation 4=13473
- Au, coherent annealing twin boundaries as vacancy sinks 4=9973
- Au, effect on neutron irradiation damage 4=28503
- Au films, dislocation loops from ion bombardment 4=1489
- Au, relaxation peaks after deformation at 4.2°K 4=7429
- Au, stacking faults near grain and twin boundaries 4=9973
- Au—Ag alloys, relaxation peak meas. 4=20656
- BaTiO₃, dislocations under mechanical impulse 4=1495
- BaTiO₃, etch pit pattern in plastic deformed region 4=30565
- BaTiO₃, ferroelec., effect of elastic anisotropy 4=20279
- Be, rel. to microstrain characteristics transition 4=17726
- BeO, defects due to neutron irradiation, rel. to double Bragg scattering 4=29097
- Bi films, in growth, healing 4=23333
- Bi, twinning dislocations, interaction with defects formed during slip 4=10454
- CaWO₄, etch-pit obs. 4=6838
- Cd, and stress effects, cyclic, ductility 4=10372
- Cd, rel. to impurity distribution 4=6837
- Cd, evidence from growth spirals on single crystals 4=29044
- Cd, structure and multiplication 4=9970
- CdI, polytype 28Hc, screw and growth 4=13584
- CdS, Burgess vector, X-ray diffraction obs. 4=22595
- CdS, decomposition products diffused along dislocation lines, rel. to irradiation 4=9985
- CdS, det., new etchants 4=1496
- CdS, dislocation structure and growth mechanism 4=25938
- CdS, vapour phase grown, position and density 4=20281
- Cds, X-ray microscopic images, senses of Burgers vectors 4=30560
- Co, and mag. domains 4=22980
- Co—Fe alloy films, electron microscope study 4=30562
- CrBr₃, multiribbons structure and stacking faults 4=22585
- CrCl₃, multiribbons structure and stacking faults 4=22585
- Cu, and elastic Young's modulus, beta ray effects, low temps. 4=10376
- Cu, annihilation and blocking, under deformation 4=26506
- Cu crystals prep. with few dislocations 4=4544
- Cu, dislocation loops formed on deformation 4=28469
- Cu, distrib. after deformation at 4.2°K, meas. 4=9971
- Cu, electron-irradiated, thermal depinning, theory 4=28455
- Cu films evap. onto Cu, epitaxy 4=25942
- Cu, loops after ion irradiation below 30°K 4=6897
- Cu, low density growth study 4=23337
- Cu, neutron-irradiation effects 4=13398
- Cu, obs. after unidirectional and reverse straining 4=28944
- Cu, plastically deformed, X-ray investigation 4=22596
- Cu, prismatic, on neutron irradiation 4=17460
- Cu, rel. to α - and β -irradiation 4=22586
- Cu, relaxation peaks after deformation at 4.2°K 4=7429
- Cu, sub-structure, rel. to grain size and strain rate 4=20282
- Cu—3.1 wt% Co alloy, precip., nucleation of spherical coherent particles by dislocations 4=30776
- Cu—14.3 at.% Al, quenched, by electron microscope 4=1487
- Cu₂Au, plastically deformed, rel. to stress/strain data 4=17729
- Cu₂Au, strained, frictional stress 4=26507
- Cu—Ge alloy, dislocation unlocking process causing yield phenomena 4=7422
- α Cu—Ge alloys, stacking and twinning faults 4=28473
- Cu—Ge single crystals, dislocation damping 4=23150
- Cu—Ge super saturated soln., Cu segregation along As-grown dislocn. 4=29007
- Cu—In, during age hardening 4=4461
- Cu₂O, etching obs. 4=22598
- Cu₂O, rel. to thermal etching, 800°–1000°C 4=1494
- Fe alloys, and deform. damping peak 4=28962
- Fe containing C and N, segregation of C and N to dislocations 4=17427
- Fe, movement length and yield point 4=23162-3

Crystal imperfections—contd

dislocations—contd

- Fe, release stress meas. 4=28958
- Fe, screw, rel. to pyramids on whiskers 4=29064
- Fe, stress prod., effect of N, Mn 4=23161
- Fe, upper yield stress, effect of dislocation locking 4=10383

- Si, dislocation loops, large, generation 4=1481
- Si, doping at high local concs., effect 4=28574
- Si epitaxial layers, effect of growth rate 4=12771
- Si, in webs 4=12749
- Si, interaction of impurities 4=12738
- Si, loops, screw with super jogs, on bending 4=12761
- Si, networks due to diffusion 4=17433
- Si, {111} face epitaxial layers 4=2039
- Si, p-n jn., anisotropic stress effect, bulk distribn. effect, calc. 4=28584
- Si, prod. and obs. 4=30564
- Si, props. and configuration by X-ray topographs 4=22597
- Si, rel. to local changes in work function, meas. 4=21553
- Si, surface damage annealing processes 4=7705
- Si, zone-refined, effect of technique on dislocation density 4=29060
- SiC, etching and electron microscope studies 4=4062
- SiC, rel. to polytypism 4=2009
- Si-Fe, rolled and annealed, with {111}[112] orientation 4=23171
- Si, P diffusion-induced 4=22590
- Si, p-n jn., anisotropic stress effect, bulk distribn. effect, calc. 4=28584
- Sn single crystal films, evaporated, expt. and theory 4=9962
- SnS₂, ribbons and extended jog formation 4=9977
- Ta, and acoustic relaxation peaks 4=15417
- Ta, var. with plastic deform., effects of temp., struct. 4=28985
- Ti-Mo-Fe-Al alloys 4=25948
- TiO₂ films, and stacking faults, electron microscope obs. 4=6862
- U, on deformation and irrad. followed by heat treatment 4=4058
- Uα, networks, due to radiation, electron microscope obs. 4=4059
- α-U, stacking fault formation mechanism 4=12762
- UC, distrib. by electron microscopy 4=30567
- Va, and strain ageing, mech. props., effect on 4=29021
- W, mobility on {110} planes of edge dislocations 4=22591

Crystal imperfections—contd

dislocations—contd

- W, screw dislocations through central (011) plane 4=9979
- X-ray imaging, causes of contrast 4=12763
- Zn, etching obs., formed in growth or deform. 4=9968
- Zn, ion bombard. etching 4=1477
- Zn, plastically deformed, density anisotropy 4=1498
- Zn single crystals, edge dislocations, climb 4=28991
- Zn, sources at inclusions 4=25940
- Zn tungstate 4=15477
- Zn, twinning dislocations, interaction with defects formed during slip 4=10454
- Zn: Cd, arrays and substructures, etching obs. 4=6852
- ZnS, screw, elec. field and charge distrib. 4=6846
- ZnS, screw, elec. potential valley depth calc. 4=6845
- Zn-Tl(0.1%), etching polishing obs. 4=28472
- Zr, polycryst., rel. to basal slip kink bands 4=22574
- ZrO₂, rel. to polymorphic transform. kinetics mechanism 4=29023
- interstitials**
 - austenite-ferrite boundary, C or N conc. rel. to curvature 4=26540
 - complex oxides, cation distrib. determ., rel. to term splitting 4=9952
 - distribution prod. in displacement cascade, cascade theory 4=30557
 - effect on recovery of cold worked b. c. c. metals 4=10362
 - f. c. c. metals, radiation damage, dynamic stages 4=30590
 - f. c. c. metals, reduced density "zones" obstacles to dislocation movement 4=30760
 - ferroelectric materials, impurities rel. to Mössbauer effect 4=28622
 - fluorite structure solns. 4=25921
 - Frenkel defects, radiation annealing, statistical model 4=22564
 - Frenkel, high densities, defect structures 4=25926
 - graphite, clusters due to irradiation, flux level effects 4=6898
 - graphite, loops, on n irrad. at high temp. 4=30558
 - graphite, from irrad., annealing 4=1466
 - graphite, irrad., enhanced nucleation 4=20322
 - graphite, reirradiated, decomposition of complexes by neutrons 4=20270
 - graphite single crystals, irradiated 4=28444
 - impurity atoms, Mössbauer effect 4=28322
 - impurity atoms, segregation to dislocations, temp. and comp. depend. 4=17427
 - impurity, electron scatt., inelastic, thermal motion effect 4=4013
 - intermetallic cpds., and lattice constant changes at high temp. 4=28920
 - ion beam prod. at low energies 4=6833
 - metals and alloys, loops, differential diagnosis, review 4=12733
 - metals, Frenkel pairs recomb., annealing theory 4=15471
 - metals, neutron irrad. at 4.5°K, annealing model 4=12829
 - metals, radiation cascade summation effect on elec. cond. 4=25999
 - mobility, quantum-mechanical theory 4=12736
 - noble metals, α and d-irrad., Frenkel defects annealing 4=22564
 - radiation produced in cascade, distrib. 4=9943
 - rel. to diffusion 4=25955
 - semiconductors, binary, self-compensation theory 4=17481
 - semiconductors, impurity hopping cond., a. c., approx. at low temps. 4=10037
 - solid solns., interstitial, statist. model 4=15440
 - stress-induced ordering and anelasticity, thermodynamic theory 4=6824
 - trapped electron, energy levels 4=25895
 - Ag halides, rel. to anomalous thermal expansion 4=3999
 - Al, effect on neutron irrad. damage 4=28503
 - Al single crystals 4=15701
 - Au, and annealing, irradiation, Stage III effect mechanism 4=15472
 - Au, effect on neutron irrad. damage 4=28503
 - Au films, ion beam prod. at low energies 4=6833
 - BaTiO₃, Po²¹⁰ irradiated, potl. distrib., movement of interstitial 4=25982

SUBJECT INDEX

Crystal imperfections—contd**interstitials—contd**

- CaF₂, Sm⁺⁺ and Tm⁺⁺ impurity ion valence control, electrolytic meth. 4=23667
- CaF₂-YF₃ crystalline solns., F⁻ interstitial 4=6831
- Co, annealing meas., Frenkel pairs recomb. 4=15471
- Cu, and annealing, irradiation, Stage III effect mechanism 4=15472
- Cu films, ion beam prod. at low energies 4=6833
- Fe, α -phase, migr. energies and atomic configs., classical model 4=20271
- Fe containing interstitial C and N, segregation of C and N to dislocations 4=17427
- Fe-C, computer calc., energies 4=17426
- Fe, N interstitial effect on recovery and recrystallization 4=22565
- GaAs, ratio of interstitial to substitutional Zn 4=4071
- Ge, containing O, interstitial O configuration 4=28485
- Ge, 1.0 MeV electron irradi., vacancy-interstitial pair formation 4=9945
- HgTe, formation and vapour transfer energies 4=13497
- Mo, n irradi., loops 4=22566
- NaCl, due to H₂O, thermal and acoustic effects 4=17351
- NaCl, interstitial mobility, activation energy calc. 4=6832
- NaCl, Cl atom, relax. energy and distortion effects 4=12735
- Nb, and twinning, mechanical 4=13518
- Ni, α and d-irrad., Frenkel defects annealing 4=22564
- Ni, and internal friction, interstitial rot. effects on peak 4=28968
- Ni films, ion beam prod. at low energies 4=6833
- Ni oxide, emanation method meas. 4=22568
- Ni in Si, distrib., precipitation elec. cond. var., meas. 4=28453
- α -Pu, self-irrad. induced, effect on resistivity 4=22651
- Si acceptor and donor impurity redistribution during thermal oxidation 4=28572
- Si, containing O, interstitial O configuration 4=28485
- Si, P-doped, donor exchange integral by ENDOR meas. 4=17683
- Si, radiation induced, Hall effect meas., annealing 4=15508
- SrTiO₃, split, due to neutrons, X-ray obs. 4=20272
- Ta, thin foils domain patterns due to interstitial impurities 4=22567
- TiO₂, reduced, Ti ions, elec. resist. data 4=9948
- UO₂, neutron irradi., mobility temp. 4=22656
- UO₂, impurities, Mössbauer study 4=17428
- Zn oxide, emanation method meas. 4=22568

vacancies

- aggregate amalgamation under fatigue loads, rate calc. 4=4036
- aggregation, Al, quenched, new type 4=1473
- alkali halides, doped with Ag ions, reduction of Ag ions, influence of vacancies 4=15470
- alkali halides, produced by Varley mechanism, efficiency, theory 4=9947
- alloy phases, anomalously high concentrations, evidence 4=1461
- alloys, order-disorder, conc. 4=17422
- annealing in metals, effect of interaction with trace impurities 4=30555
- argon, effect on lattice mechanics 4=28347
- Born-von Kármán f. c. c. lattice, effect on lattice mechanics 4=28347
- clusters, Au, on n irradi. or quenching, annealing effects 4=4038
- crack, micro, formation mechanism by aggregate growth and fusion 4=4450
- rel. to diffusion 4=25955
- distribution prod. in displacement cascade, cascade theory 4=30557
- distribution, produced by irradiation 4=17424
- f. c. c. metals annihilation at stacking faults 4=22558
- f. c. c. metals, radiation damage, dynamic stages 4=30590
- fluorite structure solns. 4=25921
- Frenkel defects, radiation annealing, statistical model 4=22564
- graphite, interstitial monolayer disks, n-irrad., rel. to boronation and annealing 4=12727
- graphite, loops, on n irradi. at high temp. 4=30558

Crystal imperfections—contd
vacancies—contd

- graphite, made visible by cleaving, etching and decorating and obs. by electron microscopy 4=20267
- injection, during plastic deformation, self-diffusion mechanism 4=28474
- lattice distortion, rel. to phonon field perturb. 4=28445
- lattice relaxation energy caused by vacancy and vacancy pairs 4=30509
- metal oxides, O vacancies, effect on elec. cond., model 4=12860
- metals and alloys, annealing, rel. to quenching and irradiation, review 4=12733
- metals, f. c. c., activation energy for mono, and melting point 4=12732
- metals, f. c. c., single and double, formation entropy calc. 4=12731
- metals, formation by plastic deform., rel. to disloc. density 4=25924
- metals, formation energy, self diffusion and melting point 4=20298
- in metals, interactions with stress fields, theory 4=12728
- metals, max. concentration at m.p., rel. to saturation vapour pressure 4=11405
- metals, motion energy and melting point 4=25923
- metals, radiation cascade summation effect on elec. cond. 4=25999
- metals, radiation damage, vacancy behaviour 4=30593
- metals, rel. to conductivity 4=1551
- metals, retained thermal vacancies, stress effects 4=1462
- metals, temperature after-effect, dimensional changes 4=26475
- radiation produced in cascade, distrib. 4=9943
- rutile, anion, rel. to growth conditions 4=10462
- Schottky defect, formation energy, migration energy of vacancies, in ionic crystals 4=28442
- semiconductors, binary, self-compensation theory 4=17481
- stress-induced ordering and anelasticity, thermodynamic theory 4=6824
- supersaturated, random walk, 4=1464
- vacancy-impurity complexes, effect on vacancy annealing 4=22557
- volume source presence effect on pore coalescence 4=30873
- A^{III} B^V cpds., cation vacancy conc. rel. to lattice parameter 4=28993
- Ag, divacancies, binding energy and quenching 4=22562
- Ag, migration energy and activ. volume, model 4=12730
- Ag, quenched, annealing of vacancies and vacancy aggregates 4=12734
- Ag-Cd alloys, α -solid soln. range 4=29170
- Ag-Zn alloys, α -solid soln. range 4=29170
- Ag-Zn, quenched, thermal vac. formation and decay 4=6828
- Al, divacancy binding and migr. energies 4=15468
- Al, effect on neutron irradi. damage 4=28503
- Al-10 wt% Zn-0.10 wt% Si, Ge, Sn, interactions with calc. Si, Ge, Sn atoms, rel. to clustering 4=28994
- Al quenched from liq. state, conc. rel. to temp. 4=9942
- Al, quenched, void form. 4=22559
- Al single crystals 4=15701
- Al-Ag, dilute, equil. concn. meas. 4=15469
- Al-Mg alloys, effect on decomposition kinetics during zone formation 4=15729
- Al-Zn alloys, with Mg, diffusion processes 4=28477
- Al-Zn, interaction with Mg impurity atoms, effect on annealing conductivity changes 4=12725
- Au, clustering, effect of oxidizing and reducing treatments 4=22560
- Au, deformed single crystals, effect on self-diffusion 4=28443
- Au, effect on neutron irradi. damage 4=28503
- Au, formation and motion activ. energies 4=10142
- Au, nucleation below 140°C and growth 4=12724
- Au, quenched, annealing of vacancies and vacancy aggregates 4=12734
- Au, quenched, annealing out 4=22561
- Au, quenched in, annealing kinetics 4=20266
- Au, quenched, rel. to high-temp. anneals 4=25925
- Au, quenching-in and annealing-out 4=6829
- Au, sinks at coherent twin boundaries 4=9973

Crystal imperfections—contd**vacancies—contd**

- Au, thermoelec. 4.2-220°K 4=28657
 Cd, deformed at 78°K, recovery spectra analysis 4=13401
 CdS, in diffusion mechanism of Cd 4=15485
 Cr₅S₈, Cr₂S₃, order—disorder transitions, effect on X-ray diffn. meas. 4=28834
 Cr—Se, ordered, and elec. cond. 4=1549
 Cu alloys, effect of vacancies on precipitation 4=20701
 Cu, clusters, small-angle neutron scatt. 4=10009
 Cu, depletion zones after ion irradi. below 30°K 4=6897
 Cu, isochronally annealed, elec. cond. hydrogen—vacancy interaction effect 4=30606
 Cu, migration and binding energy 4=9944
 Cu, migration energy and activ. volume, model 4=12730
 Cu, n irradi. electron mic. contrast effects 4=17425
 Cu, quenched, annealing of vacancies and vacancy aggregates 4=12734
 Cu—Al alloys, formation, ordering processes 4=1987
 Cu—Al alloys, ordering, effect of quenching temp. 4=1984
 Cu₃Au, quenched-in-effect on ordering rate 4=15732
 Cu—Ni, n prod., de-segregation on heat treatment, from cond., elec. 4=22645
 Cu—Zn alloys, α -solid soln. range 4=29170
 Fe, α and diffusion, self, var. with plastic compression, 742-885°C 4=6874
 Fe, α -phase, migr. energies and atomic configs., classical model 4=20271
 Fe—Cr alloys, vacancy conc. rel. to temp. 4=20268
 Fe—Mo alloys, energy of form. rel. to Mo content, conc. rel. to temp. and Mo content 4=17421
 Fe—Mo alloys, vacancy conc. rel. to temp. 4=20268
 Fe—Si alloys, diffusion, rel. to mag. aftereffect 4=7259-60
 GaAs, on removal of Cu impurity 4=12726
 Ga₂Te₃, ordering in superlattice struct. 4=20759
 Ge, diffusion, var. with dislocation density 4=13480
 Ge, 1.0 MeV electron irradi., vacancy—interstitial pair formation 4=9945
 Hg Te—Cd Te solid solutions, study by Hall coeff. and conductivity 4=28998
 In_{1-x}Te_x ($x \leq 0.18$), NaCl type, and superconducting transition temps. 4=14518
 KBr:KH, anion vacancies, optical props. 4=7149
 KCl, pair formation energy 4=7033
 KCl, pairs, rel. to dielec. loss due to dipoles 4=28619
 KI, prod. by X-rays, temp. depend. 4=17423
 LiF, electron irradi., voids formed by point defect coagulation 4=17463
 LiF, formation by reactor irradi. 4=9946
 Na, net atomic fraction at m.p., and energy of formation 4=20269
 NaBrO₃, and cond., elec., temp. var. 4=7034
 NaCl, Ca impurity—cation vacancy pairs, interaction with dislocations 4=22571
 NaCl, formation energy, quenching meas. 4=4039
 NaCl, relaxation due to impurity vacancy complexes 4=28983
 Nb, neutron irradiated, recovery at 150°C, migration 4=12729
 Nb, vacancy formation 4=1463
 NH₄Cl, electron-deficiency centres, e. s. r. meas. 4=10006
 Ni—Fe ferrites, rel. to mag. fld. induced anisotropy 4=13250
 Pt, thermal formation kinetics 4=1465
 α -Pu, self-irradi. induced, effect on resistivity 4=22651
 Si, interactions with impurities 4=15509
 ThC₂, containing lanthanides, nephelauxetic effect 4=20462
 TiC, electron scattering 4=26017
 UC, neutron irradi., mobility temp. 4=22656
 V monoxide, non-stoichiometric, vacancy interaction energy, from e. m. f. meas. 4=28390
 V₅S₈, order 4=26678
 V₅Se₈, order 4=26678
 W, rel. to quenching, 2350° to 1.5°K 4=22563
 W—Mo, 25, 50, 75 at.%, field evaporation ion microscope study 4=29178
 ZnTe: Al, Zn²⁺, e. s. r. obs. of trapped hole 4=30556
 Zr, rel. to self-diffusion 4=1520

Crystal properties

- benzoic acid, molec. vibr., X-ray meas. 4=30511
 biaxial, optical constants, from Drude eqn. 4=30671
 dielectric constant, quantum theory 4=4195
 elastic coefficients, fourth order 4=4437
 elastic wave prop. theory 4=23093
 flat surface rearrangement without change of broken bond number 4=7521
 γ -ray resonance reflection, from surfaces 4=3970
 inert gases, rotation and ortho—para conversion of water mol. 4=1275
 inert gases, stability, three-body interaction model 4=28304
 ion hindered rotation, phonon-induced tunnelling 4=9822
 ionic energy level splitting 4=22167
 laser, flash and c.w. meas. methods 4=30078
 laser, two layered with non-coincident optic axes, operation conditions 4=11830
 magnetic symmetry and forbidden effects 4=13106
 mica, rel. to adsorption energy of water 4=7693
 molecular rot. study by cold neutron scatt. 4=30413
 nuclear polarization, low-temp., dynamic 4=27945
 optical props., classical model 4=26165
 optics, spatial dispersion effects, exciton theory, review 4=26163
 phosphors, half-widths of absorption and emission bands 4=13008
 salicylic acid, molec. vibr., X-ray meas. 4=30511
 scattering of light in synthetic crystals 4=22884
 In supercond. films, energy gap var., mag. field effect 4=29835
 synthetic, rel. to growth conditions 4=10462
 transparent, uniaxial, Cherenkov radn., magnetic and electric moment produced 4=10160
 ultrasonic 4=6738
 X-ray reflection on elastic curving with const. gradient 4=15773
 KH₂PO₄, second harmonic generation of light 4=10185
 NH₄Cl, lattice energy, ordering effect 4=28303
 Pb supercond. films, energy gap var., mag. field effect 4=29835
 Sn supercond. films, energy gap var., mag. field effect 4=29835
 ZnO, polar props. perpendicular to c-axis 4=6680

Crystal structure

- See also Polymorphism.
 aesthetic essay 4=23231
 alkali halides, stability, for three body interactions between ions 4=17745
 alloys, binary, mutual exclusion of intermetallic phases 4=13465
 alloys, dilute, sub. cellular—striation relationship 4=4634
 alloys, effect of heat treatment below recrystallization temp. 4=20630
 Alnico-type alloys, replicating technique 4=13631
 angle between crystal surface and plane meas. 4=29035
 austenite, at low temps., grain size 4=13579
 carbide precipitation in Fe—Ni—C martensite 4=15738
 chondrites, carbonaceous, selected area electron diffraction 4=2107
 colour antisymmetry mosaics 4=13512
 computer programme, least squares refining 4=23372
 computer programme, 3-dim. Fourier synthesis calc. 4=23373
 cubic metals, fibrous textures, elastic props. 4=17707
 diamond, X-ray diffr. spikes, topography 4=4646
 electron transmission micr. of coherent domain boundaries 4=13635
 ferrites, rectangular, grain size, rel. to switching 4=28843
 graphite, brominated, superlattice structure 4=4647
 graphite, dimensional changes, rel. to Br absorption 4=30808
 graphite, dimensions, neutron-irradi. effects 4=30599
 graphite, pyrolytic, formed under pressure 4=4523
 graphite, pyrolytic, graphitization, applied stress effect 4=20704
 guanidinium iodide, morphology, orientation of merohedral forms 4=2006
 gypsum, with "cast surface", microstructure 4=7670
 hopeite, morphology, natural rel. to synthetic 4=13513

SUBJECT INDEX

Crystal structure—contd

- hygroscopic crystals, optical goniometry apparatus for low and high temps. 4=30841
ice, Tyndall figures on internal melting 4=23310
inert gas crystals, atomic multipole interactions 4=22453
ionic, NaCl type, ionic radii in Born model 4=12555-6
isomorphism, statistical tests 4=23370
lamellary structure of ferromagnetic films, comments 4=23564
lattice pole distrib. in random grain array, statistical test 4=29153
layer symmetry and antisymmetry groups 4=23358
liquids, X-ray analysis, by distribution function 4=8168
magnetic, with close hexagonal packing symmetry of magnetic atoms 4=10238
and magnetic interactions and ordering, minerals 4=17617
magnetic materials, rel. to spin arrangements, book 4=7206
magnetic space symmetry, calc. 4=10237
martensite formation on Ni—C—Fe surfaces 4=15805
martensite, at low temps., grain size 4=13579
metals, effect of heat treatment below recrystallization temp. 4=20630
metals, f.c.c. rolling recrystallization, effect of deform. and annealing 4=29038
metals, grain size depend. of yield strength, orientation effect 4=13372
metals, grain size, effect of grain boundary and surface energies, review 4=13622
metals, rel. to surface-active coating 4=10353
mild steel, axial texture formation, during fatigue 4=23210
molecular coupled rotators, pair-correlation effects 4=30493
natrolite, motions of H₂O molecules 4=4565
Nichrome thin films, crystallites → fully crystalline structure on heating to 500°C 4=10030
pentaerythritol, symmetry 4=2008
Permalloy films, crystallite size rel. to contrasts of electron microscope image 4=30715
Permalloy—Mo, 79-4, and hysteresis squareness 4=13215
phase meas., by electron interferometer 4=2007
phase problem, Patterson funct. better sharpening, and MA-funct. 4=23369
polar—polar and polar—neutral 4=10493
polycrystal mixture, three-dimensional model 4=26683
polycrystalline mass, prob. of formation of lines of crystallites of each species 4=10406
polycrystalline mixtures, stochastic processes 4=28992
polyethylene, isothermally bulk-cryst., lamellar structure 4=7684
polyethylene, monolayer, fold surface geom. 4=4518
polyethylene spherulites, extinction band width 4=7683
polyethylene, unflattened monolayer, habit features 4=4517
polymer spherulites, lamellar twist 4=26581
polymers, super-molecular, control by crystallization embryo introduction 4=29152
polyolefins, orientation correl., random-walk theory 4=7682
porcelain 4=26699
Rochelle salt, domains 4=30652
sign determ., coincidence method, computational technique 4=4572
silicate glasses containing transition metal ions, sites of ions from absorpt. spectra 4=26535
silicon iron, critical substructure, effect on and change during creep 4=23170
snow, symmetry 4=4516
solution ferro, geometrical analysis 4=26575
space groups, rel. to dipole elec. and mag. structures 4=10492
spinel, 3-component, short-range order 4=15727
steel, austenitic, substructure, columnar and equiaxial grains 4=15807
steel, effect of ultrasonic heating to ~ 1000°C using internal friction 4=11398
steel, high-carbon, cold worked, meas. 4=15806
steel, texture and rolling conditions 4=20785
steel, white layers 4=13653
steels, internal strains, distrib. in grains and grain boundaries 4=26529
stiskovite, crystal habit rel. to crystallization temp. 4=26565

Crystal structure—contd

- surface decoration, secondary, mechanism 4=30824
surface, rel. to adsorption thermodynamics 4=7719
symmetry effect on physical properties, group theory application 4=30601
tricosanol, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
Ag, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
AgBr microcrystals, surface struct. 4=23313
Al, amplitudes rel. to electron diffr. intensities, and its appl. in structure analysis 4=10521
Al garnets, lattice energy, calc. 4=3955
Al grain boundaries, from bicrystal creep shear 4=20641
Al grain size, rel. to stress/strain discontinuities 4=23118
Al, mosaic structure, influence on creep 4=7405
Al powder, ground, recryst., X-ray meas. 4=10575
Al single crystals, lineage struct. 4=23521
Al, single, lamellar ribbon impurity struct. 4=23309
Al, substructure produced by impact 4=1967
Al, substructure, single crystals obtained by deformation and annealing 4=26590
Al wires, recrystallization and polygonization, from tensile testing 4=1925
Al—Ag alloy, Guinier—Preston zones, metastable precipitates 4=26691
Al—Ag(8%) solid soln., disintegration under heat treatment, focussing obs. 4=7678
Al—Cu alloys, conc. microheterogeneity in grains, various cooling rates 4=26690
Al—Cu alloy, Guinier—Preston zones, metastable precipitates 4=26691
Al—Cu alloy, rel. to strength 4=17721
Al—Zn eutectic alloy, interlamellar spacing meas. 4=4650
Au₂Cu, ordered structure 4=13485
BaTiO₃, domains 4=26694
Be evaporated layers, crystallite size 4=10449
BeO, microstructure effects on irradiation behaviour 4=6896
BeO, sintered, electron micr. meas. 4=13643
Bi 4=12882
Bi₂Te₃ 4=13530
C films, graphitization, meas. 4=23263
Ca_{0.16}Zr_{0.84}O_{1.84}, isothermal grain growth 4=13644
CdS evap. films 4=20803
CdS, hollow wurzite type, and growth 4=29047
Cd—Se, condensate, composition depend 4=23239
CdTe, from transmission, light 4=1508
CoCs₂Cl₂, two phases at low temps., from Zeeman effect 4=15585
Cu-base alloys, internally oxidized 4=7616
Cu electrodeposits, partial (110) pole figures rel. to thickness 4=7669
Cu, fibrous textures, elastic props. 4=17707
Cu, grain size, block dims., microstresses, rel. to yield stress, hardness, plasticity 4=23138
Cu, large-angle grain boundaries due to deformation 4=10378
Cu, polycrystalline, subgrain formation on plastic deformation 4=30867
Cu powder, ground, recryst., X-ray meas. 4=10575
Cu, reduced from scale, microstructure 4=23526
Cu strips, cold-rolled, recrystallization, effect of P 4=10576
Cu, surface structure after sliding of Cu stylus 4=15706
Cu texture transform., var. with rolling temp. 4=7481
Cu, thermally etched in vac., surface structure 4=17780
CuAl₂ = Al eutectic alloy, interlamellar spacing meas. 4=4650
Cu—Al solid solns., ordering kinetics, theory 4=7484
Cu₃Au, local ordering at low temps. 4=26548
Cu—2% Be alloys, ageing, structural changes 4=7482
Cu—Ni—Al alloy, martensite transformation, parent and product structures 4=17755
Cu—12 vol % alloy, particle coarsening 4=30868
Cu₂XY₃, (X = Ge or Sn; Y = S, Se or Te), superstructure and ordering 4=2066
Fe, effect of ultrasonic heating to ~ 1000°C using internal friction 4=11398
Fe filaments, surfaces 4=10457
Fe, films, columnar structure 4=26696
Fe, grain size, rel. to stress/strain diagrams 4=20661

Crystal structure—contd

- Fe single crystal plate, mosaic structure 4=26695
 Fe, slip, intercryst., on weak plastic deform. and annealing 4=13432
 Fe, substructure network 4=2109
 Fe, white layers 4=13653
 Fe-Be alloys, ordering and segregation 4=4498
 Fe-C-Mo alloy, precipitate, structure 4=17761
 (Fe, Mn)₃C, (cementite) 4=15734
 Fe₄N 4=15734
 Fe-(30.9%) Ni alloy, martensite structure 4=17830
 Fe-Ni-Al, columnar, directional crystallization 4=23344
 FeO (wüstite), superstructure 4=2078
 FeS growth spirals 4=26601
 Fe-Si(3%), cold rolled, texture similarity to Fe 4=7673
 Fe-Si(3%), (001)[100] primary source 4=7672
 Fe-Si(3.5%) slip, intercryst., on weak plastic deform. and annealing 4=13432
 GaAs and GaP lamellae 4=26580
 GaAs oriented, vapour-deposited films 4=13681
 Ge, epitaxial films, by electron transmission 4=4152
 HgTe, from transmission, light 4=1508
 Ho-Al compounds, HoAl₃, HoAl 4=23240
 InSb, dendrites, peculiar 4=2037
 InSb films, crystallite size 4=23581
 Li ferrite, neutron irradi., effect on structure 4=13242
 Mg-Zr alloy, grain growth rel. to creep strength 4=28965
 Mg-Zr homogenized alloy, Zr hydride formation 4=30872
 MgO, neutron irradi., macroscopic growth 4=12833
 MgO, of various origins, X-ray and electron micr. study 4=10583
 MgO, X-ray line broadening evaluations 4=10584
 Mn ferrite, neutron irradi., effect on structure 4=13242
 Mn(HCOO)₂·2H₂O, two types of site for Mn²⁺, rel. to mag. props. 4=17671
 Mn-Mg alloy, grain size, effect on tensile and compressive creep deformation 4=30781
 Mn-Mg ferrite, rectangular, grain size, rel. to switching 4=28843
 Mo, cold rolling and recrystallization 4=2110
 NaCl, disloc. distrib. near subgrain bdy 4=17429
 Nb, filed 4=23194
 Nb, polycrystalline, grain size 4=23192
 Ni electrodeposits, microstructure, effect of annealing 4=30870
 Ni, films, columnar structure 4=26696
 Ni, "ghost" grain boundaries, use as markers 4=7675
 Ni, grain, growth with boundaries saturated with Ni-S liquid 4=10564
 Ni powder, ground, recryst., X-ray meas. 4=10575
 Ni, slip, intercryst., on weak plastic deform. and annealing 4=13432
 Ni, undercooled, crystallographic substructure 4=13652
 Ni-Ag alloy, undercooled, crystallographic substructure 4=13652
 Ni-Cr films, vacuum-deposited on glass, composition 4=20809
 Ni-Cr(13%) slip, intercryst., on weak plastic deform. and annealing 4=13432
 Ni-Fe (50/50), ordering, neutron effects 4=13207
 NiO single crystals, twin walls meas. 4=20783
 NiO-Al₂O₃ system, from thermal expansion 4=23242
 NiO- α -Fe₂O₃ mixtures, spinel formation investig. by differential thermal analysis 4=1971
 Pb films, 4°K, localized crystalline growth 4=4669
 Pb, grain and twin boundary hardening, solute-induced 4=2014
 Pb-Cd eutectic alloy, interlamellar spacing meas. 4=4650
 PbSe films 4=10062
 Pb-Sn eutectic alloy, interlamellar spacing meas. 4=4650
 PbSnS₃, anti-phase domains 4=30563
 RBe_{1.7} (R = rare earth metal) 4=23421
 Sb poly- and mono-crystalline films 4=10609
 SbBr₃ (Menshutkin) complexes, pyramids, rel. to nuc. quad. resonance 4=26456
 Sb-Se, condensate, composition depend 4=23239
 Si, 90° twins 4=30811
 Si oxide films on Si surface 4=7564
 Si, review 4=28413
 Si, X-ray investig. of perfection 4=4056
 SiC, polytypes, rel. to dislocations 4=2009

Crystal structure—contd

- Si(3.25%)-Fe, cubic texture, surface energy effects 4=10582
 Si-Fe, grain size, effect of grain boundary and surface energies, review 4=13622
 Si-Fe, rolled and annealed, microstructure study by electron transmission microscopy 4=23171
 Ta films, microstructure and electrical props. 4=20812
 Ti oxide film on metal surface, meas. 4=15808
 TiC-WC-Co alloys, effect on compressive strength 4=15720
 α -U, single crystal extended to fracture 4=23222
 U, α -phase, recryst. after cold-rolling and annealing 4=10410
 U, recrystallization, secondary and after critical strain 4=2116
 U-Cr alloys, grain size and microstructure 4=30871
 UO₂, effect of neutron irradi. 4=22653
 UO₂, heat-treated, impurity phases 4=7679
 UO₂, high density, grain boundaries, thermal etching evidence 4=26700
 UO₂, over-sintered, grain-boundary precipitates in W ribbon, and emissivity 4=11324
 WC-Co alloys, effect on compressive strength 4=15720
 WC, rel. to high press. and temp. 4=22592
 Zn, impurity substructure 4=2095
 Zn, size effects and microstructure changes, due to thermal cycling and external stress 4=13657
 ZnO nuclei, structure 4=4555
 ZnS, polar props. rel. to photovoltaic effect 4=22807
 ZnS: Cu, Mn, Cd films 4=20813
 Zn-Se, condensate composition depend. 4=23239

 Pd₃Mn₂, ξ - and μ -phases 4=23033
 Pu—Al(5%) dilation at 100°K not in 8% Al 4=26668
 Pu—C, ≤ 50 at % C, temp. var., 500-1500°C, and phase diagram 4=7508
 Pu₃Co 4=4620
 Pu—Eu mixed oxide system, and phase transformations 4=7605
 Pu₂Si₂ 4=26669
 ReAl₁₂ 4=7627
 Ru—As or Sb—S, Se or Te 4=26056
 Sc—Sb 4=2072
 Sc—Y system 4=5443
 Sc—Zr system 4=5443
 Si ternary Laves phase, reduced atomic radius 4=7645
 Si—Fe alloy, rel. to magnetostriction curves 4=20551
 Sn—Cd lattice spacing composition, lack of anomalies 4=7646
 Sn—In (≤ 5 at %), linear composition var. 4=23493
 Sn—In, lattice spacing composition, lack of anomalies 4=7646
 SrZn₂, unit cell and symmetry group 4=13602
 Ta—Rh [Ir, Pd, Pt], intermediate phases, structure 4=23280
 Ta—Rh, rel. to constitution diagram 4=15744
 TcAl₁₂ 4=7627
 ThAl₂—ThMu₂ system, relation bet. AlB₂ struct. and Laves phases 4=17820

SUBJECT INDEX

Crystal structure, atomic—contd

alloys—contd

- Th—Ce, low-temp. lattice parameters 4=15796
 Ti₃Au, V₃Au, V₃Pt change from Cr₃Si to Cu₃Au struct. by O, N or C impurities 4=13606
 Ti—Ni system 4=23295
 U—Eu mixed oxide system, and phase transformations 4=7604
 U—Mo—Nb, up to 30 at. % Mo, 40 at. % Nb 4=13610
 U—Nb(0.3–17.3 at. %), metastable phases, quenching rate effects 4=13609
 V binary and ternary alloys 4=13612
 V₃Au, V₃Pt, Ti₃Au change from Cr₃Si to Cu₃Au struct. by O, N or C impurities 4=13606
 VMn, ordered structure of CsCl type 4=13613
 W—Be 4=17811
 YBi 4=2094
 Ysb 4=2094
 Zr(V₂CO_{1-x})₂, C14 Laves phase, Co, V distrib. 4=7651

inorganic compounds

- alkali halides, h.p. polymorphs, lattice energies and parameters 4=15786
 alkali halides, impurity ions, lattice distortion theory 4=4040
 alkali halides, lattice distortion round impurity ions 4=26446
 alkali hexafluorophosphates, dynamic, n.m.r. study 4=2067
 alkaline earth oxide cathodes, rel. to emission 4=10524
 austenite, at low temps. 4=13579
 b.c.c. hydrides, crystallog. requirements and configurational entropy 4=22447
 bafertisite BaFe₂TiO(Si₂O₇)(OH)₂ 4=7607
 calcite, rel. to structure amplitudes 4=23427-8
 calcite, by X-ray methods 4=23427-8
 calcium selenate hydrate, isotype of gypsum 4=13585
 carbon disulphide, polymer chain formation rel. to Raman spectra 4=30691
 chlorides of divalent metals, anhydrous 4=4616
 corundum whiskers, real, by electron micr. 4=26646
 curite, (3PbO.8UO₃.5H₂O), by Patterson and Fourier synthesis 4=7615
 danburite, from Bi¹¹ n.q.r. coupling 4=20628
 epistilbite, mordenite chain modification 4=23440
 films, AB₂ form, X-ray meas. 4=2065
 hambergite, Be₃BO₃.OH, redeterm. and birefringence calc. 4=4598
 ice, O atom separation elongation on isotopic exchange, rel. to temp. 4=10536
 intermetallic cpds. of transition elements, interatomic distances, calc. as atomic radii sum 4=23488
 intermetallic cpds, single-map technique 4=23377
 jachimovite, CuH₂(UO₃.SiO₂)₃.5H₂O 4=7614
 kosolite, PbO. UO₃. SiO₂. H₂O 4=7622
 lanthanide—Ni cpds. 4=28776
 lattice constituents in compound crystals, symbols and definitions 4=10494
 lithium ferrite-aluminate, cation distrib. 4=15651
 lithium ferrite-gallate, cation distrib. 4=15651
 M²⁺ borates 4=15787
 martensite, at low temps. 4=13579
 minerals, by n.m.r. 4=10522
 mordanite (Ptilolite) 4=26674
 Nickel hydride, neutron scattering meas. 4=29124
 orpiment, rel. to As⁷⁶ nuc. quadrupole res. 4=23079
 patronite 4=26677
 perovskite ferroelectric solid solutions, atomic displacements 4=10239
 perovskite (BaSr_{0.4}Nb_{0.6}O₃) type 4=4619
 perovskite-like new compounds 4=29140
 perovskite of type A₂BTeO₆, crystal lattice struct. 4=26665
 perxenate ion 4=4629
 phenaksite, X-ray goniometric study 4=30852
 phosphomolybdic acids, var. H₂O, from n.m.r. 4=23461
 quartz 4=10546
 quartz, i.r. spectrum rel. to coordination 4=1744
 α-quartz, effects of neutron irradi. 4=1542
 rare-earth beryllides 4=13601
 rare earth chromites 4=2088
 rare-earth chromates 4=29135
 rare earth—Co cpds., cubic Laves phase 4=7285
 rare-earth cpds with Sb or Bi 4=15791

Crystal structure, atomic—contd
inorganic compounds—contd

- rare-earth—Cu [Zn] alloys, crystal structure 4=10559
 rare-earth niobates and tantalates, defect fluorite- and weberite-type structures 4=20763
 rare earth_{0.5}Na_{0.5}MoO₄ 4=13544
 rare earth—Ni compounds, rel. to mag. props., down to 1.4°K 4=30854
 rare earth rhodites 4=23467
 rare earth sulphides, selenides and tellurides 4=4625
 ruby, Cr conc. and texture inhomogeneity 4=23534
 semiconducting A^{III}B^V, electron density, and paramagnetism calc. 4=7215
 semiconducting compounds, rel. to general valence rule 4=7601
 sodium cobalt molybdate 4=10547
 solid solutions, rel. to composition curves 4=10490
 tourmaline, dipole axis, electron meas. 4=17821
 transition metal oxides 4=7603
 transition metal silicides, ternary G and E, and germanides 4=7602
 26 cpds 4=28774
 whiskers from ferrous chloride 4=13551
 zirconyl perchlorate dihydrate 4=4632
 A^{III}B^V cpds., solubility of components rel. to lattice parameter 4=28993
 AgAsS₂, Patterson synthesis 4=15792
 AgCl, lattice const., effect of strong u.v. illumination 4=4622
 AgCl, X-ray determ. 4=20765
 AgFeO₂ 4=15793
 AgFeTe₂ 4=10071
 β—AgI, weight factor for refl. analysis 4=10447
 Ag_{0.5}La_{0.5}Fe₂O₁₉ 4=1844
 Ag₂O, new modification with layered structure 4=10551
 AgSbS₂, miargyrite 4=23474
 Ag₃SbS₃ 4=26152
 Ag₂Se 4=1622
 AgI, hexagonal 4=17817
 Ag₂Te 4=1622
 AlB₁₀ 4=2069
 Al₂Ca₃(SiO₄)₃, neutron diffn. analysis 4=29092
 Al₂O₃, derived from Al hydroxides 4=30844
 Al₂O₃.3CaO.6H₂O, H atom position by n.m.r. 4=29093
 Al₂O₃.3CaO.6H₂O, position of H atoms 4=4594
 AlMo 4=23417
 Al—Mo, lattice parameters rel. to Mo content 4=15722
 AlNbO₄, lattice constants and 42 X-ray powder lines 4=13580
 AlO₂, α, cell constants, rel. to n-irrad. 4=28620
 AlPO₄ 4=10523
 AlTO₃, (T = Y, Eu, Gd, Tb, Dy, Ho, Er), hexagonal structure 4=2068
 Al—V, lattice parameters rel. to V content 4=15722
 Al—W, lattice parameters rel. to W content 4=15722
 As chalcogenides 4=2135
 10 As₂O₅.90 Nb₂O₅, tetragonal phase 4=26666
 10 As₂O₅.90 Ta₂O₅, tetragonal phase 4=26666
 Au—In—Cu, h.c.p. ζ-phase, lattice spacings rel. to electron conc. 4=7618
 Au₃Mn tetragonal and orthorhombic phases 4=13590
 AuSn 4=7619
 BeO, double Bragg scattering, rel. to neutron-irrad. 4=29097
 BF₃.2H₂O 4=23423
 i-B₁₈H₂₂, by X-ray diffraction 4=4602
 B₂₀H₁₆ meas. 4=13583
 Ba borates 4=15787
 BaBr₂ 4=7608
 Ba(Ca_{0.33}Ta_{0.67})O₃ 4=4597
 BaCl₂ 4=7608
 BaCl₂.2H₂O, neutron diffn., meas. and calc. 4=29147
 BaI₂ 4=7608
 BaNiO₂, neutron diffn. analysis 4=29102
 Ba(OH)₂.8H₂O and Ba ion coordination 4=2071
 Ba—Pu oxide systems 4=7606
 BaSnO₃, γ-reson. absorption study, 78–1020°K 4=1350
 (Ba_{0.4}Sr_{0.2}Ca_{0.4})TiO₃ 4=10549
 BaTiO₃ grains, anomalous props. 4=23536
 BaTiO₃, lattice parameters, electron optical study 4=29096

Crystal structure, atomic—contd**inorganic compounds—contd**

- BaZn Fe garnet, new hexagonal series 4=13581
 BeO 4=10525
 BeO, and neutron diffusion, temp. var., review 4=19533
 BiFeO₃, and ferroelec. and mag. props, temp. var., Neel point 4=22774
 BiOCl, by electron diffr., and applicability of Blackman's calc. 4=4600
 Bi₂Se₂ and Bi₂Se₃, X-ray meas. 4=7609
 Bi₂Te₃, unit cell angle, rel. to transport props. 4=30846
 CS₂, from i. r. spectra and powder diffraction 4=10202
 Ca ferrite containing Gd³⁺ 4=26359
 Ca phosphate, octa and hydroxyapatite, and growth 4=17807
 Ca [B(OH)₄]₂·2H₂O 4=30848
 CaCO₃, effect of neutron irradi. 4=26564
 CaCO₃, high-press. phases 4=30799
 CaF₂—YF₃ crystal line solns. 4=6831
 Ca₃Fe₂ (Fe_{1.5}V_{1.5})O₁₂ 4=4376
 CaI₂, crystallization, X-ray meas. 4=2065
 CaMg[B₃O₆(OH)₃]₂·3H₂O, horacite 4=23429
 CaMoO₄—rare earth niobate systems, rel. to composition 4=26644
 CaO—Al₂O₃—Fe₂O₃, different phases 4=26643
 CaPd₃O₄, poss. space groups 4=26645
 CaPt[Pd](CN)₄·5H₂O 4=29101
 Ca_{1+x+y/2}Sb₂O₆(O'_x+F_y), X-ray study 4=4603
 Ca₂SiO₄, β-phase 4=23431
 CaSnO₃, γ-reson. absorption study, 78–1020° K 4=1350
 Ca₂Ta₂O₂₂, from powder diffr. 4=2074
 CaTiO₃, effect of neutron irradi. 4=26564
 CaWO₄, neutron diffraction refinement 4=10533
 CaWO₄, X-ray diffraction refinement 4=10532
 CaZr(PO₃)₂, from X-ray diffr., powder 4=2073
 Ca₃SiO₅, different phases, room temp. to 1100°C 4=29100
 CaWO₄, neutron diffr. analysis 4=29102
 CdBr₂, crystallization, X-ray meas. 4=2065
 CdCl₂, crystallization, X-ray meas. 4=2065
 CdI₂, neutron diffr. meas., anomalies 4=29098
 CdI, polytype 28 Hc 4=13584
 Cd₄(P,As)₂(Cl,Br,I)₃, five ternary semiconductors 4=1594
 CdS films, vacuum-deposited 4=20805
 CdS films, vapour-deposited, hexagonal, cubic phase prod. 4=29099
 CdS, high pressure phase 4=10433
 CdS, up to 90 k bars 4=4502
 CdS, structure changes under pressure 4=15779
 CdSb and ZnSb, similarity of structure 4=4142
 Cd_{1+x+y/2}Sb₂O₆(O'_x+F_y), X-ray study 4=4603
 CdSe, high pressure phase 4=10433
 CdSe, structure changes under pressure 4=15779
 Cd₂SiO₄ spinel 4=30797
 CdTe 4=1622
 CdTe—CdSe system, cubic and hexag. structures 4=23424
 CdTe, high pressure phase 4=10433
 CdTe layers sublimated onto alkali halide crystals, 4=10531
 CdTe—PbTe System 4=23262
 Ce₂Mg₃(NO₃)₁₂·24H₂O 4=7611
 CsCl, modifications I and II 4=23257
 α-Co, deposited in presence of I ions 4=29106
 CoCl₂·2H₂O refinement, bond lengths 4=7612
 Co₂(CO)₈ 4=23436
 CoF₂, temp. var., and thermal expansion 4=9863
 CoFe garnet, magnetostriuctive displacement of O ions 4=13246
 CoFe₂O₄ ferrite films 4=23586
 CoO, structure and temperature factors 4=10534
 CoPt, crystal struct., neutron diffr. meas., comp. with X-ray diffr. 4=28804
 CoSO₄, β, by n diffr., and mag. structure, 4.2°K 4=1852
 CoTiO₃ 4=13586
 CrBO₃, calcite structure, X-ray evidence 4=29105
 CrCl₃, by X-ray diffraction and n.q.r. 4=17808
 Cr F 4=23433
 CrH, "hexagonal Cr", by neutron diffr. 4=2076
 CsCdCl₃ 4=23425
 Cs₂CdCl₄ 4=23425
 Cs₃CoCl₅, least-squares refinement 4=23426

Crystal structure, atomic—contd**inorganic compounds—contd**

- Cs₂Co(SO₄)₂·6H₂O 4=23435
 CuCl₄²⁻ 4=28682
 Cu₂FeS₄, two polymorphic forms 4=23438
 Cu—Ge—Au, h. c. p. ζ-phase, lattice spacings rel. to electron conc. 4=7618
 Cu₂Mn₃₋₄O₈, tetragonal distortion rel. to composition 4=15555
 Cu(NH₄)₂Cl₂·2H₂O, meas. by e. s. r. 4=10319
 Cu₃PO₄(OH)₃, cornetite, Monte Carlo method 4=30847
 Cu₂S, tetragonal 4=15788
 Cu₂Sb₂S₄ 4=10513
 CuSO₄, neutron diffr. analysis 4=29102
 Cu—Te films 4=30880
 DyAl₃ 4=23442
 Dy₃Al₂ 4=23442
 Dy₂Ge₃ 4=23442
 Dy₂O₃, neutron diffraction determ. 4=10535
 EuCO₃, by powder diffr. method 4=26647
 EuSO₄, by powder diffr. method 4=26647
 F spinel ferrites, charge compensated 4=13229
 Fe chromium boride 4=26651
 Fe, and volume, effect of press. 4=29136
 Fe₂Cd_{1-x}Cr₂S₄ 4=29115
 Fe₃C, C atom position, by neutron diffraction 4=10537
 Fe₃C, lattice size, and ferromag. and Curie temp. 4=26322
 Fe(CO)₅ 4=23447
 FeCr₂S₄, space gp., structure, mag. prop. meas. 4=29116
 Fe—Cu solid solns., metastable 4=22988
 Fe_{0.4}Ga_{0.1}BO₃ 4=2092
 FeGe 4=7621
 Fe₂MoC 4=17809
 Fe₂MoC 4=26652
 β—FeNaO₂, X-ray and neutron diffraction studies 4=1853
 Fe₃O₄ ferrite films 4=23586
 Fe₂Se₈, crystal struct. neutron diffr. meas. 4=28816
 FeSiO₄, neutron diffr. analysis 4=29102
 FeSO₄·7H₂O 4=29117
 Fe—V(0.92 wt. %), α, γ phases, temp. var. 4=26653
 Fe—Y—La garnet 4=26679
 GaAs doped with Se, Te, Zn and Cd 4=26045
 GaSb 4=4606
 Ga—Te system 4=23444
 Ga₂Te₃, superlattice ordered vacancies 4=20759
 Gd₂Al₃ 4=23442
 GdCoO₃ 4=26649
 Gd₂Ge₃ 4=23442
 Gd garnet, effect of substitution of Fe by Sc 4=7650
 Gd₂Mn₁₀ 4=23443
 GdNi, rel. to mag. props. 4=30854
 GdRu₂ 4=4605
 Ge_{0.2}Cu_{1.2}Fe_{1.8}O₄, 2 phases, 430° and 510°C, Mössbauer study 4=7620
 GeO₂, quartz form 4=23445
 10 Ge₂O₅·90 Nb₂O₅, tetragonal phase 4=26666
 10 Ge₂O₅·90 Ta₂O₅, tetragonal phase 4=26666
 GeZnBaO₄ 4=23473
 HBO₂, -130°C 4=13582
 HCrO₂, DCrO₂, by neutron diffraction 4=7613
 HF 4=7137
 HfCr₂ 4=30850
 HfSn 4=26650
 HgI₂(TlI)₄, from X-ray diffr. powder 4=2082
 HgS, high pressure phase 4=10433
 HgSO₄·H₂O, refinement, and H bonding 4=26658
 HgSe, high pressure phase 4=10433
 HgTe, high pressure phase 4=10433
 Hg₂TeO₆ 4=4613
 HgTl₄Br₈ 4=23458
 HoAl₂ 4=23240
 HoD₃, neutron diffr. comparison with X-ray diffr. 4=29112
 H₂S, solid, rel. to phases 4=20706
 InSb 4=4606
 InSb, lattice const. changes rel. to pressure, review 4=12895
 InSb, InSbSn, InSbSn₂, InSbSn₃, metallic forms. 4=29114
 InTe, metallic form 4=29114
 InTe (II), metallic 4=10428
 InTe (II), metallic 4=10429

Crystal structure, atomic—contd
inorganic compounds—contd

- InTe—PbTe system 4=23262
 KBr, lattice parameter, rel. to Pb impurity content 4=6895
 KC(CN)₃ 4=20761
 KCl:Co, coord. of Co from spectrum, absorpt. 4=26186
 K₂Co(SO₄)₂·6H₂O 4=23435
 K₂Cr₂O₇, electron-diffraction study 4=30853
 K₄Fe(CN)₆·3H₂O 4=20622
 K₄Fe(CN)₆·3H₂O, by n.m.r. and X-rays 4=20622
 KF·4H₂O 4=29130
 KHF₂, neutron diffraction data refinement, FHF geometry 4=10545
 KHCO₃, neutron diffn. study of H₂-atom posn. 4=29132
 KHSO₄ 4=23464
 (KHSiO₃)₄ 4=7637
 K₂(HSiO₃)₄ 4=26670
 KI, Hg(CN)₂, erratum 4=7636
 (K_{0.8}La_{0.2}Bi_{0.4})NbO₆ 4=10549
 KMnCl₃, from e.p.r. compared with KMnF₃ 4=1881
 K₂MoO₃F₄·H₂O 4=7635
 K₂NbF₇, neutron diffn., meas. and calc. 4=29147
 K₂O·2Ta₂O₃ 4=23465
 K₂PtCl₄, lattice spacing by electron micr. 4=15784
 K₂ReH₉, H-atom arrangement in ReH₉²⁻ ion neutron—X-ray diffn. comp. 4=29133
 K₂SnBr₈, cubic phase 4=23463
 KTiNbO₅ 4=23466
 KTi₃NbO₈ 4=23466
 K₂VS₄ 4=20762
 K₂W₂O₁₁·4H₂O 4=29134
 KZnCl₂·2H₂O 4=2087
 K₂ZnO₂ 4=17818
 LaF₃ 4=22478
 LaFe_{1-x}Al_xO₃, changes rel. to mag. props. 4=30720
 La₂O₃, and thermal expansion, 20-1050°C 4=17372
 LaTe₂ 4=4240
 LiAl₅O₈, distortion, determ. from Li⁷ and Al²⁷ n. m. r. 4=17696
 LiBC₂ 4=23451
 LiCrO₄ powder, X-ray photos 4=29119
 Li₂CrV₂O₈, spinel type, Cr and Li distrib. 4=13593
 Li—Cu—Al system 4=23452
 LiCuCl₂·2H₂O 4=7301
 LiEuO₂ 4=4611
 LiF crystals, lattice expansion on neutron irradi. 4=10539
 LiGa₅O₈ 4=2080
 LiH₂PO₃, unit cell 4=7625
 Li hydrazinium sulphate, and ferroelec. 4=20420
 Li oxalate, rel. to C—C bond electron density 4=4595
 Li—Zn—Al system 4=23452
 Li₂ZnCl₄·2H₂O 4=13594
 Mg ferrite, nonstoichiometric, cation distrib., erratum 4=17810
 Mg, volume and lattice param., press. effect to 300 kbar 4=29120
 MgAl₂O₄, cation distrib., neutron diffn. analysis 4=29121
 MgF₂ thin layers 4=29122
 Mg_xMn_{3-x}O₄, tetragonal distortion rel. to composition 4=15555
 MgO microstructure, rel. to periclase formation, impurities effect 4=30869
 MgSO₃·3H₂O 4=13595
 MgSO₄·6H₂O 4=13596
 MnAs, above 40°C 4=10540
 Mn dioxides, γ 4=26657
 MnF₂, temp. var., and thermal expansion 4=9863
 Mn_xFe_{3-x}O₄, spinels, lattice consts. 4=10541
 Mn₂Ge₃, by neutron diffn. 4=4364
 Mn₃Li₂ZnO₈ 4=26656
 Mn₂Pd₃ ordered alloy 4=13598
 MnO, distortion, and antiferromagnetism 4=13271
 α-Mn₂O₃, neutron diffraction determ. 4=10535
 Mn₃O₄, change assoc. with ferrimag. transition search 4=2906
 MnSO₄·4H₂O, from proton mag. resonance study 4=23456
 Mn_{1+x}+₂/3Sb₂O₆(O_x+F_y), X-ray study 4=4603
 MoBr₃ 4=17812

Crystal structure, atomic—contd
inorganic compounds—contd

- MoO₂—MoO₃ system phases 4=7631
 MoO₃, lattice spacing by electron micr. 4=15784
 MoO₃, least-squares refinement of structure 4=4614
 Mo_nO_{3n-m+1} homologous series based on MoO₃ 4=7629
 Mo₂O₁₁, monoclinic and orthorhombic 4=4615
 Mo₂O₁₄, 2-dimensional disorder 4=7628
 Mo₂O₃, least-squares refinement of structure 4=7630
 Mo₁₈O₅₂ 4=7629
 MoSe₂ 4=7626
 Mo(Si_{0.8}Be_{0.2})₂ 4=10638
 8NaAlSi₃O₁₀·3H₂O 4=26674
 NaHF₂ and NaDF₂, FHF ion geometry 4=4623
 Na₂H₂P₂O₁₂, 2D disorder struct. 4=30855
 Nb₂Sn, lattice parameter meas. 80° to 1290°K 4=30524
 Nd₂O₃, and thermal expansion, 20-1050°C 4=17372
 NH₂—NH₂·BF₄, crystal struct. by Weissenberg camera 4=29113
 NH₄Br, modifications II and III, X-ray meas. 4=23419
 NH₄Br, H atom positions, electron diffraction determ. 4=30845
 (NH₄)₂Co(SO₄)₂·6H₂O 4=23435
 (NH₄)₂CrO₄ meas. 4=23420
 NH₄ oxamate, rel. to C—C bond electron density 4=4595
 (NH₄)₂Mn₂(SeO₄)₃, Fe K_α radiation study 4=30843
 (NH₄)₄P₄O₁₀ 4=23418
 (NH₄)₂SeO₄ meas. 4=23420
 (NO₂)₂·S₃O₁₀²⁻ 4=26663
 N₂O₄, unstable monoclinic form 4=4618
 Na(AlSi₃O₈)₂·H₂O 4=23477
 Na₂Al₂Si₂O₁₀·2H₂O, H atom positions 4=10552
 Na₂Al₂Si₂O₁₀·2H₂O, (natrolite) 4=13603
 NaB(OH)₄·2H₂O 4=7641

 Y chromates 4=29135
 YBe₃ and ABe₁₃ compounds 4=15797
 (Y₁₋₇₆Bi_{0.25})Fe_{5-x}Al_xO₁₃, effect of Bi³⁺ substitution 4=23023
 YCu₂ 4=4630
 YFe garnet, Sb³⁺ substituted for Fe³⁺ 4=26344
 Y garnet, effect of substitution of Fe by Sc 4=7650
 YMnO₃, rel. to magnetic props. 4=7294
 YbB₁₂ 4=7649
 Zn—Al system (40-75 wt% Zn) 4=23299
 ZnF₂, temp. var., and thermal expansion 4=9863
 ZnIn₂S₄ 4=28738
 Zn_{1-x}Mn_x·O₄, tetragonal distortion rel. to composition 4=15555

SUBJECT INDEX

Crystal structure, atomic — contd

inorganic compounds — contd

- $\text{Zn}_{1-x}\text{Mn}_x\text{O}_4$, tetragonal distortion rel. to composition 4=15555
 $\text{Zn}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, from X-ray data 4=30857
 $\text{Zn}_2\text{Mn}[\text{SiO}_4][\text{OH}]_2$ 4=13614
 ZnO , and semicond., dielec., optical props. 4=27725
 $7 \text{ ZnO} \cdot \text{Sb}_2\text{O}_3$, ratio Zn: Sb 4=4631
 $\text{Zn}_2(\text{OH})_4(\text{CO}_3)_2$ 4=26680
 $\text{Zn}_2\text{P}_2\text{O}_7$: Mn and $\text{Zn}_2\text{P}_2\text{O}_7$: Cu, space group rel. to temp. 4=26572
 ZnS : Cu, effects of quenching 4=15618
 ZnSb 4=29148
 ZnSb — CdSb films 4=12917
 ZnSe films 4=23352
 ZnSe — HgSe solid solutions, lattice parameter rel. to Zn concentration 4=15798
 ZnTe — HgTe solid solutions, lattice parameter rel. to Zn concentration 4=15798
 Zn tungstate 4=15477
 ZrC , and phase transform., ~2200°C, fruitless search 4=17775
 β - ZrH_2 , statistical model 4=20766
 ZrO_2 — La_2O_3 system, cond., elec., var. temp., freq., composition 4=25990

organic compounds

- anthracene, 95° and 290° K 4=23501
 anthracene, simultaneous X-ray diffraction 4=7652
 benzene diazonium salts, 11 substituted 4=23503
 benzene at -3°C, plane orientation, rel. to Raman spectra 4=30691
 cis-dizido-bis-ethylenediamine cobalt nitrate 4=13587
 cyanogen, dipole-dipole coupling 4=4280
 dicyandiamide, and H atom positions 4=23504
 L-cystine hydrobromide, β -synthesis methods 4=20767
 dibenzene chromium mol., symmetry assessments 4=22389
 3, 3'-diethylthiocarbocyanin chloride 4=10563
 diglycine nitrate 4=7653
 diphenyl, neutron inelastic scattering investigation, 20°C 4=5153
 factor V 1a (aquo cyanide of vitamin B₁₂ nucleus) 4=23505
 glycine silver nitrate, rel. to ferroelec. transit. 4=20423
 gramicidin S iodomercurate 4=30858
 guanine hydrochloride dihydrate, crystal structure 4=4633
 methane 4=22456
 methyl ammonium alum, low temp. phase, and ferroelectricity 4=13616
 9-methyladenine 4=20769
 monochloroacetic acid crystals, 3 polymorphous phases 4=13353
 ortho-dichlorobenzene, rel. to n. q. r. 4=13355
 peralkyl ammonium, phosphonium, and sulphonium hydrates 4=7656
 L-phenylalanine hydrochloride 4=10560
 phthalocyanine and metal derivs., electron diffraction problem 4=23508
 polyethylene, neutron inelastic scattering investigation, 20°C 4=5153
 polyhedral clathrate hydrates 4=7655
 polyhedral clathrate hydrates 4=7656
 polyethylene, stretching, electron microscope study, low-angle scatt. 4=23410
 potassium cobalt (II) acetylacetonate 4=13587
 pyrene-tetracyanoethylene complex 4=22909
 Rochelle salt, ferroelectric, ionizing radiations effects 4=7050
 starch-iodine complex, model, $(\text{HI}_3 \cdot 2\text{C}_6\text{H}_5\text{CONH}_2)$ 4=13619
 symmetries det. using X-ray intensity statistics 4=2048
 tetra-n-butyl ammonium fluoride hydrate 4=7655
 tetramethylammonium perchlorate 4=26682
 toluidine, para 4=13618
 trimethylamine oxide 4=10561
 tri-n-butyl sulphonium fluoride hydrate, monoclinic form 4=23502
 tri-n-butyl sulphonium fluoride, monoclinic, water "cage" 4=13620
 tris(trimethylene)benzene, $\text{C}_{15}\text{H}_{18}$ 4=10562
 $\text{C Cl}_3\text{CH}(\text{OH})_2$, neutron diffn., meas. and calc. 4=29147
 C_8F_{12} 4=29151
 $\text{C}_2\text{H}_5\text{NH}_2\text{B}_6\text{H}_{11}\text{NHC}_2\text{H}_5$ 4=2096
 $\text{C}_{12}\text{H}_{22}\text{O}_{11}$, neutron diffn., meas. and calc. 4=29147
 α - $\text{C}_{10}\text{H}_7\text{HgI}$ 4=23507

Crystal structure, atomic — contd
organic compounds — contd

- Co pyridine thiocyanate 4=13587
 $\text{Cs}_2(\text{UO}_2)_2\text{OCl}_2$ 4=7610
 $\text{Cu}_2\text{Cl}_4(\text{CH}_3\text{CN})_2$ 4=13615
 $\text{Cu}_2\text{Cl}_6(\text{CH}_3\text{CN})_2$ 4=13615
 $\text{Cu}_5\text{Cl}_{10}(\text{C}_2\text{H}_5\text{OH})_2$ 4=13615
 Cu phthalocyanine 4=26332
 Eu benzoylacetate chelate, eightfold dodecahedral arrangement of O round Eu ion 4=29150
 Eu dibenzoylmethide chelate, eightfold dodecahedral arrangement of O round Eu ion 4=29150
 Hg methylmercaptide, X-ray analysis 4=20768
 $\text{Hg}(\text{II})$ complexes 4=30861
 $\text{HgCl}_2\text{C}_4\text{H}_8\text{S}$ 4=30859
 $[\text{HgCl}_2(\text{C}_6\text{H}_5)_2\text{AsO}]_2$ 4=30860
 $2\text{HgCl}_2 \cdot (\text{C}_2\text{H}_5)_2\text{S}$ 4=13617
 K acid phthalate, cleavage plane grating spacing 4=4583
 K squarate monohydrate, a charge-transfer self-complex 4=23509
 $\text{Li}(\text{N}_2\text{H}_5)\text{SO}_4$ 4=23453-4
 $\text{Mg}(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$ 4=23506
 $\text{MgSO}_4 \cdot 4\text{H}_2\text{O}$ 4=23455
 $\text{Mn}(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$ 4=23506
 $(\text{NH}_4)_2\text{C}_5\text{O}_5$ 4=29149
 Ni β -alanine dihydrate 4=7654

Crystallization

 diffusionless, conditions 4=364
 fog, supercooled, by various substances 4=7836
 glass, mica, synthetic, kinetic studies 4=13535
 ice frazil, disk-like, heat emission coefficient 4=11407
 ice, texture developed during freezing 4=4548
 interface shapes in nonadiabatic steady-state process 4=10489
 kinetics, effects of ultrasound 4=10463
 kinetics in u. s. field 4=7538
 metals, effect of grain boundary and surface energies on recrystallization, review 4=13622
 metals, in u. s. field, role of insoluble impurities 4=26603
 Nichrome, recryst. nuclei formation obs. 4=13474
 polycrystalline mass, prob. of occurrence of continuous crystallite lines 4=10406
 polyethylene, effect on lamellar thickness, melting pt, density 4=15809
 polyethylene single crystals, morphology changes 4=7525
 polyethylene oxide copolymers, isothermal meas. 4=7562
 polyoxymethylene, spherulitic with chain folds, rate 4=23620
 pulsed discharge effects 4=15756
 rate as combination of matter and heat transport 4=26584
 recrystallization, twin formation, book 4=7528
 salol, mechanism 4=26605
 seed formation on isomorphous nuclei, calc. 4=7539
 silica, vitreous, effect of H_2O and O_2 atmospheres 4=23348
 spherulitic, fractionation and impurity segregation, kinetic and morphological effects 4=15753-4
 steel, 3%Si, and dislocations 4=2114
 stiskovite, crystallization temp. rel. to crystal habit 4=26565
 supersaturation, impurities, and crystal form 4=13514
 whiskers 4=17791
 AgBr , effect on habit of solution conditions 4=10479
 Al , recryst. nuclei formation obs. 4=13474
 Al single crystals, recrystallization 4=23325
 Al , in u. s. field, role of insoluble impurities 4=26603
 Al wires, and polygonization, from tensile testing 4=1925
 Al -1.2% Mn, recrystallization 4=7473
 Al -Be boride from Al melts 4=26592
 Al -Si alloy, modification study on solidification 4=23329
 Au single crystals, surface effect on recryst. 4=29055
 BaTiO_3 , microcrystalline, from glass 4=20725
 Be boride, B-rich 4=26592

Crystallization—contd

- Bi, in u.s. field, role of insoluble impurities 4=26603
 Cu strips, cold-rolled, recrystallization, effect of P 4=10576
 CuSO₄, acceleration by u.s. waves 4=15759
 Fe, N interstitial effect on recrystallization 4=22565
 Fe—Co alloys, recrystallization 4=1993
 Fe—Co, recrystallization rel. to ordering processes 4=26598
 Fe—Ni—Al, directional, columnar structure 4=23344
 Ge crystallized from Ge—In—Sb liq. alloy, impurity content 4=12737
 Ge, irradi. by neutrons and Xe⁺ ions, displacement spike recrystn. 4=17461
 Ge, recrystallization evidence after rolling at 700°-800°C 4=23153
 InSb—Te, liquid periodic temp. changes cause Te inclusions 4=23342
 KCl, initial, theory 4=26607
 Mg alloy, polycrystalline, {1012} twin bands, recrystallization within 4=23307
 NaCl, crystalloluminescence 4=7197
 NaCl, supersaturation, impurities, and crystal form 4=13514
 Na paratungstate, from aqueous solns., dilatometry application 4=26609
 Na₃PO₄, acceleration by u.s. waves 4=15759
 Nb films from vapour 4=2031
 Ni, recrystallization kinetics, use of "ghost" grain boundaries as markers 4=7675
 PbMoO₄ (wulfenite), under hydrothermal conditions 4=26602
 PbS deposition on doped Si crystal, giving impurity centre distrib. on Si surface 4=17794
 Pb—Sb(2.45 wt. %), and superconductive critical field var. with aging 4=5520
 Si—Fe, effect of grain boundary and surface energies on recrystallization, review 4=13622
 Si—Fe, hot-worked, recrystallization 4=23343
 Si—Fe, secondary recrystallization, effect of atmosphere 4=4649
 Sn, in u.s. field, role of insoluble impurities 4=26603
 SnO₂ (cassiterite), under hydrothermal conditions 4=15766
 W alloys, recrystallization temp. 4=23220
 Zn, re-, polygonization, from stress-strain relations 4=7519
 Zn, in u.s. field, role of insoluble impurities 4=26603
 Zn₂SiO₄, liquids and glasses, phases 4=23353

 hematite, triaxial anisotropy in basal plane 4=13191
 isomorphism, statistical tests 4=23370
 isomorphous replacement and anomalous dispersion data, Fourier synthesis feeding 4=23365
 layer symmetry and antisymmetry groups 4=23358
 least squares refinement assuming mol. rigidity 4=26619
 matter tensor construction 4=7522
 models, magnetic, self-crystallizing 4=4513
 molecular location, optimum interval for minimum residual method 4=26623
 molecular structure calc. with known orient. in lattice 4=13559
 net planes, electron micr. interference fringe contrast 4=2061
 noncubic unit cells, least squares calc., reflection weighing 4=10447
 Patterson functions study by image algebra 4=23363
 phase angles determined by anomalous dispersion method, intensity error effect 4=2005
 phase-determining techniques, direct instrumentation 4=23364
 phase problem, Patterson funct. better sharpening, and MA-funct. 4=23369
 phase symmetry, in reciprocal lattice 4=26617
 phases symmetry in reciprocal lattice 4=29073
 polycrystalline aggregates, simulated symmetries, u.s. study 4=29026
 Pb₂V₂O₇ 4=2075
 refinement rate of coordinates in minimum residual method 4=26622
 regular tetrahedron, Fourier transform. 4=29074
 semidirect products and point groups 4=10446
 shift product meth. and Sayre relation for additional structure factors 4=23367
 Shubnikov antisymm. groups for infinite double-sided ribbons 4=4515
 sign determ., statistical method 4=23366
 space group, abstract defin. and represent. 4=4567
 space group reduction to subgroups under strain 4=4514
 sphere packing with discrete radius distrib., statistics 4=71
 structure ampl. of two related crystals, probab. distrib. 4=4571
 structure factor coupling matrices 4=30828
 surface, 80 diaperiodic groups in three-dim., tabulation 4=15812
 surface, terminology 4=15813
 symmetry and antisymmetry groups 4=10448
 symmetry and antisymmetry groups of layers 4=2004
 symmetry groups, cubic and ultimate 4=23359
 symmetry of physical space represented in Fourier space 4=2044
 temperature corr. effect on reliability coeff. 4=17797
 wave-optical diffraction theory for perfect and distorted single crystals 4=23362
 Cd single crystals, shaping and polishing 4=30812
 NH₄Cl, crystal habit change caused by NiCl₂ 4=29027

Crystals

- e.m. wave scatt. by electron-phonon system 4=4247
- effective mass approximation 4=25872
- effective mass det. from reflection Faraday effect 4=1305
- electron correlations in narrow energy bands 4=6812
- electron correlations in narrow energy bands, degenerate band case 4=9895
- electron distributions in high elec. fields 4=28340
- electron gas, cond. tensor in uniform mag. field 4=17405
- electron gas, including particle-hole exchange scatt. in singlet and triplet states 4=27094
- electron gas, degenerate, ground-state energy and stability 4=12710
- electron-lattice interaction, M-centre data 4=12812
- electron motion, in presence of point defects, functional anal. 4=1421
- electron passage through 2 potl. barriers, reson. tunnelling 4=4033
- electron-phonon interaction, adiabatic theories 4=25876
- electron-phonon interaction, ultrasonic amplification conditions, review 4=3988
- electron-phonon interactions, statistical theory of non-equilibrium processes 4=6766
- electron-phonon system, interacting, thermodynamic potential 4=22524
- electron-phonon system, in mag. field, transport processes, phonon drag 4=28397
- electron-phonon system, relax. time, freq. depend., rel. to phonon lifetime 4=12676
- electron-phonon system, temp. effect 4=9893

Crystals—contd**electron states**—contd

- electron-phonon systems in mag. field, quantum theory 4=6767
- electrons, phonons, plasmas, theory 4=9803
- energy band minima, subsidiary, associated with impurity states 4=15449
- energy band and projection operators, analytic and asympt. props. 4=25891
- energy bands and Wannier functions, n-dim., analytic props. 4=25892
- energy exchange processes 4=9879
- energy spectrum, in mag. field 4=17398
- exchange interaction bet. mag. ions and cond. electron 4=22522
- excitation energy, migration, in one-dimensional molecular random lattices 4=22523
- exciton systems, magnetic, model 4=9914
- excitons, interactions with molecular vibrations 4=9915
- f. c. c. lattice, d-band structure, effect of spin-orbit coupling 4=28412
- F-centre, excited state, separation from cond. band 4=12808
- Fermi integrals evaluation 4=27106
- Fermi statistics of two-dimens. free-electron systems 4=29564
- Fermi surface for interacting system, symmetry 4=9909
- Fermi surfaces, rel. to ultrasonic polarization rotation 4=12629
- ferrocene, hole drift mobility, meas. by photoconductivity method 4=26154
- ferromagnetic, electron scattering from spin imperfections, and Hall effect 4=6917
- ferromagnetic metals, spin of conduction electrons, polarization 4=15443
- ferromagnetic transition metals, carriers, itinerant electrons 4=13130
- ferromagnetism band theory, spin waves 4=13131
- ferromagnetism possibilities in band model 4=13134
- ferroelectric, polarization reversal 4=10108
- films, discrete electron energy spectrum, effects 4=1428
- first Brillouin zone, Bloch electrons, analytic behaviour 4=15452
- fluctuations, electron and hole, nonthermal equil. 4=9887
- fractional parentage coeffs. for cubic configs. 4=1339
- γ -ray scatt., Rayleigh, classical model 4=20166
- glasses, energy transfer from triplet state, review 4=17391
- graphite, Fermi surface, from Shubnikov-de Haas effect 4=15519
- graphite, magnetoreflexion, oscillatory mag. field dependence on optical reflectivity 4=22540
- graphite, planar, overlap functions 4=15451
- graphite, spectrum, pressure deformation up to 10 000 atm. 4=1562
- Hall mobility rel. to temp., calc. from scatt. by optical phonons and ionized impurities 4=30536
- helicon-phonon interaction 4=12706-8
- helicon wave absorption, quantum oscillations 4=9926
- helicons, boundary-value problems, microscopic theory 4=28427
- high pressure and electronic structure, review 4=12667
- hot electron cyclotron resonance 4=6814
- "hot" electron motion, Monte Carlo calcs 4=25879
- hot electrons, spectral shape and attenuation length in presence of finite absorption 4=25880
- ice, energy bands of H_3O^+ , rel. to mobility 4=12699
- impurities, carrier scattering 4=6775
- impurity scatt. transport coeffs. calc. 4=25874
- insulating state, many-particle electron localization 4=9897
- insulators, current injection, volume-controlled 4=27097
- inter-band optical transitions in low-mobility semiconductors 4=28396
- interaction with single lattice oscillator, Lee-Low-Pines method 4=4025
- interface of one-dim. crystals, localized levels 4=22541
- interstitial ion trap 4=25895
- ionic crystals, energy levels of trapped electrons, calc. 4=1423
- ions 4=12572
- ions in S-state, g-factor 4=25825
- kinetic eqns. in phonon fields, quantum theory 4=4012
- Kohn effect, indirect observ. in many metals 4=28402

Crystals—contd**electron states**—contd

- Kronig-Penney crystal with random atomic positions 4=22520
- LCAO calc., inversion of cyclic matrices 4=25870
- lattice electrons in external homog. mag. field, theory 4=25877
- lattice models, three-dim., solvable 4=4015
- localized states, for lattice with 2 kinds of atoms 4=17399
- luminescent, photoconductive, calc. 4=12980
- magnetic breakdown, simple model 4=25878
- magnetic spin coupling in NiAs type compounds 4=4326
- metal films, Tamm surface transition, and optical absorpt., anomalous 4=7094
- magnetic translation group, irreducible represent. 4=20232
- metal films, transition radiation theory 4=6772
- metal, localized d states, impurity pair, many-body theory 4=20240
- metal-semiconductor interface, Fermi level position 4=17403
- metallic plates, Fermi surface, by magnetoacoust. effects 4=20210
- metals, characteristic energy losses, magnitude 4=12713
- metals, conduction electron exchange, effect on ferromag. spin ordering 4=17631
- metals, conduction, point defect scatt., pseudopotential method 4=6771
- metals, coupled orbits, two dimensional, theory and appl. 4=28299
- metals, cyclotron reson., Fermi-liquid effects calc. 4=17412
- metals, electron energy change rel. to defects 4=12689
- metals, electron-lattice vibration interaction 4=12607
- metals, electron-phonon, and electron-electron interaction 4=9803
- metals, electron-phonon interaction 4=12678
- metals, electron-phonon interaction and cyclotron resonance 4=4011
- metals, electron-phonon interaction, in mag. field 4=9894
- metals, electron theory, extension 4=4026
- metals, Fermi surface, from magnetoacoustic osc., giant quantum 4=12631
- metals, Fermi surface, rel. to field emission 4=24722
- metals, free-electron, surface potential, correl. effect 4=12701
- metals, free, X-ray scatt. meas. 4=13588
- metals, from n. m. r., review 4=12669
- metals, helicons, dispersion eqn. and phonon interaction 4=12705
- metals, monovalent, by n. m. r. techniques 4=13333
- metals, normal, electron momentum distrib. theory 4=12675
- metals, nuclear spin relax., quasiparticle picture failure 4=7341
- metals, phonon interactions, quasiparticle transport theory 4=17389
- metals, quasi-particle excitation, in mag. field 4=4034
- metals, scatt. by lattice oscill., from neutron scatt. data 4=28352
- metals, semiclassical "orbits" breakdown, quantum calc. 4=12684
- metals, soft X-ray emission, double electron transition contribution 4=12687
- metals, wave-function calc., modified plane wave method 4=12688
- metals, with intersecting bands, nonthreshold internal photoeffect 4=6915
- minority carrier lifetime, fast meas. method through conductivity modulation 4=28392
- mobility, weak and strong scatt., perturb. theory 4=1422
- molec. crystals, tight-binding wave functions, in elec. fld. 4=9876
- molecular crystals, radiationless transition probabilities 4=12686
- molecular, one-dimensional model, excitation migration, effect of impurity 4=25909
- momentum eigenfunctions 4=12665
- naphthalene, excess electron and hole band structures 4=1430
- naphthalene, exciton absorption linewidth 4=9916

SUBJECT INDEX

Crystals—contd

electron states—contd

- Bi₂Te₃, Brillouin zone structure rel. to Laue patterns 4=6797
 Bi₂Te₃, transport props. from unit cell angle 4=30846
 C, and mag. anisotropy, theory 4=10241
 Cd, Fermi surface 4=6793
 Ca, Fermi surface, by de Haas—van Alphen effect 4=15455
 Cd, Fermi surface, pressure depend. 4=4023
 Cd films, conduction and interband transition and u. v. absorpt. 4=10164
 Cd, m. f. p. max. at 3°K from magnetoacoustic effects 4=6730
 CdGeAs₂, energy band gap and effective electron mass 4=1593
 Cd_xHg_{1-x}Te, forbidden energy gap from optical absorpt. meas. 4=13027
 CdIn₂Te₂, forbidden band width meas. 4=7121
 CdIn₂Te₂, n-type, forbidden band width 4=6949
 Cd₃N₂(T₁⁷) type, carrier energy bands 4=6786
 CdS, effective masses, heavy and light 4=20257
 CdS, electron trapping parameters from conductivity glow curves 4=22532
 CdS, energy terms linear in wave vector, optical effects 4=26181
 CdS, energy transport, exciton emission data 4=13068
 CdS, from cyclotron reson., < 4.2°K 4=28431
 CdS, Hall mobility of photoelectrons 4=17528
 CdS, local-level parameters from i. r. impurity photoconductivity 4=1678
 CdS, minority carrier motion rel. to elec. pot. distrib. 4=26037
 CdS single crystals, surface states, photoconductivity investigation 4=28421
 CdS, trapping levels, from thermally stimulated conductivity curves 4=1595
 CdS with Nd³⁺ impurity, ground-state splitting 4=7333
 CdSb, density of states and effective mass 4=20356
 CdSb, interminumum carrier scatt. 4=25887
 CdSe exciton bands, complex structure 4=9912
 CdTe, cond. band. min. 4=17400
 CdTe, double acceptor centre, props. 4=17420
 CdTe, effective mass and single-valley behaviour 4=28432
 Ce, f electrons, and thermal expansion, low temp. anomalies 4=15433
 Ce, struct. from positron annihilation 4=17413
 CeCl₃.7H₂O, Ce³⁺ ion, from paramag. relax. 4=26380
 Ce magnesium nitrate, energy diff. between 1st excited and ground states, calorimetric determ. 4=12641
 CeS, forbidden band width 4=6952
 Ce₂S₃, forbidden band width 4=6952
 Ce₂S₃, γ-phase, interaction with polar lattice 4=13028
 Ce₃S₄, forbidden band width 4=6952
 Co complex oxides, valence states, X-ray data 4=6691
 Cr, rel. to K_γ, line 4=1427
 Cr₂O₃, kinetics of Nb₂O₅, V₂O₅ donor addition 4=30535
 Cs halides, cond. band structure 4=6787
 Cs, thermal effective mass, from atomic heat 4=25852
 Cu, band struct. calc. by modified augmented plane wave method 4=17401
 Cu, band struct., from photoelectric emission 4=20242
 Cu, cyclotron resonance, electron masses meas. 4=9933
 Cu, d-band density of states 4=12692
 Cu, Fermi surface and electron distrib. nearly-free electron approx. 4=9903
 Cu, Fermi surface neck diameters meas. 4=10033
 Cu, Fermi surface necks, by dHvA effect 4=17622
 Cu, positron flux from Cu⁶⁴, spectral distrib. 4=28435
 Cu phthalocyanine, number of surface carriers 4=10137
 α-Cu phthalocyanine, surface states, acceptor-like 4=28422
 Cu—Ge—Au, h. c. p. γ-phase, axial ratio rel. to electronic structure 4=7618
 γ—Cu—Zn, alloys, Fermi surface 4=3992
 Dy⁺³ in cubic potentials and exchange field, calc. 4=6696
 Er³⁺ in cubic potentials and exchange field, calc. 4=6696
 Er³⁺ in CaF₂ matrix, oscillator strengths, transition schemes 4=20454
 Fe, electron density, X-ray data 4=13591
 Fe, electron—photon showers 4=25884
 Fe group ions in tetrahedral coordination 4=25903

Crystals—contd

electron states—contd

- Fe, magnetized, positron annihilation 4=22555
 FeCO₃ ground state wave function by Mössbauer effect 4=28410
 FeF₂ ground state wave function by Mössbauer effect 4=28410
 FeTiO₃ ground state wave function by Mössbauer effect 4=28410
 Ga, cond. electrons causing optical absorption, number 4=7134
 GaAs, band structure calc. 4=25899
 GaAs, effective ion charge, from piezoelectricity 4=1670
 GaAs, n and p-type, surface meas. 4=12893
 GaAs, optical transitions involving impurities 4=6776
 GaAs, Ge-doped, deep acceptor level 4=10175
 Ga(As_{1-x}P_x), conduction band minima separation 4=9901
 GaP, band structure from optical data at high press. 4=20243
 GaP, gap, from photoconductivity, temp. var. 4=28644
 GaP, radiative recomb. of trapped carriers 4=10215
 GaP, zone structure 4=25900
 GaSb, p-type, valence band structure 4=12892
 GaSb—Ga₂X₃ alloys, (X = Se, Te), optical energy gap rel. to comp. 4=28997
 Gd, cond. electron polarization, from γ—γ correl. of Lu³⁺ impurities 4=4009
 Gd, exchange strictions 4=28409
 Gd, struct. from positron annihilation 4=17413
 Ge, acceptor states, binding energy and eigenfunctions 4=28706
 Ge, acceptor states, shallow, wave-functions and energies 4=25901
 Ge, anisotropic scattering, on ionized impurities and acoustic phonons 4=1424
 Ge, around Fe⁵⁷, from Mossbauer effect n and p type diff. 4=15404
 Ge, avalanche breakdown, relative electron loss to optical and acoustic modes 4=28560
 Ge, carrier radiative capture by impurity atoms 4=30540
 Ge, carriers, hot, and nonlinear deviations from thermal equilib. for high impulse currents 4=6941
 Ge, direct transitions at saddle point between cond. and valence bands 4=22860
 Ge, on donor centre, interact. with phonon 4=17393
 Ge—electrolyte interface, fast and slow surface states 4=7762
 Ge, electronic band structure, theory and expt., review 4=12895
 Ge, energy bands, detailed calc. pseudopotential method 4=20247
 Ge, energy levels, produced by fast-neutron bombardment 4=1433
 Ge films, acceptor conc. reduction by cleanliness improvement 4=6965
 Ge, free carriers in n-type, study by Voigt effect 4=155
 Ge, Group V impurities, ground-state splittings, optical meas. 4=28337
 Ge, heavily doped, transitions rel. to energy depend. of absorpt. spectrum 4=26198
 Ge, highly-doped, rel. to i. r. absorpt. 4=26191
 Ge, indirect interband tunnelling, temp. depend. 4=7019
 Ge, intervalley scattering by donor ions 4=28400
 Ge, investigation using cyclotron resonance and saturation 4=28430
 Ge, l. f. scatt. relax. time, heat treatment effect 4=7155
 Ge, line shapes of collective excitations 4=28437
 Ge, n-type, carrier recomb. theory at dislocations 4=28395
 Ge, n-type, conductivity effective mass 4=17390
 Ge, n-type, hole lifetime, temp. var., trapping effects after γ irradi. 4=6781
 Ge, n-type, hot carrier recomb. in high elec. fields 4=22713
 Ge, n-type, iso-energy surfaces from Hall effect 4=303
 Ge, p-type, nonparabolic bands with variable warping 4=1431
 Ge plasma, growing helical density waves 4=17406
 Ge, plastically deformed, minority carrier trapping centres 4=12673
 Ge, population inversion states with impurities 4=12677

Crystals—contd

electron states—contd

- Ge, recomb. radiation in mag. field and i. r. light 4=6782
 Ge, rel. to cyclotron reson. line broadening 4=20256
 Ge rod, plasma resonance absorpt. 4=25915
 Ge, shallow donor states, relativistic corrections 4=9898
 Ge, shallow donors, e. s. r. meas. 4=13318
 Ge, surface recomb. velocity, clean and oxidized 4=6969
 Ge, surface recombination, air/vacuum cycling at high temps. 4=6974
 Ge, surface states, effect of water 4=4149
 Ge, surface states, slow, meas. by d.c. field effect tunnelling 4=20360
 Ge, surfaces treated with HF-H₂O, 4=9910
 Ge, transmitted phonon drag at v. low temp. 4=20238
 Ge, X-ray meas. and mag. props. calc. 4=7216
 Ge and Si, n-type, ionized-impurity scatt. 4=6780
 Ge: Au, compensated Au level at 2 eV, optical ionization 4=1684
 Ge, C₆-doped, carrier recomb., Auger effect mass-action const. 4=9890
 Ge, Sb-doped, 0.09 eV level obs. 4=28508
 HfC—TiC, ZrC, NbC, TaC solid solns., 4=25902
 HgTe, electron effective mass 4=13048
 HgTe, L₆ splitting from refl. meas. 4=10180
 HgTe, mobilities and effective masses, from semicond. props. 4=7087
 HgTe semicond. film, gap, mobility and conc. 4=23580
 Ho³⁺ in cubic potentials and exchange field calc. 4=6695
 I₂, space group orbital treatment 4=17335
 I₂, transient space-charge-limited currents along various crystallographic directions 4=25883
 In, d-band transitions assigned to far u.v. absorpt. edges 4=15446
 In, Fermi surface, second zone, magnetoacoustic meas., 270 Mc/s 4=15456
 In, m.f.p. of electrons, temp. var., supercond. and normal 4=21415
 In alloys, from mag. props. 4=28767
 In_xAs_{1-x}, forbidden energy gap width rel. to comp. 4=4017
 InAs semicond. film, gap, mobility and conc. 4=23580
 InSb, carrier conc., energy gap and electron mobilities, in n- and p-type 4=26048
 InSb, cond. band, nonparabolic model, in n-type 4=1700
 InSb, cond. electron density at nuclei, meas. 4=22535
 InSb, electronic band structure, theory and expt., review 4=12895
 InSb, minority carrier lifetime and diffusion coeff. meas., 130°K 4=30537
 InSb, mobility, after n, γ irradi. at 78°K, recovery on heating 4=6976
 InSb, transport phenomena at low temps., effect of high elec. fields 4=30538
 InSb, n-type, effective mass by magnetoplasma refl. 4=26401
 InSb, n-type, impurity mols. in high mag. fields, rel. to cond. band 4=9902
 InSb, p-type, cyclotron resonance data 4=6815
 InSb, pinch effect 4=17394
 InSb, plasma density waves in n-type, in transverse mag. fields 4=6809
 InSb semicond. film, gap, mobility and conc. 4=23580
 In₂Se, forbidden band width meas. 4=7558
 In—Sn alloys, Brillouin zone effects, superconductivity, and Fermi surface, rel. to composition 4=6798
 K, Fermi surface, cyclotron resonance data 4=6816
 K, new collective electron state and coherent pairing of the second kind explanations 4=26210-11
 K, optical effective mass 4=12666
 KCl, coloured, electron traps 4=20431
 KCl, quenched, trap distrib. changes 4=17606
 KCl—KF mixed crystal, FCl⁺ hole centre meas. 4=6887
 Kr, solid, band structure, orbital calc. 4=4018
 LaAlO₃: Cr, Nd, level transfer Cr³⁺3d → Nd³⁺4f 4=30539
 LaB₆, from reflectivity spectrum 4=7139
 LaCoO₃, magnetic and electrical anomalies 4=28616
 Li, Compton scatt. of X-rays, momentum distrib. 4=6773
 Li, Fermi level, electron density, e. s. r., n.m.r., calc. 4=28874

Crystals—contd

electron states—contd

- Li, thermal effective mass, from atomic heat 4=25852
 LiCl, M-centres, Heitler—London calc. 4=12813
 LiF, M-centres, Heitler—London calc. 4=12813
 LiF, self-trapped hole, energy and wave functions 4=17453
 LiF, V₊ centre, ENDOR study 4=26452
 LiH, positronium, energetic likelihood 4=20260
 Li—Mg alloy, nearly free-electron, positron data 4=12719
 Li₃Sb, forbidden zone width and bond ionic character 4=1589
 Mg, electron bombarded, plasma radiation detection 4=17407
 Mg, Fermi surface, exptl. study 4=6796
 Mg, Fermi surface, galvanomag. study 4=6795
 Mg, plasma oscill., volume and surface, excitation by electron beam 4=28428
 Mg, quantum defect model for compress. calc. 4=28966
 Mg₂Ge, band structure calc. using pseudopotentials 4=28411
 Mg₂Ge, interminimum carrier scatt. 4=25887
 Mg₂Si, band structure calc. using pseudopotentials 4=28411
 Mg₂Sn, band structure and effective masses 4=10179
 Mg₂(Sn)_x(Pb)_{1-x}, surface states in semimetal region 4=28411
 MgZn₂, Fermi surface, from de Haas—van Alphen effect 4=1799
 Mn complex oxides, valence states, X-ray data 4=6691
 MnP, energy diagram calc., and mag. props. 4=12683
 Mo, band struct., from magnetoacoustic effect, 1 Gc/s, 4.2°K 4=15423
 Mo, Fermi surface calc. 4=25906
 Mo, Fermi surface, magnetoresist. data 4=17476
 Mo—Nb alloy with 1% Fe, virtual bound states near Fermi level 4=28530
 Mo—Re alloy with 1% Fe, virtual bound states near Fermi level 4=28530
 NH₄Cl, electron-deficiency centres, e. s. r. meas. 4=10006
 Na, conduction electrons, spin—lattice relax. time 4=20600
 Na, Fermi surface, cyclotron resonance data 4=6816
 Na, Fermi surface rad., from cyclotron reson. with helicon waves 4=22554
 Na, Kohn effect, indirect observ. 4=28402
 Na, optical effective mass and interband transitions 4=1750
 NaCl, orthogonalized wave functions, calc. 4=6789
 NaCl, transition rel. to β-band 4=9883
 NaCl-type deviating from heteropolarity, statistical calc. 4=12558
 NaCl, wave function and energy for excess band electron 4=1429
 NaSb, forbidden zone width and bond ionic character 4=1589
 Na₃Sb, forbidden zone width and bond ionic character 4=1589
 Nb films, superconducting, energy gaps 4=14530
 Nb, plasma and relax. freq., 1-15 μ 4=26209
 Nb, supercond., energy gap, ultrasonic determ. 4=14526
 Nb₂O₅, non-stoichiometric, band gap, from spectrum, reflectance 4=10197
 α-Nb₂O₅, electronic mobility, temp. var. at high temps. 4=26403
 Ni, band theory, ferromag. 4=12682
 Ni, d-band structure, effect of spin—orbit coupling 4=28412
 Ni, Fermi surface, exchange splittings, one-electron band model 4=9908
 Ni, Fermi surface, from de Haas—van Alphen effect 4=9907
 Ni Fermi surface, from magnetoelec., high field 4=12694
 Ni ferromag. alloys, spin—orbit effect on transport processes 4=22679
 Ni, ferromag. band structure, Fermi surface, Green's fn. calc. 4=28417
 Ni, ferromag., Fermi surface analysis 4=9905
 Ni, metal—insulator—metal, electronic level shifts due to high press. changes 4=6923
 Ni²⁺ electronic energy levels in α-NiSO₄·6H₂O 4=12648
 Ni—Pd alloys, band structure from heat capacity meas. 4=15428

SUBJECT INDEX

Crystals — contd

electron states — contd

- Pb, d-band transitions assigned to far u.v. absorpt. edges 4=15446
- Pb, Fermi surface, cyclotron resonance meas. 4=6793
- Pb, Fermi surface, second zone, magnetoacoustic meas., 270 Mc/s 4=15456
- Pb₂, transitions from split valence band to conduction band and exciton levels 4=26202
- Pb-In alloys, Fermi surface wavefunctions 4=4428
- PbS, band edge structure, nearly-free electron model 4=25905
- PbS, band structure, magneto-optical meas. 4=25904
- PbS surface, slow states produced by H₂O vapour 4=25885
- PbSe, band edge structure, nearly-free electron model 4=25905
- PbSe, current carrier bands, structure 4=1615
- PbTe, band edge structure, nearly-free electron model 4=25905
- PbTe, band structure, relativistic effects 4=12693
- PbTe, effective masses, temp. dependence 4=25886
- PbTe, electron mobility at liq. He temp., theory 4=4041
- PbTe, interminimum carrier scatt. 4=25887
- PbTe, mobility of carriers rel. to concn. 4=6783
- PbTe, p-type, majority carriers, large g factors, from Knight shift 4=4429
- Fd, d-band structure, effect of spin-orbit coupling 4=28412
- Pd, Fermi surface of "fluted cylinder space pattern" type 4=26012
- Pt, d-band structure, effect of spin-orbit coupling 4=28412
- PuC, band structure 4=28416
- Rb, thermal effective mass, from atomic heat 4=25852
- Re, Fermi surface, by de Haas-van Alphen effect 4=12696
- Re, Fermi surface, galvanomag. meas. at 4.2°K 4=4123
- S, energy gap 4=28415
- S, monocrystalline, shallow traps, nature 4=25889
- S, orthorhombic, charge transport, 180°-370°K 4=30541
- Sb, ellipsoidal carriers, by de Haas-Shubnikov effect 4=6945
- Sb, Fermi surface, from magnetoresistance oscs., 1.2°K 4=4138
- Sb, Fermi surface, by Shubnikov-de Haas effect 4=9904
- Sb, reciprocal effective mass parameters 4=25846
- sbl₃, band gap, from conductivity, electrical, temp. var. 4=1624
- Sb₂S₃, band structure, group theory calc. 4=1434
- Sb₂S₃, energy gap and valence band 4=1590
- SbTeI band gap, from conductivity, electrical, temp. var. 4=1624
- ScN, from n.m.r. of Sc⁴⁵ 4=23076
- Se, band structure in hexagonal crystals, exptl. 4=4019
- Se, effective mass, from refl. Faraday effect 4=13055
- Si, acceptor levels after γ -irrad. 4=6788
- Si, acceptor states, binding energy and eigenfunctions 4=28706
- Si, acceptor states, collective strain splitting 4=20239
- Si acceptors, spin-lattice relax. calc. 4=12617
- Si, anisotropic scattering, on ionized impurities and acoustic phonons 4=1424
- Si, around Fe⁵⁷, from Mossbauer effect n and p type diff. 4=15404
- Si, band gap, temp. var., as for Au-Si surface barrier height 4=15550
- Si, carrier radiative capture by impurity atoms 4=30540
- Si, compensated, single injection meas. at low temps. 4=20377
- Si, cond., density at nucleus, from Overhauser effect and spin relax. 4=20244
- Si, cond. and valence levels, general strain effects 4=4020
- Si, on donor centre, interact, with phonon 4=17393
- Si, effect of Ni impurities 4=4173
- Si, electronic band structure, theory and exptl., review 4=12895
- Si, energy band structure, band gap, carrier mobility and recombination, review 4=28413
- Si, energy bands, detailed calc. pseudopotential method 4=20247
- Si fast surface states, rel. to heating 4=10066
- Si, Hall mobility and μ_n/μ_p , temp. depend. 4=15542

Crystals — contd

electron states — contd

- Si, heavily doped, plasma oscillations in n-type 4=22550
- Si, heavily doped, transitions rel. to energy depend. of absorpt. spectrum 4=26198
- Si, impure, electron-phonon interact. 4=4276
- Si, incoherent small-angle X-ray scatt. 4=17581
- Si, ionization rates of holes and electrons, meas. 4=17395
- Si, l.f. scatt. relax. time, heat treatment effect 4=7155
- Si, minority carrier lifetime, radiation effects 4=28513
- Si, minority carrier lifetime, thermal variation 4=12909
- Si, n-type, heavily doped, band structure and mobility 4=12912
- Si, n-type, ionized impurity scatt. anisotropy 4=26058
- Si, net acceptor levels in forbidden gap 4=4101
- Si p-n juncn., deep trap levels 4=28591
- Si, p-type, space-charge-lim. hole injection and trap effects 4=6988
- Si, population inversion states with impurities 4=12672
- Si, proton damaged n and p-types 4=15458
- Si, quantum defect model for compress. calc. 4=28966
- Si, quantum efficiency meas. in vac. u.v. 4=12992
- Si, radiation field interaction with lattice vibr. at critical points of Brillouin zone 4=22895
- Si, radiative electron capture by Ga and In impurity atoms 4=4169
- Si, recomb. surface levels, heating effect 4=12702
- Si, shallow donor states, relativistic corrections 4=9898
- Si, small slices, lifetime meas., appl. of Siemen's method 4=28568
- Si, surface states 4=1620
- Si transistor, minority carrier recomb. increase on stress application 4=28603
- Si, X-ray meas. and mag. props. calc. 4=7216
- SiC, cubic, cond. band minima, rel. to interband absorption 4=10218
- SiC, 15R, interband absorption rel. to optical props. 4=7157
- Sn, Brillouin zone effect on elec. cond. and thermo-elec. 4=26015
- Sn, d-band transitions assigned to far u.v. absorpt. edges 4=15446
- Sn, Fermi surface 4=25907
- Sn, Fermi surface and mean free path 4=6916
- Sn, grey, band structure and effective masses calc. 4=6791
- Sn, grey, electron effective mass 4=20379
- Sn, grey, hole effective mass 4=22898
- Sn, grey, X-ray meas. and mag. props. calc. 4=7216
- α -Sn, band-structure model 4=6790
- SrTiO₃, bands calc. 4=28414
- Ta films, superconducting, energy gap 4=14530
- Ta, supercond., energy gap meas. 4=14531
- Tb³⁺ in cubic potentials and exchange field calc. 4=6695
- Te 4=12680
- Te, band structure in hexagonal crystals, exptl. 4=4019
- TeI, band gap, from conductivity, electrical, temp. var. 4=1624
- ThC, band structure 4=28416
- Ti, two-quantum annihilation, effect of adsorbed H 4=28433
- TiC_xN_{1-x}, carrier density from Hall effect 4=17479
- TiO molecule, low-lying, molecular orbital calc. 4=9729
- TiO, electronic mobility, temp. var. at high temps. 4=28403
- TiO₂, interminimum carrier scatt. 4=25887
- TiO₂, non-stoichiometric, bandgap, from spectrum, reflectance 4=10197
- Ti_{1-x}V_xC, carrier density, from Hall effect 4=17479
- Tm³⁺ in cubic potentials and exchange field calc. 4=6695
- U⁴⁺ in octahedral coord. complexes, 5f² levels 4=22900
- UC, band structure 4=28416
- V films, superconducting, energy gap 4=14530
- V₃ Ga, band struct. model, peak density at Fermi surface 4=20245
- VN, from n.m.r. of V⁵¹ 4=23076
- VO₂, semiconducting, energy gap rel. to press. 4=28576
- V₂O₃, energy gap 4=25993
- V₂O₃, non-stoichiometric, bandgap, from spectrum, reflectance 4=10197
- V₂O₅ type, carriers, energy spectrum extremum 4=6784

Crystals — contd**electron states — contd**

- V₃Si, band struct. model, peak density at Fermi surface 4=20245
 V³⁺ salts, hydrated, mol. orbital theory of ligand field 4=20520
 W, energy level densities, rel. to work function 4=21555
 W, Fermi surface 4=4022
 W, Fermi surface, by magnetoacoustic meas. 4=9906
 W, Fermi surface, magnetoresist. data 4=17476
 Y, band struct. and ang. correl. of annihilation radiation 4=15466
 YFe garnet, exchange interactions 4=28849
 Yb, struct. from positron annihilation 4=17413
 Yb³⁺ in cubic potentials and exchange field, calc. 4=6696
 Zn, carrier density and mean free path 4=12865
 Zn, Fermi surface, galvanomag. data 4=28539
 Zn, Fermi surface, pressure depend. 4=4023
 Zn, quantum defect model for compress. calc. 4=28966
 ZnO, Cu²⁺ substit. impurity, wave functions 4=4042
 7 ZnO.Sb₂O₃, rel. to ratio Zn:Sb 4=4631
 ZnSb, interminimum carrier scatt. 4=25887
 ZnSb, p-type, energy band structure 4=12919
 Zr, Fermi surface, cellular approx. 4=28418
 Zr—O crystal, cohesive energy, Ligand field treatment 4=9807
 Zr—O crystals, energy band structure, theoretical investigation 4=15459

etching

- diamond faces, microtopography, natural and artificial 4=2015
 diamonds, and growth history, natural 4=2027
 drilling, deformation free 4=4557
 effects of ultrasound 4=10463
 f. c. c. metal surfaces, observation of grooved nature by polarized light, nature of etching solns. 4=30813
 ferromagnetic, and orientation 4=7526
 garnet ferrites, hydrothermal method 4=2017
 glass, effect on fracture strength 4=4465
 glass surfaces, growth spirals 4=26614
 graphite, and cleaving and decorating, to make vacancies visible 4=20267
 graphite, etch pits, origin 4=22599
 hot HCl, microetch figure orientation, electron microscope exam. 4=30865
 ice, chemical, stress effects 4=23317
 ice, etch channels prod. by nonbasal glide 4=4061
 ice, by evaporation, -15°C 4=23316
 ice, plastically deformed, prism planes 4=20720
 ice, pure and NaCl doped, thermal etching 4=10461
 quartz, magnetic field and X-rays, no effects 4=29037
 regular pattern formation, silk-screen transfer process 4=13520
 Rochelle salt, X-irrad., etch pits on faces 4=2018
 ruby laser crystal, rel. to dislocation struct. 4=22589
 steels, substructure, contradictory data 4=29036
 topaz, cleavages 4=23315
 tri-hydrogen lithium selenite single crystals, etch pit effects 4=12750
 II—VI and III—V compounds 4=10460
 using ion beam, high-voltage 4=29998
 Zircaloy-2, rel. to ht. treatment effect 4=26534
 Ag, thermal etching in oxygen 4=5471
 AgCl, etch pit formation, rel. to face orientation 4=9966
 BaTiO₃, 4% HNO₃, 2% HF, slip mode in plastic deformed region 4=30565
 BeO, etch pit formation, correl. to internal crystal structure 4=10525
 BeO, sintered, microstructure, electron micr. meas. 4=13643
 CaWO₄, obs. of dislocations 4=6838
 Cd, dislocation structure investig. 4=9970
 Cd, spirals on single crystals 4=29044
 CdS, new etchants to detect dislocations 4=1496
 CdS, optical study of defect struct. 4=30559
 CdSe, optical study of defect struct. 4=30559
 Cu, thermal, in vac. 4=17780
 Cu₂O, dislocation obs. 4=22598
 Cu₂O, thermal, in vacuo, 800°–1000° C 4=1494
 Cu—Si alloy, abnormal thermal etching 4=26583
 Fe, substructure network 4=2109

Crystals—contd**etching—contd**

- GaAs, dislocations in (111) and (111) planes, etching 4=1497
 GaAs, for lasers, Zn diffused junction 4=8988
 GaAs, light-figures method 4=2011
 Ge, by GeI₄ vapour mixtures, meas. 4=15750
 Ge, in HF, HNO₃, H₂O and HC₂H₃O₂ solns. 4=15751
 HgSe, dislocation obs. 4=13543
 Li trihydrogen selenite, dislocation obs. 4=9969
 MgO, dislocation obs., compared with X-ray exam. 4=4051
 MgO, impurity precipitates on {100} surfaces 4=22569
 Mo, dislocation line etch-figure study 4=25947
 Mo, dislocation lines and networks 4=1493
 Mo, and dislocation movement 4=22600
 NaCl, dislocation sites 4=2020
 NaCl, dissolution spirals 4=2019
 NaCl, plastically deformed, etch spiral patterns 4=12767
 Nb, polycrystalline, dislocation etch pits 4=23192
 PbTe, etch pits before and after annealing 4=6783
 Pu, rel. to micrographic examination 4=29165
 Sb, by H, rel. to microstruct. 4=26693
 Si, doped at high local concs., dislocation etch 4=28574
 Si, effect on surface recombination, photoconductive meas. 4=4174
 SiC, rel. to dislocation electron microscope studies 4=4062
 UC, technique for etch pits 4=7535
 UO₂, thermal, revealing grain boundaries 4=26700
 W faces, activity and oxygen method of colour etching 4=2018
 W, zone-refined, etch figures, electron microscope obs. 4=9967
 Zn, dislocation obs., formed in growth or deform. 4=9968
 Zn, ion bombard., dislocation study 4=1477
 Zn: Cd, dislocation arrays and substructures obs. 4=6852
 Zr—Al alloys rel. to sorption properties 4=21200
- excitons**
 A¹¹B^{v1}, Bose—Einstein condensation, obs. possibility 4=6803
 absorption region, rel. to e. m. wave propag. 4=10148
 absorption spectra, phonon coupling, interband effect 4=13007
 absorption spectra, rel. to crystal size 4=4245
 Agranovich's second quantization theory 4=9921
 alkali halides, from spectra, u. v. 4=13020
 anthracene, diffusion to surface, rel. to charge carrier production 4=22528
 anthracene, exciton—exciton interaction, photoconductivity 4=15572
 anthracene, rel. to fluorescence 4=7199
 anthracene, singlet-state, spontaneous ionization rate 4=15463
 anthracene-trinitrobenzene complex crystals, evidence for localized excitons 4=28749
 aromatic hydrocarbons, and luminescence, var. with doping 4=1787
 aromatic, triplet band calc. 4=6805
 benzophenone, triplet excitons 4=1788
 benzophenone containing 1, 2-benzanthracene, triplet migration 4=13095
 Bose—Einstein condensation, phase transitions of second kind 4=6804
 capture by impurity centres, rel. to carrier recombination 4=9913
 covalent, Mott exciton near surface, microscopic approx. 4=9911
 cuprite, absorption lines in photoconductivity response curve 4=7065
 deforming, spectrum, temp. var., m. f. p., molecular crystals 4=6801
 dielectric, non-radiative ionization of perturbation centres 4=25910
 dielectrics, and spectra, u. v., separation from scatt. struct. 4=22826
 double exciton excitation propag. 4=6800
 exchange correction to binding energy 4=28425
 exciton-phonon coupling, interband effect 4=13007
 ferrocene and cond., elec., dark and photo- 4=17532
 Frenkel, energy spectrum in mag. field 4=12704
 impurity level calc., molecular crystals 4=28423
 inert gases, solids, appl. of Wannier model 4=9919

Crystals — contd

excitons — contd

- inert gases, from spectra, u.v. 4=13020
- ionic, localized, Urbach's rule, rel. to optical absorption 4=7097
- light dispersion, rel. to periodic boundary conditions 4=10152
- linear chain mol., elec. field effect on second moment 4=1442
- molecular aggregates, spectral effects calc. from vibr. electronic coupling 4=9796
- molecular crystals, crystal shape dependence of exciton states 4=28424
- molecular crystals, exciton processes 4=1439
- molecular crystals, ionization 4=17404
- molecular crystals, rel. to vibronic interactions 4=6806
- and molecular dissociation, radiation effects 4=9918
- molecular excitation, electronic, matrix interconnecting molecules 4=9920
- molecular, one-dimensional model, wave packet, second moment, effect of impurity 4=25909
- morpholinium⁺ tetracyanoquinodimethane, e.s.r., 1 to 600 atm 4=28878
- Mott exciton, Zeeman and Stark effects 4=1438
- Mott, at phonons and impurity centres, binding and decay 4=12703
- naphthalene, fluoresc., hopping model, 2°-100°K 4=1791
- noninfinite mass, rel. to spatial optical dispersion 4=1705
- optical excitons, scattering on phonons 4=1435
- optical excitons, scattering on phonons, probability 4=6802
- optical observations and point defects 4=1441
- optics, spatial dispersion effects, review 4=26163
- organic, luminescence, imperfection effects 4=10228
- organic mol. crystals, carrier prod. by multiple exciton interact. 4=4224
- paramagnetic, phonon — coupled interactions 4=9917
- perylene, electronic transition, lowest, strong exciton coupling 4=20249
- phonon coupling, weak, Green's function approach 4=22543
- phonon-induced exciton interactions 4=25908
- semiconducting, non-radiative ionization of perturbation centres 4=25910
- semiconductors, nodal elementary excitations 4=15461
- symposium, Colorado Springs (1962) 4=6513
- thin crystals, at low temp. 4=4024
- wave function and energy 4=1437
- weak-binding case, energy spectrum 4=1436
- Wurster's blue perchlorate, exciton magnetic resonance 4=4415
- wurtzite type and absorption, light, anisotropy 4=4278
- Ar, solid, appl. of Wannier model 4=9919
- Ar: H, 1s-2p, 1s-2s excitation calc. 4=30548
- (*c*,AsCH₃)⁺(TCNQ)₂⁻ solid free radical, exciton mag. reson., zero-field 4=20584
- CaSO₄ · 2H₂O, Davydov theory, for vibr. level splittings 4=3983
- CdS, emission meas., rel. to energy transport 4=13068
- CdS, exciton annihl. radiation, polarization meas. 4=28723
- CdS, photoconductivity, exciton structure obs. 4=7063
- CdS, second valence band, splitting, rel. to optical effects 4=26181
- CdS, spectrum and doping effects 4=28426
- CdS, spectrum at low temp. 4=1441
- CdS:Se, photoconductivity, exciton structure obs. 4=7063
- CdSe, absorption spectra structure interpretation 4=20248
- CdSe bands, complex structure 4=9912
- CdSe, photoconductivity, exciton structure obs. 4=7063
- Cs halides, cond. band structure 4=6787
- Cs, Sb films, from absorpt. band edge structure 4=10166
- CuCl, rel. to fluorescence and photoconductivity 4=26240
- CuI, absorption spectra, rel. to crystal size 4=4245
- CuI, spectral bands, crystallite size effects 4=26187
- Cu₂O, absorption spectrum, neutron and γ-irrad. effects 4=1727
- Cu₂O, Ag-doped, yellow and green series 4=22855
- Cu₂O, defects effect on exciton spectrum 4=1440
- Cu₂O, Zeeman effect of yellow line 4=22854

Crystals — contd

excitons — contd

- GaAs, exchange correction to binding energy 4=28425
 - GaP, bound, from spectra and luminescence, 77°K 4=154
 - GaP, and luminescence regular lines at low temps. 4=130
 - GaP, from photoconductivity, temp. var. 4=28644
 - GaSe, films, oriented, spectra, absorpt., reflect, emission 4=1730
 - Ge, exchange correction to binding energy 4=28425
 - Ge, formation, optical data 4=22860
 - KCl, localized, Urbach's rule, rel. to optical absorption 4=7097
 - KCl-NaCl, exciton absorption rel. to composition 4=4267
 - KCl-RbCl, exciton absorption rel. to composition 4=4267
 - Kr, solid, Wannier states, orbital calc. 4=4018
 - PbI₂, photo prod., and image recording 4=21323
 - PbL₂, spectrum, 4.2°K 4=30437
 - SiC, cubic, luminesc. of N-exciton complexes 4=10218
 - SiC diode "laser", recombination, rel. to stimulated emission 4=14956
 - SiC, 15R, luminescence of N-exciton complexes 4=7157
 - TiCl 4=22924
 - TiCl, and luminescence build up 4=10220
- faces**
- adsorption effects on growth, periodic bond chain theory 4=26582
 - angle between crystal surface and plane meas. 4=29035
 - Bravais rule, justification 4=10456
 - calcite, cleavage planes, X-ray diffraction anal. 4=23314
 - decoration, secondary, mechanism 4=30824
 - diamond, hexagonal spirals, on octahedral faces 4=23312
 - diamonds, microtopography, natural and artificial 4=2013
 - durene, growth by layer spreading 4=17784
 - flat surface rearrangement without change of broken bond number 4=7521
 - four faces in zone, relation 4=23311
 - growth, rel. to equil. faces, effects of nucleation 4=13524
 - guanidine iodide, ion binding energies, rel. to growth 4=10473
 - interfacial energies, variational calc. 4=6697
 - polyethylene, monolayer, fold surface geom. 4=4518
 - polyethylene, unflattened monolayer, habit features 4=451
 - Rochelle salt, X-irrad., cavities 4=2018
 - Ag, epitaxy on 2 differently oriented LiF crystals 4=10484
 - AgBr, preferential adsorption in crystallization 4=10479
 - As₂O₃, cubic, growth from vapour, mol. theory 4=10468
 - Ba sulphate, 100 faces, surface energy calc. 4=20178
 - Bi, cleavage planes, X-ray diffraction anal. 4=23314
 - Ca sulphate, 100 faces, surface energy calc. 4=20178
 - Cd, equilibrium form, from interatomic forces 4=7532
 - Cd single crystals, shaping and polishing 4=30812
 - Cu, faceting at 1000°C 4=10459
 - Cu, (111) and (100) faces, Ge surface diffusion 4=22611
 - Cu, thermally etched in vac., topography 4=17780
 - Fe filaments, structure 4=10457
 - Fe-Ni 50:50 alloy, hot-rolled, texture meas. 4=13434
 - GaAs wafers, polarity determ. 4=4522
 - Ga(As_{1-x}P_x), {100} and {111} only 4=29051
 - InSb crystal-melt interface, facets correl. with crystal growth mechanism 4=10475
 - InSb, damage in abraded {111} surfaces 4=23159
 - MgO, {100}, cleavage surface energy 4=4556
 - NaCl, growth patterns, on heating, impurity effects 4=455
 - Pu, α, angles 4=7533
 - Si, "faceting" effect during growth 4=2042
 - Sr sulphate, 100 faces, surface energy calc. 4=20178
 - W, activity and oxygen method of colour etching 4=2016
 - W, N₂ on, surface potl. 4=29199
 - YFe garnet, morphology 4=10458
 - Zn, cleavage planes, X-ray diffraction anal. 4=23314
 - Zn, equilibrium form, from interatomic forces 4=7532
 - Zn, thermally evaporated cleavage surfaces 4=29179

growth

- See also Crystallization, Zone melting and refining.
- afterheater for strain level lowering in crystal growing 4=30814
- alkali halide, in various gas atmospheres 4=26589
- alkali halides, high-purity single crystals 4=13529

Crystals—contd**growth—contd**

- alkali halides, impurity precipitation, effect of growth atmosphere 4=7546
- alkali halides, Kyropoulos method, apparatus 4=10466
- alkaline-earth halides, rel. to colour centres 4=28494
- alloys, mag. and high m. p. 4=7537
- anthracene whiskers 4=7568
- binary eutectic systems, mechanism 4=30862
- Bravais rule, justification 4=10456
- claudeite, As_2O_3 , by forced condensation 4=2024
- condensation nuclei, under normal and adsorption conditions 4=26588
- corundum, from gas phase 4=30818
- corundum, hydrothermal conditions, Al_2O_3 and Cr_2O_3 cotransfer 4=26591
- corundum, rate in hydrothermal conditions 4=30819
- corundum, from soln. in PbF_2 4=4541
- crystallization rate as combination of matter and heat transport 4=26584
- crystallizer, closed-system evaporation 4=4537
- cubic seed formation on isomorphous condensation nuclei 4=26586
- Czochralski furnace, electron beam heating, for refractory metals 4=26585
- Czochralski method, afterheater for strain level defects, X-ray exam. 4=13521
- dendrites, dislocation formation 4=28458-9
- diamond, natural octahedral, growth history 4=26595
- diamonds, history, natural, by etching 4=2027
- in drop of liquid 4=10476
- durene, from melt 4=17784
- epitaxial layers, structure 4=4664
- epitaxial, and surface texture 4=26612
- epitaxy, impurity diffusion 4=25960
- faces, impurity adsorption effects, periodic bond chain theory 4=26582
- faces, rel. to equil. faces, effects of nucleation 4=13524
- faults produced during growth, origin 4=9938
- ferrite, proeutectoid, in ternary Fe—C—Mn austenites, by two-phase diffusion couples 4=30801
- ferrites, hexagonal 4=20728
- ferrites, particle dia. var. 4=17832
- ferrites, single, by sintering of ring 4=4545
- film deposition rate monitor, using crystal oscillators 4=29180
- films, profile families for linear and ring sources 4=20741
- films, thickness uniformity on rotating substrates 4=20742
- flats on spherical crystals during asymmetric vacuum cooling 4=15755
- floating crucible, limiting capillary length for no back diffusion 4=13522
- flux effects of KCl or Li_2SO_4 in CaWO_4 and Zn_2SiO_4 : Mn synthesis 4=10211
- furnace, Carc image, for refractory oxides 4=20735
- by fused salt electrolysis, ceramic double cell 4=15757
- garnet ferrites, hydrothermal method, 500°-600°C 4=2017
- garnet single crystals, pulling technique 4=13549
- glass, caused by bubble-induced nucleation 4=20729
- glass, light and heat treatment effects 4=23340
- glass, 600-1000°C, with TiO_2 catalyst 4=13534
- glass surfaces, spiral patterns 4=26614
- graphite, impurity nucleation of rad. damage 4=26450
- graphite, pyrolytic, stress relaxation 4=26597
- guanidine iodide, rel. to ion binding energies on faces 4=10473
- guanidinium iodide, from vapour phase and soln., morphology and orientation 4=2006
- heterogeneous nucleation 4=2025-6
- ice, in drop of water 4=10476
- ice, in elec. field 4=13540
- ice, electrical effects 4=20731
- ice, electrostatic analogy 4=13541
- ice nucleation by hydrophobic substances 4=13538
- ice nucleation, molec. aspects 4=13537
- ice, rel. to sorbed water phase transitions 4=13539
- ice, from supercooled water, disc like, relations between temp., thickness and dia. 4=10474
- ice, temp., supersaturation var. 4=2028
- imperfections, h. c. p., X-ray line breadth analysis 4=10568

Crystals—contd**growth—contd**

- ingots by Czochralski method, radial temp. gradients 4=20721
- intermetallic compounds 4=9804
- "iodide" process 4=4536
- iodoform, epitaxial, and surface texture 4=26612
- ionic filaments, from solutions 4=10482
- kinetics, effects of ultrasound 4=10463
- and lattice vibr., thermal 4=7544
- layer formation, extension of transition layer theory 4=4532
- magnetic oxides 4=20734
- from melt, incomplete liquid mixing 4=13512
- from melts, effect of self-adsorption on surface state 4=10464
- metal films, evaporated, bridging phenomenon 4=20743
- metals, effect of grain boundary and surface energies, review 4=13622
- metals, f.c.c. rolling recrystallization, effect of deform. and annealing 4=29038
- metals, from melt, with definite shape and orientation 4=7536
- metals, furnace 4=29039
- metals, zone refined, grain boundary migration 4=13527
- ρ -methyl naphthalene, from soln., stepped surface 4=20732-3
- model, tetrahedral wire networks 4=16299
- normal, mechanism 4=4533
- oxide films, discontinuous, growth kinetics 4=29041
- oxide films on metals, space charge field effect 4=30825
- oxide films, rel. to space charge 4=7028-9
- oxide films, space charge, rate effects deduced by averaging technique 4=23563
- perovskite materials, epitaxial vapour deposition 4=4562
- polyethylene, secondary recryst., surface mass defect effect 4=7561
- polyethylene spherulites, radial growth rate 4=7683
- polymers, at plasticity temp. peak 4=17742
- pyrites triglyph, distrib. of trace elements 4=30822
- raising-crucible method for single crystal growth 4=17781
- rare earth ox. , Na_2O , MoO_3 , method 4=13544
- refractory metals, by zone refining 4=23322
- review, imperfection effects 4=7541
- rubber, low temp., differential thermal analysis 4=23347
- rubber, stress effects, cyclic, smoked-sheet 4=23619
- ruby, by slow cooling of $\text{PbO}(\text{B}_2\text{O}_3)_x$ flux doped with Al_2O_3 and Cr_2O_3 4=11837
- salol, from melt, mechanism 4=26605
- "seed" formation on isomorphous condensation nuclei, adsorption influence 4=26587
- semiconductor epitaxial films, prep. method 4=30826
- semiconductor layers, epitaxial, "sandwich" method 4=7572
- semiconductor, mechanism causing impurities 4=30816
- semiconductors, diamond-lattice 4=13533
- semiconductors, epitaxial, with close spacing 4=10487
- semiconductors, introductory lectures 4=30615
- semiconductors, organic, epitaxy on mica 4=13555
- semiconductors, review and impurity movement 4=28297
- semiconductors, ultrapurification, conference 4=23319
- single crystals, hot-wire device 4=7542
- steady-state, from melt, competitive adsorption model 4=7540
- steel—Si(3%), orientation methods, cube texture 4=13654
- step motion, microscopic kinetics 4=15752
- stepped surface profile recording 4=20732-3
- stress and dislocation formation, theory 4=30815
- synthetic, growth conditions rel. to phys. props. 4=10462
- temperature control circuit 4=4534
- theory, var. with growing conditions 4=7543
- thermal stresses in crystallizing ingot 4=115
- thermodynamic equilibrium between 3 phases, at boundary 4=1972
- III—V compounds 4=29053
- III—V compounds, epitaxy by flash evaporation 4=7571
- triglycine sulphate, external habit modification 4=15767
- twisted shape of crystals grown by Verneuil's method 4=23320

Crystals—contd

growth—contd

- vapour—liquid—solid mechanism using impurity, for whisker 4=17792
 vapour—solvent system, surface-limited 4=13526
 from volatile components 4=4539
 water-soluble crystals, internal circulatory growth method 4=4535
 whisker growth and evaporation, theory 4=29063
 Ag, condensation on NaCl, in air and vacuo 4=13547
 Ag, epitaxially on NaCl cleaved in vac. 4=29070
 Ag, epitaxy on 2 differently oriented LiF crystals 4=10484
 Ag films, epitaxial, in-situ meas. 4=29071
 Ag films, recrystallization time thickness var. 4=23571
 Ag, nucleation on W field emitter tips 4=15765
 AgBr, effect on habit of solution conditions 4=10479
 AgBr emulsions, gelatinous, tabular growth var. pH 4=10478
 AgBr micro crystals, rel. to twinning 4=13519
 AgCl epitaxially on AgBr microcrystals 4=23313
 Ag₂O, new modification with layered structure 4=10551
 Al, and dislocations and impurities distrib. 4=20278
 Al doped with radioactive Fe, decanting 4=29040
 Al, epitaxially on NaCl cleaved in vac. 4=29070
 Al, Fe distribution coeff., var. with temp. gradient 4=13457
 Al, impurity interactions between Fe, Si, Cu 4=13528
 Al monocrystals, recrystallization—polygonization competition 4=23327
 Al oxide films, discontinuous, growth kinetics 4=29041
 Al, recrystallization, after deformation and annealing 4=26590
 Al, recrystallization inhibition by polygonized struct. prod. 4=23326
 Al, recrystallization, new study method 4=13641
 Al-rich intermetallic cpds, peritectic method, Czochralski method 4=13525
 Al, single crystals, gradient heating apparatus 4=10467
 Al, solidification, use of u.s. vibration 4=23328
 Al, zone-melted, effect of Ag, 15-135 × 10⁻⁶, compared with Cu, Mg 4=2021
 Al, zone refined, grain boundary migration 4=13527
 Al—Cu alloys, solidification, use of u.s. vibration 4=23328
 Al₂O₃, in molten PbF₂ 4=29614
 Al₂O₃ whiskers, by vapour deposition 4=7567
 in Al—Si eutectic, modification due to 1A elements 4=13476
 As₂O₃, cubic, from vapour, crystal faces theory 4=10468
 Au, epitaxially on NaCl cleaved in vac. 4=29070
 Au film, epitaxially on mica in v.h. vac. 4=23576
 Au films, epitaxial, in-situ meas. 4=29071
 Au, and vacancy nucleation below 140°C 4=12724
 Au, vapour-grown whiskers, twins 4=4527
 BaTiO₃, by exaggerated grain growth 4=20724
 BaTiO₃, floating-zone technique 4=23330
 BaTiO₃ from melt in oxygen atmosphere 4=23331
 Bi 4=12882
 Bi films, dislocation healing 4=23333
 Bi, preferred growth orientation, effect of Sn additions 4=17783
 Bi single crystals, rapid-freeze method 4=23332
 {Bi_{3-2x}Ca_{2x}}[Fe₂](Fe_{3-x}V_x)O₁₂ 4=29043
 Bi₂S₃ 4=10140
 Bi—Sb alloys, single-crystal growth 4=23334
 Bi₂₄Se₆Sb_(60+x)Te_(150-x), by Bridgman process, thermoelectric props. 4=29042
 Bi₂Te₃ 4=13530
 Bi₂Ti₂O₁₂, ferroelec. single crystals 4=23335
 Ca phosphate, octa and hydroxyapatite, and struct. 4=17807
 during CaSO₄·½H₂O hydration 4=20727
 CaMoO₄—rare earth niobate systems 4=26644
 CaSO₄·2H₂O, nucleation, effect of var. subst. 4=20730
 CaWO₄, defects 4=30817
 CaWO₄:Nd, rel. to laser threshold 4=19308
 CaWO₄, trivalent rare earth substitution 4=15474-5
 Cd, spirals on single crystals 4=29044
 CdGeAs₂ 4=1593
 Cd_{0.1}Hg_{0.9}Te 4=28554
 CdI₂, polytype 28 Hc, and screw dislocation theory 4=13584

Crystals—contd

growth—contd

- CdI₂, and polytype prod. 4=26593
 Cd₃P₂ 4=26036
 CdS, dislocation structure and growth mechanism 4=25938
 CdS films on non-cryst. substrates, Ag-activated 4=20804
 CdS films on rocksalt, electron diffraction exam. 4=4670
 CdS, hollow, by sublimation at high pressures and temps. 4=7548
 CdS, hollow, in N₂ flow 4=10470
 CdS, with hollow centres 4=29046
 CdS, hollow wurzite type, and structure 4=29047
 CdS, large 4=7549
 CdS, sublimation method for large single crystals 4=10469
 CdS, from vapour, dislocations meas. 4=20281
 CdS, CdSe: Cu, large, and photoconductivity 4=1679
 CdSb, doping, using Cd-rich Cd—Sb alloy 4=29045
 CdSb, phase separation, by centrifuging melt 4=4543
 CdSe single crystals, Reynolds—Greene method 4=22797
 CdTe, by static sublimation on cool wall under pressure 4=15758
 CdTe, differences between opposite faces, from vapour 4=4542
 CdTe, sublimation 4=7547
 Co, electrodeposited, growth habits 4=23346
 Co particles from CoBr₂, ext. symmetry, twinning effect 4=26594
 Co whiskers, by H₂ reduction of CoBr₂ 4=23258
 CoO single crystal, by Verneuil method 4=29048
 Cr, impurity effects 4=7424
 Cr, whiskers 4=10483
 Cu 4=7537
 Cu, epitaxially on NaCl cleaved in vac. 4=29070
 Cu, few dislocations, by Bridgman and Czochralski methods 4=4544
 Cu films, recrystallization time thickness var. 4=23571
 Cu whiskers 4=13553
 Cu whiskers, platelet modification 4=17793
 Cu, with low dislocation density 4=23337
 Cu—Ge alloy with ideal axial ratio 4=7422
 Cu₂O nucleation on Cu under O ion bombardment 4=26613
 Cu₂O, by oxidation 4=13531
 Fe filament layers 4=10457
 Fe, high-purity, recrystallization kinetics 4=15761
 Fe layers on Cu, electrolytic, outward growth obs. by electron diffraction 4=4531
 Fe, pyramids on whisker surfaces 4=29064
 Fe trichites, arc shaped 4=4549
 Fe whiskers, nucleation sites, oxide replica technique 4=2036
 FeAl₂O₄—MgAl₂O₄ mixed crystals 4=20514
 Fe_{1-x}Cd_xCr₂S₄ 4=29115
 Fe—(30.9%) Ni, 2-stage martensitic plate growth 4=17830
 FeO thin films on Fe whisker surfaces 4=4668
 α-Fe₂O₃, from Li₂O—B₂O₃—Fe₂O₃ system, rel. to phase equilibria 4=7560
 FeS growth spirals 4=26601
 Fe—Si (3%), on deformation and annealing, mag. field effects 4=13536
 Fe—Si (3%), oriented 4=30820
 Fe—Si (3¼%), (100)[001] or (110)[001] texture prod. 4=26599
 FeSn₂, and morphology 4=26600
 Ga, from melt, mechanism 4=29050
 GaAs and GaP lamellae 4=26580
 GaAs on Ge substrates, epitaxial growth and deposition on high index planes and curved surfaces 4=29066-8
 GaAs, different seed orientations, pulling from melt 4=7553
 GaAs films on Ge, by flash evaporation in vacuum 4=13681
 GaAs, by free surface method 4=7552
 GaAs, sources of contamination 4=29052
 GaAs—GaP alloys, vapour, prep. technique 4=4546
 GaAs—I₂, epitaxial vapour growth, kinetics 4=7551
 Ga(As_{1-x}P_x), {111}—{100} faces, texture, props. rel. to lasers 4=29051
 GaP, epitaxial, by Ga₂O vapour transport 4=15770
 GaP single crystals, growth from the melt 4=7550
 GaP and Sn solubility 4=28999

Crystals—contd

growth—contd

- GaP, travelling solvent method 4=23338
 GaSb, effect of max. melting point 4=16290
 GaSb, reduction of high acceptor conc. 4=23339
 GaSb and Ga—Sb distribution coeffs., Zn⁶⁵ 4=4072
 Gd to Tm rare earths, large crystals 4=4551
 Ge, epitaxial films, formation conditions 4=7574
 Ge, epitaxial, from vapour, effect of elec. field 4=10488
 Ge, epitaxial growth, direct obs. 4=4564
 Ge, epitaxial layers, rate, rel. to doping 4=7573
 Ge, epitaxial on CaF₂ 4=10486
 Ge, epitaxial, using water vapour 4=4561
 Ge films, epitaxial, iodide process 4=10485
 Ge, films, epitaxial, rel. to deposition parameters 4=70807
 Ge, films, pyrolytic, etching is not necessary for low defects in growth 4=17844
 Ge films, single-crystal, microzone melting technique 4=2125
 Ge, from gaseous phase using 2nd component 4=10471
 Ge, impurity doping in vapour growth 4=7555
 Ge, interaction of O₂ and Al rel. to dopants 4=1606
 Ge, pulled, temp. distrib. meas. 4=13532
 Ge, segregation coefficients of Ga, In, Sb and Bi, concentration-dependence 4=7556
 Ge, supercooling and irregular growth 4=4547
 Ge, surface, electron microscope exam. by replica 4=13646
 Ge, transition detection, by autodecoration 4=2041
 Ge, vapour-growth, diffusion limited 4=26596
 Ge, vapour growth, impurity doping 4=1470
 Ge, web growth 4=13533
 Ge, whiskers and needles 4=10480
 Ge—Si alloy films, from vapour, on Ge 4=7554
 Ge—Si alloys, by vertical recryst. zone method 4=10472
 Ge—Si, floating-zone technique 4=7557
 Ge—Si solid solutions, whiskers and needles 4=10480
 Hg whiskers 4=4559
 HgS, raising-crucible method for single crystal growth 4=17781
 HgS, single crystals, from vapour 4=2029
 HgSe, Bridgmann method 4=13543
 In—Mg(50/50 at.), whiskers with 96% In 4=20738
 InSb crystal—melt interface, facets correl. with crystal growth mechanism 4=10475
 InSb dendrites 4=7569
 InSb, dendritic 4=15769
 InSb, phase separation, by centrifuging melt 4=4543
 InSb, web growth 4=13533
 InSb, zone-melting, ultra-pure 4=23341
 In₂Se, extraction from melt for n and p-types 4=7558
 K, needle-shaped 4=26606
 K whiskers 4=4559
 KCl, Pb impurity entry, rel. to vibration 4=30821
 KCN, single crystal growth, and purification 4=26608
 KCN by zone refining 4=8490
 K₂SO₄, impurity distrib. during crystallization 4=29062
 LaF₃, doped, single-crystal, Czochralski growth 4=13542
 LaF₃, single, by Czochralski method 4=23345
 LiF, single crystals in r.f. field and controlled atmosphere 4=29056
 LiFeO₂, from Li₂O—B₂O₃—Fe₂O₃ system, rel. to phase equilibria 4=7560
 LiFe₃O₈, from Li₂O—B₂O₃—Fe₂O₃ system, rel. to phase equilibria 4=7560
 MgO, sintered, water vapour effect 4=23546
 MnSi_{1.72}, Czochralski method 4=29012
 MnTi-base spinel 4=2032
 Mo epitaxy, by partial molybdenite decomposition 4=29069
 Mo, by floating zone refining and melting by electron bombardment 4=23349
 NaBrO₃, supersaturation effects, and dislocation theory 4=15764
 NaCl, adsorption at crystal—solution boundary 4=20736
 NaCl, face patterns, on heating, impurity effects 4=4553
 NaCl, plastically deformed in solution and vapour, further growth 4=13548
 NaCl whiskers, by vapour deposition 4=29065

Crystals—contd

growth—contd

- NaI:Ti, Kiropoulos' method, impurities 4=2035
 Nb—Sn films on Nb, by anodic oxidation diffusion and superconductivity 4=8571
 Ni 4=7537
 Ni, bicrystal seed orientation technique 4=23301
 Ni, electrodeposited, growth habits 4=23346
 Ni, epitaxially on NaCl cleaved in vac. 4=29070
 Ni, grain, with boundaries saturated with Ni—S liquid 4=10564
 Ni, plastic deform., recrystallization var. time, microscopic obs. 4=26604
 Ni₃As₄, vapour grown with and without halogen 4=10543
 NiBr₂, spirals on platelets 4=26615
 NiO, epitaxial growth on Ni (111) face 4=7702
 PbF₂, forms occurring during different conditions, from liquid 4=4541
 PbZrO₃—PbTiO₃ solns., by powder heating with fluxes 4=17786
 Pd films, epitaxial, in-situ meas. 4=29071
 Pt, vapour grown whiskers, twins 4=4527
 Sb, preferred growth orientation, effect of Sn additions 4=17783
 Sb, from vapour phase, growth triangles 4=2022
 Sb₂S₃, from vapour, rel. to S partial pressure 4=2023
 Se dendrites, rel. to twinning 4=26611
 Se, rel. to Cl doping 4=2033
 Si, Czochralski method, rel. to misorientation 4=2034
 Si, epitaxial films, by vacuum sublimation 4=15822
 Si epitaxial layers, deposition conditions, depend. of dopant conc. 4=23356
 Si epitaxial layers, effect of rate on stacking-fault density 4=12771
 Si, epitaxial, on quartz, orient. depend. 4=4563
 Si, epitaxial, stacking fault dislocation loop origin 4=6859
 Si, epitaxial, by vacuum sublimation 4=17796
 Si, epitaxial, from vapour, effect of elec. field 4=10488
 Si, "faceting" effect 4=2042
 Si films free from stacking faults, by initial fast deposition 4=4659
 Si, films, pyrolytic, etching is not necessary for low defects in growth 4=17844
 Si, by floating zone method 4=30564
 Si, from gaseous phase using 2nd component 4=10471
 Si, (111) face epitaxial layers, rel. to dislocations 4=2039
 Si, 90° twins 4=30811
 Si overgrowths, mechanism 4=23357
 Si oxide films on Si surface, oxidation growth versus time, parabolic relation 4=7564
 Si, P-doped, Czochralski method, solute striations 4=4530
 Si, single-crystal, on sapphire substrate 4=17795
 Si, single, dislocation free, by SiCl₄ dislocs. by H 4=4560
 Si, supercooling and irregular growth 4=4547
 Si, surface, electron microscope exam. by replica 4=13646
 Si, web growth 4=13533
 Si whiskers 4=10481
 Si, whiskers and needles 4=10480
 Si, zone melting, by electron beam 4=4554
 SiC, epitaxial 4=30827
 SiC, and polymorphism 4=10477
 SiC, β, form and impurity distrib. 4=13546
 SiC, by decomposition of SiCl₄ by tolnol, on C 4=13545
 SiC, from imperfections, X-ray investig. 4=23472
 SiC whiskers, by sublimation 4=20739
 Si—Fe, effect of grain boundary and surface energies, review 4=13622
 Si—Fe, orientation requirements, cube-on-edge 4=13655
 Si—Fe, secondary promotion by inclusions 4=15760
 Si and SiO₂, successive epitaxial growth 4=15823
 Sn, high-purity ingots, dendrite orientation 4=20740
 Sn, Sn—Pb whiskers, press. induced, var. press. 4=13552
 Sn whiskers 4=13553
 Sn, white, electrolytic, current var. 4=26610
 Sn, zone refined, grain boundary migration 4=13527
 Sn—Pb alloys, dendrite spacing 4=23355
 SnS films on rock-salt, 30°–450°C 4=29189
 SrSO₄, from supersaturated soln., spherulitic, in presence of EDTA 4=7563

Crystals — contd
growth — contd

- TiO₂ films, heated brookite, anatase formation conditions 4=13505
- U, recrystallization, secondary and after critical strain 4=2116
- UO₂, epitaxial growth on CaF₂ 4=2040
- W, doped wires, secondary recryst., rel. to temp. and heating rate 4=10588
- W, by floating zone refining and melting by electron bombardment 4=23349
- W ribbons 4=7565
- Y, annealing of arc-melted buttons 4=4551
- YFe garnet, rel. to face morphology 4=10458
- Zn(NH₄)₂(SO₄)₂·6H₂O, impurity distrib. during crystallization 4=29062
- Zn, dislocations, etching obs. 4=9968
- Zn, low disorientation and dislocation, by soft mould 4=17788
- Zn single crystals, spirals and closed-loop patterns 4=17789
- Zn single hexagonal crystals, in macrosonic fields 4=23351
- Zn tungstate, Čochrański method 4=15477
- ZnAl₂O₄, in molten PbF₂ 4=29614
- ZnBaFe garnet, and ferrimag. linewidth reduction 4=13289
- ZnO, hydrothermal growth 4=20737
- ZnO nuclei, structure 4=4555
- ZnS films on rocksalt, electron diffr. exam. 4=4670
- ZnS: I, vapour-solvent system, solid transport rate 4=15768
- ZnSb, p-type, pulling from melt 4=12919
- ZnSe films, from organometallic cpds. in organic liquid 4=23352
- Zr, whiskers, by h. c. p. — b. c. c. phase transform. cycling 4=13554
- Zr, zone-melted purification, recrystallization temp. 4=17790

imperfections

- operator-equivalent formalism in theory 4=28315
- paramagnetic ion salts, crystal-field splitting 4=2684
- potential field, one-dimensional, periodic, saw-tooth, having a defect 4=28404
- rare-earth cpds., quadrupole anti-shielding 4=3957
- rare earth ions in crystals, L-S multiplet exchange splittings 4=25824
- rare earth ions, shielding, calc. 4=28311
- rare earth ions, shielding, and nuc. quad. moments 4=25804
- rare-earth ions spectra, shielding and distortion 4=12567
- rare earth ions, validity 4=25809
- rare earth metals, magnetic, from specific heat, 0.4-4°K 4=15429
- rare earth salts, ionic energy levels and energy transfer 4=25823
- rare earth Fe garnets, magnetic exchange field 4=28848
- rare earth Fe₂ compounds, similar at Fe (except CeFe₂), from Mössbauer effect 4=15403
- rare earths, and mag. props. and Mössbauer h.f.s. 4=22456
- ruby, hemihedral field effect in spectrum 4=26219
- ruby, higher-order odd, rel. to absorption bands 4=2046
- ruby, rel. to B₁ and B₂ absorption lines, mag. and elec. field effects 4=28703
- time reversal appl., symmetry 4=28309-10
- tourmaline, e.s., electron diffr. exam. 4=22461
- tourmaline, elec., electron polarization meas. 4=17821
- transition metal ions, line spectra, vibration effects 4=420
- trigonal, rel. to d⁵ ion spectra 4=7096
- vanadyl complexes, splitting of levels 4=22901
- Ag alloys, dilute, elec. gradients, ang. correl. meas. 4=22458
- Al, force consts., by normal modes analysis 4=20192
- Al-(0.11 at.%)Ag solid solution, elec. field gradient 4=22459
- AlCl₃, nuclear quadrupole coupling const. of Al²⁷, and elec. field gradient parameter 4=12569
- Al₂O₃, effect on Ni⁶¹, n.m.r., h.f.s. 4=7334
- Al₂O₃, quadrupole interactions of V and Mu 4=3959
- Al₂O₃, trigonal, energy levels calc. of Fe³⁺ 4=1356
- Am IV in LaCl₃, energy levels, assignment of 10 lowest 4=20177
- Au in Fe, Co, Ni, mag., Mössbauer obs. 4=20158
- BaF₂, charge compensation by interstitial F⁻, e.s.r. obs. 4=22460
- BaO.6Fe₂O₃, mag. field meas. using Mössbauer technique 4=12591
- BaTiO₃ 4=29095
- BeO, electric grad., contrib. of O dipole moments 4=12568
- CaCO₃, e.s.r. data of Mn²⁺, pressure depend. 4=1880
- CaF₂, charge compensation by interstitial F⁻, e.s.r. obs. 4=22460
- CaF₂, from e.s.r. of trivalent rare-earth ions 4=20585
- CaF₂, rel. to paramag. resonance data 4=12601
- CdS, elec. potential distrib. 4=26037
- CdS, field around Nd³⁺ impurity 4=7333
- CdS, from mag. suscept. of Ni²⁺ 4=17616
- Ce Mg nitrate, ordered spin T → O°K 4=28317

Crystals—contd

internal fields—contd

- Ce Mg nitrate, splittings 4=26381
 Cl₂, intermolecular forces, space group calc. 4=23432
 Co, magnetic, from nuclear Zeeman effect of Au¹⁹⁷ 4=9811
 Co spinel, molecular field treatment, giving Curie-Weiss consts. 4=13231
 Co_mMg_{2-m}TiO₄, cation distrib. parameter, determ. from mag. moment meas. 4=13231
 CoO, at O nuclei, O¹⁷ n.m.r. meas. 4=13349
 Co_mZn_{2-m}TiO₄, cation distrib. parameter, determ. from mag. moment meas. 4=13231
 CrO₂, anisotropy energy, erratum 4=15397
 Cu²⁺ spectra effect of tetrahedral field 4=12571
 CuCl₂·2H₂O, elec. field gradients calc. 4=3958
 Cu₂O, elec. field from charged defects 4=1440
 Cu₂VS₄, sylvanite, Madelung's coeff. 4=22449
 Dy, temp. var. from Mössbauer effect 4=12588
 Er³⁺ in CaF₂ matrix, splitting 4=20454
 Er³⁺ in LaF₃, energy levels 4=28684
 Eu benzoylacetate chelates 4=28753
 Eu, mag. field at nuclei meas. 4=12642
 Eu, nuclear polarization and hyperfine field 4=28318
 Eu²⁺ cubic splitting in BaO 4=20152
 EuFe garnet, hyperfine interact. of Eu¹⁵¹ 4=1343
 EuFe garnet, mag. field and elec. field gradient at Eu nucleus 4=25805
 EuS, nuclear polarization and hyperfine field 4=28318
 Fe alloys, dilute, mag., external induced, Mössbauer obs. 4=30496
 Fe mag., at In¹¹³, Re¹⁸⁵, Ir¹⁹² from β asymmetry at 0.1°K 4=20157
 Fe⁵⁷ alloys, hyperfine 4=12559
 Fe⁵⁷, d-electron antishielding factor 4=12587
 Fe garnets, rare earth-Fe anisotropic exchange interaction 4=22469
 Fe⁵⁷, mag., from Mössbauer effect, temp. var. near Curie point 4=13190
 Fe, magnetic, from nuclear Zeeman effect of Au¹⁹⁷ 4=9811
 Fe, from Mössbauer effect under high press. 4=28327
 Fe³⁺ in cubic field, optical spectrum and ground-state splitting 4=20463
 Fe³⁺ quadrupole coupling const. in rare-earth iron garnets 4=12575
 Fe-Al, magnetic, Mössbauer obs. 4=12564
 Fe-Al (0-50 at %), magnetic, at Fe⁵⁷, Mössbauer obs. 4=12562
 FeCO₃, magnetic, Mössbauer effect study 4=28410
 FeF₂, magnetic, Mössbauer effect study 4=28410
 Fe-Ir, Re, mag. at Ir, Re nucleus, from nuclear specific heat 4=17331
 Fe-Ni invar-type alloys, mag. fields, Mössbauer meas. 4=28813
 Fe₂O₄, hyperfine at low-temp. transition 4=4510
 FeOOH, α and γ -phases, magnetic 4=22465
 FePd, at Fe, Mössbauer obs. 4=12561
 FeTiO₃, magnetic, Mössbauer effect study 4=28410
 GaAs alpha particle detector, n-type, high resistivity 4=9013
 Gd, magnetic, at Lu³⁺ impurities, from γ - γ correl. 4=4009
 Hf¹⁸¹, from 133-482 keV ang. correl. perturbation 4=20156
 Hf(NH₄)₂F₆, elec. h. f. s. interaction, from γ - γ ang. correl. 4=6684
 Hf¹⁸¹OCl₂·8H₂O, quadrupole coupling of Ta¹⁸¹, d_{5/2} 4=6690
 In, electric, press. var., n. q. r. and thermal expansion meas. 4=28313
 KCl screened Coulomb potentials 4=15556
 K₂CrO₈, splitting 4=12566
 KMgF₃, from Ni II fine structure analysis 4=12574
 KNiF₃, covalency theory of Ni-F₂ complex 4=20151
 KNiF₃, from Ni II fine structure analysis 4=12574
 La ethyl sulphate, from e. s. r. large quadrupole splitting 4=23048
 LaCl₃, from e. s. r. large quadrupole splitting 4=23048
 LaCl₃, orbital calc. of Er³⁺ spectrum 4=4259
 LaCl₃, time reversal appl. symmetry, Tb³⁺ Eu³⁺ ions 4=28309-10
 LaMgNO₂, from e. s. r. large quadrupole splitting 4=23048

Crystals—contd

internal fields—contd

- Lu, elec. gradient along symm. axis 4=9854
 MgO, cubic, from forbidden transitions in e. s. r. of Mn²⁺ 4=13325
 Mn²⁺ in cubic field, optical spectrum and ground-state splitting 4=20463
 Mn²⁺ and Fe³⁺ ions, ground state splitting in low-symmetry fields 4=1353
 MnO, at O nuclei, O¹⁷ n.m.r. meas. 4=13349
 N, atomic, in crystals, zero-field splitting 4=25828
 (NH₄)₂Hf¹⁸¹F₆, quadrupole, coupling of Ta¹⁸¹, d_{5/2} 4=6690
 Nd₂Mg₂(NO₃)₁₂·24H₂O, absorption spectrum 4=7145
 Ni, magnetic, from nuclear Zeeman, effect of Au¹⁹⁷ 4=9811
 [Ni(H₂O)₆]²⁺ complex, symmetry 4=6683
 PbTiO₃, strong axial field, e. s. r. of Fe³⁺ 4=20595
 Pr ethyl sulphate, crystal field parameters 4=13120
 Pr oxides, at Pr ions, rel. to mag. suscept. 4=13121
 Si, electric, due to Sb, effect on Ga diffusion 4=28484
 Sn, Sn alloys, from Mössbauer effect 4=20153
 SrF₂, charge compensation by interstitial F⁻, e. s. r. obs. 4=22460
 SrO, weak cubic crystal field, evidence from e. s. r. data 4=28886
 SrTiO₃, axial F³⁺ e. s. r., due to nearest-neighbour charge compensation 4=23047
 SrTiO₃, electrets 4=22780
 TiO₂, from e. s. r. of Gd³⁺ 4=10322
 TiO₂, rel. to transition metal ion e. s. r. 4=26432
 Tm ethyl sulfate, oxide, trifluoride, electric, electronic shielding 4=30497
 Tm¹⁶⁹ (C₂H₅SO₄)₃·9H₂O, electronic shielding, Mössbauer obs. 4=3965
 V, hyperfine, at V⁵¹ nucleus 4=20626
 YGa garnet, for Yb³⁺, 9 parameters 4=12560
 Yb³⁺ in garnets 4=25806
 Yb³⁺ in YGa garnet, 9 parameters 4=12560
 YbGa garnet, F₂ level, paramag. suscept. data 4=1846
 ZnO, from mag. suscept. of Ni²⁺ 4=17616
 ZnS, cubic and hexagonal, by Mn²⁺ e. s. r. 4=1882
 ZnS:Mn, symmetry on Mn²⁺ activator 4=20494
 ZnSe, from e. s. r. of Cr³⁺ meas. 4=13312
 ZnTe, from e. s. r. of Cr³⁺ meas. 4=13312
 ZrFe₂, anisotropic mag. h. f. s., Mössbauer meas. 4=22457

 impurity mass-difference scatt., rel. to thermal cond. 4=4001
 impurity nucleus in Bravais crystal, Mössbauer effect 4=12577
 impurity spectra, narrow "no-phonon" lines, theory 4=10150
 inert gas solids, ideal, using Mie-Lennard-Jones potential 4=6712
 inert gases, theory 4=22454
 inorganic dielects, i. r., "centro-freq." meas. 4=28349
 intermetallic cpds., plastic deformation, thermal vibrs. and hardness 4=28920
 and ion e. s. self-energy 4=24550
 ion tunnelling, phonon-induced, theory 4=9822
 ionic crystals, optical lattice absorption and reflection 4=22842
 ionic crystals, Pauling's theory 4=20149
 ionic motion, due to superposition of harmonic vibrations 4=1360
 ionic, n. q. r. times rel. to phonon spectrum 4=17702
 Ising model, thermodynamics, with strong interaction between atomic planes 4=28366
 isotopic disorder, dynamics and statistical dynamics 4=1378
 Jahn-Teller distortions, induced by tetrahedral-site Fe^{2+} ions 4=15406
 Kohn effect, indirect observ. in many metals 4=28402
 lasers, phonon-terminated, dielec. theory 4=14939
 lattice dynamics, simple adiabatic and harmonic approx. 4=25832
 lattice gases, Mayer's fugacity series, remainder 4=5090
 lattice-internal mode combination, rel. to near i. r. spectra complexity 4=6702

Crystals—contd

lattice mechanics—contd

- lattice vibr. correl. and scatt. by point defects 4=9829
 lattice vibrs.—spin wave interacts. in mag.-ordered crystals 4=1363
 localized vibr. in one and two dim., frequencies 4=1374
 localized vibrations, using random walk theory 4=1375
 longitudinal modes of linear chain, with many-neighbour interact. 4=20179
 low-temperature physics conference 4=11428
 Lyddane—Sachs—Teller relation generalization and validity limit 4=30510
 magnetoacoustic transitions, 2-quantum 4=1390
 mechanical energy flow, "Poynting" vector 4=12658
 metallic cubic, Grüneisen parameter and thermal oscillation frequencies 4=1406
 metals, acoustic wave absorption, theory 4=1389
 metals, atomic vibrations at melting point 4=17378
 metals, cubic, thermal motion in 4=1361
 metals, electron-phonon interaction effect on specific heat, errors 4=20211
 metals, electron-phonon interaction, in mag. field 4=9894
 metals, electron-phonon interact., quasiparticle transport theory 4=17389
 metals, helicon-phonon interaction theory 4=12705
 metals, interacting ion cores in electron gas background, model 4=3976
 metals, lattice vibrations—electron interaction 4=12607
 metals, neutron scatt. data, rel. to cond. electron scatt. cross-section 4=28352
 metals, normal, phonon momentum distrib. theory 4=12675
 metals, nuclear spin relax., quasiparticle picture failure 4=7341
 metals, thermal atomic vibr., anharmonicity 4=6705
 metals, u. s. absorption, in mag. field 4=3985
 methane, freq. distrib. at 6.5° K, neutron scatt. meas. 4=22479
 mixture phase separation temp. calc. 4=17339
 molecular crystals, nuclear spin-lattice relaxation 4=23063
 molecular crystals, rel. to diffuse X-ray scatt. 4=23391
 molecular oscillations from X-ray photographs 4=30511
 molecular, translational and rotational vibr. 4=3977
 moment-trace method for disordered linear lattices 4=1372
 Mössbauer effect, line intensity, effect of anharmonism 4=17345
 Mössbauer effect obs. 4=12610
 Mossbauer effect, optical analogue 4=17558
 Mössbauer effect, recoil-free fraction meas. 4=17347
 Mössbauer effect, relax. effects calc. 4=12578
 n-paraffins, vibrational spectra from meas. of neutron scattering 4=12551
 neutron scatt., inelastic, $S(\vec{k}, \omega)$ function calc. for anharmonic crystal 4=28351
 neutron scatt., monochromatic, one-phonon process calc. 4=9832
 nonideal, electronic—vibr. transitions in impurities 4=22473
 nuclear transitions, internal conversion, lattice vibr. effects 4=6268
 one-dimensional coupled oscillators, heat flow, isotopic impurity effect 4=1409
 one-phonon scatt. by local vibrations, explicit formulae 4=22474
 optical erosion of condensed matter, review 4=17455
 paraelectric materials, freq. spectrum, temp. depend. 4=28344
 paraelectric material, nonlinear dielec. const. 4=10092
 paramagnetic ion spin-phonon interaction, review 4=15409
 paramagnetic, spin-phonon interactions, from cond., thermal mag. field peaks 4=17385
 paramagnetic, with strong spin-lattice coupling 4=6739
 perovskite structure, ferroelec. optical modes 4=7042
 perovskite titanates, optically active vibrations 4=26184
 phonon bottleneck observation 4=28429
 phonon concept invalidity at high temps. 4=3980
 phonon damping in solid solutions 4=30507
 phonon diffusion and conductivity thermal, $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ containing Fe^{++} 4=1383
 phonon dispersion neutron spectrometer, triple axis, focussing, graphical aid 4=22475

Crystals—contd

lattice mechanics—contd

- phonon distrib., deviation from equil., rel. to thermal cond. 4=6755
 phonon distributions in high elec. fields 4=28340
 phonon generator cavity 4=30057
 phonon increase by forced Cherenkov emission 4=15410
 phonon interaction with e.m. field in wurtzite and blende type lattices 4=25837
 phonon lifetime, reciprocal, reson. character in isotopically disordered crystal 4=30528
 phonon and magnon spectra 4=13578
 phonon relax., optical phonon role 4=28350
 phonon relax., rel. to refl. by surface dehydrated layer 4=9834
 phonon scatt. by mass defects, theory 4=20148
 phonon scatt. by mol. impurity centres, resonance 4=9833
 phonon scatt. by point defects 4=1413
 phonon spectrum 4=2063
 phonon spectrum determ. from incoherent neutron scattering 4=6701
 phonon theory, as Einstein phonon dressed by interaction with other Einstein phonons 4=20180
 phonon wave, collective, and stimulated emission by supersonic electrons 4=20181
 phonons, Boltzmann time-depend. eqn. soln. in bounded medium 4=24111
 phonons, as optical exciton scatterers 4=1435
 phonons, optical, quantum electronics, phonon-maser postulated 4=6718
 phonons and phonon interactions, book of lectures 4=30505
 phonons, thermal, interaction with long-wavelength phonons 4=20182
 phonons in 3-dimensional lattice 4=9803
 piezoelectric, energy loss of charged particle by u. s. radiation 4=22556
 piezoelectric, phonon radiation by moving charged particles 4=6719
 point defects, general methods review 4=22470
 polarization of vibr., rel. to symmetries 4=20189
 polyethylene, vibrational spectra from meas. of neutron scattering 4=12551
 polypropylene, isotactic and atactic, vibrational spectra from meas. of neutron scattering 4=12552
 quantum relax., rel. to absorption lineshapes and inelastic neutron scatt. 4=22472
 quartz, low temp., 1000 Mc/s 4=30057
 α -quartz, optical phonon-maser postulated 4=6718
 quartz, phonon scatt. of He-Ne laser light in cavity for freq. translation 4=24899
 quartz phonon traject., and heat pulse propag., low temps. 4=25867
 quartz, ultrasonic interaction, for radiation induced defect study 4=20263
 quartz, Z-cut, comparison of acoustic and thermal parameters 4=6724
 quasi-longitudinal waves, approx. theory 4=11281
 Raman lasers, phonon linewidth effects 4=24907
 Raman scattering, shell model theory 4=26169
 from Raman spectra, using small solid samples 4=15581
 rare earth ethyl sulphates, from anomalous specific heat and thermal conductivity 4=6714
 relaxation energy caused by vacancy and vacancy pairs 4=30509
 resonance absorption, line width, temp. depend. 4=3984
 review 4=17338
 review of many phonon processes 4=20183
 ruby, odd ion vibr., rel. to absorption bands 4=20467
 ruby, spin-lattice interaction, from e.s.r., stress effects 4=23055
 ruby, zero phonon impurity line broadening 4=30689
 salicylic acid, molecular oscillations from X-ray photographs 4=30511
 scattered electron momentum transfer to lattice 4=1385
 second-sound conditions in dielec. solids 4=12620
 second sound, dispersion reln. deriv. 4=12621
 semiconductors, current-polarization interact. 4=1572
 semiconductors, energy gap rel. to electron-lattice interact. 4=4014
 semiconductors, hot-electron Hall mobility, optical phonon scatt. 4=4129

Crystals—contd

lattice mechanics—contd

- semiconductors, phonon distrib. disturb. by hot electrons 4=25835
 semiconductors, vibration spectra 4=25834
 semiconductors, zincblende-type, phonon frequ. regularities 4=3981
 space correlations, calc., high temp. limit 4=17337
 specific heat rel. to thermal X-ray scattering factor 4=1393
 spectrum, heavy isotope, localized mode 4=1369
 spin-lattice relax. for var. defect reson. freq. 4=17341
 spin-lattice relaxation in rare-earth salts 4=26428
 spin systems interactions via lattice, temp. evolution 4=26259
 spin-wave interaction, with acoustic waves, in isotropic ferrodiel. 4=25845
 statistical dynamics of interacting oscillators 4=76
 superconducting tunnel junctions, phonon-assisted tunnelling 4=5508
 surface atoms, Debye-Waller factor calc. 4=9823
 surface modes, scattering matrix method 4=12606
 thermal cond., transverse and longit. phonons 4=6756
 thermal vibration, excitation or suppression by electron thermal vibration spectrum, frequency distrib. 4=9825
 thermal vibrations and crystal growth, polymorphism and screw dislocations 4=7544
 thermodynamic potential 4=1358
 transfer matrix method for two and three-dim. lattices with defects 4=1371
 transition metal ions, electronic transitions effects 4=4244
 tricyclodecane, model 4=3978
 vacancy as phonon field perturb., lattice distortion 4=28445
 vibration band spectra for one dimensional chain 4=8082
 vibration distortion by defects 4=1359
 vibrations in 1 and 3 dim., quantization into phonons, freq. spectrum exptl. determ. 4=15526
 vibration potential calc. by group theory 4=22335
 vibration, study by Mössbauer effect 4=25839
 vibrs. and e. m. fields 4=28346
 vibrational freq. spectra of disordered chains, peaks 4=20186
 vibrational specific heat, theorem, inflection point, generalization 4=1394
 vibrational spectrum of disordered chain, exact calc. 4=20188
 vibrations anharmonicity, rel. to temp. effect on Mössbauer line shift 4=28320
 vibrations, local irregularities influence 4=28341
 virtual symmetry concept 4=22471
 waves, longitudinal, along linear chain of atoms, calc. 4=28342
 wurtzite struct., vibr. spectrum theory 4=30508
 and X-ray calc. methods, anharmonicity effects 4=23390
 zero phonon impurity line broadening 4=30689
 zinc blende type and wurtzite type crystals, optically active lattice vibrations 4=12605
 A^{III}B^V cpds, lattice atom displacement energy, electron bombarded 4=12554
 Al, electron-acoustic wave interaction, 4°K 4=12633
 Al, frequ. of normal modes, meas. analysis 4=20192
 Al garnets, energy calc. var. structures 4=3955
 Al, vibr. spectrum calc. 4=6706
 Al-Ag solid solns., var. with Ag conc. of interatomic force 4=6707
 Al-Ag solid solns., var. with Ag conc. and temp., X-ray diffr. obs. 4=6703
 Al-Ag, X-ray diffr. and crystal lattice vibr., var. with Ag conc. and temp. 4=6708
 AlO₂ (sapphire), phonon traject., and heat pulse propag., low temps. 4=25867
 Al₂O₃, i.r. lattice vibr. spectra analysis 4=4256
 Al₂O₃, phonon generation, coherent, via transducer of insulating CdS films 4=28353
 Ar, from H, D impurity 1s-2p transitions 4=30503
 Ar-H₂ solid solutions, vibrations 4=3855
 Ba(ClO₃)₂·H₂O, H₂O molecular motion, rel. to n. m. r. 4=6692
 BaF₂:Sm²⁺, vibronic spectra model 4=13085
 Ba(NO₃)₂, NO₃⁻ vibrations, effect of coupling 4=10163

Crystals—contd

lattice mechanics—contd

- BaTiO₃, lattice vibr. calc. 4=20193
 BaTiO₃, oscillation spectrum, temp. effect 4=30677
 BaTiO₃, simple ion models 4=12612
 Be, vibr. spectra, by root sampling method 4=20194
 Be, vibr. spectrum for inelastic neutron scatter 4=25840
 C, spin-lattice relax., different carbonization temps. 4=1869
 Ca₃Al₂(SiO₄)₂, energy calc., var. structures 4=3955
 CaF₂ structure, defect-activated lattice bands and vibronic transitions, selection rules calc. 4=28356
 CaMoO₄, i.r. from polarized refl. spectra 4=25841
 Ca(OH)₂, lattice vib. spectra 4=3973
 CaSO₄·2H₂O, vibr. spectrum, resonance splitting 4=3983
 CaWO₄, i.r. from polarized refl. spectra 4=25841
 CdS, multiphonon i.r. absorption 4=7116
 CdS, optically active phonon processes 4=17560
 CdS, phonon scatt., relax. times 4=15411
 CdS, wurtzite, spectrum calc. 4=3975
 CdTe, phonon scatt. by mag. impurities, heat cond. 4=9871
 CdTe, phonon scatt., relax. times 4=15411
 CeMg nitrate, from far i.r. data 4=4254
 CeZn nitrate, from far i.r. data 4=4254
 CsBr, i. r. reson. freq. 4=15702
 CsCl, spectrum, effect on specific heat, acoustic velo. 4=3974
 CsCl type, effective temp. characteristics, temp. depend. 4=9827
 CsCl-type lattice, calc. by Houston method 4=28368
 CsCl-type lattices, phonon spectra, thermodynam. props. 4=1382
 CsF, fundamental dispersion frequ. 4=1737
 CsI, i. r. reson. freq. 4=15702
 CsI, principal oscillation modes 4=1725
 Cu, anisotropic dispersive continuum model 4=1368
 Cu-complexes, organic, spin-lattice relaxation, temp. var. 4=12613
 Cu, force consts. and phonon dispersion, model 4=12604
 Cu, thermal expansion, anisotropic continuum dispersive model 4=12657
 Cu, white, Debye-Waller factor interpret. 4=3982
 Cu₂O, Debye-Waller factor, characteristic temp. and Cu at. scatt. factor 4=10530
 Dy ethyl sulphate, spin-lattice relaxation 4=15671
 Er ethylsulphate, vibrational energy levels 4=1364
 Fe, frequ. spectrum, Born-von Karman model 4=20184
 Fe⁵⁷ compounds, Mössbauer effect obs. 4=12609
 GaS, i.r. spectrum, two-, three-phonon process, space-group selection rules calc. 4=28357
 GaAs, normal vibr. modes, dispersion reln. 4=6709
 GaAs, optical phonons and current saturation at 77°K, 4=17392
 GaAs, phonon scatt., relax. times 4=15411
 GaAs, phonons in diffused junctions, and recombination spectra, 4°K 4=13078
 GaSb, phonon assignments, optical and acoust. 4=3981
 GaSb, phonon scatt., relax. times 4=15411
 Ge, acoustic and optical modes, Grüneisen parameters 4=22507
 Ge, comparison of acoustic and thermal parameters 4=6724
 Ge, electron anisotropic scattering on ionized impurities and acoustic phonons 4=1424
 Ge, interaction with electron on donor centre 4=17393
 Ge, n-type, phonon distrib. disturb. by hot electrons 4=25835
 Ge, phonon spectrum, critical point analysis 4=28355
 Ge, temp. depend. 100°-700°K, neutron meas. 4=9831
 Ge, thermal expansion, anisotropic continuum dispersive model 4=12657
 Ge, white, Debye-Waller factor interpret. 4=3982
 H adsorbed atom on crystal surface, i.r. spectrum 4=2131
 HBr and DBr mol. crystals, from far i.r. spectra 4=20444
 HCl and DCl mol. crystals, from far i.r. spectra 4=20444
 H₂O, adsorbed on crystals, hygroscopic, librations 4=22828
 H₂O molecules in crystals, low-freq. motions, study by neutron inelastic scattering 4=20176
 α-Hg, monatomic rhombohedral model 4=9828

Crystals — contd

lattice mechanics — contd

- Ho ethyl sulphate, spin-phonon interactions, from cond., thermal mag. field peaks 4=17385
 InSb, metallic, and specific heat, calc. 4=1396
 InSb, phonon scatt., relax. times 4=15411
 K, calc. using Toya's electron-phonon interact. 4=20196
 KBr, neutron scatt., Green's function calc. 4=9824
 KCl, calc. 4=28361
 KCl, with KNO_3 , phonon-defect reson. interaction, and thermal cond. temp. var. 4=17382
 KCl: Li^+ , local vibrations, by Raman scattering 4=6713
 $\text{K}_2\text{Co}(\text{CN})_6$, vibrational spectrum 4=25842
 KF, fundamental dispersion freqn. 4=1737
 $\text{K}_2\text{Ir}(\text{CN})_6$, vibrational spectrum 4=25842
 $\text{K}_3\text{Rh}(\text{CN})_6$, vibrational spectrum 4=25842
 Kr, var. with temp. of lattice parameter 4=22502
 KTAO_3 , i.r. active modes 4=30513
 LaBr_3 , vibration modes from vibronic spectra 4=1365
 LaCl_3 , vibration modes from vibronic spectra 4=1365
 LaCl_3 and LaBr_3 , vibrations from vibronic spectra 4=20195
 LaCl_3 , 24 k=O modes, symm. coords. 4=12614
 LaF_3 : Pr^{3+} , excited optical state widths and phonon-ion relaxation 4=30686
 LaF_3 , vibrations 4=22478
 Li, anisotropic dispersive continuum model 4=1368
 Li, Na, K, coupling parameter, semi-empirical determ. 4=1380
 LiBr, fundamental dispersion freqn. 4=1737
 LiCl , frequency spectrum, Houston and Blackman methods of evaluation 4=12651
 LiCl , fundamental dispersion freqn. 4=1737
 LiF , frequency spectrum, Houston and Blackman methods of evaluation 4=12651
 LiF , reflection spectra and dispersion theory 4=30684
 Mg alloys, dilute, Matthiessen rule deviations, rel. to phonon spectrum 4=28531
 $\text{Mg}_3\text{Al}_2(\text{SiO}_4)_3$, energy calc., var. structures 4=3955
 MgF_2 : Ni^{2+} and laser emission 4=5878
 MgO, frequencies from i.r. spectrum 4=1739
 MgO, phonon generation, coherent, via transducer of insulating CdS films 4=28353
 MgO reflection spectra and dispersion theory 4=30684
 MgO: Cr^{3+} and : V^{2+} , phonon interactions rel. to fluoresc. 4=10216
 $\text{Mg}(\text{OH})_2$, lattice vib. spectra 4=3973
 Na 4=6715
 Na, calc., ion screened Coulomb model 4=22480
 Na, Kohn effect, indirect observ. 4=28402
 Na, phonon spectrum calc. by Toya's method with modified interference factor 4=6716
 Na, using lattice dynamics of metals model 4=3976
 NaCl, calc. 4=28361
 NaCl, Debye-Waller factors calc. 4=22481
 NaCl, frequency spectrum, Houston and Blackman methods of evaluation 4=12651
 NaCl structure, defect-activated lattice bands and vibronic transitions, selection rules calc. 4=28356
 NaI, neutron scatt., Green's function calc. 4=9824
 NaN_3 , single crystals, vibrational spectrum 4=22894
 NaNO_2 , asymmetric valence and lattice vibrations, rel. to absorption spectrum 4=7154
 NaNO_3 , force consts. 4=28354
 Nb, obs. by neutron scatt., anomalies 4=3979
 Nd ethylsulphate, vibrational energy levels 4=1364
 Ne from H, D impurity from 1s-2p transitions 4=30503
 Ni, neutron diffn. by phonons 4=28359
 Ni, phonon generation at 9 kMc/s by ferromag. relax 4°K 4=23035
 Ni, vibration, normal modes, freq. distrib., meas. using neutron scattering 4=28360
 Ni_3Co , Debye characteristic temp., ordering effects 4=1982
 NiF_2 , i.r. spectra of lattice vibrs. 4=26208
 Ni_3Fe , Debye characteristic temp., ordering effects 4=1982
 Ni_3Mn , Debye characteristic temp., ordering effects 4=1982
 NiO, spin-dependent i. r. absorption band model 4=10182
 Pr ethylsulphate, vibrational energy levels 4=1364
 Pr^{3+} in LaCl_3 , vibronic selection rules at special points of Brillouin zone 4=12615

 graphite, and anisotropy 4=13516

SUBJECT INDEX

Crystals — contd

orientation — contd

- graphite, due to sliding on Cu 4=17836
 graphite, pyrolytic, formed under pressure 4=4523
 graphites, effect on (h, k) X-ray reflections 4=23446
 ice crystals during freezing 4=4548
 jig, rel. to surface lapping or grinding 4=29028
 lattice plane, counting tube technique 4=17802
 manganite $\rightarrow$ pyrolusite $\rightarrow$ Mn_2O_3 , relationship between orientations 4=26561
 martensite needles on Ni-C-Fe crystals 4=15805
 measurement by cylindrical X-ray camera 4=7592
 metal films evap. on cleaved substrate, temp. depend. 4=10451
 metal surfaces, rel. to 4=26717
 metals, effect on grain size depend. of yield strength 4=13372
 metals, f.c.c. and b.c.c., by ion bombardment ejection patterns 4=23303
 metals, growth of melt with definite orientation 4=7536
 micas, rel. to i.r. spectra 4=15594
 misorientation meas. on Weissenberg goniometer 4=13515
 monochloroacetic acid crystals, 3 polymorphous phases 4=13353
 ortho-dichlorobenzene, rel. to n. q. r. 4=13355
 permalloy films, crystallite effect on magnetization ripple 4=23001
 polycrystalline materials with fibre texture 4=23304
 polyethylene, crosslinked, strained, crystallite orientation 4=29031
 polymers, crystallites, X-ray diffraction method 4=2012
 polyolefins, correlation, random-walk theory 4=7682
 preferred, quantitative determ. from X-ray data 4=15747
 rhombohedral and cubic, from traces on single surface 4=29029
 ruby, rel. to sub-boundary arrangement and density 4=20283
 sapphire, rel. to sub-boundary arrangement and density 4=20283
 sections, use of optical interference figures 4=15748
 steel-Si(3%), methods, cube texture 4=13654
 Tutton's salts, water of cryst., proton-proton vector 4=10450
 X-ray diffr. meas. using polaroid films 4=2010
 Ag, epitaxy on 2 differently oriented LiF crystals 4=10484
 Ag films, epitaxial, on Ge and Si surfaces 4=29188
 Ag, rel. to surface energy 4=15816
 AgCl, faces, rel. to etch-pit formation 4=9966
 Al, rel. to channelling of heavy Na^{24} , Kr^{85} , Rb^{86} , Xe^{135} ions 4=22642
 Al, single, lamellar ribbon impurities 4=23309
 Be films on var. substrates 4=23570
 Bi, preferred growth orientation, effect of Sn additions 4=17783
 CdTe, monocrystalline, rel. to photo-e. m. f. 4=10126
 α -Co, deposited in presence of I ions 4=29106
 Cu electrodeposits, partial (110) pole figures rel. to thickness 4=7669
 Cu, and wear, frictional 4=13393
 in Cu-Al-Ni, during martensitic transition 4=13483
 Fe, deformation, due to layer of oxide formed at high temp. 4=1945
 Fe, electrolytically deposited 4=29030
 Fe filament layers 4=10457
 Fe-Co, elongated particles with Co ferrite coating 4=17655
 FeO thin films on Fe whisker surfaces 4=4668
 GaAs, light-figures method 4=2011
 KN_3 , rel. to Mn^{2+} paramag. resonance 4=23051
 NaN_3 , rel. to Mn^{2+} paramag. resonance 4=23051
 Ni films, evaporated 4=10613
 Ni-Fe (50/50), ordering, neutron effects 4=13207
 RbN_3 , rel. to Mn^{2+} paramag. resonance 4=23051
 Sb, preferred growth orientation, effect of Sn additions 4=17783
 Si, misorientation during Czochralski growth method 4=2034
 Si-Fe, growth requirements, cube-on-edge 4=13655
 Sn, dendrites in high-purity ingot 4=20740
 UC_2 4=29034

Crystals — contd

orientation — contd

- Zn, rel. to thermal expansion 4=17377
 Zn single hexagonal crystals grown in macrosonic fields 4=23351
 Zn tungstate 4=15477
 ZrO_2 , in phase transformations 4=23297
- polarons**
 drift mobility, perturbation theory calc. 4=9923
 Feynman model, Green's function formulation 4=25911
 mobility, low-temperature 4=6807
 mobility minimum, small polarons 4=9924
 molecular vibronic coupling criteria 4=28335
 polarization field with one k-component, Lee-Low-Pines method 4=4025
 small, motion, density matrix formulation 4=22544
 small, optical props. in i.r. 4=22545
 wave functions in external elec. field 4=9922
 CdS, and cyclotron resonance 4=20258
 Ce_2S_3 , γ -phase, from optical parameter meas. 4=13028
- twinning**
 In on amorphous support, obs. by electron microscopy 4=30571
 bicrystal, tilt wall formation, simple model 4=4526
 brass, β , martensitic phase, by X-rays and electron diffr. 4=10526
 calcite, dislocation interactions 4=9955
 calcite, rel. to hardening 4=10373
 calcium selenate hydrate 4=13585
 crossing, {112} in b.c.c. 4=10452
 diamond, trigons on twin boundary, formation 4=15749
 dislocation model 4=7530
 dislocation theory, rel. to Lifshits macroscopic theory 4=1472
 electron diffr. maxima calc. 4=29084
 f.c.c. crystals, deformation twins, nucleation and propagation 4=26578
 intersections mechanisms 4=20277
 mechanical, book 4=7528
 In, mechanical twins, electron microscopic obs. 4=30809
 metals, f.c.c. 4=2013
 pole rather than dislocation model 4=7529-30
 polyethylene, deformed, rel. to stretching direction 4=20679
 in polysynthetic twin, emergent defect behaviour 4=25930
 quartz, artificial, rel. to Li, Na, Ge, Al impurities 4=30810
 ruby, basal 4=20283
 sapphire, basal 4=20283
 thiosalicylic acid, monoclinic 4=29033
 twin intersections, and Cahn's continuity conditions 4=23305
 twins, Co^{59} ferromag. nuclear resonance 4=1860
 AgBr micro crystals, rel. to growth 4=13519
 AgBr microcrystals, rel. to AgCl epitaxial growth 4=23313
 Al creep shear, and grain boundary struct. 4=20641
 Al, planar 4=10453
 Au, boundaries, as vacancy sinks 4=997?
 Au films, electron diffr. and micr. meas. 4=4524
 Au, twins in vapour-grown whiskers 4=4527
 AuCu, order twinning 4=12776
 BaTiO_3 , 4% HNO_3 -2% HF etching 4=30565
 Bi, twin boundaries, props. 4=10454
 Co particles from CoBr_2 , effect on ext. symmetry 4=26594
 Cr, cracks, at grain boundary-twin intersections 4=23136
 Cu crystals, deform. twin form. 4=29032
 Cu, dendrites, pseudopentagonal 4=23306
 Cu, possible pole rather than dislocation model 4=7529-30
 Cu-Al alloy, deformation twinning, study by electron microscopy 4=26579
 Cu-Ge alloy 4=7422
 α Cu-Ge alloys 4=28473
 Fe, deformed at -196°C 4=20719
 Fe, f.c.c., boundary energy 4=13673
 Fe, occurrence in single crystals 4=4529
 Fe, polycrystalline, rel. to grain size 4=15709
 Fe thin foils, zone-melted 4=9974
 Fe-Be (5 wt. %), intersections, mechanical 4=10455
 Fe-(30.9%)Ni alloy 4=17830

Crystals—contd**twinning**—contd

- Fe—(33%) Ni, martensite deformation twins 4=13517
 Fe—Ni—C martensite, rel. to carbide precipitation on tempering 4=15738
 Fe—Si(3.1%), deformation, dislocation networks 4=17432
 Fe—Si(3.25%), and fracture, nucleation 4=20664
 Ga 4=4528
 GaAs, crystal growth from melt with different seed orientations 4=7553
 GaAs on Ge substrates, twin planes, rel. to Ge surface 4=29066
 Mg alloy, polycrystalline, {101 $\bar{2}$ } twin bands, formation of, and recrystallization within 4=23307
 MnAs, above 40°C 4=10540
 Mo, cracks, at grain boundary—twin inter-sections 4=23136
 Mo₅O₄ 4=7628
 Mo—Re alloys, after deformation 4=23308
 Na, rel. to elec. resist., theory 4=22686
 Nb, mechanical, interstitial effects 4=13518
 Ni, plastically deformed, microtwinning, expt. 4=10587
 Pb, twin boundary hardening, solute-induced 4=2014
 Pt, twins in vapour-grown whiskers 4=4527
 α -Pu 4=28973
 Sb, twin boundaries, props. 4=10454
 Se dendrites, rel. to growth and shape 4=26611
 Si, epitaxial layers grown on quartz 4=4563
 Si, 90°, formation and structure, grown by Czochralski method 4=30811
 Ti—Mn alloys 4=4490
 α -U, single crystal extended to fracture 4=23222
 UC₂, mirror twin formation 4=29034
 U—Mo alloys, during deformation 4=20687
 W, cracks, at grain boundary—twin intersections 4=23136
 YCu₂ 4=4630
 Zn, dislocations, etching obs. 4=9968
 Zn, twin boundaries, props. 4=10454
 ZnSb 4=29148
 Zr, polycryst., rel. to basal slip kink bands 4=22574
 Zr, α {11 $\bar{2}$ 1}, shear meas., from grain boundary rotations 4=7531
 ZrO films, assoc. with monoclinic—tetragonal transform. 4=23298

whiskers

- anthracene, growth 4=7568
 corundum, prep. and props. 4=30823
 corundum, real structure, by electron micr. 4=26646
 growth and evaporation, theory 4=29063
 growth, vapour—liquid—solid mechanism using impurity 4=17792
 meas., geometry, from vibr. freqs. 4=2038
 metal, binary, tensile strength and deform. 4=13378
 Ag, cond., elec., low temp. min. 4=17478
 Ag, elec. resistance, rel. to temperature 4=4124
 AlN, axial dislocation effect on growth 4=23354
 Al₂O₃, growth by vapour deposition 4=7567
 α -Al₂O₃, transport and deposition 4=7566
 Co, grown by H₂, reduction of CoBr₂ 4=23258
 Cr, growth 4=10483
 Cu, cond., elec., low temp. min. 4=17478
 Cu, growth 4=13553
 Cu, platelet modification on growth 4=17793
 Cu, resistance, rel. to temp. 4=4116
 Cu, spiral and straight types, growth 4=13550
 Cu—Fe, strength 4=7419
 CuO, is of no importance in Cu oxidation 4=29212
 Fe, electron diffraction examination 4=7570
 Fe, growth and nucleation sites, by oxide replica technique 4=2036
 Fe, growth pyramid form. on surface 4=29064
 Fe, by H reduction of FeBr₃, 3 in. geometry meas. from vibr. freqs. 4=2038
 Fe, magnetization reversal nucleation rel. to surface defects 4=7261
 from FeCl₂, X-ray diffraction obs. 4=13551
 Ge, prep. and props. 4=10480
 Ge—Si solid solutions, prep. and props. 4=10480
 Hg, growth, evaporation kinetics and surf. diffusion 4=4559
 In—Mg(50/50 at.), growth with 96% In 4=20738

Crystals—contd**whiskers**—contd

- K, growth, evaporation kinetics and surf. diffusion 4=4559
 KCl, tubular, plastic deformation, fracture rel. to defects 4=28976
 NaCl, prep. by vapour deposition 4=29065
 Ni₃As₂, vapour grown, space group and lattice parameters 4=10543
 Si, formation on sublimating surface 4=4558
 Si, growth 4=10481
 Si, prep. and props. 4=10480
 SiC, growth, by sublimation 4=20739
 Sn, growth 4=13553
 Sn, Sn—Pb growth, press. induced, var. press. 4=13552
 Zr, growth by h. c. p. —b. c. c. phase transform. cycling 4=13554

Curium

- energy levels, low-lying, of trivalent Cm 4=15275
 Cm³⁺, electronic energy levels, theory and expt. 4=22310
 L X-ray fluorescence yield meas. 4=15307

Curium compounds

No entries this year

Current, electrical

See also Conduction, electrical.

- amplification using secondary electron multiplication 4=16533
 capacitor charging method for small currents 4=5534
 in carbon brushes, effect on friction 4=7415
 in circular loop, possibility of resultant second-order electric field 4=11762
 collection by moving cylindrical probes 4=24670
 configurational e. m. f., Boltzmann transport eqn. 4=8113
 current sheet, rel. to magnetic scalar potential 4=21632
 d.c. to a.c. conversion, magnetoresist. devices 4=22737
 dielectric films, thermal current calc. 4=12958
 displacement current, interpretation for students 4=3098
 electrometer tube, deflecting beam, noise props. 4=5530
 electrometer, vibrating membrane 4=18636
 electron gas, in uniform mag. field, density 4=17405
 galvanometer, ballistic, under exponential current decay 4=21433
 galvanometer, optical lever for Brownian motion obs. 4=5369
 generator of nanosecond steep-front pulses 4=18650
 induced in wire vibrating in mag. field 4=2754
 induction, general, by motion of charge and uncharged conductors 4=3112
 measurement, $\sim 10^{-13}$ amp., use of electrometer circuit 4=14543
 measurement, by storage capacitor, to 10^{-15} A, 4=24524
 megampere, high vacuum, low inductance feed through 4=27459
 in metals, current bursts due to e.m penetration 4=1557
 plasma, circulating currents, in crossed elec. and mag. fields 4=21501
 plasma, two-temp., kinetic eqns. 4=8689
 pulsed particle beams, noninterrupting meas. method 4=3054
 pulsed source, fast, H disch. tube breakdown 4=18652
 regulator for 10 000 A magnet power supply 4=16618
 regulator, $\pm 0.1\%$, for u. v. source 4=14350
 source, const., continuously adjustable, transistor 4=27458
 stabilizer, electron tube heater current 4=14561
 stabilizer for 0.1–11 mA 4=16401
 stabilizer, using mag. field 4=16402
 superconducting sheets, high-field, distrib. 4=22942
 switch on processes in a cylindrical conductor, field changes 4=11499
 switching, by controllable low pressure gas discharger 4=14585
 synchronous machines, transient load angles, recording 4=24539
 10^{-9} to 10^{-8} A, recording apparatus for photo-registration 4=14544
 transformer with superconductive windings, construction 4=16381
 trigatron, pressurized, 10–50 kV low jitter operating range 4=18757
 C resistor, depend. of characts. at He temps. 4=26005
 CdS, current saturation, effect of conductivity 4=30620

SUBJECT INDEX

Curvature measurement

No entries this year

Cyclotron resonance

atmospheric gases, magneto-plasmas, microwave

absorption 4=18879

crystals, rel. to Green's function analysis of galvanomag.
effects 4=6909

flames, low-pressure, ionization study 4=5553

hot electrons 4=6814

ion, enhanced diffusion in H plasma 4=29910

ion, plasma anomalous diffusion 4=29909

ionized gas, particle acceleration by h. f. resonating
field 4=8641

ionized gas, slightly, rel. to collision frequ. 4=461

metal plasma, Fermi-liquid effects calc. 4=17412

metals, electron "liquid", transport theory 4=9889

metals, rel. to electron-phonon interaction 4=4011

metals, in extreme anomalous relaxation region 4=12717

metals, in inclined mag. field 4=17410

plasma, e.m. wave propag., relativistic
dissipation 4=11629

plasma, e.m. wave refractive indices 4=11630

plasma, iono-acoustic emission 4=508

plasma in mag. field 4=2973

plasma mirror devices, electron, for trapping 4=24686

plasma, moving, ionic 4=2996

plasma, non-linear theory 4=24687

plasma, nonuniform cylinder 4=27528

semiconductors, diamagnetic, review 4=23042

semiconductors, metals, in extreme anomalous relaxation
region 4=12717

semiconductors, review including Ge and Si 4=25916

skipping orbit, carrier sign determ. 4=17411

Al, basic electron group, effective masses meas. 4=4007

Al, limiting point, rel. to current sheets 4=9934

Al, rel. to majority carriers effective masses,
anisotropy 4=12697

Ar, slightly ionized, rel. to collision frequ. 4=461

Bi, Doppler-shifted, Alfvén wave analysis 4=12716

Bi, electronic band structure determ. 4=12882

CO₂, slightly ionized, rel. to collision frequ. 4=461

CdS, effective mass of electrons and holes 4=1446

CdS, effective masses det. 4=20257

CdS, < 4.2°K 4=28431

CdS, and polarons 4=20258

CdTe, n-type, 70 Gc/s meas. 4=28432

Cs atom, electron scatt. cross-sect. meas. 4=25570

Cu, new orbits and electron masses meas. 4=9933

Ge 4=23042

Ge, line broadening due to carrier-carrier
interaction 4=20256Ge, line-broadening, due to lattice and neutral impurity
scattering 4=12714Ge, and saturation, use in energy level investigations,
mag. field present 4=28430Ge, ²⁰K, light intensity var. 4=22553

He, slightly ionized, rel. to collision frequ. 4=461

InSb 4=23042

InSb, 4, 8 mm, temp. var., and hole masses 4=1447

InSb, p-type 4=6815

K, Azbel'-Kaner, free masses meas. 4=6816

Na, Azbel'-Kaner, free masses meas. 4=6816

Na, helicon waves, Doppler-shifted and Fermi surface
rad. 4=22554

Na, l.f. magnetoplasma resonance damping 4=1448

O₂, slightly ionized, rel. to collision frequ. 4=461

Pb, Fermi surface meas. 4=6794

PbTe, cyclotron absorption 4=12715

Si 4=23042

Si, line-broadening, due to lattice and neutral impurity
scattering 4=12714**Cyclotrons**

See Particle accelerators, orbital.

Damping

See also Internal friction.

bar, dynamic absorber effect on solid damping 4=18313

beams with internal damping, transverse

vibs. 4=5267

Damping—contdconcentration, fluctuating, by continuous sampling through
a tube 4=8140differential eqns., linear, damping coefft.,
oscillations 4=14011

multiresonant structures, by feedback 4=27240

plasma oscillations, Landau damping, expt. 4=5667

radiation damping, classical and quantum, of free
oscillations 4=2560resonance tube dissipation, coaxial air jet excita-
tion 4=11305

torsional pendulum 4=113

viscous, of oscillating liquid columns 4=138

Cu, damping capacity, influence of deformation at low
temps. 4=23147

Fe, zone-melted, magnetoelastic damping 4=26303

Mg single crystals, prestrained, critical stress

 τ_B for 1.41×10^{-6} g mm per mm² 4=30780

Mn austenite, capacity 4=23183

Mn-Cu alloy, dilatational rel. to distortional strain
ratio 4=11269

Ni austenite, capacity 4=23183

Zr, peak at low temp. 4=26533

Data tables

See Collections of physical data; Tables, mathematical.

Dating

See Earth, age; Radioactive dating.

Dayglow

See Airglow.

Decay periodsSee Hyperons, decay observations; Mesons, decay
observations; Radioactivity, decay periods.**Decay schemes**See Hyperons, decay observations; Mesons, decay
observations; Radioactivity, decay schemes.**Decomposition**

See Dissociation.

Deformation

See Bending; Elastic deformation; Plastic deformation.

de Haas—van Alphen effectSee also Diamagnetism; Magnetic properties,
diamagnetic.

alkali metals, in steady mag. fields 4=26263

bound electrons, theory 4=17620

electron-phonon interaction effect 4=22524

low-temperature production 4=2903

metals, effect of electron-phonon interaction 4=9894

metals, oscillations, rel. to electron-phonon
interaction 4=4011

metals, quantized theory 4=6722

and plasma wave polarization rot. by drift current 4=202

quantum oscillations at high temps. 4=9928

transition elements, Cr group, up to 18 kG 4=7211

Ag, Fermi surfaces, period and effective mass in "necks",
meas. 4=28772

Al, rel. to Fermi surface 4=12697

Al, use in determ. Fermi surface shape 4=6792

Au, Fermi surfaces, period and effective mass in "necks",
meas. 4=28772

Be, prediction from Fermi surface 4=9900

Bi, effect of pressure 4=28760

Bi, and Landau level spin splitting 4=13107

Bi, Shubnikov, 0.5°K 4=17621

Bi, for various orientations, at 0.08°-0.12°K 4=7210

Ca, Fermi surface det. 4=15455

Cd, at high mag. fields 4=22946

Cr, and magnetic structure 4=23027

Cu, Fermi surface necks meas. 4=17622

Ge, heavily doped, magnetoresistance oscs.,
4.2°K 4=28561

In, up to 18 kG, rel. to free-electron model 4=4325

InBi, at liquid He temp., temp. var. 4=30702

MgZn, and crystal Fermi surface 4=1799

Ni, and crystal Fermi surface 4=9907

PbTe, u. s. absorption oscs. 4=6732

Re, Fermi surface on A-L line meas. 4=12696

Sb, Fermi surface models, liquid He temp., calc. 4=28758

Sb, magnetoresistance osc., 1.2°K, and Fermi
surface 4=4138**Demagnetization**

See Magnetization process

- Densitometry**
 colour, for temp. meas. 4=8481
 densitometer, conversion to micro by attachment to microscope 4=18236
 integrating video microdensitometer 4=7595
 X-ray diffraction photographs, microdensitometry 4=23396
- Density**
 critical, according to single phase region data 4=21365
 AgCl-Ag₂S system 4=24235
 UO₂, melting change 4=24438
- gases**
 arcs, electric, vacuum between Fe 4=18776
 diagram expressions in power series expansion in density 4=24130
 dimethyl ether + SO₂, HCl of fluoroform, press. var., and association 4=11258
 measurement, supersonic flow, interferometric, effect of high gradients 4=214
 shock waves, meas. rel. to Mach number, by electron beam method 4=14259
 tensor behaviour in elec. field 4=14219
 CO₂, calc., 0°-1000°C, up to 100 bar pressure 4=5231
 D₂O, at high temp. and press. 4=2657
 H₂O vapour, in boiler, by radioactive tracer 4=16130
 O₂ in shock waves, by u. v. absorpt. technique 4=18341
- liquids**
 alcohol solns., with alkali metals, light scatt. study 4=24174
 alcohols, superheated, (hydrogen bonded) 4=18213
 alkali metal oxides, 1050° to 1500°C 4=24163
 benzene-propyl alcohol, near critical point of liquid-vapour system 4=24184
 binary systems with eutectic state diagrams 4=11177
 cyclohexane binary mixtures, rel. to soln. mol. theory 4=18191
 diagram expressions in power series expansion in density 4=24130
 electrolytes in mixed solvents 4=2659
 metals, high temp. measurement 4=24182
 microfluctuations 4=24183
 molten oxides, Na₂O. GeO₂. SiO₂ system 4=24164
 naphthalene, binary systems, rel. to eutectic 4=11177
 organic coolants for reactors, high temp. and press. meas. 4=4
 oxygen, boiling, bulk density 4=11432
 tensor behaviour in elec. field 4=14219
 B, molten 4=132
 Ba, boiling, crit., temp. var., calc. discrepancy 4=18183
 Bi-S solns. 4=24185
 Ca, boiling, crit., temp. var., calc. discrepancy 4=18183
 Co 4=18184
 D₂O, at high temp. and press. 4=2657
 F₂, calc. using significant structure theory 4=8166
 Fe 4=18184
 Fr, calculation from liquid alkali metals data 4=14182
 H₂O, max., temp. calc. from compressibility 4=8178
 He³-He⁴, maxima temps. 4=16319
 He⁴, meas. under vapour press. 4=11445
 Hg-In amalgam 4=8158
 Hg-Tl amalgam 4=8158
 LiClO₃, molten 4=24186
 LiClO₃-LiNO₃ mixture, molten 4=24186
 Mn-Si, Mn-Si-C, Mn-Fe, Mn-C, 1440°C 4=11156
 Ni 4=18184
 Ni in Bi, 800°C, var. conc., and interstitial occupation 4=14137
 T₂O, by magnetic float method 4=8177
- solids**
 diamonds, natural 4=23151
 films, from light transmission and reflection 4=13679
 glasses, oxide, densification in rigid state up to 80 kbar 4=13408
 gramicidin S iodomercurate 4=30858
 infrared optical materials, forty-eight 4=2811
 magnetized anomalous body, calc., effective 4=5736
 metals and alloys, rel. to surface props. 4=13668
 metals, effect of single vacancies 4=30593
 meteors 4=26929
 meteors, faint photographic 4=29433
- Density — contd**
solids — contd
 polyethylene, effect of crystallization 4=15809
 rare earth rhodites 4=23467
 snow, cover on ice flows, velo. 4=4746
 steel, Cr-Ni, effect of cold working, ageing 4=1951
 vitreous borates and silicates and crystals of same composition and structure 4=2136
 Al₂O₃, sintered, increase by adding MgO 4=20788
 AuSn 4=7619
 CH₄, 77°-85°K 4=26497
 Co 4=18184
 Cu-Al (14.3 at.%), temp. var., and deformation 4=7487
 Fe-Ge alloys, β -phase 4=29118
 GeZnBaO₄ 4=23473
 He⁴ 4=18523
 KCl, effect of γ -irrad. on density 4=10015
 Mg₂Si, 15% increase for cubic to hexagonal transform. 4=30804
 Mo, cold-worked, changes on annealing 4=23177
 Ni 4=18184
 Ni-(6.0-27 wt %) Mn alloys 4=1968
 NH₃, 77°-194°K 4=26497
 Pu-Al, Pu-Ce alloys, determ. for phase boundary position calc. 4=13440
 Se, temp. melting var., from lattice consts. 4=25865
 Si 4=27595
 SiMgBaO₄ 4=23473
 SiO₂, fused, fast-neutron-irrad., meas. 4=28620
 SiZnBaO₄ 4=23473
 Sn 4=17583
 Sn-In (≤ 5 at %) and lattice parameters 4=23493
 Te, temp. var., from lattice parameters, decrease on fusion 4=17819
 Ti-Mo (0-35%), and phase transforms. 4=1964
 Ti-Nb alloys, composition depend. 4=26531
 Ti-Nb (0-60%), and phase transforms. 4=1964
 Ti-V (0-50%), and phase transforms. 4=1964
 U, decrease on annealing following irradiation 4=12835
 U nitrides 4=2093
 Zr-Nb, Zircaloy, changes during annealing in temp. gradient 4=20691
- Density measurement**
 blast-wave density gauge 4=2777
 cryogenic liquids, as function of saturated vapour press. 4=11433
 gradient column method, errors for polymer powders 4=8011
 granular materials, Hg-displacement method 4=23540
 liquid oxygen, boiling 4=11432
 liquids, apparatus for use up to 500°C and 20 kg/cm² pressure 4=4
 solid bodies, with gradient tube 4=5
- Detonation**

Deuterium—contd

- atom and ion beams, 20 MeV, collisional electron detachment from 4=18676
 atoms in H_2 , CH_4 , and C_2H_6 , reaction and moderation probabilities 4=23673
 atoms, in ^2P state, chem. reaction with N_2 4=13724
 chemical analysis, by γ , n, use of β -source bremsstrahlung 4=26772
 conductivity thermal, liquid, ortho and para 4=171
 crystal structure, electron diffraction meas. 4=23439
 crystal structure and heat capacity 4=29110
 diamagnetism, calc., including vibr. 4=9705
 diffusion in Nilo-K glass to metal seal material 4=6876
 diffusion in polymers, and H, T 4=6877
 electric discharge, stationary striations, spectral analysis 4=5568
 electron ionization frequency 4=18675
 hailstone content, for stone trajectories and altitude of form. 4=29277
 ion, D_2^+ , dissociation energies meas. 4=9778
 ions, D_2^+ , dissociation in molecular collisions, cross-section for d-formation 4=25752
 ions, D_2^+ , emulsion sensitivity, up to 25 keV 4=9037
 liquid, μ^- reactions, formation and decay of $(d\mu d)^+$ 4=3953
 liquid state, thermodynamic props., reduced volume, quantum cell model 4=14134
 molecular vibrations, anharmonic atomic, and spectroscopic mass calc. 4=12446
 molecule, mag. suscept. and rot. mag. moments, vibr. and centrifugal effects 4=28191
 neutron scattering, 14.1 MeV 4=16901
 in organic liqs., nuclear quadrupole relax. 4=24248
 plasma, density meas., with T ion beam 4=2990
 plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
 plasma, heating by fast magnetic compression 4=8694
 plasma, ionization and heating, rel. to impurities 4=8686
 plasma, Joule heating in strong magnetic field 4=8685
 plasma θ pinches, ionization rates and impurity radiation losses 4=18958
 plasma, Θ -pinches, ionization rates and power loss by impurities 4=16494
 plasma, two-temp., transfer coeffs., calc. 4=14631
 plasmoids, fast moving 4=11604
 positron annihil. mean life in liq. and solid 4=4031
 Raman spectrum, laser stimulated, four photon, difference from H_2 4=9704
 shock waves, precursor effect, microwave study 4=18347
 solid, e.s.r. of unpaired atoms rel. to lattice sites 4=4402
 solid electron diffraction patterns 4=13589
 spectrum of Rb, doublet displacement, pressure var. 4=6483
 ultrasonic absorption, rotational relaxation, 77°, 90° and 293°K 4=16149
 viscosity, -50° to 150°C, below 200 atm. 4=24264
 D_2 arc discharge, visible and i.r. meas. 4=18781
 D_2 beams, scattering by Ni, polycrystalline 4=19996
 D_2 condensed layers, texture, rel. to H_2 4=13682
 D_2 diffusion in CCl_4 4=18189
 D_2 , heat capacities, 1.5°-22°K, and heats of fusion of liq. rel. to ortho—para comp. 4=20212
 D_2 liq., surface tension rel. to temp., expt. 4=27164
 D_2 , photoionization and absorpt. cross-sections, 580-1000Å 4=28190
 D_2 , slow neutron scatt. calc. 4=25645
 D_2 scattering of H atoms 4=25780
 D_2 screening consts., calc., including vibrations 4=9705
 D_2 , thermodynamic and partition functions 4=28177
 D_2 and H_2 , intermolecular potentials, difference 4=9792
 in He of reactor coolant loop, mass spectrometric determ. 4=2174

Deuterium compounds

See Hydrogen compounds

Deuterons

See also Cosmic rays, deuterons; Nuclear reactions, deuterons.

- accelerator beam, 150 keV, 5 Mc/s pulse modulation 4=16601
 ang. correl. with nucleon, emitted from excited nucleus 4=22107
 breakup by 14.7 MeV neutrons 4=6056
 D-state, rel. to nucleon soft core parameters 4=11981

Deuterons—contd

- disintegration in Coulomb field, perturb. theory 4=6141
 disintegration, by nucleons, diagram summation technique 4=3494
 dispersion theory analysis 4=27907
 dynamical model based on Regge pole theory 4=12077
 e.m. form factor, application of dispersion theory 4=960
 e.m. form factor, relativistic calc. 4=16973
 electrolytic separation, rel. to cathode material and temp. 4=2159
 form factor, e.m., calc. error 4=19600
 hyperdeuteron of spin 0, possible 4=9316
 magnetic moment, exchange-current contrib. 4=9304
 magnetic moment, velocity-dependent-potential correction, 4=30276
 n-p capture, nucleon current operators, nuclear interact. effect 4=27908
 $p + p \rightarrow d + \pi^+$, rel. to energies 4=9305
 production, by $p + p \rightarrow d + \pi^+$, 1.5 to 2.5 BeV 4=9191
 production by p's at 30 GeV, from n-p pairing, calc. 4=25202
 pseudoscalar parameter introduction 4=30223
 repulsive core model 4=892
 theory amplitude of nucleon current between one nucleon and deuteron states 4=12075
 two-body bound state model 4=16974
 wave function, analytic 4=19599
 wave-functions, ground state 4=12076
 wave-function parameterized for fitting 4=25201
 $B^{10}(Li^7, d)N^{15}$ 3.5 to 4.5 MeV ang. distributions 4=22220
 $B^{11}(Li^6, d)N^{15}$ 3.5 to 4.5 MeV ang. distributions 4=22220
 $He^3(\nu, p)D$, 35 MeV 4=6147
 $He^3(p, d)He^3$, ang. distrib. 4=16894
 in Li^6 photofission, energy spectra 4=25444
 $Li^6(\alpha, d_0)Be^8$, ang. distrib., medium energies 4=9567
 $Ni^{62}(He^3, d)$ spectrum and ang. distrib., and Cu^{63} levels 4=17054
 $O^{16}(p, d)O^{15}$, spectrum, and O^{16} nuclear shell struct. 4=12222
 $O^{16}-Al[Ni, Ag, Au]$ reaction, 167 MeV emission 4=22229
 $S^{32}(n, d)P^{31}$, 14 MeV, energy and ang. distrib. 4=22021
- effects**
 anthracene, scintillation light yield 4=26255
 anthracene, 24 MeV, low-temp. scintillation 4=26254
 inert gases, excited atoms formation by electron capture 4=11530
 naphthalene, 24 MeV, low-temp. scintillation 4=26254
 noble metals, Frenkel defects, spontaneous recomb. 4=22564
 terphenyl, scintillation light yield 4=26255
 Al, range meas., 5-27 keV 4=1540
 Au, range meas., 5-27 keV 4=1540
 Cu, range meas., 5-27 keV 4=1540
 LiF, coloration, effect on fluoresc. 4=4302
 LiF, 13.5 MeV, coloration layer meas. 4=4082
 Ni, Frenkel defects, spontaneous recomb. 4=22564
- interactions**
 break-up by nucleon, graph summation method 4=21956
 electron-deuteron inelastic scattering, final state interactions 4=30215
 d-d, d-t, in n source, sealed tube 4=12024
 $d + d \rightarrow He^3 + n$, catalysis by μ^- -mesons 4=27909
 $d + d \rightarrow He^3 + n$, negative μ catalysis 4=25205
 $d + d \rightarrow He^4 + \gamma$ at 1.35 MeV 4=961
 d, e disintegration, final state interaction 4=21955
 $d + \gamma \rightarrow d + \pi^0$ 4=21963
 $d + \gamma \rightarrow \pi^0 + d$, 500 MeV, rel. to model with ^3D wave contrib. 4=9303
 d (n, p) 2n, p spectrum high energy limit and n-n scatt. 4=25105
 d(n, p)2n, rel. to n-n scatt. 4=12009
 d(p, 2p)n, 50 MeV 4=21957
 D-D fusion in Zeta, neutron spectra 4=3013
 D(d, n)He³, anisotropy factors, total neutron yield 4=9308
 D(d, n)He³, differential cross-section, 25.3 ± 0.3 MeV 4=6141
 D(d, n)He³, neutron polarization, ang. and energy distrib. 4=9307
 D(d, n)He³, neutron polarization, energy depend. 4=25204
 d(d, n)He³, n polarization, 4=30277
 D(d, n)He³, n polarization, 70-153 keV 4=16977
 D(d, n)He³, polarization of neutrons 4=16978
 D(d, n)He³, 3-19 MeV 4=19605
 D(d, n)He³, 12-20 MeV, neutron polarization 4=6145

Deuterons — contd**interactions — contd**

- D(d, p)T, differential cross-section, 25.3 ± 0.3 MeV 4=6142
 form factor, mag., low momentum transfer, from e-p
 to e-d scatt. 4=19601
 γ -d, $\pi^\pm$ production, differential cross-sections 4=19552
 K^- -d capture at rest, Λ -N scatt. processes 4=12066
 n capture, and H^3 , He^3 form factor sharp fall off 4=21965
 n + d $\rightarrow$ p + 2n, rel. to phenomenological
 potentials 4=21958
 p-d, 745 MeV, He^4 and H^3 production with pions 4=6097
 p + d $\rightarrow He^3 + \gamma$, catalysis by muons, γ -rays study 4=6675
 p + d $\rightarrow He^3 + \pi^0$ and $H^3 + \pi^+$, meas. and anal. 4=6098
 p + d $\rightarrow He^3 + 2\pi$, rel. to strong π - π interaction 4=6100
 p + d $\rightarrow He^3 + 2\pi$, logarithmic singularities 4=21898
 $\bar{p}$ + d $\rightarrow \Lambda + \Sigma^- + \bar{\Xi}^+$ meas. 4=21854
 $\bar{p}$ -d, production of strangeness -3 baryon, theory 4=9286
 π^- + d $\rightarrow$ n + n + γ , γ spectrum and n-n scatt. 4=25104
 π + d $\rightarrow$ p + p, impulse approx. 4=19559
 π^+ + d $\rightarrow$ p + p + f_0 missing peaks and $f_0 \rightarrow 2\pi^0$ or
 π^+ + π^- ratio 4=25154
 π^+ + d $\rightarrow$ p + p, 0.65 to 1.95 GeV/c, differential cross-
 section, meas., 4=30258
 $\pi^\pm$ + d $\rightarrow K + (\Lambda$ or $\Sigma) + N$, and Λ , Σ^0 isospin purity 4=9289
 $\pi^\pm$ photoprod. ratio from deuterium 4=930
 H^3 (d, p), search for H^4 4=15110
 He^3 (d, t) He^2 , half life meas. 4=9320
 He^3 + d(6-10 MeV), p spectrum, and He^4 excited
 state 4=15112
 He^4 (d, np) He^4 , p spectra 4=21959
 He^4 (d, p) He^5 stripping, 24.3 and 27.3 MeV 4=9310
 T(d, n) He^4 , neutron polarization, 4=30279
 T(d, n) He^4 , 1 to 3 MeV. 4=30278
 T(d, n) He^4 , 3-19 MeV 4=19605

photodisintegration

- covariant description 4=9306
 covariant theory 4=25203
 cross-sections and polarizations, to 130 MeV 4=19603
 parity nonconservation effect below pion prod
 threshold 4=16976
 theory below pion production threshold 4=16975

polarization

- elastically scattered on nuclei 4=30347
 e-d scatt., calc. 4=21962
 electric, by point charge, for ground state 4=959
 in (d, n) reactions, rel. to differential cross-section and
 n polarization 4=9551
 in scattering by He^4 4=19606
 after π^0 photoproduction 4=21963
 polarization, from Saclay cyclotron 4=19602
 resonant depolarization in cyclotron 4=24772
 from Saclay cyclotron 4=19602
 source of polarized deuterons 4=11988
 tensor polarization parameters in d-p scatt. 4=3495
 Ta scatt. at 13.6 MeV, meas. 4=6369

scattering

 doped synthetic, anomalous X-ray spikes 4=6819
 electron spin resonance, rel. to neutron dose 4=7324
 electronic band structure, LCAO calc. 4=25898
 excitation, electronic, by charged particles 4=17408
 friction and wear in high vacuum 4=23152
 growth history, natural, by etching 4=2027
 irradiat., optical effects, defects and paramag. res. 4=28507
 lattice vibs., phonon dispersion relations 4=30512
 luminescence excitation spectra and recombination radiation 4=10214
 magnetic props. calc., from X-ray meas. of electron density 4=7216

Diamonds—contd

- melting temp. and polymorphic transition under press. 4=5448
 microparticles, accel. to simulate meteors 4=3062
 molecular C ions formed in spark source, mass spectro-graphic study 4=9782
 natural, density determ. 4=23151
 natural octahedral, growth history 4=26595
 natural and synthetic, i.r. absorpt., 6 band groups 4=7129
 optical props., u. v., from refl. spectrum 4=13033
 phase transformation, to graphite, equilibrium curve, calc. 4=4508
 phase transformation, to graphite, study methods 4=4507
 phonon spectrum, critical point analysis 4=28355
 photoconductivity, optical transmission, and electron states of semiconducting diamonds 4=28642
 plastic deformation, nature 4=15707
 Raman spectrum, Stokes and anti-Stokes lines, laser stimulated 4=7105
 recombination radiation meas. analysis 4=13072
 semiconducting, conductivity, decrease on irradiat. by n, e 4=4146
 semiconducting, holes, density of states mass 4=22533
 semiconducting, luminescence and birefringence 4=10213
 semiconducting, (100) and (111) surfaces, electron diffr. meas. 4=26704
 semiconducting, surface structure 4=30877
 Siberian, luminescence temperature quenching, -196° to 500°C 4=7179
 spectra, absorption, and electron states 4=10172
 spectrum, irradiation, n, e, γ , thermal annealing effects, review 4=1729
 spirals, on octahedral faces, hexagonal form 4=23312
 sputtering, difference between focusing and channelling 4=25980
 (111) surface states 4=22542
 twin boundary, trigon pairs, formation 4=15749
 type I, α -particle counting 4=9324
 X-ray diffr. and u. v. absorpt., by platelet imperfections 4=28683
 X-ray reflection values 4=26188

Dichroism

Dielectric devices

- artificial dielectrics, anisotropic, oblate and prolate, first-order theory 4=26094
 capacitance of thin dielectric structures 4=11498
 capacitor, dielec., space-charge-limited conditions 4=1644
 capacitor, stable, time and temp. 4=27456
 capacitors, films, anodic oxide, review 4=2934
 ceramic rutile—Au rectifiers, meas. 4=12979
 diode and triode characteristics at v. h. f., theory 4=7060
 diodes and triodes, space-charge-limited, review 4=15564
 diode, tunneling through metal oxide film 4=15566
 electrodes, dielec. coated for vac. insulation of h. v. 4=24536
 element, autostabilizing dielec., explanation 4=22789
 ferroelectric tube electromechanical acoustic generator theory 4=24309
 metal—insulator—metal, pot. barrier shape meas. 4=26136
 metal—insulator—metal sandwiches, electron current, energy distrib. 4=12977
 metal—dielec.—metal sandwiches, rectification 4=15565
 mica test capacitor, dielec. losses and cond. 4=22787
 parametric amplifier, microwave 4=24828
 triglycine sulphate, use as autostabilizing element 4=22788
 triode, surface-channel, space-charge-limited, theory 4=12978
 tunnel cathode, injected electron temp. 4=12959
 tunnelling structures, thin-film, current-voltage relns. 4=22786
 Van de Graaf generator, dederon tape belts use 4=29858
 $Al-Al_2O_3-Al$ films, electron tunnelling theory 4=17526
 $Al-Al_2O_3-Al$ tunnel cathodes, hot electron transport 4=22762
 $Al-Al_2O_3$ —solid rectification, effect of water vapour 4=20427
 $Si-SiO_2-Al$ structures, conductance laws meas. 4=20393
 TiO_2 rectifying barriers, current meas. 4=17525

Dielectric measurement

- capacitance, abs. meas. method 4=24519
- complex dielec. const. at 8 mm, interferometric and standing-wave methods 4=418
- e.m. spherical resonators with small spherical samples 4=30056
- glass, immersion method for permittivity 4=26098
- H₂O, decimetre const. meas. 4=24227
- liquids, ϵ up to 35 4=8584
- liquids and gases, surface prep. of electrodes 4=5532
- liquids, elec. strength, automatic meas. 4=2926
- liquids, permittivity and loss, test cells 4=11490
- loss-angle tangent determ. by resonance circuit method 4=10091
- metal halides, constants and anisotropies 4=1646
- microwave, by cavity perturbation of freq. 4=18629
- microwave methods, cm 4=5531
- multilayer optical props. by elec. simulator 4=21306
- permittivity at sub-millimetre wavelengths 4=4198
- polymers, complex const., 1-100 c/s 4=419
- polymers, relax. meas., 10^{-2} c/s-300 Mc/s 4=18630
- reflection and transmittance meas. in decimeter range, optical method 4=16383
- by resonators and coaxial lines 4=16384
- Schering bridge, automatic balancing 4=18628
- semiconductors, waveguide 4=17482-3
- solids, microwave region, graphical anal. method 4=7026
- solns. in H₂O, decimetre const. meas. 4=24227
- strip-line cavity 4=24520
- transmission-line, effect of sample thickness 4=16385

- p-chloranil, current—voltage char., and traps 4=10101
- at cryogenic temps., review 4=17512
- crystal space groups, dipole structures 4=7579
- crystal space groups, rel. to dipole structure 4=10492
- crystals, permittivity, theory 4=10090
- diamond, dielec. const., press. depend. 4=12960
- dielectric constant, rel. to electron gas stopping power for charged particles 4=27572
- dielectric const., temp. depend. 4=26092
- effect of moisture absorption 4=28606
- electric fields, alternating, response of poor conductor 4=30642
- ethyl esters in α -phase, absorption, anomalous behaviour 4=10102
- ethyl stearate and behenate, absorpt., two position model 4=12965
- films, electron tunnelling 4=22660
- films, very thin, optical absorpt. 4=22830
- glass, immersion method for permittivity, meas. 4=26098
- glass, from space charge and electrode polarization 4=28614

Dielectric properties of substances—contd

solids—contd

- glass under very high pressure, activation energy
var. 4=30645
- glycine silver nitrate, rel. to ferroelec. transit. 4=20423
- ice, Arctic sea, dielectric constant and loss tangent, freq., conductivity and temp. var. 4=26100
- infrared optical materials, forty-eight 4=2811
- insulators, polarization investigation 4=12955
- ionic crystals, with disordered charge distrib., losses 4=26096
- layers, effect on longit. Kerr effect 4=18436
- lead titanate zirconate, dielectric consts., meas. 4=15563
- meas., capacitance bridge, 5 c/s-500 kc/s, for quartz, high temp. 4=2927
- metal halides, consts. and anisotropies 4=1646
- metal oxide film, tunneling current 4=15566
- metals, Cu, Ag, Au, theory review 4=13047
- metals, dielec. const., inverse value, rel. to micro-characteristics in case of anomalous skin effect 4=13000
- mica, rel. to adsorption energy of water 4=7693
- mica, thin layer, as capacitor, losses and cond. 4=22787
- mixtures, dielectric const. calc. 4=17514
- mylar, l.f. losses at liquid He temps. 4=20411
- noble gases, dielectric constants rel. to Clausius-Mosotti law 4=30688
- oxide films, space change in growth 4=7028-9
- p.t.f.e., loss increase by X-rays 4=20412
- p.v.c., relaxation, similar to acoustic 4=15419
- paper, adsorption of water, effect on microwave permittivity 4=1656
- Plexiglas, constant and loss factor at 36.06 Gc/s and 7.86 Gc/s 4=7040
- poly- γ -benzyl-L-glutamate, dispersion and struct. 4=26109
- polycarbonate resins, α -, β - and γ -absorption peaks meas. and origin 4=30648
- polyethylene, loss, γ irradi., large change mechanism 4=7039
- polymer thin films, 50-150 Å, 77°-300° K 4=22769
- polymers, molec. relaxation, 50-100 deg. above vitrification point 4=1333
- polymers, polar and non-polar, dipole relaxation, review 4=26108
- polymers, rubbery, losses, -180° to 25°C 4=15713
- polymers, > 300°C 4=20410
- polypeptides, synthetic, dispersion 4=12966
- polystyrene, current oscs., high voltage 4=28621
- polystyrene films, formed in glow discharge 4=4207
- polytetrafluoroethylene, elec. cond., anomalous and steady state 4=10103
- powders, permittivity in 10 000 Mc/s band 4=26093
- quartz permittivity, sub mm, compared with Rexolite 4=4198
- quartz, temp. var., and alkali impurity imperfections 4=12739
- relaxation 4=10104

- He⁴, microwave frequencies 4=18523
- I crystals, 180°-330° K, meas. along crystal axes 4=7032
- InP, InAs, InSb and bandgap and occupancy 4=28557
- In₂S₃, meas. 4=20374
- K, constant, 0.6 to 2.5 μ wavelength range 4=12666
- KBr, lattice dynamics, Green's function calc. 4=9824
- KBr, r.f. dispersion at high temps. 4=26106
- KBr, rel. to fast electron-irrad. 4=1651
- KCl, Ca-doped, dipole aggregation process 4=1652
- KCl crystals, wave-number dependent dielectric function 4=15556
- KCl, elec. cond., Sr doped, temp. var., and association 4=20407
- KCl, high-temp. loss, rel. to Sr content 4=28619
- KCl, high-temp., rel. to vacancy pairs 4=7033
- KCl·CaCl₂, dielec. losses, effect of ht. treatment and plastic deform. 4=26103
- K₂O·2Ta₂O₅ 4=23465
- KTaO₃, paraelec., microwave, Curie-Weiss law 4=26121
- LiF, defects giving dielec. props., recovery kinetics 4=1850
- Li₂SO₄·H₂O, protonic conductor, two dispersions 4=10097
- Li₂SO₄·H₂O, rel. to proton mobilities 4=28480
- Mg₃B₂O₁₁Cl, phase transformation, and absence of ferroelec. 4=4201
- MnS, dipolar relax., α green, due to adsorbed S 4=20406
- NaCl, losses, effect of hydrolysis, meas. 4=20409
- NaCl, r.f. dispersion at high temps. 4=26106
- NaCl, relaxation due to impurity-vacancy complexes 4=28983
- NaCl:Ca 4=12961
- NaI, lattice dynamics, Green's function calc. 4=9824
- NaNbO₃-KSbO₃, effect of substitution of Na by K 4=7035
- NaNbO₃-NaSbO₃, effect of substitution of Nb by Sb 4=7035
- NaNO₂, near Curie point, temp. dependence 4=28630
- NH₄NO₃, dielectric anomaly in low frequency region 4=4199
- NiFe garnet, fine grain, loss, microwave meas. 4=13299
- Pb silicate glasses, radiation effects on logs 4=17515
- Pb zirconate titanate, modified by Bi ferrite, dielectric constant 4=7049
- Pb zirconate titanate ceramic ferroelectric resonators 4=28629
- PbC₂O₄, permittivity and losses, low frequency 15°C 4=1654
- PbHfO₃, complex dielectric const., study 4=1866
- PbMg_{1/2}W_{1/2}O₃, antiferroelectric Curie point, anomalies in elastic yield, internal friction 4=1953

SUBJECT INDEX

Dielectric properties of substances—contd

solids—contd

- Pb(NO₃)₂, meas. by graphical anal. method, microwave region 4=7026
 PbS, from optical i.r. transmission and reflection 4=22874
 PbSe, dielectric const., imaginary part, analysis 4=14013
 PbTe, 24 Gds, < 200, from cavity surface impedance 4=17516
 PbTiO₃, paraelec., microwave, Curie-Weiss law 4=26121
 PbTiO₃—PbZrO₃—LaFeO₃ system, antiferroelec. phase 4=28633
 Pb(ZrTi)O₃, modified, press. of 0-10 000 psi effect rel. to acoustic projectors 4=26117
 RbNO₃, absence of ferroelectricity, crystal struct. mechanism 4=4202
 RbNO₃, single crystals, from room temp. to m.p. 4=22779
 S powders, density var., 9200 Mc/s 4=22758
 S, rhombic, high-voltage polarization, current flow meas. 4=10098
 Sb, from i. r. props. 4=28672
 SbSI, transition, non-polar to ferroelec., lattice const. changes 4=20757
 Se, amorphous, poly- and monocrystalline, dielectric const. 4=26057
 Si Schottky diodes, image force dielec. const. 4=26081
 SiO films, 10⁻² to 10⁷ c/s 4=22766
 SiO films, 400 c/s-12 mc/s loss 4=1655
 SiO₂, fused, fast-neutron-irrad., room temp. props. 4=28620
 SrTiO₃, paraelec., freq. spectrum, temp. depend. 4=28344
 SrTiO₃, paraelec., microwave, Curie-Weiss law 4=26121
 SrTiO₃—Bi₂O₃—3TiO₂ 4=26129
 Ta anodic oxide films, effect of heat treatment 4=10099-100
 Ta₂O₅, α and β forms, dielec. const. and dissipation factor, 77° to 373°K, 100 c/s to 100 kc/s 4=12964
 TiO₂ (rutile), apparent dielectric const. at various field strengths 4=17522
 TiO₂ (rutile), electronic suscept. theory 4=13123
 TiNO₃, meas. by graphical anal. method, microwave region 4=7026
 ZnO, and crystal struct. 4=22725
 ZnO, electrophotographic, charging in discharge 4=18443
 ZnS, evaporated layers 4=4206
 ZnS phosphors, photodielec. meas. and models 4=22808
 ZnS—CdS: Cu Ag type, optical effects, theory 4=30647
 ZnS:Cu, ZnS:CdSCu and luminescence props. 4=4284

solids, ferroelectric

See Ferroelectric materials

Differential analysers

See Calculating apparatus, differential analysers

Differential equations

- Appell function F₃, special soln. 4=11018
 diffusion, one-dim., finite difference methods, relax. patterns, multiparameter families 4=16064
 first order, simultaneous, governing soln. of nonlinear systems 4=11020
 generalized axially symm. potential theory, Bergman's integral operator method 4=24018
 Hamilton-Jacobi, variable separations, rel. to relativistic one-body problem 4=5033
 heat cond., linear, with discontinuous coeffs., homog. difference solns. 4=14422
 Hermitian, contour integral solution 4=12
 hypergeometric functions F₁ and F_D of two and more variables 4=11017
 Laplace expansion, generalization to arb. powers and functions of distance 4=11022
 Laplace transforms of empirical curves, use 4=21017
 linear, second degree, damping coefft., oscillations 4=14011
 Maxwell's eqns., integration 4=24796
 optimal control, successive approx. soln. 4=18030
 oscillating systems, nonlinear, transitional processes 4=8018
 partial, nonlinear hyperbolic class, spectroscopic-perturb. procedure 4=11021
 partial, nonlinear hyperbolic, singularities of solns. 4=18028
 Poisson's equation with axial symmetry, relaxation soln. simplification 4=18029

Differential equations — contd

- shock waves, m.h.d., reduced form system, continuous solns. 4=11292
 spherical harmonics, arb. functions, three-dim. addition theorem 4=11023
 stability, non-linear oscillating or rotating systems 4=16164
 stochastic system, stability probability 4=8023
 sun, cyclic activity, dynamical props., calc. 4=29437
 Thomas-Fermi fn. and derivative, rational approxm. 4=27020
 three-body problem, perturbations of regularized equations 4=24017
 $\psi_{xx} + 1/x(\psi_x) + Kx^n\psi = 0$, soln. in terms of simple tabular functions 4=8020

Diffraction

- aperture or disc, circular, calc., successive approx. 4=21022
 calculation, successive approx., large integration region 4=21022
 cylindrical wave by cylinder, dark field 4=29516
 elastic waves, by crack 4=18317
 elastic waves, by spherical cavity 4=24292
 fluctuating fields, review of Soviet papers 4=2527
 seismic waves, forms and spectrum 4=24291
 shock waves, plane wave, by contours of arbitrary shape 4=14257
 slit or strip, large, calc., successive approx. 4=21022
 smooth transparent object, geom. theory 4=18033
- acoustic waves**
 acoustic solid lens, image struct. 4=24324
 cylinder of arbitrary shape, integral eqns. 4=2791
 hydroacoustic plane waves on boundary of 2 elastic plates 4=8347
 Kirchhoff approx. for plane wave on in. disc. 4=27263
 image fluctuation spectrum, effect of lens 4=283
 in medium with spheroidal inhomogeneities 4=18356
 oblate spheroid, penetrable, theory 4=14293
 plane hydro-acoustic wave, at crack in elastic plate 4=21248
 plane waves, by elliptic cylinder 4=5322
 pulses by fluid cylinder 4=24325
 in random sound field by spheres and cylinders 4=8343
 random sound field, by various shapes 4=2792
 Rayleigh disc, correction meas. 4=21254
 shapes suitable for transducer design 4=8342
 turbulent flows, noise generation, diffraction theory 4=5299
 wedge-shaped regions with ideal boundaries, diffr. of plane, cylindrical and spherical waves 4=5320
- acoustic waves, ultrasonic**
 cylinder in isotropic medium, Fresnel theory 4=5324
 cylinder, limiting transition to light and dark regions 4=5325
 elastically anisotropic medium 4=14294
 water, effect on u.s. velocity, interferometric meas. 4=21131
- electromagnetic waves**
 aperture, boundary wave theory 4=694
 aperture, circular, non-uniform 4=697
 aperture, polarization of far field, theory differences 4=5810
 application of Bessel function products integrals 4=24830
 application of simultaneous Wiener-Hopf eqns. 4=27643
 boundary value problems, recent solutions 4=707
 by circular aperture 4=27649
 circular aperture, coherent, line integral calc. 4=3147
 circular apertures and discs, integral represent. method 4=24837
 conducting plane in plasma, calc. 4=27644
 by conductors, perfect, with coating 4=24844
 at contours or bodies of arbitrary shape, theory 4=24290
 convex cylinder, short waves, and diffusion, transverse 4=690
 convex surface, h.f. asymptote 4=19223
 cylinder, parabolic, short waves, asymptotes 4=19222
 cylinders, two parallel elliptical 4=24838
 decomposition into geometric optical and diffracted waves, Kirchhoff's theory 4=695
 dielectric body of arbitrary shape, sphere perturb. soln. 4=27645

Diffraction — contd**electromagnetic waves — contd**

- diffraction grating, finite conductivity effects, computer calc. 4=14888
- disk, circular, plane, scalar, short waves 4=692
- Fresnel field of directive antenna 4=8947
- by grating, conducting, for plane monochromatic wave 4=3148
- grating, transparent sinusoidal profile 4=21654
- guided, by slot, broad, transverse 4=715
- at interface of two dielectrics 4=11799
- by ionospheric irregularities, computing method 4=26843
- ionospheric radio star scintillation, interferometer meas. 4=13840
- Kirchhoff solution 4=24835
- Kottler's theory, Fresnel field in 4=698
- losses in beam wave-guide 4=736
- metal grating with screen and magnetodielec. 4=14889
- metallic grating, plane, on dielec. layer 4=8936
- microwave diffraction field meas., by light-modulated scattering 4=24841
- mixed boundary value problem, uniqueness theorem 4=11797
- model simulation method 4=8940
- numerical integration of Fresnel-Kirchhoff formula 4=3170
- by plane double grating 4=24840
- by plane double metallic grating 4=24839
- plane wave at single and at two perfectly cond. half-planes between 2 media 4=5809
- plane waves by conducting cylindrical lamina 4=27647
- plane waves by slit between two different media 4=5812
- plates; inclined 4=3149
- polygonal cylinders, geometrical theory 4=11798
- review of last 3 years work 4=30051
- review, short waves, ray propagation and local emphasis 4=689
- by several smooth surfaces 4=5808
- shadow, boundary layer calc. 4=696
- simple solution reasons 4=699
- sinusoidal grating, rel. to optical props. of thin films 4=27819
- sphere, inhomogeneous, discussion 4=5811
- spheroid, thin, oblate, scalar, radiation pressure 4=691
- stratified medium, h.f. 4=3146
- strip, soft, plane wave, line source solution 4=693
- transient, plane 4=702
- by two coaxial disks 4=27648
- two dimensions, soln. 4=19220
- two discs, dipole source 4=19224
- uniaxially anisotropic regions, theory 4=14883-4
- waveguides and resonators, open, with plane mirrors 4=14880
- wedge, conducting, bounded by anisotropic dielectric 4=19221

electrons

See Electron diffraction

light

- at aperture, comparison of Kirchhoff and Rayleigh-Sommerfeld theories 4=16249
- apodiser, circ., prep. by evaporation in vacuo 4=21308
- by black obstacles, boundary condition approximation 4=8451
- boundary diffraction wave, for mutual coherence function 4=29768
- coronagraph, effect of boundary diffraction wave 4=29461
- Debye-Sears effect comparison of new theory with expt. 4=16250
- Debye-Sears, spectra intensity computer calc. 4=14386
- diffraction image, three-dimensional, and generalized aperture 4=11331
- effect on imaging square-wave object in incoherent light 4=5392
- effect on ruby laser output beam 4=30098
- expt., rel. to primary light standard 4=14329
- extinction of light by spherical particles 4=5397
- far-field patterns for single and multiple apertures 4=18422
- ferromagnetic domains, magneto-optical study 4=7239
- Fresnel, laboratory experiment 4=18420

Diffraction — contd**light — contd**

- hexagonal patterns in insect vision 4=20993
- images with coma, diffraction effects 4=27290
- Kirchhoff diffraction pattern calcs. 4=8445
- laser, ruby with slit in Fabry-Perot system 4=8996
- and magnification beyond Rayleigh's limit, diffraction theory 4=8388
- monochromatic, parallel, coherent, without laser 4=328
- orthogonal to prog. u.s. wave, at infinity 4=24393
- patterns, production conditions 4=27333
- plane wave diffraction by metallic grating 4=2853
- point sources, total illuminance in image, meas. method, theory and expt. correl. 4=5367
- quartz, by optical phonons, u. v., quantum electronics 4=24925
- by rectangular aperture, gen. soln. in presence of aberrations 4=8452
- resolving power, ambiguous image concept 4=18390
- by rotating, rectangular apertures in astigmatic systems 4=11360
- sampling theorem, application to diffraction theory 4=18421
- use in scanning variable-density seismogram 4=23700
- self-radiant line elements, rel. to meas. by method of steepest slopes 4=14335
- by sound, dependence on length of sound field 4=2851
- by sound, improved experiment 4=2850
- by ultrasonic waves, amplitude modulated 4=29769
- ultrasonic waves, successive diffraction theory 4=8446
- ultrasonic waves in water 4=18425
- u.s., intensity calc. 4=24392
- wavefront change in shape, formulae 4=11327
- wavefront reconstruction with continuous-tone objects 4=5393
- wide-angle, effect of edge material and wavelength, meas. 4=8454
- zone plate equivalent to amplitude filter 4=18426
- N_2O , u.s. dispersion meas. 4=11246

neutrons

See Neutron diffraction

X-rays

See X-ray diffraction

Diffraction gratings

- aberrations, concave grating at grazing incidence 4=11361
- astronomical objective grating, use 4=23832
- use in azimuth modulation, optical analogue to r.f. modulation 4=8453
- calibrator, for visible and vac. u. v., giving grating efficiency 4=8444
- concave, focusing anomaly of second and third orders 4=2852
- concave, in soft X-rays, reflectivity comparison 4=18411
- dielectric, 4.2 mm radiation, diffraction anomalies 4=21315
- e.m., finite conductivity effects, computer calc. 4=14888
- Ebert-type plane grating mounting, stigmatic 4=11342
- echelette, polarization of light in far i.r. 4=14403
- echelette, transmission factor, mounting comparison 4=5395
- electromagnetic waveplane, reflection and transmission 4=8450
- electron microscope stereo photos 4=27335
- light generation, coherent, by electron beam moving across 4=5360
- for measurement of length and angle displacements, review 4=18013
- metal, double, for e.m. waves 4=14890
- in monochromators, substitution for prisms 4=8430
- plane wave spectra in grating theory 4=5398-9
- polarization effects 4=27334
- production, ion beam-chemical process 4=14387
- reflection efficiencies, calc. 4=14380
- ruling and testing at M.I.T. 4=18402
- semi-infinite, of identical cylinders, scatt. 4=21655
- signal modulated, image rel. to strain distrib. meas. 4=24344
- sinusoidal profile, refl. and transmission powers 4=18423
- sinusoidal profile, transparent, e.m. wave theory 4=21654
- spacing, variation about its mean, meas. 4=5394

SUBJECT INDEX

Diffraction gratings — contd

- spectrofluorometer, transmission correction 4=317
- spectrometric mounting, grazing incidence, for 20–500 Å region 4=8424
- use in metrology, rel. to Moiré fringes 4=18014
- use for refractive index gradient meas. when gratings produce Moiré patterns 4=14384
- for vacuum u.v. and X-ray regions 4=18424
- X-ray, soft, Au and Ti coated echelettes 4=11736
- Au-covered, distortion effect of X-ray spectra, > 15 Å 4=30008

Diffusion

- See also Neutrons and antineutrons, diffusion; for diffusion of matter, see Diffusion in gases; Diffusion in liquids; Diffusion in solids
- asymptotic theory from monoenergetic Boltzmann eqn. 4=5107
- binary and ternary isothermal diffusion, frictional coeffs. 4=8119
- Brownian motion, forced interdiffusion 4=29539
- calculation, matrix., multicomponent mass transfer 4=27115
- cloud, polydispersed, two-dimensional 4=23748
- in dense fluids, self-diffusion coeffs., rel. to quantum equilibrium props. 4=21114
- discrete media, simple one-dimensional motion, theory 4=8118
- Einstein's diffusion—mobility relationship, fundamental extension 4=99
- Einstein's mobility reln. extension 4=27116
- electrons, in cylindrical geometry, number of collisions 4=6025
- fluid mixtures, non-linear 4=2628
- fluid mixtures, non-linear, constitutive equations 4=2629
- fluid, viscous spiral flow, eqns. solutions 4=24133
- gaseous in porous media, graphite 4=233
- Geiger-Müller counters, photoelectron back diffusion 4=19326
- in gels, meas. by radioactive tracer 4=10666
- intermolecular resonant excitation transfer 4=6663
- metals, self, vacancy formation energy and melting point 4=20298
- meteor trails, in earth's mag. field 4=30978
- multi-component system, soln. 4=5105
- one-dimensional, finite difference methods, relax. patterns, multiparameter families 4=16064
- one-dimensional, with simultaneous linear accumulation 4=2606
- plasma, Bohm coefficient from instability meas. 4=2974
- plasma, Brownian motion in mag. field 4=502
- plasma, collisional, across mag. field 4=499
- plasma, decaying, meas. in mag. field 4=14643
- plasma, inert gases, transverse, in mag. field 4=5602
- plasma, turbulent, in strong mag. field due to drift instab. 4=5666
- quantum isotope effect 4=18116
- radiation in thick layer, asymptotes 4=18118
- rate rel. to thermodynamic activity 4=17851
- in separation processes, transport equation application 4=14084
- solid solutions, dilute, activation energies comparison with Zener relaxation 4=23235
- surface source at free convection in boundary layer with variable exchange 4=5238
- theory, convergence improvement methods 4=24405
- thermal, in fluid-filled chambers with no convection, rel. to acoustic props. 4=27262
- thermal or matter, point source on tube axis, for tube source or not, obs. 4=5106
- thermal, mixtures, binary, stream direction and "forgotten effect" 4=2630
- thermally activated linear response functions 4=16062
- and thermodynamic irreversible processes, motion equation of continua 4=24106
- three-component system, restrictions in analysis 4=8117
- in turbulent field, stationary 4=5106
- turbulent, from point source with boundary layer flow, meas. 4=11149
- turbulent, in stratified fluid 4=29593
- Wigner-Seitz cell, calc. method 4=19888
- Au, self, vacancies due to deform. effect, theory 4=28443
- C in α -Fe, temp. var. 4=28488

Diffusion—contd

- Cu, self, surface, oxygen pressure, impurity effects 4=28487
- Fe, volume diffusion across oxide phase boundary rel. to oxidation rate 4=10635
- Ge, rel. to distribution coefficients and impurities in liquid and solid 4=15488
- Ni-Fe-Cr alloys, thermal diffusivity, 20–900°C 4=15424
- O₂ plasma, isothermal, ambipolar, at high temps. 4=14642
- Si, in liquid and solid rel. to distribution coefficient and impurities in liquid and solid 4=15488
- Ti⁴⁺ in Ti, activation energy, frequency factor, temp. effect 4=28492
- V⁴⁺ in Ti activation energy, frequency factor, temp. effect 4=28492
- W, thermal diffusivity, 1600–2960°C 4=15495

acoustic waves

- See also Scattering, acoustic waves
- halomethane-inert gas mixtures, ultrasonic dispersion 4=5246
- in reverberation chamber, effect on absorption 4=14284
- measurement, architectural acoustics, by crossed microphones 4=14307
- reverberation chamber meas. of diffusivity 4=296

electromagnetic waves

- See also Scattering, electromagnetic waves
- anisotropic, Chandrasekhar X, Y function introduction 4=709
- dielectric wedge, right angled, calc. 4=27646
- on diffraction, convex cylinder, short waves 4=690
- imperfect plane dielectric 4=27654
- metal grating, double, plane, meas. 4=14890

light

- See also Reflectivity; Scattering, light
- asymptotic luminance in diffusing and absorbing medium 4=18431
- non-uniform media, radiative transfer, review 4=18117
- and reflection and transmission 4=324
- two-layer medium with interface effects considered 4=11362

Diffusion in gases

- See also Flow, gases
- acetylene, in ethane and self-diffusion meas. 4=11238
- aerosols, phoresis 4=10658
- air-CO₂, binary diffusion coeffs. 4=24267
- arcs, electric, time var. 4=486
- atmosphere, smoke study 4=30931
- atmosphere, upper, and vapour from sounding rocket 4=4779
- atmospheric dust, fall effect on cloud growth 4=26791
- atmospheric grenade glow clouds, rel. to atmosphere density 120–180 km 4=23772
- charge carriers in elec. field, effect of space charge 4=11255
- correlation studies 4=29671
- diffusivity, lateral, in diabatic conditions near ground, determ. from diffusion expts. 4=23738
- discharge plasma, ambipolar diffusion rel. to electron density 4=14641
- discharge, reflex, plasma, enhanced 4=19048
- dispersion from instantaneous ground source 4=4762
- ethane, in ethylene, acetylene and self-diffusion meas. 4=11238
- ethylene, in N₂, ethane and self-diffusion meas. 4=11238
- forces on aerosols in diffusing gas mixtures 4=2169
- gas with rotating molecules, kinetic theory 4=5230
- gas-vapour critical region 4=21181
- glow clouds from grenades, diffusion coeff. determ. 4=10737
- inert, in terms of Morse potential 4=8241
- ionosphere, plasma diffusion 4=10756
- measurement, gas chromatographic, and obstructive factors 4=24269
- measurement, optical method 4=27216
- metal vapours, interdiffusivities with Ar at high temp. 4=24266
- methane, in CO, N₂ and CF₄, and self-diffusion meas. 4=11238
- methane, in terms of Morse potential 4=8241
- multi-component boundary, dissociation effects 4=21179
- optical meas., binary mixtures 4=11241
- particles, small, in nonuniform atmosphere 4=20848

Diffusion in gases — contd

- plasma, anomalous diffusion in mag. field 4=16470
 plasma, anomalous, in ion cyclotron reson. 4=29909
 plasma behind shock front, rel. to precursor creation 4=18340
 in plasma, of charged particles across magnetic field 4=11601
 plasma, current effects, classical and Bohm enhanced density—rad. rel. 4=27514
 plasma, diffusion decay in mag. field; theory 4=29908
 plasma, in mag. field 4=501
 plasma, in mag. field, Cs, not Bohm 4=27515
 plasma, stable, mag., of charged particles 4=8693
 plasma, weakly ionized, anomalous 4=18815
 polar and polyatomic gases, mutual diffusion coeffs., calc. from viscosity meas. of binary mixtures 4=21180
 ring discharges, electrodeless, diffusion-controlled, for-mation and decay times 4=18698
 sensitivity to intermol. potential, quantum calc. 4=11237
 spin, at low temps., quantum effects rel. to self-diffusion 4=8244
 surface source at free convection in boundary layer with variable exchange 4=5238
 in vacuum gauge, McLeod effects with cold traps 4=8275
 Ar, isotopic thermal, 127° to 653°K 4=5239
 Ar—CO₂, binary diffusion coeffs. 4=24267
 Ar—H₂, interdiffusion through capillary, pressure effect 4=27215
 Ar—He, interdiffusion through capillary, pressure effect 4=27215
 Ar, of Zu, temp. var. spectral absorpt. meas; 4=18244
 CF₄, in methane, meas. 4=11238
 CO, in methane, meas. 4=11238
 CO₂, self 4=29670
 CO₂—Ar, 290-470°K 4=27216
 CO₂—CO, 290-470°K 4=27216
 CO₂—N₂, 290-470°K 4=27216
 CO₂—SF₆, 290-470°K 4=27216
 Cs atoms in inert gases 4=28142
 Cs plasma current effects, classical and Bohm enhanced density—rad. rel. 4=27514
 Cs plasma, in mag. field, not Bohm 4=27515
 H plasma, enhanced by ion cyclotron reson. 4=29910
 H and Morse potential parameters 4=29665
 H and H₂ mixture, coeff. of mutual diffusion 4=14207
 H, in CO₂, CF₃Cl₃, Kr, Xe, meas. by T tracer 4=11240
 H₂—Ar, 290-470°K 4=27216
 H₂, spin-diffusion at low temps., quantum effects 4=8244
 H₂, spin-diffusion meas., 20°-55°K, rel. to ortho—para concn 4=8245
 H₂^{1,2,3}—Kr⁸⁵ mixtures meas. 4=24268
 H₂—CO, 290-470°K 4=27216
 H₂—CO₂, 290-470°K 4=27216
 H₂—N₂, 290-470°K 4=27216
 H₂—SF₆, 290-470°K 4=27216
 He—air, binary diffusion coeffs. 4=24267
 He—air, 290-470°K 4=27216
 He—Ar, binary diffusion coeffs. 4=24267
 He—Ar, 290-470°K 4=27216
 He—CO, 290-470°K 4=27216
 He—CO₂, binary diffusion coeffs. 4=24267
 He—CO₂, 290-470°K 4=27216
 He—H₂, interdiffusion through capillary, pressure effect 4=27215
 He—N₂, 290-470°K 4=27216
 He—SF₆, 290-470°K 4=27216
 He³, self, 1.7-4.2°K, from pulsed n.m.r. 4=16152
 He³, spin-diffusion at low temps., quantum effects 4=8244
 I discharge, positive column striations 4=8649
 K plasma current effects, classical and Bohm enhanced density—rad. rel. 4=27514
 Li—Li gas mixtures, at high temps. 4=3860
 Li—O gas mixtures, at high temps. 4=3860
 N₂, in methane and ethylene, meas. 4=11238
 N₂, in terms of Morse potential 4=8241
 Na vapour, optically oriented, spin relax. 4=22314
 Ne, positive Ne ion diffusion and drift 4=21463
 O—H gas mixtures, at high temps. 4=3860
 SF₆—Ar, 290-470°K 4=27216
 SF₆—CF₄ mixtures, 300°-350°K meas. 4=2725
 SF₆—CO, 290-470°K 4=27216
 SF₆—N₂, 290-470°K 4=27216

Diffusion in gases — contd

- ZnS:I vapour-solvent system, solid transport rate 4=15768
 thermal
 atmosphere, of He, effects on composition 4=26805
 binary mixtures, Chapman—Cowling second approx. 4=21178
 binary, one trace, Chapman—Cowling second approx., new form 4=232
 composition dependence, diffusion factors and mutual diffusion coeffs. 4=11239
 dynamic press. changes, for free convection 4=27203
 electrons, in Ne, electron-density sampling meas. 4=8613
 electrons, meas. using scintill. chamber 4=8612
 hydrocarbon binary mixtures, stream direction and "frotten effect" 4=2630
 isotope separation, Clusius—Dickel column, theory 4=9680
 isotope separation in ternary systems 4=12412
 laminar flow of mixing gases, numerical calc. 4=14196
 and mass transfer at mixture boundary layers 4=5221
 molecular, vacuum pump and pump throttling appls. 4=8265
 pressure depend. of thermal-diffusion factor 4=2726
 shape factor, column, calc. including temp. var. 4=5237
 CO isobaric mols., separation, inversion temp. 4=20841
 CO₂ with Ar, Kr, Xe 4=29673
 H—He isotope quaternary mixtures 4=29672
 H₂^{1,2,3}—Kr⁸⁵ mixtures meas. 4=24268
 Diffusion in liquids

 solutions, effect on u.s. absorption 4=173
 theory, review 4=16100
 three-component solns. near critical pt. 4=29618

SUBJECT INDEX

Diffusion in liquids — contd

- turbulent, longitudinal, in finite channel, meas.
method 4=11162
water, neutron, diffusion length, 24°–82° C 4=21869
AgNO₃–NaNO₃ molten mixtures, interionic
diffusion 4=29617
Ag, Sn and Ag diffusion 4=24196
Ar, self-diffusion, config. relax. model 4=8163
Ar, self, transport theories criticism 4=18187
CCl₄, diffusion of H₂, D₂, N₂, Ar, CH₄, CF₄ 4=18189
CO, self diffusion, 69–78° K 4=21118
Cd, of U 4=5167
Cu, diffusion of Si, Ti, Cr, Fe, Co and Ni rel. to rate
of soln., expt. 4=8194
Fe⁵⁷ in glycerine, and Mössbauer line broadening 4=21119
Fe–C and solution rate, 7 elements 4=18190
He³, self, temp. var., from pulsed n.m.r. 4=16317
Hg, self-diffusion, expt. 4=24192
KCl, Na²² diffusion, rel. to temp. 4=8193
KNO₃–LiNO₃, of Li⁶, Na²³, K⁴¹, ratio differences from
one 4=16103
N₂, in liq. O, gas phase method 4=5168
Na²² in fused NaNO₃, diffusion coeff., high pressure 4=21120
NaCl, diffusion of unlike ions 4=27167
NaI, I¹³¹ diffusion, rel. to temp. 4=8193
NaI–KCl, Na²² diffusion, rel. to temp. 4=8193
NaI, Na²² diffusion, rel. to temp. 4=8193
NH₃, self 4=14155
Pb–Sb alloys, Pb and Sb diffusion 4=164
SF₆, 221°–315° K meas. 4=2715
Zn, self-diffusion 4=5169

thermal

- binary mixtures, flow eqn. 4=2665
binary molecular solns. 4=5164
cross-coefficients, constancy 4=374
electrolytes, Soret coeffs., estimation from Govy fringe
intensities 4=27168
metals, meas. by radial thermal waves method 4=25959
mixtures, binary, stream direction and "forgotten
effect" 4=2630
ternary systems involving chem. reaction, isothermal
free diffusion, theory 4=8195
KNO₃, fused, meas. 4=163
Li, isotope diffusion meas. 4=24195
LiNO₃, fused, meas. 4=163
RbNO₃, fused, meas. 4=163

Diffusion in solids

- See also Permeability, mechanical
alkali halide systems, interdiffusion, use for solubility
determ. 4=20692
alkali halides, interstitial ion mobility 4=17438
alloys, binary, intrinsic coeffs 4=9980
alloys, order–disorder 4=17422
atom jump freqn., dynamical theory 4=4069
atomic, effect of ferromagnetism 4=12806
atoms, adsorbed, surface diffusion in electric
field 4=7715
austenite–ferrite boundary curvature rel. to interstitial
C or N concentration 4=26540
Boltzmann transport eqn., relaxation-time approx. 4=6768
α-brass, n enhanced, flux independ. 4=28479
brass, β layer growth vs α couples 4=6868
β-brass, order–disorder, coeff. 4=17422
calcium aluminoborate glasses, O diffusion 4=28610
calcium aluminosilicate glasses, O diffusion 4=28610
carrier recombination, diffusion controlled, in irradiated
insulators 4=12957
cast iron, Mg-bearing, Fe self-diffusion, rel. to small Mg
additions 4=15490
ceramics, precision lapping device for diffusion coeff.
meas. 4=17437
charged particles, force rather than flow rate
formulation 4=1524
compensation effect, theory 4=9981
crystalline phases in binary metallic systems 4=23236
crystalline, simple one-dimensional motion,
theory 4=8118
crystals, vol. fluctuation model for self-diffusion 4=22604
cubic crystals, anisotropy 4=17447
diamond, of He 4=28490
donors, ionized, in oxide cathodes, rel. to flicker
noise 4=24727

Diffusion in solids — contd

- Duran glass, Ne diffusion 4=4073
equations, for decay of magnetization fluctuations in
Heisenberg ferromagnet 4=13150
f. c. c. substitutional mixed crystals, foreign atoms to
dislocation lines 4=10359
ferrite grains, self, of O, in growth 4=17832
ferromagnets and permeability and hysteresis 4=13153
films, vacuum-deposited, substrate conc. rel. to time
and temp. 4=22607
fluids, non-linear 4=2628
fluids through elastic solids 4=25956
of foreign atoms, modification of hysteresis
loop 4=17634
formation factor and permeability equations 4=22608
glass, of Ag, self 4=30575
glass, of H₂O, conc. dependent 4=9987
glass, rel. to variable comp. production 4=26730
grain boundary solns., for sectioning method 4=28476
graphite, of Th, activation energy 4=6869
ice, self, mechanism 4=4074
impurities during epitaxy 4=25960
impurity from a deposited layer 4=22606
interdiffusion, in ordered alloys, theory 4=1510
interstitial atoms, in ordered alloys, theory 4=1509
ion tunnelling, phonon-induced, theory 4=9822
ions, impurity, in metals, thermal, electron-drag
effect 4=25958
isothermal, thermal and Soret effect 4=25955
kinetics, temp. depend. law 4=12778
laminated slab 4=12777
Matano interface, thermodynamic interpretation of
properties 4=12783
measurement, α-recoil, sensitive 4=1516
measurement, autoradiographic method for volume
diffusion 4=22609
measurement, from mag. h.f. permeability 4=22943
measurement, n.m.r., appl. to ultraslow diffusion 4=20292
measurement, self, down to 10⁻²⁰ cm²/sec, by
radioactive tracer 4=12802
mechanisms involving point defects 4=1504
metallic multicomponent systems, during
sintering 4=7688
metallic systems, multicomponent, soln. of diffusion
eqns. for const. and variable diffusion coeffs. 4=6863–4
metallic systems, multicomponent, thermodynamic props. of
D matrix 4=6863
metals, apparent enhancement, rel. to plastic
deformation 4=20306
metals, b. c. c., interstitial O, N, C diffusion
rel. to m. pt. 4=4495
metals and binary alloys, self-diffusion activation
energies 4=22605
metals, multicomponent, kinetic calc. of Onsager
L coeffs. 4=28475
metals, oxide film growth, homog. field approx. 4=7753
in metals, plastic-deformation effects 4=1523
metals, self, surface, mechanisms, review 4=9982
metals, thermal diffusivity meas. by radial thermal waves
method 4=25959
methane, self-diffusion coeff., n.m.r. data 4=6651
migration of slightly soluble spherical particles,
temp. gradient analysis 4=30573
moisture in dielects., rel. to effect on elec. props. 4=28606
naphthalene segregation coeff. in anthracene, luminescence
meas. 4=29057
Nilo-K glass to metal seal material of H, D 4=6876
nuclear fission gas bubbles, and coalescence 4=6441
in oxide films, growing, of ions, electrons, vacancies, holes,
rel. to space charge 4=7028–9
plastics, of C¹¹ prod. by 9GeV p's 4=19717
point defect annealing kinetics 4=6826
polycrystals, temps. at which volume or grain-boundary
diffusion predominate 4=12780
polyethylene, ethane diffusion 4=28481
polymers, of H, D, T, He 4=6877
positrons, lifetime, long tail anomaly 4=6030
protons, in Fe, phonon-induced tunnelling 4=9822
protons, in ice, phonon-induced tunnelling 4=9822
quartz, of Ar rel. to surface sorption in electrodeless
discharge 4=20821
α-quartz, impurity cation migration 4=26104

Diffusion in solids—contd

- rare gases, auto, discrepancy between theory and meas. 4=17436
- refractory materials, vacuum furnace for study 4=2877
- review 4=25957
- rubber, silicone, for vacuum work, outgassing 4=8280
- rutile, O₂ and B anisotropy 4=1505
- salts, activation energy concept 4=24191
- self-diffusion, during plastic deformation, vacancy injection 4=28474
- self-diffusion, heat of activation, melting temp. depend. 4=12782
- for semiconductor conc. distrib. meas. 4=20351
- for semiconductor device manufacture, review 4=25957
- semiconductors, carriers, rel. to noise 4=22691
- semiconductors, diffusion length and const. 4=15531
- semiconductors, diffusion of minority carriers 4=6778
- semiconductors, minority carriers, meas. 4=22700
- semiconductors, review, and crystal imperfect. 4=28297
- silica glass, tritiated H₂O diffusion 4=4078
- silica glass, "water" diffusion, thermal history influence 4=15493
- silica, of H, role of OH 4=20304
- simultaneous diffusion, of 2 components, meas. by differential γ -ray method 4=12779
- sintering, activation energy meas. from elec. cond. var. 4=13665
- solute atom diffusion in vicinity of phase boundaries, eqn. 4=10412
- spin-spin diffusion causing nuclear relaxation 4=10342
- steel, of Al, Cr, Ti, B or C, residual stresses, tensile and compressive 4=1952
- succinonitrile, polycryst., self-diffusion, n.m.r. meas. 4=1898
- surface and volume diffusion processes, competitive, mathematical treatment 4=12781
- system with n components, intrinsic coeff. determ. 4=4070
- thermal, in binary metallic mixed phases, theory 4=9983
- thermal, in crystals, equivalence of two theories 4=6866
- transistor cross-section, diffusion of minority carriers 4=7022
- translational, in nuclear mag. dipolar relax. 4=1895
- two-phase systems, calc. of coeffs. 4=6865
- Zircaloy-2, of H, thermal, theory 4=6882
- zone refining, effects 4=23321
- Ag, grain boundary self-diffusion, in elec. fields 4=9992
- Ag, grain boundary and vol. diffusion in sintering 4=28482
- Ag ion migration in α -quartz 4=25966
- Ag, self-diffusion in β -AgMg 4=15494
- Ag, self-diffusion during torsional deformation 4=9989
- Ag, self, grain boundaries, and charge carrier type 4=9991
- Ag, self, meas., temp. var., by radioactive tracer 4=12802
- Ag, substitutional impurities, thermal diffusion 4=17440
- Ag of Fe, Co, Ni, discrepancies 4=20305
- Ag of Fe, Co, Ni, poss. surface effects 4=12800-1
- Ag-Cd alloys, mutual diffusion, Zener relaxation in α -phase 4=28981
- AgCl, of Cl³⁵, temp. var. 4=9996
- Ag-Pd alloys, Pd self-diffusion coeff. at 850°C and 896°C 4=9994
- Ag, of Pd, meas. and analysis 4=6870
- AgS, thermal self-diffusion in S vapour 4=9990
- Al, diffusion of Fe, Ni, Co, dislocation short-circuiting models 4=1506
- Al, electrolytic self-diffusion 4=17439
- Al, self-diffusion, determ. by electrotransport meas. 4=28486
- Al, H distrib., autoradiography 4=2106
- Al-Zn alloys, Mg and mutual diffusion, Mg conc. depend. 4=28477
- Al-Zr interdiffusion 4=28478
- Ar in CaF₂, as model for fission gas transport in UO₂ 4=25466
- Au, substitutional impurities, thermal diffusion 4=17440

Diffusion in solids—contd

- Au, surface self-diffusion study, 272°-950°C 4=25963
- Au, of Ag, surface effects 4=10603
- Au and Cu on Cu, surface diffusion 4=15487
- Au, in Si, interstitial-substitutional equil. meas. 4=6878
- Au-In system, below 155.4° C 4=22618
- B, in Si, concn-depend., calc. 4=9993
- B in Si, 1100° to 1300°C 4=20303
- B in Si redistribution due to oxidation calc. 4=25967
- B, in Si, surface film removal 4=20384
- Be, proton-bombarded of H, and agglomeration 4=15484
- Bi, of Ag¹¹⁰, d.c.-induced, analysis 4=12785
- Bi₂O₃, Bi self-diffusion, effect of phase transformation 4=6867
- Bi₂Te₃, Cd diffusion and solubility 4=1507
- C, pyrolytic, of Th, activation energy 4=6869
- C, in Ti, 1223-1923°K 4=1519
- CaAl₂Si₄O₁₂·6H₂O, Ca²⁺ and Si²⁺ differential exchange, self-diffusion coeffs., calc. 4=30572
- CaF₂, pure, on annealing in O₂ and air 4=12787
- CaF₂, of O₂ activation energy meas. 4=12786
- Cd in CdS, meas. analysis 4=15485
- Cd¹¹⁵ into MgCd₃, effect of ordering 4=25965
- Cd in NaCl meas. from colloidal coloration 4=28491
- CdS, decomposition products along dislocation lines, rel. to irradiation 4=9985
- CdS, diffusion controlled evaporation 4=27389
- CdTe, intercrystalline, 350-580°C 4=1508
- Co-C, C diffusion rel. to temp. 4=20295
- Co-Cu interdiffusion coeff. mechanism 4=12789
- Co-Ni interdiffusion coeff. mechanism 4=12789
- Cr in Al, 250-605°C 4=22610
- Cu, electrical transport of Ag 4=20307
- Cu in extrinsic and intrinsic Ge, Si and GaAs 4=12791
- Cu, migration of He-filled bubbles 4=30573
- Cu rods, brass-cored, mutual diffusion, effect of press., rel. to diffusion-induced porosity 4=15486
- Cu, self-diffusion energy 4=1455
- Cu, substitutional impurities, thermal diffusion 4=17440
- Cu, surface, rel. to defect self-healing 4=12744
- Cu and Au on Cu, surface diffusion 4=15487
- Cu, Ge surface diffusion 4=22611
- Cu-Ni interdiffusion coeff. mechanism 4=12789
- Cu-Ni, powder to alloy homogenization 4=26550
- Cu, of Pd, meas. and analysis 4=6870
- Cu, Sb¹²⁴ diffusion, 560°-896°C 4=22609
- Cu-Sn, thermal, in mixed phases 4=9984
- Cu, zone-refining of tracers 4=23336
- Fe, α , self, var. with plastic compression, 742-885°C 4=6874
- Fe, b. c. c. 4=25964
- Fe and ferritic steels, of H, Fick's law modification 4=6873
- Fe, self diffusion above 1350°C 4=9988
- Fe, self-diffusion, creep rate, at sub-melting temp. 4=23164
- Fe, self-diffusion, effect of Sn and Sb additions 4=12794
- Fe, self, frequency rather than activation as cause 4=1514
- Fe, α , γ , δ , of P, 1250-1350°C 4=17442
- Fe, P diffusion, radiometric study 4=20294
- Fe, of P, 700-890°C, alloying effects 4=20296
- in Fe, of solid and liq. Zn, inert-marker technique 4=1515
- Fe⁵⁹ in γ -Fe self-diffusion coeff., grain size effect, radioactive tracer meas. 4=30581
- Fe-Al alloys, self-diffusion in elec. field, radioactive tracer study 4=25968
- Fe-C, C diffusion rel. to temp. 4=20295
- Fe-Ce, Fe self-diffusion, Ce content depend. 4=12793
- Fe-Mg alloys, Fe self-diffusion, rel. to small Mg additions 4=15490
- Fe-Mo-C, Fe⁵⁹ diffusion, differential γ -ray meas. 4=12779
- FeO electrolysis, ~1000°C 4=29227
- Fe₂O₃, on porcelain surface, thermal 4=30577
- GaAs, diffusion of 14 atoms, review 4=22612
- GaAs Esaki diode, interstitial, rel. to deterioration 4=26078
- GaAs injection lasers, diffusion problems 4=22613
- GaAs junctions, prep. by Zn and Sn double diffusion 4=26069
- GaAs, stress effects of doping with Se, Te, Zn and Cd 4=26045

SUBJECT INDEX

Diffusion in solids—contd

- GaAs, Ag diffusion 4=1512
 GaAs, Cd diffusion, rel. to dislocations 4=9986
 GaAs, of Cd, In, interstitial-vacancy mechanism 4=12792
 GaAs, Li diffusion, Hall effect meas. 4=15537
 GaAs, S, Se and Te diffusion, n-p junction formation 4=17441
 GaAs with SiO₂ films, Zn diffusion 4=22616
 GaAs, Zn diffusion, to achieve low surface concs. 4=22614
 GaAs, Zn diffusion, mechanism 4=4071
 Ge, of crystal vacancies, var. C dislocation density 4=13480
 Ge, diffusion of Sb and As, rel. to Sb and As surface concs. 4=30574
 Ge, dislocations effect 4=25961
 Ge, of He 4=28490
 Ge, O diffusion, i. r. absorpt. band, dominant, stress-induced dichroism meas. 4=28485
 Ge, Sb diffusion, rel. to local electric fields, 750°-900°C 4=6871
 Ge, Sb or In diffusion, dislocations effects 4=1511
 Ge with Sn, disloc., effect on boundary 4=25962
 He³, β -phase, rel. to nuc. mag. relaxation 4=14505
 Hf, O₂ diffusion, 800° and 950°C 4=6872
 Hg whiskers, surface 4=4558
 HgTe, intercrystalline, 350-580°C 4=1508
 Γ films adsorbed on Cu and Al, surface self-diffusion of Γ 4=15489
 InSb, diffusion of impurities 4=4075
 InSb, excess carrier coeffs., 130°K 4=30537
 InSb films, of In and Sb, rel. to elec. props. 4=20808
 K whiskers, surface 4=4559
 KCl, additively coloured, diffusion and reaction of H₂O 4=17445
 Li₂SO₄, H₂O, proton mobilities from dielec. props. 4=28480
 Mg, Pu and U diffusion 4=1517
 Mg₃Cd, of Cd, temp. var., ordering effects 4=4076
 MgO, of Co, Ni cations, grain boundary, 1350°C 4=20299
 MgO, Ni²⁺ grain-boundary diffusion 4=20300
 Mg-Zr alloys, directional diffusion 4=12796
 Mg-Zr system 4=23243
 Mn-Fe(81%), of H heat treatment effect, and mech. tensile props. 4=20670
 MnO₂, of O₂, > 100°C 4=20823
 Mo, reactive diffusion in BCl₃ + SiCl₄ + H₂ atoms. 4=28489
 Mo, H₂ diffusion during H₂ = 2H reaction using Mo catalyst 4=20117
 Mo, H₂ and CO diffusion, above 1000°C degassing 4=22620
 Mo-Si system, reactive diffusion processes 4=12795
 Mo-W alloy, 600°-700°C, components meas. 4=6875
 Mo-W, component diffusion, 1500°-2600°C 4=22621
 Na, in aluminosilicate glasses 4=1645
 NaCl, Zn diffusion, temp. and conc. depend. 4=12803
 Nb, of H, 60°-100°C, n.m.r. meas. 4=17695
 Nb, H₂, O₂ and CO diffusion, above 1000°C degassing 4=22620
 Nb in Ta, submicron sectioning technique 4=12804
 Ni, self-diffusion, 929-1303°C 4=12797
 Ni-C, C diffusion rel. to temp. 4=20295
 Ni-Cr alloys, Ni and Cr diffusion rel. to Cr content 4=20302
 Ni, Cr diffusion, 600-900°C 4=15492
 Ni-Cr system, partial and total mass transfer 4=12788
 Ni, of H, and X-ray spectrum, emission, K edge Kronig 4=22622
 Ni, H₂ and CO diffusion, 970-1320°C 4=22623
 Ni, of H, magnetic saturation obs. 4=22623
 Ni⁶³ in Ni and γ -Fe, grain-boundary, meas. 4=20301
 NiS, Ni and S self-diffusion, expt. and theory 4=12798-9
 O, self, in BeO, 1500-2000°K 4=12784
 Pb, self, 20-85°C, test of sensitive α -recoil method 4=1516
 Pb/Bi supercond. double layers, mutual diffusion 4=24513
 Pb, from U, and anomalous PbS formation 4=23710
 Pb^{206,207}/U^{238,235} systems in minerals 4=4079
 PbS, Pb²¹⁰ diffusion, at 700°C, rel. to stoichiometry 4=15491
 Pd-H, H diffusion at room temp. 4=17444
 δ -Pu, self-diffusion coeff., 350°-440°C 4=22624
 Pu, thermal diffusivity determ. 4=17443
 Sb, in Ge, equil. with Bi-Sb alloy-vapour 4=1513
 Sb¹²⁴ in Sn, d.c.-induced, analysis 4=12785
 Se of Cl, temp. var. 4=4165
 Si crystal dislocation networks due to diffusion 4=17433

Diffusion in solids—contd

- Si, enhancement when proton irradi. 4=1544
 Si, impurity diffusion, accel., after 300-1000 keV proton irradi. 4=9995
 Si, impurity distrib. meas. of diffused layers 4=28448
 Si, n-type, minority carrier diffusion length 4=4168
 Si, p-n junction, minority-carriers diffusion 4=4180
 Si, self-diffusion coeff. meas. 4=6878
 Si, of Ga, internal elec. field effects due to Sb 4=28484
 Si, of Ga and B, surface conc. 4=4077
 Si, of He 4=28490
 Si, Ni and Au diffusion, dislocation loop formation 4=1481
 Si, of Ni, rel. to elec. cond. var. meas. 4=28453
 Si, Ni⁶³ tracer diffusion, meas. of Ni solubility in Si 4=4497
 Si, P diffusion, P₂N₅ as diffusion source 4=22625
 Si, O diffusion, i. r. absorpt. band, dominant, stress-induced dichroism meas. 4=28485
 Si, into V, two-component superconductive films 4=5527
 SiC, Au diffusion, rel. to hot electron emission from p-n junctions 4=569
 Si, of P, concn.-depend., calc. 4=9993
 Si, of P, dislocation distrib. near junction, meas. 4=28471
 Si, of P, dislocations prod. 4=22590
 Si, of P, through SiO₂ films 4=28483
 SiO₂ to Si diff, of Ga, segregation coeff., p-n jn. method, two boundary model 4=30578
 Sn atoms, in thin films, effect of O₂ on mobility 4=13684
 Sn in Ge, disloc., effect on boundary 4=25962
 Sn, into Ni, two-component superconductive films 4=5527
 Sn/In supercond. double layers, mutual diffusion 4=24513
 Sn, high press., vacancy jump mechanisms 4=30580
 SrF₂, pure, on annealing in O₂ and air 4=12787
 ThO₂-Y₂O₃ solid solns., of Xe¹³³, on irradi. and heating 4=15496
 α -Ti, self-diffusion 4=1518
 TiO, self diffusion 4=30579
 UC, self diffusion of U and C 4=13611
 UC, sintering activation energy meas. from elec. cond. var. 4=13665
 UO₂, of fission Xe, on annealing at 1400°C 4=12805
 UO₂, N diffusion kinetics 4=28493
 UO₂, of Xe, increase on irradiation 4=6879
 UO₂-Y₂O₃ solid solns., of Xe¹³³, on irradi. and heating 4=15496
 V, of O and/or C, strain ageing effect on mech. props. 4=29021
 W, sintering kinetics, 1300°-1750°C 4=7687
 W, H₂ diffusion during H₂ = 2H reaction using W catalyst 4=20117
 W, H₂ and CO diffusion, above 1000°C degassing 4=22620
 W, of K, surface 4=23610
 W, O diffusion, activation energy determ. by internal friction 4=17446
 Xe, in ceramic oxides 4=20293
 Yb, of O₂ and N₂, between interstitial sites 4=15497
 Zn⁶⁵, distribution coeffs. between GaSb and Ga-Sb 4=4072
 Zn, impurity diffusion, screened interaction model 4=9997
 Zn, Ga diffusion, after adsorption 4=26729
 Zn, in GaAs Esaki diodes, rapid 4=17504
 Zn in GaAs, under excess As vapour 4=22615
 Zn, in GaAs and GaP, mechanism expts. at 900° and 1000°C 4=22617
 Zn in GaP 4=12790
 Zn, in GaAs and GaP, 700° to 1100°C 4=13458
 Zn, Hg diffusion, after adsorption 4=26729
 Zn, of Hg, temp var., surface and volume 4=1521
 Zn in InP, 600°-900°C meas. 4=22616
 Zr alloys, of H, heat of transport 4=6880
 Zr, b.c.c., anomalous self-diffusion 4=1520
 Zr, Fe diffusion, temp. depend. 4=15498
 β -Zr, of H, coeffs. 4=1522
 Zr, of Zr⁹⁵ and Nb⁹⁵ 4=6881

Dimensions

Particle accelerators; X-ray tubes.

Discharges, electric

See also Arcs, electric; Breakdown, electric; Corona, electric discharge; Plasma; Sparks, electric.
a. c., cathode fall from probe data, calc. 4=24602
a. c., narrow gas with dielectric boundaries 4=21477
between acid solutions and Ni cathode a few mm away at 13 mm press. 4=24606
afterglow, atomic collision processes 4=25577
afterglow, electron temp. meas., gated radiometer 4=5631
afterglow, recombination effects, sparks, review 4=14610
afterglows, Langmuir probe meas. of electron temp. and densities 4=21483
air, at atm. pressure, prebreakdown, between point and plane 4=18695
air, electrodeless discharge, noise spectra 4=468
air, flowing, pulsed discharge 4=2959
air, supersonic flow 4=470
air, 20-15 000 c/s 4=16452
alkali metals, high-pressure, radiation characteristics 4=18709
anode region, moving striation excitation 4=8645
anodes, cooled, in contact with laminar arc-heated flow 4=14732
aqueous electrolyte, development 4=2967
avalanche, development, eigen space charge effect 4=18741
avalanche series, carrier number distrib. function 4=18742
between insulators, glass, covered with photographic emulsion 4=5581
capillary, osc., continuum spectrum 4=18719
carnauba wax electrets, discharge current 4=12972
cathode fall, Mo, Ni in Ar, Ne 4=568
cathode fall region, l.f. impedance 4=21484
channel expansion rate, calc. 4=466
charged particle conc. by ionic $H\beta$ line broadening 4=21480
charged particle loss with refl. electrons 4=14587
chemical effects 4=18758
coaxial plasma source, current flow 4=24640
cold cathode discharge vacuum gauge 4=18286
cold cathode, with ignition, electron beam prod. and focusing 4=11704
cold cathode reflex, instability 4=29878
conference, Paris (July 1963) 4=18670
controlled initiation mechanism 4=8633
current change due to light, relation to pressure change due to potential, H 4=5583
cylindrical, drift instabilities calc. 4=8639
cylindrical, self-quenching, microwave investigation 4=18706
d. c., oscillation sources and prevention 4=24603
dark discharge behaviour in tube with ignitor 4=29880
for detonation on charge surface, fast, cheap 4=16178
dielectric solid, internal, equivalent circuit 4=8601
direct current plasma, moving striations, high-current approx. 4=14600
discharge pin, coaxial, for transient event recording 4=14258
double layer potential in l.p. discharges 4=11552
during crystallization, high voltage pulse effects 4=15756
e. m. noise reson., microwave, Kr, Xe, d. c. 4=21473-4
e. m. wave absorption, polarization effects, hot and cold cathode discharges 4=8711
e. m. wave attenuation meas. in super-high freq. pulse discharge 4=688
electrical strength, pulsed, of high vac. gap, effect of electrode material 4=14589
electrode processes in high-current in vacuum 4=21479
electrode spark conditioning, 10^{-5} to 10^{-8} mm Hg 4=18767
electrodeless, inert gas sorption at quartz surface 4=20821
electrodeless, in toroid, striking voltage var. with freq. 4=5587
electron avalanche current with diffusion 4=24618
electron avalanche, development intensification by high-gain image intensifier 4=18740
electron relax. rate to Maxwellian velocity distrib. 4=11590
electron velocity distrib., double-probe technique 4=18703
flash discharge tubes, as i. r. sources 4=29800
flash tube, pre-excitation, effect on optical quality 4=11337

Discharges, electric—contd

fluctuations, acoustic wave effects 4=8632
free radical synthesis 4=22433
gas discharge pumping action in mag. fields 4=18155
gas discharger, current switching, low pressure, controllable, 4=14585
gas, effect on CdSe photocond. 4=30659
gases, optical frequency 4=8655
glow, a. c. impedance 4=2956
glow, acoustic prod., 2-7 kc/s 4=14594
glow, cathode fall region theory 4=29883
glow, cathode, spectra, and surface ion neutralization 4=18722
glow, cold-cathode, low-pressure, impedance and determ. of equiv. circuit 4=18723
glow, cold cathode, in mag. field, cathode spot and ball of fire movement 4=5573
glow, d. c., cathode fall region, dynamic aspects 4=18720
glow, d. c., cathode surface distrib. of positive ionic density 4=29884
gas, d. c. excited in photoelec. cell, Joshi effect 4=29876
glow, d. c., positive column moving striation, pulsed microwave technique 4=27499
glow, H, plasma efficiency meas. 4=8644
glow, heavy particle range and energy loss in normal cathode fall range 4=14592
glow, high press., relax osc., freq. var. 4=14591
glow, in hollow cond., e. m. wave phase shift 4=21659
glow, instability in mag. fld. without current 4=14593
glow, ion plasma oscills. near cathode 4=24610
glow, Kr ion penetration into Mo 4=27581
glow, low-pressure, spiraling, theory 4=18732
glow, mechanism, fringe slow secondary electron effects 4=5574
glow, negative, oscills., var. with pressure and potential 4=471
glow, normal and min. cathode fall, theory 4=16450
glow, rel. to polystyrene film formation 4=4207
glow, pulsed diodes, cathode particle vapours 4=5569
glow, with self-generated elec. oscillations, impedance 4=469
glow, sound waves, radial and azimuthal 4=11554
glows, electron energy loss 4=495
glows, moving striation investigations, by pulsed image convertor 4=5571
hexane, discharge characteristics 4=2704
high-current, current meas. by Rogowski coil 4=417
high-current, electrode sheath effects 4=18944
high-current, electron density, interferometer meas. 4=16444
high-current, runaway electrons, e. m. radiation 4=16477
high-voltage and high-pressure, breakdown mechanisms, review 4=18750
hollow cathode discharge within microwave cavity, two-state operation 4=16445
impulse, in crossed elec. and mag. fields 4=18923
impulse streamer branching from Lichtenberg figure studies 4=2955
impulsive, shock-controlled spread 4=21478
induction, study of converging plasma jets 4=8793
inert gas glow, with low-maintaining potential, 22-35 V 4=18730
inert gas, low press., hot cathode, noise, var. current, cathode temp. 4=21472
inert gas glows, effect of active gas addition 4=18731
inert gas + N_2 weak discharge afterglow, metastable N_2 colls 4=24613
inert gases, striation propagation study 4=8647
insulating gaseous systems, at press. between atmospheric and high vac. 4=20957
ion reson., r. f. probe obs., hot cathode Hg discharge 4=14681
ionization chamber, var. with supply impedance 4=11561
ionizing, interactions with getter films 4=21202
Joshi effect, mechanism, photo-electrons from surface 4=27500
as leak detection in vacuum systems 4=18304
Lichtenberg figure growth in nanosec time range 4=14623
linear, high-current, at atmospheric pressure 4=18700
linear pinch, symmetry, rel. to capacitor arrangement 4=5642

SUBJECT INDEX

Discharges, electric—contd

- low-pressure, near limiting current, model 4=18699
 low pressure, in strong ionization regime 4=27495
 luminescent channel between positive point and plane 4=2954
 methane, electron avalanches, mean energy and drift velocities 4=11546
 methane, electron drift velocity, avalanche meas. 4=11253
 mobility controlled sheaths, I-V relations 4=18689
 multipactor one-sided discharge modes 4=2953
 in narrow gaps limited by dielectrics 4=29877
 neutralization and de-activation near metal surfaces 4=8642
 number density distrib., low pressure 4=18701
 oscillations, d.c. column current 4=11540
 Peek's formula for crit. elec. field var. with internal coaxial cond. radius 4=18743
 Penning with hot cathode, use as ion source 4=18697
 Penning, rel. to ion pumps 4=18265
 Penning, radiation, due to electron cloud rot. instabilities 4=5797
 Penning, X-ray prod. by anode bombardment, max. energy 4=21468
 plane diode, weakly ionized plasma, potential distrib. 4=14626
 plasma, diffusion, ambipolar, and vol. recomb., rel. to electron density 4=14641
 plasma isolated region formation mechanism 4=18947
 plasma-sheath eqn., collisionless, exact soln. 4=8731
 positive column, a.c., instability 4=18734
 positive column afterglow, quasi TE₁₁ mode absorption 4=14904
 positive column constriction 4=18733
 positive column, d.c., local pulse disturbance 4=18980
 positive column, electron energy distrib. calc. 4=21485
 positive column, electron temp. relaxation time determ. 4=24615
 positive column, electron velo. distrib., effect of adding inert gas 4=21486
 positive column, electron velocity distrib. meas. 4=2957
 positive column, impedance characteristics 4=18735
 positive column, internal mag. field meas. 4=11673
 positive column, ionization striations 4=18736
 positive column, negative ion effects 4=473
 positive column, range of existence without running striations 4=16451
 positive column, stability in time-dependent mag. field 4=8648
 positive space-charge sheath, positive ion movement, theory 4=11513
 precursor effects in intense discharges, two models 4=8638
 predischarges at very low press., diff. regions 4=16441
 pressure depend. of parameters, a.c. discharges 4=8634
 probes, noise processes 4=18707
 pulse microwave, hydrodynamic effects 4=477
 pulsed, high power, electron-ion temp. diff. theory 4=18704
 pulsed, plasma jet study 4=8792
 r.f. emission, near ionizing particle track 4=681
 reflex, diffusion in plasma, enhanced 4=19048
 reflex, energy balance equation 4=27494
 reflex, low-pressure, radially increasing mag. fld. 4=18696
 review, collision and radiation processes 4=8637
 Sceptre IV, megajoule discharge system 4=14728
 sheath, double, at constriction, meas. 4=11543
 shock waves in mag. H tube, plasma 4=24305
 space charge sheath, positive, ion movement 4=8636
 spark discharge tube, heavy current 4=16456
 standing-wave, in air 4=24605
 strata, amplitude and shape 4=16446
 striations, moving, microwave study of charge densities 4=14601
 switching, by superconducting devices 4=18627
 thermal equil. criteria, re-examination 4=11541
 thread glow, slowly rotating, space charge distrib. 4=14590
 toroidal, electron density distrib. 4=24683
 Townsend, current rise calc. 4=21476
 Townsend, photon absorption 4=18712
 Townsend, pulsed, ion distrib. 4=24604

Discharges, electric—contd

- Townsend, radiation quenching through H₂ collisions 4=25770
 transient, across vortex-stabilized arcs 4=18805
 weak diffuse, constriction by low-freq. and d.c. radial elec. fields 4=18940
 with heated cathode, in mag. field, press. and field depend 4=24608
 Al, spectral line intensities, oscillation 4=14651
 Al surface, effect of various substances on breakdown voltage 4=2962
 Ar afterglow, collision with gases, electronic spectra of excited gases 4=18725
 Ar, afterglow due to excitation in electron avalanches 4=24614
 Ar afterglow plasma, dielec. const., meas. and theory 4=11641
 Ar, electron avalanches, mean energy and drift velocities 4=11546
 Ar, electron drift velocities meas. 4=24561
 Ar, excitation of upper levels, in d.c. discharge, quenching collision broadening 4=14598
 Ar glow, localized density meas. by X-ray fluorescence 4=18724
 Ar, positive column excitation at medium pressures 4=557
 Ar, shock-ionized, mechanism of sustained discharge 4=8640
 Ar, spectra, neutral, var. with type of discharge 4=18782
 Ar⁺, pulsed, 10 laser wavelengths, 4500 Å to 5300 Å 4=192
 Ar-Hg, striation, moving, dispersion rel. 4=16449
 BF₃ discharge, 5450 Å emission, identification as BO₂ bands 4=22371
 Br-Ar mixtures, glows, Faraday dark space, luminous layers 4=11551
 CO, Joshi effect, surface origin 4=467
 CO₂ laser, pulsed, B'²Σ⁻-A'²Π band transitions 4=8976
 CO₂ glow, positive ions 4=18726
 Cs, cond., field, var. with current 4=21497
 Cs, ion wave resonance and plasma instability 4=11671
 Cs plasma, probe characteristics meas. by 1-, 2-, 3-, and 4-electrode probes 4=14688
 D, stationary striations, spectral analysis 4=5568
 F, spectral line intensities, oscillation 4=14651
 H, condensed in high vac., by high pot. field, appls. 4=27497
 H, pulsed, ionization, dissociation effects 4=18682
 H, stationary striations 4=5568
 H, Townsend, self-sustained, Hα radiation 4=18710
 H and He⁺ in mag. field, reaction ht. cond. 4=29882
 H⁺, 750 keV, energy transfer to give neutral beam of quantum levels > 7 4=11515
 He afterglow, atomic emission 4=22298
 He afterglow, electron energy decay meas. 4=11542
 He afterglow, molec. and atomic spectra 4=24612
 He afterglow, positive ion mobilities and conversion rates 4=21482
 He afterglow, selective excitation of second gas 4=12385
 He afterglow, spectral emission, molecular bands 4=20049
 He, d.c., at high pressure, elec. and spectrosc. study 4=11539
 He, electron drift velocity meas. at high E/P 4=11550
 He, flowing, afterglow, atomic spectrum 4=18727
 He₂, flowing, afterglow, molec. spectrum 4=18728
 He, hysteresis near mag. field for positive column instability 4=18737
 He⁺, hollow cathode, spectrum shift 4=18812
 He-Ar, with Hg, resonance radiation meas. 4=21475
 Hg-He, 19 laser lines meas. 4=24905
 He-Ne, + column, electron density, noise temp., var. current 4=18738
 He-Ne, decay rate of metastable states of Ne, meas. 4=28132
 He-Ne, excited atom concs. in plasma decay, different from pure He, Ne 4=21469
 He-Ne gas mixture, glow cataphoresis 4=24275
 He-Ne glow discharge, laser action in negative glow 4=16695
 He-Ne glow, quenching by microwaves 4=18729
 He-Ne laser 4=18718
 Hg hot cathode tube, l.f. plasma oscills. 4=21530

Discharges, electric—contd

- Hg—inert gas, resonance radiation reflection by walls 4=18711
 Hg, laser, 1.529, 1.813 μ 4=765
 Hg plasma, probe characteristics meas. by 1-, 2-, 3-, and 4-electrode probes 4=14688
 Hg, positive column, electron velocity distrib. function 4=14599
 Hg—rare gas mixtures, positive column 4=5567
 Hg vapour press. var. in discharge tubes with ignitor 4=29881
 I, a.c. current var. on illumination, wall effects 4=21470
 I, laser, 3.236, 3.431 μ 4=765
 I, positive column striations, diffusion in 4=8649
 in $K_4Fe(CN)_6 \cdot 3H_2O$, recurrent, with charging transients 4=22776
 in KH_2PO_4 , recurrent, with charging, transients 4=22776
 N, condensed in high vac., by high pot. field, appls. 4=27497
 N₂, afterglow due to excitation in electron avalanches 4=24614
 N₂, afterglow pink, not due to N(⁶S) atoms 4=14596
 N, afterglows, resonance absorption 4=24611
 N₂, delayed implosion of Z-pinch 4=540
 N₂ dissociation, catalyzed, in microwave discharge 4=27496
 N₂, electron avalanche development 4=21467
 N₂, electron avalanche transition to streamers 4=24617
 N₂, electron avalanches, mean energy and drift velocities 4=11546
 N₂, electron drift velocity, avalanche meas. 4=11253
 N₂ glow, presence of N atoms 4=14595
 N₂⁺, N₂⁺ in glow, drift velocity studies 4=24576
 N₂—methane, afterglow due to excitation in electron avalanches 4=24614
 N₂—methane mixture, current rise due to single electron 4=5578
 NH₃, glow, ion—molecule clusters 4=21481
 N—O afterglow, chemi-ionization, reaction 4=23648
 Ne, c.w. laser action up to 133 μ 4=30086
 Ne, excitation of upper levels, in d.c. discharge, quenching collision broadening 4=14598
 Ne glow, cathode fall, changes, with polycryst. Mo cathode 4=11549
 Ne, high-frequency, striations 4=474
 Ne, hot cathode, moving striations, image converter meas. 4=11544
 Ne, low-pressure, with positive column, periodic structure 4=18739
 Ne, positive column, h.f. cond., electron density and temp. 4=5575
 Ne, pulsed d.c. excitation, afterglow 4=14597
 Ne, stationary and moving stratification 4=8646
 Ne—Ar, with Hg, resonance radiation meas. 4=21475
 Ne—H₂ mixtures, low press., striations 4=16448
 O, positive column oscills., freq. var. with dimensions, voltage 4=8650
 O recombination, in elec. discharges, role of excited molecules 4=21464
 O, spectral line intensities, oscillation 4=14651
 O₂, glow, two forms, differences 4=2958
 O₂⁺, hollow cathode, spectrum, and aurora 4=22366
 O₃ production in silent discharge, surface effects 4=17860
 O₂—N₂—Ar, forbidden auroral radiation 4=18708
 Si p—n barrier layers, avalanches, on particle irradi. 4=12932
 Xe, density and temp. gradient meas. 4=14588
 Xe, discolouration due to N₂ contamination 4=21207
 Xe, electron avalanches, mean energy and drift velocities 4=11546
 Xe, pulse, possible maser action 4=489
 Xe pulsed, spectra, var. time, discharge 4=24355
 Xe and Xe—water vapour mixtures, afterglow decay rates 4=24599

high-frequency

- afterglow meas. by plasma waveguide cell 4=5572
 air, discharge configuration, localization by quadrupole mag. field 4=24646
 arc, ion accel. 4=24624
 breakdown at optical frequencies 4=18747
 charged-particle energy gain after r.f. field reflection near cyclotron resonance 4=19166

Discharges, electric—contd**high-frequency**—contd

- cyclotron, low-voltage, formation 4=19143
 ionized gas, particle acceleration by h. f. field at cyclotron resonance 4=8641
 microwave discharge tube, liq. helium cooled 4=14583
 plasma confinement by bell-shaped mag. field, induction discharge 4=11548
 plasmas, thermal, dynamic props., theory 4=8665
 positive-ion source, mass-spectrometer study 4=606
 r.f., interferometric study 4=18714
 r.f. plasmoid, rel. to dipolar resonance 4=18716
 radiation, microwave plasma, electrodeless dis. 4=16443
 recent studies, non-diffusion-controlled, review 4=18715
 resonance discharge, and suppression possibility 4=14586
 ring discharges, electrodeless, diffusion-controlled, formation and decay times 4=18698
 ring, electron motion in r.f. field 4=18939
 ring, skin effect meas., 0.9–5.6 Mc/s 4=18717
 spiral structures and resistance extrema 4=8643
 torch, excitation mechanism at 2400 Mc/s 4=11547
 u.v. resonance line source, for photochemical work 4=14349
 weak to strong transition pressure, var. tube dia., at. wt. 4=16442
 Ar, coherent oscillations, 10–100 kc/s, in 1000–3000 Oe 4=24609
 Ar, spectrum, similarity to Geisler tubes at high powers 4=5612
 Ar, torch, electrode erosion, lack of for Al 4=8667
 C_n⁺ and C_n⁺ distrib., periodicities with var. n 4=16447
 H, r.f., in single-turn coil, 70 W, 125 Mc/s 4=18713
 H₂, discharge configuration, localization by quadrupole mag. field 4=24646
 He, spectrum, similarity to Geisler tubes at high powers 4=5612
 He—Hg r.f. discharge, laser action 4=3210
 Hg arc, for telemetry, modulated at 10 to 120 kc/s 4=8666
 I afterglow, ion-ion recomb. coeffs. 4=27489
 N, afterglow, electron density, var. with time, and aurora 4=532
 N, torch, electrode erosion, lack of for Al 4=8667
 N₂, catalysed dissociation 4=11553
 N₂, production of active nitrogen 4=3865
 Ne, spectrum, similarity to Geisler tubes at high powers 4=5612
 Ne, 3200 Mc/s, pulsed, ionization boundary movement 4=21471

Disperse systems

- See also Aerosols; Colloids; Emulsions; Foams; Powders; Sols; Suspensions
 coagulation, kinetic eqn., soln. 4=10656
 collisions in, rate constants, effect of size distrib. 4=73
 droplet movement in homog. turbulence field 4=5227
 lattices, particle size determ. by light scattering 4=4716
 liquid drops, collision, coalescence, disruption, photographic study 4=30910
 particle size spectrum meas. from transparency spectrum 4=13748
 in Fe, mechanical prop. improvement 4=17733
 particle spectrum from spectral transparency 4=15849
 particle spectrum from tabular presentation of transparency 4=20840
 particle spectrum from transparency 4=20839
 BaTiO₃—MgSnO₃ with Ag or Ni, dielectric props 4=4211
 Ni "Kanigen" phase, atomic structure 4=7674

Dispersion, acoustic

- in crystals under stress, anomalous resonances 4=6726
 ionic sound waves in plasma, dispersion relation, expt. 4=8772
 Kramers—Kronig relations 4=8345
 liquid mixtures, critical, corrected results 4=14162
 in metals, mag. field present 4=25844
 metals, theory rel. to force of cond. electrons 4=6734
 at phase transformations of the second kind 4=14289
 pulse, variation of form caused by random inhomogeneities of medium 4=282
 radiation impedance rel. to far field pressure and baffle impedance 4=8344

SUBJECT INDEX

Dispersion, acoustic — contd

- solids, second sound, dispersion reln. 4=12621
- Ag, dissipation, increase by grinding 4=6723
- Au, dissipation, increase by grinding 4=6723
- Br., liq. and solid, rel. to vibr. relax. 4=14163
- CO₂, light diffr. meas., and vibr. relax., press., temp. var. 4=18249
- Cu, dissipation, increase by grinding 4=6723
- N₂, light diffr. meas., and vibr. relax., press., temp. var. 4=18249

ultrasonic

- diatomic gases at low pressure 4=2730
- metals in mag. field, frequ. -depend., theory 4=12625
- N₂O, meas. by optical diffraction 4=11246
- paramagnetic ions in crystal, anomalous 4=15416
- spiral propagation, assuming Hooke's law 4=14282

Dispersion, optical

- in metallic vessels, ferrosulphate method 4=9016
- microcalorimeter for ionizing radiation, portable 4=22053
- n, based on long BF₃ counter 4=21882
- by N reactions, in N + O mixtures and N oxides 4=5893
- N₂O, high-dose dosimeter 4=11859
- neutron, by Ni⁵⁸(n,p)Co⁵⁸, branching ratio errors 4=19536
- neutrons, fast, by thermoluminescence 4=6078
- neutrons, 14 MeV, chemical systems 4=25118
- neutrons, tissue dose, Hurst counter, 0.25–1 MeV 4=3428

SUBJECT INDEX

Dosimetry—contd

- n, use of nuclear emulsions, type K 4=915
 paraffin phantoms, depth-dose studies, for 3 and 33 BeV
 proton beams 4=13979
 radiation dose to Canadians from fallout 4=17913
 radiometer for β -active gases in air, conc. detm. 4=1037
 reactor irradi., energy dose, calorimetric
 meas. 4=6087
 Si 4=27717
 space, due to cosmic rays, Van Allen belts and flare
 particles 4=20958
 spectrophotometric dosimeter in range 500-5000 rad
 using methyl orange dye 4=5894
 units, ICRU report 4=6259
 Universal Radiometer, RUS-3 4=16740
 whole-body counter, γ -emission, 150 mc to
 10 μ c 4=22052
 whole body counting with single NaI:Tl detector 4=25332
 X-ray, semicond. Si p-i-n junction, Li drifted 4=19475
 X-rays, soft, using Ce sulphate solns. 4=9017
 X-rays, 4-20 MV, locally absorbed, by C
 calorimeter 4=11739

Double refraction

crystals, triclinic, fourth-order coefficients 4=13360
earth, from tides gravity meas. 4=15858
f. c. c. and rocksalt-type, vol. derivatives, from lattice
and finite strain theories 4=28375
ferroelectrics, nonlinearity 4=1909
ferromagnets, var. with field above saturation 4=13362
garnet, -183° to 300° C 4=7427
glass, Young's modulus rel. to refr. index, ht.
effect 4=22864
graphite, polycrystalline, small-strain model 4=23132
graphite, Young's modulus, electron beam effects,
4 MeV, temp. var. 4=4467
graphite, var. with strain amplitude, temp., neutron
effects 4=10380
graphites, lampblack-based, irradiation effect on
modulus 4=20323
heat prop. effects 4=20629
hexamine, compared to Li, Fe 4=28358
high-order, thermodynamic definition 4=11145
ice, C_{11} and C_{33} values, determ. from u.s. vel.
meas. 4=17350
incremental, finite strain 4=11137
infrared optical materials, forty-eight 4=2811
Invar-type alloys meas., dispersion-hardened 4=13419
lead titanate zirconate 4=15563
metals, cubic, elastic and shear moduli 4=17707
metals, effect of heat treatment below recrystallization
temp. 4=20630
metals, effect on temp. depend. of activation energy
at high temp. 4=15693
naphthalene crystals, 13 consts. 4=1957
noise abatement materials, dynamic 4=28912
polyethylene terephthalate, transversely isotropic 4=1960
polymer melts, shear moduli 4=14112
polymethylmethacrylate, shear, Young's and bulk moduli,
Poisson's ratio 4=7445
polyvinyl chloride, complex shear modulus, freq. and
temp. depend. 4=15714
porous polycrystals, var. of Young's modulus with
porosity 4=17708

Elastic constants—contd

- pyroxenes 4=20682
powder porosity, contact cross-section and Young's
modulus reln. 4=23542
quartz fourth order, from non-linear acoustic reson.
effects 4=16179
rubber, Young's modulus, pressure effect meas. 4=7454
salicylidene aniline crystals 4=22781
silica, fused, Young's and rigidity moduli rel. to large
tensile strain 4=28979
 θ (elastic) rel. to θ (calorimetric) near
T = 0°K 4=28343
variation detection, by transverse u.s. waves 4=13363
Young's modulus, Cu, Ag and Au, decrease after deformation
and recovery 4=15703
Ag—Sn alloy, effect of Pb addition 4=28964
Al, adiabatic, at 300°, 77° and 4°K 4=23117
Al alloys, elastic modulus, electrocapillary
effect 4=4438
Al, recovery after plastic deform., dislocation
effects 4=20651
Au, cold worked, dynamic moduli meas. 4=1941
Au, transient changes due to quenching 4=23156
Au—Ag, rel. to composition 4=23158
BaF₂, u.s. pulse meas., 4.2–300°K 4=28937
BaNb₂O₆—PbNb₂O₆ 4=1909
BaTiO₃ 4=1909
BaTiO₃—CaTiO₃ 4=1909
BaTiO₃—CaTiO₃—CoCO₃ 4=1909
Bi 4=12882
Bi₂Te₃ 4=13530
C, glassy and baked, var. with strain amplitude, temp.,
neutron effects 4=10380
C, polycrystalline, small-strain model 4=23132
C, Young's modulus at high temperatures 4=23131
Cd pyroniobate, rel. to piezoelectric props. and
temp. 4=4459
Co, effect on magnetic sp. ht. det. 4=25856
Co—W, during phase transformations 4=17727
Cr, Young's, ~ 40° C, effect of thermal and mech.
history 4=26501
CsBr, room temp. to 4.2°K 4=15702
CsBr, single crystals, temp. depend. 4=1932
CsCl-type crystals, third order 4=1933
CsI, room temp. to 4.2°K 4=15702
CsI, single crystals, temp. depend. 4=1932
Cu, cold worked, dynamic moduli meas. 4=1941
Cu, elastic and shear moduli 4=17707
Cu, 99.99% pure, elastic modulus, electrocapillary
effect 4=4438
Cu, recovery after plastic deform., dislocation
effects 4=20651
Cu, Young's, beta ray effects, low temps. 4=10376
Cu—Ag, Cu—Sn, Cu—Zn alloys, effect of Pb
addition 4=28964
Cu₃Au, Young's modulus rel. to ordering 4=7488
Cu—Sb, rel. to composition 4=23158
Fe, α , and Debye temp., effect of alloying with Mn, Mo, Si,
C 4=6750
Fe, effect on magnetic sp. ht. det. 4=25856
Fe-base alloys, Young's modulus rel. to Ni and Co
content and temp. 4=17736
Fe—Ni—Mo alloys, Young's modulus rel. to Mo
content 4=17737
Fe—Rh alloy, Young's modulus 4=26314
Hf, single crystal moduli, 4° to 1155°K 4=26530
InAs, adiabatic, room-temperature 4=4468
K, calc. using Toya's electron—phonon interact. 4=20196
KI, -183° to 300° C 4=7450
Li, elasticity modulus rel. to plastic deformation 4=10431
Mg, Cd, and ordering kinetics 4=1995
MgO, comparison with theory 4=7434
MgO, polycryst., rel. to single-crystal data 4=13426
Nb, u.s. meas. 4=28977
NH₄Cl, near λ -point 4=7410
NaCl single crystals, c_{111} , u.s. optical determ. 4=26528
NaNO₂ 4=20716
16% Nb—Zr alloy, 475° - 575° C, rel. to $\beta \rightarrow \alpha$
transform. 4=23281
Ni, effect on magnetic sp. ht. det. 4=25856
Ni electrodeposited coatings, elastic modulus
variations 4=23181

Elastic constants—contd

- Ni ferrite, modulus rel. to mag. fld. and frequency 4=23186
- Ni, rigidity modulus rel. to work hardening coeff., theory 4=10587
- Ni—Cu alloy, 1-5 Mc/s 4=20676
- Ni—Fe alloy, 1-5 Mc/s 4=20676
- Ni—Fe ferromag. alloy, meas. at 300°K 4=7442
- PbMg_{1/2}W_{1/2}O₃, yield anomaly, near antiferroelectric Curie point 4=1953
- Pb_{0.99}Sr_{0.01}(Zr_{0.93}Ti_{0.07})O₃—Ta₂O₅ 4=1909
- Pu—Al alloys, Young's modulus, determ. for phase boundary position calc. 4=13440
- Pu—Ce alloys, Young's modulus, determ. for phase boundary position calc. 4=13440
- Sb, rel. to lattice vibrations 4=9826
- Sn—Ag, Sn—Zn, Sn—Sb, rel. to composition 4=23217
- Ta, u.s. meas. 4=28977
- Te, force consts., determ. 4=1367
- Te, 100°-300°K, u.s. echo meas. 4=10402
- Te, 6 consts. 4=4489
- Ti, single crystal moduli, 4° to 1155°K 4=26530
- Ti—Mo (0-35%), Young, shear, and phase transforms. 4=1964
- Ti—Nb alloys, composition depend. 4=26531
- Ti—Nb(0-60%), Young, shear, and phase transforms. 4=1964
- Ti—V (0-50%), Young, shear, and phase transforms. 4=1964
- UCd₁₁ 4=23223
- WC, Co-bonded, formulae for elastic modulus 4=28986
- ZnS, variation with temperature 4=13450
- Zn—Sb, rel. to composition 4=23158
- Zr, single crystal moduli, 4° to 1155°K 4=26530

measurement

- ferroelectric ceramic disks, poled, Poisson's ratio method 4=7364
- at high press., dynamic complex elasticity of solids and liquids 4=7360
- high-temp. meas., static-type appar. 4=23088
- impulse method, for dynamic modulus 4=17711
- metals, low temp., use of superconductivity 4=15685
- metals, vibra., review 4=15684
- modulus of elasticity, using double pendulum 4=7363
- from piezoelectric vibrator resonance 4=15683
- Poisson's ratio 4=13365
- Poisson's ratio, beam bending, from optical reflection focus 4=7366
- Poisson's ratio, from longitudinal reson. of sample in air and liquid 4=17710
- Poisson's ratio, from viscoelastic sphere forced vibr. 4=15686
- polymers, resonant flexure method 4=20678
- polymers, shear modulus, complex 4=15714
- polystyrol, elasticity modulus, using double pendulum 4=7363
- ring and disc, Young's modulus and Poisson's ratio 4=7365
- rubber, hard, elasticity modulus, using double pendulum 4=7363
- shear, linear isotropic viscoelastic solid 4=23090
- skis 4=23230
- solids, u.s. determ. 4=4440
- tensile stress, area compensator for constant stress-cycling 4=7371
- torsion pendulum, transformer system for carrier freq. 4=4997
- from velocity, acoustic waves, u.s., high temps., long. and shear 4=26463
- vibration method, for small plates 4=20631
- Vinidur, elasticity modulus, using double pendulum 4=7363
- Young's modulus apparatus with hydraulic amplification, student expt. 4=27011
- Young's modulus, dynamic, above 1000°C, for pure polycryst. metals and commercial graphites 4=30788
- Young's modulus, viscoelastic acoustic materials, as rods 4=17709
- Al single crystals, 4.2-300°K 4=13390
- C steel, stress meas. by X-ray method 4=23097
- KBr, by diffuse X-ray reflection 4=1963
- KCl, by diffuse X-ray reflection 4=1963
- NaF, by diffuse X-ray reflection 4=1963
- Te, u.s. echo technique 4=4489

Elastic deformation

- See also Bending; Stress/strain relations; Torsion
- coaxial cylindrical system, electrostatic solution 4=29856
- crystal lattices, and X-ray absorpt. and deviation, calc. 4=2047
- crystals, strong deflection of X-rays meas. 4=15774
- crystals, X-ray refl. 4=1706
- dislocation wall, compound tilt, rel. to penetration 4=20633
- edge cracks propag., cyclic stress required, 8 materials 4=30759
- elastic-plastic cylinder with free ends and internal heat generation 4=5116
- inclusion, elliptic, spontaneous, in orthotropic medium 4=18131
- magnetoelastic media, volume elements rotation, rel. to magnetization eqn. of state 3=11136
- polymer network, orientation distrib. funcn. of statistical segments 4=23616
- polymers, vitreous, and double refraction sign change 4=7164
- steel, effect on X-ray line profiles 4=23143
- steel, from time of contact in impact expts. 4=13366
- theory, duality of inverse methods 4=5115
- viscoelastic non-homogeneous solids 4=21066
- Ag films, electron diffr. exam. 4=1928
- Al alloy, effect on X-ray line profiles 4=23143
- Al films, electron diffr. exam. 4=1928
- Co, anisotropy, stress effects 4=7425
- Cu, effect on X-ray line profiles 4=23143
- Cu, energy absorption, dislocation annihilation and blocking 4=26506
- Cu—Al alloy, and recovery, causing internal energy changes 4=13402
- Cu—Si—Mn, stacking faults, formation 4=12774
- Cu—Zn alloy, and recovery, causing internal energy changes 4=13402
- KCl, effect on V₂-band formation 4=20318
- NaCl, round dislocations 4=12766

Elastic fatigue

- bending fatigue machine with controlled atmosphere 4=23091
- brass, cumulative damage under limited stress 4=28946
- brass, subject to alternating torsion 4=1939
- crack, micro, formation mechanism by vacancy aggregate growth and fusion 4=4450
- crystal vacancy aggregate amalgamation, rate calc. 4=4036
- fatigue tests on propag. of edge cracks in eight materials 4=30759
- measurement, high amplitude, u.s. 4=4442
- metal films, electron-microscope study 4=4449
- metals, f.c.c., mechanism 4=23160
- metals, fatigue processes, review 4=13382
- mild steel, axial texture formation, X-ray diffract. anal. 4=23210
- steel, effects of disloc. locking and strain ageing 4=10382
- vacuum tester 4=20637
- Al alloy, effect of atmospheric humidity 4=23125
- Al alloys, high-strength, unusual fatigue behaviour, effects of cycling rate 4=26493
- Al, fatigued at 78°K, dislocation debris 4=12751
- Al—Mg, dislocation arrangement, electron microscope study 4=12759
- Cu crystals, effect of strain amplitude 4=23140
- Cu, persistence of voids after annealing 4=15705
- Cu, slip, electron microscope exam. 4=23139
- Cu, slip process peculiar to fatigue 4=26504
- Cu, subject to alternating torsion 4=1939
- Cu, torsional strain cycling 4=1940
- Fe, Armco and pure, mechanism 4=23160
- Fe, b.c.c., limit, ageing effects 4=13417
- Fe, slip, electron microscope exam. 4=23139
- Fe and Fe alloys, var. rel. to temp. and N and C content, enhancement by Mn addition 4=28957
- Mg, slip, microscope obs., and Fe 4=23175
- Mg and Mg alloys, temp. depend. 4=1954
- Pb, effect of atmosphere on fatigue life 4=13421
- Pu, limit 4=7449
- Zn, at room temp. using direct stresses 4=7466

SUBJECT INDEX

Elastic limit

See also Slip

- crystal pinned dislocation freeing at yield, calc., without neglecting line tension 4=7382
- measurement, threshold 4=15691
- steel, polycrystalline, study of Liders fronts 4=7458
- steel, torsional pre-strain effects 4=7459
- steels measurement, threshold 4=15691
- Al alloy measurement, threshold 4=15691
- Be, microstrain, effects of damaged surface 4=7412
- Fe single crystals, $< 5 \times 10^{-3}$ p.p.m. C, temp. depend. 4=1944

- Fe, var. with strain rate, mechanism 4=4469
- Fe₃Al, yield stress rel. to degree of ordering 4=4473
- Mg single crystals, prestrained, anelastic limit τ_A rel. to temp. in 82° to 320° range 4=30780
- Nb, yield stress, temp. depend. 4=4480
- Ni, effect of cold working and annealing 4=13431
- Ni, lower, var. with grain size, heat treatment effects 4=4482

Elastic losses

See Internal friction

Elastic relaxation

See also Creep

- dislocation core, effect of thermal disorder 4=20274
- internal friction, dislocation—point defect interact. process 4=1913
- metals, and description of gases 4=10621
- metals, during vibration 4=7374
- polyethylene 4=7375
- polyethylene, stress relax., rel. to strain rate and temp. 4=20681
- polymethyl methacrylate, β -relax., stress relax. and creep, activation energies, theory 4=28922
- stress relaxation, activation energy, theory and expt. 4=28922
- Al, stress relax., creep and internal friction, activation energies 4=28922
- Au—Ag alloys 4=20656
- Br, liq. and solid, vibr. relax. 4=14163
- CO₂—He mixture, absorpt. of sound rel. to vibr. relax. 4=14213
- Cr, ~ 40° C, effect of thermal and mech. history 4=26501
- Cu, deformed, three relaxation peaks 4=1935
- Cu, elec. resist. meas., activation energies 4=10025
- Cu, in stages I and II of work hardening 4=4460
- Cu—Be alloy, in phase transition, oscill. damping 4=13403
- Cu—In alloy, in phase transition, oscill. damping 4=13403
- Mn—Cu alloy, dilatational rel. to distorsional strain ratio 4=11269
- NaCl, due to impurity—vacancy complexes 4=28983
- O₂, symmetry lattices, paired point defect assoc. 4=30748
- ZnCl₂, molten, shear and structural relaxation 4=11176

Elastic waves

See also Acoustic waves; Seismic waves

- absorption at high freq. in Ge, Si and Z-cut quartz 4=6724
- anisotropic, historical development of theory 4=262
- anisotropic wave propagation, analytical method 4=5268
- in antiferromagnetics, bound magnetoelastic waves 4=22490
- Armco iron, velocities, at 4.5 to 18 kbar pressures 4=4470
- Cherenkov radiation prod. elastic conductor in mag. field next to vacuum 4=14244-5

- crystals, with vel. extremum, propagation 4=11278
- cylinder, finite, circular, torsional oscillations 4=14242

Elastic waves — contd

- diffraction calc., 2-dimensional, use of Fourier transform 4=18318
- diffraction, at contour or bodies of arbitrary shape, theory 4=24290
- diffraction by crack 4=18317
- diffraction by spherical cavity 4=24292
- dispersion of axisymm. waves in composite rods 4=2757
- effect on Cherenkov radiation, liquid in a mag. field with a moving mechanical impulse 4=5271
- elastic, visco plastic material, rel. to work-hardening 4=30747
- energy-transfer ratios, symmetry, at boundary between 2 media 4=1248
- expansion coeff. of wave fronts in continuum mech. 4=21021
- generation of circularly polarized transverse 4=21221
- generation by transient surface heating, rel. to thermal and elastic props. 4=5275
- granite, high-ampl., attenuation 4=15717
- gravitating sphere, shear wave propag. 4=11141
- Green's function for multi-layered half-space, calc. method 4=27247
- guided, Schlieren optical study, u. s. 4=5277
- in half-space 4=261
- head waves, refr. from layers, two-dim. models 4=14246
- hypoeastic media, principal, acoustic tensor 4=2617
- impulsive source near fluid—2-layer solid interface 4=2762
- interaction with spin-waves, in isotropic ferro-dielec. 4=25845
- Lamb's problem for inhomog. medium 4=2759
- liquid crystal propag. 4=24144
- liquid—solid boundary, S head waves 4=260
- liquids, inhomogeneous with const. vel. 4=8301
- Love, in anisotropic layer with monoclinic symm. 4=2758
- Love, dispersion curves, effect of surface irregularities 4=264
- Love waves in double surface layer, in porous solid, liquid-filled 4=11285
- Love waves, energy flux rel. to period and depth 4=14247
- magnetoelastic waves in ferromagnets, parallel pumping 4=26296
- magnets, velo. and decay law 4=5269
- marble, high-ampl., attenuation 4=15717
- metals, polarization plane rotation and circular mag. dichroism 4=13367
- metals, polarization rot. and dichroism in mag. polarized metals 4=12635
- metals, theory rel. to force of cond. electrons 4=6734
- nonhomogeneous media, unoccupied eqns. of motion 4=2760
- normal plate modes in solid cylindrical layer 4=255
- point source in semi-infinite elastic medium, use of singular integrals 4=5276
- in porous media, expansion process, longitudinal and transverse waves interactions 4=8307
- porous media with heterogeneities 4=14243
- porous solid, liquid filled, transmission across plane interface 4=11284
- from pressure on spherical and cylindrical cavities in anisotropic medium 4=24294
- propagation expts. using u. s. absorpt. in plastic sheets 4=2787
- propagation of finite amplitude waves in incompressible elastic materials 4=11280
- propagation in multilayered media, matrix method of soln. 4=11287
- propagation in solids, nonlinear effects 4=30744
- quartz, general or, 600–1200 Mc/s 4=21232
- quasi-longitudinal waves in crystals 4=11261
- radiation from piston in infinite elastic screen 4=11277
- radiation, solid—liquid contact in mag. field 4=24288-9
- random medium, effective propag. const. 4=16016
- Rayleigh waves in nonhomogeneous elastic half-space 4=8306
- Rayleigh waves, propagation along isothermal and insulated boundaries 4=24293
- reflection and refraction at rigid boundary between two elastic media 4=263
- reflection and refraction at solid—liquid boundaries 4=2763
- relativistic, general Noll medium 4=14039

Acoustic waves — contd

- rods, semi-infinite, axisymm. waves 4=18309
- sand, frozen, water-saturated, propag. parameters 4=26781
- scattering by small inhomogeneities 4=8300
- secondary, on reflection at fluid-porous medium boundary 4=11282
- SH-point source in half-space with layer 4=2761
- shock precursor waves, decay 4=5278
- snow, cover on ice flows, velo. meas., long and solid with dislocations, decay 4=23092
- in solids, kMc/s range, classical and quantum mech. approach 4=9837
- solids, surface wave excitation and propagation, geometrical theory 4=11273
- spherical source, Schotte's model soln. 4=21218
- stress, in solids, review 4=11279
- stress waves, near and far fields, elastic and viscoelastic solids 4=18320
- surface, hove, dispersion in a tapered layered medium 4=8303
- surface, Rayleigh, propag. 4=18319
- surface Rayleigh velos. in orthorhombic symmetry medium, calc. 4=8304
- surface waves from point sources in multi-layered medium, radiation pattern 4=11283
- surface waves in porous half-space supporting liquid layer 4=11286
- thermal, in solids, detection by X-ray and neutron diffraction 4=9837
- transmission through plate joints 4=24295
- turbulent medium, unbounded, fluctuations, spatial correl. 4=11276
- two-dim. perforated models for seismic waves 4=7814
- velocity transformers, resonant 4=5272
- vibration freqs. and mode shapes for inhomogeneous beams, calc. 4=14249
- viscoelastic bodies, longitud. and transverse, phase meas. 4=265
- viscoelastic materials, isotropic, guided waves, attenuation 4=21220
- viscoelastic medium, shear wave propag., birefringence 4=5274
- wedge, inhomogeneous with const. vel. 4=8301
- Al, high-ampl., attenuation 4=15717

Elasticity

SUBJECT INDEX

Electrets—contd

Tl₂Se, As₂Se₃ layers, photo- and cathodo-electret states 4=26133

Electric breakdown

See Breakdown, electric

Electric charge

See also Space charge

accelerated charges, elec. field produced 4=3110

atmosphere lower layers 4=29302

blowing snow 4=30934

capacitors, non-linear, d. c., a. c., and superposed a. c. and d. c., calc. 4=29857

droplets of water and salt-soln., accumulation and loss 4=5539

earth, positive 4=26780

electrometer tube, deflecting beam, noise props. 4=5530

electron—proton diff., meas. attempts, cosmology and particle theory 4=15905

glass dust, effect of γ -rays 4=22764

ice, on melting, CO₂ prevention 4=23767

ionic, in cubic ionic crystals 4=25822

ions, change resulting from interaction with residual gas 4=8852

measurement, using radioactive Ag, for polarography 4=7763

milk droplets, sign of charge rel. to droplet radius 4=8599

milk powder, charge amount rel. to conc. in flow and flow vel. 4=8599

mobility in gases, meas. using pulse generator 4=18650

pendulum torque, anomalies 4=27123

production, laboratory substandard for instrument calibration 4=21432

snow, on melting, CO₂ prevention 4=23767

on snow, storm conditions 4=29278

sun, from interplanetary mag. field meas. 4=23905

transfer, p + H, relativistic corrections 4=27486

H₂O drops, on freezing 4=23768

Electric fields

See also Electromagnetic fields

asymptotic expansion of electric vector fields 4=3099

average energy gain method, quantum theory 4=11121

charged filament moving near cond. halfplane 4=14867

above a complicated boundary, determ. by computer 4=5536

Coulomb, one-region, two-centre expansion 4=29515

dielectrics, layer-like inhomogeneities, pre-breakdown 4=1676

e. m. waves scatt. by plasma-coated conducting cylinder 4=24847

generator, solid state, for monopole gas analyser 4=27588

geometric model about charged particle 4=657

at liquid interface, due to adsorption and desorption of surface active ions 4=5163

plasma, h. f., strength meas. by Stark effect 4=11625

plasma, resonance distrib., hysteresis 4=5607

plotter, elec. of multiresistivity systems 4=24527

probe, photoconductive 4=3097

produced by accelerated charges, calc. 4=3110

pulsed dipole in an interface 4=713

relativity, general, radial cylind. -symm. field 4=8043

with rot. symm., ion optics 4=24755

rotating system of reference rel. to electro-dynamics 4=21637

statistical props. in medium with small random permittivity variations 4=8600

stress tensor and field, symmetrical expansion of hollow spherical dielectric 4=22756

trapping and compression in conducting media 4=21635

two coaxial equidiam. cylinders 4=2931

voltmeter, digital, using feedback principle 4=8586

in xerography, calc. 4=14416

effects

alternating, poor conductor response 4=30642

anthracene, on free carrier photogeneration 4=22805

Brillouin beam, reflection 4=3042

cloud precipitation processes, review 4=10720

conductivity, thermal, liquids, dielectric, increase 4=5170

convection in fluids 4=16271

crystal atomic scatt. factor, rel. to X-ray scatt. 4=26629

crystal phonon generation due to electron scatt. 4=9835

Electric fields—contd**effects**—contd

electron beam, hollow, vel. distrib., when crossed with mag. field 4=29968

electron distrib. function, max. anisotropy approx. 4=8114

gas, viscosity 4=29649

glass light transmission 4=22862

ice crystal growth 4=20731

on ion currents in flames 4=13727

ionized gas, electron heating 4=11577

liquids, fluoresc. dielec., on luminesc. 4=24222

liquids, insulating, heat transfer, space charge effect 4=11195

metals, surface ionization, statist. theory 4=8631

n. m. r. in gases and liquids 4=18252

nitrobenzene, dielec. const., 3 cm, relax. 4=21145

organic scintillators, γ -ray spectrum 4=10227

oxidation, proposed obs. in triode 4=20829

in paramagnetic resonance 4=26369

polymer solns., structure, light scatt. 4=24180

polymer solutions, flowing in a. c. + d. c., double refraction 4=18199

propane, γ -radiolysis 4=29233

semiconductor hole energy distrib. 4=25875

with space-modulated mag. field, electron motion 4=5850

splitting of e. s. r. lines of Cr³⁺ in ruby 4=26387

water drops, on disintegration 4=24153

water drops, supercooled, on freezing 4=11403

water drops, supercooling 4=368

water, heat transfer from fine Pt wires 4=8200

Ar—Cs plasma, heating to 3000–4000°K 4=27545

BaO, desorption from W by elec. field 4=7722

BaTiO₃, phase transformation, from e. s. r. of Fe²⁺ 4=100

Br⁷⁹, ⁸¹, I¹²⁷ nuc. quadrupole res. in halogenated benzene and nitrobenzene 4=1312

CdS, luminescence quenching and enhancement 4=15617

CdS single crystals, on spectral characts. of quantum yield 4=26144

Fe—Al alloys, self-diffusion 4=25968

Ge, electron mobility var., and phonon 4=9835

Ge p—n junction, absorption edge shift, for light modulation 4=26193

H, levels and elec. moment, calc. 4=25481

He II, ion motion in rotating He 4=14499

Li precipitation in Ge 4=10425

MgO, creep increase 4=7433

NaCl crystals, on photostimulated exoelectron emission, 4=24721

PbS films, work function 4=11684

PbS photosensitive layers, e. m. wave absorption rel. to conductivity 4=1736

Si, diffusion of Ga, internal elec. field effects due to Sb 4=28484

Si real surface, electrical properties, 190°–620°K 4=100

Si surfaces, d. c., a. c. and pulsed fields 4=1620

ZnS, luminescence quenching and enhancement 4=15617

Electric strength

See also Breakdown, electric

alkali halides, review 4=1647

conducting surfaces in field between electrodes, elec. stresses 4=24535

dielectric liquids, automatic meas. 4=2926

gaseous cavities in solid dielects., elec. stresses 4=245

n-hexane, effect of dissolved gases 4=5201

liquid argon, effect of electrode surfaces 4=16121

methane liq. electrode influence 4=21144

pyrophilite, safe stresses for 5000 hrs. at 800–1140°C 4=28611

Al₂O₃, safe stresses for 5000 hrs. at 800–1140°C 4=286

BaZrO₃ containing La, breakdown strength 4=20419

MgO, safe stresses for 5000 hrs. at 800–1140°C 4=2861

Electrical measurement

Entries describing measurement methods for specific

electrical quantities and effects may also be found listed under the various headings for the subjects concerned

apparatus for low temp. and high pressures 4=16394

atmospheric electricity, field, current and conductivities 4=13801

bridge, noiseproof, circuit 4=16389

capacitance, abs. meas. method 4=24519

capacitance, absolute scale determination 4=8585

Electrical measurement—contd

- capacitance standards, mica, effect of temp. on stability 4=11491
- capacitances, small and rapidly varying, circuit 4=16386
- charge production for electrostatic instrument calibration, laboratory substandard 4=21432
- coaxial connector reflections and risetime distortion, meas. 4=29847
- conduction current due to μ sec voltage pulses, charge storage integration, meas. 4=29845
- conductivity, by induction method 4=422
- contact-resistance probe, automated 4=8587
- conversion of analogue to digital using masted c. r. t. and photocells 4=27441
- crystal electron traps, by opposite pulses 4=15447
- current divider arrangement, for null d. c. measurements 4=14542
- current, $\sim 10^{-13}$ amp., use of electrometer circuit 4=14543
- current, vibrating membrane electrometer 4=18636
- currents, small, by capacitor charging, digital output 4=5524
- discharge pin, for transient event meas. 4=14258
- e. m. spherical resonators with small spherical samples 4=30056
- electrolytic tank field plotter, velocity controlled 4=8583
- electrometer based on EPP-09 potentiometer 4=14541
- electrometer, for d. c. signals, high sensitivity 4=24523
- electrometer tube, deflecting beam, noise props. 4=5530
- frequency, period and pulse separation times, counter with printing adaptor 4=16412
- galvanometers, superconducting, review 4=8577
- Hall voltage for Ge and Si, by quadrant electrometer 4=10054
- high voltage probe, wideband 4=24521
- integrator, fluctuating voltage meas. 4=29844
- large direct currents by Hall effect integrating loop 4=421
- laser mean output power 4=11817
- Markov generator 4=427
- noise, errors due to finite instrument range 4=18634
- oscilloscope sweep delay digital read-out 4=27449
- phase differences of two sinusoidal voltages 4=14540
- phase discriminator, gas-discharge 4=16390
- phases angles, precise 4=5008
- polarity coincidence detector for signal-to-noise ratios 4=24518
- potential comparison, Dauphinee method modification 4=11494
- power—freq. convertor, using thermal principle 4=11492
- power, modulation transformer 4=16396
- power, semiconductor magnetoresistance multiplier 4=11493
- pulse discriminator restorer, threshold pot. maintenance at high rates 4=778
- pulse receiver system, stagger-tuned, rel. to relaxation time meas. 4=27443
- r. m. s., checking methods 4=14539
- Rogowski coil, h. f. response 4=417
- scale-section converter analysis 4=8582
- self-balancing earthing device for bridges 4=5533
- of semiconductor parameters, instrument for simultaneous meas. 4=15532
- semiconductors, lab. props. meas. 4=12878
- sensitivity and signal-to-noise ratio improvement in suspended systems 4=2925
- thermoelectric, material quality control 4=7090
- units, system transformations 4=27440
- Van de Graaff accelerator, precision voltage meas. with generating voltmeter 4=30001
- voltage-current characteristic of photo diode, meas. circuit 4=17502
- voltage pulses, by Kerr cell system 4=21443
- voltages, high d. c., compared to standard cells 4=29846
- voltages, use of photoelectric optical amplifier 4=16387
- voltages, random, instrument for statistical characteristics 4=16388
- voltmeter, digital, using feedback principle 4=8586
- wattmeter for phosphor power absorption meas. 4=17592

Electrical properties of substances

- See also individual properties e.g. Conductivity, electrical
- electrolytes, temperature prod. charge transfer 4=21154

Electrical properties of substances—contd

- electrons and holes, double injection, models, comparison 4=28515
- films, thin solid 4=22660
- gas, neutral, run-away electrons, theory and expt. 4=18251
- gas, shock-heated, current-voltage characteristics 4=14222
- gas-solid suspensions, particle potential 4=27470
- gases, photoelectric current, meas. accuracy 4=14572
- glass dust, effect of γ -rays 4=22764
- graphite, irradiated in nuclear reactor, decreasing damage with increasing annealing freq. 4=9615
- graphite, pyrolytic 4=26006
- ice, H_3O^+ mobility 4=7031
- insulating state, many-particle electron localization 4=9897
- insulators, current injection, volume-controlled 4=26097
- metal films 4=10020
- metal oxide films, transparent 4=4110
- metallic contacts to CdS single crystals 4=12853
- metals, very pure 4=20147
- model for nonparabolic but spher. symm. energy bands 4=22692
- polyethylene, rel. to paramagnetic props. 4=22952
- semiconductors, on irradiation 4=10040
- silicones and related materials, rel. to thermal-vacuum environment 4=20414
- solids, generation-recombination noise, theory 4=12837
- thin films, conference 4=17838
- transition metal oxides, review 4=25890
- Ag halide photographic grains, effect of Cd 4=18437
- Ag-Pd alloys, cold worked, effect of annealing 4=22684
- BaTiO₃, semiconducting single crystals, reduced in H atmosphere 4=15533
- BaZrO₃, containing La 4=20419
- Bi, V-I chars., in mag. fields at low temps., pulse shape effects 4=20352
- C resistor, characts. at the temp., depend. on meas. current 4=26005
- CdS films, recrystallized 4=20804
- CdS single crystals, photoelectric polarization 4=26038
- Ga liq., rel. to free electron and pseudopot. theory 4=21152
- GaAs, effect of irradiation by 1 MeV electrons 4=25984
- Ge, on irradiation 4=10040
- HgSe, and phase transform., high press. 4=23278
- In₂Te₃ 4=29011
- LaB₆, metallic 4=7139
- Mo-permalloys and K formation 4=26316
- Nb-Zr(25%) superconducting, a. c. losses, d. c. field effect 4=11482
- PbS films, single-crystal 4=23582
- PbTe, effect of high pressure 4=12904
- Sb₂S₃, molten 4=8197
- Se-Te alloys, rel. to order 4=20470
- Si, electric susceptibility 4=12895
- Si, on irradiation 4=10040
- Ta films, effects of N, O and methane 4=13685
- Ta films, rel. to particle size 4=20812
- Ti oxides, films on Ti, composition and structure 4=26714
- ZnS: Cu, Mn, Cl films 4=20813

Electrical units

See Units

Electricity

- current carrying conductor of particular cross-sect. in uniform mag. fld. 4=30022
- current point source potential, with cond. varying parallel to medium surface 4=30024
- dynamo, superconducting, d. c., driven by rotating mag. field 4=14562
- heating inside solenoid, nonuniform, rel. to medical diathermy 4=15969
- impedance between perfect conductors in a finitely conducting medium 4=5541
- lead sealing in high pressure vessels 4=23988
- leads, epoxy coated, for high press. work 4=23987
- low temp. lead seal 4=18506
- motor, asynchronous, slip ring mag. speed indicator 4=24538
- motor, d. c., brushless 4=18658
- motor, linear d. c. 4=18657
- voltage regulator, feedback corona type 4=8604
- W filaments, improved life in mag. fields for a. c. heating by adding 3% Re 4=19083

 dispersive medium, circular motion, polarization energy losses 4=5759
 dissipative potentials and e. m. electron mass hypoth. 4=3109
 electrodynamical flow, laminar, in two-channel config. entrance region 4=5757
 electron axial motion in linear accelerator 4=16573
 electron gas, in uniform mag. field 4=17405
 electron in osc. electric field in a mag. field 4=5754
 electron orbital stability, radiation effects 4=16630
 electron, radiating, stability of motion 4=8907
 electrons near cond. bodies, minimal-principle proposal 4=3108
 energy balance of uniformly accelerating charge 4=8904
 equation of motion and Lagrangian of radiating electron 4=19165
 extended particle in inhomog. e. m. field, relativistic motion 4=14869
 extension from four-dimensional to five-dimensional space 4=11027
 field of electron moving on world line, gen. equations 4=14870
 flow of charged liquid in tube under influence of e. s. field 4=24801
 fluid, symmetrical currents transverse to mag. fld. 4=11766
 gas, viscous, electrically conducting, flow in plane channel, in transverse fields 4=3117
 gyrotropic medium, moving dipole and point charge, monochromatic radiation 4=21645
 and interactions, unifying principle 4=5015
 light-wave field, in weakly inhomogeneous dielectric, energy density 4=299
 mag. field origin from relativistic effects in Coulomb forces between parallel currents 4=8901
 magnetoelastic media, eqns. 4=11136
 Maxwell—Lorentz eqns., free-space bounded plane-wave solns. 4=21643
 motion of a charged particle in strong combined elec. and mag. fields 4=3107
 moving bodies, e. m. field quantities, associated 4=663
 moving media, Minkowski's theory, review 4=27620
 moving media, phenomenological eqns., gauge invariance 4=3113
 multipole expansion, couplings, quadrupole and octopole 4=27618
 multivelocity stream, Hamiltonian represent. 4=592
 nonlinear, singularities, structure and motion 4=5762
 null flat-space coord. system, Maxwell field tensor 4=5046
 oscillations, radial, in mag. field, radiative atten. 4=6021
 particle acceleration by time periodic mag. fields 4=5764
 particle distrib. trapped in mag. tube of force 4=5758
 particle in external e. m. field, quantum theory, hydrodyn. model 4=24058
 particle motion in giffered mag. fields, var. with injection 4=8903
 particle motion in indep. rotating $\vec{E}$ and $\vec{B}$ fields 4=662
 particle motion in plasma, induced fields effects 4=505

SUBJECT INDEX

Electrodynamics — contd

- particle motion in spiral cubic mag. field 4=5761
- particle orbits in logarithmic potential 4=5755
- particle trajectories in a mag. mirror field 4=667
- photon emission by charged particle passing through dielec. slab 4=26231
- plasma, rotating cylindrical layer in crossed field 4=503
- plasmoid acceleration, electrodynamic method using images 4=16469
- radiation, from fast particle in nonstationary inhomog. medium 4=3366
- radiation interference in stratified media 4=3116
- relativistic, charged particle interacting with its radiation field, external e. m. field present, Liouville eqn. 4=8094
- resonance spin flip, particle rotating in mag. field 4=3115
- rotating system of reference 4=21637
- Runge-Lenz vector in presence of elec. field 4=11763
- sphere in field of current loop, quasistationary case 4=19168
- spin- $\frac{1}{2}$ particles, classical motions from Dirac eqn. 4=21041
- spin 1 and $\frac{1}{2}$ particles in mag. field, theory 4=5063
- spins in cavity, two, interaction and mode coupling 4=5793
- statistics, classical oscillators, and quantum field 4=5092
- straight motion in stratified medium, particle radiation 4=3106
- transition radiation from charge moving through diffuse interface 4=19195
- transition radiation, effect of multiple scattering 4=30211
- trapping of charged particle in magnetic field 4=19164
- two electrons, interacting, distrib. of incident light pressure 4=5760
- waves, nonlinear, propagation vel. 4=16627

Electrokinetic effects

See also Electrophoresis

- charged filament moving near cond. half-plane, field 4=14867
- electrohydrodynamic flow, laminar, in annular channel 4=5768
- flow through charged membranes 4=23668-9
- gas, diffusion in elec. field, spatial energy distrib. 4=5252
- piezoelectric solids, phonon radiation by charged particles 4=6719

- CdS, Te-doped, mechanism study 4=28724
- Cu₂O, i.r., with and without Al electrodes 4=1769
- Cu₂O, mechanism and kinetics 4=13070
- GaAs diffused junctions, recombination spectra, and phonons, 4°K 4=13078
- GaAs diode, p-Si-n, i.r. temp. var. 4=20481
- GaAs diodes, change during SiO evaporation 4=7205
- GaAs diodes, truncated cone shape 4=15548
- GaAs, electroluminescent diodes with negative resist. 4=26079
- GaAs, forward biased p-n junctions 4=4297
- GaAs, p-n junction, rel. to carrier transport 4=22740
- GaAs p-n junctions, i.r., effect of Cu impurities 4=7184
- GaAs p-n junction, stimulated exciton recombination emission 4=7182
- GaAs-GaP diodes injected carriers 4=1772
- Ga(As, P) diodes 4=12934
- GaP diodes, recomb. near energy gap 4=13077
- GaP, semiconducting junction diodes, recombination radiation 4=13076
- Si junctions, spectrum 4=4305
- Si transistors at reversed bias junctions 4=17608
- SiC, p-n junctions 4=1777
- Zn oxide and sulphide, average brightness voltage depend. 4=22912
- (Zn, Cd)S:Cu phosphors, emission range extension 4=1783
- (Zn, Cd)(Se, S) base, luminor props. 4=22925
- (Zn, Mg)S:Cu, halide phosphors 4=4311
- ZnS, and electron emission, voltage var., distrib. 4=21558
- ZnS phosphors, injection electroluminescence 4=26234
- ZnS powder, effect of ball milling 4=26253
- ZnS powder, striations 4=1782
- ZnS powders, contact, rel. to charge injection 4=28745
- ZnS and ZnS:Al temp. and impurity depend. 4=1779
- ZnS:Cu, definition of pot. barriers responsible 4=4308
- ZnS:Cu, electron excitation processes 4=1784
- ZnS:Cu, excitation freq. var. 4=22928
- ZnS:Cu, halide, effect of Cds 4=4309
- ZnS:Cu: halogen phosphors, deterioration kinetics 4=26252
- ZnS:Cu, mean brightness and time distrib. meas. 4=20493
- ZnS:Cu quenched phosphors, annealing effects 4=7192
- ZnS:Cu, rel. to Cu concn., meas. 4=20491
- ZnS:Cu, short elec. pulses and sinusoidal voltage, combined effect 4=20492
- ZnS (Cu, Al) phosphors, frequency dependence and mechanism 4=10223
- ZnS-Cu, Al, Cl phosphors, role of holes in kinetics 4=26251
- ZnS-Cu, Cl(Al), intensity temp. depend. 4=28717
- ZnS:Cu, Mn films 4=13087
- ZnS:Cu, Sn, Gudden-Pohl effect 4=4290
- Zn(S:Se):Cu type phosphors, props. 4=15619
- ZnS-Cu₂S 4=13088
- ZnS:Mn cells, brightness effect of dielectric 4=1785
- ZnS:Mn, evaporated, efficiency meas. 4=7195
- ZnS:Mn phosphors, excited by unipolar electric pulses 4=22929
- ZnS-ZnSe, rel. to Cu activator conc. and host lattice structure 4=10226
- ZnSe, red 4=7190
- ZnSe-Cu₂Se 4=13088
- ZnTe diodes, injection, orange and dark red 4=28747
- ZnTe, p-type, by minority carrier injection 4=28746

Electrolysis

- See also Conductivity, electrical, electrolytic; Dissociation, electrolytic; Electrochemistry; Electrolytic deposition; Ion velocity, electrolytic

Electrolysis — contd

- electrolytes, symmetrical, conductance 4=10643
- electrolytic tank field plotter, velocity controlled 4=8583
- free radical prod. and e.s.r. 4=8960
- fused salt, ceramic double cell for crystal growth 4=15757
- fused salts, transference phenomena 4=11191
- quartz, ion-exchange, and cond. 4=20408
- rare earth ion mixture separation 4=20835
- separation of D_2 , rel. to cathode material and temp. 4=2159
- FeO, ~ 1000°C, transport number meas. by anode Fe loss 4=29227
- KCl solution, Co hydrogen over-potential 4=29228
- PbO solid electrolyte voltaic cell 4=2162

Electrolytic deposition

- α -active isotopes 4=17865
- deposited coatings, stresses, residual, X-ray determ. 4=23181
- forming screw threads 4=23666
- metals, radioactive, small-scale cell, to 100°C 4=30906
- plating fine wires, jig 4=4705
- radioactive reference samples 4=22056
- rare earth elements, molecular plating method 4=17867
- structure of final stage of growth 4=30879
- X-ray exam., diffr. pattern elimination 4=29154
- Co, growth habits 4=23346
- Co single crystal films, effect of soln. pH and applied mag. field 4=23664
- Co⁵⁷ sources for Mössbauer effect obs. 4=21990
- Cr, microscopy 4=10579
- Cu layers, preferred orientation 4=7669
- Cu onto rare earths, small area 4=23665
- Fe layers on Cu, outward growth tendency, electron diffraction obs. 4=4531
- Fe⁵⁷ sources and absorbers for Mössbauer effect obs. 4=21991
- Ni deposited coatings, stresses, residual, X-ray determ. 4=23181
- Ni electrodeposits, effect of annealing on micro-structure and hardness 4=30870
- Ni, growth habits 4=23346
- Sn, white, current var. 4=26610
- Th, from nitrate, mol. plating of stainless steel cathodes 4=20836
- Th and U, molecular plating method 4=17866
- ThO₂ inside Al tubes 4=20837
- U compound films, from ammonium oxalate solns. 4=7767
- U, from nitrate, mol. plating of stainless steel cathodes 4=20836

Electromagnetic fields

- accelerator cavity field from periodic beam, calc. 4=24764
- in anisotropic layer, build-up 4=14864
- asymptotic expansion of electric vector fields 4=3099
- book, e.m. theory 4=8037
- build up, basic prospecting parameters 4=16623
- cavity, meas. by perturbing sample 4=16650
- in cavity, spherical, in dissipative medium, with central dipole 4=14878
- charge creation, two theories comparison 4=3103
- charged filament moving past system of conducting half-planes 4=27617
- circular loop at earth—air boundary 4=30026
- conservation law of ten new extensive quantities 4=19161
- and crystal lattice vibrs., interactions 4=28346
- current source in anisotropic medium, by Fourier analysis 4=27634
- in curvilinear orthogonal coordinates, sine var. fields 4=16647
- dipole, harmonic, on multilayered anisotropic earth, e.m. field 4=16661
- dipole, vertical, in void over gyrotropic medium 4=8902
- of dipole wave, weakly guided 4=14901
- Einstein—Maxwell field equations solutions 4=14017
- electron moving on world line, generalized equations 4=14870
- electron scatt., polarization change, relativistic calc. 4=3292
- elliptic cylinder, inside, carrying d.c. 4=30023
- energy—momentum tensor in external grav. field 4=45

Electromagnetic fields — contd

- fluctuating, stochastic props., correlations, connection with quantum theory 4=27616
- fluids in motion, summary of results 4=14866
- geometric model about charged particle 4=657
- Green tensor functions in anisotropic media 4=660
- guiding centre Hamiltonian, canonical eqns. 4=14865
- half-space representation 4=24797
- high, 100, 250 and 400 kG magnets 4=649
- historical evolution of concept 4=655
- of infinite slot in infinite cylinder surrounded by plasma sheath 4=21660
- interaction with low-energy, low-density plasma 4=14661
- localized charge—current distrib., asympt. props. 4=11759
- loop carrying a.c. current above cond. layer 4=14863
- measurement using thin coil spring 4=8926
- moving charge, quantum calc 4=29533
- moving media, two, boundary conditions 4=661
- origin, dynamical, in quantum electrodynamics 4=5921
- of particle, charged, in uniformly accelerated motion 4=14868
- penetration from anisotropic medium into ellipsoidal anisotropic inclusion 4=3100
- photon red shift 4=21817
- plasma, magneto, air interface, current line sources parallel to interface 4=680
- plasma maintenance and stabilization 4=29937
- for plasma stabilization, in fusion devices 4=8728
- probe, photoconductive 4=3097
- quantized, coherence of induced radiation 4=11883
- in relativistic fluids, Clebsch transformations 4=21030
- rotational, conformal mapping soln. 4=21634
- scatt. of Dirac particle, massive, polarization change, relativistic calc. 4=3292
- singular, in presence of induction 4=47
- spins in cavity, two, interaction and mode coupling 4=5793
- statistics, classical oscillators, and quantum field 4=5092
- transient, in air and dissipative media using electric and magnetic probes 4=30025
- uniformly accelerating charge, rel. to energy balance 4=8904
- wire ring, thin, field of current 4=24798
- 300 000 Oe, Al solenoid at 15° K 4=24789

SUBJECT INDEX

Electromagnetic waves—contd

- radiometer, 100-300 Gc/s, high-sensitivity 4=745
- radiometers, for mm waves, superheterodyne 4=19207
- radiometry, submillimetre, with interferometric modulator 4=8927
- receiving aerials, optimum parameters for incoherent source obs. 4=3163
- receiving arrays, multiplicative, directional 4=3165
- and relativity, general 4=11057
- relativity, general, as source of information 4=18057
- resonance interaction with a medium 4=11784
- resonant e.m. systems with total internal reflection 4=19208
- ruby, harmonic generation, 4.5 → 9 kMc/s 4=1872
- ruby, mixing and harmonics due to non-linear susceptibilities, line shapes 4=8999
- signal detection with laser amplifier 4=11795
- spin inertia effects 4=16846
- sub mm, detection methods, survey 4=14445
- time arrow, appl. to cosmology of absorber radiation theory 4=7950
- u.l.f. emission, production by particle acceleration high velocities 4=26802
- velocity, equal to light, flare star obs. 4=21269
- velocity, near large masses, and astron. unit discrepancies 4=29470
- velocity of propagation, proposed test of special relativity 4=8930
- wave-field problems, use of conformal mapping, survey 4=5018
- wave function assignment to energy densities 4=5020

radiators

- accelerating dipoles and charges, in waveguide, wall effects 4=27635
- aerial in anisotropic medium, impedance 4=5818
- aerial, cylindrical, current density eqn. 4=14906
- aerial impedance, theoretical interpretation 4=5822
- aerial near plane boundary of dielec. half-spaces 4=19238
- aerial pattern, horn, effect of surrounding plasma, redistribution into side lobes 4=3153
- aerial temp. in terms of e.m. wave temp. 4=16660
- aerials, conical with elliptical cross-section 4=5824
- aerials, effect of statistical construction errors 4=19185
- aerials, integral equations, inconsistency 4=8948
- aerials, interact. with oncoming wave 4=712
- anisotropic, stratified, media, plasma appl. 4=721
- antenna, ferrite rod, characts. 4=16662
- antenna response pattern of arbitrary time sigs. 4=24848
- antennae, radioastronomy 200 ± 50 ft. optimum diameter 4=30976
- aperture along infinite wedge, far field soln. 4=14905
- aperture fields and aperture Q, reactive energy 4=5820
- aperture patterns, far field, variational synthesis 4=3162
- aperture, spatial freq. characts. 4=3164
- arrays, non-uniformly spaced, space factor approx. 4=3166
- axially-slotted cylinder with plasma coating, radiation 4=8942
- biconical, selective mode coupling solution 4=3160
- buried and submerged 4=19239
- Cassegrain aerial, modified, for arbitrary aperture illumination 4=11806
- charge moving axially in circular guide 4=30059
- Cherenkov, in dielectrics 4=19189
- Cherenkov, in ferrites, anisotropic, radiation resistance 4=19188
- Cherenkov radiation due to moving mechanical impulse in dielectric liquid in mag. field 4=5270
- Cherenkov radiation, no analogue for photons moving in rectilinear channel in medium 4=27632
- clouds, 30, 50 Mc/s obs. 4=17889
- current source in anisotropic medium, by Fourier analysis 4=27634
- dipole aerial, effect of ion engine exhaust 4=14908
- dipole, anisotropic medium 4=724
- dipole array in dielectric slab, pattern 4=30061
- dipole elec., radiation resistance in magnetoionic medium 4=24849
- dipole, electric, ground plane, inhomogeneous 4=732
- dipole, electric, in plasma 4=722
- dipole, harmonic, on multilayered anisotropic earth, e.m. field 4=16661

Electromagnetic waves—contd**radiators—contd**

- dipole, insulated and immersed in lossy medium, admittance meas. 4=19240
- dipole near conductor/free space interface, meas. 4=14907
- dipole in prolate dielectric spheroid 4=30062
- dipole, pulsed, in an interface, field 4=713
- dipoles, thin, scatt. 4=30052
- discharge, elec. d.c., Kr, Xe, reson., microwave 4=21473
- discharge, electrodeless, microwave plasma 4=16443
- discharge, Penning, electron cloud rot. instabilities 4=5797
- Doppler effect mm wave generator 4=8925
- electron beam, bunched, by deflection modulation, and Fabry-Perot cavity 4=19198
- electron bunches moving in non-uniform medium 4=19190
- endfire, coupled to TEM line, broad-band 4=733
- ferrite post in waveguide aperture 4=11785
- fields, produced by aperture in coated plane 4=24825
- fluid-mechanical sources in plasma, ext. mag. field effect 4=27633
- frequency-independent, spiral, log-periodic 4=728
- Fresnel field of directive antenna 4=8947
- general aerial in arbitrary lossy medium 4=30065
- ground plane, inhomogeneous 4=731
- gyrotropic medium, moving dipole and point charge 4=21645
- impedance of cylindrical dipole in ionosphere 4=24850
- leaky 4=3156
- light, coherent, from electron beam moving across grating 4=5360
- line source, radiation in half-space of compressible plasma-surface waves 4=24823
- log-periodic 4=729
- magneto-ionic medium 4=723
- maser, ruby, optically pumped, by laser, for mm wave generation 4=3205
- microwave aerial in dielec. shell, radiation patterns 4=27662
- millimetre and submillimetre, conference, Orlando (1963) 4=8922
- noise sources, microwave, effective temp. meas. 4=24826
- oscillator, microtron, racetrack, for mm and sub mm 4=19200
- particle, charged, moving along axis of cylinder guide 4=19192
- particle, charged, moving in magnetoactive medium in non-uniform field 4=19194
- plane parallel layer, control by gratings 4=19215
- plasma, by intense linear discharge interaction 4=510
- plasma, by longit. osc. self interaction 4=554
- plasma, magneto, air interface, current line sources parallel to interface 4=680
- plasma, noise spectrum from cylinder, scatt. TM, TE waves 4=18889
- plasma, oscs., coherent rad. 4=16506
- plasma oscs., cyclotron, prod. by electron beam in Hg 4=18867
- plasma, tuneable 4=3161
- plasma into vacuum, and plasma wave velo. 4=21508
- plasma wave along mag. field 4=5628
- point-contact diode, for harmonic generation of mm waves 4=17501
- power transfer, Fresnel region 4=730
- radiation field of infinite slot in infinite cylinder surrounded by plasma sheath 4=21660
- random sources on plane, field spatial correl. 4=24025
- reactive energy in aperture fields and aperture Q 4=5821
- relativistic, spherical, non-rotating 4=24048
- retarded potential choice using Lorentz condition 4=8923
- semiconducting tunnel diode, freq. and power performance 4=19203
- semi-infinite layer system 4=19237
- slot on conducting cylinder with cold plasma and axial mag. field 4=24824
- slot on cone problem, using Sommerfeld's complex-order wavefunctions 4=11807
- slot, v.l.f., natural island 4=734
- slotted-sphere aerial in plasma, and acoustic 4=30063-4
- small resonant scatterer bounds 4=16659
- sphere, conducting, field calc. 4=3133
- spherical and spheroidal 4=5823

SUBJECT INDEX

Electron beams—contd

- for irradiation of liquid and gas samples, 10 to 100 keV 4=27568
- linear accelerators, beam profile monitor 4=3066
- longitudinal electron vels. in modulated beams, equalization 4=8833
- machine giving electron spot of few μm dia. 4=3047
- magnetic deflector systems, possible deflection aberration 4=5720
- measurement, anomalous secondary emission 4=27570
- modulated, in study of atomic optical excitation functions 4=3803
- molecular beam electron bombardment detector 4=1326
- monitors, Al foil, secondary electron emission 4=8827
- monochromator, using scattering resonance in He 4=8832
- multielectrode gun, partially shielded, focusing 4=19097
- multivelocitv stream, Hamiltonian represent. 4=592
- nonplanar phenomena in single and multiple beams 4=16534
- passive parametric interaction between transverse electron beam waves 4=3135
- phase-space occupation 4=29560
- plane and axially symmetric, electron-optic eqns. 4=593
- plasma, coherent energy loss meas. 4=16508
- plasma osc. in strong mag. field 4=18991-2
- plastic mouldings, difficulties in obtaining uniform dose distrib. 4=17456
- position and current measurement 4=8875
- position and current measurement, use in accelerator 4=16572
- production in discharge, cold cathode, with ignition, focusing 4=11704
- profile equation solution 4=21584
- profile meas. 4=27369
- r.f. coupling by plasma in electron tube 4=19199
- radiating, in storage rings, motion stability 4=8907
- relativistic beam-plasma config., instabilities 4=5677
- relativistic, freq. mixing rel. to mm wave generation 4=24827
- relativistic, passing through plasma, kinetic theory 4=5597
- ripple after mag. collimation, computer solns. 4=5707
- runaway, disruption 4=21568
- scattering in magnetic fields 4=641
- solid, axially symmetric, thermal velocity effects 4=5706
- in solids, characteristic energy losses, review 4=17414
- space-charge waves, non-linear, two streams, trapped electrons 4=583
- stabilization, lateral, by ion space charge, grid effect 4=19096
- transmission through metallic foils 4=21571
- transmission through solid, energy characteristics 4=4032
- from Transtron S-1 accelerator, mag. field effects 4=14774
- transverse waves, space charge effects 4=21567
- two-beam instability, review 4=590
- ultralow-noise beams, power spectra meas. 4=14758
- vacuum-to-atmosphere apertures in beam systems 4=8281
- visual and photographic study with fluoresc. powder 4=8830
- > 1 MeV, meas. by polymethyl methacrylate plates 4=29975

- plasma electrostatic instabilities 4=19038
- plasma generation, density and potential distrib., static theory 4=8677
- plasma instability excitation 4=8776
- plasma interaction, in low-pressure arc. 4=18945
- plasma interaction, transverse field 4=19008
- plasma ion interaction 4=18984
- plasma in mag. field, helical beam, instabilities theory 4=27557
- plasma, along mag. field, unstable transverse propagation 4=553
- plasma osc., non-linear theory 4=14703
- plasma, oscillation excitation 4=24690
- plasma oscills., cyclotron, in Hg 4=18867
- plasma, by pulsed beam up to 8.5 amp, in mag. field 4=16507
- on plasma, transverse waves due to interaction with plasma 4=11677
- polyethylene, electrical conductivity 4=1657
- polystyrene films, ionization energy loss rel. to momentum 4=20261
- radiation damage in pure metals, at low temps., mechanism 4=30592
- resonance passage, through 2 potl. barriers in solid 4=4033
- ruby, luminescence 4=28735
- semiconducting Si p-n diodes, microstructure exam. by scanning 4=7657
- shadow projection of foils, in biprism, electron microscope 4=29160
- shock waves, for thickness meas. 4=24301
- solid surface heating 4=21570

Electron beams—contd

effects—contd

- solids, elastic scatt., for truncated matching potentials 4=12818
 solids, transient effects, mechanisms 4=17454
 tourmaline, pyroelec. polarization prod., electron diff. exam. 4=12976
 tungsten hexacarbonyl bombardment, elec. props. of film formed 4=26016
 virtual cathode formation, rel. to passage through plasma column 4=11678
 X-rays prod., K_{α} , L_{α} and L_{β} , lines, expt. efficiency values 4=28662
 Ag foils, 40 keV, transition radiation 4=22552
 Ag foils, transition radiation, temp. and thickness depend. 4=22551
 Al foils, light emission 4=17407
 Al single crystals, mechanical props. 4=15701
 Al, yield stress, heat treatment effect 4=28929
 $AlCl_3$, formation of Al^- 4=18674
 Au, crystal point defect recovery temp. var., elec. cond. study 4=30600
 Au and Au—Mn glasses, blackening 4=17462
 Au, L-Auger, fluoresc. and Coster—Kronig yields 4=1227
 B hydrides, fragmentation 4=21460
 (Ba, Sr)O particle heating, onset conditions 4=11717
 CaF_2 , on Tm^{2+} , Ho^{2+} e.s.r. 4=26433
 Cd vapour, coherent excitation rel. to luminesc. excitation 4=25536
 Cd hydroxide, void prodn. by vacancy aggregation 4=12830
 CdS laser excitation 4=21684
 Cu, dislocation depinning, thermal theory 4=28455
 Cu, K_{α} radiation, obs. intensity meas. 4=9664
 Cu, pure, 1. 25-3. 25 MeV, stage I recovery spectrum 4=10010
 Cu target, inclined, K_{α} emission 4=17561
 GaAs, lattice atom displacement 4=22646
 GaAs, luminescence 4=4298
 GaAs luminescence, 100°K 4=26245
 GaAs, 1 MeV, on elec. and photoelec. props. 4=25984
 GaAs solar cells, 0.8 and 5.6 MeV 4=17538
 GaAs solar cells, photoresponse 4=7067
 GaAs, thermal cond., 2 MeV irradi. and annealing 4=28381
 GaI_3 , formation of Ga^- 4=18674
 Ge, defects, by 28 MeV electrons 4=1539
 Ge, impurity photoconductivity 4=10128
 Ge, luminescence 4=4298
 Ge, oxygen-defect complexes, i. r. absorption study 4=6830
 Ge, role of carriers in displacement process 4=9945
 H_2 , ionization, up to 500 eV, current saturation 4=16432
 H_2 , mol. vibr. excitation 4=22357
 H_2O , hydrated e spectrum and reaction rates 4=20073
 H_3O^+ formation in mass spectra of alcohols and formate esters 4=9780
 He atom excitation, supplementary lines by adding H, Kr, Hg 4=22294
 He, ionization, up to 500 eV, current saturation 4=16432
 He^+ , excitation, mag. depolarization of emitted light, and level lifetimes 4=1221
 InBr, formation of In^- 4=18674
 InSb, ang. var. in recovery 4=28510
 InSb, thermal cond., 2 MeV irradi. and annealing 4=28382
 K, energy loss spectrum, plasma osc. peaks 4=28514
 KBr, dielectric properties and optical absorption 4=1651
 KBr, F-centre prod. efficiencies at liq. He temp. 4=12810
 LiF, F-centre prod. efficiencies at liq. He temp. 4=12810
 LiF, void formation by point defect coagulation 4=17463
 Mg foils, light emission 4=17407
 Mo, desorption of CO, O^+ by slow electrons 4=23599
 N_2 , molecular excitation, vibr., anharmonicity effects at higher levels 4=12463
 Na, energy loss spectrum, plasma osc. peaks 4=28514
 NaCl, F-centre prod. efficiencies at liq. He temp. 4=12810
 Nd^{3+} luminescence in Ba glass and $CaWO_4$, 100°K 4=26245
 Pb hydroxide, decomposition in electron microscope 4=4698
 PbI_2 , irradiation damage 4=26202
 $SbCl_3$, negative ion formation 4=453

 Si surface-barrier diodes, oscillations 4=12938
 use in Si zone-melting 4=15762
 Si, Au- and Cu-doped, impurity detection 4=10135
 Tl halides, formation of Tl^- 4=18674
 W, desorption of H, O and CO from field emitter points 4=23609
 Zn, coated with Zn—Sn, Zn—Cd and Zn—Pb, tensile strength 4=23227
 ZnS, positive temp. coeff. of luminesc. and cond. 4=13091

ionization

See Electrons, ionization

Electron capture

See Ions, recombination; Radioactivity, electron capture

Electron diffraction

- apparatus for mol. electronic struct. of gases, design 4=30408
 atoms, effects of electron correlation 4=30390
 crystal lattice, for microscope magnification meas. 4=13632
 density—intensity calibration 4=5703
 errors in patterns produced with microscope lenses 4=8834
 field emission by infinite slit, Fraunhofer 4=19106
 fluctuations, mechanical, of colloidal particles 4=5702
 Fresnel, by filament 4=21569
 gas mols, and dynamic scatt. 4=28284
 gas, multiple elastic scatt. effect, calc. 4=5705
 interference, two-wave, electron wave 4=16536
 oscillation of light particles in electron beam 4=5704
 tourmaline, polarization effect meas. 4=17821
 tricosanol, intensities rel. to structure amplitudes 4=10521
 Ag, intensities rel. to structure amplitudes 4=10521
 Al, intensities rel. to structure amplitudes 4=10521
 Au, intensities rel. to structure amplitudes 4=10521
 MgO, double refraction of electrons, dispersion 4=4612
 NH_3 , and electronic structure 4=1271
 Pt, oxygen-covered, low-energy, scattering effects 4=4639
 Si, extinction distance meas. 4=7644

Electron diffraction crystallography

- See also Crystal structure, atomic amplitude—phase diagram, interference, and classical dynamic theory 4=26637
 atomic positions, thermal motion effects 4=30829
 conference, Madras (1963) 4=20744
 contrast diff. by coherency strains 4=7661
 curved crystals, use for intensity var. meas. in diffracted beams 4=15783
 Debye—Waller factor rel. to distance from surface 4=13574
 diamond, semicond., (100) and (111) surfaces 4=26704
 diffuse streak patterns from single crystals 4=20756
 distorted crystals, Fermat's principle for Bloch waves 4=7596
 electron microscope low-angle scatt. technique 4=23410
 films, crystal orientation meas., accuracy 4=23409
 glass, for vacuum deposition, residual contamination 4=13647
 indexing patterns, slide rule method 4=23407
 insulators, technique for diffraction pattern prod. 4=15781
 interference fringe branching at stacking faults, rel. to absorption 4=9976
 kinematical and dynamical theories 4=4589
 microdensitometer, integrating video 4=7595
 moiré patterns of superposed crystals, multiple-beam 4=7597
 muscovite, technique for diffraction pattern prod. 4=15781
 Pendellösung fringes in distorted crystals, application to two-beam cases 4=13575
 photograph meas. by binocular microscope 4=17803
 phthalocyanine and metal derivs., lattice image problem 4=23508
 single crystals, diffuse spots and streaks 4=2059

SUBJECT INDEX

Electron diffraction crystallography—contd

splitting of lines for powders, due to refraction 4=23408
theory, and appl. to plasma oscillation, thermal vibr., band transition 4=13629
twin maxima calc. 4=29084

two-wave approx. applicability 4=4600

wave-optical theory, for perf. and distorted single crystals 4=23362

Ag films, crystal structure, atomic, variable filter technique 4=2060

Al—3% Si alloy, anomalous reflections, rel. to Si crystallites 4=4593

Au films, anomalies 4=15821

BaTiO₃, analysis 4=29095

Be crystallite size in evaporated layers 4=10449

BiOCl, two-wave approx. applicability 4=4600

Fe layers on Cu electrolytic growth, epitaxy 4=4531

K₂Cr₂O₇ 4=30853

MgO, technique for diffraction pattern prod. 4=15781

Pt phthalocyanine, micrograph "lattice image" 4=26638

Si wedge, Kikuchi pattern 4=23470

Sn films, single-crystal, streak patterns 4=23492

Electron diffraction examination of materials

adsorption of O, I, H, P monolayers on Ge and Si 4=20824

aerosol, ZnO smoke, particle weight meas. 4=4718

apparatus, demountable, 0 to 500 eV electrons 4=4638

beam studies apparatus, 6°–77°K 4=27400

camera for alkali antimonide photo-electric film examination 4=15785

cinematic 4=20776

contrast diffr. by coherency strains 4=7661

cyclopropane, molec. structure determ. 4=20036

gases adsorbed on Pt 4=23602

gases, apparatus and calc. 4=30409

graphite surface film formed by sliding on Cu 4=17836

grids, hemispherical, construction 4=20777

iron whiskers, by transmission 4=7570

liquids, organic, aromatic, mol. alignment 4=3049

low energy, review 4=7664

low-energy technique, resolution and background improvement 4=7663

metal films, liquid phase growth mechanism at certain temps. 4=13683

metal single crystals, freshly molten, horizontal device 4=5714

molecular structure determination, sector-microphotometer intensity data 4=20034–5

po⁺ crystalline, pattern meas. technique 4=26688

scattering chamber for gases and vapours meas. 4=5713

Siemens Elmiskop I, camera factor var. 4=23517

tourmaline, dipole axis and internal elec.

field 4=17821

tourmaline, pyroelec., axis, e.s. field 4=22461

tourmaline, pyroelec. polarization prod., on electron irradi. 4=12976

water, structure 4=2650

Ag, effect of Ag₂S growths on electron diffr. 4=2090

Ag films, elastic deform. 4=1928

Ag foils, polycrystalline, Debye–Scherrer rings 4=7677

Al, film and block, crystallite misalignment comparison 4=20802

Au films 4=7712

Au films, twinned structures 4=4524

CdS film growth on rocksalt 4=4670

CdSe solid films 4=15819

Co films, refl. spots and streaks 4=23434

Cu(NO₃)₂ vapour mols., configuration and dimensions 4=6590

Fe—1.2% C—12.5% Mn, martensitic transformation 4=17760

Nb, domain patterns 4=10578

Pt—Al, 3 new phases, crystal struct. 4=23286

TiO₂ films, heated, brookite, anatase formation conditions 4=13505

ZnO smoke, patterns for hard and soft electrons, recoil effect 4=7784

ZnS film growth on rocksalt 4=4670

ZnS and ZnS:Mn films, structure 4=15825

Electron emission

See also Fluctuations, electrical; Photoelectric emission;

Photoelectricity; Thermionic emission, electrons

activation and freq. coeff. 4=11688

alkali films, adsorbed on metal surfaces 4=27559

Electron emission—contd

alkali halides, exo-emission, after X-irrad. 4=3018
arc, cold-cathode 4=18774

cathode, rel. to methane pressure changes 4=21576
effect of condensed phase on electron density in a gas 4=3019

exoemission, appearance mechanism 4=3016

gas discharge tube cathodes with accelerating field 4=475

metals, electron—ion emission, theory 4=8798

metals, exo-, due to u. s. irradi. 4=27560

from metals, in mag. field, quantum oscillations of cold emission current 4=16517

microscope, use for obs. of phase changes 4=7520

potential barriers and emission-limited current between parallel metal electrodes 4=24720

pre-breakdown, from protrusion, projection tube

use 4=29887

reflection and transmission through surface pot.

barriers 4=29960

single crystals, electron—ion emission, effective collision radius 4=1546

tunnel cathodes, structural effects 4=11692

Al, exo-emission 4=19077

Al oxide surface, exo-electron glow curves 4=3017

Al—Al₂O₃—Au—Ba, var. with Au, Ba thickness 4=8799

CdS films, cold emission 4=21556

Cu, single-crystal faces, work function, temp depend. 4=8795

GaAs cathode coated with Ag—O—Cs layer, emission efficiency 4=8805

K, on Pt wire, and ion emission, abrupt changes 4=11689

LiF crystal, exoemission from X- and α -irradiated specimen 4=26206

MgO, cold 4=19078

Si, n-type, hot electron emission 4=15543

Si, p—n junctions, hot emission 4=7003

SiC p—n junctions, by Au diffusion, 20°–400°C 4=569

ThO₂ coated filament emitters, poisoning and activ. 4=21560

W points, laser induced 4=8811

W in thermionic convertor, rel. to CsF atmosphere 4=18662

field emission

for detecting dielectric impurity films on metal, after positive ion absorption 4=23562

diamond, type I, in α -counting 4=9324

field emission and elec. breakdown between Ni surfaces in vacuum 4=24724

flicker effect 4=5691

flicker noise, point cathode 4=3020

flicker noise, temp. dependence 4=24723

Fowler–Nordheim curves, oscillographic meas. 4=3023

gas absorption effect rel. to field and current 4=3024

gun, electrostatically focussed, for hollow beams 4=11703

high currents, pulsed, bright ring surround 4=21559

infinite slit, Fraunhofer diffr. at 0°K 4=19106

metal tips, single-crystal, equil. form interpret. 4=13636

from metallic film, vac. deposited, and its role in elec.

breakdown in vac. 4=27561

metals, anisotropy, rel. to Fermi surface 4=24722

microscope and Dewar system for field emission

obs. 4=21557

microscope, crack growth obs. 4=7393

microscope, resolution theory 4=5712

semiconductors, energy distrib., tunnelling calc. 4=24725

semiconductors, image force relaxation effects 4=19079

semiconductors, p- and n-type 4=19080

surface potential model 4=24726

Al—Al₂O₃—Al films, cold emission 4=11690

Al—Al₂O₃—Al tunnel cathodes, hot electron transport 4=22762

Al/Al₂O₃/Au cathode, current–voltage rel and breakdown 4=3022

Ge films on W, energy distrib. 4=8800

Os, hexagonal, meas. 4=11691

O₂, patterns on Ta, from dissociating CO 4=26726–7

Pt tips, annealing, polyhedron formation 4=14742

Re, hexagonal, meas. 4=11691

Re, pulsed 4=27562

Ru, hexagonal, meas. 4=11691

Si, energy distribution 4=19081

Electron emission—contd**field emission**—contd

- Si, into SiO₂ film, conductance meas. 4=20393
 Si, work function rel. to Fermi level 4=3021
 Ta cathode, use in microtron 4=8801
 Ta-Ta₂O₅-Al films, cold emission 4=11690
 W, effect of O₂ adsorption on work function 4=3024
 W point cathode, contaminated, for detection of single ions 4=21196
 W, temp. depend., for 10⁻¹⁴-10⁻¹⁰ amp. 4=16519
 ZnS and electroluminescence, voltage var., distrib. 4=21558

secondary

- air, negative corona discharge 4=14613
 use for amplification of small currents 4=16533
 brass target, bombard. by brass and quartz grains 4=8826
 cathode covered with emissive materials, possible mechanisms 4=19091
 dielectric layers, positively charged, internal elec. field effect 4=29967
 in electron beam monitors, anomalous 4=27570
 electron monitor, 15-70 MeV, efficiency 4=6026
 experimental techniques and results 4=5701
 fluctuation phenomena 4=8078
 by Hg atoms, evidence of metastable state 4=25596
 high-energy, low-Z targets calc. 4=24737
 ion-solid interaction, low energy, Auger-type 4=19093
 Maier-Leibritz expt., due to 2³S and 2¹S He atoms incident on collector 4=19984
 Malter effect, cause of photomultiplier fatigue 4=8819
 measurement, thin foil 4=21602
 metal surfaces, by high-energy molecules 4=11700
 metals, by H, H₂, H₃, Li, N, N₂, Ne, Ar, K, Ca and Cs in bombard. 4=8822
 metals, by light ion bombardment, rel. to ion mass 4=8825
 metals, inert gas ion bombardment, up to 50 keV 4=8824
 molec. ions on metal surface, Townsend's 2nd coeff. rel. to molec. mass 4=19092
 multiple emission, statistical distrib. meas. 4=27567
 multiplier, 16-stage, open-type, characteristics 4=8823
 photocathodes, complex, quantum yield 4=8809
 positive-ion bombard., meas. of emission coeff. 4=3036
 resonance discharge, steady state by return mechanism 4=16532
 spatial depend. of excitation effect, theory 4=14753
 surface effect, rel. to surface photoelec. effect 4=19090
 transient electron effects, mechanisms 4=17454
 transport of excited electrons, integral eqn. 4=8829
 transport process theory, elementary scatt. model 4=14752
 Al films, rel. to primary beam losses 4=9936
 Al foils in high energy beam monitors 4=8827
 Al target, bombard. by brass and quartz grains 4=8826
 Al-Mg oxides, var. current 4=19094
 Al-Mg target, bombard. by brass and quartz grains 4=8826
 Au black and polycrystalline Au, total emission coeffs., comparison 4=27566
 Au, due to Po²¹⁰ α -particles and fission fragments 4=5700
 Au, Ge, Cu, X-ray excited, energy distrib. rel. to photoelectric emission 4=8808
 Ba layers on Si and Be, rel. to layer thickness 4=11701
 BaO films, on W, at low primary energies 4=582
 Cu films, rel. to primary beam losses 4=9936
 Cu on ion bomb., ang. var. 4=21565
 Cu, on ion bombardment 4=27565
 Cu single crystals, Ar ion induced electron emission coeff. anisotropy 4=3035
 Cu single crystal, ion-electron coeff. anisotropy 4=25983
 Cu, var. Ar⁺ ion beam angles, drop for high atomic densities 4=14754
 Cu-Be, yield under H⁺_{1,2,3} bombard. 4=8828
 GaAs, rel. to local elec. field regions 4=3040
 Hg vapour in uniform field, phonon and metastable atom contrib. 4=18683
 KBr films 4=8820
 KCl films, field-enhanced 4=11702
 KCl films, transmission, time dispersion, upper limit 4=14755
 Mo, due to Hg ions, coefft. calc. 4=8625
 NaCl, under Na⁺ bombard., depth of emergence 4=8821
 Ni, ion bomb., var. mass number 4=24736
 Ni, oxide-coated, by Hg ions, calc. 4=8625
 Ti, clean and contaminated surfaces 4=21566

Electron emission—contd**secondary**—contd

- Ti films, var. with primary energy, oxidation 4=3037-8
 UC, work function, patch effect 4=5696
 W, Auger, by low-energy ions 4=3039
 W, by 1-21 keV Cs ions, kinetic, meas. 4=19095

Electron gas

 α - and f-bands, electron correlations 4=6812
 atomic statistical model 4=3770
 of atoms, collision theory 4=22327
 atoms, Thomas-Fermi statistical theory, present state 4=22280
 beta-decay, exclusion princ. inhibition 4=2342
 in Bi, magneto-plasma waves, amplitude expressions, for strong mag. field 4=20255
 Boltzmann eqn., drift term, in const. external e.m. field 4=12709
 cold emission, from metals, in mag. field, quantum oscillations 4=16517
 degenerate, ground-state energy and stability 4=12710
 degenerate, specific heat calc. 4=24101
 diamagnetism, effect on Knight shift 4=17686
 diamagnetism, small systems, size effects 4=15622
 dynamics in mag. field of degenerate gas 4=16058
 e.m. radiation absorption 4=9932
 electric cond., h.f. correl. corrections 4=5599
 electrodynamics in uniform mag. field 4=17405
 electron distrib. function in elec. field, max. anisotropy approx. 4=8114
 electron lattice, Wigner's, stability 4=25914
 energy spectrum, in mag. field 4=17398
 Fermi liquid, Coulomb interact. effect on effective masses 4=9889
 Fokker-Planck eqn. formulation incl. excitation effects 4=11585
 ground state general props. 4=16057
 high-density, ground-state energy expansion 4=11120
 hot, conductivity tensor, dissipative part 4=27511
 lattice systems, disordered, energy spectra, fundamental theorems 4=28391
 long-wavelength oscill., in mag. field, with Coulomb forces 4=11655
 in magnetic field, quantum theory of transfer processes 4=8115
 magnetic susceptibility 4=26260
 in metals, collective electron motion 4=1443
 metals, Coulomb effect on u.s. attenuation due to impurity scatt. 4=20198
 metals, "quasi free", density and plasma frequency 4=12713
 narrow energy band, statistical props. 4=6813
 neutrino radiation from degenerate gas 4=882
 non-collisional particle flow, in strong mag. field 4=16063
 oscillation between condenser plates, collective behaviour 4=8840
 oscillations, in mag. field, spin effect calc. 4=9925
 partition function and nonoscill. mag. suscept. 4=18102
 partition function in presence of scatt. centres 4=17359
 plasma phenomena in the solid state 4=15464
 quantum kinetic eqns. in periodic system 4=20251
 quantum plasma in mag. field, review 4=20250
 second harmonic generation from cond. tensor 4=17543
 separation of motion into two parts by projection onto equil. varieties in phase space 4=8089
 in solids, theory 4=9803
 stopping power for charged particles, rel. to dielectric constant 4=27572
 superconducting, density and current fluctuations 4=398
 theory, including particle-hole exchange scatt. in singlet and triplet states 4=27094
 thermal flow, in strong mag. field 4=16063
 thermoelec., calc. 4=25874
 transport, configurational e.m.f., Boltzmann eqn. 4=8113
 two-dimensional, Fermi statistics 4=29564
 turbulent elec. field fluct. theory, addendum 4=14709
 X-ray scatt., Coulomb correl. effect 4=30012
 Cu-Zn, β' phase, optical data, plasma-interband coupling 4=15587
 K, helicon wave-sound wave interaction 4=22549

SUBJECT INDEX

Electron lenses

- See also Electron microscopes; Electron optics
 aberration, spherical, meas. from beam emittance 4=19101
 anamorphic, elec. and mag. fields 4=3044
 diffraction pattern errors 4=8834
 e.m., aperture error magnification var. 4=19104
 Fresnel zone correction plates 4=8838
 immersion, relativistic correction to optics 4=597
 multi-pole, achromatic 4=16537
 projector, electron microscope, spherical aberration constants meas. 4=19105
 quadrupole, mag. and electric, with negative chromatic aberration 4=596
 quadrupole, with zero and negative chrom. aberr. 4=14761
 spherical aberr. correction with rotating mag. field 4=3058

electrostatic

- aberration correction by maintaining symmetry plane 4=16538
 for analyzer, high resolution, for 75 keV electrons 4=16541
 boundary field determ., computer method 4=5536
 coplanar aperture, props. meas. and calc. 4=24744
 four quadrupole lenses as analogue of axially symmetric system 4=8837
 gauzes, use of 4=19102
 immersion objective, optical characteristics 4=24745
 obliquely incident beam, variables separation 4=14760
 for particle accelerators, drift tube, self-focussing 4=24767
 plane three-electrode, trajectories 4=19103
 quadrupole, partial correction of spherical aberration 4=8836
 quadrupole, spherical aberrations 4=3046
 quadrupole, 2D, third order geometric aberrations 4=29970

magnetic

- current stabilization 4=11709
 cylindrical, in axisymmetrical radially increasing mag. field, vertical focusing 4=14791
 four quadrupole lenses as analogue of axially symmetric system 4=8837
 multielectrode gun, partially shielded, focusing 4=19097
 pseudo-axisymmetrical system, four air-cored quadrupoles 4=24746
 reversed field focusing, compensated 4=14757
 strong, zone-plate dimensions and arrangement calc. 4=29971

Electron microscope examination of materials

- Alnico-type alloys, replicating technique 4=13631
 atoms and atomic groups, contrast and resolution problems 4=2100
 clouds, noctilucent particles 4=29284
 conference, Cambridge, July 1963 4=2098
 crystal defects, technique and application 4=29157
 crystal lattice images, resolution analysis 4=15784
 crystal net planes, interference fringe contrast 4=2061
 crystal nuclear fission product tracks, diffr. effects 4=12817
 dislocation loops, simplified technique 4=12758
 domain boundaries, coherent, transmission images, dynamical theory 4=13635
 domain structure in Fe-Cr alloy 4=17654
 dried skim-milk particles, surface structure 4=2117
 elastic inclusions, diffraction contrast theory 4=4643
 films, very thin metal, structure determ. 4=23560
 foils, mag. domain wall widths 4=13139
 foils, orientation and thickness meas. 4=26577
 glassy sodium silicates, structure 4=29203
 graphite, Au "decoration" of dislocations 4=12760
 graphite interlamellar cpds with Br, ICl and FeCl₃, crystal dislocations 4=22588
 graphite single crystals, irradiated 4=28444
 incineration, uses for surface structure meas. 4=2105
 low-angle scattering technique, applic. to polymers 4=23410
 metal films, cyclicly deformed inside microscope 4=4449
 metal films, specimen holder, for transmission method 4=17825
 metal foils, dislocations, surface stress relax. effect 4=9964
 metal particles prepared by evap. in Ar gas 4=4645
 metal tips, single-crystal, field emission, equil. form 4=13636

Electron microscope examination of materials—contd

- metals, work hardening dislocations 4=26481
 mica, beam heating effects 4=10586
 mica foil dislocations, reflections 4=10585
 nuclear fission product tracks in plastic films 4=12819
 nuclear reactor fuel particle damage, by replica 4=19904
 n-di- and N-phenylmethacrylamide, polymerisation, crystal shapes 4=15842
 polyethylene, low-angle scattering, stretching study 4=23410
 precipitates analysis on replicas with Castaing microprobe 4=7666
 semiconducting p-n junctions, Si, Ge 4=10580
 semiconductors, cathode prep., field emission microscope 4=23519
 soda-lime glass foils 4=23527
 sodium acrylate, polymerisation, crystal shapes 4=15842
 sphere distrib. calc. from circles in section 4=2099
 transmission, self supporting Al, Mo specimens 4=15802
 Zircaloy-2, α - β change, obs. by electron emission microscope 4=7520
 Ag films on pyrex, influence of vac. on struct. 4=23587
 Al, crystal vacancy aggregation, new type, quenched 4=1473
 Al-Ag, Guinier-Preston zones, rel. to X-ray exam. 4=13639-40
 Al-Li (2.8, 1.5 wt. %) phase transformation on aging, neutron effects 4=13472
 Al-Mg, fatigued crystals, dislocation arrangement 4=12759
 Al N, axial dislocation effect on growth of whiskers 4=23354
 Al₂O₃, anodic layers grown on (100) face, structure 4=23568
 Al₂O₃, colloidal, adsorpt. on SiO₂, asbestos, graphite and clay 4=23684
 Al₂O₃ sapphire, crystal dislocation, hexagonal arrays 4=12764
 Al₂O₃, specimen preparation 4=23522
 Al-Zn alloys, precipitation, rel. to dislocation loops, cold working effects 4=13473
 Au crystal vacancy clusters, on n irradi. or quenching, annealing effects 4=4038
 Au films, lattice planes of 2.35 Å spacing, obs. 4=15782
 Au films, stress and strain rel. to internal state 4=23577
 Au films, twinned structures 4=4524
 Be alloys, microstructure, heat treatment effects 4=7667
 Be, film preparation 4=13642
 Be, neutron effects at high temps. 4=4092
 Be-Fe, microstructure, heat treatment effects 4=7667
 C-films, graphitized 4=15731
 C support film and replica preparation 4=23514
 C thin films, image contrasts 4=23574
 Cd hydroxide, decomposition in electron beam 4=12830
 CO, adsorbed on Ta, dissociation, O₂ field emission patterns 4=26726-7
 Co magnetic domains, temp. var. 4=13168
 Co-Fe alloy films, dislocation struct. 4=30562
 Cu films on Ni, Moiré patterns 4=2108
 Cu, n irradi., defect agglomerates, contrast effects 4=17425
 Cu-Al (14.3 at. %), crystal dislocations, quenched, by electron microscopy 4=1487
 Fe single crystals, surface microstructure 4=7671
 Fe, strongly work hardened, very pure, heterogeneities 4=13650
 Fe-C, C precipitation 4=15737
 Fe-1.2% C-12.5% Mn, martensitic transformation 4=17760
 Fe-C-N, segregation at grain boundaries and dislocations 4=1503
 Fe₃C in steel, crystal imperfections, increase on deformation 4=4057
 Fe-4% Mo-0.2% C, Mo₂C precip. on dislocations, 500-700°C 4=17762
 Fe-(30.9%) Ni alloy, martensite structure 4=17830
 FeO, pre-precipitation 4=26558
 Fe-Si (3.1%), crystal deform. twin dislocation networks 4=17432
 Fe-1% V-0.2% C 4=17762
 Ga films, optical props., 4000 to 10000 Å structure, meas 4=28685
 Ge, crystal dislocation loops, on bending, screw with super jogs 4=12761
 Ge, geometry of dislocations 4=6849

Electron microscope examination of materials—contd

- Ge surface, by replica, cleavage and growth 4=13646
 Ge, surface structure and surface migration 4=29175
 KCl films 4=2113
 Mg, obs. of substructure effect on grain-boundary cavity nucleation 4=23532
 NaCl films 4=2113
 Nb—Ti(66 at. %), with high supercond. critical values, layered filaments 4=13649
 Nb—Zr(25 at. %), with high supercond. critical values, layered filaments 4=13649
 Ni, mag. stray field over (110) faces 4=1835
 Ni₃Fe, dislocation pairs 4=25944
 Sb crystals, etch pits by H 4=26693
 Si, cleared, surface states 4=7676
 Si, crystal dislocation loops, on bending, screw with super jogs 4=12761
 Si, epitaxial, crystal stacking fault pairs 4=6859
 Si solar cells, crystal imperfections 4=7006
 Si surface, by replica, cleavage and growth 4=13646
 Sn, crystal imperfections, lattice, electron microscope obs. 4=4045
 TiO₂ films, crystal dislocations and stacking faults 4=6862
 U, α , crystal dislocation networks, due to radiation 4=4059
 U crystal dislocations, on deformation and irradiation followed by heat treatment 4=4058
 UC, disloc. distrib. 4=30567
 W, zone-refined, etch figures 4=9967
 ZnO, smoke, diffraction patterns for hard and soft electrons, recoil effect 4=7784
 Zn S(110) space, micro-etch figure orientation exam 4=30865
 Zr, crystal dislocations, regrouping on phase transformation, β to σ 4=1486
 Zr—Nb (15%), ω phase, electron microscope
- Electron microscopes**
 See also Ion microscopes
 brightness and contrast increase, "television" method 4=600
 chromatic aberration correction 4=11710
 contamination rates, and decontamination device 4=4641
 cooling of the object space 4=17827
 emission, by specimen heating or ion bombardment 4=5709
 emission microscope, use for obs. of phase changes 4=7520
 emission, relief contrast and aperture position 4=5711
 energy selecting microscope 4=27573
 field emission microscope, resolution, theory 4=5712
 field emission, resolution calc. 4=19106
 field emission, semiconductor cathode prep. 4=23519
 field, gas adsorption effect on work function 4=3023
 field, gas absorption effect rel. to field and current 4=3024
 Fresnel zone correction plates 4=8838
 goniometer specimen holder 4=23515
 lenses, diffraction pattern errors 4=8834
 magnetic emission, in two-electrode, connection with secondary emission 4=601
 magnetic field on sample, calc. 4=4642
 magnification meas. by electron interference 4=13632
 mirror, mag. field effects, 90° to optic axis 4=599
 mirror, surface image formation, model investigation 4=5710
 Phillips EM 200, instrumental constants 4=11712
 power pack for UEMV-100 4=16540
 projector lens, spherical aberration constants meas. 4=19105
 reflection, distortionless, chromatic aberration free 4=11711
 residual gas composition 4=20778
 review, operation, performance, resolution 4=598
 Siemen's, electromagnetic exposure system 4=11713
 Siemens Elmiskop 1, goniometer specimen cartridge control stage 4=23516
 1000 kV accelerating voltage 4=3049
 UEMV-100, high resolution 4=16539
 and X-ray micro-analyser, combined, two gun 4=27574

Electron microscopy

- See also Crystal structure, atomic
 alloys, obs. of antiphase domains 4=7472

Electron microscopy—contd

- collection of articles 4=29156
 conference, Cambridge, July 1963 4=2098
 contrast effects in metals, spiderlike, extinction contour mechanism 4=17823
 contrast increase by heavy metal adsorption 4=29159
 crystals, electron wave transmission and extinction, energy dependence 4=13633
 crystals, stacking faults, images theory 4=1501
 dark-field high resolution technique 4=23518
 diffraction grating, stereo photos 4=27335
 direct observation of radiation damage in Cu 4=6897
 drop production of suspensions 4=30909
 use of electron probe microanalyser with γ -active specimens 4=13634
 electron probe microanalysis, conference 4=10679
 electropolishing unit for thinning metal specimens 4=29162
 emission, relief contrast and aperture position 4=5711
 evaporator for study of condensing metal vapours 4=4640
 field emission, obs. of Ag nucleation on W 4=15765
 hot stage transmission, gas reactor 4=29220
 metal and alloy foils, at 10⁶ V 4=29158
 metal foil thickness meas. 4=13630
 metallic film, thickness meas. 4=4663
 mica, thin, preparation 4=10571
 micro-etch figure orientation 4=30865
 microtome, simplified design 4=10572
 photographic films, colour 4=2101
 powder prod. for grain shape study 4=20779
 use of polymer coated photographic plates 4=4644
 pulverization device for electron microscopy specimens 4=2103
 recent developments, review 4=2102
 replica and direct micrography 4=2097
 replication of selected areas 4=7665
 replication of selected areas of surfaces 4=10569
 resolution and contrast, optical transfer theory 4=14762
 shadow projection of foils, in biprism, irradiation effects 4=29160
 shadow projection of foils, charging effects on current density distrib. 4=29161
 specimen crushing device 4=2103
 specimen holders of large transmission area, films 4=17824
 specimen prep. by electropolishing 4=23513
 superconductivity study using bright field shadow technique 4=8579
 target C contamination reduction 4=17826
 vacuum cinematography 4=17828
 wafering of specimens for transmission microscopy 4=26689
 wire samples, microjet method of prep. 4=2104
 Zener diodes as voltage reference sources 4=3048
 Au film polishing and thinning technique 4=29185
 N₂ on Mo, chemisorption study, calc. 4=29195
 Be specimen prep. by electropolishing 4=23513
 Ca tungstate thin film prep. 4=23573
 In on amorphous support, twinning 4=30571
 Pt—Al, 3 new phases, crystal struct. 4=23286
- Electron optics**
 See also Beta-ray spectrometers; Electron lenses; Ion optics; Particle optics
 achromatic quadrupole lenses 4=16553
 analyzer, electrostatic, 75 keV electrons 4=16541
 axially-symmetric system and finite planar cathode, Langmuir—Child law 4=594
 beam, hollow cylindrical, ion focusing 4=589
 beams, plane and axially symmetric, equations 4=593
 buncher matching, uniform accel. field requirement 4=21573
 current density, limiting, in magnetically compressed beam at cathode image plane 4=11705
 current density, thermal velocity limit 4=11706
 digital analysis methods 4=24742
 directional beam function theory for any curved axis 4=24741
 in electric and space-modulated mag. field 4=595
 electron wave, calibrating transformation 4=16536
 energy analyser for fast electrons, electrostatic-mag., resolving power 4=29974
 focusing of broad beam in β -ray spectrograph 4=27575

SUBJECT INDEX

Electron optics—contd

- focusing of two-dim. field with median plane 4=14760
 focussing, stigmatic, by arbitrary space-limited fixed e.m. fields 4=21572
 Fresnel diffraction by filament 4=21569
 gun, injection, for magnetron, improved design theory 4=27571
 gun, velocity analyser and lens, use in electron impact spectroscopy 4=12354
 lenses, immersion, relativistic correction 4=597
 machine giving electron spot of few μm dia. 4=3047
 magnetic deflection and caustic patterns 4=11708
 magnetic field distrib. with exactly soluble paraxial eqn. 4=24743
 magnetic field, helical, space-periodic 4=19100
 magnetic field with spatial modulation 4=3043
 magnetic quadrupoles, aperture aberration meas. 4=591
 multivelocity stream, Hamiltonian represent. 4=592
 osc. electric field in a mag. field 4=5754
 r.f. field motion 4=18939
 ripple after mag. collimation, computer solns. 4=5707
 stigmatic images and affine image transforms. 4=3044
 system with 4 magnetic channels 4=5708
 three-electrode analyzers, grid distortion effects on lag curves 4=24747

Electron pairs

See also Positronium

from $\text{Cl}^{35}(\text{n}, \gamma)\text{Cl}^{36}$, ang. distrib. 4=15214

annihilation

- alkali halides, three-quantum, meas. 4=20259
 alkali halides, time spectra analysis 4=15465
 atom, K-shell electron, single-photon, calc. 4=6461
 $e^- + e^+ \rightarrow \mu^- + \mu^+$, hard-photon emission correction 4=25070
 $e^+ + e^- \rightarrow \pi^+ + \pi^-$, cross-section restrictions 4=16880
 inert gases, liq. and solid, free-positron mean life 4=4031
 neutrino energy spectrum, calc. 4=21843
 shell theory, creation and annihil. operator methods 4=30365
 to 2γ and 2μ , calc., and quantum electrodynamics short range validity 4=25071
 800 MeV, and quantum electrodynamics test 4=27832
 Al, ang. distrib. of quanta, meas. 4=12718
 Ce, photon correl. rel. to electronic struct. 4=17413
 in CCl_2F_2 , var. with pressure 4=6029
 Cu, positron flux from Cu^{64} , spectral distrib. 4=28435
 D₂, liq. and solid, free-positron mean life 4=4031
 Fe single crystals, magnetized, positron annihilation 4=22555
 Ga, liquid, data on electron mean free path 4=199
 Gd, photon correl. rel. to electronic struct. 4=17413
 Ge, ang. distrib. of quanta, meas. 4=12718
 H₂, liq. and solid, free-positron mean life 4=4031
 He, liq. and solid, free-positron mean life 4=4031
 In, liquid, data on electron mean free path 4=199
 Li, electron conc. 4=12719
 Li-Mg alloy, nearly free-electron data 4=12719
 N₂, liq. and solid, free-positron mean life 4=4032
 Na, liquid, data on electron mean free path 4=199
 Ni-Fe alloys, plastically deformed and annealed, positron annihilation with electrons 4=28434
 Ni, plastically deformed and annealed, positron annihilation with electrons 4=28434
 O₂, liq. and solid, free-positron mean life 4=4031
 Si, ang. distrib. of quanta, meas. 4=12718
 Sn, liquid, data on electron mean free path 4=199
 Ti, two-quantum, effect of adsorbed H 4=28433
 Y, angular correl. of rad., and electron band struct. 4=15466
 Yb, photon correl. rel. to electronic struct. 4=17413

production

- in antinucleon annihilation due to second π^0 4=25087
 and bremsstrahlung, for ultrarelativistic electrons 4=16870
 Coulomb electron field, recoil distrib., atomic binding effect 4=27834
 in Coulomb field, with photon inelastic scattering 4=16847
 cross-section calc. to order $\alpha^3 Z^3$ 4=9182
 cross-section, Z-dependence, in energy region 1 to 2 MeV 4=888
 energy partition, 5-90 MeV γ 's 4=21842

Electron pairs—contd

production—contd

- in gamma internal conversion, ang. distrib., and transition multiple mixture parameters 4=17085
 γ -rays, linearly polarized, 6 MeV, in emulsions 4=9183
 gamma-rays, pair conversion coefft., screening effect 4=6269
 γ -transitions, internal formation, nuclear structure effects 4=17016
 and high temp. isentropic exponent reduction 4=14469
 internal emission by aligned nuclei, theory 4=12130
 internal pair prod., Born approx. 4=3560
 in nuclear elec. monopole transitions 4=25284
 ω meson decay, from $\pi^- + p \rightarrow n + \omega$ 4=12054
 μ -mesons, 32.6 GeV, underground, in Fe targets 4=19493
 photons, scatt., Delbruck, small angle, calc. 4=3370
 photoproduction, on electrons, cross-section 4=19494
 $\pi^- + N$, 7 BeV 4=937
 with polarized γ -quanta scattering 4=17114
 radiation units and critical energies for various substances 4=6012
 radiative corrections to photoproduction 4=30219
 shell theory, creation and annihil. operator methods 4=30365
 and vacuum double refraction 4=27748
 Au, at 90° , meas. for 0.1-1.4 MeV positrons 4=9181
 in H, from π^- -meson stops in bubble chamber 4=11980
 Rh-Pt alloys, effective atomic number 4=3392
 Sn, at 90° , meas. for 0.1-1.4 MeV positrons 4=9181

Electron resonance

See Cyclotron resonance; Paramagnetic resonance and relaxation

Electron theory

See also Quantum electrodynamics

- almost degenerate eigenstate of mass operator 4=9064
 dielec. constant, high polarizability, Bohoms-Pines calc. 4=29853
 Dirac, classical theory 4=6020
 Dirac eqn., dynamical symm. group 4=24976
 Dirac, mass difference from muon 4=25124
 Dirac, position operator, Feynman-Bunge-Corben relation extension 4=21737-8
 e.m. nature of mass, rel. to dissipative potentials motion 4=3109
 general relativity, mass, vanishing grav. contrib. 4=18059
 mass, additional degree of freedom for positron 4=11979
 periodic fields, one dimensional, with a defect 4=11072
 perturbation method, modified 4=27750
 photon cloud, rel. to i.r. divergence of bremsstr. ang. momentum 4=16873
 preacceleration, classical 4=883
 quantum eqn. of motion, rel. to muon theory 4=19539
 quantum field theory, electron-positron 4=9050
 1-spinor field 4=27776
 structure, laycred, core radius and spin 4=884

Electron tubes

See also X-ray tubes

anode work function changes due to BaO

cathodes 4=14745

apertures, 5-50 μ , laser formed 4=8842

beams, transverse waves, space charge effects 4=21567

book, vacuum and electronics, applied physics 4=8581

breakdown with nickel cathodes 4=24724

cathode emission, rel. to methane pressure

changes 4=21576

cathode ray tubes with mechanical scanning, control

circuit 4=14554

cathode ray tube, waveform tracing method 4=18631

conference, review, Pilani, India, Dec. 1962 4=603

crossed-field diodes, noise, Monte Carlo, calc., increased

velo. fluctuations 4=8839

crossed-field double-beam drift-space amplifier dispersion

relations 4=11789

cut-off tubes, gas content and cathode emission

changes 4=21579

demodulation, travelling-wave phototube, theory 4=18371

demountable, using moulding seal 4=5716

diode, crossed-field injected-beam, d.c. parameters and

noise 4=19099

diode, crossed-field, noise transport 4=19109

diode, Cs, I-V curve calc. 4=14763

Electron tubes—contd

- diode for ionization meas. in combustion 4=4700
- diode, plane parallel, electron velocity distrib. 4=11693
- diode, two-dim., noise transport, Monte-Carlo calc. 4=19110
- diodes, gas-filled, current for potential discontinuities near electrodes 4=19107
- diodes, high pressure, low breakdown 4=11715
- electrometer circuit design for meas. of $\sim 10^{-13}$ amp. 4=14545
- electron gun, electrodes for converging beam 4=3045
- getter flashing with electrode bombardment 4=21201
- glass, O_2 outgassing by electron bombardment 4=21204
- gun beam density limitations, unipotential guns at low voltages 4=8831
- heater, d.c. supply stabilizer 4=14561
- image orthicon, vacuum meas. 4=18293
- initial characteristics rel. to residual gases 4=24748
- ion relaxation osc. l.f. and h.f. 4=14764
- for irradiation of liquid and gas samples, 10-100 keV 4=27568
- klystron, millimetre wave, synchronization with quartz oscillator 4=11790
- klystrons, reflex, automatic freq. control 4=3138
- klystron, reflex, frequency modulation at constant power 4=19202
- klystron, transistorized frequency stabilization in X-band 4=19201
- klystron, two-cavity extended interaction 4=29978
- ladderton (m. m. wave oscillator) 4=29979
- low-voltage with passive cathode cores, emission rel. to anode material 4=21577
- magnetron, Cu, 200 W c.w., residual gas pressure 4=21560
- magnetron, Hall cut-off in strong crossed fields, anomalous violation 4=14765
- magnetron injection gun, improved design theory 4=27571
- magnetron, plane, cut-off characteristics, expt. 4=16544
- magnetrons, linear, steady-state theory 4=29980
- magnetrons, pulse generator for operation 4=428
- magnetron, planotron, high power, review 4=11786
- multiplier, electron transit time calc. 4=29981
- multistream, nonlinear Hermite function expansion theory, for t.w.t. 4=21646
- oscillating cloud between condenser plates, collective behaviour 4=8840
- photographic recorder 4=337
- plasma diode, low-density, theory 4=21574
- plasma diodes, planar, stability 4=443
- r.f. coupling of electron beam by plasma 4=19199
- residual gas effects on deposited films 4=8273
- residual gas meas. 4=21597
- residual gases, conference, Milan (1963) 4=11718
- secondary electron resonance discharge, steady state by return mechanism 4=16532
- space charge, equil., current-voltage reln. 4=8841
- thermionic converter, mag. triode-type, optimization 4=8606
- thermionic diode, for measuring weak sound fields in gases 4=11313
- thermionic energy converters, ion acoustic oscillations 4=11716
- thyratrons, firing by intense γ -ray pulses 4=16543
- travelling-wave phototube, expt. analysis 4=18372
- travelling wave tube, failure mechanism 4=21578
- travelling-wave tube, theory 4=16542
- triode, magnetic, for heat-electric energy direct conversion 4=11505
- vacuum seal, coaxial line 4=29682
- C in cathode, effect on residual gases 4=21203
- Cs diode, high-pressure, I-V curve analysis 4=19108
- Cs-filled thermionic converter, current-voltage characteristics, rel. to current oscillations 4=14564
- Cs plasma diode, radial potential and electron density 4=21575
- Cs vapour devices, AgCl seal use 4=27236
- Cs-vapour dispenser 4=21544
- Cs-Hg diode, Hg addition effect 4=29976

Electrons

This heading includes both negative and positive electrons when the differences between them are of no

Electrons—contd

- special significance. See also Beta rays; Cosmic rays, electrons; Crystals, electron states; Fluctuations, electrical; Nuclear reactions, electrons; Photoelectricity; Plasma; Positronium; Positrons; Space charge
- Alpha apparatus, ordered motion 4=14730
- Boltzmann time-depend. eqn. soln. in bounded medium 4=24111
- charge, e-p diff., meas. attempts, cosmology and particle theory 4=15905
- coincidence apparatus, 20-50 keV region 4=11978
- detachment, in negative ions-atoms collisions 4=16429
- diffusion between cylind. absorbing boundaries 4=19489
- diffusion in cylindrical geometry, number of collisions 4=6025
- drift velocities in inert and moderator gas mixtures 4=24274
- drift velocity in several gases 4=27479
- dynamics near cond. bodies, minimal-principle proposal 4=3108
- e- μ mass ratio, electrodynamic approach 4=3383
- e- ν , K_{α} mode, non-locality and asymmetry 4=9170
- effective mass in ZnSe 4=22726
- electron-photon showers, in Xe, fluctuations 4=3384
- elementarity, possible tests 4=27823
- energy rel. to scintillation magnitude 4=16734
- Faraday cup calibration, 29 MeV electrons 4=9178
- g-factor anomaly meas. 4=885
- interaction with chemisorbed O 4=23658
- ionosphere, F-region loss coeff. charac's 4=23808
- n-e interaction, spin-independent, meas. methods 4=9204
- in lattice field, analogy with Heisenberg's nonlinear spinor field theory 4=837
- in Lorentz plasma, runaway in constant electric field 4=14635
- interactions, with electrons and positrons, e. m. interaction operator 4=27785
- low energy, double focussing electro static spectrometer 4=19491
- magnetic moment, d^2 radiative corr's., historic lecture 4=19376
- magnetic spectrometer, 11-channel, double-focusing 4=27829
- in magnetosphere, flux and energy 4=29319
- mass difference from μ -meson 4=921
- mass, energy and momentum 4=9153
- mass-momentum reln., relativistic, verification 4=8040
- mass ratio, e/ μ , electrodyn. calc. 4=5923
- mass, theoretical connection with other atomic consts. 4=11009
- mass, zero bare, rel. to photon 4=30203
- molecule collisions, inelastic, review 4=25760
- neutrino collisions, meson prod., Regge poles 4=25004
- polarization and ang. distrib. from atomic scatt. 4=25547
- polarization, in inhomog. mag. field 4=19488
- polarization by light reflection 4=11977
- polarons, in aqueous media, optical absorption rel. to mass 4=5209
- production unification with γ prod. 4=28017
- reflection and transmission through surface pot. barriers 4=29960
- Regge-pole character, possible exptal. tests 4=862
- relativistic, depolarization in mag. field 4=3111
- relativistic mass variation, effect in Compton scattering 5=868
- relativistic, speed and kinetic energy determ., for teaching 4=21023
- semiconductors, diffusion contrib. to electron thermal conductivity 4=20225
- similarity to μ meson, review of expts. 4=19455
- spectrometer, magnetic, for angular distribution obs. 4=15044
- spin polarization by deformation cooling 4=18502
- tunneling through Al_2O_3 films 4=20404
- velocity-analyzers, grid distortion effects on lag curves 4=24747
- velocity distrib. in gases 4=5251
- in H_2O vapour and H_2 and H_2O vapour mixture, drift velocities 4=8624
- in Rb^{87} , g factor, Zeeman effect obs. 4=30382

SUBJECT INDEX

Electrons — contd
scattering — contd

- back, energy distrib. 4=19756
- back, 4. 5-30 keV, var. at. no., Be-U 4=25379
- backscattering coeff. for Pb, Cd, Cu, Al, 8-22 MeV 4=22122
- backscattering of kV electrons from thin films 4=16535
- backscattering, theory rel. to energy and angle 4=16874
- calculation, validity of Brysk phase shift method 4=25061
- Compton, by standing waves of light 4=3385
- conduction, in thin films, scatt. parameter 4=22521
- crystal imperfections, and elec. cond. 4=25988
- crystals, thin, theory and appl. to plasma oscillation, thermal vibr., band transition 4=13629
- cyclohexane, inelastic scattering of 390 V electrons 4=12394
- d, calc., correction 4=3388
- by d, calc., inelastic 4=21960
- d-e, elastic, polarization, rel. to form factors, calc. 4=21961
- d-e, elastic, relativistic corrections 4=6023
- d-e, inelastic, high-energy, radiative corrections 4=15201
- d-e, inelastic, meas. rel. to nucleon structure 4=19487
- d-e, quasielastic, neutron form factors 4=25206
- dense media, ultrarelativistic, Bremsstrahlung 4=19486
- depolarization on slowing down in matter, calc. 4=25917
- dielectric slab, optical bremsstrahlung and transition radiation 4=25913;
- Dirac, Coulomb scatt., Johnson-Deck form 4=21791
- in e. m. field, polarization change, relativistic calc., and moment meas. 4=3292
- e-d, d polarization, calc. 4=21962
- e-e⁻ and e-e⁺, rel. to possible heavy photon 4=5922
- e-d to e-p ratio and d mag. form factor at low momentum transfer 4=19601
- e-d, inelastic, d model effects 4=27910
- e-e, bremsstrahlung, rel. to nonlocal electron structure 4=3380
- e-e, at high energies, bremsstrahlung 4=3386
- e-e, weak interaction parity effects 4=5957
- e-N, differential cross-sect. using dispersion relations for form factors 4=21845
- e-N, form factor sum rules 4=3395
- e-p, CH₄ target system 4=9179
- e-p, e-r 4=24990
- e-p, at high momentum transfers 4=9172
- e-p, 950 MeV, rel. to many-photon exchange 4=9171
- e-p, 2γ exchange, theory 4=3387
- e⁺-p, e⁻-p ratio, meas. as one 4=16879
- elastic, radiative tail, Bethe-Heitler cross-section 4=11975
- electron-deuteron inelastic cross-section, tensor pot. modifications 4=30215
- electron-electron, in metals and semicond., rel. to relax. 4=20235
- electron-phonon, in semiconductors, uncertainty principle 4=15444
- ethane, inelastic scattering of 390 V electrons 4=12394
- ethylene, inelastic scattering of 390 V electrons 4=12394
- ethylene, spectrum meas., agreement with u. v. 4=3828
- fast, in nuclear Coulomb field, review 4=3644
- gas, diffusion in elec. field, spatial energy distrib. 4=5252
- gas, multiple elastic, effect on diff. studies 4=5705
- gases, multiple scatt., 40-130 keV, spatial distrib. 4=887
- inelastic, analysis of cross-section formula 4=25548
- inelastic, excitation of M1 transitions in Li² and N¹⁴ 4=12134
- inelastic, radiative corrections, general 4=6022
- inert gases, electron mobility theory 4=14221
- inert gases, 25 keV, elastic, and optical transitions 4=6505
- on light nuclei with large quadrupole moments 4=3643
- in magnetic fields 4=641
- meson-electron, matrix elements, i. r. singularities 4=5925
- methane, inelastic scattering of 390 V electrons 4=12394
- molecular excitation, vibronic interaction effect 4=17274
- molecular spectra meas. 4=3828
- by molecules, electron-impact spectroscopy 4=6520
- mols. in gas phase, theory 4=1234
- by molecules, theory 4=6521
- Møller and Bhaba high energy, non-local effects 4=19374

Electrons—contd

scattering—contd

- μ -e, radiative corrections to order α^3 4=9234
 multiple, small-angle, using Molière screening 4=21838
 and ν charge moment meas. method 4=21833
 of ν_e , $\bar{\nu}_e$, spin correl. calc. 4=21836
 nuclear charge distrib., 50-183 MeV/c calc. 4=25378
 nuclear dynamic polarization, thermodynamics 4=24096
 nuclear elec. monopole transition excitation, and models 4=25284
 nuclear excitation, elec. dipole, orientation effects 4=25290
 nuclear excitation, relativistic kinematics, accuracy 4=15199
 nuclei, bremsstrahlung from polarized electrons, exact calc. 4=21837
 nuclei, bremsstrahlung spectrum, h.f. limit 4=16872
 nuclei, elastic, relativistic high-energy approx. 4=15022
 nuclei, Fermi fluid model, N-N interaction data 4=6037
 nuclei, inelastic, effect of nucl. orientation and electron polarization, theory 4=15200
 nuclei, inelastic, electric multipole excitation 4=19757
 nuclei, inelastic, pion production calc. 4=12208
 nuclei, radiative tail, nuclear size and mag. effects 4=19758
 nuclei, test of quantum electrodynamics 4=22120
 nuclei, $Z \leq 20$, elastic and inelastic, generalized model 4=9482
 nucleons, rel. to neutron-proton mass difference 4=9187
 nucleons, strange-particle prod., dispersion theory 4=9285
 nucleus of α -particle core and weakly-bound neutron 4=6326
 nucleus, inelastic, high-energy, radiative corrections 4=15201
 nucleus, struct. obs., review 4=25273
 neutrino and $\bar{\nu}$, by polarized electron, theory 4=16869
 150 MeV, inelastic, by Cr^{2+} , excited levels 4=17052
 p, further correction, mesonic contribution to two-photon exchange 4=886
 p-e, bremsstrahlung effects calc. 4=25062
 p-e, elastic, polarization effects, isobaric model 4=19509
 p-e, 150-850 MeV, search for intermediate boson 4=11976
 π -e, radiative corrections, q. e. d. parts 4=27882
 π -e, 16 GeV/c meas. rel. to four-momentum transfer 4=21903
 photon beam, intense, rel. to harmonics of beam 4=9169
 range-energy relation, 3 keV-3 MeV 4=15043
 semiconductors, by ionized impurities, Born approx. 4=12874
 solids, elastic, for truncated matching potentials 4=12818
 spectrometer, for scattering by molecular gases 4=11714
 theory and pseudopots. 4=28097
 thin foils, fast electron energy losses 4=12720
 200 MeV, by carbon 4=17120
 water, inelastic scattering of 390 V electrons 4=12394
 Ag, asymmetric, by surface plasma oscill. 4=9937
 Ag, charact. surface losses, 3.6 eV, unsymm. ang. distrib. 4=28429
 Ag-Mn alloys, anomalous, and analogy with Ramsauer effect 4=17396
 Al, asymmetric, by surface plasma oscill. 4=9937
 Al, backscattering 4=16535
 Al, charact. surface losses, 6.3 eV, unsymm. ang. distrib. 4=28429
 Al, crystal stacking faults, cond. temp. var. 4=12772
 Al, energy loss, 20-60 MeV 4=28438
 Al films, rel. to transmitted spectrum 4=9935
 Al, plasma oscill. excit., volume and surface 4=28428
 Au, backscattering 4=16535
 B^{10} , and 7.48 MeV level excitation, 51, 102 MeV, orientation effects calc. 4=25290
 Be^9 , electro disintegration 4=17119
 Bi , electrons and positrons, partial-wave calc. 4=1068
 Bi , 300 MeV positrons 4=1067
 C , 40-70 MeV, strong M1 transitions, form factors 4=19760
 C^{12} excitation, 15.11 MeV level, var. inelastic momentum transfer 4=25381
 C^{12} , inelastic, meas. 4=15199
 C^{13} , inelastic, 40-70 MeV, giant resonance excit. 4=19672
 C^{13} , inelastic, rel. to particle-hole correl. 4=12209
 C^{12} levels form factors 4=25380
 C^{13} , magnetic-dipole, form factors calc. 4=19759
 CO , elastic and inelastic, from electron transport 4=11509

Electrons—contd

scattering—contd

- CO , inelastic collision cross-sections for three transitions 4=12445
 CO_2 , elastic and inelastic, from electron transport 4=11509
 Ca^{40} , 80-200 MeV, and energy levels 4=17050
 Ca^{40} , inelastic, giant resonance 4=19761
 Ca^{40} , inelastic, rel. to particle-hole correl. 4=12209
 Co , elastic and inelast., 300 keV-1.5 MeV 4=22148
 Co , electrons and positrons, partial-wave calc. 4=1068
 Co , 300 MeV positrons 4=1067
 Cu , elastic and inelast., 300 keV-1.5 MeV 4=22148
 Cu films, inelastic 4=8835
 Ge , electron-phonon, in n-type, uncertainty principle 4=15444
 Ge and Si , n-type, ionized-impurity scatt. 4=6780
 H_2 , elastic and inelastic, from electron transport 4=11509
 H_2 , inelastic collision cross-sections 4=12450
 H_2 , inelastic scattering of 390 V electrons 4=12394
 H_2 molecule 4=6521
 H_2 , 33eV 4=25644
 H^+ , inelastic, first Born approx. 4=17279
 H^+ , theory 4=9708
 H^+ , bremsstrahlung production 4=9321
 H^+ , elastic, high-energy calc. 4=27911
 H^+ and form factor in terms of component nucleons 4=6143
 H_2O mols., intensities calc. using two methods 4=6522
 He resonance, rel. to monochromator 4=8832
 He , S-electrons, scatt. 4=9670
 He , spectrum meas., agreement with u. v. 4=3828
 by He^+ , cross sections for He^+ excitation 4=15300
 by He^+ in 1s, 2s, 2p states, cross-sections 4=15301
 He^+ , bremsstrahlung production 4=9321
 He^+ and form factor in terms of component nucleons 4=6143
 InAs , mech. by i.r. absorpt. 4=20461
 n-InSb , by optical phonons, rel. to magnetoresist. oscillations 4=26049
 Li^6 , magnetic-dipole, form factors calc. 4=19759
 Li^6 , 40-70 MeV, strong M1 transitions, from factors 4=19760
 Mg , 40-70 MeV, strong M1 transitions, form factors 4=19760
 Mg , plasma oscill. excit., volume and surface 4=28428
 N^{14} (e,e), (e,e'), 121, 180 MeV 4=22011
 N_2 , collision cross-sections for two transitions 4=12462
 N_2 , elastic and inelastic, from electron transport 4=11509
 N_2 , electron inelastic collision cross-sections 4=27228
 N_2 , excitation, vibr., lifetime 4=22361
 NH_3 mols., intensities, calc. using two methods 4=6522
 O^{16} excitation in inelastic scatt. 4=19675
 O^{16} , high-energy, sum rules 4=22121
 O^{16} , inelastic, 40-70 MeV, giant resonance excit. 4=19672
 O^{16} , inelastic, rel. to particle-hole correl. 4=12209
 O^{16} , inelastic, using α -particle nucleus model 4=6326
 O_2 , collision cross-sections in Schumann-Runge region 4=12467
 O_2 , elastic and inelastic, from electron transport 4=11509
 by P^{31} , excited levels in P^{31} 4=17121
 Pb , using atoms embedded in plastic foil 4=12210
 Si , 40-70 MeV, strong M1 transitions, form factors 4=19760
 Zn , elastic and inelast., 300 keV-1.5 MeV 4=22148

Electro-optical effects

- See also Electroluminescence; Optical constants
 absorption coefficient oscillations, in crossed elec. and mag. fields 4=1708
 ADP, double refraction, axis meas. using a. c. field 4=17552
 addition copolymer solns., elec. birefringence, meas. 4=5179
 benzene, Pariser-Parr calc. 4=12497
 birefringence at high-fields, rel. to field strength 4=8460
 crystals, interband absorption in elec. field 4=17550
 crystals, rel. to light modulator design 4=21268
 double refraction, axis meas. using a.c. field 4=17552
 ethane and methane, rel. to dipole moments 4=15367-9
 gas or liquid, Kerr effect, phenom. theory 4=14219
 in gases, Kerr effect of electronically excited mols., formulae 4=6540
 interference filter light modulator 4=5359

SUBJECT INDEX

Electro-optical effects—contd

- Kerr cell as ADP modulator in automatic polarimeter 4=24397
- Kerr cell medium anisotropy relaxation and frequency modulation 4=11371
- Kerr cell shutter, h.t. pulse generator 4=21444
- Kerr cell system for voltage pulse meas. 4=21443
- light beam deflector 4=16226
- for light modulation, absorption 4=16198
- for light modulation, optimum materials and coupling 4=14327
- for light modulation, for TV transmission 4=18370
- light modulators, strain effects 4=18369
- liquids, laser induced double refraction 4=18198
- microwave modulation of ruby-laser light 4=3218
- molecular scattering of light, in strong field 4=30405
- observation, vacuum-stage for low temp. use 4=16222
- polymers, chain, calc., rotational parameters, diagonalization 4=1332
- quartz, meas. at u.h.f. 4=1743
- semiconductors, microwave analogues of Cotton-Mouton and Kerr effects 4=10157
- shutter for continuous square wave modulation of light pencil 4=8370
- spin-screw structure 4=26172
- stressed-plate shutter for light modulation 4=2821
- urotropine 4=15604
- water, Kerr constant 4=5180
- ABO, perovskites in para-electric phase 4=20464
- CdS, absorption edge shift, field-induced 4=13024
- CdS, illuminated, oscillatory currents under ultrasonic flux 4=7062
- CdS, linear 4=13023
- CuCl light modulators, comparison with dihydrogen phosphates 4=10171
- Ge, infrared modulation, by free carrier absorption 4=15589
- KH₂PO₄, linear and d. c. effects meas. 4=10185
- KTN (KTa_xNb_{1-x}O₃), props. and applications 4=20464
- PbS, photosensitive layers, field effect on microwave absorption 4=1736
- ZnS—CdS, Cu, Ag, photodielectric effect, theory 4=30647

Electrophoresis

- colloids, effect of r.f. fields 4=7788
- continuous-flow, kinematic stabilization, against thermal convection 4=29224
- and electrolyte kinetic theory 4=13732
- flow through charged membranes 4=23668-9
- metals, Al, Ti, Zr and W, powder, fusion to substrate 4=7789
- statistical mechanics, irreversible processes 4=21116
- He—Ne gas mixture, cataphoresis 4=24275
- Ne, cataphoretic purification 4=24276

Electrostatics

- See also Electrets; Electric charge; Electric fields, Brownian movement of ion, trapped trajectories 4=27084
- capacitance of thin dielectric structures 4=11498
- capacitor and switch, low inductance 4=21446
- conducting surfaces in field between electrodes, elec. stresses 4=24535
- electrification, review 4=436
- fields of two coaxial equidiam. cylinders 4=2931
- frictional electrification of belts of insulating materials 4=27454
- hollow spheres with conducting inner surfaces for e.s. experiments 4=21445
- induction in conductors, calc. 4=29855
- irregularly shaped conductors, perturb. theory 4=5537
- liquid boundary, deformation 4=18166
- microdeformation of coaxial cylindrical system, solution 4=29856
- particles, 0.3 to 15 μ radius, contact charging in intense elec. fields 4=27451
- ponderomotive forces, demonstration, using soap film 4=8598
- potential in region of thin slit 4=435
- records high-fi., permanent destaticising 4=27453
- relaxation, responses of systems, comparison with mechanics 4=14559
- sphere and two plates, conducting, potential calc. 4=24532

Electrostatics — contd

- torque due to e. m. field acting on oblate spheroidal boundary 4=24533
- torsion balance, for mag. film meas. 4=28798

Electrostriction

- See also Piezoelectricity
- electrolyte solns., thermodynamics 4=14149
- hydrostatic, theory, Clausius—Mesotti formula 4=18210
- measurement by Fabry—Perot dilatometer 4=16003
- theory, first-order, reciprocal theorem 4=7059
- triglycine sulphate 4=20426
- triglycine sulphate, 10°–80°C meas. 4=7051
- BaTiO₃ disc and cylinder electromechanical const. design charts 4=16181
- NaNO₂, temp. dependent near Curie point, calc. 4=28630

Elementary particles

- See also Baryons; Field theory, quantum; Leptons; Nucleons and antinucleons; Nucleus; Particle detectors; Quantum theory; Scattering, particles; and individual particles, e.g. Electrons, Mesons
- absorption length determ. from angular distrib. 4=5998
- absorption, transformation of spin into rotation 4=15033
- algebra of charge like props. 4=19377
- analogy between Foldy—Wouthuysen and Lorentz transforms. for zero mass neutrino 4=21832
- analytic structure of production amplitudes 4=19447
- analyticity methods, review 4=21809
- ang. correl. near threshold of formation of unstable particle 4=11953
- angular momenta, complex, Book 4=9058
- angular momentum projections, conservation, formal sum rules 4=11087
- anomalous singularity and amplitudes of some processes 4=30173
- Bargmann—Wigner theory for Spin $\frac{1}{2}$, equivalence to Rarita—Schwinger 4=5926
- baryon isobar classification, by five SU₃ Regge trajectory families 4=9094
- baryon—lepton symmetry principle for leptonic weak interactions 4=5960
- basic constants, introduction of pseudoscalar parameters 4=30223
- Bethe—Salpeter eqn. for regular and singular potentials 4=9099
- Bethe—Salpeter eqn., singular, ladder approx. 4=9098
- Bethe—Salpeter eqn., singularities at $l=-1$ 4=5970
- Bethe—Salpeter eqn. for 2 fermions, ang. variable separation 4=11901
- book 4=21740, 25049
- boson and baryon resonances in octet model 4=30164
- boson coupling, additional selection rules with G₂ symmetry 4=9090
- boson dynamics, perturbation calc. with modified Schrödinger eqn. 4=25471
- boson and fermion rotators, Regge-pole behaviour 4=2561
- boson fields, inequivalent representations 4=9083
- boson fields, invariance under point transforms. of field variables 4=5937
- boson icosuplet containing B₁ and B₂ 4=21759
- boson intermediate, decay 4=25010
- boson, intermediate, unitary symmetry props. 4=9089
- boson—nucleon interactions, isobar production 4=19499
- boson pair, photoprod. cross-section calc. 4=19403
- boson spin determination, from $K(\pi) + P \rightarrow Y + B$ and $B \rightarrow B_0 + B_0'$ 4=27775
- boson spin and parity meas. from prod. by π or K in heavy nucleus 4=5996
- boson vector pair prod. by $\gamma + Fe^{56}$ 4=5939
- bosons, baryon—antibaryon bound states, mass spectrum 4=9086
- bosons, decay calc. from unitary symmetry and b—b, b— γ interactions 4=15008
- bosons, density in phase-space, transition from particle to wave behaviour 4=90
- bosons with impenetrable cores, eqns. of motion and general operator formalism 4=16807
- bosons, interacting, gauge invariant method 4=24099
- bosons, intermediate, charged, production in neutrino—e. m. field interactions 4=9168
- bosons, intermediate, and $\Delta Q = -\Delta S$ leptonic decays 4=812

Elementary particles—contd

- bosons, massless and spinless, geometrization 4=30168
- bosons, new, heavy, prediction, in rotator model frame 4=9082
- bosons, parity expt., photo-production of spin zero bosons 4=19401
- bosons, three scalar, in relativistic Lee model 4=16788
- bosons, spinless, in two-dim. soluble theory 4=11899
- bosons, vector, existence possibility 4=25001
- bosons, zero-mass, in theory with broken symm. 4=9084
- bound-state conditions, bootstrap deriv. 4=21744
- bound state description 4=21742
- bound states and analytic properties in angular momentum 4=21743
- bound states in full symmetry four-fermion theory 4=19392
- bound states and particles in limit $Z_3=0$ 4=19393
- bound states, relativistic field theory 4=815
- bound states and renormalization consts. in non-relativistic theory 4=5950
- Brandeis summer institute 1962 lectures 4=9040
- broken $SU(3) \otimes SU(3) \otimes SU(3) \otimes SU(3)$ symmetry classification 4=24987
- broken symmetry and resonance poles 4=15006
- bubble chamber experiments at C.E.R.N., recent 4=16841
- cascade decay 4=27769
- charge conservation and photon mass 4=21735
- charge, fractional upper limit for prod. by high energy protons 4=19457-8
- charged vector bosons, effect on photon propagator 4=21732
- classification of baryons and leptons, rel. to SU_4 4=15009
- classification, quadruplet scheme 4=19378
- commutation relations of creation and annihilation operators 4=9071
- composite conditions and bootstraps 4=5929
- composite, local field operator construction 4=9049
- composite, Salams approach appl. to Zachariasen model 4=5928
- Compton scatt. on spin $\frac{1}{2}$ systems, semi-phenomenological description 4=11958
- conference, Cargèse lectures (1962) 4=5001
- conformal theory in C_6 , parity non-conservation, fusion and divergencies 4=9062
- conventional field theory, as Regge poles 4=9146-7
- and cosmology, interior gravitational const. 4=13868
- coupled to zero-rest-mass particles, rel. to mass operator 4=9064
- coupling consts., $KNA, \pi\Lambda\Sigma$ and NAK 4=9241
- coupling consts. shifts rel. to broken symm. 4=5946
- coupling of internal and space-time symmetries 4=27758
- couplings, two-field, for differences of mass only 4=822
- covariant free-particle eqns., canonical form 4=809
- covariant polarization operator for $s=1$ 4=19397
- CP, CPT invariance, outlines 4=1
- creation of matter and particle indistinguishability 4=23826
- $d_{3/2}$ octet, assignment of 1520 MeV Y_0^* 4=21754
- decay calcs. 4=21758
- decay, non leptonic, $|\Delta I| = \frac{1}{2}$ rule 4=19419
- decay, nonleptonic, on eightfold way model 4=15015
- decay and prod. rel. 4=15100
- decay theory, book from lecture notes 4=21771
- decay, 3 body leptonic, of pseudoscalar octet 4=15012
- decays, Khuri-Treiman represent., rel. to perturb. theory 4=5944
- Dirac equation function invariance properties 4=9079
- Dirac monopole, cosmic-ray prod., upper limit 4=9150
- Dirac particle, Coulomb scatt., Johnson-Deck form 4=21791
- Dirac, position operators, 0 or $\hbar/2$ spin, in mag. field 4=14046
- doublet symmetry, at high energies, validity 4=3290
- dynamic properties, review 4=5927
- dynamical symm. group generalized from Dirac eqn. 4=24976
- e.m. properties in unitary symm. theory 4=15001
- eightfold way, strong interaction symm. breakdown 4=16801
- eightfold way, unitary triplets 4=16800
- eightfold way, virtual bound state of $N-N$ system 4=21766
- equivalence with composite particles, in N/D method 4=27754

Elementary particles—contd

- equivalence and group-theoretical classifications 4=9065
- extended model, table of four-unit compounds 4=807
- fermion mass and γ_5 -invariance 4=811
- fermion systems, 2-particle Green's function 4=2591
- fermion ultrarelativistic, helicity in circular accelerator 4=11903
- fermions, Bethe-Salpeter eqn., exact solns. 4=9091
- fermions, complete spin tests, using R invariance 4=11902
- fermions, massless, interacting with massive vector particle, in one space-one time dim. 4=21727
- fermions, self-masses, Lehmann's spectral representation 4=9092
- fermions, symmetry multiplets, and strong interaction symmetry 4=30169
- Feynmann diagrams, leading Landau curves 4=3313
- fib theory, photoelectric test 4=23825
- five-tail, physical region, rel. to Lorentz-invariant variables 4=5978
- form factors and baryon-vector meson octet coupling F/D ratio 4=11908
- "fourth" baryon Sakata model, modified B-L symmetry 4=21761-2
- G_2 multiplets, e. m. and decay props. 4=9074
- G_2 symm. model, triple product of septets, reduction 4=19379
- G_2 symmetry "forbidden" decays 4=19380

 H plasma, from total Helmholtz free energy 4=8683
 K, corresponding states behaviour 4=24460
 Na, corresponding states behaviour 4=24460
 Ne, T-s, pv-p diagrams 4=11231
 Rb, corresponding states behaviour 4=24460

gases

- binary mixtures, effect on molar heats 4=14210
 Boltzmann, second quantum mech. virial coeff. 4=27212
 cluster integrals, calc. up to seven points, various models 4=11112
 compressed, statistical calc. 4=5233
 critical region, Mayer's hypoth., Percus - Yevick analysis 4=18237
 Fermi-Dirac, approx. 4=27112
 at high temperatures and densities 4=11230
 hydrogen plasma, exptl. verification by shock tube 4=18795
 isochores, rectilinear, thermodynamic implications of existence 4=24257
 isocondensed state theory, isotherm math. structure 4=14461
 isocondensed states, calc. methods 4=229
 methane, 0°-150°C 4=21175
 p-v relation for sudden compression 4=18238
 para H₂ 4=11228
 plasma 4=18793
 plasma, validity of Debye - Huckel theory 4=24633
 polar, second virial coeffs., and off-centre dipole model 4=27211
 quantum cell model 4=29663
 shock wave, behind front, third-order eqn. 4=11289
 steam, at high temps. and press. 4=21174
 steam, high temp. and press., involving viscosity 4=11236
 tetrahedral mols., second virial coeffs., rel. to octupole moment 4=20031
 theory, allowing for intermol. forces, CO₂, CO₂ confirmation 4=11229
 virial coeffs., first six, diagram expressions 4=24130
 virial coeffs., hard sphere, signs 4=18090
 virial coeff., second, in binary mixtures, use of Morse potential 4=3932
 virial coeff., second, corr. calc. from Wigner distrib. function 4=14069
 virial coeff. second of hexadecapolar gases 4=24260
 virial coeff., second meas. ~ -140°C, Burnett method accuracy 4=11233
 virial coeffs. second and third intermolec. potential functions 4=24259
 virial coeff. third for Kihara, exp-6 and square-well potentials 4=24258
 virial series, reformulation 4=27210
 weak, long-range positive potential 4=27209
 Yang - Lee distribution of roots for 2 cases of repulsive potentials 4=8090
 CHF₃, dielectric virial coeff. calc. 4=27211
 CO, theory confirmation 4=11229
 CO-hydrocarbon mixtures, virial coeffs. meas. 4=24261
 CO₂, 0°-1000°C, up to 100 bar pressure 4=5231
 CO₂, second virial coefficient 4=24262
 CO₂, theory confirmation 4=11229
 CS₂, second virial coeffs., 22-150°C 4=29666
 H, and Morse potential parameters 4=29665
 H, P-V-T, 100-10⁷°K, 10⁻¹⁰-10³ g cm⁻³, dissociation and ionization 4=14206

Equations of state — contd

gases — contd

- H₂⁺, virial theorem, basis function, different number choice 4=11232
 He, 0-150°C and density 9-180 Amagat units 4=2722
 He³, p-ρ, 1.7-4.2°K, from pulsed n.m.r. 4=16152
 K, third virial coeff. 4=230
 NH₃, high temps., calc. 4=5232
 Ne, P-ρ-T, 27-300°K, up to 200 atm, from corresp. states 4=14205
 O₂, -200° to 3000°C and up to 500 bar 4=2723
 Xe, 0°-150°C 4=21175

liquids

- n-alkane, mixtures, V^E, H^E, G^E dependence on composition 4=24199
 binary systems with eutectic diagram, density 4=11177
 binary systems with eutectic diagrams, u.s. velocity and compress. 4=11178
 compressed, statistical calc. 4=5233
 elastico-viscous, allowing for var. with shear rate 4=8176
 ethyl alcohol, Rao's rule test 4=8207
 fused salts, rigid-sphere eqn. 4=29621
 isotactic polypropylene in α-chloronaphthalene, virial coeff., second 4=24181
 isotactic polypropylene in tetralin, virial coeff., second 4=24181
 nitrocellulose in acetone, virial coeff., second 4=24181
 oligomer and polymer liquids 4=11186
 overheated liquid, near stability boundary 4=21105
 para H₂ 4=11228
 parahydrogen, second and third virial coeffs. calc. 4=14146
 polymer molecules, linear, virial coeff., second 4=24181
 polymer solns., second virial coeff. 4=27159
 polystyrene in toluene, virial coeff., second 4=24181
 simple classical, modifications of Percus - Yevick eqn. 4=16093
 virial coefficients 4=21088
 virial coeffs., first six, diagram expressions 4=24130
 water, giving max. density temp. from compressibility 4=8178
 water, p-T, anomalies near 4, 150°C 4=5158

solids

- high-pressure, using statistical model with exchange correl. 4=6677
 metals from binding theory 4=6681
 polymers, simple derivation 4=6682
 CO₂-N₂, solid-vapour equilib. system 4=11425
 Cu 4=25848
 Cu, Grüneisen eqn. in pressure, density, int. energy 4=25849
 Fe-Si, P-V, high pressure, var. with Si content 4=7497
 LiF, successive refinement method, calc. 4=28367
 NaCl, lattice energy, 50-800 kbar 4=9805
 NaF, Verma-Dayal theory 4=25851
 Ne, pressure-volume reln. at 0°K calc. 4=20150
 Xe, rel. to Grüneisen const. and thermodynamic data, expt. 4=15436

Erbium

- antiferromagnetism, press. var. 4=20567
 crystal line compounds, electronic structure, Er⁺³ in cubic potentials and exchange field, calc. 4=6696
 ion, Er³⁺, e.s.r. in CaF₂, five spectra 4=4403
 ions, Er²⁺, in MeF₂ (Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
 magnetization, high field effects, and internal fields 4=13109
 resistance, elec., 4-lead meas. system 4=30612
 Er in molten Er trichloride, elec. cond. irregularity 4=8220
 Er³⁺ e.s.r. in MgO, 20°K 4=13316
 Er³⁺, spectrum in LaCl₃, orbital calc. 4=4259
 Er³⁺, spin-lattice relax. in CdF₂, BaF₂, CaF₂, 1, 6°-25°K 4=30732
 Er³⁺ in CaF₂ matrix, absorpt. and emission spectra 4=20454
 Er³⁺ in LaF₃, energy levels and coherent emission 4=28684
 Er³⁺ in Y₂O₃, single crystals, absorption and fluorescence spectra 4=22856

Erbium compounds

- Er ethylsulphate, vibr. energy levels and spec. heat 4=1364
 ErFeO₃, perovskite-type, Mössbauer effect 4=3961

SUBJECT INDEX

Erbium compounds — contd

Er_2O_3 , Mössbauer effect, Ho^{186} oxide source, h.f.s.,
20°K 4=12589

ErP , magnetic props. 4=28773

Errors

See Measurement, errors; Random processes

Europium

antiferromagnetism, below 91°K, neutron diffr.
exam. 4=13265

atom, $K\alpha$ X-rays from radioactive sources 4=9665

compression behaviour 4=17767

crystal cubic field splitting of Eu^{2+} in BaO 4=20152

fusion curve to 70 kbar meas. 4=29022

ion, Eu^{2+} , e. s. r. in CdSe and CdTe , rel. to covalent
bonding 4=10321

ions, Eu^{2+} , e. s. r. in cubic SrTiO_3 , temp. and press.
depend. 4=10325

magnetic structure, temp. depend., neutron diffr.
meas. 4=22983

metal, nuclear polarization and hyperfine field 4=28318

resistance, elec., 4-lead meas. system 4=30612

specific heat meas., 0.4°–4°K, in phase mixture 4=12642

spectrum, Eu^{3+} , in silicate glasses, and $\text{Eu}-\text{O}$
interaction 4=10174

EuII , levels and g-sum rule 4=12367

Eu^{2+} in alkali halide crystals, absorpt. and fluorescence
spectra 4=15611

Eu^{2+} in CaF_2 , electron–nuclear double resonance 4=26449

Eu^{2+} , e.p.r., in alkali earth fluorides, cubic field
splitting 4=1875

Eu^{2+} , e. s. r. in CaO , SrO , exchange interactions 4=13315

Eu^{3+} e.s.r. in SrTiO_3 4=26441

Eu^{3+} in Y_2O_3 , luminescence and laser action 4=7181

Europium compounds

chelates, luminescence, enhancement by insulating
sheath 4=24224

ferromagnetic, exchange interactions 4=13176

Eu benzoylacetate, spectroscopic props., fluorescence
kinetics and optical pumping 4=20082-3

Eu benzoylacetate, laser characteristics 4=27698

Eu benzoylacetate chelate, eightfold dodecahedral
arrangement of O round Eu ion 4=29150

Eu benzoylacetate chelates, ligand field spectra 4=28753

Eu dibenzoylmethide chelate, eightfold dodecahedral
arrangement of O round Eu ion 4=29150

Eu β -diketone chelate in PMMA, absorption and fluoresc.
spectra 4=22906

Eu chelates, fluorescence rise and decay times 4=26256

Eu chelates, luminescence, non-exponential decay
mechanism 4=20500

Eu chelate solution, laser action 4=19281

Eu ferrite garnet, magneto-optical props. of
 Eu^{3+} 4=17563

Eu ferrite garnets, Faraday effect, freq. depend. 4=1745

Eu hexafluoroacetylacetate, luminescence 4=20085

Eu(III) aqua ions absorption bands, with sulphate
ligands 4=2685

Eu(III) dipyrindyl complexes, fluorescence
spectrum 4=20501

Eu(III) naphthalate, fluorescence spectrum 4=20501

Eu(III) phthalate, fluorescence spectrum 4=20501

EuCl_3 , solvated with H_2O and D_2O , luminescence
decay times 4=30698

$\text{EuCl}_3 \cdot 6\text{H}_2\text{O}$, absorption and dispersion, $^7\text{Fo}-$
 ^7Do 4=7130

EuCO_3 , crystal structure 4=26647

EuFe garnet, crystal mag. field, from Eu^{151} 21.7 keV
Mössbauer effect 4=20172

EuFe garnet, ferromag. relax. 4=10306

EuFe garnet, hyperfine interact. of Eu^{151} 4=1343

EuFe garnet, mag. field and elec. field gradient at Eu
nucleus 4=25805

EuFe garnet, magnetostriiction, anomalous 4=1845

EuFe garnet, spectrum, $^7\text{F}_0 \rightarrow ^7\text{F}_4$ line fine struct. 4=13054

$\text{Eu}_{0.5}\text{Gd}_{1.5}\text{Se}_{2.0}$, paramagnetism 4=13181

EuO , ferromag. and paramag. resonance, 23.8 and 27.5 Gc/s,
1.5° to 300°K 4=26358

EuO , ferromag., spin wave theory 4=7254

Eu_2O_3 , paramag. susceptibility, 300–1300°K 4=15624

Eu_2O_3 , semiconductivity, var. with sintering
temp. 4=4147

EuS , application of spin-wave theory 4=10269

Europium compounds — contd

EuS , ferromag., spin wave theory 4=7254

EuS ferromagnetic exchange interactions, heat capacity,
and Heisenberg ferromag. 4=13178

EuS , ferromagnetic, low temp., spin waves, Heisenberg
model test 4=13177

EuS , nuclear polarization and hyperfine field 4=28318

EuS , specific heat meas. 10°–35°K 4=6742

EuSO_4 , crystal structure 4=26647

EuTe , antiferromagnetic structure 4=15660

EuTe , ferromagnetism induced by high fields 4=17649

Eu_2SiO_4 , a new transparent ferromagnet 4=4356

Eu^{3+} in ketone solns., fluorescence 4=188

Evaporation

See also Vaporization

alkaline earth chalcogenides, by electron bombard. 4=24423

from capillaries of porous body, moisture, specific heat,
thermodynamic calc. 4=11414

drops covered by adsorbing layer 4=18493

evaporator, electron bombardment for high m. p.
materials 4=27712

filament, a. c. heated, model 4=5434

films, thin, evaporator 4=21358

flash evaporation, III–V semiconductors, miscibility
meas. 4=15726

glassy materials, under supersonic flow 4=27371

graphite, evaporation coeff. 4=16300

ice, and crystal etching, –15°C 4=23316

liquid–vapour system, suddenly pressurized 4=11411

low-volatility substances, obs. by mass spectro-
meter 4=16564

mechanism for several vapour species 4=371

melting point discontinuity for mol. crystals 4=18497

metal foils in vacuum furnace 4=5472

metals, film vacuum preparation 4=17839

molecules on growing particle, theory 4=8520

oxide cathodes, rate in stationary low-pressure Hg
discharges 4=8802

perovskite materials, epitaxial vapour deposition 4=4562

rate meas. in vacuum, apparatus 4=17854

rate rel. to thermodynamic activity 4=17851

semiconducting materials, in various gases, rate
eqns. 4=29808

semireflecting surfaces prep., reflectivity meas. 4=2813

solutions, thermodynamics, irreversible 4=21357

thermal, techniques 4=10607

vacuum evap. of films, thickness meas. during
process 4=4662

in vacuum, measurement, microbalance 4=29805

vapour–liq. equil., pair correl. function and eqn. of state
for long-range forces 4=8507

vapour–liq. equil., van der Waals theory, crit. region 4=8506

water droplets, electric charge loss 4=5539

water, enhancement by foreign mols. adsorbed on surface,
expt. 4=8517

whisker growth, theory 4=29063

Al_2O_3 , melting point discontinuity 4=18497

Ba from Rh single crystal 4=30892

CdS single cryst., mechanism 4=27388-9

Ge films, vacuum-evap. prep. 4=2123

Hg whiskers, kinetics 4=4559

H_2O droplets, freely suspended and charged, in
humid air 4=2891

H_2O , through mixed monolayers of long-chain n-paraffinic
alcohols 4=8518

InSb films, techniques 4=20808

K whiskers, kinetics 4=4559

Mg , effect of sorbed gases 4=14466

Pt in air, 19.81°C, accommodation coeff. rel. to
pressure 4=27218

SiO on GaAs diodes, electroluminescent radiation
change 4=7205

Ti , in getter-ion pumps 4=18270

W filament, heated, rel. to heat dissipation rate in
gas 4=372

Zn , effect of sorbed gases 4=14466

Zn , thermally evaporated cleavage surfaces 4=29179

Examination of materials

See Electron diffraction examination of materials;

Electron microscope examination of materials;

Neutron diffraction examination of materials; X-ray
examination of materials

Exchanges, chemical

- See also Isotope exchanges
 acetylacetone, keto-enol system, proton exchange, study using nucl. mag. multiple resonance 4=13702
 alanine, irradi. single crystals, free radical p-d exchange reaction, e.s.r. study 4=23043
 in aqueous media, proton mobility and electron exchange 4=15833
 chlorophyll pigments and deuterium cpds, H-D 4=26751
 ethanol, proton-transfer ion-molecule reactions 4=23623
 halide nuclei, with Hg(II) in aq. soln. 4=2142
 methanol, proton-transfer ion-molecule reactions 4=23623
 rates in systems with several nonequivalent sites, by nucl. mag. multiple resonance 4=13702
 Cl + HCl and Cl + DCl reaction rates, D-isotope effect, and tunnel effect models 4=29206
 Co²⁺ in methanol, rate of methanol exchange of solvation sphere 4=18219
 H + H₂ reaction, collision dynamics 4=17857
 H₃⁺ and saturated hydrocarbons, proton-transfer reactions 4=23622
 H₄ and H₂ formation, by adsorbed molecule exchange 4=9740
 Ni²⁺ in methanol, rate of methanol exchange of solvation sphere 4=18219
 O¹⁸ with O₂, NO, NO₂, mass spectrometry obs. 4=23645

Excitation

- See Atoms, excitation; Molecules, excitation; Nuclear excitation; Vibrations, excitation

Explosions

Ferrites—contd

- use of ferrite memory cores with multiwire spark chambers 4=16775
- in waveguide, e.m. slow-wave structure for backward-wave applications 4=16658
- waveguide, isolators, mm wave, zero field, ferrimag. reson. 4=11804
- AgLa ferrite, mag. props., prep., crystal structure 4=1844
- Ba ferrite, Bloch wall dynamics 4=30706
- Ba ferrite, different dynamic magnetization mechanisms 4=28832
- Ba ferrite, domain structure, effect of mag. field 4=26333
- Ba ferrite, elec. cond. anisotropy, 20° to 180°C 4=10041
- Ba ferrite, mag. domain structure and form of Bloch walls 4=10288
- Ba ferrite powders, sat. magnetization rel. to grinding and annealing 4=26334
- Ba, ferromag. domain pattern on cryst. faces 4=4375
- Ba and Pb, elec. cond., anisotropy and mech. 4=6953
- Ba—K Fe garnet, magnetic exchange anisotropy 4=13230
- BaCo₂Fe_{18-2x}O₂₇ (0 < x < 1.5), single crystals, magnetocrystalline anisotropy 4=26336
- BaO.6Fe₂O₃, Mössbauer effect 4=12591
- (Ba_{0.75}Sr_{0.25})O.6Fe₂O₃, comparison with BaO.6Fe₂O₃ 4=28831
- Ba—Sr—Pb, mag. props. 4=23016
- BaZn, hexagonal, new series 4=13581
- BaZnFe garnet, ferrimagnetic reson. linewidth reduction 4=13289
- Ca ferrite containing Gd³⁺, ferromagnetic resonance and crystal structure 4=26359
- Co ferrite coating on elongated Fe—Co particles 4=17655
- Co mag. anisotropy 4=1842
- CoFe garnet, magnetostrictive displacement of O ions 4=13246
- CoFe garnet, magnetostrictive displacement of O ions 4=13246
- CoFe₂O₄ films, optical Faraday effect 4=22879
- Co_{0.9}Fe_{2.1}O₄, mag. anisotropy, mag. annealing effect, meas. 4=28837
- Co_{1-2x}Fe_{2-2x}O₄, anisotropy composition var. and electron diffusion 4=23017
- Cr ferrite, Grüneisen's const., X-ray meas. 4=1407
- Cu—Zn, magnetic susceptibility rel. to hydrostatic pressure 4=7288
- CuO. Fe₂O₃, magnetic props., temp. var. 4=28838
- Dy Fe garnet, magnetostriction, temp. var. 4=13232
- Dy Fe garnet, Mössbauer effect, liquid air temps. 4=12581
- Dy Gd Fe garnet, magnetostriction, temp. var. 4=13232
- EuFe garnet, hyperfine interact. of Eu¹⁵¹ 4=1343
- EuFe garnet, magnetostriction, anomalous 4=1845
- EuFe garnet, spectrum, ⁷F₀ → ⁷F₄ line fine struct. 4=13054
- Fu garnets, Faraday effect, freq. depend. 4=1745
- Fe—Co, magnetostriction consts., X-ray meas. 4=26337
- FeMn_{2-3x}O₄, conduction process, peculiarities near Curie pt. for x = 1.6-2.0 4=17491
- Fe—Y—La garnets 4=26679
- Ga garnet, magnetization, in pulsed fields 4=4373
- LaFe_{1-x}X₂O₃, mag. and struct. props. 4=30720
- Li ferrite, ferromag. reson. line width 4=26360
- Li ferrite, neutron irradi., effect on structure and mag. props. 4=13242
- Li ferrite—chromite, mag. hysteresis and elec. cond., 20° C to Curie pt. 4=4383
- LiFe garnet, magnetoacoustic parametric reson. 4=12630
- LiFe₂O₆, sublattice magnetization, by neutron diffraction 4=28840
- Li—Ni ferrite for memory core 4=24794
- Lu iron garnet, ferrimag. resonance, heat treatment 4=20573
- Mg ferrite, nonstoichiometric, cation distrib., erratum 4=17810
- Mg ferrite—aluminates, saturation mag. rel. to parameters 4=7287
- Mg—Fe ferrite containing Co, hysteresis loops associated with Perminvar 4=20556
- Mg—Fe, magnetic prop. changes on heat treatment ordering 4=13241
- Mg—Fe, uniaxial induced mag. anisotropy 4=10292
- MgMn ferrite, domain structure 4=13238
- Mg—Mn ferrite, ferromag. reson. line width 4=26360

Ferrites—contd

- Mg—Mn, improvement by Ti⁴⁺—Ni²⁺ ion group substit. 4=20555
- Mg—Mn, permeability, var. with freq. and field strength 4=10290
- Mn ferrite, elec. resistivity and thermoelectric power, anomaly near Curie pt. 4=17492
- Mn ferrite, neutron irradi., effect on structure and mag. props. 4=13242
- Mn ferrite, paramag. susceptibility temp. depend. 4=26272
- Mn—ferrite, u.s. propag., at high mag. field 4=20202
- Mn, semicond. 4=12905
- Mn—Cu, hysteresis, rect. loop develop. at low temps. 4=28841
- Mn—Fe, rectangular hysteresis by heat treatment 4=17662
- MnFe₂O₄, n.m.r. of Mn⁵⁵ 4=28901
- Mn—Mg, with rect. hysteresis loop, rel. to composn. 4=15654
- MnFe₂O₄, ferrimag. reson., temp. var. 4=13290
- Mn_{0.6}Fe_{2.4}O₄, relaxation, wall stabilization, var. cation vacancy conc. 4=10291
- Mn_xFe_{1-x}O₄, conductivity, electrical, low temps. 4=1548
- Mn_xFe_{3-x}O₄, ferrimagnetic reson., 1.5-300°K 4=13293
- Mn_xFe_{3-x}O₄, (x > 1, disaccommodation spectrum, role of Fe²⁺ and cation vacancies 4=13237
- Mn—Mg ferrite, rectangular, switching rel. to grain size 4=28843
- Mn—Mg type, mag. props. rel. to Sc₂O₃ addition 4=13239
- Mn and Ni ferrites, with excess Fe₂O₃ and small Co²⁺ ion additions, properties 4=1843
- Mn and Ni ferrites, spiral struct., containing Co, magnetocryst. anisotropy and mag. orientation 4=10287
- Mn—Zn ferrite, Curie temp. rel. to press. 4=26340
- Mn—Zn, grain growth rel. to powder parameters 4=20782
- Mn—Zn, high permeability on reduction in vacuo. 4=23021
- Ni, elec. cond., effect of Mn content 4=6982
- Ni ferrite, elastic modulus and internal damping rel. to mag. fld. and frequency 4=23186
- Ni—ferrite, mag. moment and anisotropy const. rel. to temp. 4=15655
- Ni, ferromag. resonance linewidths 4=7305
- Ni-, induced mag. anisotropy, rel. to composition 4=14243
- Ni, initial permeability, var. only with wall dimensions, and not density or porosity 4=4386
- Ni, n.m.r. of Fe⁵⁷, pulsed method meas. 4=4426
- NiAlGa spinels, microwave power handling capacity improvements 4=13245
- Ni—Co, Fe-deficient, induced anisotropy at low temp. 4=20558
- Ni—Co—Mn, (E1), magnetomechanical coupling, rel. to polarizing field 4=7289
- Ni_{1-x}Co_xFe₂O₄, microwave props., high power 4=13244
- Ni_{0.98-x}Co_x (Mn_{0.02}Fe_{1.98}), x = 0.027, magnetostriction 4=4370
- Ni_{0.2}Cu_{0.8}Fe_{1.9}Mn_{0.02}O₄ d.c. resistivity and Seebeck voltage 4=26055
- Ni_{0.75}Fe_{2.25}Fe₂O₄, energy anisotropy, temp. and mag. field depend. 4=26338
- Ni—Fe ferrites, mag. fld. induced anisotropy rel. to Ni conc. 4=13250
- NiFe, magnetocrystalline anisotropy, 4.2-300°K 4=13247
- NiFe garnet, fine grain, ferrimagnetic reson., dielectric loss, microwave meas. 4=13299
- NiFe garnet, magnetostrictive displacement of O ions 4=13246
- NiFeO₄—Fe₂O₃—MnFe₂O₄, square-loop props. 4=20557
- NiFe₂O₄ films, optical Faraday effect 4=22879
- NiFe₂O₄—ZnFe₂O₄ systems, mag. structure meas. 4=7291
- NiMg ferrite, susceptibility, anomalous, near Suhl threshold 4=28844
- NiMn, thermoelec., 100-500°C 4=30670
- Ni_{0.253}Mn_{0.027}Co_{0.027}Fe₂O₄, mechanical resonance frequency rel. to mag. polarization and temp. 4=7290
- NiZn ferrite, disaccommodation by small amplitude 4=28845
- Ni—Zn ferrites, permeability in polarizing fields 4=26341
- NiZn ferrite, production and applications 4=28846
- Ni—Zn, n.m.r. of Fe⁵⁷, pulsed method meas. 4=4426
- Ni—Zn, 4B and 4E, hollow cylinders, magnetization, effect of twisting moment 4=13249

Ferrites — contd

- Ni—Zn—Co, complex permeability, freq. var., heat treatment effects 4=4385
 Ni—Zn, Co-substituted, diffusion after-effect 4=4377
 Ni—Zn, Co-substituted, magnetic props. 4=13248
 Ni—Zn—Cr, with CoO, mag. anisotropy, -196° to 300°C 4=30722
 Ni—Zn—Cr, magnetic props rel. to thermal and thermomagnetic treatment 4=10293
 Pb ferrite, susceptibility, temp. -depend., above Curie pt. 4=15656
 PbBa ferrite, mag. props., composition depend. 4=13235
 Pb—K Fe garnet, magnetic exchange anisotropy 4=13230
 PbSr ferrite, mag. props., composition depend. 4=13235
 Sr ferrite, susceptibility, temp. -depend., above Curie pt. 4=15656
 Sr—K Fe garnet, magnetic exchange anisotropy 4=13230
 TbFe garnet, magnetostriction, anomalous 4=1845
 $Tl_{1/2}La_{1/2}Fe_{12}O_{19}$, prep., crystal structure and mag. props. 4=7292
 YFe garnet, ferrimagnetic parallel pumping spin-wave anisotropy 4=13294
 YFe garnet, ferromag. resonance freqn. shift 4=7308
 YFe garnet, initial permeability, var. density, 5 kc/s—7.5 Gc/s 4=13252
 YFe garnet, low-temp. specific heat, spin wave contrib. 4=9855
 YFe garnet, magnetic anisotropy, induced, with Si and Mn additions 4=13254
 YFe garnet, magnetoelastic r.f. pulses, freq. —time—mag. field characteristics 4=12632
 YFe garnet, mag. meas. and mol. field model 4=20559
 YFe garnet, mag. reson., strong dispersion, field var. 4=26363
 YFe garnet, rare earth doped, ferrimag. reson. 4=13295
 YFe garnet, rare earth substituted, flux reversal speed 4=13253
 YFe garnet, spin-wave resonance curve width rel. to Dy impurity 4=10305
 YFe garnet spin wave transitory growth on microwave pumping 4=13227
 YFe garnet, spin waves excited by parallel pumping 4=10285
 YFe garnet, substitution lattice site effects 4=26343
 YFe garnet, Sb^{5+} substituted for Fe^{3+} , mag. moment var., Curie temp., and crystallography 4=26344
 YFe garnet, Yb doped, ferrimag. reson., relax. theories 4=13296
 Y—LaFe garnet, mag. props. and ferromag. resonance 4=1347
 YbGa garnet, mag. suscept. and cryst. field levels 4=1846
 ZnBaFe garnet, magneto acoustic effects, parametric, 1.3 Gc/s 4=13255
 (ZnY) $(Ba, Zn, Fe_{12}O_{19})$, linewidths and high-power props. of single-crystal spheres 4=7316

Ferroelectric devices

See Dielectric devices.

Ferroelectric materials

- antiferroelectrics, superstructural cells and domains, formation rules 4=10116
 borazates 4=22773
 ceramic, blast pressure gauge elements 4=21009
 ceramics, polarization-reversal processes, statistical investig. 4=10105
 crystal polar—polar and polar—neutral structures 4=10493
 (glycine) $_2$ BeF $_4$, n. m. r. of F^{19} , and BeF $_4$ ion hindered rot. 4=10115
 glycine sulphate, domain boundaries, X-ray topography 4=25943
 guanidine Al sulphate hexahydrate, optical harmonic generation 4=10206
 gyroelectric and hypogyroelec. crystals, definition 4=13012
 H-bonded anharmonic vibrators, quantum state determ. 4=10107
 ice 4=22775
 ionic crystals, rel. to Mössbauer effect 4=28622
 lead zirconate titanate open tubes, in underwater transducers, performance 4=14274
 mechanical nonlinearity of polycrystals 4=1909
 methyl ammonium alum, low temp. phase, crystal structure, atomic 4=13616

Ferroelectric materials — contd

- perovskite substances containing Fe magnetic ordering, neutron-diffraction study 4=10239
 perovskite-type, domain walls, thermodynamic theory 4=10106
 use as pyroelectric detectors for sub-mm wave-lengths 4=16287
 Rochelle salt, coercive field dispersion and jerky wall motion, low-freqs. 4=26126
 Rochelle salt, crystal structure, effect of ionizing radiations 4=7050
 Rochelle salt, domain structure 4=30652
 Rochelle salt, hysteresis and relaxation times, rel. to ambient humidity 4=10113
 Rochelle salt, internal friction, ampl. depend. 4=15716
 Rochelle salt, meas. at 10 Gc/s rel. to temp. 4=26127
 thiourea, props. under high press. 4=26130
 thermal conductivity, at low temp. 4=17381
 triglycine sulphate, coercive field frequency dependence 4=4217
 triglycine sulphate, domain structure 4=20426
 tri-glycine sulphate, ferroelec. statistical theory 4=17523
 triglycine sulphate, γ -induced changes 4=15561
 triglycine sulphate, h.f., meas. and heuristic model 4=4218
 triglycine sulphate, hysteresis loop, effect of X-rays 4=26131
 triglycine sulphate, locked and reversible polarization sectors 4=15767
 triglycine sulphate, non-linearity, var. with r.f., temp. 4=7052
 triglycine sulphate, optical harmonic generation 4=10206
 triglycine sulphate, piezoelec. and electrostrict. consts. 4=7051
 triglycine sulphate, polarization reversal, antiparallel domains 4=15560
 triglycine sulphate, u.s. relax. near Curie temp. 4=6728
 triglycinefluoroberyllate, impedance during switching in pulsed field 4=1665
 triglycine sulphate, internal friction, ampl. depend. 4=15716
 tri-hydrogen lithium selenite single crystals, dislocations 4=12750
 $Ba_2Bi_4Ti_5O_{19}$ and substituted cpds, ferroelec. phase transitions 4=23255
 $BaNb_2O_6$ — $PbNb_2O_6$, mechanic. props. 4=1909
 $(Ba_{1-x}R_{2x/3})Nb_2O_6$, rel. to R is Y, Sm, or La 4=20417
 $BaTiO_3$, α domain crystal, direct obs. of 180° walls 4=7046
 $BaTiO_3$, antiparallel 180° domains obs. 4=20418
 $BaTiO_3$, antiparallel 180° domains, visibility origin 4=7048
 $BaTiO_3$, breakdown field, rel. to temp. 4=10111
 $BaTiO_3$ ceramics, domain statistical distribution 4=7045
 $BaTiO_3$, coercive field, thickness depend. 4=12969
 $BaTiO_3$, crystals by floating-zone technique, props. 4=23330
 $BaTiO_3$, dielectric const. from X-ray diffr. profile 4=17520
 $BaTiO_3$, dielec. permeability from oscill. spectra, 45°—140°C 4=30677
 $BaTiO_3$ disc and cylinder electromechanical const. design charts 4=16181
 $BaTiO_3$, domain growth at fields 2–450 kV/cm 4=4213
 $BaTiO_3$, domain structure 4=26694
 $BaTiO_3$, domain structure, electron optical study 4=29096
 $BaTiO_3$, domain struct. stabilization 4=30651
 $BaTiO_3$, domain wall movement and hysteresis in a.c. fields 4=28626
 $BaTiO_3$, domain wall movements 4=7041
 $BaTiO_3$, domain walls, thermodynamic theory 4=10106
 $BaTiO_3$, e. s. r. of Fe^{2+} , near Curie point, var. with d.c. bias field, and phase transformation 4=10324
 $BaTiO_3$, effect of added Co 4=30807
 $BaTiO_3$, i. r. dispersion, coupled optical-phonon mode model 4=28670
 $BaTiO_3$, mechanic props. 4=1909
 $BaTiO_3$, modified, press. effect on dielec. and piezoelec. props. 4=26117
 $BaTiO_3$, neutron reduction of dielec. const. 4=26119
 $BaTiO_3$, new domain random nucleation, 20 kV/cm 4=28628
 $BaTiO_3$ open tubes, in underwater transducers, performance 4=14274
 $BaTiO_3$, optical harmonic generation meas. 4=20448

Ferroelectric materials—contd

- BaTiO₃, ordered phase occurrence 4=17519
 BaTiO₃, powder, elec. cond. rel. to Känzig exhaustion layer 4=12970
 BaTiO₃, relaxation properties, rel. to Sb impurity 4=10110
 BaTiO₃, relaxational oscillations 4=26116
 BaTiO₃, resistivity anomaly 4=15558
 BaTiO₃, single crystals, domain configurations and polarization reversal processes 4=28628
 BaTiO₃, surface layer thickness rel. to permittivity 4=10109
 BaTiO₃-type crystals, thick plates, macroscopic theory 4=1661
 BaTiO₃, 180° switching, effect of surface layers 4=12968
 BaTiO₃-CaTiO₃, mechanic. props. 4=1909
 BaTiO₃-CaTiO₃-CoCO₃, mechanic. props. 4=1909
 BaTiO₃-MgSnO₃, dispersions with Ag or Ni, props. 4=4211
 BaTiO₃, O deficient, conductivity, elec., positive temp. var. anomaly near Curie point 4=7047
 Ba(Ti_{0.99}Sn_{0.01})O₃, permittivity, temp., pressure var. 4=1662
 Ba(Ti, Zr, Sn)O₃, permittivity dispersion, 10⁸-10¹⁰ c/s 4=30650
 Ba(Ti, Zr, Sn)O₃ solid solutions, permittivity var. with Zr, Sn conc. 4=7044
 BiFeO₃, and crystal struct. and mag. props., temp. var., Neel point 4=22774
 BiFeO₃-LaFeO₃, change to antiferroelectric, simultaneous with mag. change 4=4214
 BiFeO₃-SrSnO₃, 4 solutions, Curie temp., from Mössbauer effect, temp. var. 4=4212
 Bi₄Ti₃O₁₂ single crystals, production and props. 4=23335
 CH₃NH₂Al(SO₄)₂·12H₂O specific heat, anomalies, rel. to ferroelec. phase transition points 4=22497
 CS(NH₂)₂, and specific heat, anomalous, at trans-form 4=1399
 KD₂PO₄, D intrabond motion theory review 4=10112
 KD₂PO₄, h.f., meas. and transition order 4=4218
 K₄Fe(CN)₆·3H₂O, discharging-charging, recurrent, transients 4=22776
 K₄Fe(CN)₆·3H₂O and specific heat, anomalous, at trans-form 4=1399
 KH₂PO₄, d. c. electro-optic effect meas. 4=10185
 KH₂PO₄, discharging-charging, recurrent transients 4=22776
 KH₂PO₄, domain pattern, optical behaviour 4=28700
 KH₂PO₄-type, collective H-bond motion calc. 4=7043
 KNO₃, switching behaviour, applied field and temp. depend. 4=26124
 KTaO₃, i. r. dispersion, coupled optical-phonon mode model 4=28670
 Li hydrazinium sulphate, and struct. 4=20420
 Li trihydrogen selenite, crystal dislocation obs. by etching 4=9969
 LiH₂(SeO₃)₂, vibrational spectra, by Raman scattering method 4=1717
 Li(N₂H₅)SO₄, crystal structure 4=23453-4
 Li(N₂H₅)SO₄, n.m.r. study 4=1902
 NaH₃(SeO₃)₂, specific heat anomalies, rel. to ferroelec. phase transition points 4=22497
 NaH₃(SeO₃)₂, vibrational spectra, by Raman scattering method 4=1717
 NaNbO₃, metastable, props. 4=20421
 NaNO₂, anomalies above Curie temp. 4=17521
 NaNO₂, electric field gradient, 20°-200°C 4=1863
 NaNO₂, paraelec., X-ray analysis of ferroelec. domains 4=26128
 NaNO₂, phase transform., to anti, from specific heat temp. var. 4=17769
 NaNO₃, polarization switching time, slow 4=1664
 NaNO₃, single-domain state prod. 4=28631
 NaNO₃, single crystals, effect of γ-irrad. 4=22777
 NaNO₃, switching currents, var. with applied voltage rate 4=10114
 (NH₄)HSO₄, polarization reversal characts., -20° to -100°C 4=30649
 NH₄HSO₄, vibrational spectra, by Raman scattering method 4=1717
 (NH₄)_xK_{1-x}NO₃ mixed crystal and KNO₃, phase III 4=1859
 (NH₄)₂SO₄, role of H bond 4=7107
 (NH₄)₂SO₄, vibrational spectra, by Raman scattering method 4=1717

Ferroelectric materials—contd

- (NH₄)₄Tl₃(H₂AsO₄)₇, "Atlas" 4=1660
 NiFe₂O₄ ferrite film, rel. to structure 4=23586
 Pb perovskite cpds, n.m.r. chemical shifts 4=20616
 Pb titanate zirconate ceramics, h. f. dielec. const. 4=4215
 Pb zirconate titanate ceramic resonators, small-signal parameters rel. to polarization state 4=28629
 Pb zirconate-titanate, modified by Bi ferrite, Curie points 4=7049
 PbNb(Zr, Ti, Sn)O₃ ferroelectric-antiferroelectric phase changes 4=4216
 Pb_{0.99}Sr_{0.01}(Zr_{0.95}Ti_{0.05})O₃-Ta₂O₅ mechanic. props. 4=1909
 PbZrO₃, modified with Ti⁴⁺ and Sn⁴⁺, ferroelectric to anti-ferroelectric transitions 4=26123
 Pb(ZrTi)O₃, modified, press. effect on dielec. and piezoelec. props. 4=26117
 RbHSO₄, vibrational spectra, by Raman scattering method 4=1717
 Rb_{1-x}K_xNO₃ mixed crystal, ferroelec. phase study 4=26125
 RbNO₃, antiferroelec. 4=22779
 SbSI, crystal struct., atomic 4=20757
 SbSI, piezoelec. constants 4=12973
 SbSI substituted, wholly or partly, Sb by Bi or As, S by Se or O and I by Br or Cd, paraelectric transitions 4=26114
 SrO.nSrTiO₃ series 4=23487
 SrTiO₃, dielec. const., field depend. 15°-80°K 4=28632
 SrTiO₃, dielec. permeability from oscill. spectra, 45°-140°C 4=30677
 SrTiO₃, i. r. dispersion, coupled optical-phonon mode model 4=28670
 SrTiO₃, lattice dynamics and phase transitions 4=17348
 YMnO₃, antiferromagnetism 4=13258
 YMnO₃, and antiferromag. 4=28860
 YbMnO₃, and antiferromag. 4=28860

Ferroelectric phenomena

- and antiferromagnetic, simultaneously 4=13258
 ceramics, permittivity under d.c. bias fields 4=26112
 classification w.r.t. Curie-Weiss consts. 4=4208
 crystals, symmetry change during phase transitions 4=20747
 domain boundaries, electron transmission micr., dynamical theory 4=13635
 domain wall movements, pyroelec. study 4=7041
 domain walls, shape, temp. depend. 4=4345
 ferro- and antiferroelectric coupling 4=10104
 gyroelectric and hypogyroelec. crystals, definition 4=13012
 irregular, classification, tensorial and gyroelec. props. 4=17517
 model, including antiferroelectricity 4=1642
 origin, role of Jahn-Teller effects 4=17519
 paraelectric phase transition, symmetries 4=29001
 perovskite structure, optical modes, sublattice couplings 4=7042
 phase transitions in antiferroelectrics, dynamics of rigid lattices 4=22778
 polarization reversal 4=10108
 polarization under short-time elec. pulses 4=20415
 regular, tensorial props., ferroelec. transitions 4=12967
 review 4=26113
 space symmetry of dipole structures 4=20746
 temperature autostabilization effect, rel. to frequency 4=17518
 theories, Muller and Devonshire, review 4=4209
 transition of dielectric const. temp. var. to Curie-Weiss law 4=4210
 AO₃-type crystals, stability of ferro- and antiferroelec. ion arrays 4=20416
 BaTiO₃ domains, X-ray diffraction obs. 4=26115
 BaTiO₃ single crystals, domain configurations and polarization reversal processes 4=28628
 Pb zirconate titanate ceramic resonators, small-signal parameters rel. to polarization state 4=28629
- Ferromagnetic relaxation**
 Green function theory, due to dipolar interaction 4=20570
 interstellar dust particles, orientation effects 4=2386
 linewidths, review 4=23034
 Permalloy films, u.h.f. absorpt. in l.f. field 4=1827
 review 4=8091
 EuFe garnet 4=10306
 Ni films, phonon generation at 9 kMc/s, 4°K 4=23035

SUBJECT INDEX

Ferromagnetic resonance

- See also Ferrimagnetic resona. 2.
 anisotropic ferromagnetic, resonance curve width 4=1856
 crystals, anisotropic, magnetization orientation depend. 4=17672
 curve width determ. 4=10305
 degenerate spin-wave coupling, var. shapes 4=13281
 dispersion of spin waves in films, deviation from square law 4=17673
 e.m.waves in metal under ferromagnetic reson. conditions 4=26357
 for electromagnetic mm wave appls., narrow 4=19187
 exchange interactions, second-order, meas. by s.w.r. 4=7303
 ferrite samples, effects of mutual coupling 4=3101
 ferrites, absorption, basic formulae generalization 4=1858
 ferrites, absorption var. with orientation 4=15665
 ferrites, Co-substituted, mag. annealing effect 4=1859
 ferrites, line width caused by exchange interact. fluctuations 4=26360
 ferrites, quantum statistical theory 4=10303
 ferromagnetic metals, spin-wave resonance 4=28521
 films, dipole-narrowed inhomog. broadened lines 4=13284
 films, linewidth 4=13278
 films, rel. to temp. 4=13285
 films, spectrum, effect of nonuniform mag. 4=13279
 films, standing modes, k^2 field spacing var. 4=13280
 films, surface spin pinning, volume inhomogeneity models 4=13277
 high-power, review 4=28862
 line width, effect of spin waves and mag. interaction 4=13276
 line width and shape rel. to h. f. susceptibility 4=30727
 linewidths, review 4=23034
 magnetoelastic waves, parallel pumping 4=26296
 metals, intrinsic linewidth 4=13287
 Permalloy films, at low bias field 4=10307
 Permalloy films, meas. of anisotropy dispersion 4=1817
 Permalloy films, standing modes, k^2 field spacing var. 4=13280
 permalloy films, standing spin-waves, at r.f. and u.h.f. 4=20575
 Permalloy films, 36 kMc/s 4=7307
 quantum-statistical theory, at high-temperatures 4=10304
 reversal of flux, diffusion aftereffect in rotation process 4=20569
 spectrometer, microwave, recording, permeability 4=763
 spectrometer, 100-1000 Mc/s YIG, Ga and Al substituted, effects of anisotropy 4=7302
 spin wave attenuation due to S-electrons 4=20572
 spin-wave instability plotting, automatic 4=20571
 spin-wave modes in films 4=13282
 spin-wave resonance, line widths 4=15664
 spin waves, low-temperature behaviour 4=26356
 study of relax. by amplitude modulation of microwave field 4=10302
 Ca ferrite containing Gd^{3+} 4=26359
 Co films, standing modes, k^2 field spacing var. 4=13280
 Co^{59} n.m.r. in stacking faults and twins 4=1860
 EuO , 23.8 and 27.5 Gc/s, 1.5° to $300^\circ K$ 4=26358
 Fe films, standing modes, k^2 field spacing var. 4=13280
 αFe_3O_4 and $NiFe_2$ type, line shapes calc. 4=13283
 Gd 4=13286
 Li ferrite, line width caused by exchange interact. fluctuations 4=26360
 Li ferrite, order-disorder effects 4=28863
 $Mg(Al, Fe)_2O_4$, defect effect 4=30728
 Mg-Mn ferrite, line width caused by exchange interact. fluctuations 4=26360
 MnBi films, oriented, temp. var. 4=13045
 $Mn_{0.6}Fe_{2.4}O_4$, relaxation, wall stabilization, var. cation vacancy conc. 4=10291
 Ni ferrite, linewidths rel. to preparation 4=7305
 Ni films, spin-wave resonance, 15-300°K 4=7306
 Ni-Fe films, dynamic behaviour rel. to frequ. 4=10266
 Ni-Fe films, line width and anisotropy dispersion 4=13288
 Ni-Fe films, multidomain 4=20546
 Y-LaFe garnet system 4=1847
 YFe garnet, frequ. shift with excited magnons 4=7308
 YFe garnet, magnetostatic nodes, instability 4=26361
 YFe garnet, order-disorder effects 4=28863

Ferromagnetic resonance—contd

- YFe garnet, In^{3+} substitution effects below $100^\circ K$ 4=26362
 $Y_3Fe_{8-x}Co_{x/2}Ge_{x/2}O_{12}$ 4=28864
 YIG, use in sensitive magnetometers 4=21615
Ferromagnetism
 See also Antiferromagnetism; Ferromagnetic relaxation;
 Ferromagnetic resonance; Magnetic properties, ferromagnetic; Magnetization process; Magnetization state.
 after-effect anomaly, near anisotropy compensation point 4=13206
 alloy with non-mag. subs., miscibility gaps and Curie point, calc. 4=13466
 alloys, elec. resistivity, theory 4=26001
 alloys, f. c. c., of 3d transition metals, low-temp. specific heat 4=12639
 alloys, ordering, with f. c. c. lattice 4=15634
 anhysteretic, of ellipsoid, independence of formation temp. 4=26290
 anisotropic h.f.s. interactions and domain-wall enhanced n.m.r. 4=22457
 anisotropy effects 4=20536
 anisotropy energy of cubic crystals 4=26287
 anisotropy, theory review 4=22970
 anisotropy, uniaxial and cubic, Green's functions 4=20528
 anomalous suscept. due to paramag. impurities, theory 4=10255
 and antiferromagnetism, coexistence in subst., magnetization processes, theory 4=7242-3
 arbitrary spin, intensity equation 4=22956
 band model possibilities 4=13134
 Barkhausen noise, power spectrum of 4=4347
 Bloch wall energy distribution 4=7237
 bond theory, quantitative aspects 4=15633
 Brown's equations 4=13142
 cluster theory, using self-consistent correlation 4=13128
 coercivity, anisotropy, and anisotropy dispersion in films rel. to structure, review 4=22976
 coupling between two layers separated by conducting layer 4=17657
 critical concentration rel. to range of interaction 4=13140
 crystal electron band theory, spin waves 4=13131
 crystal field effects and cooperative state, theory 4=1796
 crystal point imperfections, rad. prod., mag. obs. 4=25920
 crystals, symmetry change during phase transitions 4=20747
 cubic, anisotropic, spin-wave theory, case of arbitrary S 4=28796
 cubic, anisotropy, connected diagram expansions, calc. 4=28796
 cubic lattices, Bloch walls study 4=26286
 Curie temp. in cubic lattices with next-nearest neighbour interaction 4=28786
 diagonalization of free spin-waves Hamiltonian for arbitrary mag. structure 4=20523
 dielectric, interaction of mag. and elastic waves 4=20209
 dielectrics, low-temp. expansion effect 4=22963
 directional order rel. to point defects 4=1456
 domain structure at an inclusion in thin film 4=22977
 domain-wall motion, diffusion-damped 4=4343
 domain-wall motion, quantum theory 4=15635
 domain walls, 90° spin structure 4=22968
 eddy currents and complex permeab., domain theory 4=7235
 effect on atomic diffusion 4=12806
 elastic consts., var. with field above saturation 4=13362
 electric conduction by spin-wave scatt. and umklapp 4=1553
 electron-phonon interaction influence 4=12678
 electron scattering from spin imperfections, and Hall effect 4=6917
 exchange interactions, second-order, from spin wave resonance 4=7303
 exchange stiffness of a magnon, prop. to T^2 4=20527
 Fermi fluid, total spin 4=18101
 Fermi fluid, quantum field theory 4=20531
 fermions, response functions theory 4=27105
 ferroacoustic resonance, transverse 4=9846
 films, disperse anisotropy, mag. switching 4=7246
 films, e.m. parameters meas. using eddy currents 4=1764
 films, magnetization ripple, exact theory 4=22974
 films, props. rel. to dispersion of anisotropy direction 4=17640
 films, spin wave theory, rel. to quasimomentum quantization 4=7249

Ferromagnetism—contd

- free radicals, solid, Wurster's blue perchlorate, from e.s.r. 4=6657
- Green function theory of Heisenberg ferromag. 4=22957
- Green's functions, corrections 4=1812
- Green's function theory, interpolation approach 4=1811
- Hall coeff. rel. to "magnetic resistance" 4=12846
- Hall effect, theory 4=10021
- Heisenberg, correl. function, longitudinal, and specific heat 4=13127
- Heisenberg, decay of thermodynamical fluctuations of magnetization in const. coupling approx. 4=13150
- Heisenberg ferromagnet, bound states 4=7232
- Heisenberg ferromagnet, theory 4=13132
- Heisenberg, layer structures, Curie temps. 4=10254
- Heisenberg, longitudinal correl. function 4=26281
- Heisenberg magnet; impurity states and energy spectrum 4=15631
- Heisenberg model, linear, partition function 4=26280
- Heisenberg model, log partition function expansion 4=15630
- Heisenberg model, one-dimensional system 4=20522
- Heisenberg, Monte-Carlo method 4=13133
- Heisenberg, spin-wave impurity levels 4=10256
- Heisenberg, spin wave—spin wave scatt. 4=22958
- Heisenberg, thermodynamics near Curie point 4=20529
- Heisenberg, two-spin-wave bound state 4=1809
- Heisenberg, unification of theories 4=28785
- high temp., Heisenberg spin- $\frac{1}{2}$ model, expansions calc. 4=28788
- high temp. Heisenberg suscept., including second neighbour interacts. 4=28789
- impurities, localized magnetic states, interact. 4=12740
- induction formation rate, demag. effect meas. 4=13154
- insulators, phonon scattering, critical 4=26284
- internal field for periodic magnetization 4=19153
- internal fields, hyperfine, review 4=12563
- Ising and Heisenberg, randomly dilute, theory 4=26278
- Ising lattice, two-dimensional non-planar, crit. behaviour 4=22955
- Ising model of cooperative phenomena, reformulation 4=28782
- Ising model, spin correl. on triangular lattice 4=26276
- Ising model suscept. on hypercubic lattices 4=9806
- Ising, one-dim. model, phase transition statistics 4=8087
- Ising spins, random, cluster expansion theory 4=20511
- itinerant-electron model, spin-wave interaction 4=28790
- linear chains with anisotropic coupling 4=26279
- low-temp. spin $\frac{1}{2}$, T^3 term. 4=1814
- low-temperature expansions 4=22962
- magnetic ions in insulators, book 4=20521
- magnetic structure, from mag. and nuclear elastic scattering neutron spectra 4=13578
- magnetization, low-temp., effect of impurities 4=26291
- magnetization process eqns. 4=30710
- magnetization reversal, weak ferromagnets 4=13147
- magnetization, saturation approach law 4=13148
- magnetization spontaneous intensity rel. to temp., at low temp. 4=15637
- magneto-optical effects, microscopic theory 4=22839
- magnetostatic self-energy in quantum mechanical treatment of domain structures 4=4342
- magnetostriction theory rel. to high-temp. max. 4=4348
- magnetostriction, theory review 4=22970
- magnon annihil. operators in Bloch-Dyson theory 4=22961
- magnons, long-wavelength, renormalization 4=1810
- materials, soft and permanent, radiation effects review 4=17643
- meas., mag. curves, commutation ballistic method, transient effects 4=5738
- metals, elec. cond., s-d or s-f exchange model 4=12843
- metals, elec. resist., umklapp electron-magnon processes 4=22666
- metals, electron band model, calc. 4=28791
- metals, transition, theory, s-d exchange model 4=12668
- metals with degenerate bands, spin wave theory 4=7230
- micromagnetics 4=13142
- micromagnetics, book 4=7206
- Nernst-Ettinghausen effect, theory 4=25996

Ferromagnetism—contd

- neutron scatt. in ferromag. with imperfections, spin wave theory 4=10252
- neutron scatt. by polarized nuclei, interference 4=20532
- neutron scatt., polarized, spin-orbit interference 4=13143
- neutron scatt., polarization techniques and analysis 4=9205
- neutron scattering at Curie point, effect of mag. field 4=7240
- neutron scattering, magnetic, from addition centre in crystal, theory 4=25927
- neutron scattering, magnetic, theory 4=28793
- neutron study of mag. saturation, depolarization 4=15639
- nuclear ferromag. state at low temps., stability 4=7234
- nuclear magnetic resonance effects 4=13331
- nucleation field lowering model 4=28795
- Oguchi transformation limitations 4=13129
- optical and i.r. props., review 4=22815
- orthoferrites, second-order suscept. terms 4=23012
- Overhauser effect in magnet, theory 4=17691
- permanent magnets as fine particle and powder materials 4=15642
- permeability and hysteresis, diffusion and relaxation effect 4=13153
- powders, saturation of specimens, investigation 4=7250
- Preisack model for ferromagnetic with high permeability and variable internal coupling 4=20533
- quantum theory, historical review 4=22954
- quantum theory using double-time Green's functions 4=4335
- random var., and Bloch wall thermal motion 4=20538
- sheets, eddy-current losses, theory 4=13163
- simple cubic lattice, BPW method 4=20524
- single domain particles, thermal agitation 4=26297
- space symmetry of dipole structures 4=20746
- specific heat, mag. field var., approx. calc. 4=12646
- spin arrangements and crystal structure, book 4=7206
- spin ordering, effect of conduction electron exchange 4=17631
- spin-phonon interaction rel. to Debye-Waller factor 4=10496
- spin polarization of conduction electrons 4=15443
- spin states, minimum energy, calc. by cluster method 4=26277
- spin-wave amplification by beam of charged particles 4=28792
- spin wave energy distrib., Bogolyubov-Tyablikov theory 4=22960
- spin wave excit. by parallel pumping 4=10285
- spin wave generation in d.c. mag. field, coupling length calc. 4=7228
- spin-wave generation in non uniform mag. fields, magnetoelastic interaction 4=26282
- spin-wave generation in nonuniform mag. fields, theory 4=7231
- spin wave interaction, rel. to energy and lifetime at low temp. 4=15638
- spin wave interactions between itinerant electrons 4=26283
- spin wave-lattice vibs. interaction 4=1363
- spin wave and other modes, review 4=22959
- spin-wave pinning mechanism in ferromag. films, theory 4=17638
- spin wave scatt. by mag. defects, calc. 4=7229
- spin wave scatt. by mag. defects, theory 4=20148
- spin wave scatt. by mag. defects, theory 4=20526
- spin-wave spectra, effect of thin-film boundary conditions 4=7304
- spin-wave spectra, Heitjér-London approach, cluster expansion 4=17629
- spin wave theory 4=4337
- spin-wave theory, experimental test 4=20525
- spin waves, bound states in Heisenberg model 4=15629
- spin waves, coherent amplification 4=4338
- spin waves, effects of point imperfections 4=4336
- spin waves, interconversion with e.m. waves, theory 4=7227
- spin waves, localized modes calc. for cubic structure 4=10253
- spin waves, review 4=7226
- spin waves, scatt. by imperfections, boundary and point 4=1813
- spins square net, equivalence of Bethe and Kramers-Wannier approach 4=11104

Ferromagnetism—contd

- spiral struct., phonon—magnon branch interaction 4=28784
- spiral struct., theory 4=28783-4
- statistical mechanics, phase transitions, interreln. of theories 4=8098
- superconducting alloys with paramag. impurities 4=20530
- superconducting ferromagnetics, inhomogeneous, electron pairing theory 4=16334
- superconductivity theory 4=2915
- superparamagnetic particles, thermal energy effects 4=17637
- surface domain structure, anisotropic 4=26285
- surface, existence possibility, with antiferromag. interior 4=22937
- switching by avalanche of domain nucleations 4=26299
- teaching demonstration of Curie temp., by e.m. induction 4=7225
- theory, at low temps., series expansions 4=17630
- time-dependent correl. in solvable model 4=13135
- transition metals and alloys, electronic structure, exchange integral, sign 4=13224
- transition metals, rel. to atomic electron correl. 4=1839
- transition to antiferromagnetic layer, spin configuration calc. 4=13125
- transition metals, effect of electron correl. 4=17660
- transitions, second-order, point-group symmetry, possible changes 4=4340
- in two magnetic sublattices, arbitrary spin in sites, magnetization 4=26283
- uniaxial material, anisotropy energy, phenomenological operator form 4=4339
- viscosity effects, Italian I.E.N.G.F. work 4=22953
- Weiss theory, Ising model, functional integrals appl. 4=14062

Fibre optics

See Optical systems.

Fibres

- adsorption and desorption of moisture by hydroscopic fibres, convection 4=23597
- energy storage, flexural and tensile 4=15681
- glass, mechanical strength, and heat treatment and etching 4=23154
- glass, metal coating methods 4=23547
- lasers with Nd glass, sun pumped 4=27701
- pole figure, computer programme, from X-ray diffr. 4=13666
- polycaprolactam fibre films, stress effects on long range order 4=23618
- polycaprolactam films, stress effects on long range order 4=23618
- polymer, skin layers, microscopy, interference 4=13700
- quartz, internal friction at low freq., expt. 4=13447
- silica, tensile strength 4=13444
- X-ray diffraction examination, review 4=13623
- X-ray diffraction, rel. to fibre lengths 4=15811
- X-ray scatt. exam. of polymer swelling 4=17746
- X-ray scatt., glass, low angles, due to internal reflection and surface scatt. 4=29200
- yarns, fine, stress—strain curve, determ. by machine 4=15688

Field theory, classical

See also Electromagnetism; Gravitation; Relativity.

- book 4=8037
- Boscrichean atomism 4=29513
- causality, general concepts, rel. to quantum field theory 4=3271
- compensating fields, constructive theory 4=18035
- Coulomb, one region, two-centre expansion 4=29515
- cylindrical bodies logarithmic potential, analytic continuation 4=24020
- Dirichlet and Neumann's problem solns. in 3 dimensions 4=18032
- e.m. absorption props. of accelerating detectors 4=16648
- electromagnetic self-energy problem 4=21631
- electrovac universes, exact non-static cylindrically symmetric 4=14017
- gravitation, singular points distrib. for one class of two-dimensional bodies 4=16017
- local similarity of perturbed fields 4=19
- potential of elliptic operators, heat conduction appl. 4=27348

Field theory, classical — contd

- potential field continuation, using Lagrange 4=27025
- potential theory, 2 dimensional, integral representations 4=11028
- radiation coherence theory with two-point correl. functions 4=16193
- relativistic, commutators on characteristic surfaces 4=21032
- scalar field, singularities, structure 4=24021
- scale transformation rel. to conservation laws 4=8024
- singular coupling 4=29514
- wave-field problems, use of conformal mapping, survey 4=5018

Field theory, quantum

See also Dispersion relations; Fundamental particles; Physics fundamentals; Quantum theory.

- algebraic formulation 4=24960
- algebraic model and multidimensional real spinor, fundamental formulae 4=27736
- analytic regularization rel. to divergences 4=14996
- asymptotic, separable potential model 4=24962
- axiomatic, multiplicative symmetries 4=16787
- baryon R-invariance in SU(3) octet model, rel. to magnetic moments 4=21763
- basic theorems, rel. to S-matrix singularity structure 4=25036
- Bethe—Salpeter eqn., double dispersion approach 4=824
- Bethe—Salpeter eqn., general-mass case, invariant solns. 4=823
- Bethe—Salpeter eqn. for 2 fermions, ang. variable separation 4=11901
- Bethe—Salpeter eqn., rel. to multiperipheral scatt. 4=11938
- Bethe—Salpeter eqn., singular, ladder approx. 4=9098
- Bethe—Salpeter structure, rel. to non-relativistic three-nucleon problem 4=15049
- bilocal, rel. to nucleon resonant states 4=15048
- book 4=21720
- Bose field, free, assoc. lattice of von Neumann algebras 4=3275
- boson field, transverse and longitudinal states, dibaric particles 4=3295
- boson fields, inequivalent representations 4=9083
- boson fields, invariance under point transforms. of field variables 4=5937
- bosons with impenetrable cores, eqns. of motion and general operator formalism 4=16807
- bound states and analytic properties in angular momentum 4=21743
- bound states rel. to renormalization props. 4=19352
- Brandeis summer institute 1962 lectures 4=9040
- broken symmetry does not imply zero mass particles 4=16802
- broken symmetry, rel. to zero-mass bosons 4=9084
- C, P, T-transformations in curved space-time, and neutrino theory 4=9166
- canonical anticommutation relns., cyclic represent. 4=21054
- canonical variables represent. as limit of infinite space volume, BCS model 4=27739
- causality, general concepts, rel. to classical field theory 4=3271
- causality and locality in Uklmann's method 4=2548
- charged particle, with angular momentum 4=803

intermediate boson, search in e - p scatt. 4=11976

intermediate boson theory, rel. to CP non-invariance 4=16815

intermediate bosons, interactions, rel. to unitary symm. 4=25009

intermediate bosons, pair prodn. by neutrinos, cross-section 4=5959

intermediate bosons, pair prodn. by photons, cross-section 4=5958

intermediate bosons, production, polarization effects 4=9085

intermediate vector boson theory, Bethe-Salpeter eqn. for triplet amplitude 4=11919

intermediate-vector-boson theory, singlet ampl. renormalization 4=27791

intermediate vector bosons, effect on mag. moment of leptons, by ξ -limiting formalism 4=16809

intermediate vector mesons and unitary symmetry theory 4=15017

isotopic spin structures 4=11911

isotopic symmetry, broken 4=25002

K decay, form factors and branching ratios 4=21929

Field theory, quantum—contd**interactions, weak—contd**

Lee intermediate boson theory, rel. to $K_{\mu 3}$ decay 4=9272

lepton charges, effect on μ -decay 4=19421

lepton currents, neutral, e.m. induction 4=819

lepton-lepton, mediated by charged vector mesons, Bethe-Salpeter eqn. 4=9107

leptonic, high-order, by charged intermediate boson 4=11914

leptonic interactions, new baryon-lepton symmetry principle 4=5960

leptonic isodoublet weak interact. 4=3296

leptonic, peratization, iteration procedure 4=21772

lepton interactions rel. to SU_3 symm. 4=24991

leptons, e. m. props., weak-interact. corrections 4=5961

leptons, interpret. as space-time curvature 4=19405

leptons, mag. moments, corrections 4=21760

leptons, review 4=25000

leptons, scheme 4=27777

mediated by vector bosons, universality 4=21775

mesons, charged spin-1, with arb. anomalous mag. moment, covariant electrodynamics 4=25006

model, based on intermed. boson and Sakata theories 4=11916

model with four intermediate bosons 4=3320

model rel. to strong octet gauge bosons and weak intermediate bosons 4=19418

neutrino capture rate and μ^+ to e^+ production, with nucleon form factors as parameters 4=11970

neutrino form factor, e.m. 4=15042

non-leptonic, Hamiltonian transformation properties 4=15014

νN , meson production, at high energies 4=19420

nuclear axial-vector form factor 4=6033

nucleon-lepton, peratization method 4=11921

octet model generalisation 4=5930

parity non-conservation and conformal theory in C_6 4=9062

partially conserved currents hypothesis 4=5954

peratization, Feinberg-Pais, alternative formulation 4=19416

peratization and singular potentials superposn. 4=25007

quark model, non-leptonic 4=25005

Regge poles, asymptotic behaviour of cross-sections 4=3343

Regge poles for reactions of 2 spin- $\frac{1}{2}$ fermions and 2 spin- $\frac{1}{2}$ bosons 4=25004

rel. to magnetic monopole, nonsymmetry prop. 4=27753

ρ -trajectory, dispersion relns. theory 4=12050

selection rules tests using neutrinos 4=16817

SU_3 , breaking and currents 4=21773

semiweak, universal theory 4=19422

Σ decay, form factors 4=21950

six-fermion, high-energy detection 4=9106

strange particle leptonic decays, $\Delta Q = \Delta S$ rule validity 4=12070

strangeness-changing, rel. to six-body Fermi couplings 4=828

strangeness non-conserving leptonic interactions 4=27792

strong currents angle of rotation and SU_3 struct. 4=15016

structure 4=11910

symmetry approaches, consistency in symm. limit 4=27790

test of universal theory for μ -meson capture in He^3 4=3437

T invariance violation, rel. to nucleon elec. dipole moment 4=25075

T-L invariant, SU_3 transformation props. 4=27794

three-particle unitarity integral, prod. amplitude 4=25026

three-vertex-type, of intermed. bosons, with 6-spinor interaction 4=11916

two-body decays, dispersion approach 4=21756

uncertainties, outstanding 4=25001

unitary spin selection rules 4=25003

unitary symmetric spurion formalism 4=30177

unitary symmetry and $\Sigma_3 A_1$ non-leptonic decay 4=19415

unitary symmetry V-A theory 4=19414

universal Cabibbo Lagrangian 4=19419

universal coupling scheme 4=21757

universal Fermi interaction, from μ capture 4=15082

unsubtracted dispersion relns. rel. to μ - μ decay 4=11913

V-A, electron energy spectrum, calc. 4=25011

Field theory, quantum—contd
interactions, weak—contd

- V—A test by $\Lambda \rightarrow p^+ + e^- + \bar{\nu}$, polarised Λ from $K^0 \Lambda^0$ prod. in H 4=27902
 vector bosons in theory of mass doublets 4=9081
 vector current conservation, e.m. violation 4=15013
 vector current conservation, κ breaking symmetry 4=21774
 vector mesons, relativistic limit 4=11898
 W bosons, zero-mass leptonic decays, radiative corrections 4=5938
 W intermediate vector meson, decay to 3π and 4π 4=9087

- W-meson decays and axial vector current in unitary symm. 4=27765
 W-meson, rel. to origin of large mass 4=21886
 weak currents, unitary symm. classification 4=11912
 weak magnetism effects 4=9103
 Yang-Mills field e.m. interactions 4=19375

meson field

- See also Mesons; Nuclear forces.
 analytic continuation in complex ang. momentum, rel. to integral eqns. 4=11931
 angular momentum eigenfunctions, definition 4=27773
 Bethe-Salpeter eqn., singular solns., in plane of angular momentum 4=11900
 bootstrapping, N/D eqns., calc. 4=27772
 canonical structure rel. to asympt. reduction methods 4=19412
 electrodynamics, "gauge" soln. 4=27749
 five pion isospin wave-functions 4=15084
 geometrization, Rainich, of scalar field 4=5919
 ground state energy of two-nucleon system 4=846
 inelastic processes due to various moving poles 4=9143
 lepton-lepton interaction, Bethe-Salpeter eqn. 4=9107
 meson-nucleon coupling consts. calc. 4=19538
 meson octets, scalar and axial-vector 4=30163
 $N-\bar{N}$ potential, suppression of 3π annihil. 4=6036
 neutral vector meson Green's functions 4=24972
 nuclear potential, nonlocal theory, bignon and tripion contrib. 4=9095
 nucleon form factors, vector-meson fit 4=3396
 octet-octet mixing 4=19583
 $\omega-\phi$ mixing, rel. to unitary-symm. mass formula 4=820
 $\pi-N$ coupling constant, upper limit 4=21895
 pseudoscalar couplings, D to F ratio similarity to baryon mag. moments 4=27783
 pseudoscalar meson in Nambu's model 4=30154
 $\pi-\pi$ scattering amplitude and singularities in complex l-plane, 4=30262
 scalar, general relativity field eqns, approx. solutions 4=2544
 six-dimensional theory 4=3319
 spin-zero meson exchange criterion, Treiman-Yang test 4=24999
 strong coupling, rel. to nucleon struct. and spectra 4=25074
 in strong interaction model 4=27798
 vector fields, Stueckelberg formalism generalization 4=30144
 vector mesons, charged, Lee-Yang theory 4=816
 vector mesons, electrodynamics, perturb. theory 4=30149
 vector particle mass in gauge invariant field 4=24969
 Yukawa potential, single Kuri series convergence 4=11945
 Yukawa, with finite number of boson modes, convergence 4=11925
 zero-mass pseudoscalar meson, consequences 4=24989

quantization

- See also Quantum theory, quantization.
 bilocal theory, rel. to nucleon and its resonance states 4=15048
 elementary particles, spinning, quantum numbers 4=19400
 gravitation, formulation interacting with integer spin fields 4=2531
 gravitons, review 4=8035
 Green's functions for a vector field 4=797
 harmonic oscillator, transition probabilities using S-matrix theory 4=11086
 "hypercharge centre" number in eightfold way 4=16800
 internal symmetries, origin in bootstrap mechanism 4=3288
 linearized sodium field 4=27735

Field theory, quantum — contd
quantization — contd

- nonlinear oscillator, Segal's procedure 4=19345
 nonlinear, rel. to scale transformation 4=21722
 operators, normal form, fundamental theorems 4=14995
 "quark" particles, "hidden" number 4=19390
 Regge-pole character of photon, electron and μ -meson possible tests 4=862
 relativistic, without Lagrange formalism 4=11877
 second quantization, exchange operators 4=30142
 unstable particles, free, without charge or spin 4=19356
 weak hypercharge quantum number 4=19422

Films

- absorption spectra, polarimetric determ., Bartell-Churchill relations simplification 4=313
 adsorbed on gas-liquid interface, surface tension balance 4=5149
 chlorophyll, monomolec., fluorescence quenching and energy transfer 4=30456
 colloids, monomolecular, method for compression at oil-water interface 4=7717
 dielectric, refr. index meas. method 4=16207
 fluid, rigid boundary problem in thermal convect. 4=21338
 force meas. on thin films using torsion micro-balance 4=8009
 monomolecular, on water, spectrometer for optical absorption obs. 4=5384
 organic monolayers, insoluble, for seawater capillary wavedamping 4=5145
 polymer, deformation and tensile strength rel. to drawing and temp. 4=7734
 polyvinyl alcohol, gel formation 4=10664
 surface forces in films between solid media 4=7692
 thickness, meas. by high-precision pointing interferometer 4=24384
 Ag, light, absorption, refractive index, 4000-14 000 Å 4=7093
 Al, light, absorption, refractive index, 4000-14 000 Å 4=7093
 Ar, spectra, absorpt., and Xe impurity states, 10°K 4=1721
 Ga, optical coefficients in i.r. and u.v., meas 4=28686
 In, optical coefficients in i.r. and u.v., meas. 4=28686

liquid

- See also Adsorbed layers; Contact angle; Helium, liquid; Superfluidity; Surface tension.
 birefr., by Na-montmorillonite expanded in NaCl soln. 4=16091
 chlorophyll a, monolayers on aqueous surfaces, fluorescence 4=20078
 existence possibility and repulsion between 2 ionic layers 4=24228
 flow, viscous, on vertical surface 4=11161
 hygrometer, from dielectric const. 4=16131
 laminar flow, across wall, stability 4=2640
 monolayers, counter-ion penetration 4=18186
 n-paraffinic alcohols, long-chain, mixed monolayers, ideal surface behaviour 4=8518
 oil on metal, thickness meas. by Faraday effect ellipsometer 4=16087
 oil, thickness meas. interference, for elasto-hydrodynamic lubrication 4=16086
 scattering light, surface corrugation correlation effects 4=16251
 scattering, light, due to thermal corrugations, interfacial correlation effects 4=11171
 soap, scattering, light, due to thermal corrugations, interfacial correlation effects 4=11171
 surface forces, review 4=2648
 water, optical props. in i.r. 4=23722
 He, theory 4=21372
 He II film, moving, thickness, theory 4=21382
 He II, linear flow velocity meas., 1.5° to 2.13°K 4=2910
 He II, vortices 4=21371

solid

- See also Magnetic films; Optical films; Thickness measurement.
 adhesion to oxide substrates, scratch test meas. 4=30761
 adsorbed, n.m.r. investigation, review 4=2127
 adsorption of H₂ by solidified gases, ~11°K 4=13686
 albumin, semiconduction 4=22731

SUBJECT INDEX

Films—contd

solid—contd

- alkali antimonide, electron diffraction camera for photo electric films 4=15785
 alkali-halide, mol. adsorpt., i.r. study of bonding 4=29198
 alloy, prep., comp. and optical props. 4=23569
 anodic oxide films on Al alloys, microanalysis 4=7711
 anodic oxide films, P-doped on Si for device fabrication 4=26713
 anodic oxide, sealing on Al, X-ray exam. 4=17841
 anthracene, structure, spectra, absorpt. and luminescence 4=10610
 backscattering of kV electrons 4=16535
 beta-ray source and U convertor prep. by sputtering 4=12171
 computer memory, mag. and dielectric layers, optical readout 4=11757
 conference at Marseille on optics (1963) 4=20438
 conference, structure, elec. and mag. props. 4=17838
 contact-resistance probe, automated 4=8587
 cryotrons, review 4=21431
 cryotrons, static characteristics 4=415
 crystal epitaxial layers, structure 4=4664
 crystal interstitials, ion beam prod. at low energies 4=6833
 crystal orientation meas. by electron diffr. 4=23409
 deposition system, high stability automatic vac. 4=29181
 dielectric capacitors, anodic oxide, review 4=2934
 dielectric film on electrodes, effect on elec. breakdown 4=29641
 dielectric impurity on metal, detection 4=23562
 dielectric, strata optical props., simulator study 4=21306
 2,2'-dihydroxy-1,1' naphthaldiazine (lumogen), optical props. 4=13099
 discrete electron energy spectrum, effects 4=1428
 dislocation loop interaction with free surface 4=25933
 dyes, absorpt. spectra osc. strengths, luminescence quenching and spectra overlap 4=11200
 e.m. oscillations, one side transparent 4=3136
 effects of deposition conditions on growth, struct., and props., review 4=4661
 elec. conduction, metal and dielec., mechanisms review 4=22661
 electrolytic, structure of final stage of growth 4=30879
 electron beam studies apparatus, 6°-77°K 4=27400
 electron beam transmission, energy characteristics 4=4032
 electron emission, structural effects in tunnel cathodes 4=11692
 electrons, cond., scatt. parameter and mean free path 4=22521
 evaporation techniques, thermal 4=10607
 evaporator for use in electron microscope 4=4640
 ferromagnetic domain structure at an inclusion 4=22977
 ferromagnetic, Döring's spin wave treatment extension 4=4350
 ferromagnetic, e.m. parameters meas. using eddy currents 4=17642
 ferromagnetic, lamellary structure, comments 4=23564
 ferromagnetic, lattice structure, Zietek method 4=4344
 ferromagnetics, n.m.r. study 4=1893
 ferromagnetic, 180° domain walls, effective mass 4=1828
 ferromagnetic, props. rel. to dispersion of anisotropy direction 4=17640
 ferromagnetic, spin-wave resonance 4=13282
 fluoride on UO_2 substrate, refractive index 4=11350
 gelatin and gelatin-dyestuff complexes, semi-conduction 4=22731
 hydrogen isotopes condensed on cold backing, surface texture 4=13682
 interfaces, heterogeneous, bonds 4=2119
 and light, reflection and transmission, irregular surface 4=1707
 light scattering by freely-flexible macromolecular chain 4=3940
 luminescent, microcrystalline grains, optical transmission rel. to film thickness 4=26167
 magnetic domain, wall widths, electron microscope meas. 4=13139
 magnetic oxide, formation by sputtering in O_2 atmosphere 4=4349
 magnetic, spin damping const., rel. to props. of base 4=4351

Films—contd

solid—contd

- magnetostriction, monitoring during vacuum deposition 4=20539
 mechanical strength, increase by sandwich struct. 4=23571
 metal, electromagnetic behaviour 4=10020
 metal, electron transmission 4=21571
 metal, epitaxial, on cleaved substrate, crystal orientation 4=10451
 metal, evaporated, bridging phenomenon 4=20743
 metal, fatigue study in electron microscope 4=4449
 metal foils, evaporation from 4=5472
 metal-insulator-metal, pot. barrier shape meas. 4=26136
 metal, optical absorption, rel. to electrical conductivity 4=10153
 metal oxide, homogeneous, space charge distrib. 4=22689
 metal oxide, transparent conductive 4=4110
 metal oxides, space-charge distribution 4=4197
 metal, piezoresistance, var. strain-sensitivity coeff. 4=25997
 metal, polycryst., model for fission-fragment damage 4=22639
 metal, polycryst., structure rel. to optical props. 4=22817
 metal, prep. and use as apodiser 4=21308
 metal, resistance, elec., var. with deform. direction and thickness 4=4107
 metal, self-supporting, for transmission electron microscopy 4=15802
 metal, struct. var. substrate temp. 4=26712
 metal, unbacked, optical const. and thickness determ. 4=26164
 metal, var. substrate temp. 4=26712
 metal, very thin, structure determ. 4=23560
 metals, absorpt., light, anomalous, Tamm surface state transition mechanism 4=7094
 metals, adsorption of Kr, Xe, and surface area meas. 4=13692
 metals and alloys, prep. by sputtering in reactive gas 4=20799
 metals, crystal lattice spacing var. on substrate heating 4=17843
 metals, evaporation technique 4=17839
 metals, light absorption 4=10151
 metals, liquid phase growth mechanism at certain temps. 4=13683
 metals, optical absorpt. and anomalies 4=22833
 metals, preparation from small isotopic masses 4=16715
 metals, refractory, optical props., vacuum study 4=30672
 metals, superimposed, hard superconductors 4=16336
 metallic, electrical conductivity, at h.f. and He temps. 4=13680
 metallic, electrical conductivity, time and elec. field effects, low temp. 4=12844
 metallic, micrographs 4=13633
 metallic, sticking coeff., optical transmission, and oxidation 4=20801
 metallic, superconducting props. 4=8553
 metallic, thickness meas., Widmanstätten pattern method 4=4663
 mica, as capacitor, dielec. losses and cond. 4=22787
 naphthalene, thermally stressed, absorption spectra, 20°K 4=15606
 Nichrome on mica, elec. resistivity rel. to crystal structure 4=10030
 nucleation on substrate macroscopic steps 4=23557
 optical absorption, absolute i.r. intensity meas. 4=7106
 optical properties, review 4=28659
 organic, optical constants, rel. to structure 4=4241
 organic, optical props. rel. to structure 4=1702
 organic, refractive index, rel. to struct. 4=10200
 oxide films, discontinuous, growth kinetics 4=29041
 oxide films on metals, deformation meas. 4=23128
 oxide films, parabolic growth law 4=26745
 oxide, growing, space charge, rate effects deduced by averaging technique 4=23563
 oxide, growth on metals, space charge field effect 4=3082
 oxide, growth, space charge in 4=7028-9
 Permalloy, crystallite effect on magnetization ripple 4=23001
 Permalloy, electrodeposited on reduced Ni for uniaxial anisotropy 4=7283
 Permalloy, evaporation, microbalance meas. 4=5263

Films—contd

solid—contd

- Permalloy, ferromagnetic relaxation, u.h.f. absorpt. in l.f. field 4=1827
- Permalloy films, mag. ripple calc. 4=23000
- Permalloy, longitudinal Kerr effect 4=4265
- Permalloy, magnetic anisotropy and reversal time 4=28826
- Permalloy, meas. of anisotropy dispersion 4=1817
- permalloy, prep. by cathodic sputtering 4=13676
- Permalloy, structure and mag. props. relations 4=15640
- Permalloy, structure and switching 4=26327
- pinholes, rel. to substrate cleaning techniques 4=20800
- plastic, nuclear fission product tracks, electron microscope obs. 4=12819
- polycaprolactam fibres, stress effects on long range order 4=23618
- polycrystalline, uniaxial anisotropy due to magnetic energy 4=22971
- polymers, adhesion to high-molecular substrates 4=7401
- polymers, oriented, light scatt. 4=22836
- polypropylene, microstructure rel. to mech. props. 4=7447
- polypropylene, shape double-refraction 4=20474
- polystyrene, 1 μ thick on Al foil, formed in glow, dielectric props 4=4207
- profile families for linear and ring sources 4=20741
- reflection rel. to thickness 4=13004
- refractive index meas., from reflected through light fringe ang. var. 4=13678
- refractive index and thickness meas., for films on transparent substrate 4=21305
- refractive index of weakly absorbing films, meas. 4=13001
- residual gas effects on deposited films 4=8273
- semiconducting, vacuum deposition vapour source 4=26090
- semiconductor compounds, single-crystal, prepn. by cathodic sputtering 4=4665
- semiconductor, local electron centres, near surface 4=1577
- semiconductors, epitaxial growth, "sandwich" method 4=7572
- semiconductors, epitaxial, preparation method 4=30826
- silicide layers on Mo, cracks due to stresses 4=7704
- silicone polymers, 50-150 A, elec. props., 77°-300° K 4=22769
- silicone polymers, 500-2500 A, elec. props., 4°-300° K 4=22768
- silicone varnish, elec. cond. equilibrium approach 4=20413
- soda-lime glass, electron microscope examination 4=23527
- sodium salicylate, preparation method 4=13674
- sodium salicylate, u. v. fluorescence, thickness depend. 4=29756
- sputtered, prep. and props. 4=20798
- sputtering, multilayer of uniform resistivity, by rot. cathodes 4=7708
- sputtering, review 4=19122
- substrate diffusion, rel. to time and temp. 4=22607
- substrate holder, rotating, for vacuum deposition 4=13677
- substrate radiant heater, for vacuum deposition 4=26707
- sulphide, sputtered, resistivity, photoconductivity, transmittance, rel. to temp. 4=20810
- supercond., ang. var. of crit. field, interpolation formula 4=21408
- supercond., crit. current temp. var. 4=21411
- supercond., e.m. non-linearities 4=21648
- supercond., Ginzburg—Landau theory, longitudinal effects 4=21398
- supercond., phase transition to normal, var. field, temp. 4=21396
- supercond., rotating, persistent current and energy gap 4=21407
- superconducting, behaviour in mag. fields and currents 4=24497
- superconducting, energy gap variation, rel. to mag. fld. 4=16339
- superconducting, Landau—Ginzburg theory review 4=8554
- superconducting substances, getter sputtering for prep. 4=14231
- superconducting, thickness reson. 4=397
- superconducting, transition metals, prep. by "protected sputtering" 4=18587
- superconductive, max. average energy density, phase transition criterion 4=14512

Films—contd

solid—contd

- superconductors, magnetic field and phase transition 4=396
- surface supercond. in mag. fields $>H_c$, calc. 4=29829
- temperature transients decay, phonon processes 4=9867
- terphenyl salicylate, u. v. fluorescence, thickness depend. 4=29756
- thermodynamic treatment 4=13667
- thickness and deposition rate meas. during vacuum evap. 4=4662
- thickness distribution, microscopic observation 4=15817
- thickness, exact determ. with torsion micro-balance 4=2511
- thickness meas., electron probe microanalysis 4=2121
- thickness meas., interferometric, specimen holder 4=21314
- thickness meas., from light transmission and reflection 4=13679
- thickness meas., from reflected through light fringe ang. var. 4=13678
- thickness meas., X-ray reflection method 4=17840
- thickness monitor, using crystal oscillators 4=29180
- thickness and saturation magnetization, combined measurement 4=3084
- thickness uniformity on rotating substrates 4=20742
- thin foils, fast electron energy losses 4=12720
- thin inhomogeneous, prod. and optical props. 4=23559
- thin, metals, supercond. and dielect., elec. props. 4=22660
- thin, prep. and study methods 4=22881
- thin, structure and optical props. 4=23558
- from tungsten hexacarbonyl vapour electron bombardment, elec. resistance, temp. var. 4=26016
- vacuum deposition vapour source 4=26090
- vacuum conference, Boston (Oct. 1963) 4=16153
- X-ray interference linewidths 4=10604
- X-ray refl., specular, interference structure 4=3078
- AB₂ form, X-ray and optical meas. 4=2085
- Ag, absorption, light, anomalies due to granular struct 4=1715
- Ag, ageing 4=10608
- Ag, cond. elec., thickness var., and electron in f.p. 4=22683
- Ag, crystal nucleation on W 4=15765
- Ag, crystal structure, atomic, by electron diffr., variable filter technique 4=2060
- Ag crystallites on W, coalescence, rel. to substrate topography, 650°-1000° K 4=10614
- Ag, effect of O₂ on elec. resist. of evap. films 4=26014
- Ag, elastic deform., electron diffr. exam. 4=1928
- Ag, epitaxial on Ge and Si surfaces 4=29188
- Ag, epitaxial growth, in-situ meas. 4=29071
- Ag, epitaxy on 2 differently oriented LiF crystals 4=10484
- Ag evaporated on pyrex, influence of vac. on struct. 4=23587
- Ag on monocryst. Cu layers, dislocation struct. and lattice const. assimilation 4=23589
- Ag, optical absorpt. spectrum rel. to structure 4=22891
- Ag, optical absorption, plasma resonance 4=4246
- Ag, recrystallization time, tensile strength, thickness var. 4=23571
- Ag, reflection and transmission spectra, rel. to heating 4=1748
- Ag, structure and elec. resistance 4=13674
- Ag, transition radiation from 40 keV electron beam 4=22552
- AgBr, prep. by capillarity 4=15763
- AgCl, prep. by capillarity 4=15763
- AgS, contact potential photovoltaic effect 4=28650
- Ag—Sn, supercond., edge effect suppression 4=27433
- Ag₂Se, phase transform., α - β 4=23291
- Ag₂Te semicond., struct. and electron props. 4=23580
- Al, adhesion on soda lime glass 4=10596
- Al on Ag, X-ray reflectance 4=26708
- Al, cavitation by u.s. waves 4=11311
- Al, coherent scatt. region misalignment 4=20802
- Al, elastic deform., electron diffr. exam. 4=1928
- Al, electron beam energy losses with depth 4=9936
- Al, electron-bombarded, plasma radiation detection 4=17407
- Al, forming technique for narrow slits 4=14000
- Al on glass, X-ray reflectance 4=26708

Films—contd

solid—contd

- Al oxide, anodic, in diethylphthalate, galvanoluminescent cathodic flash 4=20478
 Al, melting point, rel. to thickness 4=8499
 Al oxide, anodic, i.r. absorpt. study 4=23566
 Al oxide films, discontinuous, growth kinetics 4=29041
 Al, pulse-induced destruction of supercond. 4=21412
 Al, superconducting energy gap, tunnelling meas. 4=16347
 Al, superconducting, transition temp., stress var. 4=14517
 Al, transmitted electron energy spectrum 4=9935
 Al—Ag and Al—Cu alloys, dislocations, parallel arrangement 4=1490
 Al₂O₃, on Al, interfacial topography 4=15815
 Al₂O₃, on Al, 1500 A thick, stress-strain relns. 4=23128
 Al₂O₃, anodic layers grown on (100), structure 4=23565
 α-Al₂O₃, corundum, on Al surfaces, morphology 4=4667
 Al₂O₃, electron tunneling 4=20404
 Al₂O₃, impurity cond. and negative resist. 4=22760
 Al₂O₃, photoelectric emission, delayed, thickness var. 4=24733
 Ar, oriented, oxidation 4=26715
 Au, absorption, light, anomalies due to granular struct. 4=1715
 Au, annealing effect on structure 4=23578
 Au, cond., elec., thickness var., and electron in f.p. 4=22683
 Au, conductivity, elec., decrease on adding surface layers 4=12856
 Au, conductivity, elec., non-ohmic tunnelling effects 4=6927
 Au, conductivity, elec., saturation effect at high fields 4=26009
 Au, conductivity, elec., var. with thickness, and m.f.p. 4=4117
 Au, crystal interstitials, ion beam prod. at low energies 4=6833
 Au, crystal stacking fault disappearance on O⁺ ion bombard. 4=20285
 Au, current noise, 77°-400°K 4=439
 Au, dislocation loops from ion bombard. 4=1489
 Au, elec. resistivity, thickness and temp. var. 4=22670
 Au, electron diffr. exam. 4=7712
 Au, electron diffr. obs., anomalies 4=15821
 Au, electron transfer 4=8799
 Au, electrolytic thinning and polishing 4=29185
 Au, epitaxial growth on mica in v.h. vac. 4=23576
 Au, epitaxial growth, in-situ meas. 4=29071
 Au, epitaxially grown, He and Ar beam scattering 4=22303
 Au, lattice planes of 2.35 Å spacing, obs. with electron microscope 4=15782
 Au, photoemission efficiency rel. to thickness and wavelength 4=3030
 Au, stress and strain rel. to internal state 4=23577
 Au, surface elec. cond. on supercond. Sn 4=22672
 Au, thickness meas. by γ-ray spectroscopy 4=26710
 Au, twinned structures, by electron diffr. and micr. 4=4524
 AuCu, twinning in crystals 4=12776
 Au, 2000-50 000 Å, mech. props. 4=23575
 Au, Ge, Cu, secondary electron emission rel. to photoelectric emission 4=8808
 B, electron bombardment deposition and vacuum weighing 4=10611
 B, self-supporting, preparation 4=7706
 B on Si substrate, preparation 4=15818
 Ba layers on W, photoelectric emission, in polarized light 4=8810
 BaO, on W, secondary electron emission 4=582
 BaTiO₃, grain size, var. with substrate deposition temp. 4=2124
 Be, crystal orientation and fibre struct., var. substrates 4=23570
 Be evaporated layers, crystallite size 4=10449
 Be, production for electron microscope exam. 4=13642
 Be, superconducting critical field, var. with temp., anomaly 4=5514
 BeO, tunnel current, var. with voltage 4=7017
 Bi, conductivity, elec., Hall effect, anomaly explanation 4=7709
 Bi, crystal growth, dislocation healing 4=23333
 Bi, Hall effect, effect of residual vapour 4=1591
 Bi, Hall effect, var. with thickness and residual O₂ 4=6921

Films—contd

solid—contd

- Bi, microstructure rel. to depth and base temp. 4=23568
 Bi, optical and elec. props. of oriented deposits 4=4252
 Bi oxide deposition method 4=23567
 Bi, piezoresistance, var. thickness and impurity 4=20355
 Bi, semiconductor, large temp. var. with Pb, Sn added 4=12883
 BiPb, supercond., current-voltage curve 4=14530
 C, graphitization and deformation 4=15731
 C, graphitization meas. rel. to mech. props. 4=23263
 C, lustrous layers, structure and texture 4=4666
 C₂H₂, C₂HD and C₂D₂, crystalline, i.r. absorpt. spectra 4=17585
 Ca, growth rel. to optical props 4=28674
 Ca tungstate, prep. and examination 4=23573
 CaF₂, growth, surface mobility and gas occlusion, from optical props. 4=2120
 Cd, absorption and reflection, u.v. 4=10164
 Cd, conductivity and surface potential change rel. to adsorption 4=20326
 Cd, photoelectric emission, vacuum u.v., and crystals 4=7119
 Cd, reflectivity, vacuum u.v., and crystals 4=7119
 CdO, optical consts, rel. to electron concentration 4=10165
 CdS, cathode conductivity 4=22709
 CdS, cold electron emission 4=21556
 CdS, current pulse generator 4=26148
 CdS, electrical conductivity, field effect 4=10046
 CdS, evap. on glass, crystal structure 4=20803
 CdS, evaporated, photocond., props. 4=15567
 CdS, formation by co-evaporation method 4=29183
 CdS, growth on rocksalt, electron diffr. exam. 4=4670
 CdS, Hall effect studies 4=26040
 CdS, photocond., preparation 4=2617
 CdS photoconductive cells, preparation effects, review 4=7064
 CdS, recrystallization and structure 4=20804
 CdS, vacuum-deposited, structure and resistivity 4=20805
 CdS, vapour-deposited, hexagonal, cubic phase prod. 4=29099
 CdS, X-ray diffr. obs., effect of substrate temp. 4=7710
 CdS, with CdCl₂ impurity, elec. cond., effect of moisture 4=22708
 CdSe, 0.5 to 1.0 μ, photoconduction response and dark-sensitivity 4=4229
 CdS_xSe_{1-x}, photovoltaic effect, (x from 0 to 1) 4=12982
 CdSe, structure obs., electron diffraction 4=15819
 CdTe monocrystalline, photo-e. m. f. rel. to phase composition 4=10126
 CdTe, prep., optical and photoelec. props. 4=22857
 CdTe, vacuum-deposited, structure 4=26709
 Co films, refl. spots and streaks from electron diffr. 4=23434
 Co single crystal, electrodeposition, effect of soln. pH and applied mag. field 4=23664
 Co-Fe alloy, dislocation struct. 4=30562
 CO₂, on metal, optical absorption 4=13015
 Cr, O₂ chemisorpt. effect on work function 4=23657
 Cr, optical consts., evaporation effects, prior obs. 4=2611
 Cr, optical properties, rel. to evaporation conditions 4=7115
 Cr, preparation from Cr₂O₃ 4=16716
 Cr residual resistivity, rel. to imperfections 4=20329
 Cr, separated isotopes, by vacuum evaporation 4=10606
 Cr—Si, for strain gauges 4=26502
 Cs₃Sb, absorpt. band edge structure and excitons 4=10166
 Cu, absorption, light, anomalies due to granular struct. 4=1715
 Cu, ageing 4=10608
 Cu, crystal interstitials, ion beam prod. at low energies 4=6833
 Cu, electron beam energy losses with depth 4=9936
 Cu, electron deceleration and inelastic scattering 4=8835
 Cu, evap. on Cu crystals, dislocation structure 4=25942
 Cu films, partially oxidized, mag. susceptibility at 25°C, erratum 4=17625
 Cu, foil from rolled material, behaviour, 2-53 μ thick 4=15704
 Cu on Ni, electron microscopy 4=2108

Films—contd

solid—contd

- Cu, recrystallization time, tensile strength, thickness var. 4=23571
 Cu, reflectivity, 2-10⁵ eV, ~1100Å thick 4=28676
 Cu, surface elec. cond. on supercond. Sn 4=22672
 Cu, tensile strength, rel. to thickness 4=7416
 Cu, O₂ chemisorpt. effect on work function 4=23657
 Cu and Pb superimposed, superconductivity 4=16348
 CuCl, absorption, light, thickness var. anomaly wear band 4=28681
 Cu—Co, Cu—Ag, metastable alloys, preparation by vacuum evaporation 4=10422
 CuI films on polycarbonate, 1/f noise 4=26050
 Cu oxides, thin, prep. and structure 4=23572
 Cu—Te, structure 4=30880
 Fe, adsorption of N₂, effect on conductivity and work function 4=7727
 Fe, "alternating magnetic induction", Procopiu effect, rel. to torsion 4=4359
 Fe, columnar structure, internal microstresses 4=26696
 Fe, evaporated in mag. fld., anisotropic elec. resistance 4=4120
 Fe, magnetic properties and thickness determ. 4=2511
 Fe, O₂ chemisorpt. effect on work function 4=23657
 Fe oxide films on Fe single crystals, electron diffraction study 4=26711
 Fe, 7-142Å thick, magnetization meas. 4=7265
 Fe—Ni ferromag. resistance anisotropy, compositional and thickness dependence 4=28532
 FeO on Fe whisker surfaces, oriented growth 4=4668
 Ga, optical props., 4000 to 10000Å structure, meas 4=28685
 Ga, optical props., var. deposition speed 4=17564
 Ga oxide, anodic, i.r. absorpt. study 4=23566
 Ga, visible and near i.r. properties 4=13034
 GaAs, epitaxial, thickness meas. 4=7707
 GaAs oriented, vapour-deposited films, structure 4=13681
 Ga—As oxide, amorphous 4=29184
 GaAs, photovoltaic effects, obliquely evap. 4=17530
 GaAs, prep. and absorpt. edge study 4=22859
 GaAs, prep., optical and photoelec. props. 4=22857
 GaAs, struct. and optical characts. 4=23579
 GaAs thin films, Ohm's law temp. validity determ. 4=30621
 GaAs and GaP on GaAs, GaP and Ge substrates, preparation and props. 4=26071
 GaAs, on GaP, p—n heterojunctions, photoelec. props. 4=26070
 GaSb, amorphous state, structure 4=30881
 GaSe, spectra, exciton, absorpt., reflect., emission, oriented 4=1730
 Ge, amorphous, irradi. by neutrons and Xe⁺ ions, displacement spike recrystn. 4=17461
 Ge, conductivity, elec., acceptor conc. reduction by cleanliness improvement 4=6965
 Ge, contamination and conversion effects during evaporation 4=20368
 Ge, dislocations, observation method 4=25946
 Ge, elec. cond., effect of neutron irradi. 4=15538
 Ge, epitaxial, crystallographic and elec. props. 4=4152
 Ge, epitaxial, formation conditions 4=7574
 Ge, epitaxial, formation mechanism, iodide process 4=10485
 Ge, epitaxial growth on CaF₂ 4=10486
 Ge, epitaxial layers, growth rate and morphology rel. to doping 4=7573
 Ge, etching is not necessary for low defects in growth 4=17844
 Ge, on GaAs, p—n heterojunctions, photoelec. props. 4=26070
 Ge, obliquely deposited in vac., photovoltaic effect, spectral sensitivity 4=26149
 Ge oxide, elec. characts. 4=28613
 Ge, polycrystalline, photo-e. m. f. 4=30662
 Ge, polycrystalline, piezoresistance 4=6958
 Ge, reflectance of evap. films 4=28690
 Ge, semiconducting props., epitaxial 4=20359
 Ge, single-crystal growth, microzone melting technique 4=2125
 Ge on single-crystal substrates, formation, structure, elec. props. 4=20806
 Ge, sputtered, formation conditions rel. to structure 4=20807

Films—contd

solid—contd

- Ge, for strain gauges 4=26502
 Ge, vacuum-deposited, prep. and props. 4=2123
 Ge on W, behaviour and desorption energy 4=15820
 Ge on W, field emission energy distrib. 4=8800
 Ge—Si alloy, vapour growth on Ge 4=7554
 H isotopes, 1, 3-4, 2°K, structure, isotopic effects 4=17842
 Hg, superconducting, electron tunnelling 4=24507
 HgTe semicond., struct. and electron props. 4=23580
 I⁻ films adsorbed on Cu and Al, surface self-diffusion of I⁻ 4=15489
 In, pulse-induced destruction of supercond. 4=21412
 In, reflection and transmission coeffs, rel. to evaporation 4=28692
 In, supercond., crit. field temp. var., discrepancy removal 4=18570
 In, supercond., edge effect elimination 4=24502
 InAs semicond., struct. and electron props. 4=23580
 In₂O₃ films on gelatin, 1/f noise 4=26050
 InSb crystallite size and carrier mobilities 4=23581
 InSb, evaporation, microbalance meas. 4=5263
 InSb, evaporation prod. 4=4658
 InSb, formation techniques and properties 4=20808
 InSb, i.r. transmission and reflection 4=26200
 InSb, prep., comp. and optical props. 4=23569
 InSb semicond., struct. and electron props. 4=23580
 InSb thin layers, electrical properties, 100° to 500°K 4=6980
 In—Sn supercond., crit. field temp. var., discrepancy removal 4=18570
 K, on KCl, elec. cond., annealing effect 4=4122
 KBr, secondary electron emission 4=8820
 KCl, electron microscopy 4=2113
 KCl, field-enhanced secondary electron emission 4=11702
 KCl, transmission secondary electron emission, time dispersion, upper limit 4=14755
 Li, e.m. transmission, by reson. electron spin diff. 4=26203-5
 LiF, He ion and electron penetration depth 4=8855
 LiOH, i.r. absorption, 75 to 650 cm⁻¹ region 4=13043
 Mg, electron-bombarded, plasma⁺ radiation detection 4=17407
 Mg, light scatt., lattice structure 4=2846
 Mg, photoelectric emission, energy distrib., var. with wavelength, thickness 4=575
 Mg, photoelectric yield 4=16522
 MgF₂, crystal structure, layer formation and chemical bond existence 4=29122
 MgF₂, thin, structure and optical props. 4=23584
 Mo epitaxy, by partial molybdenite decomposition 4=29069
 Mo foils, defect cluster elimination by neutron irradi. 4=10014
 Mo, gettering efficiency, at liq. N temp. 4=11265
 Mo, O₂ chemisorpt. effect on work function 4=23657
 Mo, optical reflection and transmission, 3-50 Å 4=22878
 Mo, separated isotopes, by vacuum evaporation 4=10606
 Na₂AlF₆, growth, surface mobility and gas occlusion, from optical props. 4=2120
 NaCl, electron microscopy 4=2113
 Na—DNA, highly polymerized, elec. cond. 4=12840
 Nb, crystallization from vapour 4=2031
 Nb, gas free deposition by asymmetric a.c. sputtering 4=5523
 Nb, hard superconductors, prep. and props. 4=24501
 Nb oxide, anodic, i.r. absorpt. spectrum 4=23566
 Nb, supercond., critical mag. fields 4=16354
 Nb, superconducting, energy gaps 4=14530
 Nb, superconductive, vapour-deposited, for use as getter 4=11481
 Nb, superconductivity 4=5523
 Nb, superconductivity, temp.—thickness and aging effects 4=5522
 Nb and Nb—25% Zr, superconducting, from exploding wires 4=8570
 Nb—Sn, hard superconductors, prep. and props. 4=24501
 Nb—Sn, superconductive crit. currents, var. with diffusion conditions 4=8571
 Nb, Sn, superconducting, critical current, mag. field var. 4=412
 Nb₃Sn, superconducting, mag. field penetration, 4.2-18.2°K 4=16360
 Nb₃Sn, superconductivity and metallurgical struct. obs. 4=16358

Films—contd

solid—contd

- Nb—Ti, hard superconductors, prep. and props. 4=24501
 Nb—Zr, hard superconductors, prep. and props. 4=24501
 NH₄ carbamate and deuterioammonium carbamate, i. r. spectrum 4=30675
 Ni, adsorption, of CO, var. thickness, temp., from elec. cond. 4=17847
 Ni, adsorption of N₂, effect on conductivity and work function 4=7727
 Ni carbides, preparation and lattice structure 4=13600
 Ni, columnar structure, internal microstresses 4=26696
 Ni, crystal interstitials, ion beam prod. at low energies 4=6833
 Ni, current noise, 77°-400°K 4=439
 Ni, evaporated, elec. resistance rel. to thickness 4=17477
 Ni, evaporated in mag. fld, anisotropic elec. resistance 4=4120
 Ni, external structure rel. to annealing 4=10612-13
 Ni, H₂ ht. of adsorption 4=17848
 Ni, induced magnetic anisotropy 4=7273
 Ni, magnetic anisotropy, rel. to annealing and thickness 4=7272
 Ni, magnetic moment, effect of adsorbed H 4=4365
 Ni on monocryst. Cu layers, dislocation struct. and lattice const. assimilation 4=23589
 Ni, C₂ chemisorpt. effect on work function 4=23657
 Ni, separated isotopes, by vacuum evaporation 4=10606
 Ni, spin-wave resonance, 15-300°K 4=7306
 Ni, structure, temp. and environmental effects 4=23585
 Ni, supercond. crit. current, var. temp., mag. field 4=21422
 Ni, thickness, composition, uniformity, by X-ray microanalysis 4=2122
 Ni, vapour deposited, strength rel. to thickness 4=13435
 Ni—Cr, vacuum deposited on glass, thickness and composition 4=20809
 Ni—Cr, vacuum deposited, structure changes rel. to annealing temp. 4=26562
 Ni—Fe, ferromagnetic resonance 4=20546
 Ni—Fe, stripe magnetic domains 4=28824
 P, red, deposition method 4=29186
 Pd, epitaxial growth, in-situ meas. 4=29071
 Pb and Cu superimposed, superconductivity 4=16348
 Pb, pulse-induced destruction of supercond. 4=21412
 Pb, on substrates with low thermal expansion, mechanical stresses 4=4669
 Pb, superconducting, anomalous density of states 4=404
 Pb, superconducting, energy gap, tunneling meas. 4=16347
 Pb—Bi (88:12), phase, metastable, from supercond. var. 4=23274
 PbIn, supercond., current—voltage curve 4=14530
 PbS, effect of platelet precipitates on structure 4=7624
 PbS, for i. r. detect., prop. and performance 4=1695
 PbS, mono- and polycryst., elec. props. 4=26051
 PbS, single-crystal, prep. and props. 4=23582
 PbSe, structure, semiconducting props., as for single crystals 4=10062
 PbSn, supercond., current—voltage curve 4=14530
 PbTe structure, resistivity and Hall coeff. 4=23583
 Pb—Ti, supercond., crit. field anisotropy 4=16350
 Pt thermometer, resistance 4=24414
 Sb, conductivity, elec., time var. 4=26003
 Sb on Fe substrate, microstructure of Sb rel. to substrate temp. 4=10609
 Sb on mono-crystalline Sb substrate, structure of Sb single crystals 4=10609
 Sb₂S₃, h. v. photo-e. m. f., 90°-350°K 4=26141
 Si, electrical characterization using three-point probe method 4=28569
 Si, epitaxial, cond. elec., meas. methods 4=6989
 Si epitaxial films, resistivity meas. by i. r. reflectivity technique 4=28570
 Si epitaxial layer, Si—C contaminated bonding props. 4=30883
 Si, etching is not necessary for low defects in growth 4=17844
 Si, free from stacking faults, by initial fast deposition 4=4659
 Si, growth by vacuum sublimation 4=15822
 Si, high photovoltages 4=22803
 Si, impurity distrib. meas. 4=28448
 Si with oxide film, thickness 4=4277

Films—contd

solid—contd

- Si oxide films on Si surface, oxidation growth rate and crystal structure 4=7564
 Si, with photovoltage, high 4=22802
 Si, stacking fault nucleation, Si substrates 4=20288
 on Si surfaces, gas evolution 4=20796
 SiC, high photovoltages 4=22803
 SiO antireflection films on GaAs electroluminescent diodes 4=7205
 SiO, dielec. props. and d. c. cond. 4=22766
 SiO, with Ag and Au, optical reflection, rel. to surf. conductivity 4=22888
 SiO₂, low temp. deposition method, gas discharge 4=2118
 SiO₂, thickness meas., optical method 4=29187
 SiO₂, thickness meas. by u. v. -visible interf. 4=30882
 SiO₂ on Si, diffusion of P 4=28483
 SiO₂ on Si substrate, struct. props. 4=23588
 Si and SiO₂, successive growth 4=15823
 Sn and Ag superposed, superconductivity transition temp. depression 4=24514
 Sn, crystal imperfections, lattice, electron microscope obs. 4=4045
 Sn, hard, superconducting, upper critical mag. fld, rel. to electron mean free path 4=11486
 Sn, pulse-induced destruction of supercond. 4=21412
 Sn, Silsbee crit. currents for supercond. 4=24510
 Sn, single-crystal, electron diff. diffuse streaks 4=23492
 Sn single crystal, evaporated, dislocations, expt. and theory 4=9962
 Sn, supercond. boundary effects, crit. temp. and field 4=16373
 Sn, supercond., edge effect elimination 4=24502
 Sn, supercond., microwave non-linearities 4=21429
 Sn, supercond., quantized vortex obs. 4=18610
 Sn, superconducting, a. c. field 180° phase shift across 4=14533
 Sn, superconducting, with paramag. additions, transition temp. 4=14532
 Sn, surface mobility of atoms, influence of O₂ 4=13684
 Sn, thermal conductance into liq. He 4=24470
 Sn—Al, In, Pb or Bi diffusion layers on Ni, supercond. crit. currents 4=21430
 Sn—Ta, Sn—In, supercond. crit. current temp. var., > Sn 4=21426
 SnS on rock-salt, electron diff. study from 30°-450°C 4=29189
 Ta anodic oxide, effect of heat treatment on dielec. props. 4=10099-100
 Ta, microstructure and electrical props. 4=20812
 Ta, props. rel. to deposition process 4=20811
 Ta, structure and elec. props., effects of N, O and methane 4=13685
 Ta, superconducting, energy gaps 4=14530
 Ta, superconductive, vapour-deposited, for use as getter 4=11481
 Ta, superconductivity, var. substrate temp., annealing 4=18603
 Ta thin foils, domain patterns due to interstitial impurities 4=22567
 Ta, tritiated water occlusion and absorption 4=7730
 Ta₂O₅ dielec. const. 4=12964
 Te absorption, in vacuo, 2-13 eV 4=1754
 Te, cond. and Hall effect in mod. elec. fld. 4=28575
 Te, reflectivity 4=1754
 Ti, electron emission, secondary 4=3037-8
 Ti oxide, p-n junction photovoltaic effect 4=4237
 Ti oxides, on Ti, composition and structure study, elec. methods 4=26714
 Ti—V, hard superconductors, prop. and props. 4=24501
 TiO₂, crystal dislocations and stacking faults 4=6862
 TiO₂, heated, brookite, anatase formation conditions 4=13505
 TiO_{2-x}, electrophysical props. rel. to prep. by Ti oxidation under TiO₂ powder 4=23643
 Ti, reflectivity, trans. var. λ , thickness 4=26221
 Tl₂Se, As₂Se₃ layers, photo- and cathodo-electret states 4=26133
 U compounds, electrolytic deposition, from ammonium oxalate solns. 4=7767
 U, by vacuum evaporation 4=15824

Films—contd**solid**—contd

- III-V compounds, epitaxy by flash evaporation 4=7571
 V, superconducting, energy gaps 4=14530
 V, superconductive, vapour-deposited, for use as getter 4=11481
 V-Ga, prep., superconductivity, mag. field and heat treatment effects 4=27438
 V-Si, hard superconductors, prep. and props. 4=24501
 V-Si, prep., superconductivity, mag. field and heat treatment effects 4=27438
 W, H, ht. of adsorption 4=17848
 Zn, oxidation kinetics, atmospheric corrosion 4=26748
 Zn-Cd, Zn-Pb, Zn-Sn, on Zn, electron irradi., effect on tensile strength of substrate 4=23227
 ZnO, photoconduction sensitization with eosin 4=15570
 ZnS, evaporated layers, dielectric props. 4=4206
 ZnS, growth on rocksalt, electron diff. exam. 4=4670
 ZnS, structure, effect of substrate, temp. and atmosphere 4=15826
 ZnS: Cu, Mn, electroluminescence 4=13087
 ZnS: Cu, Mn, Cl, preparation and properties 4=20813
 ZnS and ZnS:Mn, structure 4=15825
 ZnSb-CdSb, crystal structure, atomic 4=12917
 ZnSb-CdSb, semiconductivity, var. with conc., temp. 4=12917
 ZnSe, crystal growth, struct. 4=23352
 Zr, oxidation 4=4696
 Zr oxide, anodic, i.r. absorpt. spectrum 4=23566
 Zr on Cu substrates, preparation 4=16717
 ZrO₂, monoclinic-tetragonal transform. and twinning 4=23298
 ZrO₂, phase change and recovery, radiation-induced 4=4512

Filters

- one-dimensional through porous medium 4=18139
 X-ray spectrography applications 4=10675

Filters, electrical

- crystal, quartz crystal resonator theory 4=21650
 Wiener optimum filtering in low noise detector amplifiers, for nuclear spectrometry 4=9018

Filters, optical

- See also Absorption, light; Optical films.
 cell, for liquid filters 4=14346
 electro-optic interference filter, light modulator 4=5359
 glass, red, fluorescence, 700-900 mμ 4=13073
 interference, use in spectroscopy of low-intensity extended sources 4=8422
 for laser, Nd, liquid filter 4=19311
 linear low-pass, for non-negative signals 4=325
 multilayer, match to substrate by inhomogeneous layer 4=16246
 multilayer, resolving power, theory 4=14348
 multilayer, with wide transmittance bands 4=2844
 spectral, optimization, far i.r. 4=24354
 vacuum-u.v., Al and MgF₂ layers 4=21289
 Zeeman-split absorption filter, Hg¹⁹⁸ wavelength determ. 4=2830
 Al films, for 600-1250 Å 4=21290
 CO₂ emission study at 15μ, use in multiple beam interferometric apparatus 4=27310
 GaAs, transmittance improvement by monitoring GaAs diodes 4=7205
 In films, for 600-1250 Å 4=21290
 NBS coloured glass standards 4=8420
 NiSO₄·6H₂O and glass, suppression of scatt. light in u.v. spectrometry 4=27304
 Rb⁸⁷, efficiency in Rb⁸⁷ pumping 4=22313
 Sn films, for 600-1250 Å 4=21290

Fission

See Nuclear fission.

Flames

See also Spectra, flames.

- acetylene-air or oxygen, electron temp., near to gas temp. 4=16274
 acetylene destruction rate 4=30897
 acetylene-oxygen, destruction rate 4=2153
 acetylene-oxygen, using various diluents, for study of broadening and shift of spectral lines 4=11347
 acetylene in O, reactions 4=23655
 acoustic instability, gases from burning solid 4=14428
 alkali metal analysis, by photometry, enhancement 4=2173

Flames—contd

- chemical analysis, photometry, absorptive 4=2172
 chemical to heat energy transfer reactions 4=20831
 emissivity, rel. to incomplete combustion 4=8478
 ethylene-oxygen, electron temp., near to gas temp. 4=16274
 explosive gas, shock wave generation 4=5294
 flat counter-flow diffusion, structure 4=24410
 h-hexane-air, temp. meas. from double probe ion current 4=18460
 n-hexane-air mixture, electron temp. 4=29221
 hydrocarbons, ionization mechanism 4=5552
 ion currents in flames, effects of electric fields 4=13727
 ion and electron profiles, using Langmuir probes 4=7756
 laminar diffusion flames, structure study by optical methods 4=8479
 low-pressure, ionization, cyclotron resonance study 4=5553
 mass spectra studies of reactions 4=15841
 plasma, turbulent, energy spectrum of charged particles compared with neutral 4=8672
 premixed and diffusion laminar spherico-symmetrical, structure 4=8477
 propagation in laminar boundary layers 4=8476
 propagation, theory 4=5423
 propellants, i. r. spectroradiometry 4=4699
 spectrochemical photometry, effect of slit and line/widths 4=7793
 spectrophotometric analysis, incomplete evaporation effect, 4=29242
 stabilization in boundary layer, oscillation mechanism 4=8475
 stabilization, scaling laws, semitheoretical consideration 4=5424
 temperature meas., electron, by refrigerated Langmuir probe, errors 4=18934
 temperature meas., from double probe ion current 4=18460
 transport properties, theory 4=5234
 CO, ionization rate consts. of alkali metals 4=2946
 H, rotational temp. determ. from electronic OH transition 4=10641
 N, active, CN "tail" bands 4=30430
 Na-H (active), self absorption chemi-luminescence 4=23654

Flares, solar

See Sun, flares.

Flocculation

See Sedimentation.

Flow

- See also Diffusion; Jets; Plastic flow; Turbulence; Viscosity.
 acoustic generators, feedback mechanism, applied to edge tones, choked jets, bird calls 4=8321
 anisotropic fluids, continuum theory 4=14098
 annular effect in viscoelastic fluids 4=29598
 atmospheric, vorticity advection eqn. soln. 4=23741
 Beltrami flow, incompatibility with viscous adherence 4=18134
 between gas and liquid phases, unsteady and steady state transfer analysis 4=21334-5
 boundary-layer growth on cylinder, heat transfer effect 4=122-
 boundary layer, three-dimensional, motion, with rapidly oscillating external flow 4=11150
 boundary layer, unsteady, similarity solns. of eqns. 4=27137
 capillaries, with adsorption, transient flow theory 4=5140
 continuous, apparatus modification for chemical reaction meas. 4=26737
 conversion of flow eqn. to Laplace's eqn. 4=16011
 Couette, of elastico-viscous Maxwell fluid 4=5787
 Couette, in magnetohydrodynamics with suction 4=5788
 Couette and Poiseuille, variational formulation 4=8136
 critical, steam-water, pressure gradients 4=2632
 electrohydrodynamics, laminar, in annual channel 4=5768
 fluctuating, small Reynolds number, Kaplan method 4=11147
 fluctuating, superposed, past body of revolution, laminar boundary layer response 4=5129
 fluid, cond., unsteady hydromag. convection past plate 4=21640
 fluid mechanical aspects of antisymmetric stress 4=18136

SUBJECT INDEX

Flow—contd

- fluid mixtures 4=2628
- fluid-particle suspensions from liquid-fluidized beds 4=130
- fluidization of fine particles, initial stage 4=14100
- fluids, around spheroid in coaxial cylinder 4=18135
- fluids, fields driving acoustic field 4=21073
- fluids, meas. of simulated flow by electrolytic tank field plotter 4=8583
- fluids, in porous media, transformation for free-surface flow 4=8143
- fluids, pseudo-plastic, similarity conditions 4=8137
- fluids in tubes and ducts, hydrodynamic entrance region 4=14104
- fluids, unsteady particle motion, rel. to conveyance problems 4=2634
- gas-liquid, pressure drop, var. with orientation 4=5130
- heat transfer, in stagnation point flow, suction effects 4=29782
- impulsive motion of sphere in viscous fluid 4=29581
- incompressible, viscous, with const. velo. along each stream lines 4=11148
- by interaction of a two- and a three-dimensional wave 4=14103
- isentropic, of perfect fluid, analogy with relativity 4=40
- laminar, between parallel planes, stability 4=11164
- laminar entry problem in porous tubes 4=5131
- laminar, heat transfer in non-Newtonian heat-generating fluids 4=14419
- macromolecules, laminar, rel. to light scattering, flexible necklace model 4=14140
- magnetohydrodynamic, axially symmetric 4=11783
- magnetohydrodynamic, with heat addition, one dimensional 4=5785
- magnetohydrodynamic, plane channel, incompressible liquid 4=11781
- many component fluids with antisymmetric press. tensor, cross effects 4=21072
- mass transfer between moving interface and boundary layer flow, for low Sc 4=16071
- near-equilibrium, quasi-one-dimensional 4=18137-8
- non-Newtonian, generalized Reynolds no. 4=135
- in nuclear reactor channels, theory 4=17219
- Onsager's reciprocity relations for strongly coupled systems 4=96
- Oseen's eqn., soln. by generalized Green's formula 4=29584
- perfect fluid around two moving bodies 4=29583
- polymer melts, at high shear rates 4=28974
- in porous medium, vel. of fluid mass imbedded in another fluid 4=125
- powders, study using viscometer 4=5134
- power law fluids, boundary-layer eqns. 4=8138
- quartz sand, flow—stick transition 4=23538
- Rayleigh-Taylor instability, variational principle 4=29587
- Reiner-Rivlin fluid, at inlet of channel 4=18153
- Reiner-Rivlin fluids in a mag. field 4=5767
- resistance of axisymmetrical body in potential flow 4=29603
- rotating fluid, hydraulic jump 4=18152
- in shock tubes, hot flow length and testing time, viscosity effect 4=14263
- stability of plane parallel flows 4=29582
- stability of potential flow 4=29590
- stability, shear layer between parallel streams 4=124
- stability of superposed fluids 4=29579
- stability of viscous flow between rotating cylinders 4=29585
- stagnation flow, subsonic, thin-aerofoil theory 4=215
- steady and unsteady, past thin aerofoil, integral representation 4=11028
- stratified fluids, gravity waves 4=29599
- streamline curvature modulus theorem 4=14102
- superposability rel. to streamline pattern 4=2631
- supersonic, heat transfer and skin friction 4=2867
- suspensions, effect of presence of large sphere 4=5128
- temperature distrib., approx. calc. by finite differences 4=5427
- thermally stratified fluid under gravity, stability 4=24134
- through powder packs, Knudsen and Poiseuille flow, use in definition of "pore radii" 4=7685
- turbulent boundary in compressible fluid 4=29588

Flow—contd

- turbulent boundary layer, "law of the wall" 4=29591
 - turbulent diffusion from point source with boundary layer flow, meas. 4=11149
 - turbulent, intermittency 4=29592
 - turbulent, shear flow, velocity corrections 4=16072
 - two-phase, H, N and O, idealized solns. 4=11152
 - viscoelastic fluid, natural time 4=29589
 - viscous fluid, in initial section of plane channel, mag. field present, effect of elec. cond. anisotropy 4=1664
 - viscous fluid under tangential stress and gravity, stability 4=14099
 - viscous fluid through tapered tube 4=29586
 - viscous, var. as exp. temp., soln. of eqn. interims of simple tabular functions 4=8020
 - von Kármán wake of rectangular cylinder 4=29580
 - vortex, normal to a flat surface, calc., var. Reynold's numbers 4=8141
 - wake of thin flat plate, velo. distrib. meas. 4=24141
 - wall turbulence, spectral energy budget 4=11154
 - water-vapour mixture in heated pipe, circulation parameters 4=14456
- gases**
- See also Acoustic streaming; Aerodynamics; Anemometers; Supersonic flow.
 - air, Navier-Stokes equation, for air-supported puck 4=142C1
 - air over mountains, thermally inhomogeneous surfaces 4=26790
 - air, turbulence field, droplet movement 4=5227
 - air, turbulent, longitudinal space-time correlation 4=822
 - between permeable surfaces, friction, rarefaction effect 4=29651
 - Boltzmann equation, solution for large Knudsen numbers 4=2724
 - boundary layer, acoustic control 4=5225
 - bubble meter meas. method, accuracy 4=21163
 - chemical reaction effects on stability 4=16138
 - constant surface normals 4=29664
 - counter-flow system, of different refractive index, lens effect 4=29732
 - diffusing binary gas mixture 4=2169
 - discharge rates through a de Laval nozzle 4=7729
 - electrical characteristics, Couette and stagnation boundary-layer flow, ionized gases 4=8611
 - in expanding region, monatomic rarefied gas 4=11220
 - flow field around freely falling disk, rel. to Reynolds number and moment of inertia 4=11151
 - free-molecular, in cryopump configurations 4=11264
 - heat exchange and gas dynamics, conference 4=8230
 - high-velocity, two-phase turbulent jet, stagnation temp. 4=14127
 - hydrogen-air and CO₂-air systems through porous wall, heat and mass transfer 4=18447
 - ideal monatomic, eqn. of motion, invariant transformation 4=8232
 - ionized gas flow 4=11223
 - ionized gas through straight channels, m.h.d. 4=11776
 - ionized, internal, allowing for recombination 4=11223
 - isoline coincidences 4=29653
 - laminar boundary past plate in mag. field with ionized injection 4=19182
 - laminar, by mixing gases, numerical calc. 4=14196
 - laminar jet mixing in radiation gasdynamics 4=218
 - and liquids, together, pressure drop, var. with orientation 4=5130
 - magnetohydrodynamic, one-dimensional, with heat transfer 4=16645
 - magnetohydrodynamic, rotational, reciprocal relations 4=24818
 - mass transfer at boundary layers, thermal diffusion effects 4=5221
 - methane, thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224
 - molecular, through short ducts, effect of "rougher-than-rough" surfaces 4=11222
 - noise generation in turbulent flows, diffraction theory 4=5299
 - nonequilibrium, entropy changes 4=217
 - non-viscous, non-conducting perfect, hypersonic, past object with radius a pwr of distance 4=24255
 - orifice flow, free molecule density field 4=16135

Flow—contd

gases—contd

- past slender bodies, unsteady linearized relaxing flow 4=8228
 past spherical and cylindrical obstacles, trapping of aerosol particles 4=14193
 porous materials, mol. to viscous transition 4=5218
 quantity meas., using temp. difference 4=21162
 radiation magnetogasdynamics, plane Couette flow 4=18816
 rarefied gas between two parallel plates, analysis 4=5217
 rarefied, slip flow, second order, analysis 4=21167
 Rayleigh problem, linearized, kinetic theory analysis 4=16136
 regulation by bellows valve, high pressure type 4=16134
 resistance to motion of sphere with dimensions ~ m.f.p., approx. calc. 4=220
 shock relaxation in flows carrying particles 4=18338
 shock wave interaction with expansion waves 4=27249
 shock waves, in 3-dimens. flow, gradients behind shock 4=29692
 with solid particles 4=29656
 steady, in plane channel, in transverse electric and magnetic fields 4=3117
 for surface meas., specific, powders and porous materials 4=7696
 suspension of graphite in N_2 , in $1/2$ in. tube, press. drop 4=27219
 T-tube, behind shockfront 4=18831
 thermal transpiration, calc. 4=2717
 thermo-molecular, pump and pump throttling vacuum appls. 4=8265
 transition from streamline to turbulent flow, relaxation effects 4=5219
 tube, free-molecules, velo. profile 4=29655
 tubes, short, slow viscous flow of rarefied gas 4=11221
 turbulence, grid-produced, final-stage decay 4=5226
 turbulent, in pipe, dispersion of gas 4=213
 turbulent, with mass transfer, calc. of transport rates by reference states using injection friction 4=5220
 turbulent, with strongly varying density 4=212
 uniform high-speed flow past wedge 4=27205
 velocity profile development in entrance of right cylinder with slip at walls 4=5223
 viscous gas, efflux into vacuum 4=2716
 viscous, in gravit. field, spherically symm. 4=27204
 Ar, thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224
 D₂ in liq. Ar, i.r. induced absorpt. in dil solns. 4=27177
 H₂, thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224
 Kr, thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224
 Ne, thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224

liquids

- See also Acoustic streaming; Double refraction, flow; Hydrodynamics; Superfluidity.
 capillary, temp. distrib. in time and space, calc. 4=5138
 charged, in tube under influence of e. s. field 4=24801
 through charged membranes 4=23668-9
 through concentric annulus with inner cylinder rotating 4=29602
 Couette, between rot. cylinders, stability enhancement by modulation 4=24143
 Couette flow, dissipative, between rot. cylinders with mag. field present, stability 4=16643
 elastico-viscous flow, laminar, through parallel flat porous walls, heat transfer 4=21331
 elastico-viscous, 2D boundary layer flow near stagnation point 4=24140
 films, viscous, on vertical surface 4=11161
 force and moment on cylindrical obstacle in viscous fluid 4=27145
 and gases, together, pressure drop, var. with orientation 4=5130
 Hele Shaw, heat transfer 4=18456
 ideal, general soln. leading to nonlinear, second order elliptic eqn. 4=5146
 incompressible, nonsteady helical 4=18158

Flow—contd

liquids—contd

- laminar, of films across wall, stability 4=2640
 metal, turbulent, temperature fields, rel. to momentum 4=339
 metals, near f.p. 4=155
 Navier-Stokes equation periodic solutions 4=27147
 Oseen's equation solution for 3-d body 4=27143
 past sphere, shear, exact soln. 4=24142
 plane parallel, inviscid, stability condition 4=16078
 in porous materials, infiltration by liquid metals and alloys 4=8144
 through porous media, models and scaling laws 4=18155
 potential flow, general solution 4=29601
 pulsating, magnetohydrodynamic flow superposed on laminar motion of viscous liq. in annular channel 4=11770
 resistance, rel. to pipe surface roughness 4=11159
 through soils, of water, Darcy's law teaching apparatus 4=24002
 surface velo. due to wind, wave damping 4=18154
 suspension of macromolecules, dumbell model 4=29235
 suspensions capillary, axial migration mechanisms for suspended particles 4=5139
 viscoelastic, between concentric rotating spheres 4=16079
 viscoelastic, capillary, instability onset dimensionless parameters 4=14113
 viscous, cubic cell model 4=16101
 viscous, fast inclined flat plate 4=27144
 viscous liq. in annulus with variable suction and injection along the walls 4=11163
 viscous, part inclined flat plate 4=27144
 vortices, Taylor, meas. 4=18144
 water, near collapsing bubble, rel. to cavitation 4=8149
 Al activation energy jumps and cluster formation 4=5137
 Al₂O₃, molten, activation energy 4=16096
 HeII, capillary heat flow, turbulence and crit. velocity 4=8549
 He II films 4=24476
 He II, 5 types in capillaries 4=21377
 He II, laminar and turbulent, in wide capillaries 4=14501
 HeII, radial flow over horizontal plate at 1.65°K 4=8546
 Hg in mag. fld., trial installation, Grenoble 4=11768
 Pb activation energy jumps and cluster formation 4=5137
 SiO₂, molten, activation energy 4=16096
 SiO₂–Al₂O₃, molten, activation energy 4=16096
 Sn activation energy jumps and cluster formation 4=5137
 Zn activation energy jumps and cluster formation 4=5137

Flowmeters

- See also Anemometers.
 alkali metals, molten, permanent magnet flowmeter 4=8147
 cylindrical probes, properties 4=5133
 Doppler-shift, spectral broadening of u.s. reverberation 4=24135
 flow meas. using free precession of nuclei in earth's mag. field 4=27148
 gas, sintered plate type 4=18222
 low fluid velocities down to 0.1 ft/sec 4=14114
 low fluid velocities meas. 4=2635
 magnetoelectric, for dielectric fluid 4=14105
 microflowmeter for use with water 4=8146
 molten alkali metals, magnetic meas. 4=8892
 oceanographic coastal current meter 4=23724
 for reaction kinetics obs. 4=23636
 transient performance of turbine flowmeter 4=18156
 ultrasonic, temp. errors and other parameters 4=137
 for He gas 4=18224

Fluctuations

- See also Brownian movement; Random processes.
 analysis, low-freq. cross spectrum analyser 4=8
 concentration, damping by continuous sampling through a tube 4=8140
 critical, in binary system, theory 4=8525
 detector pairs in radioastronomy and nuclear physics 4=21695
 dielectrics, and polarization, dispersion, absorption, macroscopic theory 4=2935
 diffraction of fluctuating fields, Soviet papers 4=2527
 fundamental laws and theorems 4=8026
 in heat exchanger, statistical dynamic expts. 4=1169

SUBJECT INDEX

Fluctuations — contd

- magnetohydrodynamic theory 4=676
 - n.m.r., mag., as noise generator 4=754
 - at negative absolute temps. 4=14057
 - nonequilibrium states with weak time dependence and weak spatial inhomogeneity, fluct., increase 4=11092
 - photoelectric laser radiation detection 4=5354
 - product property and cluster property equivalence 4=27078
 - quantum system interacting with linear dissipative system 4=5055
 - sampled flow of random pulses, counting rate, errors 4=28089
 - shot noise, nonstationary 4=8080
 - statistical models, book 4=8078
 - temperature, autocorrel. of random inhomogeneities 4=27076
 - He-Ne laser oscillators, noise meas. in 6328 Å output 4=11822
 - acetone, conduction, freq. var. 4=21151
- electrical**
- atmospheric noise, mag. tape recording and reproducing 4=17906
 - cathodes, oxide, flicker noise, from ionized donor movement 4=24727
 - diode, crossed-field, noise transport 4=19109
 - diode, two-dim., noise transport, Monte-Carlo calc. 4=19110
 - diodes, crossed-field, Monte Carlo calc., increased velo. fluctuations 4=8839
 - discharge, acoustic wave effects 4=8632
 - discharge, inert gas, low press., hot cathode, var. current, cathode temp. 4=21472
 - errors in noise meas., effect of finite instrument range 4=18634
 - Esaki diodes, Ge, Si, GaAs, GaSb, spot noise meas. 4=26080
 - field emission flicker noise, point cathode 4=3020
 - flicker effect in field emission 4=5691
 - flicker noise in field emission, temp. var. 4=24723
 - gas discharge probe noise 4=18707
 - graphite suspension, spectrum shear rate, conc., particle size effect, time dependence 4=26765
 - i.r. systems, microphonism due to triboelec. 4=14560
 - image orthicons, noise meas. 4=29977
 - integrator design and construction 4=29844
 - maser amplifier noise 4=19263
 - meas. detectors, square and linear, accuracies 4=18635
 - n.m.r. detector, autodyne, white, flicker 4=755
 - noise enhancement and suppression in gas discharge probes, theory 4=8725
 - noise in large-diameter photomultipliers 4=24735
 - noise power meas., use of dielectric diode 4=12839
 - noise sources, microwave, effective temp. meas. 4=24826
 - noise, spectra in electrodeless discharge in air 4=468
 - noise in Tl crystals from thermal or optical excitation 4=12915
 - parametric amplifier with lossy modes, quantum noise 4=8603
 - photocurrent noise, effect of mobility fluctuations 4=12981
 - photomultipliers, single electron, increase with cathode—first dynode voltage 4=19088
 - photomultipliers, Venetian blind-type, noise 4=29965
 - plasma, hot, noise radiation, cm and mm wavelength range 4=8702
 - polar dielects., spontaneous polarization noise 4=22757
 - polyacrylonitrile, pyrolyzed, current noise 4=22734
 - probes immersed in discharges, h.f. noise 4=5738
 - quantum electronics, theoretical problems 4=21261
 - regulation, two compensators in parallel 4=29859
 - semicond. transistors, field effect, calc. 4=17508-9
 - semiconductor transistors, alloy junction, low temps., shot theory 4=12943
 - semiconductors, carrier diffusion and recomb. noise 4=22691
 - solids, generation—recombination noise, theory 4=12837
 - superconducting circuit, circulating current 4=21416
 - for temperature meas., using resistor 4=24411
 - theory 4=8078
 - thermal capacity effects 4=438
 - tunnel diode, direct tunnel-current for small bias 4=22746

Fluctuations — contd

electrical — contd

- voltage meas. instrument for statistical characteristics 4=16388
- Au films, current noise, 77°-400°K 4=439
- BaTiO₃, relaxational oscillations 4=26116
- C 4=438
- CdS single crystal, current oscillations induced by light irradi., local 4=28640
- CdSe photocond. detector, microwave signal-to-noise ratio 4=30660
- CdSe single crystals, current oscillations, undamped, light beam present, expt. 4=28641
- Cu, due to finite thermal capacity 4=438
- CuI films on polycarbonate, 1/f noise 4=26050
- Hg 4=438
- In₂O₃ films on gelatin, 1/f noise 4=26050
- Ni 4=438
- Ni films, current noise, 77°-400°K 4=439
- Si diodes, breakdown region, high noise temp. 4=22747
- Si, var. with freq., temp., field 4=4166
- Si-SiO₂—metal diodes, oscillations 4=30637

- distribution function, radial 4=24129
- distribution function, radial, average density approx. 4=18094
- distribution functions, radial, from linear integral eqn. 4=21069
- elec. currents, symmetrical, transverse to mag. fld. 4=11766
- electrodynamics, fluids in motion, summary of results 4=14866
- electrostriction, theory, Clausius-Mesotti formula 4=18210
- filled chambers, acoustic props, no convection 4=27262
- flow, Beltrami, incompatibility with viscous adherence 4=18134
- flow fields around freely falling bodies, rel. to Reynolds number and moment of inertia 4=11151
- flow, fluid mechanical aspects of antisymmetric stress 4=18136
- flow, hypersonic, past slender cone 4=18228
- flow, in porous media, transformation for free-surface flow 4=8143
- flow in porous medium, vel. of fluid mass imbedded in another fluid 4=125
- flow, around spheroid in coaxial cylinder 4=18135
- flow, two-phase, H, N and O, idealized solns. 4=11152
- fluidization of fine particles, initial stage 4=14100
- fugacity expansions, convergence radius 4=83
- hard-sphere, pair correlation function approximation 4=14075
- hole theory and quasi chemical approximation 4=8142
- hydraulic jump in rotating fluid 4=18152
- incompressible, equations of motion and vortex eqns, in corresp. form 4=8139
- instability, Rayleigh-Taylor, compressible fluids 4=18140
- isentropic, shock development from finite-ampl. waves 4=14253
- kinetic theory of dense fluids, hard-core collisions 4=16089

Fluids—contd

- magnetic field of conducting fluid in gravitational field 4=30020
- micro, theory 4=24132
- mixtures, light scattering, critical opalescence, theory 4=8526
- mixtures, "one fluid" theory, var. property 4=14067
- multicomponent systems, statistical theory, double-index distrib. functions 4=21070
- non-Newtonian heat-generating, heat transfer in laminar flow 4=14419
- nuclear spin relaxation, momentum dependent interaction 4=8256
- one-dimensional, hole theory and quasi-chemical approximation 4=16070
- pair correlation functions, mixed, perturbation calculation 4=14076
- perfect, with infinite card., shock waves 4=8310
- polar, in elec. fields, high resolution spectra, calc. 4=6650
- power law fluids, boundary-layer flow eqns. 4=8138
- pressure-entropy diagram, complement to Mollier diagram 4=8532
- propagation phenomena in conducting compressible fluid 4=16631
- quantum, cell model 4=14134
- radial distrib. function, perturbation correction 4=27135
- Rayleigh-Taylor instability, variational principle 4=29587
- Reiner-Rivlin, flow at inlet of channel 4=18153
- relativistic mechanics 4=27136
- rotating flows of von Kármán and Bödewadt 4=18141
- rotating polytropes 4=2633
- rotating polytropes 4=29366
- self-diffusion coeffs., rel. to quantum equilibrium props. 4=21114
- simple fluids, critical region rel. to correl. functions 4=24441
- stability of superposed fluids 4=29579
- stability theory, nonlinear, inviscid shear layers 4=18132
- statistical equilibrium, functional expansions 4=21052
- statistical mechanics of nonspherical molecules 4=5123
- structure theory, significant, for rigid sphere system 4=118
- super-cavitation profile, in presence of free surface 4=11153
- thermal convection, rigid boundary problem 4=21338
- thermodynamic props., rel. to molec. distrib. functions 4=20125
- thermodynamic and radial distribution function in terms of potential energy distribution 4=5122
- theory, Baer, hole, disagreement with one-dimensional hard sphere fluid 4=18089
- time-relaxed probab. densities and correl. functions for moderately dense fluids 4=27113
- transport in two-component square-well fluid 4=5124
- unsteady particle motion, rel. to conveyance problems 4=2634
- virial coeffs., and square-well potential, classical theory 4=21088
- viscoelastic constants, measurement 4=18133
- viscoelastic, natural time 4=29589
- viscous, thermally conducting, propag. of spherical waves 4=278
- Ar, radial distrib. function calc. 4=14101

Fluorescence

See Luminescence.

Fluorescent screens

See Luminescent devices.

Fluorine

- aqueous ions, entropy 4=24202
- atoms, aspherical scatt. factors in sp^3 , sp^2 and sp valence state 4=26626
- atoms and F^- ions wave functions and correlation energies 4=3789
- atom, $1s^2 2s^2 2p^6$ configs., analytic self-consist. field functions 4=15273
- crystal struct., atomic, β , 50°K 4=23441
- c.s.r. of centre in X-irrad. BeO 4=26396
- ion, F^- , electron affinity and stability calc. 4=9643
- ion, F^- , oscillator strengths calc. 4=6476
- ions, F^- , quadrupole antishielding factor calc. 4=3791
- liquid, thermodynamic and physical props., calc. by significant structure theory 4=8166

Fluorine—contd

- molecule, mag. antishielding const. of F, meas. 4=12519
- n.m.r. in acidic fluoride solns., HF, HF₂ - shifts 4=23067
- n.m.r. solids and solns. in alkali and alkali earth fluorides, shifts 4=23067
- n.m.r. of F^{19} in $KMnF_3$, u.s. modulation 4=20614
- n.m.r. of F^{19} in KrF_4 4=20612
- n.m.r. of F^{19} in XeF_4 4=20613
- n.m.r. in NH_4F solns., var. conc. 4=23067
- spectral line intensities, oscillation, in toroidal discharge with mag. field 4=14651
- F^- , atomic polarizability and London force consts. 4=3790
- F^+ , $1s^2 2s^2 3p^4 n l$ config., coupling schemes calc. 4=1190
- F^{+2+} , spectral presence from multiply-charged source 4=27584
- F_2 in sat. hydrocarbon phosphorescence, 77°K 4=20499
- β - F_2 , crystal lattice structure 4=26648
- F^{19} in CeF_3 , n.m.r. absorpt. line, mag. shielding transition 4=23068

Fluorine compounds

- desorption from Mb, and work function change 4=13691
- ferrites, spinel, charge compensated, mag. props. crystal structure 4=13229
- fluorides, acidic, solns., n.m.r. of F and HF, HF₂ - shifts 4=23067
- fluorides, Pr^{3+} doped, i.r. quantum counteraction 4=7132
- fluorides, spectra, u.v. absorpt., oscillator strength for first band 4=7131
- hexafluoride mols., interatomic distances, mean-square ampl. 4=6592
- molecular complex ions, induced dipole moments 4=30443
- nuclear spin-spin coupling consts., temp. dependence 4=3907
- FCN molecular vibr., bond lengths, dipole moment, of N^{14} , n.q.r. 4=9735
- F_2DCD_2F spectrum, rot., 7-30 kMc/s 4=25672
- FH, use in etching depressions in glass and quartz plates 4=23985

Foams

See also Bubbles.

- acoustic wave propag. 4=8337
- stability, mechanical, thermodynamic 4=24150

Fog

- atmospheric optical effects on formation from haze 4=7838
- crystallization of supercooled fogs caused by Pb iodide aerosols 4=13790
- drops, growth and condensation coeffs. 4=5467
- mist meas. 4=17887
- numerical modelling, saturation adjustment 4=17888
- particle size distrib., calc. from spectral transparency 4=7783
- prediction on diffusion models 4=7837
- radiative transport properties 4=23758
- rel. to diffusion model for radiation transport from point source 4=23751
- scattering and polarization properties 4=15867
- supercooled, crystallization by various substances 4=7836

Force

See Dynamics.

Force measurement

- magnetic materials, stress sensitive 4=7361
- remote meas. for moving machine-part 4=2513

Fourier analysis

- See also X-ray crystallography, calculation methods.
- crystal structure, isomorphous replacement and anomalous dispersion data, synthesis feeding 4=23365
- crystal structure, 3-dim. synthesis by computer 4=23373
- crystal superstructure excess points transform 4=23361
- generalized coeffs., upper and lower bounds 4=27021
- helix system transform 4=23232
- interference modulation spectroscopy 4=14356
- phase retrieval from transform, rel. to analyticity 4=6021
- summation, Buerger's treatment, symmetry phases in reciprocal lattice 4=7576

Fourier series

See Series; Transformations, mathematical.

Fractionation

See Distillation.

Fracture

See also Mechanical strength.

- brass, subject to alternating torsion 4=1939
- brittle fracture, structural aspects 4=26485

SUBJECT INDEX

Fracture—contd

- brittle materials, fracture energy meas. 4=30756
 brittle, propagation 4=26489
 brittle solids, fracture stress rel. to grain size and residual strain, theory 4=10364
 brittle solids, theory 4=23108
 cemented bodies, brittle fracture 4=26486
 ceramics, measurement method at high temps. 4=23089
 crack max. initial accel. in brittle material, calc. 4=13381
 crystals, rel. to dislocation interactions, analysis 4=22581
 drilling device for brittle crystals 4=4993
 elastomer, filled, mechanism 4=13438
 glass, velocity meas. in different atmospheres 4=13406
 graphite, H4LM 4=20658
 initiation meas., acoustic, record pickup 4=15697
 liquids, viscoelastic, in shear 4=16081
 metals, and creep void formation 4=1916
 metals, equiaxial structure, intercrystalline, strength conditions necessary 4=23107
 metals, pure, cracks on fracture surface 4=7394
 metals, time-to-fracture, constant and cyclic stresses 4=23124
 particle size distrib. function 4=13658
 and plastic yield, review 4=4454
 Plexiglass, a typical cleavage surface colours 4=26525
 polycrystalline aggregates, cleavage fracture 4=7391
 polyester fibreglass, delayed fracture, mechanism 4=1942
 polymer chain, rel. to intermolecular interaction 4=10397
 polymer films, rel. to drawing and temperature 4=7734
 polymer melts at high shear rates 4=28974
 polymers, film colour phenomena 4=10398
 polymers, solid, free-radical product, e.s.r. 4=1885
 porcelain, surface, arising during cooling 4=26699
 rubber vulcanizates, unfilled, failure envelopes 4=7453
 silicone polymers, under shear 4=27151
 steel, delay time, effects of fracture temp. and heat treatment 4=10385
 steel rod, tensile, by two pulses 4=20684
 steel, stainless, cycling speed effect on thermal fatigue 4=23211
 from thermal shock, crack propagation rel. to physical props. 4=13385
 thermal stress ageing, cumulative degradation law 4=7390
 transition mechanism in notched Tipper specimen 4=15696
 velocity, maximum, and surface energy, specific 4=4453
 viscoelastic media, thermodynamics 4=18130
 AgCl 4=23204
 AgCl, polycryst., wet with aq. soln., charact. 4=28980
 Al alloy 2024, machine stiffness effect in tension at 4.2°K 4=30765
 Al alloys, DTD683/3 and 2024-T4 4=26493
 Al crystals, rel. to necking 4=4457
 Al ductile fracture 4=23123
 Al sheets, tearing and crack toughness 4=20642
 Al—Ag, age hardened 4=28932
 Al—Cu, age hardened 4=28932
 Al—4% Cu foils, aged, mechanism 4=7404
 Al—4% Cu foils, rel. to bulk material 4=4458
 Al₂O₃, gaseous environment effect 4=28935
 Al—Zn, age hardened 4=28932
 Al—Zn—Mg alloy D. T. D. 683, fatigue, notched and unnotched high values 4=7406
 Au, polycryst., high-temp. 4=28953
 BaTiO₃, electrostrictively generated and moderated 4=28938
 Be, rolled, and plastic deform., 20°–800°C 4=26498
 BeO, stress/lattice strain relation, radiation effects 4=13394
 Cr, from ductile—brittle transition 4=23135
 Cr, effects of C, N, O and S on ductile—brittle fracture temp. 4=30770
 Cu, subject to alternating torsion 4=1939
 Cu—4% Ag alloy, Hg-embrittled, precip. effect on fracture path 4=30774
 Cu—4% Ag alloy, in Hg, by link-up of cracks mechanism 4=30775
 EI-4378 alloy, adsorbed liq. Na effect 4=23185
 Fe, rel. to temp. 4=13418
 Fe—C, rel. to temp. 4=13418
 Fe—Cr, rel. to temp. 4=13418
 Fe—Mn, rel. to temp. 4=13418

Fracture—contd

- Fe—Ni, rel. to temp. 4=13418
 Fe—Si(3%), brittle, from nucleated plastic deformation cracks 4=13412
 Fe—3% Si, microcrack propagn., temp. and strain effects 4=28961
 Fe—Si(3.25%), twinning, dislocation movement, nucleation 4=20664
 Ge, Au-doped, rel. to surface conductivity, liq. N₂ temp. 4=10052
 KCl tubular whiskers, fracture stress rel. to defects 4=20776
 KCl—KBr rel. to KBr conc. 4=4484
 MgO, bicrystals, fracture strength 4=13423
 MgO, neutron-irrad., fracture stress 4=10392
 Mo, brittle fracture at stresses below yield point 4=13427
 Mo, high purity cast, cleavage 4=28967
 Mo single crystals, along {001} and {110} planes after cooling 4=13428
 Nb, 1.4–300°K 4=23191
 Ni, Ni—Au and Ni—Ag, comparison at 500° and 600°C 4=23184
 Ni—Pt group metal alloys, stress-rupture 4=23188
 TiO₂, 600°–1300°C, rel. to stoichiometry 4=13443
 U, elongation, var. with grain size 4=4492
 α-U, single crystal extended to fracture, struct. 4=23222
 W rods, recrystallized, recovered and wrought, behaviour 4=30789
 WC, Co-bonded, mechanism 4=23221
 Zn, delayed, by cyclic unloading during extension 4=23228
 Zn, polycrystalline, deformation by hot torsion 4=28990
 Zn—(0 to 0.5%)Cd, brittle, rel. to surface phenomena, —200°C to +200°C 4=10363
- Francium**
 electrical resistance and density, calc. 4=14182
- Free radicals**
 acetyl radical, thermodynamic props. 4=25759
 alanine, irrad. single crystals, free radical p—d exchange reaction, e.s.r. study 4=23043
 alcohol—amine at second triplet level, rel. to radical formation 4=10647
 alkenes, straight chain, radicals formed by u.v. irrad., e.s.r. study at 77°K 4=20583
 alkyl, in irrad. polythene, e.s.r. 4=28276
 alkyl radicals, transient, e.s.r. 4=3925
 allyl, cation, anion and radical, electronic structure, alternant orbital approach 4=30451
 antiferromagnetism 4=4390
 aromatic free radicals and ions, electron spin densities from e.s.r. spectra 4=25723
 aromatic, proton splitting cousts. and hybridization 4=17322
 azulene anion, anomalous effects in e.p.r. spectra 4=25724
 azulene electron unique positions, relative reactivities 4=12430
 beta ray prod. by t decay in amino, dicarboxylic acids 4=29234
 in biological materials 4=25722
 in biological materials, laser irrad., e.s.r. obs. 4=26980
 1,3-bisdiphenylene-2-phenyl allyl, antiferromag. props. 4=4391
 Chichibabin's hydrocarbon, association, e.s.r. meas. 4=12535
 cis- and trans-thianthrene — 5,10-dioxide, anions, e.s.r. study 4=3906
 containing methylene groups, torsional oscillations study by e.s.r. 4=12531
 Coppinger's, magnetic double reson., electron, nuclear, in n-heptane 4=22434
 cyclohexane-1,2-dione radical anion, e.s.r., h.f.s. 4=30472
 cyclohexyl, ring inversion 4=28278
 cyclopentadienyl and cyclohexenyl, e.s.r. study 4=6640
 cyclopentadienyl, e.s.r., above 800°C 4=12534
 in d,l-valine, γ-irrad., e.p.r., 77° and 293°K 4=17685
 in irradiated crystals of trifluoroacetamide and pentafluoropropionamide 4=26395
 di-t-butyl nitroxide dissolved in methylcyclohexane, e.s.r. linewidths, effects of hydrostatic press., anisotropic region 4=24242
 dihydropyrazine cation radical, e.s.r. spectrum, isotropic hyperfine splittings, signs 4=25728
 dihydropyrazine, methyl substituted, and related radicals, e.s.r. 4=28256

Free radicals—contd

- diphenylpicrylhydrazil, magnetic susceptibility, 294°-
1.2°K Curie constants 4=10250
diquinone anion e. s. r. 4=28257
DPPH, molecular distortion in crystalline parent
hydrazine 4=28336
DPPH, recrystallization effect on e. s. r. line
width 4=26394
 α -diphenyl- β -picrylhydrazyl, relax. time var. down
to 1.5°K. 4=30730
diphenylpicrylhydrazil, multiquantum transitions in radio-
wave region 4=25604
e. s. r. meas., improved flow cells 4=22436
e. s. r. nature, magnetically diluted 4=2710
e. s. r. spectra, isotropic hyperfine splitting, semi-
empirical theory 4=9765
electrolysis prod., and e. s. r. 4=8960
ethyl-d., decomposition 4=10639
ethyl-d., excited vibr., deactivation by D₂, He 4=22441
ethynyl, in solid Ar, e. s. r. meas. 4=12532
eye melanin, kinetics, and rel. to O₂ adsorption by semi-
conductors 4=20975
g-factors, relative, e. s. r. meas. method 4=9764
ferromagnetism, Wurster's blue perchlorate, from
e. s. r. 4=6657
4,4'-bis (diphenylmethyl) biphenyl, trapping in
solution 4=24241
frozen solutions, dynamic nuclear polarization 4=12533
homologous series decomposition kinetics 4=30484
inorganic, bond dissociation energy rel. to (ionization
pot.—electron affinity) 4=9777
interaction, with silica gel surface, e. s. r. study 4=1321
itaconic acid, irradi., e. s. r. study 4=1886
lifetimes meas. by e. s. r. 4=25721
mass spectrometric observation 4=16563
in methanol, γ -irradi., e. p. r. spectrum 4=15379
methyl, adsorption in semiconductors, rel. to contact
potential 4=6992
methyl, orbital following 4=17323
neopentyl, dissociation in pyrolysis, catalytic transfer
by HCl 4=23633
1,3-butadiene anion in liq. NH₃, e. s. r. 4=28254
organic, bond dissociation energy rel. to ionization
potential 4=9777
phenoxy radicals in soln., nuclear-electron double
resonance 4=24244
polyethylene, irradi., behaviour of free rad. 4=1334
in polymerization, redox, e. s. r. detection 4=22437
in polymerization, redox, e. s. r. study 4=9786
in polyethylene, irradi., electron-spin density 4=3949
produced in reaction of deuterated polystyrenes with H
and D atoms 4=29219
reaction on cold surfaces, rel. to H₂O₂ formation 4=10640
recombination on semicond. surface, rel. to
luminesc. 4=20476
recrystallized, e. s. r. at low fields 4=28279
redox polymerization, e. s. r. meas. and steric
structure 4=28275
sec-butyl systems, D substituted, chemically activated,
isotope effects, secondary 4=22432
sec-butyl, vibrational deactivation 4=3929
in solid polymer fracture products, e. s. r. 4=1885
in solids, exciton—phonon coupling 4=9917
in solution, det. by inverted Overhauser effect 4=25733
in solution, e. s. r. linewidths 4=25720
in soln., e. s. r. hyperfine splitting assignment by
linewidth analysis 4=28252
in soln., e. s. r. line shapes 4=28253
in solution, rotational—diffusion, anisotropic, rel. to
e. s. r. linewidths 4=30470
solutions, Overhauser effect, p, e relax. and mol.
motion 4=24245
specific heats and antiferromagnetism, organic crystal-
line radicals 4=10295
spectra, microwave 4=22433
spin-orbit interactions 4=6615
spin resonance and hyperfine interaction 4=9763
stabilization in cavities of water clathrate
lattice 4=9784
substituted cyclobutane anions, e. s. r. 4=25726
sym-trinitrobenzene and related radicals, e. s. r.
study 4=30474

Free radicals—contd

- synthesis in elec. discharge 4=22433
vinyl radical, β -proton hyperfine splittings 4=25732
vinyl, in solid Ar, e. s. r. meas. 4=12532
Wurster's blue, e. s. r. reinterpretation 4=9766
Wurster's blue perchlorate, ferromagnetism, from
e. s. r. 4=6657
($\phi_3\text{AsCH}_3$)⁺(TCNQ)₄⁻ solid, exciton mag. reson., zero-
field 4=20584
BH, BD energy states and transitions, l-coupling of
excited states 4=25636
C₂, CN, temp., in O₂-C₂H₂, O₂-C₂N₂ detonation in shock
tube 4=7757
CH₂² π state, dissociation energy 4=12527
CH₂, ang. depend. of spin densities on protons 4=25758
CH₃O, spectrum, u. v. absorpt., from photolysis of
CH₃NO₂ 4=22435
CF₂, i. r. spectrum 4=28209
DNA, Na salt of, e. s. r. spectra 4=3903
DPPH, gyromagnetic ratio apparent change in weak
field, 4=17311
DPPH—hydro peroxide solutions, e. s. r. 4=202
DPPH, low-field e. s. r. at low temp. 4=25727
H, bond dissociation energy rel. to ionization
potential 4=9777
HCO and DCO, electronic absorption spectrum 4=6594
HCO, low-temp. i. r. study of chemistry 4=25757
HCO₂, electronic structure and spectrum 4=6622
HO₂, low-temp. i. r. study of chemistry 4=25757
HSiCl and HSiBr, spectrum and structure 4=15345
KrF, e. s. r. spectrum at 77°K 4=28872
L-cystine dihydrochloride, irradi. at low temp., free
radical prod., e. s. r. study 4=20591
NBr, i. r. spectrum 4=20122
NBr, low temp. i. r. study of chemistry 4=25757
NCl, i. r. spectrum 4=20122
NCl, low temp. i. r. study of chemistry 4=25757
NF₂, electronic absorption spectrum 4=28281
NF, i. r. spectrum 4=20122
NF, low-temp. i. r. study of chemistry 4=25757
NH, emission spectrum, rel. to shock wave in
N₂-H₂ systems 4=17320
NH, fluorescence 4=4711
NH, low-temp. i. r. study of chemistry 4=25757
NH (X² Σ^+) from NH₃ flash photolysis 4=7769
NH₂, hyperfine e. s. r. spectrum 4=6658
NH₂, stability 4=9785
NO, e. s. r. spectra, solvent effects 4=11218
Na perfluorochloride, X-irradi., e. s. r. spectra of free
radical formed 4=20601
OH, chemiluminescence, H₂-O₂ reactions 4=13705
OH, delayed appearance in acetylene-O₂ reaction 4=20830
O-hydrides, wave functions, anal. of calculations 4=9731
OH, from γ -irradiated ice and water 4=5196
OH ground state, h. f. s. consts. 4=1270
OH, role in H diffusion in SiO₂ 4=20304
OH* split from H₂O₂, abnormal rotation, statistical
model 4=17321
OH* split from H₂O₂, rotational states, ang.
momentum effect 4=28282
PH and PH₂, lower electronic levels 4=28200
PO, spectrum in P₄ + O reaction 4=23638
RCH₂CHCOOR' in ester—urea inclusion cpds., e. s. r.
and molecular motion 4=28277
S and Se org. cpds, u. v.-irradi., comparison 4=30473
SH, SD and SO, e. s. r. spectra 4=3905
SO, microwave spectrum 4=28203
SO, millimeter wave spectroscopy 4=28202
SO radical, dissociation limits, u. v. band
interpretation 4=6655
SO, spectrum, vacuum u. v., and dissociation
energy 4=17861

Freezing

- See also Melting, Supercooling.
alloys, stability of planar interface during solidifi-
cation 4=11404
camphor, cryoscopic const., by micro-melting point
method 4=362
decanting of liquids during freezing 4=8504
depression of freezing point, cryoscopic
determ. 4=18490
electrolytes dissolved in H₂O droplets, expt.
investigation 4=2888

SUBJECT INDEX

Freezing — contd

- eutectics, lamellar, rel. to entropy prod., theory 4=5449
- gas, for vacuum pump, high speed 4=11261
- gases, for vacuum pumping 4=5255
- glass, excess entropy calc. 4=27375
- ice, C particle nucleation activity 4=27374
- ice nucleability on ZnSe 4=5457
- ice, potential differences at interface, rel. to space charge 4=21353
- lamellar eutectic systems 4=8503
- metals, ultrasonic absorption meas. 4=174
- metals, u. s. irradi., cavitation 4=27372
- mixture, eutectic, solute redistrib. calc. 4=27373
- molten metals, activation energy of flow, existence of jumps 4=155
- para- and meta-xylene, discontinuous, rel. to viscosity meas. 4=11179
- prefreezing effects on viscosity and other props. 4=24439
- rate for plate or sphere mould 4=5453
- rocks, u. s. control 4=26781
- supercooling, finite cond. and different densities of phases 4=2887
- theory, error 4=16296
- theory, from molecular field theory 4=2889
- water drops, effect of electrolytes on temp. 4=21354
- water drops, supercooled, elec. fld effect 4=11403
- water on ice-forming nuclei, n. m. r. study 4=13539
- water, ice interface morphology 4=4548
- Fe—C alloys, nucleation undercooling and struct. 4=21352
- H₂O drops, and electrification 4=23768
- He³—He⁴ mixtures, and λ curves 4=14485
- He³—He⁴ mixtures, phase diagram, down to 0.45°K 4=8550
- He³—He⁴ solutions, liquid—crystal equilb. diagram, 1.4–4°K 4=29823
- NaF, f. p. depressions, effects of trivalent fluorides 4=8505
- NaF, freezing point depression, effect of transition metal difluorides and CdF₂ 4=5454
- Pb—Sn eutectic, unidirectional solidification at known freezing rate 4=4550

- F functions, rel. to crystal structure theory 4=7578

Fundamental concepts

See Physics fundamentals.

Fundamental constants

See Constants.

Fundamental particles

See Elementary Particles.

Fusion

See Heat of fusion; Melting; Nuclear fusion.

Gadolinium

- analysis in small conc. by (n, γ) reaction 4=13756
- atom, K α X-rays from radioactive sources 4=9665
- conduction electron polarization from Lu³⁺ γ — γ correl. 4=4009
- conductivity, thermal, 5–310°K, Lorenz function 4=12661
- crystal growth from melt 4=29050
- crystals, domain patterns by Bitter figures 4=22985
- Curie temp., effect of pressure to 40 kbar 4=13183
- e. s. r. of Gd³⁺, in metals and cpds. of high susceptibility 4=28873
- e. s. r. in Pd, and long range polarization 4=26400
- electrical conductivity, 1.5–20.3°K 4=17473
- electric conductivity, spin-wave scatt. processes 4=1553
- electrical resist., 4°–375°K, rel. to mag. transitions 4=10027
- electronic structure by positron annihilation 4=17413
- exchange strictions in single crystals 4=28409
- Faraday effect meas. 4=4257
- ferromagnetism, normal from 77 to 290°K, neutron diffr. exam. 4=13182
- ferromagnetism, temp. var. calc. 4=28789
- ferromagnetic reson. 4=13286
- ferromag. spin ordering, effect of conduction electron exchange 4=17631
- ions, Gd³⁺, in CaF₂, e. s. r. 4=1876
- ions, Gd³⁺, e. s. r. in cubic SrTiO₃, temp. and press. depend. 4=10325
- magnetic moment and elec. resistivity 4=4358
- magnetization, 140 kOe, rel. to molecular field model 4=4357
- magnetization saturation rel. to temp., 4.2°–30°K 4=22984
- magnetoresistance, low temp., high field decrease 4=22673-4
- magnetoresistance, temp. var., 3 maxima 4=22671
- magnetostriction, saturation consts., 4.2°–340°K 4=22986
- magnetostriction, volume, 77° to 325°K, up to 20 kOe flds 4=26302
- magnetic transition, mag. and X-ray diffr. exam. 4=13180
- phase transformation, high press., and ferro-mag. reduction 4=15733
- specific heat, magnetic, const. coupling approx. 4=30522

Gadolinium—contd

- Gd in molten Gd trichloride, elec. cond. irregularity 4=8220
 Gd³⁺, e.p.r., in alkali earth fluorides, cubic field splitting 4=1875
 Gd³⁺ e.s.r. in garnet, rel. to GdIG anisotropy 4=26398
 Gd³⁺, e.s.r. in CaF₂, BaF₂ and SrF₂ 4=4407
 Gd³⁺ e.s.r. in LaAlO₃, 4°-700°K 4=26386
 Gd³⁺, paramag. relax. in CaF₂, meas. 4=7328
 Gd³⁺, in zircon, paramag. resonance 4=15673
 Gd³⁺ in Ca ferrite, ferromagnetic resonance 4=26359

Gadolinium compounds

- Gd gallate, magnetic saturation, high pulsed fields 4=19154
 Gd garnet, effect of substitution of Fe by Sc on mag. props. and crystal structure 4=7650
 Gd hydride, elec. conductivity rel. to composition 4=20328
 Gd hydrides, statistical treatment 4=13486
 GdAg—GdIn, antiferro- and ferromag. props. 4=28764
 GdAl₃, crystal struct., atomic 4=23442
 Gd₂Bi₃, ferromagnetism 4=13181
 GdCl₃, specific heat meas. from 1.2°-2.9°K, discontinuity at Curie pt., 2.2°K 4=17363
 GdCl₃.6H₂O, luminescence, resonance line self-reversal in thick crystals 4=26241
 GdCl₃.6H₂O, mag. behaviour at low temp. 4=17670
 GdCl₃.6H[D₂O]₂, fluorescent transitions, rel. to vibration of neighbouring molec. group 4=1773
 GdCoO₃, crystal structure and mag. property 4=26649
 Gd—Dy alloys, magnetic spiral struct. between Curie and Neel points 4=13110
 GdF₃, magnetic properties 4=23018
 GdFe garnet, spin-wave normal modes calc. 4=7293
 Gd—Fe, Co or Mg system compounds, crystal structure, atomic 4=4605
 Gd₂Ge₃, crystal struct., atomic 4=23442
 Gd₂Mn₂₃, crystal struct., atomic 4=23443
 GdN, Gd¹⁵⁹, ¹⁵⁷ n.m.r. 4=13344
 GdNi, crystal struct. rel. to mag. props. 4=30854
 Gd₂O₃.Nd³⁺, stimulated emission and fluorescence at room temp. and 77°K 4=17602
 GdP, ferromagnetism induced by high fields 4=17649
 Gd₅Pd₂, ferromagnetism 4=13220
 GdRu₃, crystal structure, atomic 4=4605
 Gd₂Sb₃, Gd₂Sb₃—Gd₂Bi₃, ferromagnetism 4=13181
 Gd₂Se₃, antiferromagnetism, below 6°K, Curie temp. versus resistivity 4=13181
 Gd—Th, Ru, superconductivity and ferromag. 4=18567
 Gd—Y alloys, paramagnetic susceptibility rel. to temp. 4=28778

Galaxies

See also Nebulae.

- angular momenta, rel. to energy nonconservation 4=15924
 barred, outward gas flow and spiral arm formation, model 4=2378
 barred spiral, gas motion 4=10871
 central layer, gravitational resonance effects 4=10848
 classification, review 4=17985
 cluster stability 4=15927
 clusters, dynamic evolution, N-body theory 4=2380
 clusters, early, HI and HII regions, spiral structure arrangement 4=10859
 clusters, mean square residual velocities calc. 4=17986
 clusters, stability, and validity of Newtons law at great distances 4=8033
 collapse of central region 4=23880
 collision of two, escape of stars 4=23881
 colour photometry (UBV) of spirals and ellipticals 4=26920-1
 compact, and galactic nuclei, extended eruptions 4=4876
 cosmic ray intensities in different types 4=15907
 distance of stars from galactic plane, correl. with metal deficiency 4=2375
 elliptical, brightness, time depend, calc. 4=20905
 elliptical, dynamical models 4=2368
 evolution 4=2379
 evolution 4=13900
 evolution rate, catastrophies 4=23878
 external, mass-luminosity ratio, rel. H content, mass density and extragalactic distance scale 4=23877
 formation and mag. fields in steady state universe 4=30972
 galactic anticentre, neutral H distrib. 4=23875

Galaxies—contd

- galactic clusters, surface densities and tidal force 4=13896
 galactic magnetic field, meas. attempt 4=7990
 Galactic magnetic field, rel. to star formation 4=10847
 Galactic magnetic fields, rel. to interstellar cloud equilibrium 4=10855
 Galactic neutral clouds within halo?, 21 cm obs. 4=13968
 Galactic plane, force and motion at 90° 4=20904
 Galactic pole, neutral H obs. from 21 cm radio survey 4=23945
 Galactic spur, radio emission 4=29485
 Galactic X-rays, evidence 4=12085
 Galaxy, age 4=29411
 Galaxy, central condensation, O.H.P.I. region 4=17984
 Galaxy, diffuse Lyman- α in night sky 4=29410
 Galaxy, disk—halo transition region, composition 4=10849
 Galaxy, distance to centre 4=1873-4
 Galaxy, γ -ray sources >0.2 MeV 4=2383
 Galaxy, gas, magnetic fields and dynamics 4=13898
 Galaxy, history and characteristics 4=20903
 Galaxy, hydrodynamic shock wave damping 4=11773
 Galaxy, mag. field, discussion of possible values 4=7956
 Galaxy, mag. field effects and halo 4=10850
 Galaxy, mag. field, from H spectrum at 21 cm 4=7954-5
 Galaxy, nuclear evolution 4=13899
 Galaxy, neutral H deviation from equatorial plane 4=10865
 Galaxy, origin of relativistic electrons and primary cosmic rays 4=4877
 Galaxy, radio background polarization at 610 Mc/s 4=13967
 Galaxy, radio polarization, 75 cm 4=10923
 Galaxy, radio spectrum, rel. to electron density and mag. field 4=10924
 Galaxy, radiowave absorption in interstellar gas 4=4930
 Galaxy, Schwarzschild velocity distrib., hydrodynamic origin 4=23882
 Galaxy, southern, spectrophotometric study 4=4872
 Galaxy, spiral arm plasma instability in mag. field 4=24705
 Galaxy, spiral structure, from interstellar reddening 4=23874
 Galaxy, stellar cluster distribution 4=4871
 Galaxy, stellar evolution rel. to the two-colour diagram 4=4875
 Galaxy, spiral structure, 21 cm obs. 4=29483
 Galaxy, star clusters, luminosity function 4=29404
 Galaxy, structure, correl. between stellar and neutral H data 4=2374
 Galaxy, time of nucleosynthesis, meas. 4=17983
 Galaxy, X-radiation, total for $\lambda < 40\text{\AA}$ 4=2364
 Galaxy, X-ray emission, mechanisms 4=10851
 gas in galactic clusters 4=10857
 H Balmer absorption line formation, rel. to ionization 4=10872
 H, intensity distrib. and radial velocity, 21 cm survey 4=20948
 H radio emission 4=30990-1
 H II regions, freqn. function and reln. to stellar mass limit 4=10875
 highly flattened, distrib. of matter 4=2376
 intergalactic medium, condensations 4=4878
 interstellar matter in. conference, Princeton (1961) 4=7959
 light bending in gravit. fields of galaxies, use 4=2382
 light deflection by grav. field of galaxies, possible meas. 4=10854
 light var. of intense radio sources 3C48, 3C196, 3C273 4=15925
 luminosity function of extragalactic radio sources 4=7957
 M3 globular cluster, horizontal branch distrib. 4=23872
 M31, flux of angular momentum, pilot calc. 4=13903
 M82, radio radiation absorpt. 4=23951
 Magellanic cloud, small, star and H veloc. 4=23876
 magneto-gravitational model 4=13901
 magnetogravitational theory 4=2377
 magnetogravitational theory, expanding motion of 3 kpc arm 4=26922
 mass-luminosity ratio and age 4=26923
 mass meas. from gravitational lense effect 4=30966
 mass-potential energy reln. and evolution radiation processes 4=10852
 metagalactic system, early development 4=30971

SUBJECT INDEX

Galaxies — contd

- and metagalaxy, cosmic-ray interactions, γ - and X-rays 4=20885
- NGC 6611, bright rim structures, distortion velocities 4=10846
- nuclei with violent events 4=13904
- neutral hydrogen mass, limits 4=13971
- passing of two galaxies, grav. interaction 4=2381
- photometric distance meas., rel. to red shift 4=10853
- radio, data analysis and generation processes 4=10928
- radio emission, 408 Mc/s, linearly polarized component 4=29484
- radio emission and magnetic fields 4=30992
- radio, model of extended source 4=10929
- radioluminosity function 4=29488
- radio noise, satellite versus ground meas., ionospheric absorption effect 4=30987
- radio sources, intense, 3C48 type, optical identification 4=15926
- radiosources, possible class 4=29486
- radio survey, 750 to 1400 Mc/s 4=23947
- red-shift, "total relativity" theory 4=10789
- redshifts of quasi-stellar radio sources 3C47 and 3C147 4=17987
- rich clusters, coincidences with radiosources 4=29489
- rotation law, depend. on cloud density 4=10858
- self-gravitating disk of matter, structure and stability 4=10787
- SO, elliptical, interstellar matter 4=10869
- spherical systems, star loss rate rel. to mass 4=10845
- spiral, ang.-momentum distrib. in disks 4=29412
- spiral arm formation 4=29414
- spiral, H II regions, excit. conditions and electron temp. distrib. 4=7958
- spiral and irregular, gas distrib. 4=10856
- spiral struct. of disks, grav. instability mechanism 4=29413
- spiral structure persistence and, gas transport, review 4=13902
- stellar systems, rapidly rotating, collisionless, stability, local 4=29402
- star motion, third integral 4=17972
- Virgo cluster, neutral hydrogen ratio, radio obs. 4=13972
- V444 Cygni, Wolf-Rayet component 4=23865

Gallium

- adsorption, on Zn, diffusion 4=26729
- cond., elec., low temps., impurity effects 4=17474
- Curie temp. variation with pressure 4=28806
- Debye temp. anisotropy, from elec. cond. 4=20217
- diffusion into Si, surface conc. 4=4077
- diffusion through SiO₂ to Si, segregation coeff., p-n jn. method, two-boundary method 4=30578
- film, optical coefficients in i.r. and u.v., meas 4=28686
- films, optical props., 4000 to 10000 Å structure, meas 4=28685
- film optical props., var. deposition speed 4=17564
- heat of fusion, γ Ga 4=24435
- heat of fusion using Calvet microcalorimeter 4=14434
- heat of solution in Sn at 750°K, and theories 4=24175
- ions, Ga⁺, formation in electron interaction with GaI₃ 4=18674
- liquid coating on Zn, Cd, Sn crystals, rel. to their mech. props. 4=10353
- liquid, electrokinetic effects, structural viscosity, in surface layers 4=24230
- liquid, electron mean free path, by positron annihl. 4=199
- liquid, electron transport props. 4=21152
- liquid, refr. and absorpt. index in visible and near i. r. 4=24213
- magnetic props. of single crystal, 20°-1000° C meas. 4=7255
- optical consts. for three axes, over 0.4-8.0 μ 4=7134
- polycrystalline and liq., optical props., 4000-8000 Å 4=26189
- resistance, elec., 4-lead meas. system 4=30612
- resistivity, ideal, rel. to temp., and departures from Matthiessen's rule 4=17475
- solubility from saturation current in p-n junct., 360°-550° C 4=30793
- specific heat, 0.1°-4.2°K analysis 4=15426
- supercond., press. var. of crit. temp. 4=21420

Gallium — contd

- superconductivity of high-pressure modification 4=8567
 - surface tension at m. pt. and agreement with Mendeleevian periodicity 4=8189
 - thin films, front-, support-side transmission factors, transmission factor, vacuuo, and meas. 4=30680
 - thin films, visible and near i. r. properties 4=13034
 - twinning mechanism 4=4528
 - ultrasonic absorption, giant quantum oscillations, effective mass determ. 4=17355
 - Ga⁷¹, Ga⁶⁹, strength fn., neutron scatt., resonance parameters, spin var., calc. 4=28036
- Gallium compounds**
- gallates, garnet, Yb³⁺, Nd³⁺ magnetization process, high temp. var., calc. 4=20517
 - laser junction fabrication 4=24920
 - Ga and In antimonides, arsenides and phosphides, mutual solid solubility 4=15726
 - Ga-As oxide, amorphous film 4=29184
 - Ga ferrite garnet, magnetization, in pulsed fields 4=4373
 - Ga oxide anodic films, i.r. absorpt. study 4=23566
 - GaAs, absorpt. edge, var. with compensation, meas. 4=30681
 - GaAs, Ag diffusion and solubility 4=1512
 - GaAs, for alpha ray detection, n-type, high resistivity 4=9013
 - GaAs, band structure calc. 4=25899
 - GaAs, crystal dislocations, Li precipitation 4=22587
 - GaAs, crystal growth from melt with different seed orientations 4=7553
 - GaAs, crystallographic orientation, light figures method 4=2011
 - GaAs, current saturation at 77°K, optical phonon effect 4=17392
 - GaAs diffused junctions, recombination spectra, and phonons, 4°K 4=13078
 - GaAs, diffusion of Cd, In, interstitial-vacancy mechanism 4=12792
 - GaAs, diffusion of Cd, rel. to dislocations 4=9986
 - GaAs, diffusion of 14 atoms, review 4=22612
 - GaAs diode laser, impurity states 4=24877
 - GaAs diode lasers, i.r. output, angular distrib. 4=19303
 - GaAs diodes, photon emission, refrigeration 4=10082
 - GaAs, doped, i. r. absorption and fluorescence 4=10175
 - GaAs doped with Se, Te, Zn and Cd, elec. props. and lattice parameters 4=26045
 - GaAs, e.s.r. of Fe, quasiforbidden transitions 4=1879
 - GaAs, e.s.r., 4.2°K 4=4406
 - GaAs, e.s.r. of Zn, Cd 4=7338
 - GaAs, effect on elec. ad photoelec. props. of 1 MeV electrons 4=25984
 - GaAs, elec. breakdown hysteresis, of lasers 4=20380
 - GaAs, electrical activity of Cu in, 600-1000° C 4=15536
 - GaAs, electro and photoluminesc. meas. 4=4297
 - GaAs, electroluminescence, i. r., effect of Cu impurities 4=7184
 - GaAs electroluminescent diodes, antireflection films 4=7205
 - GaAs, electroluminescent diodes with negative resist. 4=26079
 - GaAs, electron irradi., lattice atom displacement in n-type 4=22646
 - GaAs Esaki diodes, rapid impurity diffusion 4=17504
 - GaAs Esaki diodes, spot noise meas. 4=26080
 - GaAs, etching of dislocations 4=1497
 - GaAs, exchange correction to binding energy 4=28425
 - GaAs, Faraday effect 4=17565
 - GaAs films, epitaxial, thickness meas. 4=7707
 - GaAs films, obliquely evap., photovoltaic effects 4=17530
 - GaAs, films on GaP, p-n heterojunctions, photoelec. props. 4=26070
 - GaAs films, prep., optical and photoelec. props. 4=22857
 - GaAs films, vapour-deposited on Ge, structure 4=13681
 - GaAs, floating zone refining 4=29054
 - GaAs, GaSb, dielectric const., and bandgap and occupancy 4=28557
 - GaAs grown in oxygen, luminescence 4=4296
 - GaAs injection lasers, properties and mechanisms 4=19302
 - GaAs injection lasers, recomb. mechanisms 4=3228
 - GaAs, intrinsic and heavily doped, thermal cond. 4=1414

Gallium compounds—contd

- GaAs junction, h-power, characts. 4=24914
 GaAs lamellae, morphology and structure 4=26580
 GaAs laser, c. w., in liquid He II, limited current range 4=5871
 GaAs laser diode, active region photomicrographs 4=5869
 GaAs, laser diode, amplification, var. current 4=14943
 GaAs laser diode, continuous, 77°K 4=5877
 GaAs laser diode, preferred beam direction with parallel piped crystal 4=5866-7
 GaAs laser diode, var. of emission with voltage 4=5876
 GaAs laser, freq. tuning by uniaxial stress 4=5860
 GaAs laser, geometry for more highly collimated light beam 4=14944
 GaAs, laser, injection 4=3224
 GaAs, laser, injection, threshold and diff. loss, calc. 4=3225
 GaAs laser, near-field emission patterns 4=24915
 GaAs laser, room temp. 4=5870
 GaAs, laser, transitions, calc. 4=3222
 GaAs, laser-type, optical absorption meas. 4=13035
 GaAs lasers, continuously operating, spectral characteristics 4=19304
 GaAs, lattice defects, introduction and removal by thermal treatment, effect of Cu 4=15467
 GaAs, Li diffusion in, Hall effect meas. 4=15537
 GaAs, luminescence, electron beam prod., 100°K 4=26245
 GaAs, luminescence, by electron bombardment 4=4298
 GaAs, n-type, magnetoelec. and thermomag. props. 4=1601
 GaAs, n and p-type, surface elec. meas. 4=12893
 GaAs, normal vibr. modes, dispersion reln. 4=6709
 GaAs on Ge substrates, epitaxial growth, fault formation, deterioration of {111} Ge surface, and deposition on high index planes 4=29066-8
 GaAs, magnetoresistance, negative, 4.2°K 4=28556
 GaAs, optical second harmonic generation, by laser beams 4=28666
 GaAs, optical study with view to laser prod. 4=28688
 GaAs, optical transitions involving impurities 4=6776
 GaAs, p-n heterojunction with Ge, photoelec. props. 4=26070
 GaAs p-n i. r. source, 1 W by elimination of internal reflections 4=5861
 GaAs, p-n junc., electrolum., carrier transport 4=22740
 GaAs, p-n junction lasers 4=3227
 GaAs p-n junction, stimulated exciton recombination emission 4=7182
 GaAs p-n junctions, photoeffect and recombination radiation 4=28643
 GaAs p⁺n alloy diodes, meas. and models 4=7011
 GaAs, p-n-p, n-p-n slices, prep. by Zn and Sn double diffusion 4=26069
 GaAs, photo-response, 78°-295°K 4=10127
 GaAs, phonon scatt. from thermal cond. meas. 4=15411
 GaAs, piezoelectricity, and effective ion charge 4=1670
 GaAs, reactor irradi., annealing props 4=6899
 GaAs, recombination radiation, electron probe study 4=26242
 GaAs, refractive index, from 0.7 eV to absorpt. limit, 300°, 187° and 103°K 4=15588
 GaAs, S, Se and Te diffusion, n-p junction formation 4=17441
 GaAs, screw dislocation, elec. field and charge distrib. 4=6846
 GaAs, screw dislocations, elec. potential calc. 4=6845
 GaAs, secondary electron emission rel. to local elec. fields 4=3040
 GaAs, semicond., high resistivity inhomogeneities and dislocations 4=6955
 GaAs semicond. tunnel diodes, deteriorated, I-V relax. freq. 4=10084
 GaAs, semiconducting surface phenomena from photo, field effects 4=1602
 GaAs, single-crystal growth by free surface method 4=7552
 GaAs, solubility and distrib. coeff. of Zn 4=13458
 GaAs, sputtering models 4=25985
 GaAs substrate with oxide film, optical consts. 4=22858
 GaAs, thermal cond., effect of 2 MeV electron irradi. and annealing 4=28381
 GaAs thin films, Ohm's law temp. validity determ. 4=30621
 GaAs thin films, optical absorpt. edge 4=22859

Gallium compounds—contd

- GaAs thin films, struct. and optical characts. 4=23579
 GaAs, use in u.s. amplifier 4=22488
 GaAs, vacancies, on removal of Cu impurity 4=12726
 GaAs, various alloys for making devices 4=12924
 GaAs wafers, polarity determ. 4=4522
 GaAs with SiO₂ films, Zn diffusion 4=22616
 GaAs, Zn diffusion, to achieve low surface concs. 4=22614
 GaAs, Zn diffusion under excess As vapour 4=22615
 GaAs, Zn diffusion, mechanism 4=4071
 GaAs, Zn diffusion, mechanism expt. at 900°C 4=22617
 GaAs, Zn-doped tunnel diodes, degradation 4=26084
 GaAs—GaP alloys, vapour grown, prep. and props. 4=4546
 GaAs—GaP diodes, injection electroluminescence 4=1772
 GaAs—GaSb, epitaxial heterojunction, prod. and elec. props. 4=28587
 GaAs—Ge, epitaxial heterojunction, prod. and elec. props. 4=28587
 GaAs—In₂, epitaxial vapour growth, kinetics 4=7551
 GaAs—InAs alloy, visible and u.v. reflectivity spectra 4=26190
 Ga(As_{1-x}P_x), conduction band minima separation 4=9901
 GaAs_{1-x}P_x laser poss., and higher energy system type 4=16702
 Ga(As_{1-x}P_x), n-type conductivity, pressure effect 4=17487
 GaAs_xP_{1-x} diodes, light emission from junctions 4=7183
 GaAs_xP_{1-x}, p-n junction lasers 4=3227
 Ga₂As, electron interaction Ga⁺ formation 4=18674
 GaN, superconductivity, var. with mag. field 4=402
 α-Ga₂O₃ powder, n.m.r. of Ga⁷¹, Sternheimer antishielding factor 4=7349
 Ga₂O₃, carrier effect on spectral line intensity of matrices 4=26224
 Ga₂O₃, effect on Bi₂O₃ polymorphism 4=23253
 GaP, band structure from optical data at high press. 4=20243
 GaP, crystal excitons, bound, from spectra and luminescence, 77, 4°K 4=15462
 GaP, crystal growth method 4=23338
 GaP crystals, structural defects, elec. and optical effects 4=22573
 GaP, diffusion and solubility of Zn 4=12790
 GaP diodes, electrolumesc. recomb. near energy gap 4=13077
 GaP, edge luminescence bands, long-wave excitation 4=13074
 GaP, epitaxial crystal growth 4=15770
 GaP lamellae, morphology and structure 4=26580
 GaP, luminescence, decay time fine structure rel. to lattice defects 4=4300
 GaP, luminesc., pair spectra and "edge" emission 4=10215
 GaP, luminescence regular lines due to excitons, low temps. 4=13075
 GaP, optical second harmonic generation, by laser beams 4=28666
 GaP, p⁺-i-n⁺, two-carrier space-charge-lim. current 4=22741
 GaP, photoconductivity, temp. var., exciton effects 4=28644
 GaP, semiconducting junction diodes, recombination radiation 4=13076
 GaP, n-type and undoped, i. r. Faraday effect meas. 4=10162
 GaP single crystals, diffusion and solubility of Zn 4=12790
 GaP single crystals, growth from the melt 4=7550
 GaP, solubility and distrib. coeff. of Zn 4=13458
 GaP, solubility of Sn, in growth 4=28999
 GaP, structure changes 4=13508
 GaP, Zn diffusion, mechanism expt. at 1000°C 4=22617
 GaP—Au, semicond. diodes, barrier height 4=10080
 GaS, GaSe, optical absorption edges, temp. var. 4=28687
 GaS, i. r. lattice spectrum, two-, three-phonon process, space group selection rules calc. 4=28357
 GaS, luminescence rel. to carrier trapping states 4=7185
 Ga₂S₃, luminescence rel. to carrier trapping states 4=7185
 Ga₂S₃—Ga₂Se₃, luminescence rel. to chem. structure 4=7178
 Ga₂S₃—In₂S₃, luminescence rel. to chem. structure 4=7178
 GaSb, adsorption of oxygen 4=4673
 GaSb, amorphous state, structure 4=30881
 GaSb, crystal structure, atomic 4=4606
 GaSb, Faraday effect 4=17565
 GaSb, (110) surface, electron diffraction obs. 4=23555
 GaSb, p-type, piezoresist. 77°-350°K 4=12892

SUBJECT INDEX

Gallium compounds—contd

- GaSb, phonon assignments, optical and acoust. 4=3981
 GaSb, phonon scatt. from thermal cond. meas. 4=15411
 GaSb, photoconductivity, osc. with photon energy, phonon mechanism 4=17529
 GaSb, reduction of high acceptor conc. 4=23339
 GaSb, Shubnikov-de Haas effect, calc. 4=25881
 GaSb, thermal expansion, 20°–340° K. 4=1404
 Ga–Sb system, three-phase line, pressure–temp. projection 4=16290
 GaSb and Ga–Sb distribution coeffs., Zn⁶⁵ 4=4072
 GaSb–Ga₂X₃ alloys, (X = Se, Te), solid soln. ranges, optical energy gaps, and Hall coeff. 4=28997
 GaSb–InSb alloys, thermal conductivity rel. to that of InSb 4=28383
 GaSb–InSb alloy, visible and u.v. reflectivity spectra 4=26190
 GaSb, sputtering 4=30598
 GaSe, films, oriented, spectra, exciton, absorpt., reflect., emission 4=1730
 GaSe, luminescence rel. to carrier trapping states 4=7185
 GaSe, resistivity and Hall coeff., rel. to temp. 4=12879
 Ga₂Se₃, luminescence rel. to carrier trapping states 4=7185
 Ga–Te system, crystal structure 4=23444
 Ga₂Te₃, crystal superlattice ordered vacancy struct. 4=20759

Galvanomagnetic effects

See Magnetoelectric effects.

Gamma-ray spectra

- analysis method for spectra with several adjacent components 4=25058
 analysis using IBM 7090 4=16854
 collection 4=9374
 cosmic rays in graphite 4=27928
 deformed nuclei, vibrational states, Coulomb excited 4=22040
 effect of analyzer channel width on photopeak shape of monoenergetic line 4=11964
 even–even nuclei, $152 \leq A \leq 186$, rotational levels 4=22003
 even-mass nucleus, first rotational level, γ -ray correl. function 4=9383
 fictitious cascades, removal from sum coincidence spectra 4=16853
 (heavy ion, xn)Tb^{149g}/[Dy^{149, 150, 151}], $x = 3$ to 9, rel. to ang. momentum 4=22234
 heavy nuclei scattering, of bremsstrahlung rel. to giant resonance 4=22104
 intensity meas. by external conversion 4=17017
 light nuclei, (p, γ), rel. to giant dipole resonance 4=15143
 minerals containing U and Th, 5–200 keV 4=6249
 in mixture, approx. calcs. 4=21824
 Mössbauer effect, from nucleus motion 4=20160
 (n, γ) spectra, including resonance effects 4=19791
 nuclear reactor, fission, beamhole, VVR-M 4=1149
 $\pi^- + d \rightarrow n + n + \gamma$, and n–n scatt. 4=25104
 quartz, vitreous, light emission 4=26246
 radioactive fallout, NaI detector meas., radio-isotopes identification 4=29304
 recording with finite const. abs. channel width, accuracy 4=6010
 scintillation, computer analysis 4=27960
 A⁴⁰(p, γ)K⁴¹ 4=3565
 Ag^{110m} decay, γ –X and X–X coincidences, rel. to intermed. level search 4=27971
 Ag^{110m}, study using fast–slow Compton scintillation spectrometer 4=12154
 Al, meas. after Al + n interaction 4=12133
 Al²⁷, compound (Na²³ + α) nucleus 4=9569
 Al²⁷(p, γ), (p, α , γ), (p, γ , γ), rel. to Si²⁸ energy levels 4=22020
 Al²⁷(p, γ)Si²⁸ 4=28025
 Al²⁷(p, γ)Si²⁸ 1.6–2.5 MeV 4=30311
 Al²⁷, rel. to low-lying levels 4=17043
 Au(n, γ), resonance neutron capture 4=6363
 Au¹⁹⁸ decay to Pt¹⁹⁸ 4=27982
 Au¹⁹⁷, Zeeman effect in Fe, Co and Ni 4=9811
 Au¹⁹⁹, rel. to energy levels 4=15169
 B¹⁰, e.m. transitions, by mag. pair spectrometer 4=1008
 Gamma-ray spectra—contd
 B^{11, 12, 13} excited state decay 4=22217
 B¹¹, N¹⁴, F¹⁹ reactions on light nuclei, induced transfer 4=22209
 Ba¹³³ decay, γ – γ directional correl. meas. 4=22073
 Ba¹³⁴, γ – γ directional correl. 4=9408
 Be, meas., after Be + n interaction 4=12133
 Be⁹(d, p) γ Be¹⁰, 13.6 MeV 4=9553
 Be⁹(He³, γ)C¹², 1.5 to 4.5 MeV 4=22185
 Be¹⁰, e.m. transitions, by mag. pair spectrometer 4=1008
 Be¹⁰ excited state decay 4=22217
 Bi²⁰⁸ 4=3621
 C, meas., after C + n interaction 4=12133
 C¹²(α , γ), (α , γ' , γ), 2.8–8.3 MeV 4=30356
 C¹²[Mg²⁴] (α , α' , γ), rel. to nuclear polarization 4=28062
 C¹²(p, p' γ), 147 MeV, ang. correl. 4=22124
 C¹⁴, e.m. transitions, by mag. pair spectrometer 4=1009
 Ca⁴⁸CO₂, 52 MeV α -particles, d bombardment 4=30321
 Cd¹¹¹, cascade 173–247 keV 4=22034
 Cd¹¹⁴, from neutron capture 4=1022
 Ce¹⁴², after decay of 92.5 min La¹⁴² 4=17097
 Cf²⁵² fission, spontaneous, prompt peaks 4=17208
 Co⁵⁸, rel. to Co⁶⁰ contamination 4=15159
 Co⁵⁹(n, γ)Co⁶⁰ 4=22154
 Cr⁵² excited states, following V⁵² β -decay 4=9448
 Cr⁵³, meas. rel. to unified model 4=6226
 Cs¹⁴⁰ 4=3610
 Cu-, meas., after Cu + n interaction 4=12133
 Cu⁶⁵, from decay of Ni⁶⁵ 4=19720
 Cu⁶⁶ decay 4=15187
 Dy¹⁵⁵ $\rightarrow$ Tb¹⁵⁵ decay, and coincidences 4=6294
 Dy¹⁶⁴ 4=27977
 Eu¹⁴⁷ decay to Sm¹⁴⁷ 4=27997
 Er¹⁶⁷ (n, γ)Er¹⁶⁸ 4=9415
 Er¹⁶⁷, on Coulomb excitation 4=1075
 Eu¹⁴⁸ 4=6291
 Eu¹⁵² decay 4=9413
 Eu¹⁵² energy meas. by scintillation spectroscopy 4=25316
 Eu¹⁵⁴, from neutron capture 4=1022
 F¹⁹, from α -rays of 2–5 MeV, rel. to levels in Na²³ 4=15153
 F¹⁹(n, γ)F²⁰, pile-neutron capture 4=6353
 F¹⁹, 1.35 and 1.46 MeV levels, decay 4=12138
 F¹⁹(p, γ)Ne²⁰, rel. to giant dipole resonance 4=15143
 Fe, meas. after Fe + n interaction 4=12133
 Fe⁵⁶, meas. rel. to unified model 4=6226
 Fe⁵⁶ from Mn⁵⁶ decay 4=25346
 Fe⁵⁶(n, n' γ), 1.37 MeV 4=12232
 Fe⁵⁷ 4=19474
 Fe⁵⁷, in α and γ -FeOOH, 14.4 line h.f.s. 4=22465
 Fe⁵⁷ 14.4 keV level, and E2 4=25307
 Fr²²³ 4=17074
 Ga⁶⁹ excited level decay 4=9403
 Ga⁷¹, from 4 hr decay of Zn⁷¹, meas. 4=19721
 Ga⁷² decay, 3680 $\pm$ 40 keV line 4=22066
 Ga⁷², relative intensities of lines 4=3603
 from Gd(n, γ) reaction 4=6239
 Gd from (n, γ) reaction, use for quantitative anal. 4=13756
 Gd, neutron capture $\gamma < 1.5$ MeV from Gd₂O₃ 4=25412
 Gd¹⁵³ decay 4=30326
 Gd¹⁵⁷ from β -decay of Eu¹⁵⁷ 4=19731
 Gd¹⁵⁸ $\rightarrow$ Tb¹⁵⁸ decay internal conversion 4=6292
 Hf, soft γ -rays from neutron capture 4=3680
 Hf¹⁷², conversion electrons, 0 to 120 keV 4=9417
 Hf¹⁷⁸ from Lu¹⁷⁸ decay 4=25356
 Hg(n, γ), resonance neutron capture 4=6363
 Hg^{197, 197m}, produced by He-bombardments 4=9422
 Ho, resulting from (n, γ) reaction 4=12246
 Ho¹⁶⁵, deformed, Coulomb excited 4=22043
 Ho¹⁶⁶, from neutron capture 4=1022
 Ho¹⁶⁶ 1380–80 keV decay 4=12157
 Ho¹⁶⁹ decay 4=9454
 In¹¹⁵(n, γ)In¹¹⁵, γ -ray spectrum 4=6361
 In¹¹⁷, from β -decay of Cd¹¹⁷ 4=19726
 In¹²⁴ 4=27994
 Ir¹⁹² decay, relative intensities, 136 to 613 keV 4=9458
 Ir¹⁹⁴, 860 to 2130 keV, relative intensities 4=9420
 K³⁹(p, γ)Ca⁴⁰, 6–15 MeV, near giant resonance 4=25399

Gamma-ray spectra—contd

- K³⁹ (p, γ) Ca⁴⁰, rel. to giant dipole resonance 4=15143
 K^{39,41} (p, γ) Ca^{40,42}, 1050-1200 keV, new resonances 4=9513
 Kr⁷⁹ decay single and coincidence, and Br⁷⁹ levels 4=12148
 Kr⁸², cascades, following Br⁸² decay 4=22030
 Kr⁹⁰, 33 sec fission product decay 4=22067
 La, resulting from (n, γ) reaction 4=12246
 La, soft γ -rays from neutron capture 4=3680
 Li, meas., after Li + n interaction 4=12133
 Li⁷ (p, α) He⁴ rel. to Be⁸ new energy levels 4=22007
 Li⁷ (p, γ) Be⁸, rel. to giant dipole resonance 4=15143
 Li⁷ (p, γ) Be⁸, to 3 MeV, transitions to ground and first excited states 4=1075
 Lu^{174m} 4=6242
 Lu¹⁷⁷, decay 4=12158
 Mg, meas., after Mg + n interaction 4=12133
 Mg²⁴ (n, α) γ 1.24 MeV 4=12232
 Mo, resulting from (n, γ) reaction 4=12246
 Mo⁹⁶, multipolarities, following Tc⁹⁶ decay 4=30324
 N¹⁴, e.m. transitions 4=17027
 N¹⁴, e.m. transitions, by mag. pair spectrometer 4=1009
 N¹⁴ (p, γ), 800 MeV, non-resonant radiation 4=9507
 N¹⁴, rel. to 10.43 MeV state 4=17025
 N¹⁵ (p, γ) O¹⁶, 4 to 14.4 MeV, rel. to giant dipole resonance 4=15144
 N¹⁵ (p, γ) O¹⁶, transitions to O¹⁶ 6.06 MeV level 4=6222
 N¹⁶ decay 4=9446
 Na²³ (p, γ) Mg²⁴, 3.8 to 11.6 MeV 4=9511
 Nb, resulting from (n, γ) reaction 4=12246
 Nd, soft γ -rays from neutron capture 4=3680
 Np²³⁷ from α decay of Am²⁴¹, low energy 4=25328
 O, meas., after O + n interaction 4=12133
 O¹⁶ (α , γ) O¹⁶, 8.9 to 9.9 MeV 4=22187
 O¹⁶ (α , γ) Ne²⁰, 4.8 to 9.9 MeV 4=22187
 O¹⁸, 3.92 and 4.45 MeV states de-excit. 4=22014
 Os, soft γ -rays from neutron capture 4=3680
 P³⁰, fed by Si²⁹ (p, γ) 4=15212
 Pb²⁰⁷, 570 keV $\frac{5}{2}^-$ state decay, rel. to magnetic moment 4=25323
 Pb²¹⁰, from β -decay of Tl²¹⁰ 4=17105
 Pd¹⁰⁰ decay 4=22033
 Pd¹⁰⁰ and Rh¹⁰⁰ decay, rel. to Ru¹⁰⁰ levels 4=22032
 Pm¹⁴⁸, rel. to Sm¹⁴⁸ 1.46 MeV level 4=17099
 Pm¹⁴⁹ from β -decay of Nd¹⁴⁹ 4=17098
 Pm¹⁵¹, absence of 1.5 MeV γ -transition 4=6289
 Pm¹⁵¹ decay, γ - β coincidences 4=12186
 Po²¹⁰, in electron-capture decay of At²¹⁰ 4=6297
 of Po-Be neutron source, C¹² de-excitation γ -rays 4=19704
 Pr, soft γ -rays from neutron capture 4=3680
 Pr¹⁴¹ (n, γ), radiative capture, 3-7.5 MeV 4=3681
 Pr¹⁴² decay, γ - β correl. 4=22074
 Pr¹⁴³ decay 4=9410
 Pt (n, γ), resonance neutron capture 4=6363
 Pt¹⁸⁸ decay, γ - β coincidences 4=12176
 Pu^{238,240}, low energy 4=25329
 Ra dispersion halos near ore deposits 4=2182
 Rb⁸⁶ decay, γ - β directional correlation 4=9449
 Re¹⁸⁶, 631-137 keV decay 4=12157
 Re¹⁸⁷, 552-134 and 72-134 keV angular correl. 4=9419
 Re¹⁸⁹ 4=3618
 Rh¹⁰³ (n, γ) 4=22139
 Rh¹⁰⁴ 4=17060
 S³³ (p, γ) Cl³⁴, 300-1300 keV, branchings in Cl³⁴ 4=28031
 Sb¹²⁴ 4=22037
 Sb¹²⁴, rel. to levels and transitions 4=17061
 Sc^{44,44m}, produced by He-bombardments 4=9422
 Sc⁴⁵, 1.660 MeV level 4=6278
 Se⁷⁵ decay 4=9411
 Se^{76,78}, Coulomb excited state 4=22029
 Si³⁰ (p, γ) P³¹, 1514 to 3435 keV 4=12224
 Sm from (n, γ) reaction, use for quantitative anal. 4=13756
 Sm, neutron capture γ < 1.5 MeV from Sm₂O₃ 4=25412
 Sm¹⁴⁵ decay 4=9411
 Sm¹⁴⁹, 22.5 keV transition, Mössbauer effect 4=17068
 Sm¹⁴⁹ (n, γ), 585-440 keV cascade 4=22041
 Sm¹⁵², excited states 4=22077
 Sm¹⁵², 2⁺ and 4⁺ rotational level decays 4=22042

Gamma-ray spectra—contd

- Sn¹¹⁵, isomeric state double cascade decay 4=22035
 Sn¹¹⁹ 4=19474
 Sr^{85,85m} after positron decay of Y⁸⁵ 4=6281
 Sr⁹⁰, from decay of Rb⁹⁰ 4=22068
 Ta¹⁸¹, γ - γ angular correl., 133-482 keV 4=9388
 Th¹⁵⁸, deformed, Coulomb excited 4=22043
 Tc¹⁰³⁻⁵, in beta-decay 4=3606
 Te¹²², on positron decay of I¹²² 4=6285
 Th²³², Coulomb excited 4=22043
 Ti⁴⁶, γ - γ correl. attenuation 4=12146
 Ti⁵¹, meas. rel. to unified model 4=6226
 Tm¹⁶⁶ decay 4=12188
 Tm¹⁶⁷, and decay scheme 4=1027
 Tm¹⁶⁸, deformed, Coulomb excited 4=22043
 Tm¹⁷³ 4=1051
 Tu, resulting from (n, γ) reaction 4=12246
 U²³⁸, Coulomb excited 4=22043
 V⁵¹ 4=1017
 W (n, γ), resonance neutron capture 4=6363
 W, soft γ -rays from neutron capture 4=3680
 Y^{87,87m}, produced by He-bombardments 4=9422
 Y⁸⁸ decay, rel. to Sr⁸⁸ levels 4=25348
 Y¹⁷³ 4=6295
 Yb¹⁷⁷ 4=19476
 Yb¹⁷⁷ 1.9hr β decay 4=12159
 Zn⁷¹ $\rightarrow$ Ga⁷¹ decay 4=22065
 Zr^{88,87,89} 4=22069

Gamma-ray spectrometers

 InSb, radiation damage in p-type, recovery 4=10059
 InSb, semicond. props., recovery on heating 4=6976
 KCl, chem. effects of Cl^{35} (n, α) P^{32} 4=7777
 KCl, density, expt. 4=10015
 KCl, effect on resistance to deformation and destruction 4=10352
 KCl, irradi., rel. between colour centres and dislocations 4=10005
 KCl, Harshaw, colouration, luminescence spectra, scatt., vars. in different samples 4=1525
 KNO_3 , luminescence 4=10217

Gamma-rays—contd

effects—contd

- KNO₃, paramagnetic species 4=26423
 3K₂S₂O₈·5H₂O, e.s.r. liquid N₂ temp. 4=1887
 LiF, effect on resistance to deformation and destruction 4=10352
 LiF, expansion, F- and 450- absorption 4=4099
 LiF, low-temp. thermoluminescence meas. 4=20482
 LiF, vacancy formation by reactor irradi. 4=9946
 MgO, chemisorption of O₂, surface centre, e.s.r. obs. 4=23600
 MgO, electrical conductivity 4=28617
 Na₂S₂O₃, Na₂S₂O₄·5H₂O, e.s.r., liquid N₂ temp. 4=1887
 Na²³ in NaCl, n.m.r. 4=4432
 NaNO₂, e.s.r. 4=13329
 NaNO₂, single crystals, dielec. props. 4=22777
 NaNO₂, spectrum, i.r., var. polarization directions 4=15599
 Na₂SO₃·5H₂O, e.s.r. 4=7337
 Pb(NO₃)₂, chemical damage, annealing effect of crystal imperfections 4=4714
 Pt, work function, in O, var. press. 4=8797
 Se rectifier 4=4184
 Si, damage and annealing processes 4=15509
 Si, effects used to locate acceptor levels 4=4101
 Si(γ, n) in solid, displacement radiation effect of recoils 4=10016
 Si, Hall effect meas. of radiation damage and annealing 4=15508
 Si semiconductor reverse biased junctions, reduction by surface passivation 4=20388
 Si transistors, glass-coated 4=17510
 Sr(NO₃)₂, e.s.r. of spin ½ centres meas. 4=20602
 Ta₂O₅, induced elec. cond., time var. 4=20402
 Zn, effect on tensile strength 4=28989

internal conversion

- See also Beta-ray spectra, conversion electrons.
 angular correl. theory 4=25286
 conversion coeff. meas., β-γ coincidence method 4=9423
 crystal lattice vibr. effects on ratio and escape 4=6268
 effect of nuclear struct., review 4=12132
 electron correl. parameters, mixed multipole 4=15142
 electron directional correl., interference particle parameter, sign 4=9434
 electrons in pairs, ang. correl. theory 4=15141
 even deformed nuclei, 2⁺ → 0⁺ transitions, internal conversion studies 4=9382
 K, L capture ratio, corr. for bound electron exchange 4=15140
 K-shell, for elec. multipole, Born approx. theory 4=6500
 M-subshell coeffs., empirical screening correction 4=25285
 in nuclear elec. monopole transitions 4=25284
 pair conversion coeff., effect of screening 4=6269
 pair prod., ang. distrib., and transition multipole mixture parameters 4=17085
 rare earths, K-conversion coeffs. of E2 transitions 4=6212
 strongly forbidden transitions, electron factors, analytic expressions 4=19664
 X-ray emission, Kα, by atomic transitions 4=9665
 Ag^{106m} decay 4=22070
 Au¹⁹⁴ decay to Pt¹⁹⁴ 4=27982
 Bi²⁰⁵ 4=3621
 C¹³(p, γ)N¹⁴, rel. to N¹⁴ 10.43 MeV state 4=17025
 Ce^{138m} 4=22039
 Co⁵⁹ from decay of Fe⁵⁹ 4=27991
 Cm, L X-ray fluorescence yield meas. 4=15307
 Cr⁵⁴, K-coeff. 4=6232
 Er¹⁶⁶, K, and 2137, 2165 MeV levels parity 4=22044
 Eu¹⁴⁶ decay scheme to Sm¹⁴⁶ 4=22076
 Gd 4=6362
 Gd¹⁵⁹ → Tb¹⁵⁹ decay, spectrum 4=6292
 Hg¹⁹⁸, K conversion coeff. 4=30315
 Hg¹⁹⁸, K-conversion coeff. of 412 keV E2 transition 4=3583
 Ho¹⁶⁵, 279 keV, K-coeff. meas. 4=25319
 In^{114m}, K/L ratio 4=3607
 In¹¹⁶, K-shell, from decay of Cd¹¹⁶, ^{116m} 4=19692
 Kr⁷⁸ decay, K 4=12148
 Lu¹⁷⁵, 123 keV transition, parity nonconservation 4=9347
 Mo^{93m}, total conversion coeff. of 0.265 MeV transition 4=3569
 Nb⁹³ 4=1044

Gamma-rays—contd

internal conversion—contd

- Np²³⁷ from α decay of Am²⁴¹, energies and intensities 4=25328
 O¹⁶ 4=6218
 Pb²⁰⁵, M4 isomerism 4=30316
 Pb²¹²(ThB) 4=3607
 Pm¹⁴⁹, 114 keV transition, K-conversion coeff. 4=17098
 Pm¹⁵¹ decay 4=12186
 Pr¹⁴¹, K-coeff. 4=6232
 Pu^{238,240}, low energy 4=25329
 Ra, L X-ray fluorescence yield meas. 4=15307
 Ra²²⁶ → Rn²²², 187 keV coeffs. 4=3623
 Sm¹⁵¹ 4=3578
 Sn¹¹⁵ 4=22035
 Sn¹¹⁵, total coeff. and [K/(L + M + ...)]_{m4} 4=22036
 Ta¹⁷⁹, 30.7 keV conversion coefficient 4=6243
 Tc⁹⁴, Tc^{m94}, Mo⁹⁴ energy levels 4=30323
 Th, L X-ray fluorescence yield meas. 4=15307
 Tl²⁰³, electron polariz., following Hg²⁰³ beta-decay 4=1053
 Tl²⁰³, nuclear struct. effects 4=19736
 Tl²⁰³, 279 keV transition, K-conversion coeff. 4=3620
 Tl²⁰³, K-electron polarization after β-decay 4=6200
 Tl¹⁹⁸, 39.85 keV transition 4=1028
 Tm¹⁶⁷, 208 and 532 keV transitions, multipole orders 4=1076
 Tm¹⁶⁹, 8.42 keV transition, total conversion coeff. 4=19700
 U, L X-ray fluorescence yield meas. 4=15307
 W¹⁸², internal conversion coefficients 4=15167
- scattering**
 See also Compton effect.
 atomic, deviations from Klein—Nishina values 4=19985
 boundary, air and Fe, C, concrete or soil 4=872
 Compton, multiple, flat source, calc. 4=16848
 Compton scatt. on spin ½ systems, semi-phenomenological description 4=11958
 by concrete 4=3372
 concrete, albedo meas., 0.66 MeV 4=19467
 concrete, back-scatt., var. with thickness, angles 4=3371
 crystal diffr. maxima, meas. using Mossbauer source 4=13570
 crystals, nuclear resonant and electronic, theory 4=20166
 crystals, Rayleigh and nuclear resonant, interference 4=20165
 depth var., spectrum 4=9156
 dose from unidirectional source, var. ang., dist. 4=25056
 effect of multiple scatt. on absorber efficiency, H₂O, Al, Fe 4=9157
 with electron pair production, ang. and energy distrib. 4=17114
 high-energy quanta, on photon beams, laser-produced 4=9154
 interference between Rayleigh and nuclear reson., in Fe⁵⁷, 14 keV 4=17113
 from (n, γ), γ self absorpt. and level meas. 4=6349
 Monte Carlo calcs. for refl. from concrete 4=16849
 nuclei, study of bound highly-excited states 4=9386
 passage through plane-parallel plate, theory 4=21822
 Rayleigh scattering, large-angle, at 662 keV 4=6006
 Rayleigh, Z var., 662 keV 4=17112
 sand, depth var., spectrum, from Cr⁵¹ 4=9156
 in water, from Cs¹³⁷, interpolated energy distrib. 4=27824
 Ag isomers, excitation with bremsstrahlung 4=3631
 Ag¹⁰⁷, inelastic, ratio with (γ, n) cross-section 4=6315
 Al²⁷, 2.21 MeV level, reson. scatt. of bremsstrahlung, ang. distrib., and spin and parity 4=6224
 As⁷⁵, resonance scatt. 4=25369
 Au, giant resonances 4=19745
 Bi, elastic, for neutron-capture γ-rays 4=3630
 C¹², absorption meas. in giant resonance region 4=9476
 Ce¹⁴⁰, reson. of La¹⁴⁰ 159 keV γ's, and La¹⁴⁰ lifetime 4=22103
 Cs¹³⁷ and Co⁶⁰ point sources in Fe, radiation fields 4=6009
 Cu⁶⁵, 1.114 MeV level, nuclear resonance fluorescence 4=25309
 Cu⁶⁵, resonance scatt., levels lifetimes meas. 4=1019
 Er, giant resonances 4=19745

SUBJECT INDEX

Gamma-rays — contd
scattering — contd

- Fe, albedo meas., 0.66 MeV 4=19467
 Fe, back-scatt., var. with thickness, angles 4=3371
 Fe crystal, nuclear resonant elastic, Debye-Waller factor meas. 4=20167
 Fe, from Cs^{137} unidirectional source, spectrum, ang. distrib. 4=9155
 Fe⁵⁷, coherent resonant recoil-free, using total refl. 4=3964
 Fe⁵⁷, 14keV, interference between Rayleigh and nuclear reson. 4=17113
 Fe⁵⁷, 14 keV, total reflection near nuclear anomalous dispersion 4=17115
 Hg, elastic, for neutron-capture γ -rays 4=3630
 Hg²⁰² (n, γ) γ self absorpt. and 5.4 MeV level meas. 4=6349
 Ho, giant resonances 4=19745
 LiF diffr. maxima, meas. using Mossbauer source 4=13570
 Nd¹⁴⁴, resonant elastic cross-section 4=6233
 Pb, albedo meas., 0.66 MeV 4=19467
 Pb, back-scatt., var. with thickness, angles 4=3371
 Pb, elastic, for neutron-capture γ -rays 4=3630
 Pb, elastic, 9 MeV, differential cross-section 4=6316
 Pb, polarization ~1 MeV, reconciliation with theory 4=22105
 Pb²⁰⁸, and 5.2 MeV level meas. 4=6349
 Pb²⁰⁸, 7.28 MeV, from $\text{Fe}^{56}(n, \gamma)\text{Fe}^{57}$ 4=12197
 Re¹⁸⁷, resonance scatt. 4=25369
 Sb¹²³, resonance scatt. 4=25369
 Ta, elastic, for neutron-capture γ -rays 4=3630
 Ta, giant resonances 4=19745
 Ti⁴⁸, resonance scatt., levels lifetimes meas. 4=1019
 U, elastic, 9 MeV, differential cross-sections 4=6316

Garnets

See also Ferrites.

- crystal field of Yb³⁺ in garnets 4=25806
 elastic constants-183° to 300° C 4=7427
 ferrimagnetic resonance in disks at L-band freqs. 4=23038
 ferrites, hydrothermal etch figures 4=2017
 magnetic and crystallographic data of ferrimagnetic garnets containing Sb⁵⁺ 4=13233
 magnetic and crystallographic data for ferrimagnetic garnets containing V⁵⁺ 4=14234
 magnetic props. rel. to prep., comp., temp. and applied field freq. 4=26332
 rare earth Al garnets, mag. props. of rare earth Kramers ions 4=26342
 rare earth Fe garnets, magnetic exchange field 4=28848
 rare earth Ga garnets, mag. props. of rare earth Kramers ions 4=26342
 spin-lattice relaxation of paramag. ions 4=26399
 Al₂O₃·3CaO·6H₂O, position of H atoms 4=4594
 {Bi_{1-2x}Ca_{2x}}[Fe₂(Fe_{3-x}V_x)O₁₂], single-crystal growth 4=29043
 Fe-Y-La, prep. and props. 4=26679
 Gd³⁺ e.s.r., rel. to GdIG anisotropy 4=26398
 Dy₃Al₅O₁₂, antiferromag. ordering 4=20566
 Eu ferrite garnet, magneto-optical props. of Eu³⁺ 4=17563
 3Fe₂O₃, 2Al₂O₃, 3Y₂O₃ effect of temp. on resonance line 4=23039
 Tm, paramag. reson. and relaxation of Fe impurities 4=20593
 Y-, single crystals, growth by modified pulling technique 4=13549
 YAl, YGa and YGd garnets, Nd-doped, laser oscillations 4=19309
 YFe garnet, exchange interactions 4=28849
 YFe garnet, face morphology 4=10458
 YFe garnet, ferromag. reson., magnetostatic modes instability 4=26361
 YFe garnet, Sb⁵⁺ substituted for Fe³⁺, mag. moment var., Curie temp., and crystallography 4=26344
 YFe, Ga-substituted, n.m.r. of Ga⁶⁹ and Ga⁷¹ 4=28897
 Y₃Fe_{5-x}Al₂O₁₂, mag. spectra, 0.1-3000 Mc/s 4=30724
 Y₃Fe_{5-x}Co_{2x/2}Ge_{x/2}O₁₂, ferromag. resonance 4=28864
 Y_{3-x}Gd_xFe₅O₁₂, mag. spectra, 0.1-3000 Mc/s 4=30724

Gas analysis

Gas-discharge tubes

See also Counters; Ion sources.

- book, vacuum and electronics, applied physics 4=8581
 cathodes, electron emission under accelerating field 4=475
 cold-cathode glow tube, construction 4=18721
 cold cathode, review 4=14582
 duplasmatron, annular, magnetic field topography, influence in discharge fixing 4=27498
 flash photolysis lamp, h.v. 4=24357
 with ignitor, dark discharge behaviour 4=29880
 with ignitor, ignition phenomena 4=29879
 with ignitor, Hg vapour press. var. after cathode spot initiation 4=29881
 microwave discharge tube, liq. helium cooled 4=14583
 Penning cold-cathode, electron current at exit 4=14584
 positive column, potential gradient, var. with gas, pressure, radius and current 4=472
 waveguide cell for plasma afterglow meas. 4=5572
 Ar, for pumping ruby lasers 4=14955
 H, breakdown as fast pulsed current and light source 4=18652
 H, super-high frequency discharges in long tubes 4=24607
 He, Schueler lamp, improved electrode 4=320
 Hg, l.p., high power, Raman spectrum light source 4=319
 N, sorption speed during electron impact activation 4=18295
 N₂ light source, fast 4=24359
 Xe, density and temp. gradient meas. 4=14588
 Xe flash light source, spectrophotometry 4=311
 Xe flashtube opacity, direct meas. 4=27308
 Xe flashtubes, thermal radiation characteristics 4=14442
 Xe, temperature meas., by spectral line self reversal 4=18786-7

Gases

See also Kinetic theory, gases.

- absorption and evolution, at const. press., meas. by automatic apparatus 4=13701
 absorption, by liquid in laminar flow 4=8161
 acoustic wave prod. by osc. u.v. light source 4=16150
 adsorpt. on Ge, kinetics 4=20362
 adsorption, data correl., low press., supercrit. temps. 4=29192
 adsorption, supersaturation phenomena and two-dimensional condensation 4=7721
 binary, adsorption equilibrium parameters 4=15827
 binary mixtures, molar heats, choice of eqn. of state 4=14210
 binary monatomic mixture, transport props., pseudo pure gas 4=16140
 Boltzmann eqn. collision tem., applications 4=11235
 in chamber, dynamic press. changes, for free convection 4=27203
 chromatograph, programmed preparative-scale 4=23693
 compressor, high pressure, calibration 4=14191
 conductivities, thermal, elec., high temp. review 4=236
 containing molecules, dissipative processes, theory 4=21172
 cooling of Pt filaments 4=10034
 damping of moving body, long m.f.p., calc. 4=14229
 density distribution, meas. in low pressure high temp. gas 4=14198
 diatomic, neutron scattering, mass tensor approx. 4=2735
 diatomic, vibr. eqn. of relax., with dissoc. 4=28164
 dielectric props., nonlinearity 4=194
 dielectric theory, use of Thiede semi-invariants 4=8254
 dosimetry using ionization meas. 4=24952
 dynamics equations, approx. integration method 4=21166
 electric charge mobility, meas. using pulse generator 4=18650
 electron diff. study, scatt. chamber 4=5713
 electron diffusion in elec. field, spatial energy distrib. 4=5252
 electron drift velocities, inert and moderator gas mixtures 4=24274
 electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
 electron velocity distrib. 4=5251
 energy transfer, by radiation and conduction, with variable props. 4=29790

Gases — contd

- evolution rate from soln., measurement 4=23637
 expanding beam, condensation embryos form 4=25794
 expansion of gas cloud in presence of ambient gas 4=14202
 fissionable, pressure wave generation by neutron irradiation 4=18332
 flow, relaxing, past slender bodies 4=8228
 γ , temp. variation, student experiment 4=27217
 Gibb's statistic of isotope systems 4=2721
 hexadecapolar, statistical mechanics 4=24260
 ideal monatomic, eqn. of motion, invariant transformation 4=8232
 immiscibility He—Xe conditions obs. 4=5215
 imperfect, sonic absorption 4=8251
 imperfect, u.s. absorption 4=8252
 interferometry, Fabry—Perot, gas pressure regulator 4=8447
 ionised high temp. gas mixtures, composition and thermodynamic props. 4=24634
 ionized, thermal conductivity 4=18807
 ionization rate and collision freq., meas. by microwaves 4=24545
 ionized, propagation of longitudinal waves 4=8610
 ions, recombination, rates and mechanism 4=8629
 kinetic model with internal degrees of freedom 4=11227
 layer, atomic excited states, equilib. population in thermal equilib. 4=19972
 light scattering, ruby-laser beam 4=8456
 magnetogasdynamics, compressible channel flow 4=24817
 masses, oscillations, radial and nonradial, general variational principle 4=10781
 masses, radial and nonradial oscill., variational princ. 4=17971
 Milne's problem, energy-dependent, light gases 4=19895
 mixture, two-temperature classical system, relaxation time 4=18236
 mixtures, monatomic, thermal cond. rel. to viscosity 4=16141
 mixtures, slightly ionized, composition rel. to mag. fld. and Coulomb interaction 4=14568
 mixtures, thermodynamic properties rel. to ionization and dissociation 4=21456
 moderately dense, transport theory 4=8239
 mono- and diatomic, cylindrical shock waves, homology solution, numerical calc. 4=14254
 n.m.r., electric field effect 4=18252
 neutral, interface with plasma, coupling of m. h. d. to e. m. and acoustic waves 4=29912
 neutral, run-away electrons, theory and expt. 4=18251
 nonequilibrium, energy and momentum exchange 4=222
 optics, non-linear effects, calc. 4=240-1
 organic and inorganic, absolute Raman intensities and depolarization ratios 4=12502
 periodic disturbances in polyatomic gases 4=18247
 point explosion, calc. 4=14266
 positron annihilation, polyatomic gases, meas. 4=11259
 pressure regulator 4=16132
 properties, thermal and elec., from obs. in arc discharge 4=237
 pump, Toepler, with built-in gas quant. by meter 4=21165
 quantum statistics, with Coulomb interaction 4=11226
 radiation cooling after shock heating 4=18482
 radioactivity meas., C^{14} and S^{35} labelled, ionization chamber 4=17080
 Rayleigh and Lorentz, hard-sphere, relax. 4=11108
 real, dynamics, shock waves theory 4=2767
 relativistic, perfect 4=18235
 relaxation meas. by shock recompression near obstacle 4=14212
 residual in vacuum systems, analysis by desorption spectra 4=18306
 separation of mixtures in supersonic jets 4=5222
 shock-heated, current-voltage characteristics 4=14222
 shock waves, guided, attenuation 4=21226
 solubility, heat of soln. and partial molar vol. in nonpolar solvents 4=5155
 solubility, in liquids, radioactive tracer meas. 4=8172
 solubility meas., in liquids, slightly soluble gases 4=8171
 sound velocity meas., phase comparison technique 4=8354
 specific heat, condensed gases, high press. meas. 4=16283

Gases—contd

- spectra, electronic, excited by collisions with Ar after-glow 4=18725
 spontaneous emission probability meas. 4=20070
 temp. meas., industrial, of high vel. gases 4=27360
 thermal conductivity, use in chemical anal. 4=17875
 thermal conductivity, gas mixtures 4=345
 thermal conductivity meas., wide temp. and pressure ranges 4=18448
 thermal diffusion factors and mutual diffusion coeffs., composition dependence 4=11239
 thermodynamic functions and equilibrium constants, corrections, high temp. 4=24256
 transport properties, collision integral calc. 4=18240
 transport properties, theory 4=5234
 two-component, collective sound mode 4=18248
 ultra-relativistic, conservation of impulse energy eqn. 4=11029
 vacuum u.v. cross-sections and absorption 4=11250
 valve for 6000 atm operation 4=20998
 vapour-gas mixture, supersaturations, constant and uniform, new methods 4=5463
 velocity distrib., from electron optical study at low pressures 4=8229
 vibrational relax., kinetic eqn. 4=11245
 wave-front velo., viscous and heat conducting gases 4=8233
 X-ray scatt. for finite-sized atoms and mols. 4=2733
 X-ray scattering, intensity calc., accuracy 4=16112
 Ar, transport props. and interaction of atoms 4=18240

Geiger counters

See Counters, Geiger.

Gelatin

- effect on radiolysis of NiSO_4 solns. 4=7775
 film and dyestuff complex films, semiconduction 4=22731

Gels

- agar-agar, diffusion meas., by I^{131} tracer 4=10666
 agar and gelatin, sedimentation 4=17873
 for beta-ray scintillation counting, >0.5 MeV 4=25068
 diffusion meas., by radioactive tracer 4=10666
 ionic self-diffusion, measurement method 4=2667
 montmorillonite, refractive index var. in different directions 4=15853
 polyvinyl alcohol film, rel. to heat treatment and u.v. irradiation 4=10664
 silica gels, n.m.r. study of water contained 4=4720

Geochemistry

See Earth, composition.

Geochronology

See Earth, age; Radioactive dating.

Geodesy

See also Gravity.

- adsorption of O, I, H, P, electron diffraction study 4=20824
- atom, by Hartree-Fock self-consist. field 4=19956
- atom, p^2 config., electronic g factor meas. 4=15278
- atom, GeI, correl. between obs. wavelength shifts and predicted Stark effect 4=15277
- atomic spectrum, Ge I 4=28123
- bond bending under stress 4=28305
- breakdown, elec., var. compression stress, 5.2°K 4=20365
- carrier radiative capture by impurity atoms 4=30540
- carriers, hot, and nonlinear deviations from thermal equilb. for high impulse currents 4=6941
- charge carrier recomb., Auger effect mass-action const. 4=9890
- concentration of Sb in equil. with Bi-Sb alloy vapour 4=1513
- conductivity, elec., acceptor conc. reduction by cleanliness improvement 4=6965
- conductivity, elec., hot, carrier injection, high field mobility 4=4158
- conductivity, thermal, crystal lattice imperfections, temp. var. 4=4002
- crystal growth, epitaxial, from vapour, effect of elec. field 4=10488
- crystal growth from gaseous phase, using 2nd component 4=10471
- crystal growth, irregular, due to supercooling 4=4547
- crystal growth, pulled, temp. distrib. meas. 4=13532
- crystal growth, transition detection, by auto-decoration 4=2041
- crystal, hole lifetime, temp. var., trapping effects after γ irradiation, n-type 4=6781
- crystal point defects, methods of prod., mobility 4=30553
- crystal structure, dense forms, high pressure treatment 4=23471
- crystal surface oxidation, selective 4=30896
- crystallized from Ge-In-Sb liq. alloy, impurity content 4=12737
- crystals, bent, anomalous transmission of X-rays 4=26195-6
- cyclotron resonance, saturation, in degenerate zone, effect on nuclear reson. 4=28430
- cyclotron reson. line broadening 4=20256
- cyclotron reson., 2°K, light intensity var. 4=22553
- Debye-Waller factor interpretation 4=3982
- defects produced by γ -rays 4=1538
- deformation by rolling, 700°-800°C 4=23153
- deformed, dislocation and vacancy form, and interaction 4=28470

Germanium—contd

- de Haas-Van Alphen magnetoresistance oscs., 4.2°K 4=28561
- diffusion and configuration of O 4=28485
- diffusion, dislocations effect 4=25961
- diffusion of crystal vacancies, var. dislocation density 4=13480
- diffusion of He 4=28490
- diffusion of Sb and As rel. to Sb and As surface concs. 4=30574
- dislocation loops, on bending, screw with super jogs 4=12761
- dislocations, annealing effects 4=1485
- dislocations, geometry after deformation 4=6849
- dislocations in webs 4=12749
- dislocations, observation method 4=25946
- donor states, shallow, relativistic corrections 4=9898
- electrodes, photosensitivity rel. to quantum energy, erratum 4=22798
- electron energy-loss line shape 4=28437
- electron mobility, var. with elec. field and phonons 4=9835
- electron on donor centre, phonon interact. 4=17393
- electron-phonon scattering in n-type, uncertainty principle 4=15444
- e.m. wave, absorption, 0°K, by hopping, calc. 4=30690
- e. m. wave propag., TE₀₁, calc. for exp. decaying carrier density 4=28689
- energy bands, detailed calc., pseudopotential method 4=20247
- energy levels, produced by fast-neutron bombardment 4=1433
- epitaxial, crystallographic and elec. props. 4=4152
- epitaxial growth, direct obs. 4=4564
- epitaxial growth, using water vapour 4=4561
- epitaxial layers, growth rate and morphology rel. to doping 4=7573
- etching, by GeI₄ vapour mixtures, meas. 4=15750
- etching, in HF, HNO₃, H₂O and HC₂H₃O₂ solns. 4=15751
- exchange corrections to binding energy 4=28425
- faces, Auger-type interaction with low energy ion beam 4=19093
- Faraday effect 4=17565
- Faraday effect, interband, in strong. mag. field 4=1731
- Faraday effect theory for direct transition 4=7104
- film, amorphous, irradiation by neutrons and Xe⁺ ions, displacement spike recrystn. 4=17461
- films, epitaxial, formation conditions 4=7574
- films, epitaxial, formation mechanism, iodide process 4=10485
- films, epitaxial growth on CaF₂ 4=10486
- films, etching is not necessary for low defects in growth 4=17844
- films for strain gauges 4=26502
- films on single-crystal substrates, formation, structure, elec. props. 4=20806
- film, on W, behaviour and desorption energy 4=15820
- films on W, field emission energy distrib. 4=8800
- films, single-crystal growth, microzone melting technique 4=2125
- films, sputtered, formation conditions rel. to structure 4=20807
- films, vacuum-deposited, prep. and props. 4=2123
- free carrier Voigt effect, anisotropic in n-type 4=15590
- fusion boundary of In, dislocation effect 4=25962
- γ -irrad., Sb-doped, annealing meas., two stages 4=28508
- grain boundary breakdown surface field effect 4=4155
- Grüneisen parameter, temp. depend., calc. 4=12657
- Hall effect, path length effects 4=17489
- Hall effect, 30 Gc/s, by coupled waveguides, and mobilities 4=20349
- hardness, micro, -200 to 1000°C, linear to exp. transition 4=13404
- hardness, purity depend., 0-600°C 4=15708
- heavily doped, energy depend. of absorpt. spectrum 4=26198
- heavily doped, reflectivity, heat treatment effect 4=7155
- highly-doped, i.r. absorpt. 4=26191
- impurities, Group V, ground-state splittings, optical meas. 4=28337
- impurities, interaction with dislocations, theory 4=12738
- interface with electrolyte, fast and slow surface states 4=7762

Germanium—contd

- lattice const. rel. to press., electronic band structure, elec., optical and defect props. 4=12895
 lattice thermal conductivity, analysis 4=6756
 lattice vibr., temp. depend. 100°-700°K meas. 4=9831
 layers, epitaxial, structural imperfections 4=30566
 luminescence, by electron bombardment 4=4298
 magnetic props. calc., from X-ray meas. of electron density 4=7216
 magneto-optical absorpt., crossed-field 4=20456
 magnetoresistance, anomalous, low temp. 4=6972
 magnetoresistance, impurity conduction 4=6966
 magnetoresistance, negative, 4.2°K 4=28556
 magnetoresistance, p-type, stress effects 4=10053
 meteorites, isotopic composition 4=2408
 microhardness anisotropy 4=30778
 microhardness, rel. to internal photoeffect 4=4463
 Mössbauer effect, of Fe⁵⁷, diff. between n and p type, and electron config. 4=15404
 neutron diffr. crystallography, 1.18 Å 4=15700
 neutron-irrad. damage region obs. by chemical etch 4=4060
 optical absorption up to 2.5 eV meas. 4=22860
 optical constants, theoretical interpretation 4=7135
 oscillations, relaxation, high resistivity rod 4=4156
 oxygen-defect complexes, irradiation effects, i. r. absorption study 4=6830
 p-type, acceptors binding energy, eigenfunctions and Zeeman effect 4=28706
 paramagnetic and cyclotron resonance 4=23042
 paramagnetic reson., ground state splitting rel. to deformation, mag. and elec. fields 4=15674-5
 phonon spectrum, critical point analysis 4=28355
 photoconductivity, nonlinear, 150°-300°C 4=30664
 photoconductivity and photomag. spectrum and surface charge geometry 4=22895
 photoconductivity, Zn doped, liquid He temps, impurity centre transitions 4=15569
 photoelectric emission, momentum conservation, polarization evidence 4=14748
 photoelectromagnetic effects, rel. to photoconductivity 4=26150
 photoreponse, temp. and bias effects in bicrystals 4=28645-6
 photosensitivity of electrodes rel. to quantum energy 4=12988
 photovoltaic effect, spectral sensitivity 4=26149
 piezoresistance, low temp., donor conc. var., four-valley model 4=20367
 piezoresistance, n-type, impurity conduction 4=12896
 piezoresistance of n- and p-type, review 4=26046-7
 plasma resonance absorpt. in n-type 4=25915
 plastic deform., dislocation and work-hardening 4=13405
 plastic deformation under dynamic compression 4=20655
 plastic deformation, yield analysis 4=10379
 plastic flow and strength 4=28950
 polarized i. r. prod. by double reflection on Ge 4=5400
 positron annihil. quanta, ang. distrib. meas. 4=12718
 precipitation of Cu, crystal dislocation density var., 450-570°C 4=13480
 refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
 reflectance in 2650-10 000 Å region, effect of surface damage 4=7133
 reflectance of evap. films 4=28690
 reflection, i. r., for polarization prod. 4=5401
 secondary electron emission rel. to photoelectric emission 4=8808
 segregation coefficients of Ga, In, Sb and Bi, concentration-dependence 4=7556
 semiconducting props., films epitaxial 4=20359
 semiconducting, surface recombination, air/vacuum cycling at high temps. 4=6974
 semiconducting surface recomb. velo., var. e.s. pot., in vacuo 4=20363
 semiconducting, surface recomb. velo., var. majority carrier density 4=22716
 shallow donors, e. s. r., stress effects 4=13318
 solubility of Au, 500 to 870°C, by elec. resistance 4=26539
 solubility, in ZnGeAs₂, CuGeP₃, X-ray thermal obs. 4=4496
 spectra, far-i. r., 7.5°K meas. 4=26197

Germanium—contd

- spectrum, absorpt., var. with Sn doping 4=17566
 spectrum of GeI, analysis 4=6473
 sputtering, ejection patterns, temp. depend., 0-350°C 4=6903
 sputtering, strong focusing without channelling 4=25980
 surface cond. relax., slow, temp., press., H₂O vapour var. 4=20358
 surface diffusion in Cu 4=22611
 surface growth and cleavage, electron microscope exam. by replica 4=13646
 surface props. from slow relax. of elec. cond. and work function in gases 4=22715
 surface recombination velo. validity criteria 4=22695
 surface, spreading of molten In over 4=4656
 surface, structure and carrier recombination, 100° to 700°C 4=7700
 surface structure and surface migration, study by ion and electron microscopy 4=29175
 surfaces treated with HF-H₂O₂ 4=9910
 thermal cond., effect of fast neutrons 4=4003
 thermal conductivity, 3°K to melting point, meas. and theory 4=17383
 thermal expansion, Grüneisen parameters, lattice vibrations 4=22507
 thermal expansion, rel. to impurities, 77° to 340°K 4=9862
 thermal shock behaviour rel. to conductivity 4=6763
 thermodynamics of impurity doping 4=1470
 3°K to melting point, meas. and theory 4=17383
 ultrasonic absorption, rel. to thermal parameters 4=6724
 u.s. wave propag. in n-type, meas. 4=20200
 Voigt effect, free carrier, anisotropic, in n-type 4=26194
 wave propag., u.s. 4=20201
 wedge, effect on transmittance meas., 2-15 μ 4=20443
 wetting and dissolution, by molten Ge, uniformity 4=4655
 wetting by In, and Ge surface energies, var. planes 4=13672
 whiskers and needle-shaped crystals, prep. and props. 4=10480
 work function, local changes due to dislocations 4=21553
 X-ray diffr., dynamical, meas. with fluoresc. radiation 4=10509
 X-ray K-absorption spectrum, fine structure 4=4258
 for X-ray monochromatization, use of dendrites 4=24777
 X-ray transmission, anomalous, rel. to impurities 4=2077
 X-ray transmission, anomalous, temp. depend. 4=20455
 in Al-10 wt% Zn alloys, interaction with vacancies, rel. to clustering 4=28994
 Ge:Cu and Ge:Hg as radiation detectors 4=361
 Ge-H₂SO₄ boundary capacity, var. with electrode pot. meas. 4=30904
 Ge I, electronic g factors and empirical intermediate coupling transformation 4=22303
 GeI, oscillator strengths meas. 4=25510
- Germanium compounds**
 germanate pyroxenes, high-pressure phase transformations 4=4509
 monogermane, digermane, and derivatives, proton resonance spectra 4=17315
 germlyl halides, i. r. spectra and fundamental vibrations 4=6593
 Ge-Al₂O₃ interface, elec. relax., slow 4=25994
 Ge-Br, chemical equilibria by weight-loss meas. 4=26596
 Ge⁷³(C¹³H₃)₄, nuclear coupling, Ge⁷³-p, C¹³H₃ 4=22425
 GeCl₄·(CH₃)₄, stretching vibr., i. r. absorpt. 4=30463
 Ge[Co₂]O₄, spinel, Néel temp. 4=13266
 Ge-Cu solid solution, distortions due to precipitation 4=2084
 Ge_{0.2}Cu_{1.2}Fe_{1.6}O₄, Jahn-Teller distortion, rel. to Mössbauer absorption, 430° and 510°C 4=7620
 Ge[Fe₂]O₄, spinel, Néel temp. 4=13266
 GeH₄ group, deform. freqs., symmetrical 4=3853
 GeH₄, indirect p-Ge spin coupling meas. 4=15382
 Ge halides, spectrochemical analysis of impurities 4=7792
 Ge₂H₆ and Ge₂D₆, i. r. and Raman spectra 4=9739
 Ge-I, chemical equilibria by weight-loss meas. 4=26596
 Ge-In, melting and alloying 4=4655
 Ge-Li, Li precipitation, electric-field-enhanced 4=10425
 Ge-Ni solid solution, distortions due to precipitation 4=2084
 GeNi₂O₄, antiferromagnetism, and atomic struct. 4=13267
 Ge[Ni₂]O₄, spinel, Néel temp. 4=13266
 Ge NiO₄, antiferromag. structure neutron diffr. study 4=28855

SUBJECT INDEX

Germanium compounds—contd

- GeO₂, amorphous and polycryst., e.s.r. of V 4=13330
 GeO₂, effect on Bi₂O₃ polymorphism 4=23253
 GeO₂ glass, densification in rigid state up to 80 kbar 4=13408
 GeO₂, molten, viscosity 1470°-1720°C 4=182
 GeO₂ oxide films, electrical characts. 4=28613
 GeO₂, quartz-like, crystal structure 4=23445
 10 Ge₂O₃, 90 M₂O₃ (M = Nb, Ta), tetragonal phase 4=26666
 GeS-S-SnS system, phase examination 4=26552
 Ge-Si alloy films, vapour growth on Ge 4=7554
 Ge-Si alloys, monocrystal growth, by vertical
 recryst. zone method 4=10472
 Ge-Si solid solutions, whiskers and needle-shaped
 crystals, prep. and props. 4=10480
 GeTe, nature of carriers 4=6975
 GeTe, optical props., 0.5-25 eV meas. 4=13042
 GeTe, superconductivity 4=18569
 GeTe vaporization chemical reactions 4=20828
 Ge tetrahalides, mean ampl. of vibr. 4=25673
 GeZnBaO₄, crystal struct. atomic, density, mag.
 susceptibility 4=23473

Glaciers

- rapid advance due to cavities containing water 4=23709

Glass

- See also Optical materials; Vitreous state.
 adsorption of H and D, at 20° and 17°K 4=13688
 adsorption of N₂ and Ar, using ultrahigh vac.
 techniques 4=7716
 adsorption of polyethylene-o-phthalate, var. with mol.
 rot. 4=10622
 alkali borate and borosilicate, B^{10,11} e.s.r. 4=7319
 alkali borate, with high alkali oxide content, γ -irrad.,
 e.s.r. studies 4=20582
 alkali-silicate of high u.v. transmission, absorpt. spectra
 of cations 4=7111
 α -radiation surface damage 4=12831
 aluminized ground, specular reflectance data giving
 height distrib. of surface irreg. 4=8384
 aluminosilicates, elec. cond. and diffusion
 coeffs. 4=1645
 balls, packed in liquid, u. s. absorption,
 500 kc/s-5 Mc/s 4=29711
 behaviour at high rates of heat transfer 4=30779
 borate glass, Nd³⁺-doped, laser oscills. 4=24924
 borates, glasses and compounds, high-temp. energy
 rels. 4=22516
 boric acid glass, aromatic-doped, X-irrad., e.s.r. 4=13742
 borosilicate, volume electrical conductivity 4=1648
 borosilicate, photoelectric emission induced by high intensity
 laser beam 4=14749
 for bubble chamber windows, opt. and mech.
 props. 4=5906
 bubble chamber windows, specification and
 testing 4=5911
 calcium aluminoborate, elec. conduction and O
 diffusion 4=28610
 calcium aluminosilicate, elec. conduction and O
 diffusion 4=28610
 carbonate system formation 4=23615
 Corning 9863, use in filter for u. v. spectrometry 4=27304
 creep expts., tensile, in glass fibre epoxy resin
 laminate 4=28951
 crystal growth, light and heat treatment effects 4=23340
 crystal growth, 600-1000°C, with TiO₂ catalyst 4=13534
 deformation processes at low temp., meas. 4=4683
 dielec. props. under very high pressure, activation
 energy var. 4=30645
 dielectric permittivity by immersion method 4=26098
 diffusion of Ag, self, molten 4=30575
 diffusion of water, conc. dependent 4=9987
 dihalide ions, trapped formation, by X-rays, u.v., optical
 study 4=4707
 double refraction, by ionic migration 4=30682
 Duran, Ne diffusion 4=4073
 dust, effect of γ -rays on elec. props. 4=22764
 dynamic press. meas. with resist. transducer 4=21225
 energy transfer from triplet state, review 4=17391
 etching depressions using HF 4=23985
 ethanol, e.s.r. of irrad.-induced electrons trapped
 at 77°K 4=4399
 excess entropy calc. liquid to solid transformation 4=27375
 for Faraday effect optical isolator 4=21318
 Glass—contd
 fibreglass, mechanical strength, rel. to temp. and
 time 4=1920
 fibres, mechanical strength, and heat treatment and
 etching 4=23154
 fibres, metal coating methods 4=23547
 fibres, X-ray scatt., low angles, due to internal reflection
 and surface scatt. 4=29200
 fission-frequent track registration and neutron
 detect. 4=19344
 fracture velocity meas. in different atmospheres 4=13406
 frosted surfaces, polarizing properties rel. to
 reflection 4=20458
 γ -radiation resistant 4=8405
 glass—crystal system, residual stresses from transition
 temp. 4=23099
 growth spirals after etching 4=26614
 heavy atom distribution, by X-ray investigation 4=4686
 high strength, prodn. and developments 4=29201
 hole prod., v. small, by sand blasting 4=23992
 homogeneity, evaluation using mirror system 4=29738
 inert gases, ionically pumped, thermal recovery 4=21205
 infrared transmitting, high temp. 4=306
 inorganic, Fe⁵⁷ Mössbauer absorption 4=20168
 laser, La-Ba-Th-borate, Nd doped, 4F_{3/2} → 4I_{13/2} 4=14948
 laser materials, preparation 4=24908
 laser, Nd, fibre, sun pumped 4=27701
 layers, positively charged, secondary electron
 emission 4=29967
 light scattering coeff. of Kubelka-Munk theory 4=17556
 light transmission, intensity (laser), elec. field
 effects 4=22862
 liquid-glass transition, free volume theory 4=16102
 luminescence, and radiative transfer between rare
 earth ions 4=15614
 mechanical strength, effect of cracks, etching,
 temp. 4=13407
 mechanical strength, flaws, cracks, failure process,
 calc. 4=28952
 mica, synthetic, crystallization, kinetic studies 4=13535
 Mössbauer effect, of Fe⁵⁷, pyrex, similar to fused
 quartz 4=15405
 optical homogeneity, Williams' interferometer
 testing 4=21285
 optical, physical structure and props., conference 4=10625
 optical props., γ ray effects 4=8405
 optically inhomogeneous plate, optical path differences,
 meas. by interferometry 4=2849
 organic, double refraction on cooling in stretched
 state 4=22863
 organic, review of viscoelastic props. 4=4685
 oxide, densification in rigid state up to 80 kbar 4=13408
 oxide densified at high pressure, heat treatment 4=13409
 oxide, Nd³⁺ fluorescence and stimulated emission 4=20484
 photoconductivity 4=22731
 plastic flow, evidence study 4=23155
 polymer soln. temp. of formation, effect of non-
 solvents 4=20827
 polystyrene, heat capacity in glass-transform.
 interval 4=7736
 porous, Ar, condensation ht. and pore shape 4=20819
 porous, strength and length changes on water vapour
 adsorption 4=23544
 prep. and props, review 4=26731
 Pyrex, He³ adsorption and nuclear relaxation 4=7350
 Pyrex, thermal conductivity below 1°K 4=6758
 rare-earth (III) borate, Faraday rotation 4=26217
 rare-earth III phosphate glasses, Faraday
 rotation 4=10187
 red glass filters, fluorescence, 700-900 m μ 4=13073
 refractive index meas. in i.r. by refractometric
 method 4=21282
 refractive index variation, interferometry meas.
 method 4=27300
 refractive index var. testing, autocollimating
 devices 4=8378
 rhyolite, viscosity and water content, 350° to
 850° C 4=11189
 selection for achromatic, anamorphic telescope 4=21288
 selenide, for 8-15 μ transmission 4=20457
 semiconducting, based on Fe oxides, structure 4=2137
 silica, diffusion following reaction with tritiated water
 vapour 4=4078

Glass—contd

- silica, E¹-centre—hydroxyl bonds relation 4=22951
 silica, H diffusion, OH effects 4=20304
 silica, vitreous, crystallization, effect of H₂O and O₂ atmospheres 4=23348
 silica, "water" solubility and diffusion, influence of thermal history 4=15493
 silicate, Ag halide sensitized, photochromic reversible 4=29202
 silicate, colour centre thermal stability 4=20308
 silicate, containing transition metal ions, sites of ions from absorpt. spectra 4=26535
 silicate, environmental effect on Nd³⁺ fluorescence 4=20485
 silicate, Eu³⁺ spectra, absorpt. and fluorescence 4=10174
 silicate, Nb⁴⁺ n.m.r. 4=7332
 silicate, static stress fatigue and strength 4=13446
 silicate, viscosity rel. to thermal history 4=4684
 silvered, microstructure obs., interferometric 4=10598
 soda lime, Al adhesion 4=10596
 soda-lime-silica, fracture strength from -100° to 700°C 4=4465
 soda-lime-silica, heat treatment effect on breaking stress 4=4464
 soda-lime-silica, stress relaxation in transform. range 4=4680
 soda lime, thin foils, electron microscope examination 4=23527
 solder-glass technique 4=23990
 solder-glass techniques for teaching lab. 4=18010
 space charge and electrode polarization 4=22765
 space charge and electrode polarization 4=28614
 spectrum, near i.r., "small pore" 96% SiO₂ 4=22889
 sputtering, by Kr ions 4=12825
 stabilization, viscosity variation and stress relaxation 4=4679
 stress, in ultrasonic machining, var. with amplitude, clamping press. 4=2756
 stresses, instantaneous or cyclic, meas. method 4=10357
 structural models, from As chalcogenides structural data 4=2135
 structure, electron microscope exam. 4=29203
 structure, use of Mössbauer effect obs. 4=20169
 surface area, specific, effect of abrasion 4=28984
 surface sorbed inert gas ions, ion induced emission 4=23593
 temp. meas., industrial 4=27360
 thermal expansion at low temp., expt. 4=17369
 transmission, light, γ radiation loss reduction by heating 4=22861
 ultrasonic relaxation loss, inorganic oxide glasses 4=20204
 uptake of Sr 4=2154
 u.s. attenuation, gigacycle freqs. 4=22483
 for vacuum deposition, residual contamination, electron diff. study 4=13647
 variable comp., diffusion role in production 4=26730
 viscoelastic props., conference (Sheffield, 1963) 4=4678
 viscosity, creep recovery obs. method, validity 4=4682
 viscosity, meas., reduction of obs. periods 4=4681
 Vycor, ht. of Ar sorption 4=20818
 Vycor, NH₃ adsorpt., i.r. study 4=20817
 Vycor, porous, phase transformations of adsorbed H₂O, Xe, from expansion 4=10630
 X-ray diffraction examination, review 4=13623
 X-ray reflect., and crit. angle and absorpt. 4=28675
 Al phosphate, thermoluminescent, use in dosimeters 4=5892
 with Al₂ structure 4=10627
 AlVO₄, structure, from spectra, i. r. 4=10626
 Au and Au—Mn glasses, electron irradi., multi-colour formation 4=17462
 B₂O₃, Young's modulus rel. to refr. index, ht. effect 4=22864
 BPO₄, AlPO₄, structure, from spectra, i. r. 4=10626
 BVO₄, structure, from spectra, i. r. 4=10626
 Ba crown with Nd³⁺, laser action 4=8992
 Ba crown, UO₂²⁺ radiationless resonance energy transfer to Nd³⁺ 4=22914
 BaO—Al₂O₃—TiO₂—SiO₂, crystal growth caused by bubble-induced nucleation 4=20729
 BaSO₄, AlAsO₄, structure, from spectra, i. r. 4=10626
 for BaTiO₃ crystallization 4=20725

Glass—contd

- Ce₂O₃. 2. 67P₂O₅, optical rot. — mag. susceptibility comparison 4=22851
 GeO₂ glass, X-ray absorption spectrum, fine structure 4=15591
 Li—K—Na mixed, electrical conductivity, rel. to temp., up to 430°C 4=10095-6
 M¹¹M¹⁰O₄, structure, from spectra, i. r. 4=10626
 Na borate, 2-component, Raman spectra, rel. to coordination transitions 4=20449
 Na₂O—K₂O—GeO₂, electrical conductivity, rel. to comp. 4=10094
 NaPO₃ fibres, oriented, structure 4=7732
 Nd³⁺ doped, value as laser materials 4=13037
 O₂ outgassing by electron bombardment 4=21204
 Pb silicate, radiation effects on elec. cond. and dielectric loss 4=17515
 SiO₂, Young's modulus rel. to refr. index, ht. effect 4=22864
 ZnO, Young's modulus rel. to refr. index, ht. effect 4=22864
 Zn,SiO₄, crystallization, phases 4=23353

Glass—metal seals

- development for tubes containing hot alkali vapours 4=23991
 direct, new types 4=23991
 high temp. and press. 4=23989
 multiple glass—W rod seals, prodn. method 4=2748
 Nilo-K, diffusion of H, D 4=6876
 silicone resin, use up to 400°C, at 2×10^{-10} torr 4=8277
 surface, bonds, rel. to elec. props. 4=10594
 AgCl, use in Cs vapour devices 4=27236

Gold

- acoustic dissipation, coeff., increase by grinding of metal 4=6723
 adsorption and desorption on Mo, radiotracer meas. 4=2130
 adsorption of H 4=23605
 annealed, struct. expansion and thermal defect existence 4=30554
 atom, electron Coulomb scatt. without excit., 50-400 keV 4=6502
 atom, electron Mott scatt., numerical soln. tables 4=25572
 atom, electron scatt., inelastic, 500 keV meas. 4=3809
 atomic beam scattering from epitaxially grown gold films 4=22323
 atomic electron affinity, surface ionization meas. 4=18678
 atomic, photoelectron ang. distrib. from L subshells 4=30389
 atoms trapped in polar and nonpolar media, liq. N₂ temp., e.s.r. 4=13317
 atoms, 20 keV electron plural scattering 4=13627
 backscattering of kV electrons 4=16535
 cold-worked, annealing effect rel. to resistivity 4=7428
 colloidal coagulation kinetics 4=7787
 compression tests on single crystals 4=30764
 conductivity, elec., films, decrease on adding surface layers 4=12856
 conductivity, elec., films, non-ohmic tunnelling effects 4=6927
 conductivity, elec., films, saturation effect at high fields 4=26009
 conductivity thermal, below 1°K 4=6757
 contact to CdS single crystals, electrical props. 4=12853
 crystal dislocation relaxation peaks after deformation at 4.2°K 4=7429
 crystal imperfections, interstitials, and irradiation, annealing 4=15472
 crystal imperfections, stacking tetrahedra, removal by ledge propagation 4=15480
 crystal internal mag. fields in Fe, Co, Ni, Mössbauer obs. 4=20158
 crystal interstitials in films, ion beam prod. at low energies 4=6833
 crystal stacking fault energy calc. 4=22603
 crystal vacancies, quenched in, annealing kinetics 4=20266
 crystal vacancy clusters, on n irradi. or quenching, annealing effects 4=4038
 crystal vacancy nucleation below 140°C and growth 4=12724
 crystals, alloy formation by nuclear transmutations 4=15227
 de Haas—van Alphen effect and Fermi surface, at low-field 4=28772

Gold—contd

- deuteron range meas., 5-27 keV 4=1540
 deformation vacancies, effect on self diffusion 4=28443
 diffusion of Ag, surface effects 4=10603
 diffusion in Si, interstitial-substitutional equil. meas. 4=6878
 diffusion, thermal, of substitutional impurities 4=17440
 electric cond. for vacancy scatt., pseudopotential method 4=6771
 electrolytic films, structure 4=30879
 electron diffraction intensities and structure amplitudes rel., and its appl. in structure analysis 4=10521
 electron emission, secondary, due to α -particles and fission fragments 4=5700
 electron field emission from $\text{Al}/\text{Al}_2\text{O}_3/\text{Au}$ cathode 4=3022
 electron irradi. point defect recovery, temp. var., elec. cond. study 4=30600
 electron pair production meas. at 90° 4=9181
 electron transfer through films 4=8799
 epitaxial growth on NaCl cleaved in vac. 4=29070
 epitaxial thin-film growth, in-situ meas. 4=29071
 e. s. r. of Mn, g shift 4=30738
 in Fe-Ni, sign of local mag. field on dissolved Au 4=20542
 film, epitaxial growth on mica in v.h. vac. 4=23576
 films, absorption, light, anomalies due to granular struct. 4=1715
 films, cond., elec., thickness var., and electron in f.p. 4=22683
 films, cond., elec., var. with thickness, and m.f.p. 4=4117
 films, current noise, 77° - 400°K 4=439
 films, dislocation loops from ion bombard. 4=1489
 films, elec. resistivity, thickness and temp. var. 4=22670
 films, electron diffr. exam. 4=7712
 films, electron diffr. obs., anomalies 4=15821
 films, evaporated, bridging phenomenon 4=20743
 films, evaporated, optical props. determ. 4=22865
 films, evaporated, optical props., 300-2000 Å 4=22869
 films, photoemission efficiency rel. to thickness and wavelength 4=3030
 films, secondary electron emission rel. to photoelectric emission 4=8808
 films, stress and strain rel. to internal state 4=23577
 films, thickness meas. by γ -ray spectroscopy 4=26710
 films, twinned structures, by electron diffr. and micr. 4=4524
 films, 2000-50 000 Å, mech. props. 4=23575
 films, very thin, absorpt. 0.2 - $0.7\ \mu$ 4=22867
 foil, speed of evap. in vacuum furnace 4=5472
 Hall effect in films meas. 4=4112
 hot electrons, range-energy reln. meas. 4=22534
 hydrosol in KCl and BaCl_2 , slow coagulation, kinetics 4=10661
 internal friction and dynamic moduli after cold working 4=1941
 internal friction, influence of annealing treatments 4=4466
 internal friction, peak at -60°C after quenching 4=20657
 ions, Au^+ , in Ge, photocond. kinetics 4=1684
 L-Auger electrons and X-rays, under electron impact 3=1227
 lattice planes of 2.35 Å spacing, obs. with electron microscope 4=15782
 lattice spacing by electron micr. 4=15784
 Lorenz number at low temp. 4=6919
 m.f.p. of electrons from elec. conductivity of films, var. with thickness 4=4117
 Mossbauer effect, of Fe^{57} , temp. var. 4=15401
 neutron irradi. at 4.5°K , effect of initial defect concn. on annealing 4=12829
 neutron irradi. damage, effects of impurities, vacancies dislocations 4=28503
 nucleus, screened, electron scatt. calc. 4=9667
 optical props., dielectric const., and band struct., review 4=13047
 oriented crystals, plastic deform. 4=26512
 plastic flow, surface removal effects 4=7430
 plastically deformed single crystals, activation energy and activated vol., effect of surface condition 4=30763
 point defect study, expansion meas. and X-ray diffr. techniques 4=30551

Gold—contd

- polycrystalline, adsorpt. of Ba, photoemission characts. 4=24731
 polycrystalline, high-temp. creep and fracture 4=28953
 proton irradi., 10 MeV, stage III recovery 4=10011
 proton penetration along lattice open channels, at 75 keV 4=4086
 quenched, high-temp. anneals 4=25925
 quenching, producing internal friction and elastic modulus changes 4=23156
 radiation damage 4=30587
 recovery, stage I, of neutron-irradi., rel. to quenched-in vacancies 4=4097
 refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
 single crystals, surface effect on recrystallization 4=29055
 solid solubility of Ho 4=13459
 sols, optical absorption rel. to part. size, temp., prep. method 4=23681
 solubility in Ge, 500 to 870°C , by elec. resistance 4=26539
 specific heat Debye temp., anomalous, low temp. 4=25854
 sputtered, focused collision sequence energy, $\langle 110 \rangle$ 4=4096
 sputtering by Ar, meas. of yield by replication 4=27582
 stacking-fault tetrahedra, irradiation-induced annealing 4=4065
 stacking fault tetrahedra, nucleation and growth 4=17435
 stacking faults, energy calc. 4=12769
 superconducting transition temp. calc. 4=5515
 surface diffusion on Cu 4=15487
 surface polishing and thinning electrolytically 4=29185
 surface potential meas. of Au with adsorbed O_2 deposited on glass 4=23598
 surface, self-diffusion study, 272° - 950°C 4=25963
 thermal e.m.f., elec. and thermal cond., low temp. 4=1698
 thermal expansion, lattice const. changes from Bradburn-Fürth eqn. of state 4=20219
 thermoelec. of crystal vacancies, 4.2- 220°K 4=28657
 thermoelec. effect, homogeneous, of third degree (1^{st} Benedicks effect), in single crystal 4=28655-6
 thermoelectric power, effect of crystal imperfections 4=7086
 thermoelectric power, effect of lattice defects 4=20435
 thermopower and elec. resist., rel. to vacancies 4=10142
 thin film, abnormal optical absorpt. 4=22866
 thin film. scatt. factor meas. 4=22837
 thin films, annealing effect on structure 4=23578
 thin films, optical consts. theory 4=22868
 thin films, transmittance meas. of phase changes 4=22829
 threshold energy to displace atom from lattice and subthreshold displacement 4=12827
 twin boundaries, coherent annealing, as vacancy sinks 4=9973
 twins in vapour-grown f.c.c. whiskers 4=4527
 work function, effect of adsorption of H, air, and dipole moment 4=11683
 work function, effect of air and H_2 4=14741
 vacancies in quenched crystals, annealing out 4=22561
 vacancies quenching-in and annealing-out 4=6829
 vacancies, and vacancy aggregates, annealing in quenched specimens 4=12734
 vacancy clustering, influence of oxidizing and reducing treatments 4=22560
 X-ray reflect., and crit. angle and absorpt. 4=28675
 Young's modulus, decrease after deformation and recovery 4=15703
 Au black, total secondary emission coeff. and slow electron absorpt. 4=27566
 Au foils, crystal stacking fault disappearance on O^- ion bombard. 4=20285
 $\text{Au}^{191,193}$ hyperfine-structure separations 4=25499
 Au^{197} in metallic Au, Mössbauer absorption 4=1349
 Au, point defect study by electron irradi. 4=25922
 Au I resonance doublets, absolute oscillator strengths 4=6485

Gold compounds

- alloys, crystal, Brillouin zone interactions and Fermi surface distortion 4=12700
 alloys, grain boundary delineation by rapid cooling 4=10581

Gold compounds—contd

- Au germanide, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
 Au hydride, u.v. absorption spectra 4=1260
 Au tellurides, metastable phases, X-ray diffr. exam., supercond. props. meas. 4=29833
 Au—Ag, dislocation relax. peaks meas. 4=20656
 Au—Ag, elastic parameters rel. to composition 4=23158
 Au—Ag, heat treatment, explosive, study by microhardness 4=13410
 Au—Ag, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 AuAgZn₂, crystal structure, atomic 4=4608
 AuAl₂, AuGa₂, AuIn₂, similarity, low temps. 4=6743
 Au₅Ba, superconducting transition temp., var. with structure 4=5515
 AuBe, Mg, Ga, Si and Ge. spectra, vibr. and rot. and mol. consts. 4=22352
 AuBr₄⁻, mean amplitudes of vibr. from Raman freqs. 4=15318
 Au—CdTe, photovoltaic effect for barrier cells 4=17400
 AuCl₄⁻, mean amplitudes of vibr. from Raman freqs. 4=15318
 Au—Co dilute alloys, mag. props., very low temp. 4=20540
 Au—Co solid solutions 4=7468
 Au—Cr, low-temp. mag. transition 4=17650
 AuCu crystals in thin films, twinning 4=12776
 Au₃Cu, ordered structure 4=13485
 Au—Cu—Ni phase transformations, order—disorder, X-ray diffr. obs. 4=7493
 Au—Cu—Zn, Martensitic transformn., structure, boundary, stacking, theory 4=29008
 Au—Fe alloy thermocouples, low temp. use 4=8537
 Au—Fe dilute solid solns., mag. ordering, Curie temp. calc., from Mössbauer spectrum, low temps. 4=10277
 Au—Fe, low-temp. mag. transition 4=17650
 Au_{0.9}Fe_{0.05}, mag. props., low temps., high fields 4=10278
 Au_{0.95}Fe_{0.05}, magnetic ordering 4=17651
 AuH, electronic-band spectra, by exploding wire method 4=25635
 AuH and AuD, far u. v. spectra 4=30431
 Au—In system, diffusion props. below 155.4°C 4=22618
 Au—In—Cu, h. c. p. ζ -phases, axial-ratio changes 4=7618
 Au₃La_{0.9}Er_{0.2}, magnetic cooling by adiabatic demagnetization 4=16305
 Au—Mn alloy, Curie temp. rel. to press. 4=26340
 Au₃Mn crystal struct., atomic, tetragonal and orthorhombic phases 4=13590
 Au—Mn, low-temp. transition 4=17650
 AuMn₃, paramag. susceptibility, 0°–1000°C rel. to composition 4=15627
 Au₃Mn, phase transformations, ordering, crystal structure, atomic 4=7494
 Au₂MnAl, Heusler structure 4=4607
 Au—Ni alloys, precipitation, composition effects 4=20703
 Au—Ni, i.r. absorption virtual bound state model 4=1732
 Au—Ni (50:50 at. %), hardening by heat treatment 4=23157
 Au—Pd, structure, short range order, persistence on cold work and heating 4=13645
 Au—Re alloy, elec. resist. at low temps. 4=22681
 AuSb₂, elec. resist., thermoelec. power, and Hall coeff. 4=15520
 AuSn molecule, visible and near infrared spectra 4=6563
 AuSn, structural, thermal, electrical and magnetic props. 4=7619
 Au—Sn—Fe, paramag. props., 300–700°K 4=15626
 Au—Sn—Mn, paramag. props. 300–700°K 4=15626
 Au₃Zn[R₁], Au₃Zn[R₂] and Au₃Zn, crystal structure 4=1990
 Cu—Ge—Au, h. c. p. ζ -phases, axial-ratio changes 4=7618

Gramophones

See Sound reproduction.

Granular structure

- alloys, intergranular segregation 4=4636
 α -brass, grain size rel. to intergranular cavitation 4=30866
 aggregates, geometric props. 4=23541
 density meas., bulk, Hg-displacement method 4=23540
 ferrites, var. and growth 4=17832

Granular structure—contd

- fibre-textured metals, microstruct. changes during deform. 4=15803
 grain-size distribution, computation from micrograph 4=23512
 magnetic recording tape, particle interactions 4=13165
 mechanical strength, tensile 4=23106
 metal films, rel. to optical props. 4=22817
 porcelain 4=26699
 porosity under shear stress, as for most random config. 4=17831
 Ag thin films, light scatt. 4=22892
 Al, polycryst., rel. to residual press. effects 4=23120
 Al—1½% Mn alloy, grain size rel. to intergranular cavitation, 4=30866
 Al—Al₂O₃ alloys, deform. induced substruct. 4=29163
 Au films, 2000–50 000 Å, rel. to stress/strain curve 4=23575
 Au, single crystals, surface effect on recrystallization 4=29055
 BaTiO₃, anomalous crystallographic props. 4=23536
 Cd, polycryst., rel. to flow under shear 4=23130
 Cu, explosively deformed, substruct. 4=29164
 Cu, substructure of annealed specimens, temp. var. 4=23525
 Cu—Al, explosively deformed, substruct. 4=29164
 Cu₃Au, shock wave effect on microstruct. 4=26508
 Cu—Fe, sintered, rel. to interphase energies 4=20789
 Ge, after rolling at 700°–800°C 4=23153
 LiF, bicrystals, grain boundary migration 4=23531
 NaCl, boundary effect on plastic deform 4=23209
 Ni—Fe alloy, cubically aligned, rolling textures 4=26698
 Pu, substruct. metallography 4=29165
 Sb crystals, boundaries by etching with H 4=26693
 Ta, 2°–2600°C 4=23489
 U, size, u.s. waves, vel. and attenuation, meas. 4=29166
 U—Mo alloys, morphology of α pseudograin 4=29167
 W, doped wires, secondary recryst., rel. to temp. and heating rate 4=10588
 ZnS. ZnSe : Cu phosphors, luminescence and grain structure 4=13086

Graphite

- ablation, in O and air under flow conditions, 1000°–1400°C 4=29211
 adsorpt. of Al₂O₃, electron micrograph 4=23684
 adsorption cross-section meas. in reactor 4=3757
 adsorption of inert gases, dispersion energy calc. 4=13689
 adsorption, physical, of Ar and Kr, theory and expt. 4=23592
 arcbreak, dropless 4=11560
 atomic displacement from lattice, at 15°K energy threshold from e⁻—bombardment 4=22647
 brominated, superlattice structure 4=4647
 compressibility, pyrolytic graphite 4=13411
 conductivity thermal, neutron effects, var. with irradi. and meas. temp. 4=6764
 contact resistance, high press. and current effects 4=20331
 creep, reactor-radiation induced 4=28955
 crystal interstitial and vacancy loops on irradi. at high temp. 4=30558
 crystal orientation and anisotropy, X-ray exam. 4=13516
 crystal orientation, effect on (h, k) reflections 4=23446
 diamagnetic susceptibility anisotropy, 2500°K to 2900°K 4=4324
 diffusion of gases 4=233
 diffusion of Th, activation energy, pyrolytic C 4=6869
 dimensional changes, rel. to Br absorption 4=30808
 dislocations and impurities, Au "decoration" for electron microscopy 4=12760
 elastic constants, polycrystalline samples, small-strain model 4=23132
 elastic, Young's modulus, electron beam effects, 4 MeV, temp. var. 4=4467
 electrical resist. depend. on mag. field 4=26007
 electron spectrum, pressure deformation, up to 10 000 atm. 4=1562
 energy release on irradiation, reaction kinetics analysis 4=12832
 etch pits, origin 4=22599
 evaporation coeff. 4=16300

Graphite—contd

- force consts. from specific heat 4=20185
galvanomagnetic effects, rel. to temperature and pressure 4=6926
graphite, Fermi surface, from Shubnikov-de Haas effect 4=15519
graphitic materials, neutron irradiation and surface homogeneity 4=29177
graphitization of polymer carbons 4=23264
H4LM, tensile strength, -253°-500°C 4=20659
H4LM, UTS rel. to temp. and strain rate in vac. and He 4=20658
heater for MHD studies 4=21449
hexagonal and rhombohedral. enthalpy difference 4=30534
I adsorption, 100° to 800°C, 0. 01-15mm Hg 4=30889
internal friction, elasticity, var. with strain amplitude, temp., neutron effects 4=10380
ion scatt., Ar, max. 4=19118
interstitial monolayer disks, n-irrad., rel. to boronation and annealing 4=12727
irradiated in nuclear reactor, decreasing damage with increasing annealing freq. 4=9615
irradiation damage at power reactor temps. 4=1532
jet, maser-induced, temperature meas., spectral 4=5881
jet, velocity meas. by probe method 4=25787
lattice dimension and thermal expansion changes on irradiation 4=20760
lattice dynamics 4=6710
light scattering by particles, refl., refr. and absorpt. meas., mag. effects 4=30683
magnetoelectric effects, room temp. -150°C 4=1562
magnetoreflexion, oscillatory mag. field dependence on optical reflectivity 4=22540
magnetoresistance, negative, in graphite-Br 4=20327
magnetoresistance, nonlinear, in liq. He bath 4=15518
mechanical damping, 300°-20°K 4=28956
melting point, var. with pressure up to 3000 at. 4=8500
metal particle mobility on surface, atmos. and metal effect 4=29176
molecular C ions formed in spark source, mass spectrographic study 4=9782
Mössbauer effect, pyro, Fe⁵⁷ 4=12590
n irradiation and annealed, elec. props 4=30605
neutron age in, for Po-Be neutrons 4=6069
neutron ang. and energy distrib. at water bdy. 4=27860
neutron diffusion 4=6065
neutron diffusion, thermal decay const. meas., modified pulse method 4=3422
neutron diffusion, thermal, temp. effects 4=910
neutron irradiation effects on structure, theory 4=22648
neutron irradiation, surface smoothing 4=10013
neutron moderation spectrum 4=6073
neutron moderation, time dependent spectra 4=12016
neutron rethermalization 4=3739
neutron scattering, energy distrib., 3 peaks in freq. distrib., expt. and theory 4=6711
neutron scattering, temp. and energy var. 4=12010
neutron thermalization 4=19897
nucleation, enhanced, on irradiation 4=20322
orientations in surface film formed by sliding on Cu 4=17836
overlap functions 4=15451
phase transform. from C, diamag. suscept. obs. 4=26546
phase transform from C, X-ray obs. 4=26547
phase transformation, to diamond, equilibrium curve, calc. 4=4508
phase transformation, to diamond, study methods 4=4507
physical effects of neutron-irradiation 4=30599
polyatomic mols., formation and cona in spark source 4=25667
polycryst., B-doped, diamag. susceptibility and Hall effect rel. to temp. 4=28765
polycrystalline, thermal conductivity, rel. to crystallite size and irradiation 4=1412
powders, amorphous state 4=10624
pyrolytic, annealing under pressure 4=4523
pyrolytic, double Bragg refl. by X-ray diffr. 4=23528
pyrolytic, graphitization, applied stress effect 4=20704
pyrolytic, neutron-irradiated, electrical conductivity 4=10028
pyrolytic, stress recrystallization 4=26597

Graphite—contd

- pyrolytic, thermal expansion by intercalation and annealing 4=25863
radiation and annealing effects 4=1466
radiation effects at high temps. 4=20323
radiation induced crystal interstitial clusters, flux level effects 4=6698
radiation-induced dimensional changes, effect of compressive stresses 4=25464
reactor, distortion by neutron irradiation, 425-800°C 4=28504
reirradiated, decomposition of defects by neutrons 4=20270
semiconducting magnetoresistance, Hall effect, unusual 4=20369
single crystals, impurity nucleation of rad. damage 4=28456
single crystals, irradiation, electron microscope obs. 4=28444
specific heat at very low temps., interpretation 4=25855
spectral line intensity, carrier effect 4=26224
structural defects, obs. by electron microscopy, distrib. and high-temp. behaviour 4=12743
sublimation, heat of 4=12527
sublimation, under H₂ laminar boundary layer 4=14464
surface area meas. using Kr⁸⁸ γ -radiation 4=23554
surface mobility of Ag, mechanism 4=10602
suspended in N₂ in 1/2 in. tube, flow, heat transfer 4=27219
suspension, elec. noise spectrum, shear rate, conc., particle size effect, time dependence 4=26765
thermal cond., crystalline parameter, and internal energy changes on irradiation 4=20226
thermal conductivity, below λ -point. of He, meas. and Calc. 4=30531
thermal conductivity rel. to defect structure 4=1415
thermal expansion, diff. temp. ranges 4=1402
thermal expansion meas., Graphite-AUG-3 4=17367
thermal expansion, -196° to 2000°C 4=22505
thermal expansion within the layer planes, X-ray diffraction study 4=28377
thermocouples, output and sensitivity 4=21343
transformation to diamond, catalysis by metals 4=1991
vacancies, made visible by cleaving, etching and decorating and obs. by electron microscopy 4=20267
vaporization, by laser, vapour mass spectrum 4=21361
X-ray diffraction examination, review 4=13623
X-ray exam., micro., small angle scatt., pyrolytic 4=20781
Young's modulus by flexural sonic waves method 4=28954
Fe⁵⁷ Mössbauer effect, rel. to binding anisotropy 4=12586

Graphs

- See also Nomograms.
e.m. wave refraction effects on satellite comm. 4=30067
frequency distribution curves in overlapping Gaussians, method 4=2520
plasma, e.m.-wave propag., hot 4=11613

Gravitation

contraction of gravitating spheres 4=24051
Dirac hypothesis on "constant", expt. data 4=18038
disk of stars, gravitational stability 4=23879
e.m. theory 4=24033
earth's gravitation field, determ. from accurate meas. inadequately distributed 4=7811
Eddington's eqns., non-singular stationary soln., for material body 4=11031
effects in meas. of C_v near critical point 4=14468
Einstein's theory, extranewtonian eqns. of motion rel. to anharmonicity conditions 4=8034
from electromagnetic field, null 4=29518
energy and momentum for grav. waves 4=21027
equations of motion and conservation laws, scalar, vector, tensor theory 4=11134
Euclidean theory, exptl. tests 4=8029
Euclidean theory, experimental tests 4=14026

Gravitation—contd

- evidence for theories, conference, Varenna (1961) 4=24026
 exponential representation of potentials 4=27037
 fermion transmutations 4=2532
 field, algebraic struct. 4=24029
 field classifications, Penrose rel. to group of motion 4=18034
 field equations, Hamiltonian form 4=5041
 field fluctuations, rel. to fundamental length 4=27035
 field, singular points distrib. for one class of two-dimensional bodies 4=16017
 field, stationary, in conformal space 4=25
 fields, compensating, constructive theory 4=18035
 fields, stationary, due to single bodies 4=24027
 fields with zero $g_{\mu\nu}$ 4=2529
 gas cloud, self-gravitating, instability 4=17970
 geometrostatics, method of images 4=5034
 geon, gravitational, self-consist. field method 4=21029
 gravitational collapse, instabilities and Maclaurin spheroids 4=23841
 gravitational constant, effect of var. on two-body problem 4=17973
 gravitational field, asymptotic props. in Einstein spaces 4=11034
 gravitational field, high-order eqns. 4=11032
 gravitons, review 4=8035
 gyroscopic motion in linear theories, rel. to relativity 4=18036
 homogeneous bodies, field representation by surface integrals 4=23
 Kund equations, consistency with expanding universe theory 4=8031
 inertial and passive masses, equivalence, torsion balance meas. 4=14027
 instability, Jeans' criterion, rel. to viscosity of medium 4=21
 instability, random motion effect, energy limit 4=10779
 interaction with Dirac field, canonical variables 4=2530
 Jean's gravitational instability 4=10785-6
 Jeans medium gravitational instability 4=26889
 Jordan's extended theory, review 4=27030
 Kepler motion, spin or regularization 4=27118
 lens effect for galaxy mass and Hubbles const. meas. 4=30966
 lens effect, for stars 4=29520
 light bending by galaxies, observational use 4=2382
 and Machs principle, compatibility requirements 4=14025
 measurement of Riemann tensor, search for gravitational radiation 4=22
 microscopic systems, multipole radiation, linearized theory 4=24030
 Minkowskian theory 4=14028
 Möller formulation of gravitational stress-tensor in tetrads., discussion 4=5047
 moving particle, relativistic treatment contributions 4=24
 Newtonian force long-range behaviour, Finze's hypothesis 4=29348
 Newton's law, validity at great distances, and stability of clusters of galaxies, 4=8033
 n particle problem 4=2472
 perturbations, eqns. of motion in fast motion approx. 4=24038
 Φ waves, possible effects on solar system 4=13911
 plasma, cylindrical, instability in mag. field 4=24705
 plasma gravitational stability, viscous, heat cond., rot. 4=26890
 Plebański and Pellegrini tetrad gravitational eqns., exact solns. 4=14031
 pure field, general, spinor forms calculus 4=18053
 quantization 4=24039
 quantization, Feynman and canonical, equivalence 4=18037
 quantization theory 4=5065
 quantized field formulation in interact. with integer spin fields 4=2531
 radiation by bodies in field of collapsing star 4=23830
 radiation, detection above noise power requirements 4=11048
 radiation, energy, first approximation 4=27034

Gravitation—contd

- radiation, and Fokker action principle 4=8045
 radiation, form for integrable metrics 4=16027
 radiation, many bodies 4=29
 radiation, pure, new set of states 4=5040
 redshift and photon deflection, relativistic and Newtonian treatments 4=5026
 relative, rel. to conservation laws of gen. relativity 4=11049
 relativistic red shift, Mössbauer meas. 4=12598
 relativistic waves, type-N, in radiation-filled universe 4=2542
 relativity, ennuple formalism of Möller 4=27-8
 rocket paths in field of number of masses 4=2472
 rotating body, vac. field eqns. 4=24028
 S-matrix theory for grav., -inertial mass equality and graviton emission 4=27747
 scalar, Nordström's theory 4=5025
 sin x/x , use in problems, convergence investigation 4=27036
 spin field coupled to gravitational field, commutation reln. for canonical energy density 4=19365
 spinning mass field, as algebraically special metrics 4=5044
 spinor compensating field formalism 4=14030
 stationary fields 4=5043
 stationary fields of axial symmetry 4=14029
 stationary system with spherical symm., rederiv. 4=18055
 theory, on conceptual basis, series of articles 4=8028
 three-body problem, Meffroy's special case 4=21063
 three-body problem, reduction to two-body problem 4=8123
 three-dimensional space theory 4=27029
 variation of const., rel. to solar evolv. 4=17997
 variation of const. in space-time, consequences 4=17961
 varying G, Brans-Dicke cosmology, stellar evolution and solar system effects 4=13910
 and velo., e.m. waves, poss. var., from planetary radar meas. 4=16028
 wave detection 4=11055
 waves field eqns., asymptotic soln. 4=27033
 waves, production and equations 4=27032
 wave radiation on e.m. wave emission and absorpt. 4=24047
 waves, Rumers' invariant theory 4=29519
 Whitehead theory, principle of equivalence 4=27031

Gravity

See also Geophysical prospecting.

- aircraft meas. technique 4=4737
 analytic continuation of anomalies, method 4=7810
 anomalies and temp. deform. of earth, calc. 4=29252
 atmospheric effects, book 4=10695
 calculation of earth's field, mantle and core model 4=13765
 earth's external field, low-order harmonics source 4=4734
 earth's potential, even harmonics, satellite meas. 4=4735
 ellipsoid, rotating triaxial, field, closed formulae, rel. to geodesy 4=2178
 formulae expression 4=29251
 gravimeter, recording, automatic meas. of earth's deformations 4=7809
 gravimetry, underground, results of development 4=4738
 massive collapsing stars, generation of gravitational waves 4=23842
 meas., interferometric, free fall lengths 4=13762
 meter calibration 4=7812
 photon frequency, effect, Mossbauer effect, calc. 4=27045
 planets, gravitational energy, Betti-Ritter formula extension 4=29425
 reduction to spherical surface 4=13763
 standards, meas. 4=4736
 and tide meas., and earth elastic const. 4=15858
 two-dim. downward distrib., new method 4=13764

Group theory

- aerodynamic one-dimensional problem appl. 4=24253
 conformed group in Minkowsky space, unitary irreducible represent. 4=19366
 group represent. reductions using Schur's lemma 4=16036

Group theory — contd

- inhomogeneous Lorentz group, represent. on ang. momentum basis 4=11895
- Ising model, two-dim., Kramers–Wannier duality as Poisson's summation formula 4=18079
- Lie, geometry, gauge invariance, definition 4=13
- Lie groups, semisimple, representations 4=5011
- Lie, simple, for strong interactions 4=15000
- Lorentz, connected inhomogeneous, central extensions 4=29527
- Lorentz group, inhomog., in quantum-mech. kinematics 4=2552
- Lorentz, homogeneous, explicit representations class 4=29512
- magnetic translation group 4=20231
- magnetic translation group, irreducible represent. 4=20232
- nonunitary groups, representation theory 4=10
- octet model and Clebsch–Gordan coeffs, applic. 4=11026
- parastatistics of rank > 2 4=5083
- point transformations, use in many-body problem 4=5094
- quantum theory, appl., symmetry projections 4=2567
- rotations, Lorentz transformations, homomorphisms 4=27042
- semidirect products and point groups 4=10446
- space group, abstract defin. and represent. 4=4567
- space group for crystals, rel. to L_2 orbitals 4=17335
- strong interactions, higher-symm. models, discrete subgroup 4=9115
- symmetric, appl. to several–nucleon system 4=12105
- symplectic ensemble, multi-channel reduced width ampl. distrib. 4=11091
- uniqueness of four and eight-dim. spaces 4=24965
- unitary groups, connection with Kemmer algebras 4=19384
- SU_3 , finite and disconnected subgroups 4=27756
- SU_3 , generators, sign of λ , matrix 4=16015
- SU_3 group, Clebsch–Gordan coeffs. 4=67
- $SU(3)$, triangular represent. 4=11887
- $SU(n)$ group, independent invariants 4=9

Gyromagnetic effect

- magnetic cores, loss factors below gyro. res. freq. 4=28861
- molecules, paramag. susceptibility 4=3900
- proton, in water 4=3399
- time-dependent, linear, rel. to irreversible processes 4=9619

Gyromagnetic ratio

- alkali metal mols 4=30422
- electrons, g-factor anomaly meas. 4=885
- rare-earth cpds., effect of orbit–lattice interaction 4=7336
- shifts by exchange interactions 4=7318
- As^{73} 66 keV state 4=3568
- Cd^{111} , meas. for excited states 4=3570
- Er^{166} 80.6 keV state, g-factor 4=27978
- Os^{189} , 155 KeV 2^+ state 4=15168
- Pb^{204} , meas. for excited states 4=3570
- Re^{187} , 206 keV level, 4=9419
- Yb^{172} , 2^+ rotational state, g_R -factor 4=27979

Gyroscopes

- angular momentum conservation 4=16067
- mechanical analogue of e.s.r. and maser action 4=7317
- oscillator freq., damping coeffs., var. with rigidity, mass non-conservative forces 4=11128
- precession teaching 4=27007
- rate, frequency response characteristics using a microsyn 4=24116

Hafnium

- atom, binding energies of K to O_{III} shells 4=12368
- atom, K α X-rays from radioactive sources 4=9665
- crystal internal fields from Hf^{181} 133–482 keV anisotropy 4=20156
- foils, nuclear targets, reducing Mo impurity 4=3233
- neutron cross-sections, slow 4=29111
- single crystal elastic moduli and h.c.p. $\rightarrow$ b.c.c. transformation 4=26530
- O₂ diffusion, 800° and 950°C 4=6872

Hafnium compounds

- Hf carbide, thermal expansion, 26° and –196°C 4=1405
- Hf tetrahalides, vibration, mean amplitudes 4=22377
- HfC, high-temp. heat content 4=12650

Hafnium compounds — contd

- HfC, thermoemissive props. 4=3027
- HfC–TiC, ZrC, NbC, TaC solid solns., crystal electron states 4=25902
- $HfCr_2$, crystal structure 4=30850
- $Hf^{181}F_6(NH_3)_6$, quadrupole coupling of $Ta^{181}, d_{5/2}$ 4=6690
- $Hf(NH_4)_2F_6$, elec. h. f. s. interaction, from γ – γ ang. correl. 4=6684
- Hf–O₂ crystal structure, atomic 4=7471
- Hf–O thermodynamic properties 4=7471
- HfO_2 , diffusionless phase transition meas. 4=13509
- HfO_2 , pure and 10, 15 wt % Y_2O_3 stabilization, thermal expansion to 4500°F addition effect 4=30525
- $Hf^{181}OCl_2 \cdot 8H_2O$, quadrupole coupling of $Ta^{181}, d_{5/2}$ 4=6690
- $HfSn$, crystal structure 4=26650

Hall effect

- See also Semiconducting materials; Semiconductors.
- alkali halides, electron, temp. var., and F centres 4=30644
- anthracene, anomalous effect predicted by band theory 4=6993
- arc discharge, currents in crossed elec. and mag. fields 4=18789
- bibliography on theory and applications 4=22662
- cathode spot motion, in mag. field 4=24626
- ferromagnetic, theory 4=10021
- ferromagnetics, and electron scattering from spin imperfections 4=6917
- ferromagnetics at low temp., residual resistivity 4=20324
- ferromagnetics, rel. to "magnetic resistance" 4=12846
- graphite, n irradi. and annealed 4=30605
- graphite, polycryst., B-doped, rel. to temp. 4=28765
- graphite, 290°–420°K, atmospheric to 9000 atm. 4=6926
- Hall generator, design and appl. 4=22735
- Hall generator, side resistance 4=26088
- Hall generators 4=10088
- in hydromagnetic stability problem 4=8917
- in ionized gas flow in straight channels, m.h.d. 4=11776
- ionosphere 4=26841
- liquid metals 4=29645
- in mag. field stabilizer 4=30016
- magnetohydrodynamic generators, effect on thermal cycle losses 4=5542
- magnetron, Hall cut-off in strong crossed fields, anomalous violation 4=14765
- measurement at low temp. and high pressures 4=16394
- measurement, semiconductors, h.f., by coupled waveguides 4=20349
- metallic conductors, shape factor 4=22678
- metals, liquid, nine, coeffs. meas. 4=27195
- multiplier, rel. to audio-tone-burst stimulator 4=24313
- organic crystals, prediction from band theory 4=6993
- organic semiconductors, narrow-band, calc. 4=12920
- plasma acceleration in elec. field 4=18818
- plasma, cylindrical column 4=18825
- plasma positive column, and electron drift vel. 4=29905
- plasma, rel. to flow 4=27513
- plasma swirl theory 4=29914
- plasma theta pinch rotation 4=2992
- polyacrylonitrile, pyrolyzed 4=22733
- probes, use of superconducting mag. shield 4=2921
- semiconducting thin layers, mobility meas. method 4=28552
- semiconductors, high-ohmic, electrode meas. arrangement 4=1583
- semiconductors, hot-electron, optical phonon scatt. effect 4=4129
- semiconductors, lab. meas. method 4=12878
- semiconductors with low mobility, theory 4=1568
- semiconductors, meas. instrument 4=12879
- semiconductors, meas., review 4=26024
- semiconductors, minority-carrier, meas. method 4=22694
- semiconductors, non-degenerate, rel. to reduced surf. potential 4=10039
- semiconductors, reinforcement of h.f. mag. field 4=12868
- and stationary and quasistationary e.m. processes, in high conductivity media 4=17469
- thin layers, electrical properties, 100° to 500°K 4=6980
- use in magnetic field measurement 4=16608
- use in Si and Ge impurity analysis 4=28571
- Ag antimony telluride 4=22722

Hall effect—contd

- AgIn₂Te₅ 4=26060
 Ar plasma, shock heated, Hall e.m.f. meas. 4=18897
 As—Te—I and As—Te—Br semiconducting glasses 4=26029
 Au films, laboratory expts. 4=4112
 AuSb₂, 2.5°–300°K meas. 4=15520
 Bi doped with Te or Sn, at 4.2° and 77°K 4=30619
 Bi, elasto-Hall coeffs. meas. 4=26032
 Bi films, anomaly explanation 4=7709
 Bi films, effect of residual vapour 4=1591
 Bi films, laboratory expts. 4=4112
 Bi films, var. with thickness and residual O₂ 4=6921
 Bi, pressure effects, 4.2°K 4=6922
 Bi and Bi—Sb alloys, in weak magnetic field region, 77°–273°K 4=4139
 Bi—Sb, 75–500°K 4=26034
 Bi—Sb alloys, tensor, 77° to 300°K 4=10042
 Bi:Sn (0.2 at. %), mag. field var. 4=20354
 Bi—Sn, 75–500°K 4=26034
 Bi—Te solid solutions, 77°–300°K 4=10045
 Bi—Te, 75–500°K 4=26034
 Bi₂Se₂ and Bi₂Se₃, temp. depend. 4=7609
 Bi₂Te₃, var. with Ge, Pb doping, 100–400°K 4=15535
 C, non-graphitized powder, 80° to 400°K 4=12855
 Cd, oscills., low temp. 4=6923
 Cd, two vector component meas. 4=28538
 CdGeAs₂ 4=1593
 Cd_{0.1}Hg_{0.9}Te, rel. to doping 4=28554
 CdS films 4=26040
 CdS, photoelectron Hall mobility 4=17528
 CdSb, anisotropy, 77–340°K, and mobilities 4=4143
 CdSb, temp. depend. and anisotropy meas. 4=6948
 CdSb, temp. var. 4=17524
 CdSb, Ag-doped, meas. 4=20356
 CdSb—ZnSb, 90–400°K 4=1592
 CdTe, rel. to acceptor states 4=4145
 CdTe—CdSe alloys, rel. to composition 4=22706
 Ce_{3-x}S₄, x > 0.3, analysis rel. to temp. 4=10048
 Co_{1-x}Fe_xSi, semimetal props. meas. 4=17486
 Cr—Fe alloys at room and liq. N₂ temp. 4=22668
 CrSi₂, coeff., rel. to semicond. props. 4=20357
 Cr—V alloys at room and liq. N₂ temp. 4=22668
 Cu—base binary solid solns., effect of scattering 4=17472
 Cu phthalocyanine, rel. to carrier mobilities 4=6994
 Cu₃Au, plastic deformation increase 4=22669
 Cu₃Sb, 2.5°–300°K meas. 4=15520
 Fe—Ni alloys, rel. to elec. cond. 4=26011
 Fe—Ni, Hall e.m.f., Ni conc. depend. 4=13184
 Fe—Ni, temp. and magnetization depend. 4=12858
 Fe—Si, Hall e.m.f., Si conc. depend. 4=13184
 Fe—V alloys, room and liq. N temp. 4=1564
 GaAs, rel. to vacancies on removal of Cu impurity 4=12726
 GaAs, Li diffusion effects 4=15537
 GaAs—GaP alloys, mobility 4=4546
 GaSb—Ga₂X₃ alloys, (X = Se, Te), Hall coeff. rel. to comp. 4=28997
 GaSe, rel. to temp. 4=12879
 Ge, on fast neutron bombard. 4=10012
 Ge films, constant and mobility, rel. to substrate temp. during deposition, thickness and temp. 4=20806
 Ge, n irradi., 14 MeV, n-type, and crystal imperfection distrib. 4=6822
 Ge, n-type, hot electron mobility, theory 4=6970
 Ge, p-type, concn. depend. 4=12901
 Ge, path length effects, space-charge zone of bicrystal 4=17489
 Ge, planar, n and p-type, heavily doped 4=4154
 Ge, temp. dependence, rel. to neutron-produced energy levels 4=1433
 Ge, 30 Gc/s, by coupled waveguides, and mobilities 4=20349
 Ge, Zn-doped, 5°–250°K 4=6957
 HgTe, doped and undoped, 77°–400°K 4=10063
 HgTe, 100–320°K 4=7087
 HgTe, 100°–400°K 4=4163
 HgTe—CdTe solid solutions, rel. to vacancy study 4=28998
 InAs, at liq. N₂ temperatures 4=10057
 InAs, for mag. field meas. up to 34 kG 4=24784
 InAs—CdTe alloys, n-type, up to 400°K 4=22717
 InSb element, thermal time const. meas. circuit 4=6978
 InSb, in fields up to 450 kOe, 20°–300°K 4=6977
 InSb films, rel. to annealing 4=20808

Hall effect—contd

- in InSb, for mag. field spectrum analyzer 4=30014
 InSb, pulse technique meas. 4=30538
 InSb, 80°–500°K, in n- and p-type 4=26048
 Mn_{2-x}Cr_xSb, changes rel. to mag. transitions 4=1617
 Mn₂Ge₂ ferrimagnet, near compensation point, expt. and theory 4=26053-4
 Ni films, room and liquid N temps. 4=12862
 Ni—Cu—Fe alloys, ordinary and extraordinary, meas. 4=10031
 Ni—Fe films, room and liquid N temps. 4=12862
 Ni and Ni—Fe alloys, residual resistivity 4=20324
 P, rel. to thermal cycling 4=10436
 PbS film, single-crystal, mobility 4=23582
 PbS layers, mono- and polycryst. 4=26051
 PbTe, p-type, impurity levels 4=15540
 PbTe thin films 4=23583
 PbTe—SnTe system alloys 4=23275
 S, orthorhombic, charge transport, 180°–370°K 4=30541
 Sc, temp. depend. 4=26013
 Se, vitreous, photo-Hall effect, n-type cond. 4=22805
 Si, after γ -irrad. 4=6788
 Si, coeff. when Ni-doped 4=4173
 Si, heavily doped, temp. depend. 4=4171
 Si, Hall mobility and μ_n/μ_p , temp. depend. 4=15542
 Sn, Hall field 4=17583
 α -Sn, theory 4=6790
 SrTiO₃, 4.2°–300°K meas. 4=15559
 Te, coeff., sign inversions 4=12916
 Te films, in modulating elec. field 4=28575
 Te, molten, temp. depend., free-electron model 4=2707
 TiC_{1-x}N_{1-x}, and carrier density 4=17479
 TiO₂, partly-reduced, anisotropy, 78°–700°K 4=10072
 TiO₂ (rutile), slightly reduced, rel. to 1/T 4=15541
 US, 4.2–360°K 4=12842
 Zn, two vector component meas. 4=28538
 ZnSb, p-type, meas. 4=12919
 ZnSe, scatt. const. 4=22726

Halogens

- atoms, radiative electron capture 4=25493
 cyanides, mol. vibr. and thermodynamic props., calc. 4=25674
 halides of group V elements, absorpt. spectra 4=6581
 halogen cyanides, molecular vibr., bond lengths 4=9735
 ion, di, formation, in glasses, by X-rays, u. v. 4=4707
 metal halides, far i. r. spectra 4=7117
 spectra, atomic, in arc in He atmosphere 4=9642
 vibrational relaxation times 4=28181
 Br₂, I₂, ICl, IBr, molec. beams, reactive scattering with K, Rb, Cs 4=28288

Hardness

- See also Abrasion; Work hardening.
 alkali halides containing F-centres, hardening on illumination 4=13392
 alkali halides, γ -irrad. hardening 4=15699
 calcite, on repeated twinning 4=10373
 f. c. c. metals, hardening by fast neutrons 4=30760
 f. c. c. polycrystalline metals, hardening according to Taylor's rule 4=13370
 intermetallic cpds., and thermal vibrs., plastic deformation 4=28920
 metals, dislocation distrib. and hardening mechanism 4=28465
 metals, hexagonal and cubic, microhardness rel. to reciprocal volume-wear rate and friction coeff. 4=13387
 metals, radiation hardening 4=30587
 precipitate and dispersion hardening 4=28948
 solid solutions, hardening mechanism 4=26536
 solid solutions, Suzuki atmosphere contrib. 4=20638
 solution increase and solute atom dislocation interactions 4=26482
 strain-hardening, effect of dislocation multipoles 4=25936
 steel, absorbed H₂, effect on microhardness 4=23216
 steel, ageing effects 4=29009
 wurtzite cpds., BeO and others, single crystals 4=1931
 AgZn and AgCd, hardening by thermal cycling 4=23289
 Al, electron beam increase 4=28929
 Al, polycrystalline, microhardness rel. to applied load 4=17743
 Al, recovery of hardening by annealing 4=15701
 Al single crystals, strain-hardening var. with specimen dia. 4=30762

Hardness—contd

- Al—Ag alloy, var. with Guinier—Preston zone radius and temp. 4=30768
- Al—Cu, Al—Mg, Al—Si alloys, strain—age increase 4=17722
- Al—Li (2.8, 1.5 wt. %), and phase transformation on aging, neutron effects 4=13472
- Al—Mo, rel. to Mo content 4=15722
- Al—V, rel. to V content 4=15722
- Al—W, rel. to W content 4=15722
- Al—Zn alloys, and precipitation, rel. to dislocation loops, cold working effects 4=13473
- Al—Zn alloy, var. with Guinier—Preston zone radius and temp. 4=30768
- Al—Zn, precipitate and dispersion hardening 4=28948
- Au—Ag, micro, and annealing on explosive loading 4=13410
- Au—Ni (50:50 at. %), heat treatment improvement 4=23157
- Be 4=4599
- Be, microhardness anisotropy 4=20646
- Be, neutron effects at high temps. 4=4092
- Be—Cu (97.5%), stress effects 4=23148
- BeO, annealed after irradiation, microhardness meas. 4=12722
- Bi—Cd, effect of composition near eutectic 4=7414
- C, pyrolytic, meas. 4=13400
- Cd, micro, effects of electrons, alphas, with and without Sn 4=23229
- Cd—Se, condensate, composition depend. 4=23239
- CdGeAs₃, microhardness 4=1593
- Cr, effects of C, N, O and S 4=30770
- Cr, impurity effects 4=7424
- Cu, fractured specimen, stress effects 4=28940
- Cu, hardening by fast neutrons 4=30760
- Cu, indentation hardness, effect of loading duration 4=26518
- Cu, rel. to grain size, block dimensions, micro-stresses 4=23138
- Cu tensile specimens, strained 4=23142
- Cu, polycrystalline microhardness rel. to applied load 4=17743
- Cu, strain-hardening and softening 4=1940
- Cu—3.1 wt% Co alloy, age hardening due to precip. 4=30776
- Cu—12 vol % SiO₂ alloy, hardness and interparticle spacing relationship, meas. 4=30868
- Cu—Al, precipitate and dispersion hardening 4=28948
- Cu—Al (14.3 at. %), temp. var., and deformation 4=7487
- Cu₃Au, f. c. c., ordered, strain hardening 4=17730
- Cu₃Au, shock wave effect on microhardness 4=26508
- Cu₃Au type superlattice alloys, rel. to ordering 4=7483
- Cu—Co, precipitate and dispersion hardening 4=28948
- Cu—In, during age hardening 4=4461
- Fe, neutron irradiation 4=28509
- Fe, polycrystalline, microhardness rel. to applied load 4=17743
- Fe₃Al, strain hardening, effect of long-range order 4=17735
- FeCo—2%V, strain hardening, effect of long-range order 4=17735
- Fe—Ge alloys, β -phase 4=29118
- Fe—Ge alloys, heat treatment and temp. depend. 4=26010
- Fe—Ni alloys, heat treatment increase, effect of alloying elements 4=20662
- Fe—Ni, Ni conc. depend. 4=13184
- Fe—18 to 21% Ni martensites containing Ti, Al, Cu or Mo, age hardening 4=13420
- Fe—Ni—Mn, α -phase 4=23168
- Fe—Ni—Mn—Ti, α -phase 4=23168
- Fe—Ni—Ti, α -phase 4=23168
- Fe—Si, Si conc. depend. 4=13184
- Ge, micro, —200 to 1000°C, linear to exp. transition 4=13404
- Ge, microhardness anisotropy 4=30778
- Ge, microhardness, rel. to internal photoeffect 4=4463
- Ge, purity depend., 0–600°C 4=15708
- HgS, α -phase, microhardness, impurity effects 4=7073
- HgTe—CdTe systems, microhardness 4=7436
- InSb, metallic form 4=29114
- InSb, microhardness anisotropy, by scratch method 4=1943
- KBr, microhardness, 4=6895
- KCl containing F-centres, hardening on illumination 4=13392
- KCl, pure Harshaw, γ -irradiation 4=10005
- KCl, Sr²⁺ doped, γ -irradiation 4=10005
- LiF, indentation hardness, effect of loading duration 4=26518

S 254a

Hardness—contd

- Mg, microhardness anisotropy 4=1955
- Mg, Cd, hardening during annealing, isothermal 4=23176
- Mg—Cd, composition and temp. depend. 4=13424
- MgO, indentation hardness, effect of loading duration 4=26518
- NaCl, Ca²⁺ doped, surface indentation meas. 4=23208
- NaCl, scratching along directions showing hardness polarity, rel. to dislocation distrib. 4=1962
- NaCl single crystals, microhardness rel. to applied load 4=17743
- Nb—base binary alloys, rel. to conc. 4=17813
- Nb—N crystals, with 0.9–1.3 at. % N 4=10032
- Nb—Sn, β -W phase, micro 4=26661
- 16% Nb—Zr alloy 475°–575°C, rel. to $\beta \rightarrow \omega$ transform. 4=23281
- Ni, effect of cold working and annealing 4=13431
- Ni electrodeposits, effect of annealing 4=30870
- Ni, micro, neutron effects, and phase transform. 4=23282
- Ni₃Al with Cr, Ti, Mo and W additions 4=23459
- Ni—Cr (21.4 wt%), micro, neutron effects, and K phase form. 4=23282
- NiGa, grain boundary hardening, O₂-induced 4=17740
- Pb, grain and twin boundary hardening, solute-induced 4=2014
- Pb, high-purity, solute-boundary hardening 4=28963
- Pu—Al alloys, determ. for phase boundary position calc. 4=13440
- Pu—Ce alloys, determ. for phase boundary position calc. 4=13440
- Sb—Se, condensate, composition depend. 4=23239
- SbI₃, micro 4=1624
- SbTeI, micro 4=1624
- Sc, microhardness, anisotropy of single crystals 4=10143
- Si, micro, —200 to 1000°C, linear to exp. transition 4=13404
- Si, microhardness anisotropy 4=10401
- Si, microhardness anisotropy 4=30778
- Si, microhardness, rel. to internal photoeffect 4=4463
- Sn(β) 4=29114
- Ta carbide, microhardness, rel. to C content 4=13448
- TeI, micro 4=1624
- Ti—base alloys, hardenability 4=23218
- TiI₃, microhardness decrease in i.r. illum. 4=7396
- TiO₂, micro, effect of non-stoichiometry 4=13441
- U carbides 4=13611
- U nitrides, microhardness 4=2093
- UC 4=13611
- U—Nb (0.3–17.3 at. %), and metastable phases, quenching rate effects 4=13609
- WC, microhardness, rel. to plastic deformation 4=4491
- WC, rel. to high press. and temp. 4=22592
- Zn, micro, effects of electrons, alphas, with and without Sn 4=23229
- Zn, microhardness anisotropy 4=1955
- Zn—Cd alloys, age-hardening 4=1965
- Zn—Se, condensate, composition depend. 4=23239

 impairment, exposure to steady-state noise 4=4975
 interaural phase differences, lateralizing effects 4=26993
 instrument to display subjective spectrum and noise loudness 4=5332
 intermittent noise heard by observer while searching for visual display 4=20984
 lateralization of images, with binaural tones 4=23962
 localization shifts, stimulus effects 4=23965
 losses, temporary, following exposure to pronounced single-freq. components in broad-band noise 4=23971
 loudness calc., digital 4=20973
 loudness discrimination for varying intensity change rate 4=26989
 loudness function with masking noise 4=10970
 loudness, little var. with pulse length and band-width 4=15976
 loudness of masked and unmasked sounds 4=2482
 loudness meas., direction compensated microphones 4=5330
 loudness meas., review 4=289
 loudness of simple short pulses 4=2483
 masker level and noise-signal detection 4=15980
 masking, backward and temporal summation 4=23966
 masking of noise bursts by continuous noise 4=10960
 masking of tone by pulsed sound, threshold var. p.r.f. 4=15979
 monaural auditory detection, model 4=13991
 monaural fatigue, effect on discrimination and matching 4=20970
 music perception via interfering paths 4=23964
 musical consonance and crit. bandwidth, review 4=15978
 noise judgment of aircraft in flight 4=4973
 noise pulses, loudness perception 4=2484
 noise, subjective meas., recent advances 4=10955
 noises, effects on alertness 4=23961
 noy tables, rel. to band sound-pressure levels 4=10971
 octaves judgement, h. f., systematic shifts 4=10965
 pitch magnitude estimation 4=4978
 pitch, time cue effect 4=23968
 plane-wave sources, two, directional localization of sound 4=26992
 pulse-train pitch 4=20971
 pure-tone auditory fatigue, central factor 4=10963
 rating scales, neutralization of stimulus bias 4=26988
 ratio scales, category scales and variability for loudness and softness 4=10962
 receiver operating characteristics, mech. analogue to rating scale 4=10967
 reception and probability of message 4=23967
 recognition of Bulgarian sounds on varying duration 4=13988
 repetitive noise bursts, apparent changes 4=10957
 residue, tonal, identification 4=15977
 reverberation effect on impact noise reaction 4=14315
 room noise, various single-number criteria 4=10968

Hearing—contd

sensation decay rate between two pulses 4=10966
 sensory thresholds and response bias 4=15984
 ship safety signals, audibility of 4=5300
 short tones, loudness and detectability scaling 4=23963
 signal detect., stimulus-oriented approach 4=20972
 sonic and u. s. freqs. conducted through skull 4=4981
 sound and speech perception, human ear resolving power 4=10956
 speech intelligibility, effect of talker-listener angle 4=7996
 speech intelligibility, talker-listener angle effect 4=13989
 stereophonic sound fields, analysis 4=5309
 in stereophony, three-channel, effect of noise on localization and understanding 4=7997
 subjective comparison, level non-effect 4=26987
 subjective spectrum and noise loudness, display instrument 4=5332
 temporary threshold shift, prod. and recovery 4=4979
 threshold, circumaural earphone effect 4=23969
 threshold-resistivity for circumaural earphones and earphone cushions 4=4982
 thresholds, short-time 4=20969
 threshold of susceptibility, directional dependence 4=26990
 threshold of tone pulses, masking influence of noise band 4=23975
 underwater thresholds 4=13992

SUBJECT INDEX

Heat conduction—contd

- ionic melt, ideal, thermal conductance calc. 4=11175
- lattice, weakly ionic, thermal conductivity rel. to ionicity 4=20224
- liquids, insulating, in elec. field, space charge effect 4=11195
- liquids, temp. dependence, theory 4=170
- liquids, viscous, by elastic waves 4=11194
- low temp., contacts, meas. using aligned Ce^{141} , γ -ray anisotropy temp. var. 4=16307
- many-dimensional equation, finite difference soln. accuracy improvement 4=18454
- metals, Lorenz parameter, anomalous, at He temps. 4=17471
- mixed three-pair boundary problem for a semi-space 4=11386
- with phase transitions, temp. dependent coefficients 4=29785
- plasma, heat flux perp. to mag. field, theory 4=5601
- plasma, many-component, heat fluxes calc. 4=8690
- plasma, partially ionized, in mag. field, calc. 4=11588
- plasma, relativistic, in mag. field 4=14647
- plasma, two-temp., heat fluxes, kinetic eqns. 4=8689
- plasmas, unified theory calc. 4=498
- potential of elliptic operators, theory 4=27348
- semiconductor, diffusion contrib. to electron thermal conductivity 4=20225
- semi-infinite body, from similarity, theory 4=5417
- several space dims., finite difference scheme 4=14423
- solid containing point defects, non-stationary 4=8474
- solids, anisotropic, coordinate transformation paradox removal 4=11387
- solids, Boltzman transport eqn., relaxation-time approx. 4=6768
- solids, m. f. p., and microwave phonon attenuation 4=17380
- solids, small good cond. in imperfect contact with large poor cond., calc. 4=14426
- superconducting films in mag. fields, calc. 4=18555
- superconductors, electronic, phenomenological model 4=21406
- superconductors, electronic, for strong electron-phonon coupling 4=16328
- superconductors, in intermediate state 4=18558
- superconductors, macroscopic theory 4=18557
- superconductors, var. with mag. field, Landau laminae theory 4=5499
- temperature distrib. calc. with energy specification 4=343
- thermally stratified fluid under gravity, stability 4=24134
- theory, convergence improvement methods 4=24405
- 2-layer problems of non-stationary cond., approx. soln. 4=5415
- two plates, one heated over whole surface, other cooled over part 4=5416
- two- and three-phase media, thermal conductivity, theory and comparison with expt. 4=11384
- variational principles in thermoelast. and heat cond. 4=109
- waves, numerical calc. 4=18453
- wedge shaped bodies, integral transform. solns. 4=21337

Heat losses

See Heat transfer.

Heat measurement

See Calorimeters; Calorimetry.

Heat of adsorption

- calorimeter and cryostat for measurement 4=11399
- gases on metals, theory rel. to metal-metal bonds 4=7723
- H on Ag, Au and Al 4=25605
- H and D on glass, at 20° and 17°K 4=13688
- H₂ on evaporated W and Ni films 4=17848
- H₂, isotopic, at low temps., theory 4=23595
- He⁴ on Saran charcoal, isosteric heats of adsorption 4=13690
- Pt and C-supported Pt, ads. of H₂ and O₂, partial molal enthalpies of adsorption rel. to coverage and temp. 4=26721

Heat of combustion

calorimeter, semi-micro static aneroid 4=8494

Heat of crystallization

See Crystallization.

Heat of dissociation

Cd₃As₂ 4=24457

Heat of formation

calorimeter, solution, graphite, 20°-80°C 4=355

Heat of formation—contd

- ice, double faults 4=25804
- Laves phases and other intermetallic systems 4=10418
- measurement, double oxide from constituents, by mass spectrometer 4=26746
- B hydrides 4=21460
- BC₂, B₃C, BCSi, BSi₂, BC, BSi 4=17318
- BOCl, rel. to vapour-phase equilib. 4=15837
- C₈K rel. to graphite polymorphism 4=30534
- CaCl₂ 4=5461
- Cd₃As₂ 4=24457
- CoMn₂O₄, from Co₃O₄-Mn₂O₄ system 4=22517
- Cr-Si system, rel. to mag. susceptibility 4=1802
- GaP, in reactions with wet H₂ 4=13709
- HBO₃, three cryst. forms, meas. 4=14452
- V-Fe alloys, from v. p. data 4=10441

Heat of fusion

- alkaline earth halides 4=8501
- borates, glasses and compounds 4=22516
- high temp., salts, entropy, formula 4=11406
- methylphosphonyl dihalides, from heat capacity meas. 4=30521
- nonionic liquids, from rigid-sphere eqn. of state 4=2893
- organic molecular complexes 4=5450
- propylene oxide 4=22496
- Cs perrhenate in Cs nitrate 4=10631
- D₃, rel. to ortho-para composition 4=20212
- γ Ga 4=24435
- Ga, using Calvet microcalorimeter 4=14434
- HClO₄, anhydrous 4=9859
- In, using Calvet microcalorimeter 4=14434
- K perchlorate in KNO₃ 4=10631
- K perrhenate in KNO₃ 4=10631
- K, using Calvet microcalorimeter 4=14434
- LiClO₄ and LiClO₃-LiNO₃ mixtures 4=29620
- Mg orthophosphate 4=9860
- Mg pyrophosphate 4=9860
- Na chromate in NaNO₃ 4=10631
- Na molybdate in NaNO₃ 4=10631
- Na perrhenate in NaNO₃ 4=10631
- Na sulphate in NaNO₃ 4=10631
- NaNO₃ 4=16282
- Rb perrhenate in Rb nitrate 4=10631
- ZnBr₂ 4=14156
- ZnCl₂ 4=14156

Heat of reaction

- gases, calorimeter with replaceable reaction cells 4=8493
- measurement, calorimeter, differential high temp. 4=18472
- BF₃(g) + B₂O₃(l) = (BOF)₃(g) 4=2149
- (BOF)₃(g) = 3BOF(g) 4=2149
- Fe-Al alloys, enthalpy and entropy 4=15441
- H₂O + D₂O = 2HDO 4=29204
- MgUO_{3.5} + 0.12 O₂ → Mg UO_{3.75} 4=20714
- W + H₂O vapour 4=27387
- Zn in Zn salt solns., and electrolytic Peltier effect 4=7768

Heat of solution

- alkali metal binary mixture 4=11182
- alkaline-earth nitrates in fused alkali nitrates 4=29622
- calculation, solids in molten reciprocal salts 4=14136
- fused salts 4=29622
- gases in nonpolar solvents 4=5155
- ions, aqueous, hts. and entropies of hydration 4=16104
- noble metal solvents, calc., agreement with expt. for dil. solns. 4=7469
- AgBr, in NaNO₃, KNO₃ or mixtures, e. m. f. meas. 4=14136
- AgI, in NaNO₃, KNO₃ or mixtures, e. m. f. meas. 4=14136
- Al in Sn at 750°K, and theories 4=24175
- Ar, in H₂O 4=159
- Cs perrhenate in Cs nitrate 4=10631
- CsF in water 4=29623
- Cu-Ni system, at 1200°C 4=24176
- Cu-Sn system, at 1127°C 4=24176
- HBO₃, three cryst. forms, meas. 4=14452
- Ga in Sn at 750°K, and theories 4=24175
- In-Sb-Zn soln., partial molar heats of soln. of Sb and Zn 4=24201
- K perchlorate in KNO₃ 4=10631
- K perrhenate in KNO₃ 4=10631
- LiClO₃-LiNO₃ molten mixture 4=29620

Heat of solution — contd

- LiF 4=24202
- N₂, in H₂O 4=159
- (NH₄)₂SiF₆, rel. to third-law verif. for hexagonal—
cubic transformation 4=12645

plates 4=2861
- radiation, m. h. d. Couette flow 4=24813

Heat transfer—contd

- radiative, black surfaces in grey medium, appl. of generalized ang. coeffs. 4=18480
- radiative, improved differential approx. 4=16268
- radiative, study by differential methods 4=24427
- from reflected shock wave, at end wall 4=29696
- review and bibliography 4=29780
- shock tubes, radiative, meas. at supersatellite speeds 4=14260
- steam condensation, dropwise 4=16298
- suction effects, with internal heat generation, in stagnation point flow 4=29782
- sunspots, convection inhibition by mag. braking 4=2426
- in supersonic flow 4=2867
- supersonic flow, conference 4=8230
- suspension of graphite in N_2 in $1/2$ in. tube 4=27219
- suspensions, non-Newtonian, metal oxides, turbulent 4=15855
- thermistors, natural and forced convection together 4=27355
- thermodynamic coupling bet. heat and mass transfer in free convection 4=340
- transformation, mathematical, Mollier to enthalpy—composition diagram 4=8531
- transient, average bulk temp. formulae 4=11383
- in transition boiling domain, from horizontal surface 4=29784
- transport coefficients in resistive medium, correl. - function, proof 4=27347
- turbulent flow of fluids with var. properties, and frictional resistance 4=18457
- turbulent, from point source with boundary layer flow, meas. 4=11149
- turbulent, heat eddy diffusivity near wall 4=16273
- in wake of rectangular cylinder 4=29580
- Ar—W accommodation 4=29674
- Cu, nucleate boiling, effect of surface config. 4=2862
- H_2O , from fine Pt wires, effect of ionic currents 4=8200
- H_2O , boiling, from Ni wire in subcooled and boiling water 4=11417
- H_2O , saturated and subcooled, boiling at coexistence of nucleate and film regions 4=27379
- H_2O , subcooled, surface boiling under free convection 4=27380
- He, from thin cylinders, expt. rel. to theory 4=8515
- He^3 , liquid or solid, thermal boundary resist. with Cu or epoxy resin below $1^\circ K$ 4=27404
- He^4 , solid, thermal boundary resist. with Cu below $1^\circ K$ 4=27404
- In—sapphire boundaries, thermal resist., for super cond. and normal In 4=28385
- Na oleate, boiling at coexistence of nucleate and film regions 4=27379
- Ne, liquid, coeffs. meas. 4=8201
- Pt and Ni wires to boiling water, depend. on wire surface 4=2894

Heat treatment

- alkali halides, rel. to light scattering 4=28712
- alloys, below recrystallization temp., and elastic const. and struct. 4=20630
- Alnico, effects on mag. props. and crystal structure 4=1830
- Alnico—Cu, effect on mag. coercivity 4=17645
- annealing effect on defects from coalescence of twin layers 4=25930
- annealing, isothermal of metals after heavy-particle bombard. using liq. nitrogen cryostat. 4=8488
- anthracene, effect on free carrier photogeneration 4=22809
- brass, effect of external stresses during annealing 4=20649
- carbon iron sheet, annealing and deformation, causing abnormal grain growth 4=13651
- ceramics, and microstruct. bi-phase equilibrium rate, diffusion 4=23524
- ceramics, volume and mechanical strength changes rel. to annealing 4=10374
- crystals, point defect annealing kinetics, diffusion eqn. 4=6826
- defect self-healing at high temp., mechanism and kinetics 4=12744
- excitation, slow neutron beam study 4=3990
- glass, crystal growth and light effects 4=23340

Heat treatment—contd

- glass, effect on breaking strength 4=4464
- glass fibres, and mechanical strength 4=23154
- glass, oxide, densified at high pressure 4=13409
- glass, Pb, γ irradi., and light transmission loss reduction 4=22861
- glass, Young's modulus rel. to refr. index 4=22864
- graphite, annealed after irradiation 4=1466
- graphite, annealed and n irradi., elec. props 4=30605
- graphite, interstitial monolayer disks, rel. to annealing 4=12727
- graphite, pyrolytic, annealing under pressure 4=4523
- graphite, pyrolytic, effect on thermal expansion 4=25863
- graphite, thermal cond. rel. to defect structure 4=1415
- hexahalogen complexes of Pt elements, cryst., annealing, thermal, of chem. radiation damage 4=12822
- ice plates cracking from thermal shock 4=1947
- ionic crystals, annealing effect on optical properties 4=28442
- isochronal annealing studies, expt. results 4=30587
- and magnetic after effect, soft materials 4=17636
- magnetic films, hypercritical hysteresis loops 4=13156
- magnetic, review 4=22941
- metal wires, quenching in He II 4=23997
- metals and alloys, vacancy precipitation, rel. to annealing, review 4=12733
- metals, below recrystallization temp., and elastic const. and struct. 4=20630
- metals, cold worked b. c. c., effect of interstitials on recovery 4=10362
- metals, deformed, crystal dislocation var. eqn. 4=12747
- metals, deformed, Frenkel pairs recomb. theory 4=15471
- metals, neutron-irradiation at $4.5^\circ K$, annealing analysis 4=12821
- metals, quenching strains effect on retained thermal defects 4=1462
- metals, recovery from irradiation damage 4=1533
- mica, and spectrum, muscovite sheet 4=10181
- pentaminebromo complexes of Pt elements, cryst., annealing, thermal, of chem. radiation damage 4=12822
- Permalloy films, mag. 4=20549
- Permalloy, and mag. initial susceptibility and elec. cond., stress effects 4=7282
- polyethylene, annealing, surface mass defect effect 4=7561
- polyethylene, effect on lamellar thickness, melting temp. and density 4=15809
- polyvinyl alcohol film, rel. to gel formation 4=10664
- quartz, smoky, effect on spectrum absorption bands 4=1742
- quenching of metal wires, elec. heated, in liquid He II 4=14475
- quenching of metals, oriented void formation 4=20291
- rubber, crystal growth, low temp. 4=23347
- semiconductors, introductory lectures 4=30615
- semiconductors, review 4=28297
- single crystals, rel. to residual stresses, "anomalous" distrib. 4=10358
- solid solns., annealing temp., rel. to cellular precipitation, Turnbull theory 4=10415
- stacking-fault tetrahedra, irradiation-induced annealing 4=4065
- steel, ageing effects 4=29009
- steel, annealing, rel. to deformation recovery 4=4462
- steel, effect on fracture delay time 4=10385
- of steel sections of vacuum chamber, proton synchrotron 4=14834
- steel, stainless, cycling speed effect on thermal fatigue 4=23211
- steels, austenite formation, rapid X-ray anal., recording apparatus 4=23270
- steels, C and Cr, austenitic transformation, white layer formation 4=23269
- thermal stress ageing law 4=7390
- vacancy annealing in metals, effect of interaction with trace impurities 4=30555
- vacancy prod. in pure metals 4=30593
- Zircaloy-2, heat and annealing effects at high temps. 4=26534
- Zircaloy-2, reduction of corrosion and hydrogen embrittlement 4=10994
- Zircaloy and Zr—Nb alloy, dimensional changes in temp. gradient 4=20691
- Ag, proton irradi., 10 MeV, stage III recovery 4=10011

Heat treatment—contd

- Ag, quenched, annealing of vacancies and vacancy aggregates 4=12734
 Ag, quenching, and divacancy binding energy 4=22562
 Ag, quenching after heating in air, lattice defects 4=6823
 Ag-Cd alloys, annealing spectrum of cold-worked specimens 4=23290
 Ag-Pd alloys, electrical props., effect of annealing 4=22684
 Ag-Zn, quenched, thermal vacancies formation and decay 4=6828
 AgZn and AgCd, accelerated ordering and hardening by thermal cycling 4=23289
 Al, annealing effect on Bordoni peaks 4=1927
 Al, annealing, single crystal formation, substructure 4=26590
 Al crystals, rel. to recrystallization-polygonization competition 4=23327
 Al, and dislocations and impurities distrib. 4=20278
 Al, divacancy binding and migr. energies 4=15468
 Alnico, mag. props. and structure 4=13166
 Al, quenched, dislocation loops 4=6840
 Al, quenching, dislocation interaction and stacking faults 4=12757
 Al, recrystallization inhibition by polygonized struct. 4=2332
 Al single crystals, annealing 4=15701
 Al single crystals, recrystallization effect 4=23325
 Al wires, and polygonization, from tensile testing 4=1925
 Al-Cu (4%), quench aging, electric current effects 4=7407
 Al-Zn, conductivity changes and Mg impurity/vacancy interaction 4=12725
 Al-Zn (10-98 wt. %), cycling, and internal friction and elongation 4=13389
 Au, annealing, influence on internal friction 4=4466
 Au, annealed, struct. expansion and thermal defect existence 4=30554
 Au, cold-worked, annealing effect rel. to resistivity 4=7428
 Au, crystal vacancy clusters, on n irradi. or quenching, annealing effects 4=4038
 Au films, annealed after ion irradi., defect behaviour 4=1489
 Au, proton irradi., 10 MeV, stage III recovery 4=10011
 Au, quenched, annealing of vacancies and vacancy aggregates 4=12734
 Au, quenched, high-temp. anneals 4=25925
 Au, quenched in vacancy annealing kinetics 4=20266
 Au, quenching-in and annealing-out of vacancies 4=6829
 Au thin films, end of annealing 4=23577
 Au thin films, rel. to structure changes 4=23578
 Au and Au-Mn glasses, electron irradi., multi-colour formation 4=17462
 Au-Ag, explosive, study by microhardness 4=13410
 Au-Ni (50:50 at. %), hardening 4=23157
 Ba_{1-x}Sr_xPbO₃, 6Fe₂O₃, mag. props. 4=23015
 BaF₂, effect on e.s.r. of Gd³⁺ 4=1877
 BaTiO₃, annealing of mechanically-shocked crystal 4=1495
 Be alloys, and microstructure 4=7667
 Be, and mechanical properties, 600°C, impurity effects 4=7667
 Be-Fe, and microstructure 4=7667
 BeO, annealing after irradi., point defects 4=12722
 BeO, n irradi., effect on thermal cond. changes 4=6762
 BeO, sintered, rel. to reflection coeffs. 4=28671
 CaF₂, annealing effect on X-ray line-broadening 4=23523
 CaF₂, rel. to rare earth ion e.s.r. 4=26425
 Cd-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 Co, deformed, Frenkel pairs recomb. 4=15471
 Co, h.c.p., annealing, effect on stacking fault probabilities 4=22602
 Co, in a mag. field 4=4352
 Co (NO₃)₂ · 6H₂O, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
 Cu, annealing at 1000°C in wet H₂ atm. 4=10459
 Cu defect self-healing at high temp., mechanism and kinetics 4=12744
 Cu, dislocation loops after neutron irradi., annealing 4=4053
 Cu, electron irradi., 1.25-3.25 MeV, stage I recovery spectrum 4=10010

Heat treatment—contd

- Cu, neutron irradiated, damage annealing, in relation to rearrangement of "zones" 4=30760
 Cu, point defects, quenched and annealed 4=1455
 Cu, proton irradi., 10 MeV, stage III recovery 4=10011
 Cu, quenched, annealing of vacancies and vacancy aggregates 4=12734
 Cu-4% Ag alloy, Hg-embrittled, quenched and slow-cooled alloys, effect on fracture path 4=30774
 Cu-12 vol % SiO₂ alloy, annealed, SiO₂, particle coarsening, hardness, interparticle spacing 4=30868
 Cu-Al, annealing and short-range order 4=1988
 Cu-Al solid solns., ordering kinetics, theory 4=7484
 Cu₃Au, cold worked, ordering and strength changes 4=7485
 Cu-Ni, n prod. vacancy de-segregation, from cond., elec. 4=22645
 Eu₂O₃, sintering, effect on semiconductor 4=4147
 αFe, ageing, mechanism 4=1946
 Fe, quenching, rapid, and martensitic transformation 4=13495
 Fe₃Al, quenching and slip system 4=6854
 Fe-C, annealing after irradi. 4=14735-6
 Fe-Co-V alloys, annealing, ordering and elec. cond. 4=1992
 Fe-Co-V, effect on elec. cond. 4=22676
 Fe-Ge alloys, elec. and mag. props. 4=26010
 Fe-Ni alloys, annealing, effect on strong-field susceptibility 4=28811
 Fe-Ni alloys, hardness increase, effect of alloying elements 4=20662
 Fe-Ni, annealing of defects from neutron irradi. 4=1457
 Fe-Ni 50:50 alloy, hot-rolled, texture meas. 4=13434
 Fe-Ni (1-10%), quenching, rapid, phase transformations 4=13496
 Fe-Ni-C martensite, tempering, electron transmission study 4=15738
 Fe-Ni-Mn, α-phase, effect on props. 4=23168
 Fe-Ni-Mn-Ti, α-phase, effect on props. 4=23168
 Fe-Si, effect on mag. props. 4=1826
 GaAs, annealing props. after reactor irradi. 4=6899
 GaAs, lattice defects, introduction and removal, effect of Cu 4=15467
 Ge, after 1.0 MeV electron irradi. at liq. He temp., annealing behaviour 4=9945
 Ge, annealing, effect on dislocations 4=1485
 Ge, effect on photocond., 150°-300°C 4=30664
 Ge, heavily doped, reflectivity meas. 4=7155
 Ge, p-n junctions 4=6999
 InSb films annealing, rel. to elec. props. 4=20808
 InSb films, crystallite size, rel. to annealing 4=23581
 InSb, γ-irradi., annealing processes from isochronal tempering 4=10059
 InSb, In and Sb yield 4=1969
 K films, on KCl, effect on elec. cond. 4=4122
 KCl, effect on chem. effects of Cl³⁵ (n, α) P³² 4=7777
 KCl, effect on prod. of F, M- and V-centres 4=10002
 KCl·CaCl₂ crystals, effect on dielec. losses 4=26103
 LaTe_{1.7-2.0}, semicond. n-type prod. 4=4240
 LiF, annealing of dielec. defects 4=1650
 LiF, crystal structure changes due to bombardment with alumina particles 4=4044
 LiF, residual stress relaxation during annealing 4=23173
 LiF, X-irradi., volume expansion and coloration, low-temp. annealing 4=15505
 Lu iron garnet, ferrimag. resonance 4=20573
 Mb, crystal dislocations, on deformation, hard particle ring sources 4=4054
 Mg alloys, and plastic yield points 4=15710
 Mg₂Cd, annealing, isothermal, and hardening 4=23176
 Mg-Fe ferrite, ordering, mag. prop. changes 4=13241
 MgO, primary particles and defects, for various origins 4=10583
 Mg-Zr alloy, rel. to creep strength 4=28965
 Mn ferrite, ferrimag. resonance 4=20573
 MnBi, magnetic props., and order-disorder transform. 4=1798
 Mn-Fe(81%), and mechanical tensile props. and permeability to H 4=20670
 Mo, cold-worked, annealing, density changes 4=23177
 NaCl, annealing by X-rays, rel. to vol. expansion and coloration 4=17464
 NaCl, low-angle grain boundary displacement 4=15481

SUBJECT INDEX

Heat treatment—contd

- NaCl, vacancy formation energy, quenching meas. 4=4039
 NaCl, X-irrad., volume expansion and colour centres 4=15510
 Nb—Sn, superconductivity in mag. field 4=27438
 Nb—Zr (25%), and supercond. crit. current—mag. field var. 4=27612
 Ni, annealing after cold working 4=13431
 Ni electrodeposits, effect of annealing on micro-structure and hardness 4=30870
 Ni, fatigue, and grain struct. and dislocations 4=23179
 Ni ferrite, ionic rearrangement, rel. to ferrimag. resonance 4=1861
 Ni films, annealing rel. to external structure 4=10612-13
 Ni, and internal friction 4=23178
 Ni, and magnetomechanical effects 4=23180
 Ni—Cr films, vacuum deposited, annealing temp. rel. to structure changes 4=26562
 Ni—Fe alloy, effect on mag. anisotropy, meas. 4=10282
 Ni—Fe alloy, plastically deformed, effect on strength 4=26524
 Ni—Fe, and magnetization anisotropy, ordering 4=13205
 Ni—Fe(66:34), with mag. field, effect on internal friction 4=23187
 Ni₃Fe, rel. to short-range order during ageing, 300°-450°C 4=23285
 NiO— α -Fe₂O₃ mixtures, rel. to spinel formation 4=1971
 Ni₃Pt, annealing, short-range order 4=1999
 Ni—Zn—Co Fe garnet, effect on complex permeability, Ni—Zn—Cr ferrites, rel. to magnetic properties 4=10293
 P, thermal cycling rel. to phase transformations and elec. props. 4=10436
 Pb—Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 Pb(NO₃)₂, chemical γ damage, effect of crystal imperfections 4=4714
 PbTe, carrier conc. and mobility 4=6783
 Pt field emission tips, annealing, polyhedron formation 4=14742
 Pt wire, elec. resist., recovery after cold working 4=15524
 Pu, Pu—Al, annealing, lattice-defects removal 4=1537
 Sb, low-angle grain boundary displacement 4=15481
 Si, annealing of neutron-irrad. damage 4=4005
 Si, capture centres 4=17495
 Si, heavily doped, reflectivity meas. 4=7155
 Si, rel. to carrier trapping, 800°-1300°C 4=10065
 Si, surface damage annealing processes 4=7705
 SiO₂, with < 1% Al, rel. to thermoluminescence and coloration 4=4306
 Sn—Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 SrF₂, effect on e.s.r. of Gd³⁺ 4=1877
 Ta anodic oxide films, effect on dielec. props. 4=10099-100
 Ta, effect on lattice parameters 4=23489
 Ta films, and supercond. 4=18603
 Ta thin foils, domain patterns due to interstitial impurities 4=22567
 TiO₂ films, brookite, anatase formation conditions 4=13505
 U, α -phase, recryst. on annealing 4=10410
 U, annealing following irradiation, swelling 4=12835
 U containing Kr gas 4=2115
 α -U, effect on ductile/brittle transform; -183° to 350°C 4=28987
 UC, annealing rel. to cell size 4=13611
 U—Mo alloys, annealing, post-irradiation, rel. to nuclear fuel swelling 4=3759
 UO₂, structure of impurity phases 4=7679
 V—Ga film, superconductivity in mag. field 4=27438
 V—Si film superconductivity in mag. field 4=27438
 W, doped wires, secondary recryst. 4=10588
 W, quenching, 2350° to 1.5° K, rel. to vacancies 4=22563
 Zn, creep, cycling effects 4=13452
 Zn, polycrystalline, deformation by hot torsion 4=28990
 Zn, thermal cycling, size effects and microstructure changes 4=13657
 Zn(NO₃)₂·6H₂O, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
 ZnO, lattice parameters, effect of thermal history 4=23500
 ZnS, Fe and Cr ion charge transfer, e.s.r. meas. 4=1357

Heat treatment—contd

- ZnS : Mn²⁺, rel. to activator conc. and phase transformation 4=20596

Heating

- cavitation, double temp. jump meas. 4=14118
 crystal imperfection mobility activation meas., extension to higher order processes 4=9940
 due to atmospheric ozone, calc., Curtis—Godson approx. 4=10699
 electron-beam unit, for Czochralski crystal-growing unit 4=26585
 film substrates, vacuum deposition, radiant heater 4=26707
 furnace for use with X-ray diffractometer 4=10514
 glassy materials, under supersonic flow 4=27371
 heater, self-supporting, 1000°C, for metal film evaporation 4=21346
 high-frequency apparatus, for X-ray study of liquid refractory metals 4=21096
 incandescent filaments, a. c. heated, evap. rate 4=5434
 induction source, for Al creep meas., in vacuo, high temp. 4=26496
 induction, temp. stabilizer 4=14437
 inside solenoid, nonuniform, rel. to medical diathermy 4=15969
 ionosphere, sudden, in auroral zone 4=26842
 by r.f. oscillations, LGZ-10 oscillator range extension 4=14556
 radio frequency, thermocouple control 4=21344
 semiconducting wafers, graphite resistance 4=26091
 solid surface by electron beam 4=21570
 solid in vapour, press. and temp. adjustment 4=10995
 transient surface heating, generation of elastic waves 4=5275
 wires, exploded, by condenser discharge, calc. 4=16265
 Au—Pd, structure short range order persistence 4=13645

Height measurement

See Length measurement.

Helium

- acoustic wave propag., by localized r.f. breakdown 4=19019
 afterglow, atomic emission 4=22298
 afterglow, molec. and atomic spectra 4=24612
 afterglow, positive ion mobilities and conversion rates 4=21482
 α -particle double electron capture 4=24571
 arc column, with superposed mag. fld., press. var. and heat cond. calc. 4=18777
 arc discharge, visible and i.r. meas. 4=18781
 arc, electric, introduction of Li and Sr, var with pressure, < 8.5 atm 4=8663
 arc, electric, pressure increase, rel. to magnetic field 4=8664
 arc, stationary, d. c., transport coeffs. rel. to mag. field 4=18780
 in atmosphere, thermal diffusion effects 4=26805
 atmospheric distribution up to 430 km 4=26807
 atmospheric, upper, from twilight glow, and fast photoelectrons 4=13826
 atmospheric, vert. distrib. during quiet sun, calc. 4=7872
 atom, accurate calcs since 1957, review 4=9630
 atom, autoionization meas. near 200Å 4=12355
 atom, collision with α , two-electron exchange 4=9633
 atom, elastic electron scatt., 0-50 eV calc., polarization effect 4=28150
 atom, electron capture from H⁺, first Born and distorted wave approx. 4=18690
 atom, electron correl. in ground state 4=3779
 atom, electron elastic scatt., rearrangement collisions 4=25565
 atom, electron excitation, abs. cross-sections 4=17253
 atom, electron impact induced radiation, polarization 4=25531
 atom, electron-induced radiation, polarization cause 4=9660
 atom, electron movement in physical space, spinor-form wave eqns. 4=3778
 atom, excitation by p and H, radiation polarization 4=22316
 atom, fine structure, programme calc. 4=19946
 atom, ground state, electron spatial correlation 4=22296
 atom—H atom interaction energy calc. at short range 4=19993
 atom, Hartree—Fock approx., perturb. corrections 4=6465
 atom, Hartree—Fock orbitals, from many-electron trial wavefunction 4=1202

Helium—contd

- atom, interactions with oscillating electric field, variation-perturbation method 4=6451
 atom, oscill. strengths, transition probabs. and lifetimes calc. 4=1205
 atom, (1s, ns) states, phase mechanics method 4=17242
 atom, proton impact, spectra meas. 4=25485
 atom, recombination rate constants, three-body 4=17852
 atom, repulsive energy from H atom, calc. 4=19992
 atom, slow electron scatt., simplified exchange operator 4=19980
 atom, by truncated reaction operator formalism 4=2553
 atom, transitions between S and P states, f values 4=17243
 atom, (2p)² state, split-p-orbital calc. 4=1203
 atom, 2³S₁ state, mag. suscept. calc. 4=28113
 atomic beam, atomic and ionic partial stopping powers in gaseous H₂ 4=25779
 atomic beam, effective charge through Cd metal and gas 4=1231
 atomic beam scattering from epitaxially grown gold films 4=22323
 atomic excitation by electron impact 4=25529
 atomic excitation ion-atom collisions, resonance at 28eV 4=19945
 atomic excitation and spectral polarization, induced by p and H colls, 5-35 keV 4=25533
 atomic scatt., nonadiabatic effects at high energies 4=1228
 atomic spectrum in flowing afterglow 4=18727
 atomic spectrum, self-broadening calc. 4=17240
 atomic structure calc., ground state 4=22297
 atoms, electron-induced radiation, polarization 4=25484
 atoms, electron scatt, inelastic, continuum oscillator strength determ. 4=25516
 atoms, electron scattering, sharp resonance 4=25566
 atoms, electron scatt., slow, elastic, calc. 4=17259
 atoms, excitation, by electrons, supplementary lines by adding H, Kr, Hg 4=22294
 atoms, excitation, by He ions, radiation polarization 4=19944
 atoms, excitation, double, by electron impact, calc. 4=30388
 atoms, excited state lifetime meas. apparatus 4=25534
 atoms, He—He and He—H repulsive potentials, theory 4=9675
 atoms, ionization of He, Ar, H₂ and N₂, 15-180 keV 4=2944
 atoms, mesic, formation in He—H mixture 4=1233
 atoms, n³P level, fine structure 4=30375
 atoms, S-electron elastic scattering 4=9670
 atoms, struct., electron, phase mechanical calc. 4=22293
 atoms, 20 keV, bombard. of W, surface damage 4=15511
 autoionization levels, calc. 4=12356
 autoionization probabilities 4=24567
 beams, atomic and ionic stopping powers of H₂ gas 4=25778
 breakdown, laser induced, at high pressures 4=8654
 bubbles in Cu, diffusion, rate of migration 4=30573
 colliding with Ni, W and Pt, thermal accommodation coeffs., theory and expt. 4=15814
 cooling of irradiated specimens, computer programme for calc. 4=2866
 conductivity thermal, He^{3,4} gas, 0.4-3°K 4=16145
 cryogenic tests, 2.5° to 4.2°K, below 10⁻⁶ mm Hg 4=2736
 cryotrapping continuous, by Ar, 4.2°K 4=18271
 d.c. discharge, afterglow, electron energy decay meas. 4=11542
 desorption rates and heats of desorption from silica gel and sand 4=7729
 diffuse lines in plasma, pressure broadening 4=28110
 diffusion in polymers 4=6877
 diffusion, in H₂, pressure effect 4=27215
 diffusion in Si, Ge, and diamond 4=28490
 discharge, d.c., at high pressure, elec. and spectrosc. study 4=11539
 discharge, hollow cathode, spectrum shift 4=18812
 electron collision cross-sections and oscillator strengths in ionized continuum 4=12397
 electron collision cross-sections for 1S¹ → 2P¹ transition, calc. 4=12395
 electron drift velocity meas. at high E/P 4=11550
 electron impact spectra 4=6520
 electron impact spectrum, higher resolution study 4=12554

Helium—contd

- electron inelastic collision cross-sections rel. to scattering angle 4=12396
 electron inelastic scattering 4=12394
 electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
 equation of state, 0-150°C 4=2722
 excitation by electrons, abs. excit. functions rel. to pressure 4=25330
 excitation and ionization, produced by single electron impact 4=25535
 excited states, single-configuration calcs. 4=25483
 freezing, He³-He⁴ mixtures, and λ curves 4=14485
 heat transfer from thin cylinders, expt. rel. to theory 4=8515
 injection into air, thermal diffusion effects 4=5221
 interaction with H atom 4=25583
 interatomic, Morse potential force consts. from viscosity 4=9787
 interatomic potentials, comparison 4=12406
 ion, He⁺, scatt. on He, resonant electron capture 4=5563
 ion, He⁺, scatt. on He, resonant electron capture 4=5564
 ion mobilities from electron density meas. 4=2948
 ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
 ionization cross-sects, on He, Ne, N₂ 4=24572
 ionization, electron impact, up to 500 eV, current saturation 4=16432
 ionization by fast He atoms and He⁺ ions 4=24566
 ionization, first and second coeffs, meas. 4=18681
 ionization, first Townsend coeff. meas. 4=8618
 ionization growth, role of delayed photon processes and metastable atoms, 4=24570
 ionization, He atoms and ions, 15-180 keV 4=2944
 ionization, and He⁺, Ne⁺, Ar⁺ beam losses 4=24594
 ionization, high press. coeffs. 4=14576
 ionization, primary coeff. rel. to pressure 4=18679
 ionization rel. to structure of planetary nebulae 4=20902
 ionization, secondary, rel. to positive ions and non-resonance radn. 4=8619
 ionization study, high press., low temp., equilib. eqn. 4=11531
 ionization, by 30-1000 eV He atoms, meas. 4=27482
 ionized, slightly, cyclotron reson., collision frequ. det. 4=461
 ions, electron scattering, elastic, polarized orbital method 4=28149
 ions, electron scattering, exchange polarization approx. 4=25564
 ions in He gas, at 500°K, transfer exchange cross-section, field, temp. var. 4=29870
 ions, He II, 3s, p, d—4s, p, d, f line complex 4=22299
 ions, He⁺, ionization of He, Ar, H₂ and N₂, 15-180 keV 4=2944
 ions, He₂⁺ dissociative recombination meas. 4=18693
 ions, He₂⁺ formation from He⁺, reaction rates meas. 4=11532
 ions, He₂⁺ formation kinetics 4=2145
 ions, He₂²⁺, natural orbital expansion coeffs. 4=25648
 ions, inelastic scatt. on O¹⁶, 65 MeV, rel. to levels 4=17201
 ions, irradi. of quartz and vitreous silica, stress relaxation 4=15507
 ions, negative, electron—electron and electron—nuclear energies 4=1178
 ions, sputtering of Cu, atom, energy distrib. 4=24754
 isotope shift calc., ²¹P, ²³P 4=6464
 in lasers, 6328 Å oscillation modes 4=14934
 in lasers, Zeeman effect, at 3.39 μ 4=14936
 light source, plasma, for 584 Å 4=27305
 Maier-Leibnitz expt., repeat electron collision cross-sect. 4=19984
 in MHD generators, ionization, non-equilib., seeded with Cs 4=18663
 metastable atoms, scattering in He and Ne 4=25588
 metastable, low-energy electron scattering 4=25567
 molecular bands in afterglow 4=20049
 molecular ion, Σ , state binding energy calc. 4=9712
 molecular, Morse parameters, different for equilib. and non-equilib. props. 4=9713
 optical pumping, 1.955 μ emission 4=767
 Penning mixtures, He—H, primary ioniz. coeff. 4=21462
 phase mechanics, quantal potentials 4=12358
 photoionization cross-sections 4=18680
 plasma, afterglow, electron-atom momentum transfer, 10⁻³ eV, 4.2°K 4=14638

Helium—contd

- plasma electron-beam generated waves at cyclotron harmonics 4=16500
- plasma, electron density and temp. from line profile meas. 4=18857
- plasma, electron-ion recomb. to excited bound states 4=5565
- plasma, electron temp. and percentage ionization, spectroscopic determ. 4=16486
- plasma, energy balance parameter meas. 4=531
- plasma gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
- plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
- plasma jet, spectroscopic invest. 4=5618
- plasma, pulsed, anomalous afterglow of H 4=29920
- plasma, pulsed electron—optical radiation recording 4=21514
- plasma, rate processes, simult. differential eqns. 4=14633
- plasma, shockwaves, temp. and density relations 4=5611
- plasma, weakly ionized, spectrosc. investigation 4=18854
- plasma, z-pinch effect at high gas densities 4=14693
- plasmoids, fast moving 4=11604
- positive ion production, by energetic He⁺ impact 4=24569
- radiation width and resonance broadening 4=9634
- SCF theory, LCAO approx. 4=22272-4
- scattered by Fe, scattering cross-sections, calc. 4=12402
- scattering by Ni, polycrystalline 4=19996
- shock wave, self-ionizing, 50 μ Hg, structure 4=18830
- shock waves, jump conditions, effect of ionization 4=16174
- solar, abundance, from cosmic ray primaries 4=15938
- solubility in liq. H₂ 4=18182
- sparks, temp. fall from 50 000° to 5000°K 4=8659
- spectrum, discharge, electric, r.i., similarity to Geisler tubes at high powers 4=5612
- spectrum, He—Ne, stimulated transitions 4=28130
- spectrum He₃, h.f.s. of 2¹P - 4¹D line, no 4¹D, h.f.s. anomaly 4=12359
- spectrum meas., by electron scatt., agreement with u.v. 4=3828
- spectrum, in plasma, displacement, blue 4=530
- spectrum profiles, HeI in arc 4=19947
- spectra, rel. oscill. strengths of 10 transitions 4=30376
- spin-diffusion at low temps., quantum theory calc. 4=8244
- Stark line broadening, in arc under variable press. 4=1201
- X-ray scatt. factors, calc. 4=10499
- He, thermodynamic props., up to 100,000°K, partition function cut off effect calc. 4=16146
- He—Ar with Hg discharges, resonance radiation meas. 4=21475
- HeH⁺, in stars, early, cannot explain 1600-2400 Å deficiencies 4=26909
- He—H₂⁺ reaction, cross-section, phase-space kinetics 4=23627
- He—He, potentials from neutral beam elastic scatt. 4=25777
- He—He⁺-e decaying plasma, recombination and energy balance 4=18809
- He—Ne discharge, decay rate of metastable states of Ne meas. 4=28132
- He—Ne discharge, glow, quenching by microwaves 4=18729
- He—Ne, discharges, elec., excited atom concs. in plasma decay 4=21469
- He—Ne glow discharge, laser action 4=16695
- He—Ne mixture, laser transition coupling 4=14935
- He—Ne system, population study by resonant cavity spectroscopy 4=19288
- He I lines, transition probabilities, half-widths, and shifts 4=3780
- He I Stark broadening in fully ionized plasma 4=18853
- He II λ 4686 Å line, electron impact excit. 4=1225
- He⁺ beam production 4=29987
- He⁺ formation in He by He⁺ beam 4=19114
- He⁺, atm. distrib., 130-430 km 4=26839
- He⁺ in discharge in mag. field, reaction ht. cond. 4=29882
- He⁺, electron capture from scattering He atoms 4=19995
- He⁺-electron scattering 4=25532
- He⁺, electron scattering by 1s, 2s, 2p states 4=15301
- He⁺, excitation cross sections for electrons 4=15300
- He⁺-H₂ reaction, cross-section, phase-space kinetics theory 4=23627

Helium—contd

- He⁺, ionization near metallic surface and highly excited states, long-lived 4=25514
- He⁺-He, charge transfer, differential and total cross-sections 4=24573
- He⁺, Ne⁺, Ar⁺ beam losses due to ionization 4=24594
- He⁺ positive ion stripping and neutralization, 100-450 keV, 4=24568
- He³ adsorption and nuclear relaxation on Pyrex 4=7350
- He³, ¹D levels, h.f.s.; mag. reson. obs. 4=28111
- He³ metastability exchange cross-section, temp.-dependence 4=25589
- He³, mixed symmetry states and nuclear photo-effect 4=9321
- He³, photodisintegration 4=25213
- He³, photodisintegration cross-sections calc. 4=6319
- He³, T removal by adding H carrier and freezing at 4.2°K 4=5491
- He³, T₉₂ temp. scale 4=16303
- He-3 and 4, beams below 0.5°K 4=2905
- He³-He⁴ freezing mixtures, phase diagram, down to 0.45°K 4=8550
- He³(25%)—He⁴(75%), melting, latent heat, 0.4-1.1°K curves 4=14486
- He³-He⁴, liquid—crystal equilb. diag. 4=2912
- He⁴ liquid, μ^- capture rate, bubble chamber meas. 4=30244
- He⁴ liquid, π^- capture, recoil spectrum, bubble chamber meas. 4=30244
- He⁴, melting, latent heat, 0.4-1.1°K curves 4=14486
- He⁴ source, continuous generation and fast transfer 4=9433
- He₂ ground state energy, rel. to atomic scattering 4=25587
- He₂ 600 Å band 4=6569
- He₂ spectrum, in flowing afterglow 4=18728
- He₂ (³ Σ_u^+), potential curve, orbital calc. 4=1261
- He₂⁺ (² Σ_u^+), dissociation energy calc. 4=1320
- gas**
- diffusion, in binary mixtures with Ar, N₂, CO, air, CO₂, SF₆, 290-470°K 4=27216
- flowmeter for He gas 4=18224
- Joule—Thompson zero press. coeff., exptl. and theoret. 4=27208
- laser, He—Ne, Zeeman and coherence effects 4=8982
- velo., acoustic, in He gas, 4-14°K, for temp. meas. 4=16308
- viscosity of pure gas and N-mixture, meas. to 1000°K and 600 kg/cm² 4=24265
- D₂ content, in reactor coolant loop, mass spectrometric determ. 4=2174
- He—air, binary diffusion coeffs. 4=24267
- He—Ar, binary diffusion coeffs. 4=24267
- He—Ar supersonic jet recovery factor > either pure gas 4=27206
- He—CO₂, binary diffusion coeffs. 4=24267
- He—CO₂ mixture, absorpt. of sound rel. to vibr. relax. 4=14213
- He—N, compressibility, 0 to 140°K, meas., Burnett method accuracy 4=11233
- He—Ne confocal laser, radiation patterns 4=5847-8-9
- He—Ne, gaseous cascade laser 4=11824
- He—Ne, laser action up to 57.355 μ 4=11823
- He—Ne laser, gas discharge aspects 4=18718
- He—Ne laser, 0.63 μ , microwave modulation 4=3211
- He—Ne laser oscillation patterns, 3.39 μ , evaporographic obs. 4=27687
- He—Ne laser, 6328 Å, output power var. with mirror transmission 4=21676
- He—Ne laser, lifetime 4=24898
- He—Ne mixture, cataphoresis 4=24275
- He—O₂ mixtures, vib. relax., acoustic resonator meas. 4=11244
- He—Xe gas system immiscibility conditions obs. 4=5215
- He³ gas, diffusion, self, 1.7-4.2°K, from pulsed n.m.r. 4=16152
- He³ laser, single freq. operation 4=16692
- He³ nuclear magnetometer, terrestrial 4=7931
- He³ vapour, Fermi—Dirac spin degeneracy, near 3.0°K 4=14204
- He³ nuclear polarization by optical pumping 4=6497

Helium—contd

liquid

- See also Quantum theory, many-particle systems; Superfluidity.
- Bose liquid, perturb. expansion at zero temp. 4=27100
- Bose system, rotating, hydrodynamics below condensation point 4=8545
- breakdown, electric, mechanism, impurity effects 4=5200

SUBJECT INDEX

Helium—contd

liquid—contd

- He³ and He⁴, thermal boundary resist. with Cu or epoxy resin below 1°K 4=27404
 He³ and He⁴, velocity of sound 4=14488
 He⁴—He³, dilute, thermodynamic props., calc. 4=21378
 He⁴, adsorption on Saran charcoal below 5°K 4=13690
 He⁴, cond. thermal, with β phase 4=18526
 He⁴, λ transformation, thermodynamic props 4=27405
 He⁴, molar volume and expansion coeff. 4=11445
 He⁴, PVT relations near melting curve and λ -line 4=18516

He⁴ structure function at T = 0, shoulder calc. 4=24469

He⁴ vapour pressure scale, 1.36° to 2.16°K 4=27401

liquid, sound propagation

absorption, second sound, HeII capillary

flow 4=18521

below and at λ point, expt. determ. of vel. 4=5492

u. s. cavitation meas., 1.2°–2.3°K 4=18520

He II, absorption calc. on four-phonon mechanism, <0.6°K 4=2908

He II, reflection and transformation of sound waves, at vapour–liq. interface 4=19824

He II, vel. and absorpt. of sound, temp. depend. 4=381

He³, finite-temp. props., by Fermi liquid theory 4=5494

He⁴, 1st and 2nd sound propag., molecular-acoustic invest. 4=2907

He⁴, velocity, many-boson theory 4=91

He⁴ and He³–He⁴ mixtures, 10 Mc/s 4=14484

He⁴–He³ (<1%), 0.1°–1.0°K 4=21379

solid

crystal structure, γ -form 4=18524

crystals, surface energy calc. 4=17336

exchange heat capacity separate meas. 4=21388

positron annihil. mean life 4=4031

thermal conductivity 4=18525

He³, adsorbed, spin–lattice relaxation time 4=14492

He³, β -phase, below 1°K, nuc. mag. resonance meas. 4=14505

He³ and He⁴ allotropes, nomenclature 4=13487

He³, n.m.r., exchange-bath analysis 4=11453

He³, n.m.r., longit., bottleneck in energy

transfer 4=18522

He³, nuclear suscept. and mag. exchange 4=2911

He³, review 4=14476

He³, specific heat, adsorbed on zeolite, 0.1–1.4°K, and nuclear spin orientation 4=14506

He³, spin–lattice relax. of He³, calc. 4=8551

He³, thermal boundary resist. with Cu below 1°K 4=27404

He³, thermal conductivity 4=18525

He^{3,4}, thermodynamic properties, above 3°K, at high densities 4=29816

He³, transition to liq., fermion theory 4=27111

He³–He⁴ mixtures, phase separation, from specific heat 4=14504

He³–He⁴ phase diagrams 4=18508

He³–He⁴ solutions, liquid–crystal equilib. diagram, 1.4–4°K 4=29823

He⁴ and He³–He⁴ mixtures, sound propagation 10 Mc/s 4=14484

He⁴, cond., thermal 4=21387

He⁴, cond. thermal, γ phase 4=18526

He⁴, density 4=18523

He⁴ γ -phase, heat capacity 4=11454

He⁴, heat capacity and transition temps. near γ phase 4=21386

He⁴, melting, minimum, direct meas. 4=382

He⁴, PVT relations near melting curve and λ -line 4=18516

He⁴, specific heat, 1.3–4°K 4=29825

He⁴, thermal conductivity 4=18525

Helium compounds

HeH, excited states, ² Π and ² Σ , orbital calc. 4=1262

HeH⁺ ground state, one-centre wavefunction 4=28187

High pressure phenomena and effects

actinide elements, effect on elec. resistance 4=7500

anvil materials, effect on generation of high press. 4=10992

apparatus, cylindrical chamber, up to 10⁵ atm 4=13999

apparatus, cylindrical, high temp. high pressure 4=15998

apparatus for galvomagnetic obs. up to 30 000 atm. 4=15514

apparatus for 3 $\times$ 10⁴ atm at 1500°K 4=20997

Armco iron, yield point, effect of 10³–10⁴ atm 4=13416

High-pressure phenomena and effects—contd

benzene, spectrum, liquid and solid 4=22391

Bridgman anvil devices, materials for ultrahigh press. sealing 4=26999

d-camphor, phase transition, II–III, region of indifference 4=13510

cell for optical studies 4=28658

collection of papers 4=27002

compressor for valuable gases 4=20999

conductivity, thermal, meas., and high temp. 4=26568

crystal electron structure meas. by optical absorpt. and elec. cond. 4=12667

diamond structures, melting curves and polymorphic transitions up to 50 000 atm 4=5448

e.s.r. spectrometer for crystals under high pressure 4=21663

elastic consts. meas., from u.s. velo. 4=26463

elasticity of solids and liquids, meas. 4=7360

for electric arcs under pressure 4=14618

electric cond. of matter under high pressure 4=10019

electrical conductivity of solids, review 4=22658

electrical lead in sealing 4=23988

electrical lead prod., epoxy coated 4=23987

electrical measurements at low temp. 4=16394

ferrites, magnetic props. 4=4374

friction increase between solids 4=17720

fused salts, diffusion coeff. measurement 4=21120

gas compressor, calibration 4=14191

gas valve, 6000 atm operation 4=20998

gauge, dead-weight type, with air loading device for var. pressures 4=24008

gauges, resistance-strain type, for rock samples 4=15689

glass to metal seal, and high temp. 4=23989

glasses, oxide, densification, heat treatment 4=13409

glasses, oxide, densification in rigid state up to 80 kbar 4=13408

graphite, contact resistance 4=20331

granite, effect on absorption coeff. for high-amplitude waves 4=15717

graphite melting point var. 4=8500

Holt's press, 10⁵ atm at 2000°K, defects 4=20996

hydraulic compressor, for oil and water 4=14109

liquids, specimen holder for neutron scatt. obs. 4=21095

manganin, piezoresistivity 4=20334

marble, effect on absorption coeff. for high-amplitude waves 4=15717

measurement, wire transducer 4=18022

metals, equations of state 4=6681

Mössbauer freq. shift meas. 4=12598

optical rotation of solutions 4=29631

polymorphic transitions, a.f. and r.f. obs. 4=20695

polystyrene brittleness, 4=23198

press, 5 $\times$ 10⁴ atm operating pressure 4=20995

pressure-transmitting fluids, melting curves 4=23998

rare-earth elements, behaviour 4=17767

rare-earth metals, II, elec. conductivity 4=10035

rocks, elec. resist. to 40 000 kg/cm² and 400°

temp. 4=22663

rubber, glass transition and Young's modulus 4=7454

shear-press, 50 k bars at 1000°K 4=23986

shear in solids, high press. measurement 4=17717

solids, eqns. of state, using statistical model 4=6677

tetracyanoquinodimethane, properties 4=30602

thiourea, ferroelec. props. 4=26130

tourmaline, Z-cut, piezoelec. sensitivity, 7 kbar 4=22782

u.s. velocity in solids, meas. apparatus 4=16189

ultra-high pressure production at low temp. 4=20994

valves, frozen blocked capillary 4=24000

viscosity of pressure transmitting fluids, up to 10 000 bars 4=23999

X-ray diffraction apparatus 4=15779

zincblende structures, melting curves and polymorphic transitions up to 50 000 atm 4=5448

Al, effect on absorption coeff. for high-amplitude waves 4=15717

Al, polycryst., residual press. effects 4=23120

Al₂SiO₅ system, press-temp. curves 4=29002

Ba, crystal structure 4=4596

BaTiO₃, modified, 0–10 000 psi. effect on dielec. and piezoelec. props. 4=26117

High-pressure phenomena and effects—contd

- Bi, on oscillation effects 4=28760
 Bi, press-induced polymorphs, structural and transform. characts. study 4=30795
 Bi-Sn(50/50) phase transform., melting pt. obs. 4=20697
 CaCO₃, e.s.r. of Mn²⁺, up to 7000 atm. 4=1880
 Cd, supercond., up to 27 000 atm 4=401
 Cd₂SiO₄ phase transform., olivine-spinel 4=30797
 Ce, phase transformation diffusion, α - α' 4=4503
 Ce, I-II, rel. to crit. end point 4=17757
 Co, mag. order, thermal neutron scatt. meas. 4=28794
 Co magnetization 4=13170
 Cr, brittleness, up to 10⁴ atm 4=23133
 CsCl, F-band shape under 6200 atm 4=20313
 CsI, effect on absorpt. spectra of F and M centres 4=15502
 Cu, stress/strain relns., effect of pores 4=23146
 Fe, Mössbauer effect of Fe⁵⁷, up to 240 kbar 4=28327
 Fe, Mössbauer spectrum of Fe⁵⁷, up to 140 kbar 4=9814
 Fe-Ni, anstelite-martensite phase transitions 4=23267
 Fe-Si phase transformation, var. with Si content 4=7497
 Ga, superconducting modification meas. 4=8567
 Ga(As_{1-x}P_x), n-type conductivity, up to 15000 atm 4=17487
 Gd, Curie temp., up to 40 kbar 4=13183
 Gd, ferromag. suscept. calc. 4=28789
 Gd, phase transformation and ferromag. reduction 4=15733
 H, solid, under high pressure, elec. cond. 4=10019
 H₂, i.r. band profile in pressure-induced absorption 4=20044
 HCl, aq. soln., elec. cond. activation energy 4=2706
 He, ionization coeffs. 4=14576
 HgSe phase transform., from elec. props 4=23278
 In, crystal, elec. field var., n.q.r. and thermal expansion meas. 4=28313
 InSb, phase transition 4=17758
 InSb, thermoelec. power, up to 16 000 atm. 4=1699
 K, elec. cond. depend. over 500 kbar 4=1559
 KCl, aq. soln., elec. cond. activation energy 4=2706
 KOH, aq. soln., elec. cond. activation energy 4=2706
 Li, elec. cond. depend. over 500 kbar 4=1559
 LiH, phase transformation, metallic, calc. 4=10432
 Mg, volume and lattice param., up to 300 kbar 4=29120
 Mo, on ductile-brittle transition 4=23276
 Na, elec. cond. depend. over 500 kbar 4=1559
 NaCl, Grüneisen vel., anharmonicities 4=15432
 Nb₃Sn, supercond. transition temp., pressure effect 4=5526
 Nb₃Sn, superconductivity var. 4=18619
 Nb-Zr alloys, supercond. transition temp., pressure effect 4=5526
 Ni, metal-insulator-metal, press. transformation 4=6928
 Ni₂SiO₄ phase transform., olivine-spinel 4=30798
 O₂, i.r. and red atm. absorpt. band systems 4=6578
 O₂ and (O₂)₂ absorpt. spectra, 2-35 atm, 12600-3600 Å 4=25677
 P, phase transition, I-II, region of indifference 4=13510
 PbTe, effect of pressure on electrical props. 4=12904
 Pb(ZrTi)O₃, modified, 0-10000 psi. effect on dielec. and piezoelec. props. 4=26117
 Pu, α , conductivity, elec. 4=15522
 Pu, phase diagram, triple points to 35 kbar 4=2001
 Rb, elec. cond. depend. over 500 kbar 4=1559
 RbBr, effect on absorpt. spectra of F and M centres 4=15502
 RbCl, effect on absorpt. spectra of F and M centres 4=15502
 RbCl, F-band shape under 6200 atm 4=20313
 RbF, effect on absorpt. spectra of F and M centres 4=15502
 S, elec. cond., effect of short pulses 4=2515
 S, melting point, 20-60 kbars 4=24437
 Sb, phase transitions 4=29003
 Si 4=12895
 Sn, diffusion, self, vacancy jump mechanisms 4=30580
 Sn, Sn-Pb crystal whisker growth 4=13552
 SnTe, phase transform. 4=17770
 Sr, at 35 kbar to b. c. c., rel. to Yb 4=4624
 Te, phase transformations 4=13503
 V₃Ga, superconductivity var. 4=18619
 V₃Si, superconductivity var. 4=18619
 WC, hardness, X-ray diffrac. line widths, defects, at 2400°K 4=22592

High-pressure phenomena and effects—contd

- Zr, inhibition of whisker growth, by h. c. p. -b. c. c. phase transform. cycling 4=13554
 Zr, supercond. props., up to 24 000 atm 4=18623
 ZrO₂, tetragonal-monoclinic transformation 4=10443
High-speed photography
 See Cinematography; Photography, high-speed.
High temperature production and effects
 chamber for high temp. obs. 4=16281
 conductivities, thermal, elec., gases, plasma, review 4=236
 ferromag., Heisenberg spin- $\frac{1}{2}$ model, calc. 4=28788
 ferromag. Heisenberg suscept., including second neighbour interacts. 4=28789
 furnace, arc, interchangeable hearth 4=8489
 furnace, blackbody, 3000°K, inductively heated graphite 4=2876
 furnace, Carc image, for crystal growth of refractory oxides 4=20735
 furnace crucible, improving gas-melt contact 4=23660
 furnace, for n. m. r. meas. on molten salts 4=19248
 furnace and reaction system, for up to 1600°C 4=2875
 furnace temperature programmer 4=24422
 furnace, ultraclean, with radiation heating, rel. to semicond. device processing 4=24421
 furnace for use with X-ray diffractometer 4=10517
 furnace, vacuum, by electron bombardment 4=2877
 furnaces, tubular, temp. profile control 4=2878
 glass and ceramics, cracking and weakening under pulsed arc discharge 4=30779
 and high press., apparatus performance 4=23983
 at high pressure, cylindrical apparatus 4=15998
 impact shock waves of small solid particles, for nuclear fusion 4=18328
 isentropic exponent, reduction by electron pair prod. 4=14469
 liquids, specimen holder for neutron scatt. obs. 4=21095
 localized prod. $\sim 10^7$ ° with laser beam 4=14433
 magnetostrictive ferrites, effect on acoustic props. 4=24314
 materials, for high temp. studies of creep and fatigue 4=26474
 micro furnace, for microscopy and X-ray anal. 4=18471
 oven thermostatic control, 1400°C 4=16280
 plasma torches and furnaces, conference 4=24420
 review of research 4=18470
 by solar energy conc. by conical mirror 4=21347
 ultrasonic, in metals and alloys, using internal friction 4=11398
 vacuum melting apparatus 4=8490
 C, phase transformations, graphitization of pyrolytic C 4=7476
 C, strained, 1000°-2000°C, elementary atomic layer diameter 4=29103
 C, Young's modulus measurements 4=23131
 Ce, phase transformation diffusion, α - α' 4=4503
 WC, hardness, X-ray diffrac. line widths, defects at 2400°K 4=22592
High voltage production
 for accelerator, variable 40 kV supply 4=16574
 cascade generator, symmetrical 4=16575
 electrostatic generator, optimum main and counter - e. m. f. 4=24537
 potentiometer and standard cell with feedback 4=29850
 regulation, feedback corona regulator 4=8604
 spark-chamber electronic triggering circuits 4=9028
 transistorized regulator, 300 to 1500V 4=29849
History
 anniversaries in 1964 4=14003
 artificial elements, discovery 4=11001
 atomic emission spectroscopy 4=15263
 e. m. field concept, evolution 4=655
 elastic wave propag., anisotropic, theory 4=262
 ferrites, props., applications and technical advances 4=26331
 inertia law and Galileo 4=27117
 magnetic monopole concept 4=5735
 mechanics and mathematics, work of Jordanus Nemorius 4=27004
 motion picture industry, sound 4=287
 Newton's laws of motion and 17th century laws of impact 4=14091

SUBJECT INDEX

History -- contd

- nuclear fission discovery (1939) 4=6384-5
- physics, teaching 4=27005
- Rutherford's α -ray disinteg. of light elements, 1920's, 4=27003
- solar system, origin, theories 4=7962

Holmium

- antiferromagnetism, press. var. 4=20567
- atom, h.f.s., nuclear moments of Ho^{85} meas. 4=17003
- crystal line compounds, electronic structure, Ho^{+3} in cubic potentials and exchange field, calc. 4=6695
- fluorescent yield of L-shell 4=3774
- heat capacity of metal below 1°K , and h.f.s. parameters 4=9856
- ions, Ho^{2+} , in MeF_2 ($\text{Me} = \text{Ca}, \text{Sr}, \text{Ba}$), absorption and emission spectra 4=13038
- luminescence, Ho^{3+} doped 1% in fluorides, i. r. excited 4=28718
- magnetization, high field effects, and internal fields 4=13109
- solubility in solid Cu, Ag, and Au 4=13459
- Ho in molten Ho trichloride, elec. cond. irregularity 4=8220
- Ho^{2+} e.s.r. in CaF_2 4=26433
- Ho^{3+} in LaCl_3 , absorp. and fluoresc. spectra rel. to energy levels 4=30685

Holmium compounds

- Ho ethylsulphate, cond. thermal, mag. field peaks and spin-phonon interactions 4=17385
- Ho-Al, HoAl_2 , HoAl_3 , HoAl , struct. 4=23240
- HoD_3 , neutron diffn. structure analysis, comparison with X-ray diffn. 4=29112
- HoFeO_3 , perovskite-type, Mössbauer effect 4=3961
- HoIr_2 , molecular moments, neutron diffn. meas. 4=28829
- HoP , magnetic props. 4=28773
- Ho-Y, mag. props., 4.4-300°K meas. 4=1808
- $\text{Ho}_{0.94}\text{Pd}_{0.06}$, magnetic transition, para- to ferro-, below 27°K 4=13220

Humidity

- See also Atmosphere, humidity; Hygrometers; Moisture.
- air, and absorption, acoustic 4=14215
- air, and acoustic absorption and dispersion 4=8253
- in porous materials, correlation with vapour pressure, moisture content and temp. 4=10592
- and sunlight, theory 4=4769
- Al alloy, effect on fatigue 4=23125

Hydrodynamics

- See also Flow, liquids; Jets; Liquid oscillations; Liquid waves; Magnetohydrodynamics; Viscosity, liquids.
- acoustic hydrodynamic radiator, cavitation 4=24312
- acoustic radiator, high intensity 4=14273
- boundary conditions at surface vaporizing at high temp. and press. 4=24445
- boundary-layer growth on cylinder, heat transfer effect 4=122
- chain-macromolecules, flexible, in hydrodynamic field with parallel vel. gradient 4=6670
- collisionless, in noninertial reference system 4=23882
- convection element, thermal, two-dim., shape-preserving 4=16272
- convective instability of a vertical layer mixture under gravity 4=11155
- Coulomb system, statistical derivation 4=5126
- differential operators, Lagrange bracket symbols 4=8133
- discontinuity conditions across discontinuities, shocks and phase fronts 4=21071
- drops on rigid walls, impact, theory 4=2646
- Ekman layer role in rotating annulus regime 4=21074
- electrohydrodynamic flow, laminar, in annular channel 4=5768
- electrolytes, symmetrical, hydrodynamic term in relaxation field 4=10643
- entropy production, min., calc. 4=27393
- float, vertical velo. meas. 4=27141
- force and moment on cylindrical obstacle in viscous fluid 4=27145
- hydraulic jump in rotating fluid 4=18152
- hydraulic models, water wave recording instrument 4=18163
- electrolytes 4=21116
- entrance region in tubes and ducts 4=14104
- group theory appl. to one-dimensional problem 4=24253

Hydrodynamics -- contd

- impulsive motion of sphere in viscous fluid 4=29581
- incompressible fluids, equations of motion and vortex eqns. in corresp. form 4=8139
- instability of motion of viscous incompressible fluids 4=11146
- instability, Rayleigh-Taylor, compressible fluids 4=18140
- interstellar matter in stability, cylindrical in another plasma, in mag. fields 4=10860
- iso-amyol-water boundary mass transport, stability effects 4=24193
- laser induced effects 4=2895
- linear response eqns. for many-body systems, rel. to correl. functions 4=5104
- movement of a thin plate parallel to a plane, non-stationary 4=123
- non-linear Couette flow, vortex harmonic obs. at high temps. 4=5127
- non-Newtonian fluids, Weissenberg and Merrington effects 4=136
- nonrelativistic, uniticity of mass tensor 4=121
- numerical, use of tensor artificial viscosity 4=8132
- oscillating liquid columns, viscous damping 4=138
- paraffin molecules dissolved in CCl_4 , Brownian rotation 4=11160
- phase boundary streaming, Schlerein obs. 4=27146
- plasma, relativistic, polyliquid eqns., with radial particle braking 4=18107
- profile movement quadrature integration 4=16077
- Rayleigh-Taylor instability, effect of magnetic field 4=8910
- Rayleigh-Taylor instability, rotating conducting fluid in mag. field 4=8911
- Rayleigh-Taylor instability, rotating fluid 4=8134
- Rayleigh-Taylor instability, variational principle 4=29587
- relativistic 4=27136
- relativistic, Clebsch transformations 4=21030
- resistance of axisymmetrical body in potential flow 4=29603
- second-order fluids, viscoelastic effects correction 4=5136
- shock waves, cylindrically converging, influence of external short-circuit rings 4=16171
- slip instability, effect of viscosity and large disturbance amplitude 4=14108
- sphere placed in arbitrary flow, perturb. vel. 4=5128
- splashing definition 4=16082
- stability and generalized entropy production 4=8135
- stably stratified fluid, nearly inertial turbulence 4=16137
- stability of superposed fluids 4=29579
- surface waves scatt. on infinitely deep fluid 4=18161
- tangential discontinuities motion in ideal incomp. fluid 4=16080
- thread undergoing break-up, shape calc. 4=11158
- transport, mass, across phase boundary, stability effects 4=24193
- turbulent concn. fluctuations meas. by light probe 4=2638
- water, drag on sinking body rel. to acoustic energy 4=2639
- HeII, liq., near λ point, rotation eddy lines 4=18511
- HeII, liq., vortex lines near a wire, theory and expt. 4=8548
- He II, quantized vortices collective oscils. 4=21381
- HeII, review 4=24473
- HeII, rotating in ring channel 4=18513

Hydrogen

- See also Deuterium; Protons and antiprotons; Tritium.
- absorbed in Pd, Knight shift 4=26451
- absorbed in steel, microhardness effect and distrib. 4=23216
- absorption, acoustic, and mol. rot. relax., para. 4=29675
- absorption by Pt-Pd alloys 4=26720
- use as acceleration gas in molecular beam production 4=15389
- adsorbed atoms, visibility and desorption in ion microscopes 4=613
- adsorption on Ag, Au, Al, para-ortho conversion 4=23605
- adsorption, by Ag-Pd, from soln., Ag conc. effects 4=30893
- adsorption by Al, Ag, Cu, Au, effect on work function, and dipole moment 4=11683
- adsorption on evaporated W and Ni films, ht. 4=17848
- adsorption by films of solidified gases, $\sim 11^\circ\text{K}$ 4=13686

Hydrogen—contd

- adsorption on glass, 20° and 17°K 4=13688
 adsorption isotherm and equilibria with transition metals 4=10619
 adsorption, metal films 4=2133
 adsorption, on Mo films, at liq. N temp. 4=11265
 adsorption on Ni, catalytic, var. with pressure 4=2128
 adsorption on Pt and C-supported Pt, partial molal enthalpies of adsorption 4=26721
 adsorption on Si and Ge, elec. diffraction study 4=20824
 arc column, with superposed mag. fld., press. var. and heat cond. calc. 4=18777
 arc, electric, pressure increase, rel. to magnetic field 4=8664
 arc, high-pressure, temp. determ., interferometric 4=18705
 arc, low-density plasma column 4=5690
 arc, low-voltage, dissociation rel. to energy loss 4=18784
 atom-atom, double inelastic collisions 4=25585
 atom, Balmer line excitation in H^+ , H_2^+ , H_3^+ passing through He and Ne 4=9656
 atom, Balmer series excitation cross-section 4=22290
 atom, collisions, spin-exchange, models 4=25586
 atom, e^- scattering, resonances and Regge poles 4=25555
 atom, elastic electron scatt. and free-free transitions 4=19983
 atom, elastic slow-electron scatt. meas. 4=12391
 atom, electron elastic scatt., variational method 4=25554
 atom, electron impact effects, accuracy of classical calcs. 4=28141
 atom, electron ionization, exact classical calc. 4=28146
 atom, electron scatt., effect of virtual excit. of 2s and 2p states 4=6503
 atom, electron scatt., exchange treatment 4=25553
 atom-electron scatt., iteration-variation method, applic. to coupled equations 4=25561
 atom, electron scatt. resonances and long-range effects 4=28148
 atom, electron scatt., 2nd Born and close coupling approx. 4=25525
 atom, electron scattering, Fredholm determinant application 4=25562
 atom, excitation, calc. near (2s, 2p) threshold 4=6495
 atom, excited, electron impact ionization calc. 4=12392
 atom, excited by impact, Lyman α radiation polarization 4=12350
 atom, excited, ionization by strong elec. field, meas. 4=11530
 atom, ground state hyperfine separation 4=3777
 atom, H^+ -E collisions, electron capture theory 4=12405
 atom, H, metastable 2s state, quenching by laser beam 4=9655
 atom-He atom interaction energy calc. at short range 4=19993
 atom, He excitation, resulting radiation polarization 4=22316
 atom, He—H repulsive potential, theory 4=9675
 atom, high quantum number Balmer line broadening 4=22289
 atoms, highly-excited neutral, formation by charge exchange 4=28155
 atom, inelastic electron scatt., nonadiabatic theory 4=17257
 atom, in inert-gas solids, g-factors calc. 4=9821
 atom, Lamb shift, consequences of zero-mass pseudoscalar meson 4=24989
 atom, Lyman- α and Lyman- β lines, Stark profiles, e. m. shock tube meas. 4=28109
 atom, Lyman α in plasma, wing profile meas. 4=28108
 atom, $n \rightarrow n+1$ transitions by electron impact 4=19974
 atom, $n'l$ state, electron impact ionization calc. 4=12388
 atom, optical polarizability calc. 4=3776
 atom, parity impurities due to weak electron interact. 4=5957
 atom, polarizability, meas. in Ar— H_2 shock tube 4=9628
 atom, quenching of metastable state by laser beam 4=1223
 atom, radial eigenfunctions by Laplace transform 4=17241
 atom radiative recombination coeffs., into low-lying excited states 4=19942
 atom, repulsive energy from He atom, calc. 4=19992
 atom, two-photon ionization, e.g. metastable 2s state 4=22318

Hydrogen—contd

- atom, in 2S state, by charge-exchange by proton beam 4=11528
 atom, 2s and 2p excitation by electron impact 4=9659
 atom, wavefunctions, convergence 4=3775
 atomic beam, atomic and ionic partial stopping powers in gaseous H_2 4=25779
 atomic beam, energetic, cascade processes on passing through plasma 4=12409
 atomic beam formed on charge exchange by H_2^+ and H_3^+ 4=11526
 atomic beam in He pulsed plasma, afterglow 4=29920
 atomic beam, neutral, 20 keV, bunching 4=30399
 atomic beams, enhancement of excited-state population 4=6494
 atomic collisions, H—H, exchange, density matrix 4=6507
 atomic electron capture cross-section, impulse approx. 4=9678
 atomic, etching of Sb, rel. to microstruct. 4=26693
 atomic excitation by Cs beam charge exchange 4=19975
 atomic excitation by electron capture 4=25528
 atomic excitation by fast beta rays 4=22374
 atomic interaction energy non additivity 4=25584
 atomic and ion beams, injection into mag. mirror system 4=541
 atomic positions in crystals thermal motion effects 4=30829
 atomic scattering by D_2 4=25780
 atoms adsorbed on crystal surface, i.r. spectra 4=2131
 atoms, colliding, spin change calc., temp. var. 4=6511
 atoms, in crystals, potential distrib., thermal motion effects 4=30830
 atoms, electric field effects on levels and elec. moment, calc. 4=25481
 atoms, electron impact and elastic scattering, first-order exchange approximation 4=6504
 atoms, electron inelastic scattering, nonadiabatic 4=25559
 atoms, electron loss and capture, in NO and CO 4=463
 atoms, electron scattering, close-coupling approx. cross-sections 4=25558
 atoms, electron scattering, narrow resonances, theory 4=25556
 atoms, electron scattering resonances, structure just below inelastic threshold 4=25557
 atoms, excitation by fast H ions 4=19994
 atoms, excitation, by p, charge exchange, high, reson. 4=19976
 atoms, excitation, in planetary nebulae, high state population calc. 4=12353
 atoms, excitation of 2p state by electrons near threshold 4=25524
 atoms, excited, proton collision cross-sections, Born 4=3814
 atoms, H— H^+ low energy collisions and charge transfer 4=15303
 atoms, H α lines in meteor wakes 4=29432
 atoms, ionization, close coupling wave functions 4=24579
 atoms, ionization, by electron impact 4=24580
 atoms, ionization by electrons, with distortion of incident and outgoing waves 4=24578
 atoms, M shell excitation by electrons near threshold 4=25522
 atoms, 1s—2p and 1s—2s transitions, by electrons, theory 4=9657
 atoms, in ^2P state, chem. reaction with N_2 4=13724
 atoms, positron scattering, s-wave phase shift 4=25560
 atoms, positronium formation by fast e^+ , calc. 4=9184
 atoms, reaction with simple mols. in matrix 4=25757
 atoms, recombination on Al surfaces 4=13721
 atoms, 10 MeV, excitation and Lorentz ionization 4=25527
 atoms, two, asympt. exchange coupling 4=19990
 atom, 2s and 2p excitation by electron impact 4=25523
 atom, 2s—3s excitation, by electron impact 4=25526
 atmospheric, vert. distrib. during quiet sun, calc. 4=7872
 Balmer lines in plasma, pressure broadening 4=28110
 bond, from n.m.r., t-butanol organic solutions, p shift 4=1251
 capture of Ξ^- hyperons at rest, theory 4=9301
 chemical reactions in upper atmosphere, and OH, HO_2 , H_2 , NO_2 , O_3 , review 4=13718

Hydrogen—contd

- charge exchange and dissociation by H^+ , H_2^+ and H_3^+ ions 4=11529
- charge exchange, two-electron, with protons 4=464
- chemical displacement reaction with isobutane, steric effect 4=26753
- cooling of Pt filaments 4=10034
- detonation, density in induction zone 4=2776
- deuterated, liquid, surface tension, 16.7–20.5°K 4=2644
- diamagnetism, H_2 , H , continuum contribution importance 4=22354
- diamagnetism, H_2 , HD, D_2 , calc., including vibrs. 4=9705
- diffusion in β -zirconium, coeffs. 4=1522
- diffusion, in binary mixtures with N_2 , CO, Ar, CO_2 , SF_6 , 290–470°K 4=27216
- diffusion in CO_2 , CF_3Cl_2 , Kr, Xe, meas. by T tracer 4=11240
- diffusion in Fe and ferritic steels, Fick's law modification 4=6873
- diffusion, in Mo, W, Nb, above 1000°K, degassing 4=22620
- diffusion in Ni, mag. saturation obs. 4=22623
- diffusion in Ni, 970–1320°K 4=22622
- diffusion in Nilo-K glass to metal seal material 4=6876
- diffusion in Pd–H at room temp. 4=17444
- diffusion in polymers, and D, T 4=6877
- diffusion in Zircaloy-2, thermal, theory 4=6882
- diffusion in Zr alloys, heat of transport 4=6880
- discharge, electric, glow, plasma, efficiency meas. 4=8644
- in discharge in mag. field, reaction ht. cond. 4=29882
- discharge, r.f., in single-turn coil, 70 W, 125 Mc/s 4=18713
- dissociation behind shock waves 4=18348
- dissociation by neutron bombardment 4=3918
- effect in epitaxial growth of SiO_2 on Si surface 4=15823
- effect on mechanical props. of Ni and Cu 4=13430
- effect on work function of Al, Ag, Cu, Au 4=14741
- electric discharge, condensed in high vac., appls. 4=27497
- electric discharge, stationary striations 4=5568
- electric discharge in, at 3.2 Mc/s, localization by quadrupole mag. field 4=24646
- electron drift speed—diffusion coeff. ratio meas. 4=11254
- electron drift velocities from mol. excitation 4=11252
- electron impact spectra 4=6520
- electron inelastic scattering 4=12394
- electron scatt., elastic and inelastic, from electron transport 4=11509
- equation of state, P – V – T , 100–10⁷°K, 10⁻⁴⁰–10³g cm⁻³, dissoci., and ionization 4=14206
- e.s.r., atomic, in $CaSO_4 \cdot \frac{1}{2} H_2O$, γ irradi. 4=26401
- flow, two-phase, idealized solutions 4=11152
- at Galactic pole, 21 cm radio obs. 4=23945
- in galaxies, atomic, radio emission 4=30990-1
- galaxies, Virgo cluster, radio obs. 4=13972
- in galaxy, 21 cm survey, intensity distrib. and radial velocity 4=20948
- gas, compressed, Raman spectrum vibr. perturbations 4=22353
- gas discharge tubes, pulsed super-high frequency discharge 4=24607
- gas, energy transfer from fast H_2^+ and H_3^+ beams, meas. 4=11514
- gas, ionizing, thermodynamic properties 4=21456
- gas kinetics, para-ortho mixtures, low temperature 4=8236
- gas and liquid, viscosity up to 5000°K 4=231
- hot atom reactions, with propane, butane, butene -1, kinetic theory analysis 4=30395
- hydrogenic continuum electrostatic integrals 4=25477
- infrared band profile in pressure-induced absorption 4=20044
- interstellar cloud, "average", physical characteristics, 21 cm study 4=29482
- interstitial atoms in CaF_2 , e.s.r. 4=26402
- ion beam, molecular, dissociation, energy spreads 4=12542
- ion, H_2^+ , dissociation energies meas. 4=9778
- ion—molecule reactions with Ne under electron bombard. 4=4694
- ion source, annular, in crossed fields 4=19115
- ion source for Ogra mirror machine 4=19059
- ionization and capture of electrons, by H_1^+ , H_2^+ , H_3^+ ion beams in H 4=21461

Hydrogen—contd

- ionization, electron, first Townsend coefft. meas. 4=5555
- ionization by electron impact, ionization cross-section and coeff. 4=27483
- ionization, first and second coeffs, meas. 4=18681
- ionization by H^+ and He^+ beams, by H^+ and He^+ , electron capture into excited state 4=11527
- ionization, H_2 , electron impact, up to 500 eV, current saturation 4=16432
- ionization, He atoms and ions, 15–180 keV 4=2944
- ionization in pulsed discharge, dissociation effects 4=18682
- ionization study, high press., low temp., equilib. eqn. 4=11531
- ionized, thermal cond. in mag. field, collisional effects 4=459
- ionized, thermal cond. tensors in external mag. field 4=458
- ions on Ag, Al, Cu, W, rel. to u.v. radiation 4=20487
- ions, cyclotron resonance, use in mag. field meas. 4=16609
- ions, electron capture cross-section, first Born and distorted wave approx. 4=18690
- ions, fast proton resonant charge transfer 4=24575
- ions, H^- bound-free absorption coeff. 4=25482
- ions, H_2^+ continuous absorpt. coefft., free-free calc. 4=10834
- ions, H_2^+ , dissociation in gases at 10–180 keV 4=20118
- ions, $H^+ + H(1s)$ electron capture, exact resonance, asympt. form of impulse approx. 4=27487
- ions, H^+ , H_2^+ , D^+ , emulsion sensitivity, up to 25 keV 4=9037
- ions, $H^+ + H(1s) \rightarrow H(1s) + H^+$, exact resonance, asymptotic form of impulse approx. 4=18691
- ions, H_3^+ formation cross sect. as function of E/p 4=24576
- ions, H_2^+ , inelastic electron scatt., first Born approx. 4=17279
- ions, H_2^+ , 750 keV, energy transfer to give neutral beam of quantum levels > 7 4=11515
- ions, negative, electron—electron and electron—nuclear energies 4=1178
- ions, sputtering—yield for metals 4=12826
- isomerism, ortho—para conversion in solid, var. volumes 4=23621
- isotope layers, 1.3–4.2°K, structure, isotopic effects 4=17842
- isotopes, H_2 , HD and D_2 , viscosity and intermolecular force potentials 4=18243
- isotopic fractionation between H_2O and aqueous H ion 4=23625
- liquefier, Clarendon laboratory 4=24467
- liquid, in bubble chambers, level and pressure indicator 4=16769
- liquid, cool-down conditions, in contact with various materials 4=11436
- liquid, isotopic, molal volumes and zero-point energies 4=168
- liquid, low temp. effective mass concept 4=18175
- liquid, μ^- reactions, formation and decay of $(d\mu)^+$ 4=3944
- liquid, muonic molecular processes 4=6675
- liquid, nucleate-boiling heat-transfer, at zero and standard gravity 4=11452
- liquid, quantum effects, erratum 4=16105
- liquid, solubility of He 4=18182
- liquid state, thermodynamic props., reduced volume, quantum cell model 4=14134
- liquid, temp. regulator for bubble chamber 4=16770
- liquid, wetting of var. structural solids 4=11170
- in MHD generators, ionization, non-equilib., seeded with Li 4=18663
- mesic atoms and molecules, radiative capture of μ^- 4=3824
- metallic, possible nuclear ferromag. state 4=7234
- mixed with H_2O vapour, drift velocities of free electrons 4=8624
- mixture with Ar, electron transport coeffs. and cross-sections calc. 4=11257
- mixture, with methane, solid—vapour equilib., pressure depend. 4=11424
- molecular beam, condensed, mass-spectrometric study 4=3936
- molecular beam, for plasma density meas. 4=8724
- molecular, electron scattering 4=6521

Hydrogen—contd

- molecular ion, compressed, boundary perturbation theory 4=9707
 molecular Morse potential parameters, from gas props. 4=29665
 molecular quadrupole moment calc., improved 4=20042
 molecular screening consts., H_2 , HD, D_2 , calc., including vibrs. 4=9705
 molecular vibr. excitation by fast electrons 4=22357
 molecule, $B^1\Sigma_u^+$ and $^3\Sigma_u^+$ states, MO calc. 4=6565
 molecule, charge exchange with N^{+} ($n=0-3$) 4=8628
 molecule, dissociative ionization, proton analysis 4=6656
 molecule, dissociative ionization at 6-12 keV on H_2 gas 4=20114
 molecule, elec. polarizability tensor calc. 4=1256
 molecule, electron orbits, calc. rel. to nuclear motions 4=20041
 molecule, ground-state energy, local-energy method 4=12449
 molecule, ground state, potential curve 4=3859
 molecule, $H_2^{1,2,3}$, interaction potential with Kr^{85} , from diffusion data 4=24268
 molecule-ion, statistical theory 4=12451
 molecule, mag. suscept. and rot. mag. moments, vibr. and centrifugal effects 4=28191
 molecule, MO correl. factors, convergence 4=20023
 molecule, modified rel. to ordinary Schröd. eqns. 4=15333
 molecule, near- i. r. spectrum, singlet transitions 4=6566
 molecule, recomb., three-body reaction kinetics 4=1319
 molecule, slow neutron scatt. calc. 4=25645
 molecule, vibr. excitation by electron impact, meas. 4=28198
 molecules, dissoc. in discharge tube, increase by Laval nozzle 4=28269
 molecules, interaction energy of charged particle, calc. 4=20043
 molecules, London—van der Waals energies calc. 4=3933
 molecules, non-adiabatic theory 4=15334
 neutral, distrib. in galactic anticentre 4=23875
 neutral, in solar neighbourhood 4=29480
 neutron backscattering from reflectors, Monte Carlo calc. 4=21860
 off-centre calcs. using Coulson—Barnett and Slater—orbital radial factors 4=22291
 orbitals, natural, two-electron chemical bond 4=15335
 ortho to para- conversion, review, catalyst 4=23644
 oxidation, combustion delay surfaces 4=17858
 para, equation of state 4=11298
 parahydrogen, second and third virial coeffs. calc. 4=14146
 para-ortho-mixture, transport props. 4=16140
 para, surface tension 4=29605
 pair production and Panofsky ratio 4=11980
 Paschen's law, deviation from, at low temps. 4=479
 photoionization and absorption spectra, 600-1000 Å meas. 4=12460
 plasma, effect of spectral lines on radiant ht. cond. coeff. 4=21330
 plasma, equation of state, exptl. verification by shock tube 4=18795
 plasma, equil. composition and eqn. of state 4=8683
 plasma, flow through transverse mag. field, polarization and pondermotive force effects 4=16473
 plasma generation, high-density, clean, almost fully ionized, by whirl stabilized arcs 4=19060
 plasma, hard X-rays, in strong mag. fld., rel. to E/p 4=11612
 plasma, heating by optical generator radiation 4=11645
 plasma, line profiles and ratios using rapid scan spectrograph 4=27315
 plasma, negative absorption rel. to generator props. 4=5617
 plasma, neutral, in θ -pinch, radial and time-resolved emission 4=18956
 plasma, probe contamination 4=2987
 plasma prod. by shock waves in SUPPER II 4=27521
 plasma produced by shock waves, mag. driven spectra 4=24648
 plasma spectrographic analysis 4=18856
 plasmoids, fast moving 4=11604
 positron annihil. mean life in liq. and solid 4=4031
 pressure regulator 4=14232

Hydrogen — contd

- proton beam, fast, discrete energy losses 4=11517
 proton beam passage, double-electron capture 4=2949
 pure, neutron Fermi age calc. for moderation 4=21874
 radical bond dissociation energy rel. to ionization potential 4=9777
 Raman spectrum, laser stimulated, four photon, difference from D_2 4=9704
 Raman spectrum of liquid, laser stimulated 4=8210
 reaction rates with mixtures of ($O + O_2$) 4=4693
 solid, elec. cond. under high pressure 4=10019
 solid, i. r. spectrum Q branch, theory 4=20459
 solid, specific heat, λ anomaly at small molar volumes 4=12644
 solubility in alloys of $MgCu_2$ structure 4=30792
 solubility in liquid pure Co, Cr, Cu and Ni 4=5157
 spark discharge, shock-wave generation 4=266
 sparks, formative time lag meas. 4=8657
 spark gaps, high current, cooling 4=27503
 spectrum, mol, quadrupole bands, rel. intensities 4=9703
 spectrum, quadrupole, collision narrowing obs. 4=3854
 spectrum of Rb, doublet displacement, pressure var. 4=6483
 spectrum recombination, calc., planetary nebulae 4=12351-3
 spin-diffusion at low temps., quantum theory calc. 4=8244
 Stark shift of hyperfine separation 4=30374
 in stars, B, H_2 emission 4=26913
 stars, evolution from H 4=20892
 thermal transpiration at high temps. and 3×10^{-3} –2.5 mm Hg press. 4=5224
 trihydrogen Li selenite, crystal dislocation obs. by etching 4=9969
 triple and boiling pts. 4=5478
 ultrasonic absorption, rotational relaxation 77° 90° and $293^\circ K$ 4=16149
 vapour press. difference for normal and equil., 20° – $32^\circ K$ 4=21356
 viscosity, -50° to $150^\circ C$, below 200 atm. 4=24264
 effect on Al_2O_3 fracture strength 4=28935
 In Be, proton-bombarded, diffusion and agglomeration 4=15484
 H α radiation in self-sustained Townsend discharge 4=18710
 H atom in H_2 molecule, X-ray scattering factor calc. 4=3812
 H atoms in D_2 , CD_4 and C_2D_6 , reaction and moderation probabilities 4=23673
 H atoms, slow positron elastic scattering 4=17258
 H, electron scattering, elastic, polarized orbital method 4=28149
 H, electronic energy levels, perturbation caused by proton structure 4=25479
 H, H_2 and H_3 ions, bombard. metals, secondary electron emission 4=8822
 H, interaction with He, methane and H_2 4=25583
 H, ionization near threshold 4=27485
 H ionization, by p, 60-400 keV, crossed beam meas. 4=5558
 H, line strengths in elec. field, calc. 4=25480
 H, slow electron exchange scattering 4=22319
 H, thermodynamic props., up to $100,000^\circ K$, partition function cut off effect calc. 4=16146
 H—H atom collisions, spin—change cross-sect. up to $1000^\circ K$ 4=9677
 H— H^+ —e decaying plasma, recombination and energy balance 4=18808
 H—He isotope quaternary mixtures, diffusion, thermal 4=29672
 H—I reaction, D kinetic isotope effect 4=7745
 H—p collisions, 60-450 keV 4=24577
 H + H_2 , collinear collisions, exchange, classical mechanical calc. 4=6660
 H + H_2 exchange reaction, collision dynamics 4=17857
 H + H_2 reactions, electron transitions 4=17856
 H + H_2 reaction, London pot. energy surface, empirical eqn. 4=20129
 H + p, charge transfer, relativistic corrections 4=27486
 H^+ beam, polarized, production 4=24751
 H^+ beam production 4=29987
 H^+ , binding energy from photodetachment cross-section 4=9629

Hydrogen — contd

- H^- , continuous absorpt. in stellar atm., rel. to spectral line strength 4=23867
 H^- , detachment by $H^- + e \rightarrow H + e + e^+$, cross-sections 4=15302
 H^- formation, by H_1^+ , H_2^+ , H_3^+ ion beams, in H_2O or Hg vapour streams, 5-30 keV 4=450
 H^- , free-free absorption coeff. 4=25563
 H^- , free-free transitions, in exchange approx. 4=28147
 H^+ , growth in water vapour 4=457
 H^+ - H , electron capture wave calc. 4=22326
 H^+ - $H(1s)$ collisions, resonant charge transfer, continuum distorted wave approx. 4=22324
 $H^+ + H(1s) \rightarrow H(n^2m) + H^+$, calc., no need for p-p interaction 4=27475
 $H^+ + He(1s^2) \rightarrow H(1s) + He^+$, charge exchange cross-section 4=27474
 H_2 , absorpt. spectra in vac.-u.v., Lyman and Werner bands 4=22355
 H_2 , adsorption-desorption on W and Mo , 4=23608
 H_2 adsorption on previously adsorbed N_2 or Ar layers, 4°K 4=26719
 H_2 arc discharge, visible and i.r. meas. 4=18781
 H_2 condensation on cooled surf., rel. to vacuum production 4=8259
 H_2 continuous cryotrapping by Ar , 4.2°K 4=18271
 H_2 corona pressure changes, with Joshi effect 4=27504
 H_2 , cryotrapping effect of Ar , 4.2°K 4=2737
 $p-H_2$, dielectric polarizability rel. to dielectric const. and density 4=21143
 H_2 diffusion in CCl_4 , 4=18189
 H_2 , dissociation, theory and expt. 4=25744
 H_2 , dissociation, thermal, on Mo or W catalyst 4=20117
 $H_2 + e \rightarrow H + H^-$, resonance peaks 4=25748
 H_2 , electron scatt., 33eV 4=25644
 H_2 , excited states 4=28189
 H_2 first Townsend coeff. meas. 4=24587
 H_2 gas and liquid, nuc. spin relaxation 4=2734
 H_2 gas partial atomic and ionic stopping powers for He and H_2 beams 4=25778
 $o-H_2$, gaseous, nuclear magnetic relaxation, theory 4=25740
 H_2 , H_2^+ , H_3 systems, adiabatic energy surfaces using "atomic associations" method 4=15320
 H_2 , Heitler-London potential calc. 4=11075
 H_2 , induced fundamental band in gaseous, liquid and solid Ar 4=3855
 H_2 , interaction with H 4=25583
 H_2 ionization by electron impact 4=24581
 H_2 ionization by fast He atoms and He^+ ions 4=24566
 H_2 , ionization by ions of 200-1200 keV energies 4=27488
 H_2 ions, appearance potential 4=24546
 H_2 , isotopic, adsorption at low temps., theory 4=23595
 H_2 in liq. Ar , i.r. induced absorpt. in dil. solns. 4=27177
 H_2 liq., surface tension rel. to temp., expt. 4=27164
 H_2 , lowest excited $^1\Sigma_g^+$ state, MO calc. 4=28188
 H_2 , many-centre wavefunctions 4=22356
 H_2^+ , molecule, lower bounds for σ_g and σ_u states 4=25643
 H_2 molecule, SCF wave-function vibrational energy levels 4=6564
 H_2 molecules, quadrupole fundamental intensity, rotation-vibration interaction correction 4=12448
 H_2 , o-p conversion, nuclear spin conservation, erratum 4=17280
 H_2 , o-p conversion, reaction rates and diffusion 4=25646
 H_2 , o-p transition 4=25647
 H_2 , ortho-ortho to ortho-para reorientation ratio from n.m.r. 4=9706
 H_2 , oscillator strengths, determ. by electron impact 4=12450
 H_2 , para, thermodynamic props., 1-22°K 4=14451
 H_2 photoionization 4=27484
 H_2 , photoionization and absorpt. cross-sections, 580-1000Å 4=28190
 H_2 , $^1\pi_n(1s2pII)$ and $^3\pi_n(1s2pII)$ states 4=12447
 H_2 , plasma, ionic sound wave velocity meas. 4=19021
 H_2 positive ion production, by energetic He^+ impact 4=24569
 H_2 , quadrupole lines, breadth and shape 4=8427
 H_2 , quasi-molecular, in stellar atmospheres, absorpt. coeff. 4=23868
 H_2 , refractive index and polarizability determ., variation-perturbation method 4=25642

Hydrogen — contd

- H_2 in solid Ar induced fundamental vibr.-rotation band shift, density, temp. effect 4=30432
 H_2 solid, lattice heat capacity 4=22491
 H_2 , spectral intensities rel. to planetary bands 4=25640
 H_2 , spectroscopic consts. from Hartree-Fock wave-functions 4=15326
 H_2 , spin-diffusion meas., 20°-55°K, rel. to ortho-para concn. 4=8245
 H_2 , thermal conductivity, theory and expt. 4=21182
 H_2 , thermodynamic and partition functions 4=28177
 H_2 wavefunctions, optimization by scaling 4=20027
 H_2 , B state, approx. natural spin orbitals 4=6567
 H_2 - Br_2 reaction rate in nonsteady state, 1000°-1600°K 4=7744
 $H_2 + D = HD + H$, molec. beam study 4=3930
 H_2 and D_2 , intermolecular potentials, difference 4=9792
 H_2 - D_2 liq. solns., surface tension rel. to temp., expt. 4=27164
 H_2 - D_2 , solid, n.m.r., and isotope separation? 4=13488
 pH_2 - oD_2 solid system, vapour press. at pH_2 triple point, and phase separation 4=20705
 H_2 , HD, n.m.r. 4=6642
 H_2 - He system, liquid-vapour equilibrium 4=11409
 H_2 - Ne mixtures, elec. discharges, low press., striations 4=16448
 $H_2 + X = H + HX$ and $X_2 + H = X + HX$, ($X = H, F, Cl, Br$ and I), diatomics theory 4=26738
 H_2^+ , collision freq. with mols., var. with pressure 4=8626
 H_2^+ ion, characteristic frequencies, conditions of meas. 4=9688
 H_2^+ , three excited states 4=15332
 H_2^+ approx. wavefunction, nonuniform scaling 4=3856
 H_2^+ dissociation cross-section in H_2 gas 4=25749
 H_2^+ , dissociation, effect of vibrational excitation 4=20115
 H_2^+ , electron scattering, theory 4=9708
 H_2^+ , exact function, rel. to variational functions 4=25641
 $H_2^{++} + H_2 \rightarrow H_3^+ + H$, cross-sect. rel. to vibration of H_2^+ ion 4=24574
 H_2^+ ions, on metal surfaces, free proton prod., dissociation fractions, expt. 4=28270
 H_2^+ , Lorentz dissociation, proton trapping in DCX-1 4=5687
 H_2^+ , many-centre wavefunctions 4=22356
 H_2^+ photodissociation cross-sect. 4=25751
 H_2^+ , united atom treatment 2nd order perturbation energy 4=30434
 H_2^+ , virial theorem, basis function, different number choice 4=11232
 H_2^+ , wave-functions 4=28169
 H_2 complex, "different orbitals for different spins" 4=28215
 H_3 , electronic wave-functions 4=25675
 H_3, H_3^+ , electronic structure calc. 4=6551
 H^+ , mixed symmetry states and nuclear photo-effect 4=9321
 H_3 system, potential energy surface 4=12480
 H_3^+ , electronic wave-functions 4=25675
 H_3^+ , configuration-interaction calc. of ground state 4=28216
 H_3^+ , electron pairing 4=30444
 H_3^+ , electronic wave-functions 4=25675
 H_3^+ and H_3 , two-centre wavefunctions 4=28173
 H_3^+ , molecular struct. and energy calc. 4=13481
 H_3^+ molecule-ion, pot. energy surfaces 4=12482
 H_3^+ , proton-transfer reactions with saturated hydrocarbons 4=23622
 H^+ , existence, from photon scatt. by Li^7 4=1005
 H^+ , search for 4=9443
 H_4^+, H_5^+ molecules, detection in mass-spectrometer 4=9740
 H^+ , search for 4=9444
 HD, H_2 , isotope shift in nuclear mag. shielding calc. 4=28264
 HD solid, specific heat, along saturation curve 4=22492
 $HD^+ - He, HD^+ - Ne, Ar^+ - HD$, and $Kr^+ - HD$ reactions, isotope effects, intramolecular 4=29205

Hydrogen compounds

- See also Ice; Steam; Water.
 acids, in ice, conductivity 4=26107
 diatomic, force consts., internuclear distances, calc. 4=9691

Hydrogen compounds—contd

- halides, radiolysis in liq. phase 4=23680
 heavy water, critical constants 4=29813
 hydride ions, diatomic, Platt electrostatic model 4=12455
 hydrides and deuterides of group V elements, absorpt. spectra 4=6581
 hydrides, ordering of bond strengths 4=3845
 hydrogenous liqs., proton notion meas. by cold neutron scattering 4=27165
 ions, HS⁻ soln., u.v. absorpt. spectrum in soln. 4=16117
 isocyanic acid, flash photolysis, combination reactions of imino radicals 4=22430
 monohydrides, series of, binding type, discontinuous change 4=17281
 neutron scattering, total cross-sections for protons in hydrogenous cpds. 4=9754
 oleums, Raman relative integrated intensities 4=18206
 trihydrogen lithium selenite single crystals, dislocations 4=12750
 AH₂-type molecules, angular correlation diagrams 4=6556
 DCl solution in heavy water, i. r. spectrum 4=24218
 DCl spectrum, line shift due to HCl, oscill. 4=17283
 DCN, vibration-rotation bands 4=20066
 DCO radical, electronic absorption spectrum 4=6594
 DN₃, microwave and millimeter wave spectra 4=20067
 DNCS, molal thermodynamic props. 4=18246
 D₂-Ne mixture, phase separation temp. dependence 4=24178
 D₂O, liquid, molec. reorientation rel. to dielec. relax. and n. q. relax. 4=18221
 D₂O, neutron Fermi age calc. for moderation 4=21874
 D₂O, neutron scatt. in, energy distrib. 4=16092
 D₂O, thermal cond. of gaseous phase, 100°-500°C 4=235
 D₂O vapour, ultrasonic attenuation and velocity 4=14214
 H-bonded crystals, neutron diffraction analysis 4=23416
 H halides, solubility, var. solvent, temp. 4=24177
 H₂ condensed layers, texture, rel. to D₂ 4=13682
 HBF₄, aq. soln., X-ray analysis 4=21100
 HBO₂, crystal structure, atomic, -130°C 4=13582
 HBO₂, three cryst. forms, ht. of soln., transition and form. meas. 4=14452
 H₃BO₃, solutions, neutron spectra, thermal 4=911
 HBr and DBr mol. crystals, far i. r. spectrum 4=20444
 HBr, fundamental band, strengths and self-broadening widths 4=12452
 HBr-inert gas mixture, vibr.-rotation spectrum 4=3838
 HBr, spectrum, vibr.-rot. φ branch displacement in solns. 4=25634
 HBr*, $\Sigma^+ - \pi$, 4 new bands 4=3857
 HCl and DCl mol. crystals, far i. r. spectrum 4=20444
 HCl, DCl, spectra, pressure broadening 4=9702
 HCl, aq. soln., elec. cond. rel. to pressure 4=2706
 HCl, bands, shifts, pressure induced, due to noble gases 4=22358
 HCl crystal, overtone frequency and double excitation 4=7136
 HCl, dissociation by neutron bombardment 4=3918
 HCl, electronic structure 4=25649
 HCl gas, rel. to line shift and oscill. in DCl spectrum 4=17283
 HCl-inert gas mixture, vibr.-rotation spectrum 4=3838
 HCl liquid, viscosity meas. 4=14147
 HCl mixed with Ar and Xe, complex formation, spectral data 4=3858
 HCl, molecule, SCF MO one-centre basis set 4=20048
 HCL polar mol., n. m. r. shifts caused by added foreign gases 4=28265
 HCl, solutions, p. m. r., var. conc., mechanisms 4=206
 HCl spectrum, gas, pressure shift due to inert gases 4=15336
 HCl spectrum, i. r., discrepancy removal 4=17282
 HCl, spectrum, vibr.-rot. φ branch displacement in solns. 4=25634
 HCl, trapped in Ar lattice, molecular rotation 4=3837
 HCl, 2-0 bands, absorption and emission, pressure shifts 4=1264
 HCl, vibr.-rotation lines, impact broadening theory 4=1265
 HCl, vibration-rotation lines, inert-gas broadened, impact theory 4=9709
 HCl³⁵ J = O - 1, 3 hyperfine components meas. 4=24858
 HCN adsorpt., CsCl, NaI films, bonding 4=29198
 HCN, broadening of ν_1 lines, due to Ar, CO₂, HCl 4=3874

Hydrogen compounds—contd

- HCN, DCN spectrum, adsorbed on metal oxides, as crystalline HCN 4=10618
 HCN laser sources, 4=24904
 HCN, vibration-rotation bands 4=20066
 HCN, i. r. spectra from 2000 to 3600cm⁻¹ 4=12485
 HCO radical, electronic absorption spectrum 4=6594
 HCO radical, low-temp. i. r. study of chemistry 4=25757
 HCOF, DCOF molecular vibr., thermodynamic props., calc. 4=12503
 HD liq., surface tension rel. to temp., expt. 4=27164
 HDS, h. f. s. of microwave spectra 4=9733
 HF, charge distributions, analysis 4=12453
 HF in combustion gases at 1000°C, i. r. spectral radiances and emissivities 4=12454
 HF, correlation energy 4=12507
 HF, crystal structure 4=7137
 HF, electric dipole moment determ. from rot. mag. moment 4=30435
 HF gas, radiative transfer calc. 4=5108
 HF, Gaussian wave-functions 4=25650
 HF, in H₂O, neutron scatt. in, energy distrib. 4=16092
 HF, infra red, spectra, absorption, 22-250 μ 4=9711
 HF, low-frequency molecular motions, rel. to molec. structure 4=6568
 HF, mag. antishielding const. of F, meas. 4=12519
 HF, mol. vibr.-rot. interaction calc., m = +8 to +12 4=20045
 HF, molecular dissociation energy calcs. 4=9781
 HF, molecule, elec. polarizability tensor calc. 4=1256
 HF molecule, SCF MO one-centre basis set 4=20046
 HF, pressure-induced band, fine structure 4=17284
 HF-DF mixed crystals, i. r. spectra 4=7137
 (HF)₂, H-bond, electrostatic contrib., multicentre integrals 4=3875
 HI gas-phase addition to butene-2 4=26750
 HI, Morse oscillator matrix elements for vibration-rotation lines 4=9710
 HI, photolysis at 1849 Å 4=23672
 HI, spectrum, ν_{0-3} vibr.-rot., and transition moment 4=28192
 2HI = H₂ + I₂, thermal conductivity 4=24270
 HN₃, hydrazoic acid, quadrupole coupling constants from microwave spectrum 4=3873
 HN₃, microwave and millimeter wave spectra 4=20067
 HNCO and DNCO, photolysis, low-temp. i. r. study of intermediates 4=23674
 HNCS, molal thermodynamic props. 4=18246
 HNO₃, Raman line intensities rel. to NH₄NO₃ additions, complex formation interpretation 4=28223
 HO₂ radical, low-temp. i. r. study of chemistry 4=25757
 H₂O, D₂O, and H₂O-D₂O mixture, thermal conductivities in gaseous state 4=14209
 H₂O, electron inelastic scattering 4=12394
 H₂O, HOD, D₂O, molec. dissociation by electron impact, isotopic effects 4=3924
 H₂O molecule, Rydberg series, theory 4=28217
 H₂O, spectra of matrix-isolated 4=6595
 H₂O, spectral intensities rel. to planetary-bands 4=25640
 H₂-O₂ mixtures, vib. relax., acoustic resonator meas. 4=11244
 H₂O₃ formation, by free-radical reaction on cold surfaces 4=10640
 H₃O⁺ formation in mass spectra of alcohols, and formate esters 4=9780
 H₃O⁺ and OH⁻ ions, proton n. m. r. shifts, in strong acid or alkali metal hydroxide solns. 4=5212
 HPO, DPO, spectra, chemiluminescence of H, D + P + O 4=15346
 H₃PO₄, n. m. r., splitting and widths of p reson., ~1G 4=1307
 H₂S, absorption and photoionization cross-sections 4=28218
 H₂S, and d and t substit. products, vibr. spectra 4=15347
 H₂S combustion, spectroscopy in vac. u. v. 4=17861
 H₂S, HDS, D₂S, mass spectra and metastable transitions 4=6653
 H₂S, isotopically substituted, vibrational analysis 4=12423
 H₂S, molecule, SCF MO one-centre basis set 4=20048
 H₂S, liquid, p. m. r., temp. decrease mechanism 4=205
 H₂S, solid, struct. and phase transform. 4=20706
 H₂S*, emission spectrum meas. 4=12474
 HS₂O₂⁻, vibrational frequencies, from oleum studies 4=18206

SUBJECT INDEX

Hydrogen compounds—contd

- H_2SO_4 , vel., acoustic waves, u. s., var. with temp. and conc.; association 4=2679
 $\text{H}_2\text{S}_2\text{O}_8$, dissociation, rel. to Raman intensity data 4=18206
 H_2Se , and d and t substit. products, vibr. spectra 4=15347
 H_2SeO_4 , aq. solns., Raman spectral study 4=182
 HSiCl and HSiBr , spectrum and structure 4=15345
 T_2O , density meas. by magnetic float method 4=8177

Hydromagnetics

See Magnetohydrodynamics.

Hydrometry

See Flowmeters.

Hydrostatics

- electrostriction, theory, Clausius—Mesotti formula 4=18210
 equilibrium, stability criterion 4=2344
 liquid boundary, electrostatic deformation 4=18166
 surface under gravity, graphical solution 4=131

Hygiene

See Medical science.

Hygrometers

- dew-point determ. by α -source and ionization chamber 4=7824
 dew-point meter based on thermoelectric cooling 4=14459
 films, liquid, from dielectric const. 4=16131
 gases, relative humidity, direct meas. 4=244
 ice sphere, for 0° to -60°C 4=23731
 modified dew point, use in determ. v. p. in porous medium 4=5228
 NBS standard 4=23732
 psychrometer formulae 4=26786
 thermal or ultra-dry bulb type 4=2718

Hyperfragments

See Hypernuclei.

Hypernuclei

- angular distrib. anisotropy prod. by 9 BeV p's 4=27948
 binding energy meas. using nuclear emulsions, review 4=19343
 bound states, 2Λ with nucleons, decay and meson emission 4=19646
 decay, 2Λ with nucleons, meson emission 4=19646
 double event, prod. by K^- in emulsion, 2.3 BeV/c 4=9367
 double hyperfragment, identification 4=9364
 emission on Σ^- absorption in emulsion nuclei 4=6207
 formation, role of Y_0^* 4=12121
 heavy, mass 80-100 binding energy 4=3545
 hypertriton, average Λ -N interact., variational calc. 4=9316
 hypertriton binding, rel. to Λ -N potential 4=6139
 investigation, possible method 4=27952
 K^- meson prod., in emulsion, 3 GeV/c 4=17176
 Λ binding energy in nuclear matter calc. 4=9292
 Λ binding energy in nuclear matter for 7 Λ -N potentials 4=9366
 Λ trapping in nuclear matter due to K^- in bubble chamber 4=19805
 Λ -type, light, stability, formation and identification 4=6204
 with large strangeness, possibility 4=25270
 lepton decay, 4 fermion interaction 4=3547
 light, Λ - Λ bindings 4=19645
 measurements on short range hyperfragment 4=21994
 mesic, production and disintegration nuclear emulsions 4=17178
 mesonic, prod. by 1.5 GeV/c K^- interact., analysis 4=21992
 non-mesonic decay, B^0 , C^{10} , O^{17} , O^{18} , F^{19} 4=12120
 from π^- absorption in light nuclei, correlation of emitted nucleons 4=25416
 π^+ decay of Li^7_Λ or Be^7_Λ 4=25272
 produced by K^- and Σ^- interactions in nucl. emulsion, non-mesic decay 4=6206
 production, analogy with fragments due to π^- -mesons 4=9548
 production by 800 MeV/c K^- in emulsions, Λ^0 binding energy 4=3546
 production model 4=30304
 production by 1.5 GeV/c K^- -mesons in Li-loaded emulsions 4=17006
 production processes, high-energy 4=27951
 review 4=19643
 Σ^+ p, decay processes, probabilities 4=9299

Hypernuclei—contd

- $Z \geq 3$, nonmesic, nonmesic to π^- mesic decay ratio 4=17005
 Λ Be⁹, analysis on separable potential model 4=21993
 Λ Be¹⁰ binding energy 4=12122
 Λ Be¹⁰ binding energy and Λ - Λ interaction 4=3490
 Λ Be¹⁰, binding energy and Λ - Λ , Λ - Σ , Σ - Σ coupling strength and core radii 4=957
 Λ Be¹⁰ binding energy calc., using hard core Λ - Λ 4=25271
 Λ Be¹⁰ or ¹¹ and Λ - Λ interaction 4=994
 Λ H³, analysis on separable potential model 4=21993
 Δ H^{3,4}, binding energies 4=9365
 Δ H⁶, decay and identification 4=6204
 He, and nuclei of $Z > 3$, nonmesic decays 4=9363
 Δ He^{4,5}, binding energies 4=9365
 Λ He⁴- Λ H⁴ binding energy difference form π^- decays 4=19644
 Λ He⁴, lepton decay 4=3547
 Λ He⁶, analysis on separable potential model 4=21993
 Λ He⁶, decay observation 4=27950
 Δ He⁶ binding energy 4=12122
 Λ He⁷, decay observation 4=27950
 Λ He⁷ isomeric state 4=27949
 Λ He⁸, decay and identification 4=6204
 Λ Li⁷, decay observation 4=27950
 Λ Li⁷, spin determination and decay 4=6205
 Li⁸ fragments, freq. of emission from K^- meson + heavy emulsion nuclei interaction 4=30346

Hyperons

See also Mesons.

- heavy, prediction, in rotator model frame 4=9082
 isobars, empirical classification incl. baryons 4=954
 polarization in reaction $\nu + \text{N} \rightarrow \text{Y} + \text{L}$ 4=955
 theory, self-consistent, from Born terms, SU_3 symmetry 4=9282
 Λ and Σ , static model, two-meson approximation 4=3486
 Λ , polarization 4=9296
 Λ , polarization, from $\pi^+\text{C}$ interaction 4=3491
 Λ , theory as $[\bar{\text{K}}\text{N}]$ with $I = 0$, rel. to nonleptonic decay 4=12069
 Λ - π low energy scatt., S-matrix anal. 4=9244
 Λ^0 polarization, from $\gamma + \text{p} \rightarrow \text{K}^+ + \Lambda^0$, 950-1050 MeV 4=19595
 Λ^0 , production, cosmic ray, energy, transverse momentum distrib. 4=956
 Ω , super, prediction 4=21957
 Ω^- dynamics, N/D method theory 4=27905
 Σ , production, cosmic ray, energy, transverse momentum distrib. 4=956
 Σ , theory as $[\bar{\text{K}}\text{N}]$ with $I = 1$, rel. to nonleptonic decay 4=12069
 Ξ , theory as superposed state of $[\bar{\text{K}}\Sigma]$ and $[\bar{\text{K}}\Lambda]$ 4=12069
 Ξ^- , discovery in C.E.R.N. bubble chamber 4=16841
 Ξ^* , 1535 MeV, dynamical model of $J = \frac{3}{2}^+$ state 4=16972
 Y_0^* resonance as bound state of $\bar{\text{K}}$ -N system 4=950
 Y_0^* , role in hyperfragment formation 4=12121

absorption

No entries this year

capture

- Ξ^- , by hydrogen, at rest, theory 4=9301
 Ξ^- , on light nucleus, rel. to double hyperfragment identification 4=9364

decay

- calc. 4=21758
 energy spectrum, V-A interaction theory 4=25011
 lepton decays, relative probability, effect of form factors 4=25185
 leptonic and non-leptonic 4=25000
 leptonic, use of lepton energy spectrum at fixed nucleon energy and of H^A_Λ decay 4=9283
 leptonic, and unitary symmetry 4=27900
 nonleptonic, baryon pole approx. using SU_3 symm. 4=12067
 non-leptonic, calc. 4=25186
 nonleptonic, generalized $|\Delta I| = \frac{1}{2}$ rule 4=21941
 non-leptonic, mixing ratio in unitary symmetry 4=16970
 nonleptonic, rel. to hyperon structure and effective weak interaction 4=12069
 nonleptonic, Rosen's and Fujii's 4=12066
 pionic, two-body, dispersion approach to first order 4=21756
 pionic, universal weak coupling scheme 4=21757

Hyperons—contd

decay—contd

- pole approximation, unitary symmetry application 4=3481
- resonances, in unitary symmetry model 4=25189
- $\Lambda \rightarrow N + \pi$, propagator diagonalization 4=3317
- $\Lambda \rightarrow p^+ + e^- + \bar{\nu}$, polarized Λ from $K^0 \Lambda^0$ prod. in H, V-A test 4=27902
- $\Lambda \rightarrow p + \pi^-$, triangle reln. rel. to octet spurion and R symm. 4=19591
- $\Lambda \rightarrow p\mu^- \bar{\nu}$, branching ratio meas. 4=12073
- $\bar{\Lambda} \rightarrow p + e^- + \bar{\nu}$, p spectra 4=3487
- Σ , generalization of Gell-Mann-Rosenfeld triangle 4=9298
- Σ , leptonic, calc., on Δ charge = Δ strangeness selection rule 4=9270
- Σ, Λ , non-leptonic, and unitary symmetry theory 4=19415
- $\Sigma \rightarrow \Lambda + e + \gamma$, up to first order in Q-value 4=6140
- $\Sigma^0 \rightarrow \Lambda + \gamma$, rate 4=21950
- $\Sigma^0 \rightarrow p + \pi^- / \Sigma^0 \rightarrow \Lambda + \gamma$ ratio for lifetime meas. 4=19597
- $\Sigma^- \rightarrow \Lambda + e^- + \bar{\nu}$, weak interact. form factors 4=21950
- $\Sigma^+ \rightarrow \Lambda + e^+ + \nu$, strangeness - conserving 4=9297
- $\Sigma^+ \rightarrow \pi^+ + n$ difference, test from $\Sigma^+ \rightarrow \pi^+ + n + \gamma$ π momentum meas. 4=15107
- Σ^p hypernucleus, probabilities 4=9299
- $\Sigma^+ \rightarrow p + \pi^0$, triangle reln. rel. to octet spurion and R symm. 4=19591
- Ω^- , leptonic 2 and 3 body, calc. 4=21954
- Ω^- , non-leptonic, calc. from expt. 4=21953
- Ω^- , pole approx. for weak interact., 4=30275
- $\Omega^- \rightarrow \Xi^0 + e^- + \bar{\nu}$, calc. 4=27906
- Ξ , Λ ang. distrib. 4=3492
- $\Xi^- \rightarrow \Lambda + \pi^-$, triangle reln. rel. to octet spurion and R symm. 4=19591
- $\Xi^- \rightarrow \Lambda + \pi^-$, and violation of CP + SU₃ invariance 4=25200
- Ξ , nonleptonic modes 4=9300
- Y_1^* (1382 MeV), branching ratio, symm. -violating effects, 4=30274

decay observations

- $\bar{\Lambda}$ 4=3489

- In₂S₃, luminescence rel. to carrier trapping states 4=7185
- In₂S₃, photocond., cond., and thermoelec. props. 4=20374
- In₂S₃, vacancy ordering reaction, direct obs., on hot stage 4=13489
- InSb, cond. electron density at nuclei, meas. 4=22535
- InSb, crystal dendrite structure, peculiar 4=2037
- InSb, crystal growth, zone-melting, ultra-pure 4=23341
- InSb crystal—melt interface, facets correl. with crystal growth mechanism 4=10475
- InSb, crystal structure, atomic 4=4606
- InSb crystals, damage in abraded {111} surfaces 4=23159
- InSb. C.W. diode, laser, magnetic tuning 4=14946
- InSb, cyclotron resonance, 4, 8 mm, temp. var., and hole masses 4=1447
- InSb, dendritic growth 4=7569
- InSb, denritic growth 4=15769
- InSb, electron beam effects, ang. var. in recovery 4=28510
- InSb, equilb. vapour pressure, 783° to 1243°K 4=21362
- InSb, Faraday effect 4=17565
- In Sb, Faraday rotation, peak posn. and size at absorption edge calc. 4=28693
- InSb films, crystallite size and carrier mobilities 4=23581
- InSb films, evaporation, microbalance meas. 4=5263
- InSb, films, evaporation prod. 4=4658
- InSb films, formation techniques and properties 4=20808
- InSb films, i.r. transmission and reflection 4=26200
- InSb films, prep., comp. and optical props. 4=23569
- InSb, Hall effect, electrical cond. and magneto-resistance 4=26048
- InSb, Hall element, thermal time const. meas. circuit 4=6978
- InSb, heat treatment, In and Sb yield 4=1969
- InSb, h.p. phase transition 4=17758
- InSb, i.r. transmission, rel. to neutron irradi. 4=1735
- InSb, large-signal photoconductive effect 4=12989
- InSb, laser action at 2°K, meas. 4=8991
- InSb, magnetoresistance, geometrical effects 4=6936
- InSb, mag. susceptibility, temp. var. 4=28766
- InSb, maser, optical, 5.28 μm, 35°K 4=5864
- InSb, InSbSn, InSbSn₂, metallic forms, crystal struct., atomic, compressibility hardness 4=29114
- InSb, microhardness anisotropy, by scratch method 4=1943
- InSb, minority carrier lifetime and diffusion coeff. meas., 130°K 4=30537
- InSb, neutron diff. crystallography, 1.18 Å 4=15790
- InSb, In¹¹⁵, Sb^{211,213} nuclear polarization by d.c. 4=22462
- InSb, n-type, magnetophonon resonance 4=28563
- InSb, optical constants, in visible and near-u.v. regions 4=1734
- InSb, optical study with view to laser prod. 4=28688
- InSb, phase separation, by centrifuging melt 4=4543
- InSb, phonon scatt. from thermal cond. meas. 4=15411
- InSb, photo. e.m. effect due to carrier recomb., theory 4=20430
- InSb, photocond., osc. in excitation spectrum, and optical phonons 4=17531
- InSb, photoconductivity, osc. with photon energy, phonon mechanism 4=17529
- InSb, photoconductive, use as optical freq. mixer and detector of laser radiation 4=10131
- InSb, photomagnetic effect, 6° to 77°K 4=7069
- InSb, plasma, electron—hole, nonlinearities in helical instability 4=28562
- InSb, plastic deformation under dynamic compression 4=20655
- InSb, pinch effect 4=17394

Indium compounds—contd

- InSb, p-type, cyclotron resonance data 4=6815
 InSb semicond. films, props. and structure 4=23580
 InSb, semicond. grain boundary props. temp. var. 4=17490
 InSb, semicond. oscs., high elec. field in mag. field 4=20370
 InSb, semiconducting, oscillations, pulse current, in mag. field 4=20372
 InSb, semiconducting props., after n, γ irradi. at 78°K, recovery on heating 4=6976
 In-Sb (70 wt %), crystal structure, atomic, simple cubic 4=4609
 InSb, specific heat, calc., lattice mechanics 4=1396
 InSb, superconductivity meas. 4=14519
 InSb, transport phenomena at low temps., effect of high elec. fields 4=30538
 InSb, InSbSn, InSbSn₂, InSbSn₄, artificial 4=29114
 InSb, InSbSn, InSbSn₂, InSbSn₄, superconductivity 4=27420
 InSb, surface conductance meas. for p-type crystal in heptane and heptane-ethanol mixtures 4=28564
 InSb, (110) surface, electron diffraction obs. 4=23555
 InSb, thermal cond., effect of 2 MeV electron irradi. and annealing 4=28382
 InSb, thermoelec. power in mag. field, in n-type 4=1700
 InSb—CdTe ($\leq 3\%$), semiconducting and thermoelec. props. 4=20373
 InSb—In Te₃ alloys, thermal conductivity, 80° to 500°K 4=9870
 InSb—NiSb, electrical anisotropy 4=10060
 InSb— β -Sn system, superconductivity at high press. 4=16345
 InSb—Te, crystallization, liquid periodic temp. changes cause Te inclusions 4=23342
 In—Sb—Zn liquid solns., thermodynamics from mass spectrometry of Knudsen-cell effusates 4=24201
 In₂Se, extraction from melt of n and p-types 4=7558
 In₂Se, self-absorption edge meas. 4=7138
 In₂Se—InAs system, conductivities elec., thermal, lattice const., thermal expansion 4=1611
 In—Sn alloys, Brillouin zone effects, superconductivity, and Fermi surface, rel. to composition 4=6798
 In—Sn alloys, mag. props. 4=28767
 In—Sn alloys, supercond., magnetization and transition order 4=18576
 In—Sn, superconductivity, crit. temp. — composition discontinuities 4=18577
 In—Sn supercond. films, crit. field temp. var., discrepancy
 InTe, artificial 4=29114
 InTe, metallic form, crystal struct., atomic, compressibility hardness 4=29114
 InTe, metallic, superconductivity meas. 4=8568
 InTe in PbTe and SnTe, solid solubilities phase diagrams, and lattice parameters 4=23262
 InTe, superconductivity 4=27420
 In—Te system, phase diagram 4=29011
 InTe (II), metallic, crystal structure and supercond. 4=10429
 InTe (II), metallic, stability conditions 4=10428
 In₂Te₃—HgTe alloy, semicond. props. 4=22719
 In₃Te₅, electrical props. 4=29011
 In_{1-x}Te_x ($x \leq 0.18$), NaCl type, superconducting transition temps., and vacancies 4=14518

Inductance

- electromagnetic levitator, Lenz's law demonstration 4=5752
 ferrite sample coupling, effects at ferromag. reson. 4=3101

Inert gases

- See also the individual gases
 adsorption by graphite, dispersion energy calc. 4=13689
 atom, statistical model extension 4=3770
 atomic, reflection and electron ejection from Mo, comparison with ions and Na⁺, K⁺ 4=5719
 atoms, electron scatt., disagreement with Lenz theory 4=30393
 atoms, heteronuclear two-centre repulsion 4=9673
 atoms, ionization pot. correl. with polarization coeff. 4=27477
 atoms, photoionization spectra meas. 4=11345
 atoms, scatt. by Li²⁺ ions, theory 4=6509
 atoms, scattering of Li⁺ ions, 7-60 keV 4=3818
 atoms, van der Waals forces calc. 4=26153
 bubble formation and swelling in neutron irradi. reactor materials 4=19903

Inert gases—contd

- charge transfer cross-section, resonant, meas. 4=11516
 collision processes, with protons, 60-450 keV 4=16426-7
 crystal antishielding factors 4=28312
 crystal excitons, appl. of Wannier model 4=9919
 crystal stability, three-body interaction model 4=28304
 crystals, anharmonic free energy at low temps. and abs. zero 4=9851
 crystals, atomic multipole interactions 4=22453
 crystals, boiling points calc. 4=5473
 crystals, surface energy calc. 4=17336
 crystals, CH₄ and CD₄ impurities, vibration-rotation spectra, 5° to 40°K 4=6628
 deuteron beams, excited atoms formation by electron capture 4=11530
 diamagnetic susceptibilities from screening consts., agreement with wave mechanics 4=6458
 discharge, elec., low press., hot cathode, noise 4=21472
 discharges, striation propagation study 4=8647
 doubly-charged, single charge transfer 4=24596
 electron anomalous transmission at sub-excitation energies 4=25551
 electron drift velocities, inert gas—moderator gas mixtures 4=24274
 electron mobility rel. to scatt., theory 4=14221
 electron scatt., inelastic, continuum oscillator strength determ. 4=25516
 electron scatt., inelastic, structure beyond ionization limit 4=12393
 electron scatt., 25 keV, elastic, and optical transitions 4=6505
 energy loss in ion-atom collision, rel. to ionization 4=27478
 in glass surface, ionically pumped, thermal recovery 4=21205
 glow discharge, with low-maintaining potential, 22-35 V 4=18730
 glows, effect of active gas addition 4=18731
 inert gas—Hg discharge, resonance radiation reflection by walls 4=18711
 inert gas—p [d], collisions, Lyman α emission cross-sects. 4=25519
 interaction energies of unlike atoms 4=9672
 interaction forces with metal surfaces 4=26717
 interaction potential shape 4=12403
 ionization, by electrons exptl. threshold laws 4=24595
 ionization, by electrons, up to 500 eV 4=8620
 ionization by H⁺ and He⁺ beams by, H⁺ and He⁺, electron capture into excited state 4=11527
 ionization by ions and electrons 4=16439
 ionization, by protons, 100-450 keV 4=16426-7
 ionization calc., stable/metastable atoms/ions 4=11534
 ionization cross-sections near threshold meas. 4=11521
 ionization at 2000°K, seed impurity effect 4=27472
 ion release from discharge-treated solid 4=12816
 ions, cathode sputtering, low-energy 4=609
 ions, doubly-charged, single electron capture 4=24597
 ions, molecular, recomb. coeffs. meas. 4=2951
 ions, reflection and electron ejection from Mo, comparison with atoms, Na⁺, K⁺ 4=5719
 ions, sorbed on glass surfaces, induced emission by ion beam 4=23593
 ions, sputtering of Ag 4=4105
 ions, sputtering of Be, Ni, Pt, rel. to mass ratio 4=19124
 isotope separator, electromagnetic 4=17266
 laser lines, 2-35 μ , term assignments 4=11820
 liquid, dielec. consts 4=11209
 liquid, heat capacities and compressibilities, calc. from rigid sphere eqn. of state 4=18192
 luminescence, by fast β -rays, decay rate 4=25491
 magnetoplasmas, microwave, gyro-interaction 4=18878
 in meteorites, and their history 4=26930
 mixtures with CO₂, diffusion, thermal 4=29673
 molecule ions, mass spectrometric study 4=452
 multicomponent mixtures, thermal conductivity 4=11243
 particle range in W, "tail" 4=27579
 plasma, ionic sound wave velocity meas. 4=19021
 plasma, ionization-recombination instabilities 4=19035
 plasma, transverse diffusion meas. in mag. field 4=5602
 positron annihil. mean life in liq. and solid 4=4031
 proton beam, fast, discrete energy losses 4=11517

Inert gases—contd

- refractive indices and Verdet const. at u. v. wavelengths 4=27223
- shock waves, alkali smoke seed effects 4=29679
- solid, auto diffusion, discrepancy between theory and meas. 4=17436
- solid, g-factors of H and alkali atoms 4=9821
- solids, Grüneisen parameters, $\gamma(n)$, calc. for f. c. c. lattice 4=17379
- solid, ideal, specific heat using Mie-Lennard-Jones potential 4=6712
- solid, thermal expansion, in the harmonic approximation 4=22502
- solid, trapped alkali metals, e. s. r. meas. 4=9819
- solidified, properties as molecular solids 4=22454
- sorption, activated, at quartz surface in electrodeless discharge 4=20821
- spectra, forbidden transitions in continuum, electron scatt. obs. 4=15279
- spectra, solid, u. v., and crystal excitons 4=13020
- stimulated emission of new i. r. transition 4=16896
- stone meteorites, radiogenic and spallogenic, diffusion loss 4=20913
- transport properties in terms of Morse potential 4=8241
- viscosity, calc., at high densities 4=21176
- N_2 , dissociation by impact of ions 4=29875
- N_2O , dissociation by impact of ions 4=29875
- $X^* + Y \rightarrow XY^+ + e$ reactions, reactant lifetimes 4=13717

Inflammability

- Fabry—Perot, coupled 4=18419
- Fabry—Perot, coupled with photomultiplier for plasma temp. meas. 4=18913
- Fabry—Perot dilatometer 4=16003
- Fabry—Perot etalon with window, increased intensity and resolving power 4=11356
- Fabry—Perot, for high-resoln. and laser work 4=16230
- Fabry—Perot interference—dispersion system 4=326
- Fabry—Perot, laser modes in active material 4=27679
- Fabry—Perot, as laser resonator, stationary modes 4=19265
- Fabry—Perot, as laser resonator, theory 4=19264
- Fabry—Perot, magnetic fine adjustment 4=8448
- Fabry—Perot, oscillating, fringe pattern, depend. on vibration amplitude, expt. and theory 4=24381
- Fabry—Perot, refl. coating effect on optical thickness 4=21312
- Fabry—Perot, remote controlled 4=24382
- Fabry—Perot, Russian demonstration 4=8449
- Fabry—Perot, scanning, for spectral line profile recording 4=18401
- Fabry—Perot, scanning wedge modification 4=21311
- Fabry—Perot, with dielec. films, for absolute wavelength meas. 4=16248
- Fabry—Perot, with diffraction mirrors 4=21310
- Fizeau mirror system, for testing homogeneity of glass 4=29738
- four-plate, field image illumination 4=18418
- for Fourier spectroscopy, without collimation, theory 4=11352
- grating, for Ronchi test, historical review 4=18414
- Jamin, modifications for optical testing 4=18417
- laser feedback 4=24385
- laser, for plasma refractive index changes 4=2985
- for laser pulse compression, theory 4=24893
- laser, with spherical mirror 4=27327
- lateral shearing, using plane parallel plate, with laser source 4=18416
- for luminescence lifetime meas. short, with laser source 4=15609
- Mach—Zehnder, for exam. of dispersion in vicinity of optical reson. 4=11365
- Michelson, for astronomical i.r. spectra 4=29361
- Michelson and polarization interferometers, optical path difference meas., comparison 4=2849
- Michelson, for Fourier spectroscopy 4=29363
- Michelson-type, high-precision pointing 4=24384
- for modulation transfer functions meas. 4=11354
- oscillating, spherical mirror, for laser axial mode c.r.o. display 4=768
- radial shearing, using refr. law, review 4=24383
- scanning device, photoelectric, for Fizeau interferograms 4=11355
- shearing interferometer, prism system 4=29766
- spectrometer, far-i.r. 4=8421
- spectrometer, with osc. mirror for audio detect., advantages 4=14353
- spherical mirror, rel. to off-axis ray paths 4=18415
- stage, for multiple-beam interferometry, micro-adjustment 4=27331
- Twyman—Green, rel. to optical modulator 4=24386
- wedge, fringe space distrib., computer calc. 4=24388
- Williams type, compensation of 4=2848

Interferometry

- application in differential manometer 4=5258
- density, gases, meas., supersonic flow, effect of high gradients 4=214
- filters, vacuum-u.v. 4=21289
- r.f. discharge, density time-dependence, study 4=18714
- spectroscopy, theory and expt. 4=27311

acoustic waves

Internal friction

- alkali halides, rel. to h.f. vibrations 4=1479
- alkali halides, rel. to plastic deformation 4=1923
- alloys, for ultrasonic heating to $\sim 1000^\circ\text{C}$ 4=11398
- amplitude effects, dislocation pinning by impurities, thermal activation 4=26464
- analysing technique for composite peaks 4=28914
- automatic meas. by torsion pendulum 4=28913
- chlorobutyl polymer, acoustic, var. cross-link density 4=13396
- due to crystal point defects 4=6827
- crystal point defect quantum transitions model 4=17712
- damping experiments, low-frequency 4=10354
- dislocation creep rate over Peierls barrier, model 4=17718
- f. c. c. crystals, in compression tests, absence 4=30764
- graphite, var. with strain amplitude, temp., neutron effects 4=10380
- martensite, high and low-carbon, rel. to decomposn. products coherency 4=20685
- measurement, high amplitude, u.s. 4=4442
- measurement, impulse method 4=17711
- metals and alloys, theory and effects, book 4=7372
- metals, rel. to amplitude of vibration 4=1912
- metals, rel. to damage cumulation with static and variable loadings 4=7373
- metals in mag. fields 4=17713
- metals, meas. method, $100^\circ\text{--}430^\circ\text{K}$ 4=30746
- metals, oscillator random vibr. model, with nonlinear damping 4=26465
- metals, rel. to u.s. attenuation 4=22483
- metals, for ultrasonic heating to $\sim 1000^\circ\text{C}$ 4=11398
- Nylon-4, $100^\circ\text{--}300^\circ\text{K}$ 4=1959
- p. v. c., high sine deformation freq. and temp. var. 4=17741
- polymers, rubbery, losses, -180° to 25°C 4=15713
- quartz, decrease on elec. purification 4=15715
- quartz strands, at low freq., expt. 4=13447
- relaxation, dislocation—point defect interact. process 4=1913
- Rochelle salt, amp. depend., in various appl. fields 4=15716
- Rochelle salt, temperature effect 4=20683
- rubber, high sine deformation, freq. and temp. var. 4=17741
- rutile, rel. to type of point defects 4=23219
- solid solutions, Zener relaxation, activation energy compared to that for diffusion 4=23235
- solid, u.s., rel. to elastic wave decay 4=23092
- steel, ageing effects 4=29009
- steels, NiCr, and notch sensitivity 4=23212

Internal friction — contd

- stress-induced ordering of point defects, theory 4=6824
- thermal breakaway theory of pinned disloc. line 4=12748
- torsional pendulum, temp. depend. 4=113
- triglycylsuphate, amp. depend., in various appl. fields 4=15716
- vibrators, longit. excitation, loss distrib. 4=27241
- Ag, $4\cdot2\text{--}300^\circ\text{K}$, after $4\cdot2^\circ\text{K}$ deformation dislocation relaxation peaks 4=7429
- Ag-Cd alloys, α -phase, Zener relaxation 4=28981
- Al, Bordoni peak, annealing effect 4=1927
- Al, and creep and stress relaxation, activation energies 4=28922
- Al, dislocation relax., $10\text{--}50\text{ Mc/s}$ meas. analysis 4=12754
- Al, polycryst., rel. to residual press. effects 4=23120
- Al-Zn alloys, heat-treated 4=17725
- Al-Zn (10-98 wt. %) and heat cycling 4=13389
- Au, cold worked, dislocation pinning process 4=1941
- Au, $4\cdot2\text{--}300^\circ\text{K}$, after $4\cdot2^\circ\text{K}$ deformation dislocation relaxation peaks 4=7429
- Au, influence of annealing treatments 4=4466
- Au, peak at -60°C after quenching 4=40657
- Au, transient changes due to quenching 4=23156
- Au-Ag alloys, dislocation relax. meas. 4=20656
- Be, liq. N₂ temp. to 735°C 4=7411
- C, glassy and baked, var. with strain amplitude, temp., neutron effects 4=10380
- C and graphite, rel. to mech. damping, $300^\circ\text{--}20^\circ\text{K}$ 4=28956
- Co-W, during phase transformations, damping decrement 4=17727
- Cu, cold deformed, interstitial conditioned 4=1938
- Cu, cold worked, dislocation pinning process 4=1941
- Cu, deformed, low temp. study 4=1935
- Cu, dislocation—point defect interaction model 4=20653
- Cu, $4\cdot2\text{--}300^\circ\text{K}$, after $4\cdot2^\circ\text{K}$ deformation dislocation relaxation peaks 4=7429
- Cu, grain boundary relaxation 4=23141
- Cu-Al alloys, rel. to temp. 4=13399
- CuAu, peaks, near order-disorder transition temp. 4=26511
- Cu-Be alloy, in phase transition, elastic oscill. 4=13403
- Cu-2%Co, grain boundary relaxation 4=23141
- Cu-Ge single crystals, rel. to dislocation damping 4=23150
- Cu-In alloy, in phase transition, elastic oscill. 4=13403
- Cu₃Pd, peaks, near order-disorder transition temp. 4=26511
- CuPt₃, peaks, near order-disorder transition temp. 4=26511
- Cu-Sn alloys, rel. to temp. 4=13399
- Cu-Zn alloys, rel. to temp. 4=13399
- Fe, and crystal dislocations release stress meas. 4=28958
- Fe, rel. to localized defects due to neutron irradiation 4=26513
- Fe, at low temp. 4=20660
- Fe, technical, effects of strain-ageing 4=13415
- Fe, Al-type alloys, rel. to ordering processes 4=1948
- Fe-Mo alloys, damping capacity rel. to quenching temp. 4=1949
- LiF, recovery after plastic deformation 4=10389
- Mo, peak 4=26520
- Mo, Mo-Zr, Mo-Re, 20° to 700°C 4=7435
- Ni, cold worked, stage III recovery meas. 4=26523
- Ni, crystal interstitial rot. effects on peak 4=28968
- Ni, and fatigue, thermal, and grain struct. and dislocations 4=23179
- Ni, heat treatment effects 4=23178
- Ni-Fe(66:34), effect of heat treatment with mag. fields 4=23187
- PbMg_{1/2}W_{1/2}O₃, anomaly, near antiferroelectric Curie point 4=1953
- Pt, cold worked, stage III recovery meas. 4=26523
- Pt, $4\cdot2\text{--}300^\circ\text{K}$, after $4\cdot2^\circ\text{K}$ deformation dislocation relaxation peaks 4=7429
- Ti, cold worked, recovery on annealing 4=7461
- Yb, peaks due to O₂ and N₂ diffusion 4=15497
- Zr, effect of internal irradiation 4=4494
- Zr, peak at low temp. 4=26533

Internal stresses

See Stresses, internal

Interplanetary magnetic fields

- as cause of comet tails 4=4891
- and cosmic ray streaming due to irregs., and daily var. 4=29353
- from cosmic rays, solar flare event time distrib. 4=17996
- current theories 4=10738
- distinction from solar and geomagnetic 4=13854
- effect on solar wind and magnetosphere energy coupling 4=20858
- galactic, rel. to interplanetary H distrib. 4=2412
- investigation via cosmic-ray primaries 4=25220
- meas., space vehicle 4=10769
- Pioneer V results, mag. field 4=13976
- review of satellite data 4=26925
- review of space-probe obs. 4=4882
- and sun electric charge 4=23905
- value, Explorer 12 meas., and earth's field boundary 4=7934

Interplanetary matter

- dust belt round earth due to lunar ejection 4=15882
- dust grains, perturbation by solar wind 4=23902
- dust particles, light scattering rel. to zodiacal light and F-corona 4=15936
- dust, thermal radiation, meas. and model 4=10889
- effect on thermionic emission, electrons 4=5697
- Fermi acceleration, adiabatic theory review 4=665
- magnetopause, review 4=4958
- magnetosphere, motions, rel. to F-region irregularities 4=17953
- magnetosphere structure, rel. to geomag. pulsations 4=15898
- mass distrib. calc. 4=20914
- micrometeorites, vel., mass, radiance, charge and flux determ. 4=26931
- particle flux meas. at 1.9×10^6 km from earth by rocket, rel. to geomag. field 4=7982
- penetration, Explorer XIII and XVI satellites 4=10888
- plasma, conference (Culham Lab., 1963) 4=5589
- plasma, survey 4=20915
- plasma theory 4=20922
- plasma, zodiacal light study 4=20916
- probe 4=20965
- scattering, light 4=18427
- solar corona, outer, shape, radio scatt. meas. 4=10904
- solar, protons, long-lived, 3 MeV, and mag. storms 4=2413
- solar radiation pressure, forces and moments 4=2475
- solar wind, injection into magnetosphere 4=20857
- solar wind interaction with earth's magnetosphere, viscous 4=15897
- solar wind and magnetosphere, hydromagnetic coupling 4=20858
- terrestrial ambium, effect on polar-cap airglow 4=4785
- zodiacal light, electron density meas. 4=7981
- H, distrib., rel. to solar wind shock front theory 4=2412
- H near earth, origin of H₊ emission 4=17995
- H, neutral, to 10 earth radii, current knowledge 4=23773
- H₂ escape in outer planet region 4=7973

Interstellar matter

- absorption effects, rel. to globular cluster colour indices 4=4869
- absorption spectrum 4=29419
- absorption three-colour system determ. 4=29418
- absorption, ultraviolet, wavelength var. 4=13909
- acceleration by radiation 4=4879
- in barred spiral galaxies, gas motion 4=10871
- charged particle accel. by varying mag. fields 4=15909
- cloud complex, rel. to star formation 4=10805
- cloud equilibrium, rel. to Galactic magnetic field 4=10855
- cloud with high conc. of CN molecules 4=29421
- cloud, uniform and non-uniform models 4=29481
- clouds, internal motions 4=29420
- condensation, gravitational, stellar association theory 4=29415
- conference, Varenna (1961) 4=20883
- consumption at birth of stars 4=13883
- and cosmic rays, primary, effect on very heavy nuclei spectrum 4=15908
- Dirac monopole, behaviour and rel. to cosmic rays 4=10793
- distribution and motion, 21 cm data 4=10922

Interstellar matter—contd

- dust within 20 pc of sun, distrib. 4=10867
- energy balance 4=10870
- galactic central layer, gravitational resonance effects 4=10848
- Galactic gas, magnetic fields and dynamics 4=13898
- Galactic plane, disk-halo transition region, composition 4=10849
- in galaxies, conference, Princeton (1961) 4=7959
- $\gamma + \gamma \rightarrow \nu + \bar{\nu}$ process calc. 4=25060
- gamma-ray sources >0.2 MeV in galaxy 4=2383
- gas cloud, expanding, 21 cm absorption profiles 4=23885
- gas clouds at intermediate latitudes, radio data 4=10921
- gas in galactic clusters 4=10857
- gas and galactic halo 4=26885

- H Balmer absorption line formation, rel. to ionization 4=10872
- H cloud, phys. charac., 21 cm study 4=29482
- H density, from 21 cm profile resoln. 4=20947
- H, neutral, in Galaxy, correl. with stellar data 4=2374

Interstellar matter—contd

- H, neutral, in Galaxy, deviations from equatorial plane 4=10865
 H, neutral, in solar neighbourhood 4=29480
 H, radio emission from galaxies 4=30990-1
 H I, II, processes affecting heating rate and state of motion 4=10870
 H II ionization front, effect of mag. field 4=10874
 H II region, i.r. emission data 4=13908
 HII region, initial development 4=17988
 HII regions, formation about a star 4=23884
 H II regions in galaxies, frequ. function of diameters 4=10875
 H II regions round hot stars, energy input problems 4=13907
 H₂, metastable state c³II, abundance calc. 4=10862
 H₂ and He, effects of far-u.v. scatt. 4=2385
 OH, radio absorption obs. 4=20949-50
 OH, radio obs., 1612, 1720 Mc/s 4=30986

Iodine

- adsorption in graphite, 100° to 800°C, 0.01-15 mm Hg 4=30889
 adsorption on Si and Ge, elec. diffraction study 4=20824
 afterglow, ion-ion recomb. coeffs. 4=27489
 atom, recombination rate constants, three-body 4=17852
 catalysis of decomposition of acetaldehyde and propionaldehyde vapours 4=10642
 crystalline, space group molecular orbital treatment 4=17335
 crystals, dielec. const. meas. along crystal axes 4=7032
 discharge, a.c. current var. on illumination, wall effects 4=21470
 discharge positive column striations, diffusion in 4=8649
 laser line classification review 4=19287
 maser, optical, discharge, 3.236, 3.431μ 4=765
 molecular crystals, far i.r. spectrum meas. 4=20445
 nuc. quadrupole resonance in iodic acid, rel. to temp. 4=22426
 solution charge-transfer complexes, microwave relax. and structure 4=2699
 vapour, effect on W-filament quartz-iodine lamp spectrum 4=18406
 vapour, visible band, pressure dependence 4=12458
 I¹³¹, diffusion in molten NaI, rel. to temp. 4=8193
 I⁻, electrolytic, reaction with S₂O₈²⁻, specific cationic effects 4=13730
 I⁻ films adsorbed on Cu and Al, surface self-diffusion of I⁻ 4=15489
 I⁻ photodetachment energy dependence near threshold 4=24582
 I⁻ spectrum, in molten salt, charge transfer 4=15338
 I¹²⁷ in polycrystalline cpds., nuclear quadrupole interactions, elec. induced perturbations, 4=28909-10
 I¹²⁷⁺, stopping cross-sections in Au, Ni, Al, C 4=3815
 I⁺-Hg collision, near-resonance charge transfer process 4=22325
 I-H reaction, D kinetic isotope effect 4=7745
 I₂, currents, transient, space-charge limited, along various crystallographic directions 4=25883
 I₂, dissociation, theory and expt. 4=25744
 I₂, electronic transitions, intensity distrib. in vibrational structure, calc. 4=17285
 I₂, molecular consts. 4=22360
 I₂, molecular ground state, potential curve 4=3859
 I₂ spectrum in pyridine 4=28193

Iodine compounds

- iodide, solvated, u.v. absorption, pressure effects 4=184
 2HI ⇌ H₂ + I₂, thermal conductivity 4=24270
 HIO₃, I nuc. quadrupole res., rel. to temp. 4=22426
 ICl₃, mean amplitudes of vibr. from Raman freqs. 4=15318
 ICl, IBr, spectra, continuous 4=30426

Mössbauer effect, solid and mol. struct. 4=28326

Ion beams

- See also Ion optics; Mass spectrometers; Particle accelerators; Range of particles; Sputtering
 in accelerators, current measurement 4=16551
 angular divergence, similarity relation, plasma 4=608
 application to collision process charge transfer and ion-atom interchange study, > eV, review 4=15306
 atomic excitation related to meteor radiation 4=25590

Ion beams—contd

- bombarding target, power calorimetry 4=8853
 bunch, length and phase, rel. to cyclotron parameters 4=16586
 bunching, rel. to cyclotron parameters 4=3071
 charge change resulting from interaction with residual gas 4=8852
 charge transfer target using supersonic CO₂ jet 4=14768
 charged-particle energy gain after r.f. field reflection near cyclotron resonance 4=19166
 charges, equilib. distribution in fast beam., calc. 4=29990
 contraction or enlargement of image, apparatus 4=21585
 detection, emulsion, H⁺, H₂⁺, D₂⁺, Ar⁺, up to 25 keV 4=9037
 e. m. synchrotron oscs. on interacting with accel. system, calc. 4=11764
 e.m. wave propag. in beam-plasma system in mag. field 4=516
 emittance meas. device 4=29988
 excitation, rel. to charge transfer cross-sect. meas 4=24590
 extraction, with low divergence 4=16550
 of high-melting point substances 4=8849
 medical appls. of high energy heavy particle beams 4=7995
 multiatomic, charge/mass ratio 0.1 to 10⁷ C kg⁻¹, production and mass spectrometry 4=19116
 particulate beams, production 4=29986
 p, π, cross-section display at high energy 4=21601
 penetration of transverse magnetic fields by protons, rel. to electron neutralization 4=19130
 in plasma, non-uniform, edge instability 4=24699
 plasma, time-depend. energy loss, theory 4=11584
 position and current meas. 4=16572
 positive ion detector for meas. of two beams 4=3053
 production, positive high-intensity low-divergence beams 4=21581
 profile equation solution 4=21584
 proton synchrotron beam intensity meas. 4=14816
 proton synchrotron beam, position determ. 4=14817
 proton synchrotron beam, radial and phase position control 4=14811
 pulsed currents, noninterrupting meas. method 4=3054
 range, heavy ions of moderate vel., quasi-elastic collision theory 4=25438
 relativistic beam-plasma config., instabilities 4=5677
 relativistic, passing through plasma, kinetic theory 4=5597
 space-charge waves, propagation along drifting multi-velocity beam in mag. field 4=29985
 supersonic annular nozzle as differential barrier 4=24280
 translation system, achromatics 4=19129
 two-beam instability, review 4=590
 use in micro-colour recording, etching and machining 4=29998
 Zeta D plasma trace-ion energies, spectroscopic studies 4=8700
 Ar⁺, detection, emulsion, up to 25 keV 4=9037
 Ar ions, reflection from Cu single crystal, anisotropy 4=29993
 Cs, imaging methods 4=27583
 Cs⁺ collisionless plasma stream in transverse mag. field 4=24708
 D⁻, 20 MeV, electron detachment from, in gases 4=18676
 H⁺, production 4=29987
 H⁺ polarized, production 4=24751
 H⁺, H₂⁺, D₂⁺, detection, emulsion, up to 25 keV 4=9037
 H₂, dissociation, energy spreads 4=12542
 H₂⁺, injection and accumulation in mag. mirror system 4=541
 He⁺, production 4=29987
 Hg, 5 kV, from Kaufman-type source, neutralization by electron injection 4=19117
 T, for plasma density meas. 4=2990
 W range, anomalous penetrating tail, heavy ions 4=19119

effects

- alkali metal ions, backscattering from metal surfaces rel. to temp. 4=8854
 amplification of spin waves in ferromagnetics 4=28792
 bombarding light targets, ang. distrib. of scattered secondary ions 4=8856
 crystal interstitial prod. at low energies 4=6833
 crystal lattice, open channels penetration 4=4086

Ion beams—contd

effects—contd

dE/dR meas. in gases with low energy heavy particles 4=27578
 diffraction grating, scale, gauze prod., with chemical process 4=14387
 electromagnetic oscills., on interaction with plasma, neutral beam 4=11665
 gases, secondary processes by slow ions 4=2939
 inert gas ions, reflection by solid surfaces 4=604
 inert gases, induced emission of sorbed gas from glass surfaces 4=23593
 ion—solid interaction, low energy, Auger-type 4=19093
 metals, f.c.c. and b.c.c., orientation from ejection patterns 4=23303
 metals, optical properties 4=20472
 microparticle charging for accel. system 4=3062
 photographic plate blackening 4=24401
 plasma excitation, ion velocity effect 4=3002
 plasma, along mag. field, unstable transverse propagation 4=553
 plasma, energy loss 4=27508
 in plasma, interaction and thermalization 4=11642
 plasma interaction, e.m. osc., neutral beam 4=11665
 plasma oscs. 4=19010
 quartz, stress relaxation 4=15507
 secondary electron emission from metals 4=8824
 secondary electron emission, meas. of coeff. 4=3036
 secondary emission from metals, rel. to ion mass 4=8825
 shock waves, production of nuclear fusion temps. 4=18328
 u.v. radiation from Ag, Al, Cu, W, on H ion impact 4=20487
 vitreous silica, stress relaxation 4=15507
 Al, u.v. spectrum on K⁺, H ion bombardment 4=22913
 Ar collisions with gas atoms, diff. scatt. cross-sect. and charge state distrib. 4=25593
 Ar, total ionization, by 8-100 keV beams 4=21459
 Ar⁺, atomic scattering from metal surfaces, 40 to 80 keV 4=19121
 Ar, bombard. metals, secondary electron emission 4=8822
 Ar⁺, on Cu, secondary atom emission, 15 keV 4=17457
 Ar⁺ on metal surfaces, rel. to secondary electron emission 4=11700
 Ar⁺, 1-10 keV, sputtering yields of single crystals 4=4103
 Au films, crystal interstitial prod. at low energies 4=6833
 Au films, dislocation loops and Ar bubbles 4=1489
 C¹² on graphite single crystals, defect obs. 4=28444
 Ca bombard. metals, secondary electron emission 4=8822
 CaO, due to Hg, paramagnetic defect centres 4=7320
 Cs, bombard. metals, secondary electron emission 4=8822
 Cs⁺ bombard. Mo and Ni targets, ang. distrib. of scattered secondary ions 4=8856
 Cu, electron emission, secondary, ang. var. 4=21565
 Cu, electron emission, secondary, var. Ar⁺ ion beam angles 4=14754
 Cu, in electron microscope below 30°K, vacancies and loops 4=6897
 Cu films, crystal interstitial prod. at low energies 4=6833
 Cu, 50 keV, open channels penetration 4=4086
 Cu, luminescence, resonance, ang. var. mechanism 4=13071
 Cu, preferential atomic ejection directions, bombarded by Ar⁺ ions, 40 keV 4=4095
 Cu single crystal, sputtering ratio and ion-electron emission coeff. anisotropy 4=25983
 Cu, reflection and secondary electron emission 4=27565
 Cu surface structure after bombardment 4=13671
 Cu—Be, secondary electron yield under H_{1,2,3}⁺ 4=8828
 Ge, doping and radiation damage centres, prod. 4=28558
 H₂ and H₃ ions, bombard. metals, secondary electron emission 4=8822
 H⁻ formation, by H₁⁺, H₂⁺, H₃⁺ ions, in H₂O or Hg vapour streams, 5-30 keV 4=450
 H⁺, electron capture into excited state in H₂, Ne, He or Kr 4=11527
 H₁⁺, H₂⁺, H₃⁺ in H₂ electron ionization and capture 4=21461

Ion beams—contd

effects—contd

H₂, energy transfer from fast H₂⁺ and H₃⁺, meas. 4=11514
 H₂⁺, 750 keV, energy transfer to give neutral beam of quantum levels > 7 4=11515
 H₂⁺ and H₃⁺, charge exchange, H atom beam formation 4=11526
 H₂⁺ and H₃⁺, in He—Ne, Balmer line excit. in H 4=9656
 He penetration depth in LiF films 4=8855
 He⁺, He⁻ ion formation in He 4=19114
 He, He⁺, Ne⁺, Ar⁺ beam losses due to ionization 4=24594
 K, bombard. metals, secondary electron emission 4=8822
 Kr penetration into Mo in glow discharge 4=27581
 Li⁺, for continuous potential meas. in plasma 4=16485
 Li, bombard. metals, secondary electron emission 4=8822
 Mo, reflection and electron ejection, comparison of K⁺, Na⁺ and inert gas ions and atoms 4=5719
 N and N₂ bombard. metals, secondary electron emission 4=8822
 Na⁺ bombard. NaCl, secondary electron emission, depth of emergence 4=8821
 Ne, bombard. metals, secondary electron emission 4=8822
 Ne, He⁺, Ne⁺, Ar⁺ beam losses due to ionization 4=24594
 Ni, electron emission, secondary, var. mass number 4=24736
 Ni films, crystal interstitial prod. at low energies 4=6833
 PbS, photoelectricity, conductivity 4=4162
 Rb⁺ bombard. Mo and Ni targets, ang. distrib. of scattered secondary ions 4=8856
 Si, doping and radiation damage centres, prod. 4=28558
 UO₂, focussed collision sequences, by 50 keV Xe⁺ 4=6902
 W, Auger electron emission 4=3039
 W, kinetic electron emission due to 1-21 keV Cs 4=19095
 Xe⁺ on amorphous Ge, displacement spike recrystn. 4=17461
 Zn, etching dislocations 4=1477

Ion counters

See Counters

Ion emission

See also Thermionic emission, ions

laser induced, from C, Al, Ti, Ag, Au 4=8843
 metals, ion—electron emission, theory 4=8788
 single crystals, ion—electron emission, effective collision radius 4=1546
 solid submicronic particles, in ionized fields 4=19131
 K, on Pt wire, and electron emission, abrupt changes 4=11689
 K halides, on Pt wire, and electron emission, abrupt changes 4=11689
 Mg, laser induced, velo. var. with pulse height 4=19111
 Pb, laser induced, velo. var. with pulse height 4=19111
 Pt tips, field emission, effects of annealing 4=14742
 Zn, laser induced, velo. var. with pulse height 4=19111
 secondary
 brass target, bombard. by brass and quartz grains 4=8826
 current extraction from region of high-density electron beam 4=14767
 emission components, rel. to ion energy and type, target material 4=8845
 hydrocarbons, γ -irradiated "free ion" yield 4=2167
 from light targets bombarded by heavy ions, ang. distrib. 4=8856
 metal bomb. by alkali metal ions; scatt., evap., and diffused ion coeffs. 4=8845
 metal surface atoms, by Ar⁺ impact, 40 to 80 keV 4=19121
 metal surfaces, due to 40-80 keV Ar⁺ 4=14766
 positive, from solids, by inert gas ions 4=604
 proton prod. by H₂⁺ ion impact on metal targets 4=28270
 Al target, bombard. by brass and quartz grains 4=8826
 Al—Mg target, bombard. by brass and quartz grains 4=8826
 Cs, by Cs⁺ bombardment of Mo, 560-2500 eV 4=5717
 from Mo and Ni targets bombard. by Cs⁺ and Rb⁺, ang. distrib. 4=8856
 Ta 4=11719
 Ta surfaces 4=8844

SUBJECT INDEX

Ion microscopes

- crystal orientation determination from micrographs 4=23302
- field, for crystal imperfection study, metals 4=1449
- field desorption, visibility of adsorbed atoms 4=613
- field ion microscope with external image intensifier 4=29997
- field, review, with applications 4=21586
- for grain boundary atomic configuration obs. 4=23535
- image intensification in field-ion microscope 4=5721
- use of polymer coated photographic plates 4=4644

Ion optics

- See also Alpha-ray spectrometers; Ion microscopes; Mass spectrometers; Particle optics
- achromatic quadrupole lenses 4=16553
- calculation in magnetic fields 4=21621
- e.m. isotope separator, ion beam divergence 4=9681
- focusing props. of deflecting magnets, effect of fringing fields 4=16554
- focusing by two quadrupole magnets, optical thin lens analogy 4=16555
- image contraction or enlargement, apparatus 4=21585
- magnetic and electric fields with rot. symm. 4=24755
- mass spectrometer appls. of diverging and dispersive fields 4=24757
- quadrupole mass filter, performance studies 4=24756
- selection and primary focusing of ions from multiply-charged source 4=27584
- trajectories through slit systems of mass spectrometers 4=435

Ion sources

- See also Thermionic emission, ions
- acceleration using tandem generator 4=625
- accelerator, Hall current, surface contact 4=14729
- conference, Paris (1963) 4=11507
- current extraction from region of high-density electron beam 4=14767
- for cyclotrons 4=16587
- Duoplasmatron, characteristics 4=24750
- "duoplasmatron", pulsed, 150 mA 4=3052
- duoplasmatron-type, operating characts. 4=27577
- electron bombardment, for mass spectrometers 4=21598
- electron-collision type for carbon 4=19113
- extraction systems, similarity rules 4=21582
- 50 kV, 20 mA ion tube 4=16548
- gun, coaxial, 2 pulses 4=21548
- gun, plasma, impurity distrib. and energy spectrum, e.s. analysis 4=3015
- h.f., extraction system, optimum dims. 4=11720
- high-frequency, for 4 MV accelerator var., with emission parameters 4=605
- high frequency, with honeycomb extraction system 4=16549
- magnetron type, for high-melting point materials 4=8849
- mass spectrometer, diffusion chamber temp. stabilizer 4=617
- mass spectrometer, mod. for low energy electrodes 4=24759
- mass spectrometer slit sources, elec. potl. near slit 4=435
- multiatomic, charge/mass ratio 0.1 to 10^7 C kg⁻¹ 4=19116
- negative, Hg pool cathode 4=5718
- negative ions, plasma source 4=8846-8
- omegatron, density meas., using parallel inductor 4=8866
- Penning discharge with hot cathode 4=18697
- plasma source of negative ions 4=8846-8
- for polarized protons and deuterons 4=11988
- positive ions, h.f. elec. discharge, mass-spectrometer study 4=606
- positive ions, for mass spectrometers 4=19134
- positive ions, triggered, low-voltage 4=19112
- proton, h.f., energy spectrum 4=11721
- proton, h.f., extraction canal shape 4=11722
- r.f. spark source, energy distrib. of ions formed 4=8850
- spark, h.f., vacuum, rel. abundance, voltage var. 4=607
- for time-of-flight mass spectrometer 4=8862
- Unoplasmatron, data for argon ions 4=3051
- for Van de Graaff, pulsed, nsec proton bursts 4=19138
- Cs strip beam engine, end effect electrode design corr. 4=5722
- Cs-vapour dispenser 4=21544
- H, annular, in crossed fields 4=19115
- H⁺ polarized, by charge exchange in thin C foil 4=24751

Ion sources—contd

- He⁺, by He⁺ beam in He 4=19114
- for He⁺ and H⁺ beam production 4=29987
- Hg, 5 kV, Kaufman-type, neutralization by electron injection 4=19117
- LaB₆ cathode 4=3050
- Li, for electrostatic accelerator 4=16547
- N₂O, mass spectrum 4=21599
- alkali metal nitrates, liquid, + 4=27166
- corona, elec. discharge, mag. field reduction 4=21489
- cyclohexane liquid, mobility rel. to temp. 4=14180
- electric corona, transient, ion mobility, theory and expt. 4=2963
- electrons, low-energy, drift velocity in several gases 4=27479
- gas stream in mag. field, induced current meas. 4=29869
- Geiger counters, positive ion mobility meas. 4=11846
- n-hexane, liquid, ion diffusion coeffs., meas. 4=24194
- mobility controlled sheaths, mobility det. 4=18689
- paraffin oils, various viscosities, ion mobility meas. 4=27190
- in plasma oscillation excitation 4=3002
- plasma, weakly ionized, from distrib. functions 4=11512
- positive space-charge sheath, positive ion movement, theory 4=11513
- in silicone oils 4=29640
- space charge sheath, positive, analysis 4=8636
- rare earth ion mixtures, electrolysis 4=20835
- weakly ionized gas, ion and electron mobility 4=14571
- Ar. excitation energy, momentum transfer calc. 4=29872
- Ar, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
- Ar, liquefied, positive ion mobility meas. 4=27194
- Ar, mobility of Ar⁺ and Ar₂⁺ from electron density 4=2948
- Cs mobility in weak plasma 4=21497
- Cs⁺ and Cs₂⁺ in Cs, pulsed-discharge meas. 4=5562
- He afterglow, positive ion mobilities 4=21482
- He, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
- He, mobility of He⁺ and He₂⁺ from electron density 4=2948
- He, positive and negative, mobility meas. 4=14491
- He II, discontinuities 4=14497-8
- He⁺, liquid 4=14490
- Hg⁺ and Hg₂⁺ mobilities in Hg vapour meas. 4=8623
- KBr, interstitial mobility along [100] and [111], calc. 4=17438
- KCl, interstitial, mobility along [100] and [111], calc. 4=17438
- N ions in N₂, low-energy, drift velocity 4=24591
- N⁺, N₂⁺, N₃⁺ and N₄⁺ in N₂, drift velocities meas. 4=11535
- N⁺, N₂⁺, N₃⁺ and N₄⁺ in N₂, mobilities meas. 4=11536
- N₂, liquefied, positive ion mobility meas. 4=27194
- NaCl, interstitial, mobility along [100] and [111], calc. 4=17438
- Ne, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
- Ne, mobility of Ne⁺ and Ne₂⁺ from electron density 4=2948
- O₂ plasma, isothermal, at high temps. 4=14642
- Pb²¹²(ThB) mobility in air, Zeleny's method, two groups 4=5561
- Po²¹⁰(ThA) mobility in air, Zeleny's method, two groups 4=5561
- ThA, ThB mobility in air, Zeleny's method, two groups 4=5561

Ion velocity

- No entries this year
- electrolytic
 - See also Conductivity, electrical, electrolytic; Electrophoresis
 - OH⁻ mobility, limiting, from 5 to 55°C 4=24238
 - polyelectrolyte, counterions, effective diffusion const. 4=2666
 - solids, migration in elec. field 4=25955

Ionization

- See also Dissociation; Electrons, ionization
- air, CO₂ free, electron diffusion cross-section, calc. 4=29873
- alcohols, negative, by electron beams, mass spectrometer obs. 4=16438
- aliphatic hydrocarbons, ionized fragments, kinetic energies 4=20121

Ionization—contd

- n-alkenes, mol. length change effect calc. 4=28234
- atomic systems, in strong radiation field 4=16425
- atoms charge exchange with small energy transfer 4=24554
- atoms, cross-sections for electron detachment 4=12400
- atoms by electron impact, review and bibliographies 4=25515
- atoms, by electron impact, threshold law 4=17260
- atoms, by electrons, collision theory 4=22327
- atoms and ions by electron impact, semiclassical treatment 4=25517
- atoms and mols., impact, classical calc. 4=2940
- autoionization processes, threshold laws 4=18673
- charge transfer, asymmetric, impact parameter calc. 4=21457
- chemical valence state by electron spectroscopy 4=19979
- chrysene, ionization-dissociation processes caused by electron impact 4=28248
- collision between two atoms, statist. theory 4=1229
- contact pot. difference meas. method 4=27452
- continuum metastable levels and independent particle model 4=24544
- diazocarbonyl cpds., by electron impact 4=1291
- electron-atom collisions, inelastic, classical impulse approx. 4=12398
- electron drift vel. in Cs vapour, transit-time meas. 4=29874
- by electron impact, ionic k. e. distrib., exper. data 4=27473
- electrons, ionization-momentum relation, in relativistic region 4=864
- elementary particle losses in plates at high energies 4=5997
- gas stripper for linear ion accelerator 4=19139
- gas-solid suspensions, particle potential 4=27470
- hydrocarbons, by electrons, cross-sections meas. 4=2942
- hydrocarbons, negative, by electron beams, mass spectrometer obs. 4=16138
- interstellar ionization fronts, stability 4=29416
- losses, fast particle in inhomog. medium 4=2938
- measurement, efficiency for + and - simultaneously 4=16423
- molecular beams, by electrons, emission spectrum meas. 4=12474
- molecular fragment, kinetic energy, meas. method 4=20120
- molecular ions produced by slow atom collisions 4=30397
- molecule-electron collisions, inelastic, review 4=25760
- molecules in comets, factors 4=4889
- molecules, by elec. fields, dissociation model 4=15386
- molecules, electron impact, diabatic effect calc. 4=12439
- molecules, electron impact, rel. to isotopic labelling and structure 4=454
- molecules, by electrons, mass-spectra cross-section meas. 4=2941
- monatomic, at high densities, eqns-of state 4=13881
- naphthalene, ionization-dissociation processes caused by electron impact 4=28248
- naphthalene, ionization-dissociation processes caused by electron impact 4=28248
- nuclear particle discrimination by ionization losses in scintillation counter telescope 4=16731
- photo, light source, capillary discharge 4=18719
- photo, mass spectrometer meas. 4=24758
- π -mesons, ionization-momentum relation, in relativistic region 4=864
- propane, dissociative charge exchange with rare-gas ions 4=3920
- protons, ionization-momentum relation, in relativistic region 4=864
- pyrene, ionization-dissociation processes caused by electron impact 4=28248
- r.f. emission due to electrical breakdown near ionizing particle track 4=681
- spectra prod. by laser 4=16239
- triphenylene, ionization-dissociation processes caused by electron impact 4=28248
- X-ray, electron spectroscopy for chemical analysis 4=23694
- X-ray emission, K α , from radioactive sources 4=9665
- Al, inner shell, to Al³⁺, Hartree-Fock eqns. 4=6466

Ionization—contd

- Ar atom, autoionized energy levels, meas. and theory 4=6474
- Ar atomic collisions, characteristic energy losses 4=12399
- Ar, charge exchange, two-electron, with protons 4=464
- Ar, by He atoms and ions, 15-180 keV 4=2944
- Au, L-Auger, fluoresc. and Coster-Kronig yields 4=1227
- BaO, desorption from W by elec. field 4=7722
- C⁻, photodetachment cross-section up to 3eV 4=12387
- C I, photoionization cross-section 4=18677
- Ca, single and double, by electron impact, power law 4=8617
- CdSe, photoionization in fundamental absorpt. region 4=26143
- D and D⁻ beams, 20 MeV, by collisions in gases 4=18676
- Fe XIV by electron impact, Bethe approx. 4=8621
- H, electron impact, accuracy of classical calcs. 4=28141
- H, electron impact, exact classical calc. 4=28146
- H atom, two-photon, metastable 25 state 4=22318
- H atom, excited, by electron impact, calc. 4=12392
- H atom, n^l state, by light and electron impact 4=12388
- H atoms, close coupling wave functions 4=24579
- H atoms, by electrons, with distortion of incident and outgoing waves 4=2578
- H atoms, excited, by strong elec. fields, meas. 4=11530
- H, atoms, highly-excited, by electron impact 4=24580
- H⁺ + H(1s) electron capture, exact resonance, asympt. form of impulse approx. 4=27487
- H⁺ + H(1s) $\rightarrow$ H(n^l m) + H⁺, calc., no need for p-p interaction 4=27475
- H⁺ + H(1s) $\rightarrow$ H(1s) + H⁺, exact resonance, asymptotic form of impulse approx. 4=18691
- H⁺ + H(1s) $\rightarrow$ H(1s) + H⁺, first Born and distorted wave approx. 4=18690
- H⁺-H collisions, electron capture theory 4=12405
- H⁺ + He(1s²) $\rightarrow$ H(1s) + He⁺, charge exchange cross-section 4=27474
- H⁺ + He(1s²) $\rightarrow$ H(1s) + He⁺(1s), first Born and distorted wave approx. 4=18690
- H₂, charge exchange, two-electron, with protons 4=464
- H₂, dissociative, proton ang. and energy distrib. 4=6656
- H₂, dissociative, at 6-120 keV onto H₂ gas 4=20114
- H₂, by He atoms and ions, 15-180 keV 4=2944
- He atom, autoionization meas. near 200 Å 4=12355
- He beam, effective charge through Cd metal and gas 4=12311
- He, by He atoms and ions, 15-190 keV 4=2944
- He⁺ scatt. on He, resonant electron capture, 0.4-25.0 keV 4=5563
- He⁺ scatt. on He, resonant electron capture, data analysis 4=5564
- Kr atom, autoionized energy levels, meas. and theory 4=6474
- Kr, charge exchange, two-electron, with protons 4=464
- Li, due to recoil in He⁸ decay 4=17087
- Li by electrons 4=24585
- Li, metastable states, autoionization 4=25538
- N₂, by He atoms and ions, 15-180 keV 4=2944
- (N¹⁴ N¹³)²⁺, potential 4=2945
- N⁷⁺-H₂ collisions (n=0-3), charge exchange meas. 4=8628
- Na, photo, >160 Å, calc. 4=27493
- Nd atom, ionization potential 4=6480
- O₂ and O atoms, excited, in electron collisions, meas. 4=11537
- Ne, by X-rays, 80-600 Å, cross-section meas. 4=12390
- Ne atom, K-shell, by X-rays, readjustment processes 4=9653
- (O¹⁶ O¹⁷)²⁺, potential 4=2945
- Th, electron binding energies meas. 17252
- Xe atom, autoionized energy levels, meas. and theory 4=6474
- Yb, by 30-100 keV protons, M₁ shell X-ray prod. 4=30385

gases

See also Plasma

- acetylene, by charge exchange with positive ions 4=12523
- acetylene, by ions and electrons 4=16439
- acetylene, by ions of 200-1200 keV energies 4=27488
- acetylene, photoionization 4=25690
- acetylene, photoionization and absorption coeffs. 4=8616
- air, discrete energy losses of fast proton beam 4=11517
- air, electron attachment, 3-body process 4=24560

SUBJECT INDEX

Ionization—contd

gases—contd

- air, lightning channel, multiple strokes 4=7849
 air, weak, thermal cond. tensors calc. 4=11525
 air, shock waves, ionization relaxation time meas. 4=448
 alkali metals, in CO flames, rate consts. 4=2946
 alkali metals, photoionization from excited states, calc. 4=15297
 by α rays, mass spectrometer study 4=2943
 atmosphere and Ra, in rooms 4=12164
 atomic, Coulomb, review 4=17262
 astronomical nebulae, collisional, spectrum calc. 4=10841
 benzene, isotope effect, in energy transfer from meta-stable noble-gas atom, calc. 4=29866
 n-butane, isotope effect, in energy transfer from meta-stable noble-gas atom, calc. 4=29866
 1-butyne, photoionization and absorption coeffs. 4=8616
 charge exchange by H_2^+ and H_3^+ , H atom beam formation 4=11526
 charge exchange by proton beam giving H atoms in 2S state 4=11528
 charge transfer collision involving accidental resonance 4=24553
 and charge transfer, impact parameter treatment 4=24547
 charge transfer reaction cross-sect. meas. at thermal energies 4=24555
 chemical, mass spectrometer shock tube study 4=13713
 in combustion, diode meas. 4=4700
 comet atmosphere mechanisms 4=20911
 complex organic cpds, photoionization, by vacuum u. v., bibliography 4=27469
 conductivity, a. c., calc., weak ionization 4=14570
 conductivity, small, calc., different collision frequencies 4=462
 conference, Paris (1963) 4=11506
 conference, Paris (1963) 4=18670
 conference, Paris (1963) 4=18671
 currents between parallel plates, statistics rel. to illumination 4=8614
 current—voltage characteristics, high temp. and pressure 4=18685
 cyclotron resonance rel. to collision frequ. 4=461
 Debye—Hückel potential, bound states 4=18791
 detection of single ions using W point cathode 4=21196
 diatomic molecule with atom, energy exchange, isotope effects 4=12538
 difluorodichloromethane, attachment coeff. 4=5551
 discharge, low pressure, strong ionization 4=27495
 e.m. field plus static mag. field 4=21550
 for electricity, direct conversion from nuclear reactor 4=16417
 electricity, direct converters, thermionic, plasma 4=21451
 electron affinity meas. by beam, thermal motion effects 4=21454
 electron attachment and thermal diffusion, meas. method 4=8612
 electron-attachment expts. 4=5550
 electron avalanche current with diffusion 4=24618
 electron heating in crossed elec. and mag. fields 4=11577
 electron and ion distrib. in grav. field, thermodyn. equil. 4=8609
 electrons, and capture, by H_1^+ , H_2^+ , H_3^+ ion beams in H 4=21461
 enhanced radiation 4=18686
 equilibrium behind shock front in atomic gas 4=18330
 equilibrium equation, high press., low-temp. 4=11531
 ethane, ion-molecule reactions 4=11538
 ethane, by ions of 200-1200 keV energies 4=27488
 ethane, photoionization 4=25690
 ethylene, calc. 4=9757
 ethylene, by ions of 200-1200 keV energies 4=27488
 ethylene, isotope effect, in energy transfer from meta-stable noble-gas atoms, calc. 4=29866
 ethylene, photoionization 4=25690
 in flames containing hydrocarbons 4=5552
 flames, low-pressure, cyclotron resonance study 4=5553
 and flow, allowing for recombination 4=11223
 fluorocarbon gases, bond strength and ionization pot. determ., agreement for 3 gases 4=5559
 front driven by a mag. field, radiation 4=18835

Ionization—contd

gases—contd

- higher ionization potentials, meas. by electron impact 4=24601
 hydromagnetic shock fronts, characteristics 4=449
 inert, atoms, pot. correl. with polarization coeff. 4=27477
 inert, calc., stable/metastable atoms/ions 4=11534
 inert, by collision with inert gas 80 keV ions 4=27478
 inert, by electrons, up to 500 eV 4=8620
 inert, 2000°K, Al seeding, electrode geometry, seed impurities effect 4=27472
 inert, 2000°K, electrode geometry, seed impurities effect 4=27472
 inert gas, doubly-charged, single charge transfer 4=24596
 inert gas ions, doubly-charged, single electron capture 4=24597
 inert gas mols., appearance pot. 4=452
 inert gas plasmas 4=19035
 inert-gas structures, diamag. susceptibilities from screening consts., calc. 4=6458
 inert gases, discrete energy losses of fast proton beam 4=11517
 inert gases, by electrons exptl. threshold laws 4=24595
 inert gases, by H^+ and He^+ , electron capture into excited state 4=11527
 inert gases, by protons, 100-450 keV 4=16426-7
 inert gases, near threshold, cross-sections 4=11521
 inert gases, resonant charge transfer meas. 4=11516
 ion-atom interchange processes, Birmingham, review 4=24556
 ion and electron distrib. functions and mobility for weak ionization 4=11512
 ion mass identification with wire filter 4=11510
 ion-molecule reactions in methane and ethane 4=11538
 ionization and attachment coeffs. from ioniz. current meas. 4=18672
 ions, electron attachment and detachment, simultaneous determ. 4=24592
 isotope effect, in energy transfer from metastable noble-gas atom, calc. 4=29866
 ketones, aliphatic, photoionization 4=21466
 by laser beam absorption 4=29867
 light elements, photoionization cross-sect. calc. rel. to radiative recomb. into low excited states 4=19942
 magnetohydrodynamic conversion, ionized medium 4=16418
 meas. to calc. energy absorpt. in dosimetry 4=24952
 metastable atoms in gases, inelastic collisions 4=24548
 metals, autoionization processes, threshold laws 4=18673
 methane, acetylene, oxidation, $C_2H_3^+$ formation 4=13713
 methane, ion-molecule reactions 4=11538
 methane, by ions of 200-1200 keV energies 4=27488
 methane and methyl halides, ionization-efficiency curves for molecular and fragment ions 4=24600
 methane- N_2 mixture, discharge current rise due to single electron 4=5578
 methane, photoionization 4=25690
 methanes, T-substituted, isotope effects 4=3921
 mixtures, binary, ion yields interpretation 4=455
 mixtures, rel. to thermodynamic properties 4=21456
 mixtures, slightly ionized, composition rel. to mag. fld. and Coulomb interaction 4=14568
 mixtures with metastable atoms, min, ionization energy, temp. effect 4=16424
 molecule-ion collisions, excitation and charge exchange, in adiabatic region 4=25776
 organic, by ions and electrons 4=16439
 organic sulphur compounds, meas. of appearance pot. prod. on electron impact 4=8623
 particle orbit theory 4=24549
 plasma absorpt. coeff. due to photo-ionization of excited atoms 4=2980
 plasma, effect of microfield of particles, theory 4=11570
 plasma, energy lowering for different component temps. 4=11574
 plasma, generalized Saha equation, non-equilibrium 4=11562
 plasma, ionization energy from energy balance eqn. 4=27494
 plasma, meas. from ion osc. 4=14713

Ionization—contd**gases—contd**

- plasma, potential, rel. to partition function
divergence 4=11571
- positive charge cond. by resonant charge
transfer 4=11518
- positive column, ionization striations 4=18736
- positive ion stripping and neutralization,
100-450 keV 4=24568
- positive ions by electron impact 4=5560
- precursor ionization profiles due to shock radiation
(erratum) 4=5284
- propane, dissociation cross-sects., for Ne atom
collisions 4=28274
- propyne, photoionization and absorption
coeffts. 4=8616
- by protons, 60-450 keV 4=24577
- rare gases, by ions and electrons 4=16439
- rate and collision freq., meas. by microwaves 4=24545
- resonance charge exchange, cross-section for slow
collisions 4=16428
- secondary processes of slow ions 4=2939
- shock fronts, precursor, calc. 4=269
- in shock tube, contact surface effects 4=29702
- shock tube gas behind discontinuity, impurity
effects 4=11291
- shock tube ionization meas. by microwave
method 4=24663
- shock wave, rear, ionizing rad. effects 4=18329
- shock waves, cylind., in transverse mag. field 4=8918
- shock waves, effect on jump conditions 4=16174
- by shock waves, oblique field equations 4=2769
- shock waves, slow, internal struct., computer
calc. 4=18325
- by shock waves, in transverse mag. field 4=29694
- small molecules, triple ionization 4=11511
- space-time growth in distorted fields, rel. to elec.
breakdown 4=29886
- statistical mech., kinetic rel. to potential energy 4=14569
- stress tensor for partial ioniz. in elec. and mag.
fields 4=18687
- toluene, isotope effect, in energy transfer from meta-
stable noble-gas atom, calc. 4=29866
- Townsend constants and mobilities, meas. by pulsed
discharge technique 4=8615
- Townsend's secondary coeff., rel. to molecular ion
mass 4=19092
- viscosity, Boltzmann equation approx. soln. 4=460
- weakly ionized gas, boundary-layer flows 4=8611
- weakly ionized gas, mobility and temp. of ions and electrons,
calc. method 4=14571
- $X^* + Y \rightarrow XY^* + e$ for inert gas atoms, lifetimes 4=13717
- Ag, electron affinity, surface ionization meas. 4=18678
- Ar, bombarded with 0.8-3.75 MeV protons, partial ionization
cross-section 4=27481
- Ar beams in collision with gas atoms 4=25593
- Ar, charge exchange with molecules, meas. 4=14574
- Ar, and cond., thermal, viscosity, Prandtl number,
calc. 4=18241
- Ar, cyclotron resonance, collision frequ. meas. 4=461
- Ar, electron density, time depend. 4=2948
- Ar, electron drift velocities meas. 4=24561
- Ar, by electrons, 4=25492
- Ar, by electrons, single ionization cross-sections 4=16433
- Ar, by energetic He^+ ions 4=24569
- Ar by fast He atoms and He^+ ions 4=24566
- Ar, initial ionization rates, shock-heated gas 4=11522
- Ar, K seeded, elec. cond. at atmospheric press. 4=24638
- Ar, multiple, by Auger effect, efficiency 4=11520
- Ar, partially ionized, shock heated, electronic cond. in
mag. field 4=27225
- Ar, photo, from M_1 to L edges 4=14575
- Ar plasma, shock heated 4=18897
- Ar shock wave precursors, rel. to photoionization 4=18340
- Ar, single and double, by electron impact 4=11523
- Ar, total, by 8-100 keV heavy ions 4=21459
- Ar- N_2 mixtures, single and double, by electron
impact 4=11523
- Ar $^+$ -Ar collisions, resonant electron capture 4=24588
- Ar $^+$ and Ar $^{2+}$, by electron impact 4=5560
- Ar $^{2+}$, single-charge-transfer reactions, cross-
sects. 4=8627

Ionization—contd**gases—contd**

- Au, electron affinity, surface ionization meas. 4=18678
- B hydrides, fragmentation by electron impact 4=21460
- CCl_2F_2 , ionization and attachment coeffts. 4=5550
- CO, by 80 eV electrons, attachment and ioniz. 4=5556
- CO, Franck-Condon factors 4=27480
- CO, by energetic He^+ ions 4=24569
- CO, photoionization, retarding potential meas. on
emitted electrons 4=16435
- CO, spectra excitation by active He atoms 4=11533
- CO_2 , cross-section and electron attachment 4=24565
- CO_2 , cyclotron resonance, collision frequ. meas. 4=461
- CO_2 glow discharge, positive ions 4=18726
- CO_2 , by 80 eV electrons, attachment and ioniz. 4=5556
- CO_2^{2+} , metastable state, appearance potential 4=12526
- C_2D_2 photo, mass spectrometer study 4=16440
- C_2H_2 , photochemical 4=23671
- C_2H_2 , photo, mass spectrometer study 4=16440
- C_2F_6 , ioniz. and attachment coeffts. calc. 4=5557
- C_2F_6 , ioniz. and attachment cross-sections meas. 4=16436
- Ca vapour, by Auger effect, efficiency 4=11520
- Cs atom charge transfer to $Rb^{80,87}$ ions 4=24563
- Cs, by electron impact, abs. cross-section 4=14573
- Cs in Ar, behind shock wave, relax. 4=21228
- Cs molecular beam, surface, by W plate 4=8670
- Cs weak plasma 4=21497
- CS_2 -methyl iodide, SF_6 "indicator-cpds", by electron
bombardment 4=29868
- Cu, electron affinity, surface ionization meas. 4=18678
- D, electron ionization frequency 4=18675
- D plasma, θ -pinches, by impurities 4=16494
- D theta pinches, ionization rates 4=18958
- D_2 , photoionization cross-sections, 580-1000 Å 4=28190
- Fe in solar corona, equilibrium 4=23923
- H beam, 10 MeV, Lorentz 4=25527
- H, by electron impact, ionization cross-section and
coeff. 4=27483
- H, electron loss and capture, in NO and CO 4=463
- H, first and second coeffs, meas. 4=18681
- H, near threshold 4=27485
- H by p, 60-400 keV, crossed beam meas. 4=5558
- H, in pulsed discharge, dissociation effects 4=18682
- H, shock wave plasma prod. in SUPPER II 4=27521
- H by strong elec. fld. rel. to atomic beam
excitation 4=25528
- H^- formation, by H_1^+ , H_2^+ , H_3^+ ion beams, in H_2O or Hg
vapour streams, 5-30 keV 4=450
- H_2 , discrete energy losses of fast proton beam 4=11517
- H_2 electron impact, up to 500 eV, current
saturation 4=16432
- H_2 , by electrons, first Townsend coefft. meas. 4=5555
- H_2 , by electron impact 4=24581
- H_2 , by energetic He^+ ions 4=24569
- H_2 , energy transfer from fast H_2^+ and H_3^+ , beams
meas. 4=11514
- H_2 by fast He atoms and He^+ ions 4=24566
- H_2 , first Townsend coefft. meas. 4=24587
- H_2 , by H^+ , H_2^+ , H_3^+ ions, dissociation meas. 4=11529
- H_2 , by H^+ and He^+ , electron capture into excited
state 4=11527
- H_2 , by ions of 200-1200 keV energies 4=27488
- H_2 photoionization 4=27484
- H_2 , photoionization cross-sections, 580-1000 Å 4=28190
- H_2 , photoionization, 800-1000 Å meas. 4=12460
- H_2 , by protons, double-electron capture 4=2949
- H_2 , thermal conductivity tensors in external mag.
field 4=458
- H_2 , thermal cond. in mag. field, collisional effects 4=459
- H_2^- , collision freq. with mols., var. with pressure 4=8626
- H_2^+ in different gases, 25 to 250 keV 4=25750
- H_2^+ , 750 keV energy transfer to give neutral beam of
quantum levels > 7 4=11515
- $H_2^{++} + H_2 \rightarrow H_3^+ + H$, cross-sect. rel. to vibration of
 H_2^+ ion 4=24574
- H_3^+ formation cross-sect. as function of E/p 4=24576
- H_2O , field, with W, Pt, Ir tips, mass spectra 4=24598
- H_2O , photoionization 4=25690
- H_2O , photoionization cross-sections 4=28218
- H_2O , photoionization, 800-1000 Å meas. 4=12460
- H_2O vapour, equilibrium ionization const. at high
temps. 4=16147

SUBJECT INDEX

Ionization — contd

gases — contd

- H₂S, photoionization cross-sections 4=28218
 He, autoionization probabilities 4=24567
 He, bombarded with 0.8-3.75 MeV protons, partial ionization cross-section 4=27481
 He cross-sects, on He, Ne, N₂ 4=24572
 He, cyclotron resonance, collision frequ. meas. 4=461
 He, electron density, time depend. 4=2948
 He, electron impact, up to 500 eV, current saturation 4=16432
 He, by energetic He⁺ ions 4=24569
 He, and excitation, by single-electron impact 4=25535
 He by fast He atoms and He⁺ ions 4=24566
 He, first and second coeffs, meas. 4=18681
 He, first Townsend coeff. meas. 4=8618
 He, He⁺ formation by He⁺ beam 4=19114
 He, high press. coeffs. 4=14576
 He, photoionization cross-sections 4=18680
 He, primary coeff. rel. to pressure 4=18679
 He, role of delayed photon processes and metastable atoms, 4=24570
 He, shock waves, effect on jump conditions 4=16174
 He, secondary, rel. to positive ions and non-resonance radn. 4=8619
 He, by 30-1000 eV He atoms, meas. 4=27482
 He, and He⁺, Ne⁺, Ar⁺ beam losses 4=24594
 He-H Penning mixtures, primary coeff. 4=21462
 He⁺, near metallic surface 4=25514
 He⁺-He, charge transfer, differential and total cross-sections 4=24573
 He₂⁺ formation from He⁺, reaction rates meas. 4=11532
 Hg, by electrons 4=25492
 Hg, by electrons, single ionization cross-sections 4=16433
 Hg ions in air, charge exchange cross-sections, meas. 4=27491
 Hg, mobilities of Hg⁺ and Hg₂⁺, meas. 4=8625
 Hg vapour, resonant charge transfer meas. 4=11516
 Hg vapour, Townsend coeffs. 4=18683
 Hg⁺ and Hg₂⁺, by electron impact 4=5560
 K, by electron impact, abs. cross-section 4=14573
 K, on incandescent W and Pt surfaces 4=2947
 K vapour, by Auger effect, efficiency 4=11520
 Kr, by Auger effect, efficiency 4=11520
 Kr, autoionization and efficiency curves 4=24583
 Kr, autoionization processes, threshold laws 4=18673
 Kr, bombarded with 0.8-3.75 MeV protons, partial ionization cross-section 4=27481
 Kr, charge exchange with molecules, meas. 4=14574
 Kr, by electrons 4=25492
 Kr, by electrons, single ionization cross-sections 4=16433
 Kr, initial ionization rates, shock-heated gas 4=11522
 Kr, photoionization cross-section 4=19958
 Kr, secondary ion formation, in mass spectrometer 4=451
 Kr, single and double, by electron impact 4=11523
 Kr⁺ and Kr₂⁺, by electron impact 4=5560
 Li, photoionization cross-section 4=24584
 N, N₂, Ar, Ne, electron impact, with fast crossed-beam 4=24589
 N₂, by 20-30 MeV electrons, afterglow meas. 4=14579
 N₂, discrete energy losses of fast proton beam 4=11517
 N₂, by energetic He⁺ ions 4=24569
 N₂, by fast He atoms and He⁺ ions 4=24566
 N₂, by ions of 200-1200 keV energies 4=27488
 N₂, photo, up to 28.6 eV, on de-excitation 4=16434
 N₂, photoionization, retarding potential meas. on emitted electrons 4=16435
 N₂, photoionization, 600-1000 Å meas. 4=12460
 N₂, photoionization at 600-1000 Å 4=25662
 N₂, spectra excitation by active He atoms 4=11533
 N₂, by 30-1000 eV He atoms, meas. 4=27482
 N₂⁺N₂ charge transfer cross-sect. measurements, rel. to ion beam excitation 4=24590
 N₂⁺, single-charge-transfer reactions, cross-sects. 4=8627
 N-O discharge afterglow, chemical reaction 4=23648
 NH₃, photoionization 4=25690
 NO, Franck-Condon factors 4=27480
 N₂O, mass spectrum, from ion source 4=21599
 Na, by electron impact, abs. cross-section 4=14573
 Ne, bombarded with 0.8-3.75 MeV protons, partial ionization cross-section 4=27481

Ionization — contd

gases — contd

- Ne, by electrons 4=25492
 Ne, by electrons, first Townsend coeff. meas. 4=5555
 Ne, by electrons, single ionization cross-sections 4=16433
 Ne, electron collisions, energy depend. and frequ. 4=24586
 Ne, electron density, time depend. 4=2948
 Ne, by energetic He⁺ ions 4=24569
 Ne, first and second coeffs, meas. 4=18681
 Ne, first Townsend coeff. meas. 4=24587
 Ne, and He⁺, Ne⁺, Ar⁺ beam losses 4=24594
 Ne, by pulsed 3200 Mc/s discharge, boundary movement 4=21471
 Ne, thermal diffusion coeff. meas. 4=8613
 Ne, by 30-1000 eV He atoms, meas. 4=27482
 Ne-H Penning mixtures, primary coeff. 4=21462
 Ne-H₂ ion-mol. reactions under electron bombard. 4=4694
 Ne⁺-Ne collisions, resonant electron capture 4=24588
 Ne⁺ and Ne₂⁺, by electron impact 4=5560
 Ne₂⁺ formation from Ne⁺, reaction rates meas. 4=11532
 NO⁺, produced in N + O atom collisions 4=30397
 O atom charge transfer with O⁺, H⁺ 4=24593
 O, photoionization cross-sections 4=19978
 O⁻ and O₂⁻, coll. detachment cross-sect. on Ar, N₂, 1-10 keV 4=27492
 O III, auto ionization, asymmetric lines in emission spectrum 4=15285
 O₂, cyclotron resonance, collision frequ. meas. 4=461
 O₂, discrete energy losses of fast proton beam 4=11517
 O₂, by energetic He⁺ ions 4=24569
 O₂, by 80 eV electrons, attachment and ioniz. 4=5556
 O₂, Franck-Condon factors 4=27480
 O₂, ion mass identification with wire filter 4=11510
 O₂, by "monoenergetic" electrons 4=18684
 O₂, photoionization at 600-1000 Å 4=25662
 O₂, photoionization, retarding potential meas. on emitted electrons 4=16435
 O₂, recomb. and electron capture, meas. from plasma density 4=21495
 O₂, spectra excitation by active He atoms 4=11533
 O₂, Townsend and attachment coeffs, meas. 4=8622
 O₂⁺ charge transfer cross-sect. measurements, rel. to ion beam excitation 4=24590
 O₂⁻, collision freq. with mols., var. with pressure 4=8626
 Rb atom-benzene molecule collisions, transient charge exchange 4=14580
 Rb, by electron impact, abs. cross-section 4=14573
 Rb vapour, by Auger effect, efficiency 4=11520
 SF₆, ioniz. and attachment cross-sections meas. 4=16436
 SO₂-methyl iodide, SF₆ "indicator-cpds", by electron bombardment 4=29868
 Sr, vapour, by Auger effect, efficiency 4=11520
 Xe, autoionization and efficiency curves 4=24583
 Xe, autoionization processes, threshold laws 4=18673
 Xe, by electrons 4=25492
 Xe, by electrons, single ionization cross-sections 4=16433
 Xe, by m.h.d. shock tube, elec. cond., 5800, 8000°K 4=14581
 Xe, charge exchange with molecules, meas. 4=14574
 Xe, early processes in shock tubes 4=5554
 Xe, initial ionization rates, shock-heated gas 4=11522
 Xe ions in air, charge exchange cross-sections, meas. 4=27491
 Xe-methyl iodide, SF₆ "indicator-cpds", by electron bombardment 4=29868
 Xe, photoionization cross-section 4=19958
 Xe, photoionization cross-sections, ³P_{1/2} to 280 Å 4=21465
 Xe and Xe-water vapour mixtures, afterglow decay rates 4=24599
 Xe⁺ and Xe₂⁺, by electron impact 4=5560
 Xe⁺, Xe₂⁺ and Xe₃⁺, near metallic surface 4=25514
 Zn vapour, by Auger effect, efficiency 4=11520
 Zn multiple, by electron impact, 0 to 500 V 4=465

liquids

- bubble chambers, meas. methods 4=21715
 cyclohexane, energy loss per pair, average 4=24252
 dielectric, by soft X-rays, energy per ion pair 4=11210
 formic acid, field, at metal surfaces 4=456
 hydrocarbons, saturated, current rel. to irradiation 4=27186
 isobutylene, photoionization 4=27189
 isopentane, photoionization 4=27189

Ionization — contd**liquids — contd**

- methyl-2-pentene-1, 4=27189
 n-heptane, energy loss per pair, average 4=24252
 n-hexane, energy loss per pair, average 4=24252
 organic, strongly polar, de-ionization 4=23663
 paraffin oils, various viscosities, ion mobility meas. 4=27190
 propane, photoionization 4=27189
 optical erosion of condensed matter, review 4=17455
 rare earth ion mixtures electrolytic separation 4=20835
 2, 2, 4-trimethylpentane, energy loss per pair, average 4=24252
 water, product change at high pressures 4=10646
 H₂O solns., by gamma rays, H₂⁺, H₂O⁻ struct. and stability 4=10651
 He, positive and negative, mobility meas. 4=14491
 He II, var. temp. and field 4=14500

solids

- anthracene, exciton, single-state, spontaneous rate 4=15463
 d.c. spark, disjunctive, for mass spectroscopy 4=618
 1, b-diaminopyrene solid complexes, ionic components 4=13062
 dielectric films, avalanche theory of breakdown 4=12959
 F-centre, excited, Schottky ionization and tunnelling 4=12808
 laser prod., energy independent of metal and α power 4=27576
 metals, surface, in elec. field, statist. theory 4=8631
 metals, surface ionization in elec. field 4=29982
 molecular excitons 4=17404
 optical erosion of condensed matter, review 4=17455
 plastic scintillator, energy loss by μ 4=19541
 polystyrene films, electron energy loss rel. to momentum 4=20261
 rare earth elements on W, Re and Ir surfaces 4=29983
 semiconductors, quantum impact, thresholds calc. 4=6942
 submicronic particles, in ionized fields 4=19131
 transient electron effects, mechanisms 4=17454
 X-ray production in M shell of Nd, Sm, Gd, Tb, Dy, Ho by 25-100 keV protons 4=25505
 Al, K-shell X-rays due to 60-500 keV protons 4=13046
 Br₂, benzene, charge transfer lack, p.q.r. investigation 4=25802
 CBr₄, p-xylene, charge transfer lack, p.q.r. investigation 4=25802
 CCl₄, p-xylene, charge transfer lack, p.q.r. investigation 4=25802
 Cu, K α radiation under electron impact, meas. 4=9664
 Cu, K-shell X-rays due to 60-500 keV protons 4=13046
 Ge, semiconductors, quantum impact, thresholds calc. 4=6942
 K, surface ionization by diffusion through a Globar 4=16546
 KBr, F-centre prod. efficiencies at liq. He temp. 4=12810
 KCl, F-centre prod. efficiencies at liq. He temp. 4=12810
 LiF, F-centre prod. efficiencies at liq. He temp. 4=12810
 Mg, K-shell X-rays due to 60-500 keV protons 4=13046
 NaCl, F-centre prod. efficiencies at liq. He temp. 4=12810
 SbCl₃, negative ion formation, by electron bombard. 4=453
 Si, compacted, radiation-induced, dilatation effect 4=6889
 Si, holes and electrons, rates meas. 4=17395
 Si, p-n junctions, secondary 4=7002
 Si, semiconductors, quantum impact, thresholds calc. 4=6942
 XeF₄, ionization potential from MO treatment 4=17299
 ZnS, Fe and Cr ion charge transfer, e.s.r. meas. 4=1357

Ionization, atmosphere

- See also Atmosphere, radioactivity; Ionosphere
 aurora, by 0.4-300 keV electrons, calc. 4=7888
 collisional detachment, rel. to ionosph. C region 4=2290
 concentration and mobility meas. 4=7848
 D-region, electron and ion density obs., and collision freq. distrib. during auroral absorpt. 4=26856
 E night layer 4=26857
 E, var., summer min. explanation 4=23807
 electron density equation solutions 4=10754
 electron density meas. in magnetosphere by whistlers 4=29309

Ionization, atmosphere — contd

- equatorial electrojet, ionization irregularities, field-aligned 4=17934
 exosphere, field-aligned, h. f. radio propag. 4=7894
 ion-electron densities ratio at twilight 4=2284
 ionosphere, F, layer, rel. to solar corpuscular activity 4=15892
 ionosphere, F, seasonal anomaly 4=2310
 ionosphere, increase in mag. storm recovery, from multiple whistlers 4=13837
 ionosphere, lowest, negative ion and electron densities ratio, height distrib. 4=17937-8
 O dissociation in ionosphere 4=23803
 100 km, by fission product β -particles 4=4780
 recombination coeff., daily variation 4=7896
 200-2000 km, rocket obs., heavy-light transition 4=2262
 upper, effect of solar cosmic ray protons 4=29442
 upper, ion composition, meas. instrument 4=26814
 upper, ion exchange processes, meas. 4=26809
 upper atmosph., movement of ionized irregularities 4=15883
 upper atmosphere, review 4=13819

Ionization, surface

- See also Thermionic emission; Work function
 alkali metals, heat of evap. of positive ions 4=27476
 alkali metals on heated W and Pt surfaces in ultrahigh vacuum, meas. 4=2511
 laser prod., energy independent of metal and α power 4=27576
 metals, in elec. field 4=29982
 metals, in elec. field, statist. theory 4=8631
 semiconductors, temp. depend., theory 4=26023
 Ce vapour diffusing through Ni 4=30576
 K, on W, temp. var. 4=23610
 LiCl-NaCl-KCl, mass spectrometer successive detection of + and -ions 4=27490

Ionization chambers

- α -particle collimation, 4=30282
 β ray dosimeter, extrapolation 4=9180
 for beta radioact. meas., comparison with liquid scintillation counters 4=15175
 bremsstrahlung energy determ. in different countries 4=6013
 for bremsstrahlung meas. 4=11966
 discharge number, var. with supply impedance 4=11561
 double collector, for simultaneous meas. for + and -ions 4=16423
 electron drift-velocity detector for impurity determ. in gas chromatography 4=29246
 insulators, PTFE 4=16729
 free-air chamber with mag. field, for photons up to 50 MeV 4=5886
 for γ detect., thick-walled, energy var. calc. 4=16861
 for γ detection, multilaminar, with sens. > 15 MeV 4=16850
 for γ -ray meas., strong sources 4=6262
 γ -ray variable-pressure differential type, spectral sensitivity 4=16862
 He³, distortion of pulse spectrum 4=16728
 high temp., for neutrons 4=27869
 long, anomalous response near guard tube 4=24941
 for neutron detect. by current fluctuations 4=27868
 parallel-plate, response to radiation pulses 4=24940
 protons, 3 GeV, nonsaturating 4=9200
 quantimeters for γ -meas., absolute calibration 4=9163
 for radioactive γ -ray meas. 4=6264
 for radioactivity meas. of C¹⁴ and S³⁵ labelled gases 4=17080
 for Rn²²⁰ meas., atmospheric 4=23770
 triple, with shielding screen, for fission fragment meas. 4=6396
 for vacuum u. v., 1050-1500A 4=27303
 for T meas. 4=15176
 V-I characteristics 4=16727

Ionization gauges

See Vacuum gauges

Ionization potential

- alkaline earth oxides, appearance, in mass spectrometer 4=11524
 appearance pot. of pos. and neg. ions by mass spectrometry 4=24546
 diatomic mols. of astrophysical interest 4=3825
 evaluation from prebreakdown current meas. 4=16422

Ionization potential — contd

- fluorocarbon gases, deduction of appearance pot., reson. pot., and cross-section 4=5559
 Glocker's eqn., atomic number dependence 4=15265
 hydrocarbons, appearance pot. 4=24546
 inert gas atoms, correl. with polarization coeff. 4=27477
 inert gas mols. 4=452
 inorganic radicals (ionization pot.—electron affinity) rel. to bond dissociation energies 4=9777
 iso-electronic series of atoms 4=3769
 meas. by mass spectrometry, influence of mag. field 4=21458
 organic radicals, rel. to bond dissociation energies 4=9777
 and plasma temp., exploding wires under water 4=21520
 rare earth elements on *N*, *Re* and *Ir* surfaces 4=29983
 secondary ions, by retarding potential-difference method 4=27471
 Al³⁺, theory 4=6466
 Ar, meas. by mass spectrometry, influence of mag. field 4=21458
 Ar²⁺ threshold 4=1222
 B hydrides 4=21460
 CO₂, meas. by mass spectrometry, influence of mag. field 4=21458
 H radical, rel. to bond dissociation energies 4=9777
 H₂, appearance pot. 4=24546
 Pu I 4=3798
 S, major ionic species 4=8516
 U, UO and UO₂, electron impact data 4=16437
 Xe, appearance pot. 4=24546

Ionosphere

- See also Electromagnetic wave propagation, ionosphere
 absorption, e. m. waves, D, E 4=7917
 absorption, e. m. waves, winter anomaly 4=10753
 absorption, rel. to zenith angle 4=2264
 absorption, riometer obs., rel. to high-alt. nuclear explosion, 9 July, 1962 4=4803
 altitude distrib. of meteor echoes received by forward scattering 4=13962
 atmospheric noise, v.l.f., bands var. with latitude, satellite obs. 4=13835
 atmospheric propagation, reflecting height, source distance 4=7904
 atmospheric, v.l.f. rocket obs. 4=29307
 auroral, radio wave absorption, temporal and spatial morphology 4=4801
 auroral studies with aid of vertical and oblique soundings combined with field strength meas. 4=23804
 C layer formation, collisional detachment 4=17946
 C region formation, rel. to collisional detachment 4=2290
 conductivity, elec., anisotropy 4=26841
 conductivity, sudden local changes 4=23798
 cosmic noise absorption, auroral-type, twilight effects 4=2284
 cosmic noise absorpt. during solar eclipse, 15 Feb. 1961 4=2286
 cosmic noise absorption during eclipse of sun by riometer 4=26848
 cosmic noise absorption, in nearly conjugate regions, high mag. latitude 4=15889
 cosmic noise enhancement, 18 Mc/s, from synchrotron emission following "Starfish" test 4=4800
 cosmic radio noise absorption 4=2272
 current, from atm. tides, and mag. effects 4=23774
 current and aurora 4=30940
 current patterns at high latitudes 4=2275
 currents, S₁, and mag. 4=10776
 data from radio wave absorpt. data inversion 4=3184
 data from satellite signals refr. meas. 4=15887
 daytime, electron content irregularities meas. 4=20867
 daytime, equiv. slab thickness meas. 4=20866
 disturbance, polar, spiral patterns 4=10758
 disturbances, rel. to Echo 1, 19 Mc/s radar study 4=7907
 dynamo theory 4=2265
 ELF and VLF wave propagation below inhomogeneous anisotropic ionosphere 4=24855
 e. m. reflection virtual height meas. improvement 4=7913
 e. m. wave backscattering, Boltzmann eqn. calc. 4=11235
 earth-ionosphere cavity resonances and e. l. f. propag. 4=26850

Ionosphere—contd

- and earth's mag. field, review of 1960-62 U. S. work 4=30948
 effect of cosmic background radi signal, electric and mag. fields 4=10759
 effect of solar flares on absorption 4=13844
 effects of nuclear explosions, atmospheric enhancement 4=2283
 elec. current induction by periodic field 4=23801
 electric current induction by periodic field 4=23801
 electrodynamic behaviour and physical structure 4=23790
 electrodynamic drift theory, rel. to sporadic-E 4=2300
 electrojet, equatorial, radiowave backscatt. 4=4792
 electromagnetic wave reflection, low power ground source 4=2280
 electron distrib., review of 1960-62 U. S. work 4=30952
 electron collision freq. meas., by absorption e. m. waves 4=7912
 electron concentration detm., by polarization fading analysis 4=4809
 electron content at middle latitudes in summer 4=26837
 electron content, bistatic lunar radar measurements 4=7914
 electron content, satellite observations, comparison of methods 4=2282
 electron content, total, from satellite data 4=15888
 electron density equation solutions 4=10754
 electron density in lower ionosphere due to cosmic rays 4=13847
 electron density profile, at eclipse 4=7903
 electron-density profiles rel. to solar activity 4=2259
 electron density, meas. by whistlers, high-latitude field line 4=2210
 electron temperature meas. and implications 4=7908
 electrons trapped by nuclear test, polarization of synchrotron radiation 4=7911
 equatorial, irregularity elongation 4=2263
 Faraday rotation 4=13841
 formation theories review 4=30936
 galactic noise and electrons absorption, satellite versus ground meas. 4=30987
 gravity waves, internal, atm., correction 4=29323
 heat sources for electrons at various heights 4=23802
 heating, sudden, in auroral zone 4=26842
 high-altitude nuclear explosion effects 4=10760
 hydromagnetic wave absorption by phase-mixing in model V₃-belt 4=13831
 induction of currents, with high cond. equatorial belt 4=23800
 ion kinetics in lower ionosphere 4=23799
 ion redistribution by elec. fields, theory 4=2285
 ionic reactions, general analysis 4=13846
 ionization increase in mag. storm recovery, from multiple whistlers 4=13837
 ionogram reduction to electron density profiles 4=20868
 ionogram reduction to electron density profiles 4=7915
 ionosphere-earth cavity, high-alt. nuclear detonation effect 4=2278
 ionosphere-earth cavity resonance excitation, by lightning 4=2279
 irregularities, computing resulting diffraction patterns 4=26843
 irregularities, drift and anisotropy, height depend. 4=17939
 irregularities, field-aligned, rel. to plasma instability 4=10751
 irregularities, large-scale 4=2273
 irregularities, large-scale, vertical profile synoptic variations 4=7909
 isotropic models, transmission and resonance effects 4=2261
 Joule heating, Halley Bay 4=4805
 lower, study using goniometer 4=23797
 lower, study by v. l. f. waves 4=17907
 lower, wind shears, radar obs. of meteor trails 4=30946
 and magnetic storms, m. h. d. model of SSC* 4=29341
 magnetoacoustic energy propag. 4=13832
 movements, by back scattering, incoherent 4=2271
 movements, review 4=26836
 movements, travelling, topside satellite obs 4=26847

Ionosphere—contd

- negative-ion and electron densities ratio, height distrib. in lowest ionosphere 4=17937-8
- nuclear explosion effects July 9, 1962 4=30957
- nuclear explosion, e.m. Doppler shift, 1960-62 U.S. work review 4=30953
- O photoionization cross-sections 4=19978
- O⁺, suprathermal, distrib. and motion study 4=26863

Ions—contd

- atmosphere, upper, negative, processes 4=17915
- n-amyl disulphide, γ -irrad., ionic paramag. species prod., e.s.r. and opt. bleaching studies 4=20319
- azide, in NaN $_3$, N ^{14} n.m.r. chemical shifts 4=7355
- in binary system, with dipole molecules, distribution functions 4=21089
- biphenyl, e.s.r., K h.f.s. and coupling 4=15378
- charge exchange, high-energy, orthogonality 4=24551
- charge exchange, with small resonance defect 4=3805
- charge transfer model in near adiabatic collisions 4=24552
- collision process meas., with mols., mass spectrometer current data conversion 4=25775
- collision processes, many-channel quantum defect theory 4=25576
- detection, emulsion, H $^+$, H $_2^+$, D $_2^+$, Ar $^+$, up to 25 keV 4=9037
- distributions in pulsed Townsend discharge 4=24604
- effective charge, in cubic ionic crystals 4=25822
- in electron beams, bunched, relax. osc., l.f. and h.f. 4=14764
- electron shell order 4=19939
- electrostatic self-energy and crystal lattice energy 4=24550
- ensemble, kinetic eqns. 4=5093
- excitation, by electrons, calc., positive ions 4=6489
- excitation energy, by momentum, transfer, calc. 4=29872
- excitation and ionization by electron impact, semiclassical treatment 4=25517
- in flames, effects of electric fields 4=13727
- flames, positive ion profile, using Langmuir probes 4=7756
- g-factors in the S-state in crystals 4=25825
- halogen, di, formation, in glasses, by X-rays, u.v. 4=4707
- highly ionized atoms, ionization cross-sections 4=6482
- interactions with molecules, with permanent dipoles 4=1322
- ion-molecule, collisions, excitation and charge exchange, in adiabatic region 4=25776
- from ion-molecule reactions, k.e. distrib. 4=27473
- ion—molecule rearrangement collisions at high impact energies, classical theory 4=9793
- in ionosphere, F-region, positive ion distrib. 4=29329
- ionosphere, lower, kinetics 4=23799
- kinetic energy meas., line shape analysis in mass spectrometer 4=16565
- in liquid helium 4=29817
- in liquid helium, motion, open problems 4=29819
- in liquid helium, structure and mobility 4=29818
- mass identification in gases with wire filter 4=11510
- methane, dissociation due to collisions with mols., 3.5–100 keV 4=9783
- negative, in collisions with atoms, electron detachment 4=16429
- negative, interaction with atoms 4=25582
- negative, review 4=447
- organic, excess-kinetic energy, in mass spectra 4=18688
- oxygen, electron attachment and detachment, simultaneous determ. 4=24592
- plasma, H-like, excited levels, population densities 4=2971
- plasma, maximum bound principal quantum number 4=11573
- in plasma, shift and broadening of energy levels 4=1199
- propane, dissociation cross-sects, for Ne atom collisions 4=28274
- rare earth, in crystals, shielding for internal elec. field 4=25808
- rare earth, divalent, in cubic crystals, spectra 4=20465
- resonance, r.f. probe obs., hot cathode Hg discharge 4=14681
- scattering processes and related metastable levels, independent particle model 4=24544
- single, slow, detection, by field-emission microscope 4=2738
- spectra, using Van de Graaf accel. 4=22285
- spectrum, multiple, excitation, as nova spectrum 4=15922
- in three-level system, resonant harmonic generation 4=24876
- triple ionization in small molecules 4=11511
- wave-functions and term energies, parameter tables 4=6450
- Al $^{1+}$, formation, interaction of electrons with AlCl $_3$ 4=18674

Ions—contd

- Al²⁺ + H, charge exchange cross section, matrix calc. 4=29871
 Ar, electron capture and loss, 250-1400 keV 4=16431
 Ar⁺, detection, emulsion, up to 25 keV 4=9037
 Ar⁺ metastable state near Ar²⁺ threshold 4=1222
 Ar⁺, N⁺, N₂⁺, incident on Cu and Al, momentum accommodation above sputtering threshold 4=19123
 Ar²⁺ + He, charge exchange cross section, matrix calc. 4=29871
 Au⁺, in Ge, photocond. kinetics, compensated 2 eV level 4=1684
 C, molecular, formed in spark source, mass spectrographic study 4=9782
 C^{12,13} charge states 4=24564
 C₃H₃⁺ formation in methane, acetylene oxidation 4=13713
 C₃H₃⁺ formation 4=13714
 Cl³⁵, in various cpds., n.q.r., 4.2-300°K 4=26458
 CO⁺⁺, dissociation, double mass spectrometer obs. 4=22429
 Cs⁻, resonance charge exchange, 900-2400 eV 4=18692
 Cu⁶³⁺, in various cpds., n.q.r., 4.2-300°K 4=26458
 Cu(CN₄)₂⁻ complex, electronic structure and absorption spectrum 4=1273
 D₂⁺, detection, emulsion, up to 25 keV 4=9037
 Er²⁺, in MeF₃ (Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
 Eu³⁺, in Eu ferrite garnet, magneto-optical props. 4=17563
 F⁻ wave functions and correlation energies 4=3789
 Fe²⁺, in tetrahedral sites, Jahn-Teller distortions 4=15406
 Fe³⁺, in MgO, acoustic e.s.r. 4=1867
 Ga⁻, formation, interaction of electrons with GaI₃ 4=18674
 Gd³⁺, in CaF₂, e.s.r. 4=1876
 H, fast proton resonant charge transfer 4=24575
 H molecule-ion, statistical theory 4=12451
 H, neutral, highly-excited, formation by charge exchange 4=28155
 H, sputtering-yield for metals 4=12826
 H⁺, binding energy from photodetachment cross-section 4=9629
 H⁻ bound-free absorption coeff. 4=25482
 H⁺, growth in water vapour 4=457
 H⁺, H₂⁺, D₂⁺, detection, emulsion, up to 25 keV 4=9037
 H₂⁺, dissociation, effect of vibrational excitation 4=20115
 H₂⁺, dissociation in magnetic mirror for plasma production 4=21543
 H₂⁺, H₂O⁺ struct. and stability, by valence bond method 4=10651
 H₂⁺, Lorentz dissociation, proton trapping in DCX-1 4=5687
 H₂⁺ molecule-ion, pot. energy surfaces 4=12482
 H₃⁺, structure and energy calc. 4=12481
 H₄⁺, H₅⁺, detection in mass-spectrometer 4=9740
 H₂O, dissociation due to collisions with mols., 3.5-100 keV 4=9783
 H₃O⁺ formation in mass spectra of alcohols and formate esters 4=9780
 He, electron scattering, exchange polarization approx. 4=25564
 He II, motion in rotating He under elec. field 4=14499
 He⁺, ionization of He, Ar, H₂ and N₂, 15-180 keV 4=2944
 He₂, Σ_u state binding energy calc. 4=9712
 Hg⁺, drift velocities in vapour 4=24576
 Hg⁺ and Hg₂⁺, drift velocity, Hornbeck determ. method 4=14577
 Ho²⁺, in MeF₃ (Me = Ca, Sr, Ba), absorption and emission spectra 4=13038
 Ho³⁺ in LaCl₃, absorp. and fluoresc. spectra rel. to energy levels 4=30685
 I⁻ photodetachment energy dependence near threshold 4=24582
 I⁻ spectrum, in molten salt, charge transfer 4=15338
 I¹²⁷⁺, stopping cross-sections in Au, Ni, Al, C 4=3815
 In⁻, formation, interaction of electrons with InBr 4=18674
 K⁻, resonance charge exchange, 900-2400 eV 4=18692
 Kr⁸⁶, heavy, channelling in monocryst. Al 4=22642
 Kr²⁺ + Ne, charge exchange cross section, matrix calc. 4=29871
 Kr³⁺ + He, charge exchange cross section, matrix calc. 4=29871

Ions—contd

- Kr⁴⁺ + He, charge exchange cross section, matrix calc. 4=29871
 Kr⁴⁺ + Ne, charge exchange cross section, matrix calc. 4=29871
 La, spectrum, in CaF₂, SrF₂, BaF₂, after 2 MeV β irradi., d¹ 4=10167
 Li⁻ to F⁻, wave functions 4=25495
 Li²⁺ + H, charge exchange cross section, matrix calc. 4=29871
 Mn²⁺, in MgO, acoustic e.s.r. 4=1867
 Mn²⁺, in SrS, paramag. relax. time 4=1867
 N ions, kinetic energy meas., line shape analysis in mass spectrometer 4=16565
 N⁻ spectrum, shock excited 4=21455
 N²⁺ + He, charge exchange cross section, matrix calc. 4=29871
 N₂⁺ and N₃⁺, drift velocity 4=14578
 N₃⁺, N₂⁺ in glow, drift velocity studies 4=24576
 NH₃, dissociation due to collisions with mols., 3.5-100 keV 4=9783
 NO₂⁻ spectrum, solvent band shifts and electronic transition assignments 4=3878
 NO₃⁻ spectrum, in molten salt, charge transfer 4=15338
 Na⁻, resonance charge exchange, 900-2400 eV 4=18692
 Na²⁴, heavy, channelling in monocryst. Al 4=22642
 Na²⁴, range in Al, from reaction Al²⁷(n, α)Na²⁴ 4=6355
 Nd, relaxation processes, resonance coupling, under pulsed excitation 4=17604
 Ni²⁺, mag. suscept. in ZnO and CdS 4=17616
 OH, metastable transition rates, effect of initial prep. 4=13706
 OH, use of electronic band for H-flame temp. determ. 4=10641
 OH⁻ electron polariz. calc., ε var internuclear dist. 4=25651
 OH⁻ + ROH → RO⁻ + H₂O in alcohols 4=13725
 PO₃H₄⁻, n.m.r., ~ 1G 4=1309
 Rb⁻, resonance charge exchange, 900-2400 eV 4=18692
 Rb⁸⁶, heavy, channelling in monocryst. Al 4=22642
 Sc, spectrum, in CaF₂, SrF₂, BaF₂, after 2 MeV β irradi., d¹ 4=10167
 Si²⁺ + H, charge exchange cross section, matrix calc. 4=29871
 Ti, spectrum, in CaF₂, SrF₂, BaF₂, after 2 MeV β irradi., d¹ 4=10167
 Tl⁻, formation, interaction of electrons with Tl halides 4=18674
 V⁶⁺, in TiO₂, spin-lattice relaxation, 4.2-110°K 4=1891
 Y, spectrum, in CaF₂, SrF₂, BaF₂, after 2 MeV β irradi., d¹ 4=10167
 Xe, range in Cu, Ni, Mo crystal lattices, 5-30 keV 4=19120
 Xe¹³⁶, range in monocryst. Si, 5-80 keV 4=22652
 Xe¹³⁶, heavy, channelling in monocryst. Al 4=22642
- recombination**
 in air, initial 4=5566
 alkali metals, vapours, radiative, calc. 4=15297
 atmosphere, upper, electron-ion, ion-ion, reviews 4=15884
 bimolecular gaseous ion recombination, rate constants 4=24557
 collisional-radiative, survey 4=24558
 dielectronic, and solar corona temp. calc. 4=20930
 in discharge afterglow, review 4=14610
 discharge, glow, high press., and relax. osc., freq. var. 4=14591
 in discharges, glow, cathode at surface, from spectra 4=18722
 electron-ion 3-body recomb. rates, phase space calc. 4=24559
 electron-ion, three-body, variational theory 4=2952
 and flow, gases 4=11223
 gaseous, rates 4=18694
 gaseous, rates and mechanism of neutralization 4=8629
 inert gases, molecular ions, from electron density data 4=2951
 in irradiated insulators, diffusion controlled, analogue computation 4=12957
 ionosphere, E. region due to solar eclipse 4=30960
 Langmuir-probe study 4=2950
 plasma decay meas. in toroidal mag. field 4=11600
 plasma, dense low-temp., recomb. coeff. 4=18798

SUBJECT INDEX

Ions—contd

recombination—contd

- plasma jet 4=21551
- plasma, recombination-radiation in diffuse decay 4=24651
- protons in H_2 gas, double-electron capture 4=2949
- rate, Thomson theory breakdown for molecular ions 4=8630
- spectra, calc., collision transition effects, planetary nebulae 4=12352
- three-body rate, rel. to atomic energy levels 4=11519
- Cs-plasma, spectroscopic measurement 4=8671
- Cs, 6p level, calc. 4=15297
- H, atomic and molec., on Al surfaces 4=13721
- H—H⁺—e plasma, collisional—radiative, low temp. and density 4=8682
- H⁺, spectrum, calc., planetary nebulae 4=12351-3
- H⁺ + H(1s) electron capture, exact resonance, asympt. form of impulse approx. 4=27487
- He afterglow, electron energy decay meas. 4=11542
- He afterglows mech., optical and microwave meas. 4=18693
- He plasma, to excited bound states, spectr. study 4=5565
- He II, at supercritical velos. 4=14500
- I afterglow, recomb. coeffs. 4=27489
- Li⁺ to F⁻, electron affinity calc. 4=25495
- Na, afterglow meas. with 20-30 MeV electrons 4=14579
- Ne, afterglow, electron-ion recomb. 4=14597
- O in elec. discharges, role of excited molecules 4=21464
- O₂, meas. from plasma density 4=21495

scattering

- alkali metal ions, backscattering from metal surfaces rel. to temp. 4=8854
- by atoms in solid 4=9818
- 50 keV, in gases, deduction of range, charge and straggling, use of ions from radioactive samples 4=24752
- nuclei, elastic, quasiclassical analysis 4=19828
- nucleus, elastic, strong-absorption model 4=22084
- plasma, fast ion relax., Butler—Buckingham rel. to Boltzmann calcs. 4=27512
- secondary ions from light targets bombard. with heavy ions, ang. distrib. 4=8856
- secondary ions from Mo and Ni targets bombard. with Cs⁺ and Rb⁺, ang. distrib. 4=8856
- Ar, by Cu, graphite, max. 4=19118
- Ar⁺, from metal surfaces, 40-80 keV 4=14766
- Cs in weak plasma 4=21497
- Cu single crystals, reflection 4=27565
- H⁺ + e⁻ → H + e + e⁺, detachment cross sections 4=15302
- He, inelastic on O¹⁶, 65 MeV, rel. to levels 4=17201
- He⁺ on H₂, 5-35 keV, rel. to Balmer series excitation cross-section 4=22290
- He⁺ by He atoms, electron scatt. 4=19995
- He⁺, on He, resonant electron capture, 0.4-25.0 keV 4=5563
- He⁺, on He, resonant electron capture, data analysis 4=5564
- Li⁺, by inert gas atoms, 7-60 keV 4=3818
- Li⁷⁽⁺⁾, by inert gas atoms, theory 4=6509
- Ne⁺ on H₂, 5-35 keV, rel. to Balmer series excitation cross-section 4=22290

Ions, electrolytic

- See also Conductivity, electrical, electrolytic; Dissociation, electrolytic
- anilinium salt soln. pair structure, from n. m. r. 4=2714
- aqueous soln., hts. and entropies of hydration 4=16104
- Brownian trajectories, trapped, association in poly-electrolytes 4=17864
- azulene anion, anomalous effects in e.p.r. spectra 4=25724
- hydration, in electrolytes, hydrodynamic theory 4=21101
- interaction with solvent, solvation approach, model 4=11183
- interactions in aq. solns., Raman spectra 4=2687
- ion—ion and water—ion interactions, short-range 4=158
- paramagnetic, p.m.r., spin—lattice theory 4=204
- polyelectrolyte, potential and diffusion const. 4=2666
- proton mobility and electron exchange 4=15833
- self-diffusion, meas. method 4=2667
- single-ion heat of transport in electrolytic solns. 4=5154
- in solution, interaction with solvent molecules, volumetric effects of hydration 4=21102
- substituted cyclobutane anions, e.s.r. 4=25726
- temperature prod. charge transfer 4=21154
- uranyl aqueous solns., fluorescence 4=27183
- in water, thermodynamic props., absolute 4=24197

Ions, electrolytic — contd

- Al, in H₂O, ion coordination numbers, from O¹⁷ n.m.r. 4=207
- Be, in H₂O, ion coordination numbers, from O¹⁷ n.m.r. 4=207
- Fe group, paramagnetic, moments 4=2708
- Fe, trivalent, in molten silicates + Fe₂O₃, coordination 4=2654
- H⁺ and OH⁻ aqueous, adsorption isotherms on Fe, Ni, Al powders 4=4674
- Li and F, entropies of aqueous ions 4=24202
- Mn²⁺, e.s.r., effects of Cl⁻ and SO₄²⁻ and complex formation 4=11217
- [NO(SO₃)₂]⁻ e.s.r., N¹⁵, S³³ lines 4=3904
- Te, valence 4=29225
- S₂O₈²⁻ reaction with I⁻, specific cationic effects 4=13730

Irasers

See Masers, optical

Iridium

- crystal mag. field in iron alloys, from Ir¹⁹² β asymmetry at 0.1°K 4=20157
 - powder, alloy formation by nuclear transmutations 4=15227
 - stacking-fault density meas. 4=9978
 - vapour pressure and heat of sublimation 4=8510
 - Ir⁴⁺ triad ions in K₂Ir, PtCl₆, e.s.r. 4=26403
- Iridium compounds**
- Ir—Fe alloys, nuclear sp. ht. 4=3994
 - Ir—Rh alloys versus Ir thermocouples, reference tables 4=16278
 - K₂IrBr₆, thermal annealing of chem. radiation damage 4=13822

Iron

- acoustic absorpt. and velo., up to melting temp. 4=15413
- Armco, elastic wave velocities, at 4.5 to 18 kbar pressures 4=4470
- Armco, ellipsoids, magnetostriction, longitudinal and transverse shape effect 4=4360
- Armco iron, deformation ageing, temp. depend. 4=1915
- Armco iron, plastic deformation, oriented microstress, X-ray study 4=23213
- Armco iron, yield point, effect of hydrostatic press., 10³-10⁴ atm 4=13416
- Armco, mosaic block size from X-ray diffraction line width 4=4648
- Armco and pure, fatigue mechanism 4=23160
- atom, oscillator strength of Fe I line 4=28125
- atoms, excitation, Fe⁴³, 3p^{1/2} → 3p^{3/2}, in solar corona, by protons, calc. 4=15944
- b. c. c., diffusion mechanism 4=25964
- band structure, versus Ni, mag. props. effect 4=30543
- Barkhausen effect, circular, in wires 4=13192
- Barkhausen noise, power spectrum 4=4347
- cast iron, Cr-bearing, nuclear irradi., graphitization 4=26554
- coercive force resulting from domain boundary interact. with large nonmagnetic inclusions 4=26305
- composition in magnetite, rel. to mag. susceptibility magnitude 4=13778
- conductivity thermal, below 1°K 4=6757
- creep and recrystallization processes, high-temp. 4=26514
- creep, and time to rupture under load, high temps. 4=7439
- crystal dislocation substruct., stress prod., effect of N, Mn 4=23161
- crystal, elastic γ-ray scatt., nuclear resonant, Debye—Waller factor meas. 4=20167
- crystal growth, trichites, arc shaped 4=4549
- crystal orientation, deformation, due to layer of oxide formed at high temp. 4=1945
- crystal orientation, electrolytically deposited 4=29030
- crystal whiskers, by H reduction of FeBr₃, 3 in., geometry meas. from vibr. freq. 4=2⁹
- crystal whiskers, magnetization reversal 4=22987
- damage by Fe atoms, channelling effects 4=15504
- density, liquid and solid 4=18184
- diffusion creep, rate at sub-melting temp. 4=23164
- diffusion in glycerine, and Mössbauer line broadening 4=21119
- diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194
- diffusion, self, α—Fe, var. with plastic compression, 742-885°C 4=6874
- diffusion, self effect of Sn and Sb additions 4=12794

Iron—contd

- diffusion, self, frequency rather than activation as cause 4=1514
 diffusion of solid and liq. Zn 4=1515
 diffusion in Ag, poss. surface effects 4=12800-1
 diffusion of C in α Fe, temp. var. 4=28488
 diffusion in Al dislocation short-circuiting models
 diffusion, Fe^{2+} , Fe^{3+} , in glycerol, from Mössbauer effect 4=165
 diffusion of H, Fick's law modification 4=6873
 diffusion of Ni^{63} , grain-boundary, meas. 4=20301
 diffusion of P, 1250-1350°C, α , γ , δ Fe 4=17442
 diffusion of P, radiometric study 4=20294
 diffusion of P, 700-890°C, alloying effects 4=20296
 diffusion in Zr, temp. depend. 4=15498
 e.s.r., Fe^{3+} in Al ammonium sulphate 4=13321
 effect on tensile props. of α -U, -183° to 350°C 4=28987
 elastic constants, compared to Li, hexamine 4=28358
 elastic fatigue limit, stress ageing effects, b. c. c. 4=13417
 elastic limit, var. with strain rate, mechanism 4=4469
 elec. resistance at low temp., effect of domain structure 4=28529
 electric conductivity, spin-wave scatt. processes 4=1553
 electric conductivity of strips, 0-30 Mc/s 4=7236
 electrical resistivity rel. to temp., 300-1300°K 4=30611
 electron—photon showers 4=25884
 fatigue and creep, N and C influence 4=28957
 ferromag. and Curie temp., crystal lattice size effects 4=26322
 ferromagnetic—paramagnetic transition 4=26304
 ferromagnetic permeability, stress angle effects 4=13185
 ferromagnetic saturation moment, pressure effect temp. var. 4=7257
 filamentary crystals, surface structure 4=10457
 film, O, chemisorpt. effect on work function 4=23657
 films, "alternating magnetic induction", Procopiu effect, rel. to torsion 4=4359
 films, columnar structure, internal microstresses 4=26696
 films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
 films, magnetoelastic energy 4=22971
 films, optical Faraday effect 4=22879
 films, stripe magnetic domains, rotatable anisotropy 4=26306
 films, thickness, composition, uniformity, by X-ray microanalysis 4=2122
 γ -ray point sources, Cs^{137} and Co^{60} , scatt. radiation fields 4=6009
 γ -ray scatt., albedo meas., 0.66 MeV 4=19467
 heating to $\sim 1000^\circ\text{C}$, ultrasonic, effects on structure 4=11398
 high-purity, recrystallization kinetics 4=15761
 infiltration by liquid metals and alloys 4=8144
 internal friction and crystal dislocation 4=28958
 internal friction at low temp. 4=20660
 internal friction peaks rel. to localized defects 4=26513
 interstitial C and N, segregation of C and N to dislocations 4=17427
 ions, e. s. r. in MgO , $\Delta M = 2$ lineshapes model 4=13320
 ions, trivalent, in molten silicates + Fe_2O_3 , coordination 4=2654
 ions, Fe^{2+} , in tetrahedral sites, Jahn—Teller distortions 4=15406
 ions, Fe^{3+} , acoustic e.s.r. 4=1867
 ions, Fe^{3+} , e. s. r. in calcite, isotopic shift in h. f. s. 4=13322
 ions, Fe^{3+} , e. s. r. in cubic SrTiO_3 , temp. and press. depend. 4=10325
 ions, Fe^{3+} , e.s.r. in strong axial field of PbTiO_3 4=20595
 iron group impurity e.s.r. in CaO 4=26405
 iron group ions in tetrahedral coordination, electronic structure and e. s. r. 4=25903
 layers on Cu, outward growth, electrolytic 4=4531
 lattice frequ. spectrum, Born—von Karman model 4=20184
 lattice parameters and volume, effect of press. 4=29136
 magnetic after-effect meas. up to 750°C 4=17653
 magnetic after-effect in pure, doped and neutron irradi. samples 4=1832
 magnetic crit. temp., neutron scatt. 4=13187
 magnetic film anisotropy, domain rotation obs. 4=26321

Iron—contd

- magnetic films, anisotropy and coercive force, var. incidence angle 4=28808
 magnetic films, mag. ripple formation mechanism 4=13160
 magnetic initial suscept. just above Curie temp. 4=13186
 magnetic props., proton irradi. effects, recovery 4=17643
 magnetic sheets, eddy-current losses meas. 4=13164
 magnetic sp. ht., effect of elastic modulus relaxation 4=25856
 magnetization, deviations from $T^{3/2}$ law, meas. and spin-wave theory 4=7274
 magnetization, exchange parameters, 4.2-70°K 4=20545
 magnetization of films 7-142A thick 4=7265
 magnetoelastic damping in zone-melted Fe 4=26303
 magneto-optical, γ -ray polarization rot. near Mossbauer absorpt. 4=17571
 magneto-optical reflectivity change on magnetization reversal 4=22871
 magnetoresistance, longitud., in single crystals 4=1563
 magnetoresistance, temp. var. 4=22982
 magnetostriction constants, meas. and calc. 4=28809
 mechanical ductility improvement by low-temp. pre-compression 4=17732
 mechanical prop. improvement by adding dispersing particles 4=17733
 mechanical (tensile) props., effects of C, N, Mu up to 500°C 4=26515
 microhardness rel. to applied load 4=17743
 microtwins and microcracks in Fe deformed at -196°C 4=20719
 molten, surface tension rel. to N_2 , and N_2 adsorption 4=21111
 mosaic structure 4=26695
 Mossbauer effect, Fe^{57} in Au, temp. var. 4=15401
 Mossbauer effect of Fe^{57} for press. up to 240 kbar 4=28327
 Mossbauer effect, Fe^{57} steel, 14 keV, var. velo., thicknesses, angle 4=17334
 Mossbauer effect, Fe^{57} , temp. var. near Curie point, and mag. internal field 4=13190
 Mossbauer effect in InAs, isomer shift 4=1346
 Mossbauer spectrum of Fe^{57} at high pressures 4=9814
 n.m.r. of Fe^{57} , fast-passage effect analysis 4=28898
 n.m. relax. rate theory and internal mag. field 4=23062
 neutron backscattering from reflectors, Monte Carlo calc. 4=21860
 neutron bombarded, strengthening 4=23165
 neutron diffraction intensities, effects of simultaneous reflections 4=23411
 neutron diffraction pattern, effect of moving lattices 4=13576
 neutron irradi., to 10 MeV, primary damage state 4=22649
 neutron irradiated, stored energy 4=4098
 neutron irradiation effects, hardness, elec. cond., lattice parameter 4=28509
 neutron nonelastic scattering cross-sections 4=3676
 neutron spectrum, spherical and slab cases, 3 and 15 MeV 4=30233
 nuclear transitions, meas. from γ -ray spectrum after Fe + n 4=12133
 nuclear Zeeman effect of Au^{197} rel. to mag. field 4=9811
 oxidation and reduction, using gas reactor for transmission electron microscopy 4=29220
 oxidation to wüstite, reaction rate transition 4=10635
 α -phase, radiation damage, dynamics analysis 4=6890
 phase transformation, b. c. c. to h. c. p., at 130 kbar, room temp., X-ray diffr. study 4=30802
 phase transformation, martensitic, on rapid quenching 4=13495
 plastic deform. and annealing, intercrystal slip 4=13432
 plastic yield, comparison of single with polycrystals 4=13413
 plastic yield point, and dislocation movement length 4=23162-3
 plastic yield stress, neutron effects, Petch relation anomalies 4=10387
 plastically deformed, stresses, temp. depend. 4=17734
 plates, anisotropic, B and H field vectors 4=28807
 point defects in α -phase, migr. energies and atomic configs. 4=20271
 polycrystalline, coercive force recovery after cold working 4=13152

SUBJECT INDEX

Iron—contd

- polycrystalline, plastic deformation, rel. to grain size 4=15709
 polymorphism, cast., simulation by NH_4Cl on adding NiCl_2 4=23273
 positron annihilation in magnetized single crystals 4=22555
 powder, adsorption isotherms of H^+ and OH^- aqueous proton motion, phonon-induced tunnelling 4=9822
 pure and doped, elec. resistance, rel. to neutron-irrad. 4=12857
 pure, N interstitial effect on recovery and recrystallization 4=22565
 recovery after cold working or neutron irrad. 4=6900
 resistance, elec., 4-lead meas. system 4=30612
 resistance element, bipolar, negative, expt. demonstration with 20 s. w. g. soft Fe wire 4=30610
 resistivity, anisotropic, effect of hydrostatic high press. 4=22675
 sheets, anisotropic, stationary magnetic field 4=7264
 single crystal plates, mosaic structure and slip 4=7432
 single crystals, surface microstructure, electron optical observations 4=7671
 single crystals, $< 5 \times 10^{-3}$ p.p.m. C, mechanical props. 4=1944
 slip, fatigue induced, electron microscope exam. 4=23139
 solar abundance 4=29441
 in solar corona, ionization equilibrium 4=23923
 in solar corona, relative abundance 4=29458
 solubility in Al, zone refined, var. with temp. gradient 4=13457
 sound effects in pulse magnetization 4=10264
 specific heat, Debye temp., effect of alloying with Mn, Mo, Si, C, from elastic consts. 4=6750
 specific heat, magnetic, const. coupling approx. 4=30522
 spectral lines, for arc temp. meas. 4=485
 spin polarization of conduction electrons 4=15443
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 stacking faults and twins in zone-melted Fe thin foils 4=9974
 strength during allotropic transformation 4=23266
 strength rel. to crystal structure change 4=28960
 stress-strain diagrams rel. to grain size 4=20661
 stress-strain relns., effect of sudden change of strain rate 4=13414
 substructure network, etching study 4=2109
 in sun's photosphere 4=29445
 surface energy and self-diffusion meas. above 1350°C 4=9988
 surface tension of liquid Fe, temp. var., $1550-1800^\circ\text{C}$ 4=8188
 surface tension, 1550°C 4=8186
 surface tension, var. angle, twin boundary energy, f.c.c. 4=13673
 technical, strain-ageing effects on internal friction 4=13415
 tensile flow and fracture rel. to temp. 4=13418
 tensile strength for various sintering conditions 4=10388
 thin film, abnormal optical absorpt. 4=22866
 thin film, scatt. factor meas. 4=22837
 twinning occurrence in single crystals 4=4529
 vapour, interdiffusivity with Ar at high temp. 4=24266
 vapour pressure meas. by torsion-effusion method 4=10441
 whiskers, electron diffraction examination 4=7570
 whiskers, growth and nucleation sites, by oxide replica technique 4=2036
 whiskers, growth pyramid form. on surface 4=29064
 whiskers, magnetization reversal, nucleation rel. to surface defects 4=7261
 white layers, structure 4=13653
 work function, absorbed F reduction effect 4=19075
 work function, var. O, press. and temp. 4=19076
 work hardened, strongly, very pure, microheterogeneities 4=13650
 X-ray atomic scatt. factor and electron density 4=13591
 X-ray spectra, $K\alpha$ centroid wavelengths 4=15771
 yield stress, polycrystalline specimens, effect of disloc. locking 4=10383
 α -Fe, creep at low temp. 4=17731
 α Fe, incubation creep effect 4=1946
 α - and γ -Fe, mag. symmetry near Curie point, with total moment $\neq 0$ 4=22966

Iron—contd

- α -Fe, precip. of C rel. to kinetics in alloys 4=23246
 Fe XIV ionization by electron impact, Bethe approx. 4=86211
 Fe XVI and Fe XV, multiplet strengths for transitions 4=25500
 Fe^{2+} ion, e. s. r. in CaO 4=17678
 Fe^{2+} e. s. r. in MgO, stress effects 4=30736
 Fe^{3+} in MgO, u.s. pulse interaction with spin resonance 4=26415
 Fe^{3+} in cubic cryst. field, ground state splitting 4=25827
 Fe^{3+} in cubic crystal field, optical spectrum and ground-state splitting 4=20463
 Fe^{3+} e. s. r. in AgCl 4=13324
 Fe^{3+} , e. s. r. in $\alpha\text{-Al}_2\text{O}_3$, appd elec. fld effect 4=26406
 Fe^{3+} e. s. r. in BaTiO_3 , at low temp. 4=7329
 Fe^{3+} , e. s. r., in Fe-Rb alum, rutile and $\text{K}_2\text{CO}(\text{CN})_6$ 4=20594
 Fe^{3+} in $\text{K}_2\text{Co}(\text{CN})_6$, paramagnetic relaxation from 0.1° to 4.2°K 4=26407
 Fe^{3+} e. s. r. in $\text{Li}_{0.5}\text{Al}_{2.5}[\text{Ga}_{2.5}\text{O}_4]$ 4=26404
 Fe^{2+} e. s. r. in MgO, virtual phonon effects 4=23046
 Fe^{3+} e. s. r. in ZrWO_4 4=30734
 Fe^{3+} , energy levels calc. in Al_2O_3 4=1356
 Fe^{3+} , g-factors from crystal field theory 4=25825
 Fe^{57} in inorganic glasses, Mössbauer absorption 4=20168
 Fe^{57} interaction with crystalline surroundings, 300° to 77°K 4=12587
 Fe^{57} isomer shift calibration improvement 4=20163
 Fe^{57} Mössbauer effect, in graphite, rel. to binding anisotropy 4=12586
 Fe^{57} Mössbauer effect at $\eta\text{-Al}_2\text{O}_3$ surface, 4=25816
 Fe^{57} in Fe and Cu, Mössbauer effect, 20° to 850°C 4=12584
 Fe^{59} self-diffused in γ -Fe, grain size effect, radioactive tracer, coeff. meas. 4=30581
 FeI lines, growth curves, in solar spectrum 4=23911
 in Se as trace element, neutron activation chem. anal. 4=23692
 Si-Fe, magnetic props., var. with heat treatment 4=1826

Iron compounds

- See also Ferrites; Steel
 Alnico, diffuse X-ray reflections, superstructure 4=1983
 Alnico, mag. props. and structure under heat treatment 4=13166
 Alnico-type alloy, β -phase precipitation, GP zones 4=13490
 arc, electric, Fe, Cr ratio in gas cloud, and electrode composition 4=21490
 austenite, at low temps., lattice parameters and X-ray diffraction line breadth, variation 4=13579
 austenite, under-cooled, transformation theory 4=20708
 carbon iron sheet, annealing and deformation, causing abnormal grain growth 4=13651
 cast iron, graphitization, effect of Cr 4=29010
 cast iron, Mg-bearing, Fe self-diffusion, rel. to small Mg additions 4=15490
 complex cpds, Mössbauer effect, rel. to bond covalency and inductive effects 4=9742
 complex, investigation by Mössbauer effect 4=28328
 ferrioxalate, use in actinometer, quantum yield 4=10649
 ferrite, cyclic mag., Barkhausen noise spectrum 4=13151
 ferrocene derivatives, Mössbauer effect of Fe^{57} , substituent effects 4=22466
 ferrocene, hole drift mobility, meas. by photoconductivity method 4=26154
 ferrocene, rotational-torsional energy levels 4=25612
 ferrous cpds., mag. props. by Mössbauer effect 4=28768
 ferrous, elec.-field gradient tensor analysis 4=9808
 ferrous gluconate, Mössbauer effect 4=20159
 ferrous phenanthroline and rel. complexes, Mössbauer isomer shifts 4=9816
 haematite, anisotropy, basal plane 4=10276
 Haematite, ferromagnetism, triaxial anisotropy in basal plane 4=13191
 haematite, Fe_2O_3 , Morin transition study by Mössbauer effect 4=4379
 Invar, thermal expansion down to 4°K , mag. contribution to expansion 4=17371
 Invar-type alloys, physical props. 4=13419
 magnetite, magnetization characterization expansions, -155°C 4=26312
 magnetite, magnetization self reversal, -143°C 4=4380
 magnetite, temp. hysteresis of magnetization 4=13193

Iron compounds—contd

- magnetite, Fe composition rel. to mag. susceptibility magnitude 4=13778
 magnetite, Li-substituted, magnetocryst. anisotropy and rot. hysteresis 4=13194
 martensite, formation on Ni-C-Fe crystal surface 4=15805
 martensite, at low temps., lattice parameters and X-ray diffraction line breadth, variation 4=13579
 Mössbauer effect, quadrupole splitting, Debye-Waller factor, temp. var. 4=12609
 Permalloy, film, uniaxial, magnetic fine structure 4=26324
 Permalloy films, evaporation system and magnetic properties 4=20548
 Permalloy films, ferromagnetic resonance meas. at low bias field 4=10307
 Permalloy films, magnetization reversal, along hard direction 4=10283
 Permalloy films, prep. by cathodic sputtering 4=13676
 Permalloy films, standing spin waves at r.f. and u.h.f. 4=20575
 Permalloy films, structure and mag. props. relationships 4=15640
 Permalloy films, structure and switching 4=26327
 Permalloy, magnetic props., rel. to composition 4=15649
 pyrites, triglyph, crystal distrib. of trace elements 4=30822
 Tutton's salts, water of cryst., proton-proton vector orientations 4=10450
 wüstite disintegration, kinetics, study by mag. analysis, and mechanism 4=23268
 wüstite, metastable triple point 4=20710
 wüstite, phase transformation, second order, from thermodynamics 4=26742
 Fe alloyed to Mn, Cr and Va, mag. moments, disorder, neutron diffn. study 4=28817
 Fe alloys, crystal mag. field at In^{114} , Re^{186} , In^{192} from β asymmetry at 0.1°K 4=20157
 Fe alloys, dilute, crystal internal induced mag. field 4=30496
 Fe alloys, exchange interaction, Mössbauer study 4=12602
 Fe alloys, fatigue and creep, N and C influence 4=28957
 Fe alloys, Fe^{57} hyperfine fields 4=12559
 Fe alloys, phase transforms., liquidus-solidus curves 4=24430
 Fe alloys, precipitation and deform. damping peak 4=28962
 Fe alloys with Si, Ge, and Sn, specific ht. 4=30520
 Fe alloys, vaporization, 760°-980°C, 5×10^{-7} to 10^{-9} torr 4=18500
 Fe-base alloys, mech., elec. and elastic props. rel. to Co and Ni content 4=17736
 Fe carbides, phase transformations, 350°-550°C 4=7499
 Fe chromium boride, crystal structure 4=26651
 Fe dihalides, linear symmetrical, mean of vibr. and Bastiansen-Morino shrinkage effect 4=30441
 Fe ferrite, proeutectoid, growth in ternary Fe-C-Mn
 Fe garnets, rare earth-Fe anisotropic exchange interaction 4=22469
 Fe-graphite solid solutions, phase boundaries in eutectoid part of equilb. diagram, rel. to pressure 4=23238
 Fe mineral compounds, spectral fine struct. in Mössbauer effect 4=28329
 ϵ Fe nitride, magnetic props. 4=26311
 Fe oxide films on Fe single crystals, electron diffraction study 4=26711
 Fe oxides, semicond. glasses, structure 4=2137
 Fe silicides, heat capacity and enthalpy, 55-1925°K 4=12647
 Fe tetracarbonyl complexes, Mössbauer study 4=6625
 Fe^{57} in spinel type oxides, nucl. quadrupole interaction 4=3963
 Fe-Al alloy, electronic specific heat, low temp., composition effect, calc. 4=28370
 Fe-Al alloys, effect of atomic ordering on mag. props. 4=13117
 Fe-Al alloys, electro-diffusion of components, radioactive tracer study 4=25968
 Fe-Al alloys, induced magnetic anisotropy, annealed at 580° C 4=7258
 Fe-Al alloys, ordering rel. to yielding 4=28959
 Fe-Al alloys, specific heat, low temp. 4=25857
 Fe-Al alloys, thermodynamic props 4=15441

Iron compounds—contd

- Fe-Al alloys, X-ray exam., microstructure 4=23529
 Fe-Al (0-50 at %), crystal internal mag. field at Fe^{57} 4=12562
 Fe-Al, iron-rich, slip system 4=6854
 Fe-Al, magnetic field, local Mossbauer obs. 4=12564
 Fe-Al, short-range order, by diffuse X-ray scatt. 4=15789
 Fe_3Al alloy, neutron radiation disordering 4=20707
 Fe_3Al , mag. moment, neutron irradiation effect 4=26307
 Fe-Al, plastic deformation, yielding, strain hardening and ductility, effects of order 4=17735
 Fe_3Al , work hardening rel. to degree of ordering 4=4473
 Fe-Al-Mo-Si, brittleness 4=13383
 FeAl_2O_4 , ferrimag. prop., neutron diffn. and susceptibility meas. 4=28836
 FeAl_2O_4 - MgAl_2O_4 , thermal, optical and mag. props. 4=20514
 FeAs, Mössbauer effect, of Fe^{57} , isomer shift, quadrupole splitting 4=1341
 FeAs, Mössbauer effect, of Fe^{57} , isomer shift, quadrupole splitting 4=1341
 Fe-Be alloys, crystal ordering and segregation 4=4498
 Fe-Be (5 wt. %), crystal twinning, intersections, mechanical 4=10455
 FeBr_2 , anti- to ferromagnetic transition, low temp., high field 4=13269
 Fe-C alloys, plastic yield stress, neutron effects, Petch relation anomalies 4=10387
 Fe-C alloys, surface tension at 1550°C, approx. eqn. 4=8186
 Fe-C, annealed after irradiation, elec. resistivity meas. 4=15735
 Fe-C crystal interstitials, computer calc., energies 4=17426
 Fe-C, irradiation, C trapping at defects before precip., meas. by calorimetry 4=15736
 Fe-C liquid, solution rate and diffusion, 7 elements 4=18190
 Fe-C, liquid, viscosity, rel. to C content 4=14150
 Fe-C, tensile flow and fracture rel. to temp. 4=13418
 Fe-C, C diffusion rel. to temp. 4=20295
 Fe-C, C precipitation after irradiation and annealing, study by electron microscopy 4=15737
 Fe-C-Mn austenites, ternary, growth of proeutectoid ferrite 4=30801
 Fe-1.2%C-12.5%Mn, martensitic transformation 4=17760
 Fe-C-Mo alloy, carbide precipitation during tempering 4=17761
 Fe-C-N, segregation at grain boundaries and dislocations 4=1503
 Fe_3C , crystals, C atom position, by neutron diffraction 4=10537
 Fe_3C , ferromag. and Curie temp., crystal lattice size effects 4=26322
 Fe_3C in steel, crystal imperfections, increase on deformation 4=4057
 $\text{Fe}(\text{C}_2\text{H}_5)_2$, field gradient at Fe site 4=6627
 $\text{Fe}(\text{C}_2\text{H}_5)_2^+$, field gradient at Fe, Sternheimer correction 4=25708
 $\text{Fe}(\text{C}_2\text{H}_5)_2$, r^{-3} mean values for 3d and 4p electrons 4=6626
 FeCO_3 , ground state wave function by Mössbauer effect 4=28410
 FeCO_3 , magnetic moments in strong magnetic fields 4=7298
 $\text{Fe}(\text{CO})_5$, crystal structure 4=23447
 $\text{Fe}(\text{CO})_5$, far i.r. spectrum 4=26201
 $\text{FeC}_2\text{O}_4 \cdot 2\text{H}_2\text{O}$, Mössbauer effect, and antiferromagnetic transition 4=9812
 Fe_2Cd , Cr_2S_4 , preparation and crystal structure 4=29115
 Fe-Ce, Fe self-diffusion, Ce content depend. 4=12793
 FeCl_2 , specific heat, magnetic contrib., 1.8-4°K 4=20213
 FeCl_2 whiskers, X-ray diffraction obs. 4=13551
 $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$, antiferromagnetic, proton resonance study 4=28899
 $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$, antiferromagnetism, 0.35-4.2°K 4=13114
 FeCl_3 , e.s.r. 4=10315
 FeCl_3 , e.s.r. in LiCl-KCl 4=10315
 $\text{FeCl}_3^{35,37}$, n.q.r., large linewidth 4=17703
 $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$, crystalline and vitreous, Fe^{57} Mössbauer spectrum 4=20169
 Fe-Co alloy, order-disorder transition, neutron diffraction study 4=1894

SUBJECT INDEX

Iron compounds—contd

- Fe—Co alloys, ordering and recrystallization 4=1993
 Fe—Co alloys, recrystallization rel. to ordering processes 4=26598
 Fe—Co crystal whiskers, magnetization reversal 4=22987
 Fe—Co, elongated particles with Co ferrite coating, mag. props. 4=17655
 Fe—Co ferrites, magnetostriction consts., X-ray meas. 4=26337
 Fe—Co ferromag. saturation induction, temp. var. 4=10274
 Fe—Co solid solns., mag. domain configurations, expt. 4=10270
 (Fe, Co)₁₋₆₇Ge, Pauli paramagnetism 4=4330
 Fe—Co—Ni alloys, mag. anisotropy, composition, order and temp. depend. 4=26308
 Fe—Co—V alloys, annealing, ordering, elec. cond. 4=1992
 Fe—Co—V, elec. cond., effect of heat treatment 4=22675
 FeCo—2%V, plastic deformation, yielding, strain hardening and ductility, effects of order 4=17735
 Fe—Cr alloys, vacancy conc. rel. to temp. 4=20268
 Fe—Cr, effect of ageing on mag. domain configuration 4=17654
 Fe—Cr, tensile flow and fracture rel. to temp. 4=13418
 Fe₂Cr, atomic and magnetic ordering, 1000°–1150°C 4=10427
 Fe—Cr—C, strength increase by using transformation induced strain-hardening 4=17738
 Fe—Cr—Ni, phase transform., martensitic, association of h.c.p. and b.c.c. phases 4=20709
 FeCr₂O₄, mag. structure meas. by neutron diffn. 4=28833
 FeCr₂O₄, magnetic struct., neutron diffr. exam. 4=13268
 Fe₂₃Cr_{2-2.5}O₃, corundum mag. lattice, spin configuration 4=30701
 FeCr₂S₄, space gp., structure, mag. prop. meas. 4=29116
 Fe—Cu solid solns., mag. and struct. props. 4=22988
 αFe—Cu, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 Fe—Cu system, sintered, interphase energies 4=20789
 FeF₂, antiferromagnetic, low-temp. residual paramagnetism 4=26270
 FeF₂, ground state wave function by Mössbauer effect 4=28410
 Fe_{0.8}Ga_{0.1}BO₃, crystal lattice structure 4=2092
 Fe—Gd system, mag. props., antiferromag. 4=23030
 Fe—Ge alloys, β-phase, homogeneity, structure, physical props. 4=29118
 Fe—Ge alloys, elec. and mag. props., heat treatment and temp. depend. 4=26010
 FeGe, crystal structure, atomic, mag. susceptibility, 100–1100°K 4=7621
 FeGe₂, antiferromag. structure, 77°K 4=28856
 Fe_{1.76}Ge, by polarized neut. diffractometer 4=28810
 Fe₃Ge, magnetic props and phase transition 4=1833
 Fe₂Ge₃, mag. anisotropy, saturation magnetization 4=26310
 Fe₂Ge₃, mag. properties 4=26309
 Fe—Ir, in Re, crystal internal mag. field at Ir, Re nucleus 4=17331
 Fe²⁺(KSO₄)₂·6H₂O, mag. anisotropy and susceptibility, ligand field theory 4=30705
 Fe₅LiO₄, order-disorder, transformations 4=26555
 Fe—Mg alloys, Fe self-diffusion, rel. to small Mg additions 4=15490
 Fe—Mg titanates, mag. susceptibility 4=26271
 Fe—Mn alloy, γ ⇌ ε transformation, effect of Mo and W 4=10426
 Fe—Mn alloys, phase transformations, effect of plastic deformation 4=13493
 Fe—Mn, neutron paramag. scatt. and diffuse and coherent 4=15628
 Fe—Mn, ε-phase formation, kinetics 4=23272
 Fe—Mn, phase-hardened, H₂ permeability 4=20297
 Fe—Mn(< 7%), phase transform., δ liquidus and solidus meas. 4=24431
 Fe—Mn, tensile flow and fracture rel. to temp. 4=13418
 Fe—Mn—C, martensitic phase with multilayer structure 4=13494
 Fe—Mn—C, strength increase by using transformation induced strain-hardening 4=17738
 (Fe, Mn)₃C, (cementite), precipitation from austenite, phase transformation 4=15734
 Fe_xMn_{3-x}O₄, conduction process, peculiarities near Curie pt. for x = 1.6–2.0 4=17491

Iron compounds—contd

- Fe₃MnR(R = Y, Tm, Er, Dy or Ho), ferromagnetism, 1.4–300°K, < 14 kOe 4=13189
 Fe—Mn—Si, phase transform. 4=17748
 Fe—Mo alloy, discontinuous precipitation, two types 4=13492
 Fe—Mo alloys, damping capacity and elec. resistivity rel. to quenching temp. 4=1949
 Fe—Mo alloys, vacancy conc. rel. to temp. 4=20268
 Fe—Mo alloys, vacancies, energy of form. and conc. 4=17421
 Fe—Mo—C, Fe⁵⁹ diffusion, differential γ-ray meas. 4=12779
 Fe—4%Mo—0.2%C, Mo₂C precip. on dislocations on tempering at 500–700°C 4=17762
 Fe₂MoC, crystal struct., atomic 4=17809
 Fe₂MoC, crystal struct., atomic 4=26652
 Fe₄N mag. symmetry near Curie point, with total moment ≠ 0 4=22966
 Fe⁵⁷N, n.m.r., 2 sites 4=23073
 Fe₈N and Fe₄N, precipitation from ferrite, phase transformation 4=15734
 β—FeNaO₂, crystal and magnetic structure 4=1853
 β—FeNaO₂, mag. structure, space group, meas. by neutron diffraction 4=28839
 β—FeNaO₂, magnetism, ferro- and antiferro-, and atomic struct. 4=13267
 Fe—Nb, iron-rich, phase diagram, 1200°–1535°C 4=26556
 Fe—Ni(50:50) alloy, hot-rolled, texture meas. 4=13434
 Fe—(30.9%) Ni alloy, martensite structure 4=17830
 Fe—Ni alloy in He atm., vaporization rate enhancement 4=24453
 Fe—Ni alloys, elec. cond. and Hall const. relationship 4=26011
 Fe—Ni alloys, hardness, heat treatment increase, effect of alloying elements 4=20662
 Fe—Ni alloys, Invar type, ΔE-effect, rel. to structure and third alloying element 4=23166
 Fe—Ni alloys, mag. Barkhausen noise spectrum, var. with mag. field and temp. 4=1822
 Fe—Ni alloys, mag. props. rel. to neutron irradi. 4=28812
 Fe—Ni alloys, mag. susceptibility, in strong fields, annealing 4=28811
 Fe—Ni alloys, phase transformations rel. to plastic deform. 4=17763
 Fe—Ni alloys, spin wave energies and exchange parameters 4=22990
 Fe—Ni, cyclic mag., Barkhausen noise spectrum 4=13151
 Fe—Ni, dilute, n.m.r. of Ni⁵¹ meas. 4=20621
 Fe—Ni, ferromag. moment, var. Ni in univar region 4=22989
 Fe—Ni films, ferromag. resistance anisotropy, compositional and thickness dependence 4=28532
 Fe—Ni, Hall const., temp. and magnetization depend. 4=12858
 Fe—Ni, high pressure antenite—martensite phase transitions 4=23267
 Fe—Ni invar-type alloys, internal mag. fields, Mössbauer meas. 4=28813
 Fe—Ni, mag. anisotropy, on ordering by neutron irradiation 4=10272
 Fe—Ni, magnetic domains, effect of stress 4=10280
 Fe—Ni, magnetic film anisotropy, domain rotation obs. 4=26321
 FeNi, magnetocrystalline energy, divided into crystallites 4=10271
 Fe—Ni, martensite burst transform., mechanism 4=7495
 Fe—(33%) Ni, martensite deformation twins 4=13517
 Fe—18 to 21% Ni martensites containing Ti, Al, Cu or Mo, age hardening 4=13420
 Fe—Ni, phase hardened, H₂ permeability 4=20297
 Fe—Ni (22.5%), phase transformation, effect of alloying elements 4=7498
 Fe—Ni (50–50), phase transformation, order—disorder, by n. irradi. 4=7496
 Fe—Ni (1–10%), phase transformations, on rapid quenching 4=13496
 Fe—Ni(28%), phase transforms., γ ⇌ α, X-ray diffn. obs. 4=23271
 Fe—Ni, physical props., Ni conc. depend. 4=13184
 Fe—Ni, sign of local mag. field on dissolved Au nuclei 4=20542
 Fe—Ni, tensile flow and fracture rel. to temp. 4=13418

Iron compounds—contd

- Fe—Ni, uniaxial mag. anisotropy induced by neutrons 4=1457
- Fe—Ni and Fe—Ni—Co magnetic film coupling through Cr or Pd film 4=20543
- Fe—Ni—Al, directional crystallization, columnar structure 4=23344
- Fe—Ni—C alloy, martensitic transformation rel. to plastic deformation 4=17764
- Fe—Ni—C martensite, carbide precipitation on tempering 4=15738
- Fe—Ni—C, strength increase by using transformation induced strain-hardening 4=17738
- Fe—Ni—Cr—C, strength increase by using transformation induced strain-hardening 4=17738
- Fe—Ni—Cr—Si—C, strength increase by using transformation induced strain-hardening 4=17738
- (Fe,Ni)_{1-x}Ge, Pauli paramagnetism 4=4330
- Fe—Ni—Mn, α -phase, structure and props. 4=23168
- Fe—Ni—Mn—Ti, α -phase, structure and props. 4=23168
- Fe—Ni—Mo alloys, crystal structure, mech., thermal, elec. and mag. props., rel. to Mo content 4=17737
- Fe—Ni—Ti alloy, ultimate tensile strength, temp. depend., effect of plastic deform. 4=28936
- Fe—Ni—Ti, α -phase, structure and props. 4=23168
- Fe—Ni—Ti, γ -phase, reverse martensitic transform., mech. props. 4=23167
- Fe—Ni—V, γ -phase, reverse martensitic transform., mech. props. 4=23167
- FeO absorption spectra, by flash heating and kinetic spectroscopy 4=22359
- FeO, electrolysis, $\sim 1000^\circ\text{C}$, transport number meas. by anode Fe loss 4=29227
- FeO molecule, emission spectrum, low-pressure arc source 4=9741
- FeO, plasticity, and slip on compression at 650°C 4=1950
- FeO, pre-precipitation, electron mic. obs. 4=26558
- FeO, pre-precipitation, X-ray obs. 4=26557
- FeO thin films on Fe whisker surfaces, oriented growth 4=4668
- FeO (wüstite), superstructure 4=2078
- FeO_x, phase transform., iron-magnetite-wüstite diagram, $1 \leq x \leq 1.2$ 4=26559
- FeO_{1-x}, elec. cond. at high temps. 4=25989
- Fe₂O₃, hydrous sols, stability rel. to dielec. const. 4=4719
- Fe₂O₃, α -phase, elec. props., impurity effects 4=1599
- Fe₂O₃, α -phase, ferromag. resonance lineshape calc. 4=13283
- Fe₂O₃, α -phase, pure, elec. behaviour 4=1600
- Fe₂O₃, thermal diffusion on porcelain surface 4=30577
- α -Fe₂O₃, antiferromag. Curie temp. meas. 4=10299
- α -Fe₂O₃, crystal growth from Li₂O—B₂O₃—Fe₂O₃ system 4=7560
- α -Fe₂O₃, magnetic memory mechanism 4=4378
- α -Fe₂O₃, magnetic transitions at -10°C and $687^\circ\text{C} \pm 10^\circ\text{C}$ 4=28857
- α -Fe₂O₃, memory phenomena, generalized model 4=22991
- α -Fe₂O₃ Mössbauer effect, Fe⁵⁷ h.f.s., Fe²⁺,³⁺ isomer shifts 4=12583
- α -Fe₂O₃, pure and Ga-doped, Morin transition 4=10279
- α -Fe₂O₃, single crystals, natural and synthetic, elec. conductivity 4=28615
- α -Fe₂O₃, spin density of canted moment, meas. 4=28814
- γ -Fe₂O₃, ferromag. props. decrease with Cu, Ni impurity addition 4=28815
- Fe₂O₃, effect on Bi₂O₃ polymorphism 4=23253
- Fe₂O₃, melting relations, Cr₂O₃ effect at low O₂ press. 4=14453
- Fe₂O₃—Al₂O₃ solid solutions, coprecipitated 4=13461
- Fe₂O₃—Al₂O₃, solid solution formation on coprecipitation 4=13461
- Fe₃O₄ ferrite films, structure 4=23586
- Fe₃O₄, low-temp. transition, Mössbauer effect study 4=4510
- Fe₃O₄, thermodynamic prop. changes on formation 4=26742
- FeOOH, α and γ -phases, Mössbauer effect of Fe⁵⁷ 4=22465
- Fe_{2.946}O_{4.045}Ti_{0.1025}, mag. torque and anisotropy, temp. var., transition 4=7267
- Fe—P, mag. suscept. at high temps. 4=10273
- Fe—P (0.5–13 wt.), phase diagram, 4=13491
- Fe(PO₃)₂·4H₂O, ludlamite, magnetic props. 4=15625
- FePd, crystal internal field at Fe, Mössbauer obs. 4=12561

Iron compounds—contd

- Fe—Pt alloy, press. effect on Curie temp. 4=20711
- FePt₃, antiferromagnetic structure, depend. on degree of long range order 4=26352
- Fe—Rb alum, Fe³⁺ e.s.r. 4=20594
- Fe—Rh alloy, magnetostriction, magnetization, Young's modulus and crystal lattice parameters 4=26314
- Fe—Rh alloys, mag. moments and unpaired spin densities 4=20544
- Fe—Rh, ferromagnetic transitions, transition metal effects, exchange inversion 4=13188
- FeRh(50–50at. %) mag transition antiferro-ferro 4=23031
- FeS growth spirals 4=26601
- FeS, magnon neutron scatt., temp. var. 4=28828
- FeS₂, Mössbauer effect, of Fe⁵⁷, isomer shift, quadrupole splitting 4=1341
- Fe_{0.882}S, mag. structure, neutron diffn. meas. 4=28762
- Fe₁₋₆S, neutron scattering, magnon calc. 4=28827
- Fe₂S₃, magnetocrystalline anisotropy energy 4=10275
- FeSO₄ anhydrous, Mössbauer effect 4=20159
- FeSO₄ in H₂SO₄, response to 14 MeV neutrons 4=25118
- FeSO₄·7H₂O, crystal struct., atomic 4=29117
- Fe₂(SO₄)₃, Cotton—Mouton—Voigt effect 4=29777
- Fe₂Se₈, c. stal and mag. structure, mag. order and transitions, neutron diffn. meas. 4=28816
- Fe—Si alloy, compressed, X-ray diffract. exam., texture effects, elimination 4=26686
- Fe—Si alloy, influence of Si content on crystallography of slip 4=7431
- Fe—Si alloys, antiferromag. props. 4=1854
- Fe—Si alloys, viscosity rel. to Si content (0–5%) and temp. 4=16094
- Fe—Si, Barkhausen noise, power spectrum 4=4347
- Fe—Si(3%), brittle fracture from nucleated plastic deformation cracks 4=13412
- Fe—3% Si, cleavage cracks, anisotropic growth 4=10384
- Fe—Si, coercive force, effect of cold work 4=22993
- Fe—Si(3%), cold rolled, crystal texture similarity to Fe 4=7673
- Fe—Si(3.25%), crystal dislocation movement, nucleation of twinning and fracture 4=20664
- Fe—Si, crystal growth by floating-zone method 4=7557
- Fe—Si (3¼%), crystal growth (100)[001] or (110)[001] texture prod. 4=26599
- Fe—Si(3%), crystal (001)[100] primaries source 4=7672
- Fe—Si(3%), crystal growth, oriented 4=30820
- Fe—Si, cyclic mag., Barkhausen noise spectrum 4=13151
- Fe—Si, initial substructure, effect on and change during creep 4=23170
- Fe—Si, mag. aftereffect, disaccommodation and frequ. depend. 4=7259-60
- Fe—Si, magnetic domain boundaries, polarity and interaction 4=22995
- Fe—Si, magnetic domains, plates, effect of successive remag., unsymmetrical 4=1834
- Fe—Si, mag. suscept. at high temps. 4=10273
- Fe—Si (10–27 at. %), mag., Fe atom moments at var. sites 4=7263
- Fe—Si, magnetization, deviations from T^{3/2} law, meas. and spin-wave theory 4=7274
- Fe—3% Si, microcrack propagn., temp. and strain effects 4=28961
- Fe—Si(3.25%), crystal structure, cubic, surface energy effects 4=10582
- Fe—Si magnetization process, high field, crystal imperfection effects 4=22992
- Fe—Si phase transformation, high pressure, var. with Si content 4=7497
- Fe—Si, physical props., Si conc. depend. 4=13184
- Fe—Si(3.5%), plastic deform. and annealing, intercrystal. slip 4=13432
- Fe—Si (3%), recrystallization on deform. and annealing, mag. field effects 4=13536
- Fe—Si, secondary promotion by inclusions 4=15760
- Fe—Si, secondary recrystallization, effect of atmosphere 4=4649
- Fe—Si single crystal, rotational hysteresis loss 4=15648
- Fe—Si (3%), slip deformation rate effects 4=26516
- Fe—3% Si, slip planes, 78°K 4=4471
- Fe—Si, slip propag. over grain boundaries 4=20663
- Fe—Si slip system crit. shear stress 4=23169

SUBJECT INDEX

Iron compounds—contd

- Fe—Si, surface energy, orientation depend 4=28338
 Fe—Si, volume magnetostriction, conc. depend. 4=15647*
 Fe—Si (8 at %), X-ray exam., micro., absence of lattice distortions 4=23530
 Fe—3% Si, with C, initial permeability, frequency dependence, -70° to 180° C 4=4361
 FeSi₂, n and p-type, semicond. and thermoelec. props. 4=12998
 Fe₃Si, mag. moment of Fe, polarized neutron study 4=17656
 Fe₃Si, mag. order, polarized neutron diffn. study 4=28794
 Fe—Si—Co, magnetostriction and coercive field strengths 4=7262
 Fe—Si—Cr, magnetostriction and coercive field strengths 4=7262
 FeSiO₄, mag. structure and transitions meas. 4=29102
 FeSn₂, Fe⁵⁷ and Sn¹¹⁹ Mössbauer spectra 4=7300
 FeSn₂, growth and morphology 4=26600
 FeSn₂, Mössbauer effect, temp. var., mag. effects 4=3969
 FeSn₂, at Sn—Fe interface during flash-melting, X-ray diffraction determ. 4=23690
 Fe₂Te₃ semiconducting props. 4=28565
 FeTiO₃ ground state wave function by Mössbauer effect 4=28410
 FeTiO₃, (ilmenite), single crystals, elec. conductivity 4=26122
 xFe₂TiO₄(1-x)Fe₃O₄, magnetostriction constants and magnetocrystalline anisotropy 4=4381-2
 Fe₂Tm, h.f.s. of Tm¹⁶⁹, Mössbauer effect meas. 4=12600
 Fe—V alloys, Hall effect and elec. cond., room and liq. N temp. 4=1564
 Fe—V alloys, specific heat, Einstein, below 1° K, and ferromag. cluster oscills. 4=3991
 Fe—V, magnetic initial suscept. just above Curie temp. 4=13186
 Fe—V(0.92 wt. %), crystal struct., atomic, α , γ phases, temp. var. 4=26653
 Fe—1%V—0.2%C, electron microscope examination 4=17762
 Fe—Zn alloy, discontinuous precipitation, two types 4=13492
 Fe—Zn alloys, lattice parameter and α -phase boundary 4=26654

Irradiation effects

See Biological effects of radiations; Chemical effects of radiations; Physical effects of radiations

Isomerism

See also Nuclear isomerism

- allylic chlorides, rot. from i. r. spectra 4=28235
 anils, transient species in photolysis 4=15847
 fluorinated olefins, coupling consts between cis and trans CF₃ groups 4=17316
 Mossbauer effect, equal shifts in cis- and trans- 4=15360
 polymethine chains, rel. to electronic structure and chain length 4=6636
 propionaldehyde, microwave spectrum 4=17308
 B₁₀H₂₂, X-ray diffraction study 4=4602
 H, ortho to para conversion 4=23644
 H, ortho—para conversion in solid, var. volumes 4=23621
 S₂F₆, existence of non-planar FSSF isomer 4=6604
 tri-1-(2-methylnaphthyl) boron, n.m.r. study 4=12511

Isotope effects

- on atom vibrational freq. 4=28213
 in β -ray interaction with matter 4=25063
 sec-butyl systems, D substituted, chemically activated, secondary isotope effects 4=22432
 calc., shifts in three particle systems 4=6464
 diborane (B¹¹—B¹⁰), on atom vibrational freqs. 4=28213
 on dipole moment of symmetrical molecules 4=6543
 ethanes, deuterated, vapour press., statistical theory 4=24440
 Gibbs statistic of isotope systems 4=2721
 hydrocarbon flame bands, deuterium substitution 4=25706
 on internal frequencies in condensed phase 4=5151
 lattice dynamics, effect of local mass variations 4=6703
 methanes, T-substituted, ioniz. and dissociation 4=3921
 molecules, non-linear, inertia axis shift, rot.—rot. coupling 4=22332
 neutron number var., and nuclear distortion, statistical model 4=986
 phase equilibria, and intermol. forces, review 4=25765

Isotope effects—contd

- polyglycine (N¹⁴—N¹⁵), on atom vibrational freqs. 4=28213
 water, chemical decomposition, by u.s., lack of, for H 4=13745
 BH, BD spectrum shifts 4=25636
 in Br and isotopic hydrogen mol. reaction 4=29208
 Ca⁴⁰, μ mesic X-rays, energy 4=3823
 Ca^{40,44}, μ mesic atoms, X-ray K α shift 4=25600
 Cl + HCl and Cl + DCl exchanges, rates, D-isotope effect 4=29206
 Cu II, spectrum, h.f.s. 4=9640
 H, fractionation between H₂O and aqueous H ion 4=23625
 H—D effects in acetylene decomposition by electron impact 4=25754
 H—He quaternary mixtures, diffusion, thermal 4=29672
 H₂—D₂, solid, low temps., separation? 4=13488
 HD⁺—He, HD⁺—Ne, Ar⁺—HD, and Kr⁺—HD reactions 4=29205
 In, superconducting crit. field 4=16343
 K, thermal emission of ions 4=24749
 Li, thermal emission of ions 4=24749
 N₂^{14,15}, solid, lattice parameters, unit cell volume 4=2085
 Na formate, chemical decomposition, by u.s., lack of, for H 4=13745
 N¹⁵H₃ and deuterio derivs., n.m.r., shifts 4=25741
 O¹⁸, exchanges, chemical, with O₂, NO, NO₂, mass spectrometry obs. 4=23645
 Rb, thermal emission of ions 4=24749
 Re^{185,187}, mag. h.f.s. splitting and Re^{186,188} mag. moment 4=28135
 Ru⁴⁴, shift in arc spectrum 4=25508
 SnII, h.f.s. and isotope shift 3283 Å 4=25513
 SO₂ spectrum, absorpt., α_2 system 4=25683
 Th spectrum 4=15291
 U^{233,235}, isotope shifts, 0.8–2.5 μ emission spectra 4=1217
 U I spectrum in hollow-cathode discharge 4=12379

Isotope exchanges

- malonic acid, decarboxylation, C isotope effects 4=13703
⁴⁶Ca(Hg) + ⁴⁰Ca²⁺(solution) = ⁴⁰Ca(Hg) + ⁴⁶Ca²⁺(solution) reaction, isotope separation 4=28157
 H₂ and steam in catalytic oxidation of H by Ni—on—CrO₃ 4=7758
 H₂O + D₂O, thermodynamics of mixing 4=29204
 NaCl, sublimation technique for preparation of high reactivity specimens 4=7761
 O* with CO¹² 4=10634

Isotope separation

See also Radiochemistry

- cascade balance calc., cut number choice 4=12414
 countercurrent columns, short, separative power 4=15309
 diffusion, thermal, Clusius—Dickel column, theory 4=9680
 effect of charge exchange and stripping 4=11726
 effect of scatt. in electromagnetic separator 4=10669
 efficiency, mixing entropy and separation potential 4=19998
 electrolytic countercurrent column, simplified theory 4=19999
 e.m. separator, ion beam divergence 4=9681
 electromag. separator, inert gases 4=17266
 extremum field theory of separation cascades 4=14085
 fringing field focusing radio-isotope separator at CERN, design, construction and performance 4=30401-2
 light gases, by mass diffusion columns 4=25598-9
 liquid—vapour, rel. to intermol. virial function 4=20133
 molecular beam chopper 4=30400
 molecular pump with position-depend. slit height 4=3819
 molecular pump with simultaneous enrichment and impoverishment 4=3820
 radio, rel. to nuclear reactions 4=30403
 separation cascades, transformation theory 4=14084
 ternary systems, by thermal diffusion 4=12412
 Ar, separation factor, mean square force in liquid Ar 4=21090
 B, ethyl ether—ethyl sulphide- and triethylamine—BF₃ systems 4=10633
 in ⁴⁶Ca(Hg) + ⁴⁰Ca²⁺(solution) = ⁴⁰Ca(Hg) + ⁴⁶Ca²⁺(solution) reaction 4=28157
 CO isobaric mols., by thermal diffusion, inversion temp. 4=20841
 D₂, electrolytic, rel. to cathode material and temp. 4=2159

Isotope separation—contd

- Li, concentration dependence in ion exchange methods 4=20000
- Li^{6,7}, by viscous flow 4=1232
- Te^{127,129} isomer separation in different chemical media 4=30915

Isotopes

- hydrogen, differences in hexagonal structure of H₂ and D₂ condensed layers 4=13682

Ba^{135,137}, h. f. s. of reson. line and nuclear quadrupole moments 4=25496

Sr⁸⁷/Sr⁹⁰ mass ratio, spectrometer meas. 4=17265

detection

- low density expansion to triple collision integral 4=29661
- luminescent mol. average energy at a given freq. 4=15314
- model for gases with internal degrees of freedom 4=11227
- moderately dense 4=8239
- molecular-kinetic theory of sound absorpt. in dense gases 4=5175
- particle motion in nonuniformly heated gas mixture 4=7782
- periodic disturbances, polyatomic gases 4=18247
- plasma, convergent classical eqn. 4=5595
- plasma, for cut-off Coulomb potential 4=14632

Kinetic theory—contd**gases**—contd

- plasma and e. m. field, fluctuations 4=8692
- plasma, excited states population, metastable atoms effects 4=11609
- plasma, inhomog., far from equil. 4=27509
- plasma in mag. field by expansion of BBGKY eqns. 4=11567
- plasma, quantum and exchange corrections 4=11563
- plasma, spatially inhomog., superkinetic eqn. 4=11564
- plasma, superposition of dressed test particles 4=16460
- plasma, test particle method 4=16461
- plasma, two-particle correl. function, time depend. 4=5596
- plasma waves 4=29942
- plasma, weakly unstable, nonlinear Vlasov and BBGKY eqns. 4=21494
- porous materials, molecule—wall collisions at low press. 4=29662
- rare earth ion mobility, explanation 4=20835
- rarefied, review of new methods 4=21170
- Rayleigh and Lorentz, hard-sphere, relax. 4=11108
- Rayleigh problem, linearized, analysis 4=16136
- resistance to motion of sphere with dimensions ~ m.f.p., approx. calc. 4=220
- solid—gas interact. effects, low-temp. limit 4=223
- statistical mechanics, phase transitions, interreln. of theories 4=8098
- thermal accommodation, classical perturbation theory 4=15814
- thermal conductivity, class demonstration 4=5229
- transition from quantum mech. description 4=24089
- transport processes, correl. function expressions 4=5235
- triple collision operators for dense gases 4=27213
- van der Waals, Yang—Lee distrib. of zeros 4=8235
- vibrational degrees of freedom, non-equilibrium, distrib., review 4=226
- vibrational relax., generalized eqn. 4=11245
- Ar—W accommodation 4=29674
- H, para—ortho mixtures, low temperature 4=8236

liquids

See Liquids, theory

Krypton

- absorption cross section and f value in ionization limit 4=19958
- adsorption by metal films, and surface area meas. 4=13692
- adsorption, physical, on graphite, theory and expt. 4=23592
- atom, autoionized energy levels, meas. and theory 4=6474
- atom, interaction potential with $H_2^{1,2,3}$, from diffusion data 4=24268
- atom, recombination rate constants, three-body 4=17852
- atomic scatt. factor, X-ray, rel. to theory 4=3797
- atoms, inner shell electron excitation, optically obs. 4=17247
- autoionization and efficiency curves 4=24583
- autoionization processes, threshold laws 4=18673
- charge exchange, two-electron, with protons 4=464
- crystals, surface energy calc. 4=17336
- decay of metastable atoms in pulsed discharge 4=6490
- discharge, elec., d.c., e.m. noise reson., micro-wave 4=21473-4
- electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
- gas bubbles in U metal, X-ray study 4=2115
- ion penetration into Mo in glow discharge 4=27581
- ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
- ionization, multiple, by Auger effect, meas. 4=11520
- ionization rates in shock-heated gas 4=11522
- ionization, single and double, by electron impact 4=11523
- ions, bombarding W, ionic entrapment and thermal desorption 4=13693
- ions, charge exchange with molecules, meas. 4=14574
- ions, Kr^+ , 20 keV sputtering of Cu 4=17459
- ions, Kr^+ and Kr^{2+} , ionization cross-sections, for electrons 4=16433
- ions, sputtering of Cu atoms, energy distrib. 4=24754
- ions, sputtering effects, Zn and Cu 4=12823
- ions, sputtering yields for glass, mica and quartz 4=12825
- light source, Kr^{86} and $ZnS:Cu$ 4=16224
- liquid, thermal cond., expt. and theory 4=169

Krypton—contd

- molecular beams, crossed by HCl and HI beams 4=28289
- pair coupling, Kr I, 5g level 4=28116
- plasma, partially ionized, anomalous microwave radiation at cyclotron resonance 4=5613
- scattering by Ni, polycrystalline 4=19996
- solid, electron band structure and exciton states calc. 4=4018
- solid, H_2 and CH_4 impurities, irradi., energy migration and isotopic effects, e.s.r. meas. 4=25928
- solid, rotation and ortho—para conversion of water molecules 4=1275
- solid, var. with temp. of lattice parameter 4=22502
- spectrum, auto-ionizing states, u.v. 4=15280
- spectrum, continuous, visible, shock excited 4=29678
- spectrum, 400-600Å, absorpt. ms—np lines 4=12380
- spectrum, Kr^{86} , line asymmetry meas. 4=11344
- spectrum, solid, 1070 4=17584
- thermal transpiration at high temps. and 3×10^{-3} —2.5 mm Hg press. 4=5224
- viscosity meas., effect of press. up to 820 atm 4=27214
- Kr , ionization and formation of long-lived excited ions 4=25492
- Kr^+ ion formation, in mass spectrometer 4=451
- $Kr^{2+,3+,4+}$, with He, Ne, charge exchange cross-section, matrix calc. 4=29871
- Kr^{86} ion range in amorphous Al_2O_3 , WO_3 , meas., comp. to theory 4=27580
- Kr^{86} line profiles, analysis 4=8411
- Kr^{86} vacuum wavelengths 4=19957
- Kr^+ and Kr^{2+} , ionization by electron impact 4=5560
- Kr —Li scattering, Lennard—Jones potential determ. 4=20131
- KN_3 , Mn^{2+} paramag. res. rel. to crystal orientation 4=23051
- KrF , e.s.r. spectrum at 77°K 4=28872
- KrF_4 , n.m.r. of F^{19} 4=20612

Laboratories

See also Acoustical laboratories

National Magnetic Lab. at MIT 4=649

Laboratory apparatus and technique

- air table, two-dimensional 4=10989
- analyser for frequency-amplitude characteristics of arbitrary functions 4=16009
- aperture formation, 5-50 μ , for electron tubes, by laser 4=8842
- arc welding systems, mass transport 4=10998
- automation of expt. lab., computers role 4=24013
- burette, precision, for use in conc.—conductance calibration 4=13731
- cathode ray tube, waveform tracing method 4=18631
- chemical polishing technique for Ca tungstate thin film prep. 4=23573
- compressed gas gun for controlled planar impacts over wide vel. range 4=10997
- connector, solderless, for electronic breadboards 4=18637
- crystal acid drilling, deformation free 4=4557
- crystal cutting, immiscible acid method 4=29072
- crystal chopper for Perkin—Elmer double-pass monochromator 4=5386
- cutting organic crystals by paper disc 4=21000
- crystal orientation jig 4=29028
- dielectric impurity films on metal, detection 4=23562
- electroforming screw threads 4=23666
- electrolytic thinning and polishing for Au 4=29185
- electrophotographic recording system, photocond. thermoplastic 4=26157
- electropolishing unit for thinning metal specimens 4=29162
- etching depressions with HF in quartz and glass plates 4=23985
- evaporation mask, magnetically retained 4=4991
- fabrication of aspherical surfaces 4=2814
- ferrite sphere manufacture 4=23982
- films, B, self-supporting, preparation 4=7706
- fine wires, jig for handling and plating 4=4705
- flaw detection, in ceramic lining plates, acoustic method 4=16000
- force generator, 0-8g 4=23994

Laboratory apparatus and technique—contd

- fuel, liq., combustion rate rel. to initial drop size 4=13726
 furnace for metal crystal growth 4=29039
 furnaces, tubular, temp. profile control 4=2878
 gas absorption and evolution, at const. press., meas. by automatic apparatus 4=13701
 gravimetric apparatus for determ. of oxidation of metals and alloys at low press. 4=13711
 heat bending of light pipes 4=24353
 heater, self-supporting, 1000°C, for metal film evaporation 4=21346
 heating solid in vapour, press. and temp. adjustment 4=10995
 hole prod., v. small, in glass, by sand blasting 4=23992
 ion beam supersonic annular nozzle as differential barrier 4=24280
 liquid-gas pourer, pressure cylinder attachment 4=29815
 machining of metal on a lathe 4=10990
 metal thin films, prep. for use as apodiser 4=21308
 micro-colour recording, etching and machining using ion beam of high voltage 4=29998
 microjet prep. of wire samples, electron microscopy 4=2104
 micropipette or microneedle manipulator 4=27000
 mixing apparatus for reaction kinetics obs. 4=23634
 multilayer film, controlled deposition apparatus 4=23561
 phase equilibria, pressure effects, glass-metal connector 4=2500
 photointegrating meter, portable, for use in crops 4=13998
 photovaristors, differential, preparation 4=17540
 Physical Society 1964 exhibition 4=23980-1
 plotting spin-wave instability curves 4=20571
 polishing machine, acid, for dislocation free copper 4=4992
 pointing and electropolishing Be wire phonograph stylus 4=4994
 pressure stabilizer for region of 1 torr 4=4995
 pressure vessels, sealing of electrical leads 4=23988
 scale, grating, gauze prod. ion beam-chemical process 4=14387
 scale-section converter analysis 4=8582
 scribe, for shock tube diaphragm disks 4=18336
 sealing evacuated wide-bore silica tubing 4=11267
 sealing windows at high pressure low temp. conditions 4=15999
 size parameter calc. from microscopic data, rapid method 4=26703
 slits in Al films, forming technique 4=14000
 sodium salicylate, layers, preparation method 4=13675
 solder-glass technique 4=23990
 solder-glass techniques 4=18010
 spark-erosion in liq. Ar for metal powder prod. 4=30999
 spark machining, clearance regulation, method 4=31000
 suspension, double magnetic 4=3096
 television receiver scanning, aperture influence compensation 4=11495
 temperature difference across liquid film, maintenance by thermoelectric heat pump 4=24418
 thermoelectric cutting, semiconducting Hg cpds 4=10996
 ultrasonic machine tool, expansion in cutting zone 4=14296
 winding quartz springs for sorption balances 4=4998
 wire-grids, cylindrical, manufacture 4=23995
 wires, small dia., wound into spirals 4=2499
 Cd single crystals, shaping and polishing 4=30812
 Cs-vapour dispenser 4=21544
 CsBr₃ samples, preparation 4=23993
 N₂ gas prodn., drying 4=4996
 Si, contact prod. by sparking 4=12951
 Si ion bombardment doping, Mo masking 4=26059

Lanthanum

- allotropy at high press. 4=26560
 fluorescent yield of L-shell 4=3774
 ion series in solids, optical consts, for lasers spectrum, in CaF₂, SrF₂, BaF₂ after 2 MeV β irradi., d¹ 4=10167
 superconducting, far i.r. meas., gap width 4=14522
 superconductivity, mechanism, rel. to low-lying virtual f-shell 4=5516
 superconductivity, simple model 4=14523

Lanthanum — contd

- La in molten La tribromide, elec. cond. increase with metal conc. 4=8220
 La¹⁰³, n.m.r., low temp. var., Knight shift 4=20624
 La₂ molec. dissociation energy determ. 4=12525

Lanthanum compounds

- La ethyl sulphate, crystal field grad., from e.s.r. large quadrupole splitting 4=23048
 La hydrides, search for superconductivity 4=5517
 La magnesium nitrate, energy diff. between 1st excited and ground states 4=12641
 LaAlO₃, e.s.r. of Fe³⁺ 4=23074
 LaAlO₃, e.s.r. of Gd³⁺, Pr³⁺ 4=26383
 LaAlO₃, n.m.r. of La¹³⁹, Al²⁷ 4=23074
 LaAlO₃, Cr³⁺ and Gd³⁺ e.s.r., 4°-700°K 4=26386
 LaAlO₃: Cr, Nd, Cr³⁺3d → Nd³⁺4f energy transfer 4=30539
 LaB₃, electrical and optical props., electron states 4=7139
 LaB₆, ion source cathode 4=3050
 LaBr₃, lattice vibrations 4=20195
 LaBr₃, lattice vibrations from vibronic spectrum 4=1365
 LaC₂, mean ampl. of vibr. and thermodyn. props. 4=15348
 LaCl₃, containing Pr³⁺, vibronic selection rules at special points of Brillouin zone 4=12615
 LaCl₃, crystal field grad., from e.s.r. large quadrupole splitting 4=23048
 LaCl₃, crystal field symmetry, time reversal appl. 4=28309-10
 LaCl₃, lattice vibrations 4=20195
 LaCl₃, lattice vibrations from vibronic spectrum 4=1365
 LaCl₃, lattice vibr. modes, symm. coords. 4=12614
 LaCl₃: Ho³⁺, absorption and fluoresc. spectra rel. to Ho³⁺ energy levels 4=30685
 LaCl₃, Nd³⁺ spectrum, erratum 4=17572
 LaCl₃, vibrational Raman spectrum 4=9746
 LaCoO₃, magnetic and electrical anomalies 4=28616
 LaCoO₃, reflectivity, 2-15 μ , 290°K 4=13041
 LaCoO₃, thermal cond. meas., heat transfer processes 4=30532
 LaF₂: Er, i.r. quantum counter action 4=22872
 LaF₃, doped, single-crystal, Czochralski growth 4=13542
 LaF₃, i.r. spectrum, Raman spectrum, and crystal structure 4=22478
 LaF₃, single crystal growth, Czochralski method 4=23345
 LaF₃: Pr³⁺, 4=30686
 LaF₃: Pr³⁺, laser, 5985Å, mechanism from absorpt. band spectra 4=5859
 LaFe_{1-x}X₂O₃, mag. and struct. props. 4=30720
 La-Lu alloys, superconducting, and electron-electron interaction, var. composition 4=16346
 LaMgNO₃, crystal field grad., from e. s. r. large quadrupole splitting 4=23048
 La₂Mg₃(NO₃)₁₂·24H₂O, Nd-doped, nuclear polarization 4=28900
 La₂Mg₃(NO₃)₁₂·24H₂O: Ce(0.8% of La), p polarization, dynamic, from mag. resonances, 0.5-1.7°K 4=6685
 LaNb₂O₆, identification 4=20417
 La₂NiO₄, mag. interactions, order, neutron diffn. study 4=28858
 LaO, Franck-Condon factors of band system 4=25660
 La₂O₃, thermal expansion, X-ray diffn. meas., 20-1050°C 4=17372
 LaS, thermal expansion, X-ray determ. 4=30523
 LaS, La₂S₃, thermal exp., 20-1020°K, Debye temp. 4=22508
 La₂S₃, conductivity, electrical, 20-1000°C 4=4161
 La₂S₃, thermoelectricity, 20-1000°C 4=4161
 La_{0.5}Sr_{1.5}MnO₄, mag. interactions, order, neutron diffn. study 4=28858
 LaTe₃, crystal structure, atomic 4=4240
 LaTe_{1.7-2.0}, thermoelectricity, semicond. properties 4=4240
 La-Y alloys, superconducting, and electron-electron interaction, var. composition 4=16346

Lasers

See Masers, optical

Latent heat

- See also Heat of adsorption, etc.; Thermodynamic properties
 heat of evaporation, positive ions, on alkali metal surfaces 4=27476
 self-diffusion, heat of activation, melting temp. depend. 4=12782

SUBJECT INDEX

Latent heat — contd

He³(25%)—He⁴(75%), 0.4–1.1°K curves 4=14486

Lead

absorption edge, for u. v., assignment to d-band transitions 4=15446
 atom, μ -mesic, 2P $\rightarrow$ 1S transitions, theory 4=3822
 atom, spectral lines, oscillator strengths 4=6487
 compressibility and volume, temp. variation 4=1401
 crystal imperfections, stacking fault energy, cross-slip and subgrain obs. 4=9975
 crystals, small, thermal expansion and melting 4=24436
 deformation, resist., effect of strain rate and temp. 4=28931
 diffusion, self, 20–85°C, test of sensitive α -recoil method 4=1516
 electron backscatt. coeff., 8–22 MeV 4=22122
 electron beams, energy dissipation, fair agreement for medium penetration 4=6817
 fatigue life, atmosphere dependence 4=13421
 Fermi surface, cyclotron resonance meas. 4=6793
 film, superconducting, anomalous density of states 4=404
 films, internal stresses down to 4.2°K 4=4669
 films separated by insulating layer, Josephson tunnel current, rel. to magnetic field 4=5506
 films, supercond. pulse-destroyed 4=21412
 gamma-ray scatt., elastic, 9 MeV, differential cross-section 4=6316
 grain and twin boundary hardening, solute-induced 4=2014
 halides, thermal expansion at low temps., expt. 4=17369
 hardening in high-purity Pb 4=28963
 impact high temp. behaviour 4=20665
 ion emission, laser induced velo. var. with pulse height 4=19111
 liquid flow, activation energy jumps and cluster formation 4=5137
 multipole spectra, Pb II 4=19950
 neutron prod. by cosmic-ray protons, meas. 4=9336
 neutron prod. by fast cosmic-ray muons, meas. 4=9337
 particles included in Ni grain dihedral angle, effect of stress 4=23533
 specific heat determ. from vibration spectrum data 4=9825
 supercond. crit. fields var. with residual cond. 4=18579
 supercond. density of states var., tunnelling meas. 4=21417
 supercond. films, e. m. microwave absorption, energy gap var., mag. field effect 4=29835
 supercond., specific heat, and normal, equal lattice T³ term. 4=18585
 supercond. wires, Al Ag, Au covered, free energy change 4=18581
 superconducting cavity, with high Q, for use at microwave freqs. 4=16379
 superconducting, circulating current, shot noise 4=21416
 superconducting domains, det. by electron beam 4=5518
 superconducting double layer, with Bi, diffusion and contact effect 4=24513
 superconducting film superimposed on normal metal 4=24503
 superconducting film, thermal cond. and energy gap, mag. field effects 4=18608
 superconducting films, energy gap, mag. field depend., tunnelling meas. 4=21414
 superconducting films, energy gap, tunnelling meas. 4=16347
 superconducting Pb—Pb contact resistance, motion effects 4=16349
 superconducting, specific heat jump at critical temp. 4=5519
 superconducting, transition temp./gap ratio, effect of quasi-particle damping 4=18578
 superconductive, mag. field trapped in hollow cylinder 4=389
 superconductivity, energy gap, u. s. meas. 4=18580
 superconductivity, surface losses at low freq. 4=2914
 thermal conductivity near T_c, pure specimens 4=6765
 vapour, in flames and inorganic cpd. vapours, anomalous excitation 4=9658
 viscosity, temp. var., m. p. to 1000°C 4=5160

Lead—contd

Pb²¹⁰ diffusion in PbS at 700°C, rel. to stoichiometry 4=15491
 Pb²¹²(ThB) ion mobility in air, Zeleny's method, two groups 4=5561
 Pb and Cu films superimposed, superconductivity 4=16348
Lead compounds
 alloys, superconducting, absorpt., far i. r., and sharp edge gap 4=24505
 chalcogenides, thermal expansion, 20°–340° K, rel. to Grüneisen const. 4=1403
 Kosolite, PbO. UO₂SiO₂. H₂O, crystal structure atomic 4=7622
 lead titanate zirconate, electroelastic consts., variation 4=15563
 lead zirconate titanate open tubes, in underwater transducers, performance 4=14274
 magnetoplumbite, domain nucleation at inclusions 4=17633
 magnetoplumbite, magnetic domain structure rel. to surface orientation 4=15650
 magnetoplumbite (PbFe₁₂O₁₉), domain structure, temp. depend. 4=7268
 n.m.r. of Pb²⁰⁷, chemical shifts 4=20616
 superconductivity of binary and isoelectronic alloys, 4=24504
 Pb acetate, aq. soln., dissociation, u. s. study 4=26739
 Pb acetate, aq. soln., dissociation, u. s. study 4=26740
 Pb alloys, n.m.r. of Pb²⁰⁷, Knight shift meas. 4=20617
 Pb alloys, supercond., far i. r. absorption 4=8569
 α -Pb azide, crystal structure 4=10538
 Pb azide, detonation initiation by high-intensity light 4=30898
 Pb borate glasses and compounds, high-temp. energy rels. 4=22516
 Pb ferrite, elec. cond., anisotropy and mech. 4=6953
 Pb ferrite, susceptibility, temp. -depend., above Curie pt. 4=15656
 Pb halides, Pb visible spectrum, rel. to complex formation 4=22375
 Pb hydroxide, decomposition in electron microscope 4=4698
 Pb iodide aerosol on supercooled fog, crystallizing action 4=13790
 Pb, i. r. reflection and transmission spectra 4=26184
 Pb polyphosphate, arrangement of anion chains 4=7623
 Pb silicate glasses, radiation effects on elec. cond. and dielectric loss 4=17515
 Pb sulphate, surface energy of 100 faces, calc. 4=20178
 Pb tetrahalides, vibration, mean amplitudes 4=22377
 Pb titanate zirconate ceramics, h. f. dielec. const. 4=4215
 Pb zirconate titanate ferroelectric resonators, small-signal parameters rel. to polarization state 4=28629
 Pb zirconate—titanate, modified by Bi ferrite, lattice parameters and electric properties 4=7049
 Pb—Au supercond. film sandwiches, intermetallic cpd. effects 4=27422
 PbBa ferrite, mag. props., composition depend. 4=13235
 Pb—Ba and Pb—Sr zirconate—titanate, piezoelectric finite strain response 4=7054
 (Pb, Ba)(Ti, Zr)O₃ solid solns., phase transitions 4=15739
 Pb—Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 Pb—Bi (88:12) films, phase, metastable, from supercond. var. 4=23274
 Pb—Bi, supercond. crit. fields, parallel and perpend. 4=18582
 Pb—Bi supercond. wires, Al covered, free energy change 4=18581
 PbBi₄Te₇ alloy, superstructure III 4=30651
 Pb—Cd, eutectic alloy, interlamellar spacing meas. 4=4650
 Pb—Cd, In or Sn, supercond., type II, mag. hysteresis and defects 4=18583
 PbCl₂, crystal structure, atomic 4=13592
 PbCl₂—KCl system, liq. and solid, Raman spectra 4=18205
 PbCl₂—TiCl₃ system cpds., X-ray obs. 4=26655
 PbC₂O₄, permittivity and dielec. losses, at low frequencies, 15°C 4=1654
 PbF, visible bands, rot. anal. 4=20051
 PbF₂, crystal growth from liquid, forms occurring during different conditions 4=4541
 PbF₂ films, crystalline, absorption spectra 4=2065

Lead compounds—contd

- PbF₂-1,3F₆Al coatings, ageing and use in u.v. 4=24376
 PbO.xFe₂O₃, ferrimagnetism, Mössbauer study 4=26335
 PbO.6Fe₂O₃, mag. domain structure 4=26313
 PbTiO₃-PbZrO₃-LaFeO₃ system, antiferroelec. phase 4=28633
 PbH₄, indirect p-Pb spin coupling meas. 4=15382
 PbHfO₃, complex dielectric const., study 4=1666
 PbIn alloy film, supercond., current-voltage curve 4=14530
 Pb-In, n.m.r. of In¹¹⁵, absence of quad. effects 4=20615
 Pb-In, n.m.r. of Pb²⁰⁷, Knight shifts and line-widths 4=4428
 PbI₂, optical props. and chemical decomposition 4=26202
 PbI₂, photo recording mechanism 4=21323
 Pb-K Fe garnet, magnetic exchange anisotropy 4=13230
 PbMg_{1/2}W_{1/2}O₃, elastic yield, internal friction, anomaly, near antiferroelectric Curie point 4=1953
 PbMoO₄ (wulfenite), crystallization under hydrothermal conditions 4=26602
 Pb_{1.5}Nb₂O_{6.5}, conduction props. 4=26120
 PbNb(Zr, Ti, Sn)O₃, elec. energy release, by temp. and press. enforced phase transitions 4=4216
 Pb(NO₃)₂, chemical γ damage, annealing, effect of crystal imperfections 4=4714
 Pb(NO₃)₂, dielectric const., microwave region 4=7026
 PbNO₃, NO₂ and NO₂ due to irradiation 4=17682
 PbO.2B₂O₃, atomic crystal structure 4=15787
 PbO, effect on Bi₂O₃ polymorphism 4=23253
 PbO.6Fe₂O₃, remagnetization nuclei, initial stages of formation 4=28818
 PbO.0.4H₂O, crystal struct., atomic 4=23449
 PbO, red and yellow, crystal structure, effect of neutron irradiation 4=26564
 PbO solid electrolyte voltaic cell 4=2162
 Pb-O system phase relations, 3-1400 bars 4=29214
 3PbO.8UO₃.5H₂O, curite, lattice structure 4=7615
 Pb-PbO-Pb jns., Josephson a. c. current, tunnelling calc. 4=29837
 Pb₂Q⁴Q³O₈ cpds., crystal struct., atomic 4=23448
 PbS, addition valence band, photoelec. data 4=5698
 PbS, anomalous, and diffusion of Pb from U 4=23710
 PbS, band edge structure, nearly-free electron model 4=25905
 PbS, band structure, magneto-optical meas. 4=25904
 PbS, composition stability limits on anion rich side, quenching effects 4=13468
 PbS deposition on doped Si crystal, giving impurity centre distrib. on Si surface 4=17794
 PbS, dielectric const., from i.r. transmission and reflection 4=22874
 PbS, elec. resistance, up to 200 000 kg cm⁻² 4=10061
 PbS epitaxial, preparation method 4=30826
 PbS film, single-crystal, prep. and props. 4=23582
 PbS films, effect of platelet precipitates on structure 4=7624
 PbS films, photoconductivity meas. 4=12990
 PbS films, photoconductivity, slow component 4=12991
 PbS films, sputtered, resistivity, photoconductivity, transmittance, rel. to temp. 4=20810
 PbS films, work function, effect of elec. field 4=11684
 PbS impact figure formation and dislocations and slip 4=26517
 PbS layers for i.r. detect., prep. and performance 4=1695
 PbS layers, mono- and polycryst., elec. props. 4=26051
 PbS layers, photoconductivity, rel. to intercrystallite energy barriers 4=4233
 PbS, optical props., 0.5-25 eV meas. 4=13042
 PbS, optical reflection spectra, 6-1.5 eV region 4=10177
 PbS, Pb²¹⁰ diffusion, at 700°C, rel. to stoichiometry 4=15491
 PbS, photocond. layers, excess cond. 4=7072
 PbS, photoconductivity, var. with incidence 4=7070
 PbS photodetectors, model for 4=7082-3
 PbS, photoelec. emission in near and vac. u.v. 4=5698
 PbS, photoelectricity, conductivity, ion beam effects 4=4162
 PbS photosensitive films, optical consts., 0.8-4.0 μ 4=28873
 PbS photosensitive layers, e.m. wave absorption, rel. to electric field 4=738
 PbS, preparation in porous plug reactor 4=22723
 PbS surface, slow states produced by H₂O vapour 4=25885

Lead compounds—contd

- PbS, work function, under cyclical saturation with O₂ and water vapour 4=21552
 PbS-PbSe, climb and glide of misfit dislocations 4=1499
 Pb-Sb alloys, liquid state, Pb and Sb diffusion 4=164
 Pb-Sb alloy, normal-superconducting transition, decomposition effect 4=29836
 Pb-Sb(2.45 wt. %), superconductive critical field var. with aging, and precipitation 4=5520
 PbSe, band edge structure, nearly-free electron model 4=25905
 PbSe, current carrier bands, structure 4=1615
 PbSe, dielectric const., imaginary part, analysis 4=14013
 PbSe, elec. resistance, up to 200 000 kg cm⁻² 4=10061
 PbSe epitaxial films, preparation method 4=30826
 PbSe films, structure, semiconducting props., as for single crystals 4=10062
 PbSe monocrystals, ultrasound velocity rel. to temp. 4=15415
 PbSe, optical reflection spectra, 6-1.5 eV region 4=10177
 PbSn alloy film, supercond., current-voltage curve 4=14530
 Pb-Sn, eutectic alloy, interlamellar spacing meas. 4=4650
 Pb-Sn eutectic, undercooling at solid/liq. interface, expt. investigation 4=4550
 Pb-Sn (50-50 wt) solder, specific heat, 20-300°K 4=15427
 Pb-Sn, lamellar spacing rel. to freezing velocity 4=8503
 Pb-Sn liquid alloys, thermo-e.m.f. 4=21153
 Pb-Sn superconducting cavity, with high Q, for use at microwave freqs. 4=16379
 PbSnS₂, anti-phase domains and dislocation ribbons 4=30563
 PbSr ferrite, mag. props., composition depend. 4=13235
 PbTa₂O₈, crystal struct., atomic, Pb, Ta positions 4=23450
 PbTe, absorption, u. s., de Haas-van Alphen type oscs. 4=6732
 PbTe, band edge structure, nearly-free electron model 4=25905
 PbTe, band structure, relativistic effects 4=12693
 PbTe, carrier conc. and mobility 4=6783
 PbTe, composition stability limits on anion rich side, quenching effects 4=13468
 PbTe, cyclotron absorption 4=12715
 PbTe dielectric const., 24 Gds, < 200 4=17516
 PbTe, effective masses, temp. dependence 4=25886
 PbTe, elec. resistance, up to 200 000 kg cm⁻² 4=10061
 PbTe, electrical props, effect of high pressure 4=12904
 PbTe, electron mobility at liq. He temp., theory 4=4041
 PbTe, electron oscillations and scatt., interminimum transitions 4=25887
 PbTe epitaxial films, preparation method 4=30826
 Pb-Te films, supercond. persistence beyond Hc₂, tunneling obs. 4=18584
 PbTe, n.m.r. Knight shift, p-type and large g factors of majority carriers 4=4429
 PbTe, n-type, Seebeck coeff. and elec. resist., 20°-550°K 4=22813
 PbTe, optical props., 0.5-25 eV meas. 4=13042
 PbTe, p-type, impurity levels, elec. cond. and Hall effect 4=15540
 PbTe p-n junctions, C-V and C-I meas., -196°C 4=12929
 PbTe, partial press. in equilibrium, meas. by optical absorption method 4=21363
 PbTe, piezoresistance, 4.2-300°K, p-type 4=6981
 PbTe, semicond. mobility, low temps., model 4=20375
 PbTe thin films, structure, resistivity and Hall coeff. 4=23583
 PbTe:AgSbTe₂ mixed crystals, thermoelectricity, superiority to PbTe 4=4239
 PbTe-SnTe system alloys, resistivity, Hall coeff., Seebeck coeff. and thermal cond. 4=23275
 Pb_{0.5}Ti_{0.5}, superconducting, above upper crit. field, microwave obs. 4=16351
 PbTiO₃, e.s.r. of Fe³⁺ in strong axial field 4=20595
 PbTiO₃, paraelectric, microwave dielec. const. 4=26121
 Pb-Tl films, supercond., crit. field anisotropy 4=16350
 Pb-Tl, supercond., delayed flux entry 4=24506
 Pb-Tl, superconductive, crit. surface field 4=11474
 Pb-Tl system, supercond., surface, ang. var. 4=27421
 Pb₂V₂O₇, crystal, form, structure, atomic 4=2075
 Pb₂V₂O₇, optical props. 4=2075

SUBJECT INDEX

Lead compounds—contd

- Pb—Zn molten mixture, ht. content as function of comp. 4=21123
 PbZrO₃, modified with Ti⁴⁺ and Sn⁴⁺, ferro- and antiferro-electric phases, stability, var. with press., elec. field, temp., composition 4=26123
 PbZrO₃—PbTiO₃ solns., crystal growth by powder heating with fluxes 4=17786
 Pb(ZrTi)O₃, modified, press. effect on dielec. and piezoelec. props. 4=26117
 Pb(Zr—Ti)O₃, piezoelectric ceramic, props. modified by A¹⁺B³⁺O₃ or A³⁺B³⁺O₃ 4=12974
 Pb(Zr_{0.95}Ti_{0.05})O₃, primary pyroelec. effect 4=22785
 XY₄ type halides, Urey—Bradley force field 4=6597

Leak detection

- absolute leak, Po α source 4=16162
 absorption leak detector 4=16161
 air-filled cases, automatic 4=8282
 by bubble emission, size and shape of leaks 4=10991
 bubble tests for gas tightness 4=27229
 gas probe, self-extracting 4=18305
 by partial pressure meas. 4=8273
 by positive ion source, 10⁻¹¹cc/sec sensitivity 4=19134
 using He⁶ source 4=9433
 vacuum system, by discharge spectra 4=18304

Leather

See Materials

Length measurement

- See also Altimeters; Curvature measurement; Micro-metry; Strain gauges; Thickness measurement
 bubble chamber films, optical methods 4=5904
 on bubble-chamber photographs, flying-spot machine 4=5910
 cathetometer with horizontally stabilized telescope 4=2
 comparator, with automatic readout 4=11010
 by diffraction grating pair Moiré fringes, displacement, review 4=18013
 dilatometer, Fabry—Perot 4=16003
 displacement, use of Moiré fringes 4=18014
 extensometer, magnetically coupled 4=8007
 extensometer and sorption balance, electronically controlled 4=10617
 grating spacing, variation about its mean, meas. 4=5394
 Moiré fringe interpolator 4=8443
 moving body, coords. nonsimultaneously meas. 4=27041
 readout calibration system, microinch precision, up to 500°C 4=24005
 by transducer, capacitive, circuit 4=16407
 UK yard standards, in terms of international metre 4=11011
 vertical distances, telescope with Hg mirror 4=3

Length standards

See Standards

Lenses

See also Electron lenses

- acoustic solid lens, diffr. struct. of image 4=24324
 apodizing diaphragms and diaphragms increasing resolving power 4=27291
 automatic correction procedure, flexible 4=8376
 automatic design, computer programmes 4=24339
 automatic design, computer programmes comparison 4=24340
 automatic design programme for nonexperts 4=8377
 dioptre, imperfectly polished, reflection and transmission 4=18385
 doublets, aspheric and spherical set, focal length rel. to total illuminance 4=11330
 energy distrib, geom. mod. transfer functions, competition 4=27289
 evaluation by spot diagram using computer 4=8375
 evaluation, use of Moiré patterns 4=8379
 focal length meas., new method 4=2815
 glass selection for achromatic, anamorphic telescope 4=21288
 gravitational, for galaxy mass and Hubbles const. meas. 4=30966
 gravitational, for stars 4=29520
 localized path variation of two paraxial rays 4=8392
 microscope objectives, with plano correction 4=29740
 microwave correction 4=19185
 microwave, for line source appl. 4=5807

Lenses — contd

- monocentric doublet, spherical aberration 4=21280
 performance, competition discussion 4=27288
 positive, long radii of curvature meas. 4=18384
 quality criterion, moving noise-disk meas. 4=2816
 semiautomatic designing for computer 4=8374
 symposium, improved 4=21279
 thick, charact. functions 4=18382
 triplets, air spaced, 3rd order design 4=14333
 2 coaxial, thin, achromatism, new theoretical treatment 4=8373

aspherical

- astigmatic surfaces 4=5365
 fabrication process 4=2814
 surfaces calc. with real aplanatic points 4=14334
 surface testing, by immersion to reverse spherical wavefronts 4=8400

photographic

- meas., path difference and aberration 4=8469
 objectives, wide-angle, survey 4=335
 review of recent progress in Japan 4=24400

Leptons

See also Electrons; Mesons; Neutrinos and antineutrinos
 appearance in prod. of intermediate bosons, theory 4=9085

baryon—lepton symmetry and trio-spinor

formalism 4=30157

classification, common with baryons, rel. to SU₄ 4=15009

conservation, exptl. tests, rel. to 4 component

neutrino 4=25059

decays, $\Delta Q = \Delta S$ rule validity 4=12070

$\Delta Q = -\Delta S$ decays and intermediate bosons 4=812

doublets, quaternionian formulation 4=24988

e. m. props., weak-interaction corrections

calc. 4=5961

field theory of matter 4=24959

heavy, charged, possible existence 4=21812

interactions with leptons and baryons, rel. to SU₄

symm. 4=24991

interactions and masses, electrodynamic approach 4=3383

interactions, mediated by charged vector mesons,

Bethe—Salpeter eqn. 4=9107

interactions with nucleons, peratization method 4=11921

interactions with nucleons and pions 4=25000

isodoublet structure 4=3296

leptonic weak interactions, new baryon—lepton

symmetry principle 4=5960

magnetic moment, anomalous, effects of pseudoscalar

zero-mass meson 4=24989

magnetic moment, effect of intermediate vector bosons,

by ξ -limiting formalism 4=16809

magnetic moments, weak corrections 4=21760

mass degeneracy broken by Yang—Mills gauge

field 4=27762

neutral currents, e. m. induction in weak interact.

Lagrangian 4=819

pair production from neutrinos 4=11973

photoproduction process, pseudoscalar term 4=30170

production, $\nu + n \rightarrow$ lepton + baryon, weak-interact.

theory 4=5955

quantum electrodynamics, dilatationally

invariant 4=5923

scattering, ladder diagrams trace, Feinberg—Pais

eqn. 4=16816

scattering with nucleons, calc. of 6 indep. ampli-

tudes 4=16810

1-spinor field theory, describing electrons and

neutrinos 4=27776

symmetry princ., baryon—lepton 4=19422

theory, complex spaces and quaternions 4=9093

theory, review 4=24990

weak interactions, interpret. as space-time

curvature 4=19405

weak interactions scheme 4=27777

weak interactions, semileptonic, peratization

method 4=9105

weak interactions, structure 4=11910

Light

See also Diffraction; Interference, etc.; Doppler effect; Radiation

amplification, by electron beam and slow wave struct. 4=18396

amplification and generation, coherent light, by electron beams 4=5360

Light—contd

- amplification, linear, and attenuation, quantum statistics 4=27275
- blackbody radiation, quantized, coherence and correl. tensors 4=18477
- brightness indicatrix recovery problem 4=27282
- cavity in accelerated ref. system, resonant freq. 4=16649
- coherence, partial, matrix treatment 4=16194
- coherence, partial, rel. to non-Euclidian space 4=8396
- coherence theory with two-point correl. functions 4=16193
- coherent interaction length in nonlinear medium 4=5353
- coherence theory, basic concepts 4=21263
- deflector, by electro-optic effect 4=16226
